~~F. L & W. Co.~~
Irrigation Draught:

This study ~~would~~ is an attempt to define the rate of demand for irrigation and domestic use for the ~~Hot~~ proposed system of the Volcan Land & Water Co.

At the outset the ratio of domestic use to irrigation use must be assumed.

In the case of the Cuyamaca Water Co. the domestic is only 9% of the total. However it is within the control of a ~~corporation~~ water corporation to so dispose their areas that irrigation use even if initiated will eventually become domestic. This ~~same~~ process is recognized in study of the Los Angeles supply and Mr. Mulholland has found ~~that~~ that the amount required for ~~most~~ irrigation and for suburban residence districts is practically identical in amount, ~~7.5~~ and the duty being ~~750000~~ 1 Miners duck to 7.5 acres.

Here it will be assumed that ~~33~~ % of the water will be used in domestic & ~~67~~ % in irrigation upon # areas which will gradually be subdivided. ~~The~~ ~~sanga~~ The tendency will be toward a normal domestic curve ~~which~~ of use, ~~more uniform~~ ~~the~~ This estimate will represent the variation at the start and will be shown a maximum variations.

Table No. 8

MASS TABULATION FOR WARNER'S RESERVOIR

DOMESTIC USE

Reservoir Capacity = 200,000 acre feet.

Draft ----- = 24,750 acre feet per annum at the
 rate of 9,900 acre feet from October to March inclusive, and 14,850
 acre feet from April to September inclusive.

Initial draft 10% of total, increasing uniformly and
 reaching 100% in 10 years.
