Fill in Trench - East of 813 (Wall)

October 3, 2002

Squares A1, A2, B1, B2, C1, C2, D1, D2
Cleaned Surface. Removed rocks and gravel
from all squares up to the structure collapse.
Did not collect any slag from the surface.
Structure appears to be constructed on the top of a
smelting(?) mound to the south. A circular feature
is seen on the southern sector of C2. Installation will
be photographed and recorded tomorrow.

October 4, 2002

Photographed installation. It was a circular feature L. 800
Two photos were taken. L. 801 in square C1 was
shot. It is part of the mound. Sediment: dark gray
in color. Locus encompasses the square up to the
Structure. Walls are beginning to appear.

Removal of the Wall collapse began in Squares B2, C2
The entire first level of stones were removed.
Underneath was a layer of fill. A new locus number
was issued. In B2 locus 802. In C2 - locus 803
consisted of a crescent shaped: followed the wall collapse in
the interior of the structure.

Squares ~~A~~ B, C, D - 3 were shot/recorded and
the clearing of rocks began. Only the rocks
large enough to be drawn were kept in situ.
Small and medium size rocks were removed.

Excavation, was ceased in the front part of
the structure to await boom shafts.
