The following schedule is tentative for the academic year 2010–11 only. The quarter in which a course is scheduled may differ in subsequent academic years. Students should consult [TritonLink](#) and the Student Affairs Office to obtain current information.

Prerequisites are enforced when students register for courses. Students who have satisfied prerequisites at another institution or by AP credit need to be pre-authorized to register in these courses. If pre-authorization is necessary, students should contact the Student Affairs Office before the scheduled registration period.

Some courses require a course material fee.

## LOWER-DIVISION

### BENG 1. Introduction to Bioengineering (1)

An introduction to the central topics of bioengineering in a seminar format. The principles of problem definition, team design, engineering inventiveness, information access, communication, ethics, and social responsibility will be emphasized. P/NP grading only. **Prerequisite:** none. (W)

### BENG 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. (F,W,S)

### BENG 97. Internship/Field Studies (1-4)

An enrichment program available to a limited number of lower-division undergraduate students, which provides work experience with industry, government offices, and hospitals. The internship is coordinated through UCSD's Academic Internship Program under the supervision of a faculty member and an industrial, government, or hospital employee. **Prerequisites:** lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form. (F,W,S)

### BENG 98. Directed Group Study (1-4)

Directed group study on a topic or in a field not included in the regular department curriculum. (P/NP grades only.) **Prerequisites:** lower-division standing, completion of thirty units of undergraduate study at UCSD with a UCSD GPA of at least 3.0 and consent of a Bioengineering faculty member; completed and approved Special Studies form.

### BENG 99. Independent Study for Undergraduates (4)

Independent reading or research by arrangement with a Bioengineering faculty member. (P/NP grades only.) **Prerequisites:** lower-division standing, completion of thirty units of undergraduate study at UCSD with a UCSD GPA of at least 3.0 and consent of a Bioengineering faculty member; completed and approved Special Studies form.

### BENG 99R. Independent Study (1)

Independent study or research under direction of a member of the faculty. **Prerequisites:** student must be of first-year standing and a Regent's Scholar; approved Special Studies form.

## UPPER-DIVISION

### BENG 100. Introduction to Bioengineering Design (4)

A general introduction to bioengineering design, including examples of engineering analysis and design applied to representative topics in biomechanics, bioinstrumentation, biomaterials, biotechnology, and related areas. A review of technological needs, design methodology, testing procedures, statistical analysis, governmental regulation, evaluation of costs and benefits, quality of life, and ethical issues. **Prerequisites:** BENG 1; grade of C- or better in Math. 21C or Math. 20C and Math. 21D or Math. 20D, and Phys. 2C; majors only. (S)

### BENG 101. Foundations of Biomedical Imaging (4)

An introduction to the principles and applications of biomedical imaging, with emphasis on the acquisition, processing, display of imagery, and design of imaging systems. Filtering, convolution, and Fourier methods. Microscopy, radiography, computed tomography, magnetic resonance, ultrasound, and nuclear imaging. **Prerequisites:** Grade of C- or better in BENG 100; majors only or consent of department. (F)

### BENG 103B. Bioengineering Mass Transfer (4)

Mass transfer in solids, liquids, and gases with application to biological systems. Free and facilitated diffusion. Convective mass transfer. Diffusion-reaction phenomena. Active transport. Biological mass transfer coefficients. Steady and unsteady state. Flux-force relationships.

(Credit not allowed for both CENG 101C and BENG 103B.)

**Prerequisites:** grade of C- or better in CENG 101A or BENG 112A; majors only or consent of instructor. (S)

### BENG 109. Bioengineering Statics and Dynamics (4)

Newton's Laws. Static resultant forces and moments. Conservation laws of dynamics. Muscle and joint loads. Human body dynamics, locomotion, and clinical applications. Bodies in contact: friction, momentum, and impulse; impact and injury. Work, power, and energy relationships. Bioengineering design problems. **Prerequisites:** grade of C- or better in Math. 21D or Math. 20D and Phys. 2C; majors only or consent of instructor. (W)

