

A New Year's Greeting 1902.

The Wellington Mascot.

The  Wellington
Gold Mining Company
Denver,        Colorado

THE SUNSHINE GROUP.

(From Report by Chas. A. Wolcott.)

The Golden Sheen and Colonel Sellers patented lode mining claims, which belong to the Wellington Co., are located at Sunshine, in Gold Hill mining district, Boulder Co., both claims being on the same vein, and are extensions to the northeast of the noted White Crow, which mine has produced \$350,000.

The Golden Sheen is developed by a tunnel driven 300 feet on the vein, and by an 80-foot shaft opening into the tunnel at a point 250 feet from the entrance, thus giving good ventilation. Ore to the amount of \$5,500 was extracted from the shaft in sinking. The ore chute has a very decided pitch to the eastward, for which reason the tunnel was continued beyond the shaft, with the very gratifying result that recently the chute has been tapped again. A 50-foot stope has just been put in and stoping toward the surface has begun. The ore in the stope carries good values in gold and silver, a fair proportion of it being high grade, with native gold visible in many pieces. Some beautiful specimens of leaf gold have been taken out. Together with this there is tellurium gray copper and ruby silver, making a very desirable grade of ore, the trial shipment of half a ton has been made showing a value of \$133 per ton. Other smaller amounts have been tested running as high as \$448 per ton. The low grade ore runs \$20 per ton, which is a sufficient value to leave a good margin above treatment and mining expenses.

That there is a continuous chute of ore here is known by the fact that many sacks of high grade ore were picked up on the surface in the form of float; that the ore was found in the shaft; and that it has now been cut again by the tunnel, there is no doubt whatever, but that it goes into the earth deeper than men and machinery will ever be able to work.

The immense vein against which this ore is banked was one worthy of investigation. It is from ten to fifteen feet wide and cuts for thousands of feet through the country formation. Many other veins merge into it along its course, making ore conditions very favorable. At many places throughout its length rich surface ore has been discovered. For this reason the tunnel should be continued beyond the present ore chute, as it is very probable that other ore chutes will be encountered.

The Colonel Sellers claim lies between the Golden Sheen and the White Crow. The vein here is very large and strong, and contains much mineral. It has been developed by a shaft 80 feet deep, with 200 feet of levels, and by two tunnels, one of 50 feet and one of 100 feet, beside a number of surface openings exposing the ore. Shipments of ore have been made from these workings running from \$17 to \$4,010 per ton. Here it may be well to say that ore running above \$12 per ton can be shipped at a profit. The vein as opened is from four to six feet wide, carrying from one to three feet of shipping ore. When the shaft house is completed stoping will begin on the levels of the 80-foot shaft. This you will readily understand from the size of the ore body will produce ore rapidly. With the new steam hoist in place and ore houses completed we may confidently expect to handle a large tonnage of ore from the shaft, beside the ore that will be broken in tunnels above these levels.

Aside from the ore mentioned there is in both claims a large amount of lower grade ore running in the vicinity of \$10 in gold per ton. This without doubt will prove to be an available product for chlorination and can be shipped to some custom mill or can be treated at some later date by a mill erected on the property. The day is rapidly coming when these lower grades of ore will become a great source of revenue. Each succeeding year finds a lower grade of ore marketable.

In addition to the above valuable properties the Wellington company owns the great President mine, known as "The coming mine of Ward." The President shaft is down more than two hundred feet, where we have a ten-foot vein. The rich Arcturus vein has widened out to four feet, and will soon be a shipper.

1.—Just above the Wellington property. Mine lines adjoin. 2.—The Inter-Ocean and Monongahela, adjoining Wellington properties, production nearly Half a Million Dollars. 3.—The White Crow, same vein as Colonel Sellers, production over \$350,000. 4.—The Emancipation, production \$400,000. 5.—The American, production nearly Half a Million Dollars.

Progress of Development at the Wellington Properties.

OUR SUPERINTENDENT at Sunshine writes that we have the Colonel Sellers mine entirely unwatered and this week we have men working on ore in the west drift where a large body of quartz shows. Here I believe we can get out ore rapidly, though, as I have said the larger part of it will be of a low grade. In the breast of the drift, 125 feet, a great deal of ore shows, and I think we should soon begin to drift ahead there, as farther up the hill toward the dyke the ore will be much better. Also I will recommend soon to drive the 75 foot drift east. I will give you good reason for this when you come up. In the Golden Sheen we are taking out some good ore and we will make a shipment shortly.

