

Center for Molecular Genetics Facility news conference schedule

May 6, 1987

Center for Molecular Genetics Facility Media Preview and Tour

11:00 - Donald Helinski, director, Center for Molecular Genetics: The Role of the CMG and its New Facility

11:15 - Questions/Answers

11:30 - Tour of Laboratories and Service Centers

1. Demonstration of world class computer system for the analysis of genes and proteins. The complex serves as a data bank for scientists interested in comparing the structure and components of various genes or proteins.

2. Laboratory experiment on the mechanisms that control gene expression. Molecular geneticists will add compounds to cells in shakers to determine how these substances effect the control of gene expression.

3. Demonstration of DNA synthesis on gene machine.