### BENG 110. Continuum Mechanics (4)

An introduction to continuum mechanics of both living and nonliving bodies. The laws of motion and free-body diagrams. Stresses. Deformation. Compatibility conditions. Constitutive equations. Properties of common fluids and solids. Derivation of field equations and boundary conditions. Applications to bioengineering design. **Prerequisites:** grades of C- or better in Physics 2A, 2B, 2C, and BENG 109; majors only or consent of instructor. (F)

### BENG 112A. Biomechanics (4)

Introduction to physiological systems, with emphasis on structure and function of major tissues and organs. Application of mechanics to understand the behavior of these tissues and organs at gross and microscopic levels. Bioelastic solids. Rigid body biomechanics. Biofluids. Bioengineering and medical design. **Prerequisites:** grade of C- or better in BENG 110; majors only or consent of instructor. (W)

### BENG 112B. Biomechanics (4)

Biomechanics of living tissues with emphasis on continuum analysis of problems in biofluid and cell mechanics. Engineering design and problem solving in the biomechanics of mammalian tissues, especially those of the cardiovascular system. **Prerequisites:** grade of C- or better in BENG 112A; majors only or consent of instructor. (S)

### BENG 119A. Design Development in Biomechanics (3)

Development of design project in biomechanics. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

### BENG 119B. Design Implementation in Biomechanics (3)

Implementation of design project in biomechanics. **Prerequisites:** grade of C- or above in BENG 119A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

### BENG 122A. Biosystems and Control (4)

Systems and control theory applied to bioengineering. Modeling, linearization, transfer functions, Laplace transforms, closed-loop systems, design and simulation of controllers. Dynamic behavior and controls of first and second order processes. PID controllers. Stability. Bode design. Features of biological controls systems. A simulation term project using MATLAB and an oral presentation are required. **Prerequisites:** grade of C- or better in MAE 140; majors only or consent of department. (W)

### BENG 123. Systems Biology and Bioengineering (4)

Systems biology and bioengineering consists of (1) enumeration of biological components participating in a biological process, (2) reconstruction of interactions to form a network, (3) mathematical representation for analysis, interpretation, and prediction, (4) model validation and use in prospective design. **Prerequisites:** grade of C- or better in BIBC 100; majors only or consent of instructor. (W)

### BENG 125. Modeling and Computation in Bioengineering (4)

Computational modeling of molecular bioengineering phenomena: excitable cells, regulatory networks, and transport. Application of ordinary, stochastic, and partial differential equations. Introduction to data analysis techniques: power spectra, wavelets, and nonlinear time series analysis. **Prerequisites:** grade of C- or better in BENG 122A or BENG 123; majors only or consent of instructor. (S)

### BENG 126A. Design Development in Bioinformatics Bioengineering (3)

Development of design project in bioinformatics bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

### BENG 126B. Design Implementation in Bioinformatics Bioengineering (3)

Implementation of design project in bioinformatics bioengineering. **Prerequisites:** grade of C- or above in BENG 126A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

### BENG 127A. Design Development in Molecular Systems Bioengineering (3)

Development of design project in molecular systems bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

### BENG 127B. Design Implementation in Molecular Systems Bioengineering (3)

Implementation of design project in molecular systems bioengineering. **Prerequisites:** grade of C- or above in BENG 127A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

### BENG 128A. Design Development in Genetic Circuits Bioengineering (3)

Development of design project in genetic circuits bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

### BENG 128B. Design Implementation in Genetic Circuits Bioengineering (3)

Implementation of design project in genetic circuits bioengineering. **Prerequisites:** grade of C- or above in BENG 128A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

### BENG 129A. Design Development in Cell Systems Bioengineering (3)

Development of design project in cell systems bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

### BENG 129B. Design Implementation in Cell Systems Bioengineering (3)

Implementation of design project in cell systems bioengineering. **Prerequisites:** grade of C- or above in BENG 129A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