The Boulder King Gold Mining Company is pushing development on one side of us, the Little Giant people have begun the work on the other side, and directly in front of us the Inter-Ocean, Monongahela and White Crow are taking out large quantities of rich ore. I believe our Sunshine properties will develop into big producers.

Our foreman at the President writes us that they are driving on the Arcturus vein as rapidly as possible toward the point where it intersects with the President. The ore is improving and should develop into a good and rich body when we reach the intersection.

We have not said much about the President recently because our stockholders know pretty well what that property is, while the Sunshine property being a new one we thought it better to enlighten them on the excellent properties and good work being done at that point. During the past year work has never ceased on the President group. We are pushing development and are as confident now as ever that we have a veritable bonanza of mineral at that point. The stockholders of the Wellington Company know that I have been very conservative in my statements in regard to what we have and what we are doing. Eastern stockholders who have visited and investigated the Wellington properties have almost without exception told me that I was entirely too conservative in my claims, that the properties were far better than they had expected to find, judging from my statements of them. This I think all of you will find when you visit Colorado.

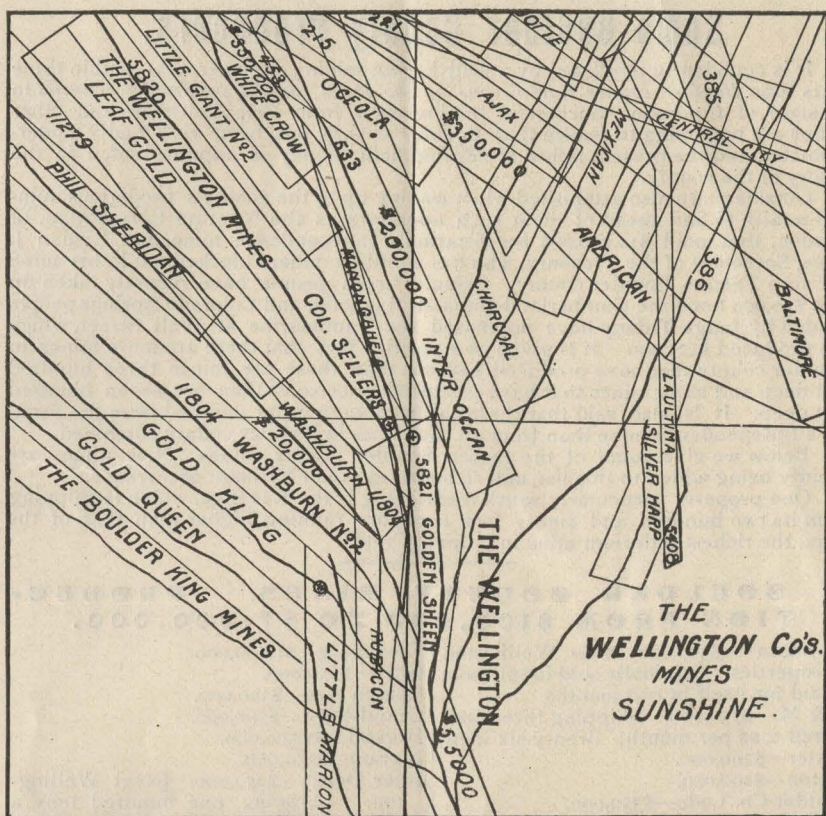

Respectfully yours,

W. W. DEGGE, Manager

THE WELLINGTON GOLD MINING COMPANY.

ANNOUNCEMENT!

Don't fail to send for our new Illustrated Prospectus. It will be too costly to distribute promiscuously, but will be freely sent to those writing for it. When ready it will be sent to all stockholders.

THE MOTHER LODE.

Herewith we present a plat of the Wellington properties at Sunshine—the Golden Sheen and Colonel Sellers. You will observe that the trend of the veins on either side forms a focus on our properties, which would indicate that the mother lode of all these veins is located here.

It is a well recognized fact that at the intersection of veins, and where veins are intersected by dykes, is where the ore is found in greatest quantities and values

Just across the center of the Golden Sheen one of the largest dykes in this section cuts across this property. Our tunnel is heading toward it, and when we reach it we should find an immensely rich body of ore.

The properties running to this focus have produced a million dollars.

The ability to comprehend a favorable investment and the requisite courage to accept an opportunity when offered are the qualities that distinguish the successful financier.

Sudden developments in our workings are liable at any moment to make our stock increase enormously in value.

Some Boulder County Producers.