### BENG 130. Molecular Physical Chemistry (4)

An introduction to physical principles that govern biological matter and processes. Thermodynamic principles and their molecular origin, structural basis of life and physical and conceptual models to illustrate life phenomena. **Prerequisites:** grade of C- or better in Chem. 6B, Math. 20A, 20B, Physics 2A, 2B, 2C; majors only or consent of instructor. (W)

### BENG 139A. Design Development in Molecular Bioengineering (3)

Development of design project in molecular bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

### BENG 139B. Design Implementation in Molecular Bioengineering (3)

Implementation of design project in molecular bioengineering. **Prerequisites:** grade of C- or above in BENG 139A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

### BENG 140A. Bioengineering Physiology (4)

Introductory mammalian physiology for bioengineering students, with emphasis on control mechanisms and

engineering principles. Basic cell functions; biological control systems; muscle; neural; endocrine, and circulatory systems. Not intended for premedical bioengineering students. (Credit not allowed for both BIPN 100 and BENG 140A.) **Prerequisites:** grade of C– or better in Chem. 6A, 6B, Physics 2A, 2B, 2C, BILD 1; majors only or consent of instructor. (W)

#### **BENG 140B. Bioengineering Physiology (4)**

Introductory mammalian physiology for bioengineering students, with emphasis on control mechanisms and engineering principles. Digestive, respiratory, renal, and reproductive systems; regulation of metabolism, and defense mechanisms. (Credit not allowed for both BIPN 102 and BENG 140B.) **Prerequisite:** grade of C– or better in BENG 140A; majors only or consent of instructor. (S)

#### **BENG 147A. Design Development in Neural Engineering (3)**

Development of design project in neural engineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

#### **BENG 147B. Design Implementation in Neural Engineering (3)**

Implementation of design project in neural engineering. **Prerequisites:** grade of C– or above in BENG 147A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

#### **BENG 148A. Design Development in Cardiac Bioengineering (3)**

Development of design project in cardiac bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

#### **BENG 148B. Design Implementation in Cardiac Bioengineering (3)**

Implementation of design project in cardiac bioengineering. **Prerequisites:** grade of C– or above in BENG 148A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

#### **BENG 149A. Design Development in Vascular Bioengineering (3)**

Development of design project in vascular bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

#### **BENG 149B. Design Implementation in Vascular Bioengineering (3)**

Implementation of design project in vascular bioengineering. **Prerequisites:** grade of C– or above in BENG 149A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

#### **BENG 160. Chemical and Molecular Bioengineering Techniques (4)**

Introductory laboratory course in current principles and techniques of chemistry and molecular biology applicable to bioengineering. Quantitation of proteins and nucleic acids by spectrophotometric, immunological, and enzymatic methods. Separations and purification by centrifugation, chromatographic, and electrophoretic methods. Course material fee may apply. **Prerequisites:** grade of C– or better in BIBC 102, BICD 100, BENG 100, MAE 170; majors only or consent of instructor. (S)

#### **BENG 161A. Bioreactor Engineering (4)**

Engineering, biochemical, and physiological considerations in the design of bioreactor processes: enzyme kinetics, mass transfer limitations, microbial growth, and product formation kinetics. Fermentation reactor selection, design, scale-up, control. Quantitative bioengineering analysis and design of biochemical processes and experiments on biomolecules. **Prerequisites:** grade of C– or better in Chem. 114B or BIBC 102 (may be taken concurrently), BENG 122A or BENG 123, and BIBC 103 or BENG 160; majors only or consent of instructor. (F)

#### **BENG 161B. Biochemical Engineering (4)**

Commercial production of biochemical commodity products. Application of genetic control systems and mutant populations. Recombinant DNA and eucaryotic proteins in *E. coli* and other host organisms. Product recovery operations, including the design of bioseparation processes of filtration, adsorption, chromatography, and crystallization. Bioprocess economics. Human recombinant erythropoietin as an example, from genomic cloning to CHO cell expression, to bioreactor manufacturing and purification of medical products for clinical application. **Prerequisites:** grade of C– or better in BENG 161A; majors only or consent of instructor. (W)