It is confidently predicted by a well known mining engineer that within three years time *Boulder county will be one of the three largest producing counties* in the state of Colorado. Successful mining men from Cripple Creek and other camps are beginning to realize that Boulder county has been very badly underestimated and the present inflow of development money is unprecedented in the history of the county.

Outsiders are also astonished when waking up to the county's prodigious mineral wealth to find ahead of them such operators as the Venture Corporation, of London, that paid \$10,000,000 for Stratton's Independence mine, and Lyman J. Gage, Secretary of the Treasury, who has a million dollars blocked out in his mine at Camp Talcott, Boulder county. Cripple Creek people have recently taken up on a \$50,000 bond the Cumberland-India at Magnolia, and Colorado Springs people headed by Judge Tiffany have purchased the Tambourine at Wall Street, which has produced \$125,000. It is given as a positive fact that there are more mines in Boulder county that have produced \$250,000 than there are mines three hundred feet deep and more mines that have produced \$1,000,000 than are seven hundred feet deep. It is also said that there has been more water pumped from the Stratton's Independence mine than from all the mines in Boulder county combined.

Below we give some of the larger Boulder county mines. New mines are rapidly being added to this list, and rich strikes are of frequent occurrence.

One property particularly worth mentioning is the Revenge, which is shipping from its two hundred and eighty foot level, ore running higher than that of the Ajax, the richest tellurium mine in Cripple Creek.

41 BOULDER COUNTY MINES. PRODUCTION FROM \$100,000 TO \$7,000,000.

American — \$300,000. Near Wellington properties. Originally sold for \$17,000; paid for itself in two months.	Freybourg — \$1,500,000.
B. & M. — \$750,000. Shipping three hundred tons per month; twenty-six men	Giles — \$250,000.
Baxter — \$200,000.	Golden Age — \$400,000.
Boston — \$200,000.	Grand View — \$200,000.
Boulder Co. Lode — \$350,000.	Horsfal — \$1,500,000.
Caribou — \$7,000,000.	Ingram — \$250,000.
Cash — \$100,000.	Inter Ocean — \$250,000. [Next Wellington. Shipping one hundred tons a month of \$150 ore; twenty-two men.
Columbia — \$200,000.	Keystone — \$150,000.
Camp Talcott — \$1,000,000 blocked out; Owned by Lyman J. Gage and associates.	Kickionga — \$100,000. Owned by Venture Corporation, London, England.
Dolly Varden — \$750,000.	Livingstone — \$350,000.
Emancipation — \$400,000. In vicinity of Wellington mines; shipping eighteen hundred tons per month.	Logan — \$200,000. Working fifty men.
Enterprise — \$400,000.	Madeline — \$200,000.
Franklyn — \$5,000,000 blocked out. A tenth interest bought a few months ago for \$125,000.	Melvina — \$750,000. Netting \$5,000 per month.
Ni Wot — \$2,000,000.	Monongahela — \$100,000. Next Wellington; working twenty men; shipments running from \$20 to \$700 per ton.
Poorman — \$250,000.	Morning Star — \$200,000.
Prussian — \$600,000.	Nil Desperandum — \$100,000 in sight.
Red Cloud — \$1,000,000.	Tambourine — \$125,000. Shipping two cars a week of \$70 ore.
Richmond — \$160,000. Netting \$5,000 per month; working twenty men.	Utica — \$1,250,000.
Slide — \$4,000,000.	Victoria — \$225,000.
Smuggler — \$2,000,000.	White Crow — \$350,000. Wellington mines extension.
	Yellow Pine — \$350,000. \$2,000,000 more in sight; very rich ore.

In figures given previously regarding the production of some of these properties we find that we have considerably underrated the production in a number of cases, notably in the cases of the Melvina and the Caribou.

WELLINGTON!

The Successful Co-Operative
Company.

NOW SHIPPING

\$5 a month secures 1,000 shares.

Only One Best Time

There is just ONE BEST TIME to buy stock in a gold mine. That is when the Ore has been located, stock sufficient to insure development has been sold, and BEFORE THE PRICE HAS BEEN ADVANCED TOO HIGH.

That is the position of the WELLINGTON today. We have sold sufficient stock to insure moderate development for the next three years, have located good ore, going in directly on the vein.

No matter how low priced stock may be, it is not the best investment until good ore has been located in the property it represents.

No matter how good the ore may be, it is not the best investment until money sufficient to insure development has been secured.

Today you can get stock at 20c a share. It will soon be advanced to 25c, or \$50 a thousand shares. \$5 a month for 40 months pays for 1,000 shares. \$25 a month for 40 months pays for 5,000 shares.