#### **BENG 161C. Metabolic Engineering (4)**

Engineering systems analysis of metabolic and regulatory processes. Use of high-throughput data for network reconstruction. Formulation of the stoichiometric matrix and its uses to determine steady state flux distributions. Kinetics of individual enzymatic reactions. Computer simulations of metabolic networks, systemic sensitivity coefficients, bifurcations to study dynamic network functions. Temporal decomposition of metabolic processes into multiple time scales and the physiological roles of metabolic events in each scale. **Prerequisites:** grade of C– or better in BENG 160B or BENG 161B; majors only or consent of instructor. (S)

#### **BENG 162. Biotechnology Laboratory (4)**

Laboratory practices and design principles for biotechnology. Culture of microorganisms and mammalian cells, recombinant DNA bioreactor design and operation. Design and implementation of biosensors. A team design-based term project and oral presentation required. Course material fee(s) may apply. **Prerequisites:** grade of C– or above in MAE 170; BIBC 102; BIBC 103 or BENG 160; majors only or consent of instructor. (F)

#### **BENG 166A. Cell and Tissue Engineering (4)**

Engineering analysis of physico-chemical rate processes that affect, limit, and govern the function of cells and tissues. Cell migration, mitosis, apoptosis, and differentiation. Dynamic and structural interactions between mesenchyme and parenchyme. The role of the tissue microenvironment including cell-cell interactions, extracellular matrix, and growth factor communication. The design of functional tissue substitutes including cell and material sourcing, scale-up and manufacturability, efficacy and safety, regulatory, and ethical topics. Clinical Applications. **Prerequisites:** grade of C– or better in BENG 103B or BENG 112B; senior standing; majors only or consent of department. (F)

#### **BENG 167. Cell and Tissue Engineering Laboratory (4)**

An introduction to contemporary methods and applications. Students will formulate and test hypotheses related to the design and production of functional tissue substitutes. Topics to be explored include tissue characterization, biomaterial scaffolds, cell migration, adhesion, and growth. **Prerequisite:** BENG 166A; majors only or consent of instructor. (S)

#### **BENG 168. Biomolecular Engineering (4)**

Basic molecular biology; recombinant DNA technologies; design and manufacture of recombinant proteins and genetically engineered cells; architecture and mechanism of molecular nano-machineries that perform gene regulation, energy conversion, enzymatic catalysis, and active transport. **Prerequisites:** grade of C– or better in BILD 1 and BENG 100; majors only or consent of instructor. (S)

#### **BENG 169A. Design Development in Tissue Engineering (3)**

Development of design project in tissue bioengineering. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

#### **BENG 169B. Design Implementation in Tissue Engineering (3)**

Implementation of design project in tissue engineering. **Prerequisites:** grade of C– or above in BENG 169A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

#### **BENG 172. Bioengineering Laboratory (4)**

A laboratory course demonstrating basic concepts of biomechanics, bioengineering design, and experimental procedures involving animal tissue. Sources of error and experimental limitations. Computer data acquisition, modeling, statistical analysis. Experiments on artery, muscle and heart mechanics, action potentials, viscoelasticity, electrocardiography, hemorrheology. Course material fee may apply. **Prerequisites:** grade of C– or better in MAE 170; junior or senior standing in the major or consent of instructor. (S)

#### **BENG 173. Bioengineering Project Laboratory (4)**

Applications of bioengineering concepts to the solution of practical and research problems. Planning, design, and testing of prototype devices. Term project and oral presentation are required. **Prerequisites:** majors only; consent of instructor; BENG 112B, BENG 172. (Not offered in 2010–11.) (S)

#### **BENG 179A. Design Development in Bioinstrumentation (3)**

Development of design project in bioinstrumentation. **Prerequisites:** concurrent enrollment in BENG 187B; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (F)

#### **BENG 179B. Design Implementation in Bioinstrumentation (3)**

Implementation of design project in bioinstrumentation. **Prerequisites:** grade of C– or above in BENG 179A; concurrent enrollment in BENG 187C; Bioengineering or Bioengineering: Biotechnology majors only or consent of instructor. (W)

#### **BENG/BIMM/CSE 181. Molecular Sequence Analysis (4)**

(Cross-listed as BIMM 181 and CSE 181.) This course covers the analysis of nucleic acid and protein sequences, with an emphasis on the application of algorithms to biological problems. Topics include sequence alignments, database searching, comparative genomics, and phylogenetic and clustering analyses. Pairwise alignment, multiple alignment, DNA sequencing, scoring functions, fast database search, comparative genomics, clustering, phylogenetic trees, gene finding/DNA statistics. **Prerequisites:** CSE 100 or Math. 176, CSE 101 or Math. 188, BIMM 100 or Chem. 114C; Bioinformatics majors only. (S)

#### **BENG/BIMM/CSE/Chem. 182. Biological Databases (4)**

(Cross-listed as BIMM 182, CSE 182, and Chem. 182.) This course provides an introduction to the features of biological data, how those data are organized efficiently in databases, and how existing data resources can be utilized to solve a variety of biological problems. Object oriented databases, data modeling and description. Survey of current biological database with respect to above, implementation of database focused on a biological topic. **Prerequisites:** CSE 100 or Math. 176; Bioinformatics majors only. (F)

#### **BENG 183. Applied Genomic Technologies (4)**

Principles and technologies for using genomic information for biomedical applications. Technologies will be introduced progressively, from DNA to RNA to protein to whole cell systems. The integration of biology, chemistry, engineering, and computation will be stressed. Topics include: Technology for the Genome, DNA Chips, RNA Technologies, Proteomic Technologies, Physiomic and Phenomic Technologies, Analysis of Cell Function. **Prerequisites:** grade of C– or better in BIMM 100 or Chem. 114C; BICD 110; Bioinformatics majors only. (F)

#### **BENG/BIMM/CSE/Chem. 184. Computational Molecular Biology (4)**

(Cross-listed as BIMM 184, CSE 184, and Chem. 184.) This advanced course covers the application of machine learning and modeling techniques to biological systems. Topics include gene structure, recognition of DNA and protein sequence patterns, classification, and protein structure prediction. Pattern discovery, hidden Markov models/support vector machines/neural network/profiles, protein structure prediction, functional characterization of proteins, functional genomics/proteomics, metabolic pathways/gene networks. **Prerequisites:** BENG 181 or

BIMM 181 or CSE 181; BENG 182 or BIMM 182 or CSE 182 or Chem. 182; Bioinformatics majors only. (W)

#### **BENG 186A. Principles of Biomaterials Design (4)**

Fundamentals of materials science as applied to bioengineering design. Natural and synthetic polymeric materials. Materials characterization and design. Wound repair, blood clotting, foreign body response, transplantation biology, biocompatibility of materials, tissue engineering. Artificial organs and medical devices. Government regulations. Patenting. Economic impact. Ethical issues. A term project and oral presentation are required. **Prerequisites:** grade of C- or better in BENG 112B or senior standing in Bioengineering; Biotechnology major; majors only or consent of department. (S)

#### **BENG 186B. Principles of Bioinstrumentation Design (4)**

Biophysical phenomena, transducers, and electronics as related to the design of biomedical instrumentation. Potentiometric and amperometric signals and amplifiers. Biopotentials, membrane potentials, chemical sensors. Electrical safety. Mechanical transducers for displacement, force, and pressure. Temperature sensors. Flow sensors. Light-based instrumentation. **Prerequisites:** grade of C- or better in MAE 140 and MAE 170; majors only or consent of instructor. (W)

#### **BENG 186C. Bioengineering Design (4)**

Development of a bioengineering design described in a formal engineering report. Engineering analysis and application of methodology from applied sciences, biology, physiology, and biochemistry. Analysis of economic, environmental, manufacture, ethical, health and safety, social issues, and application of governmental regulations. **Prerequisites:** grade of C- or better in BENG 103B, BENG 106B, BENG 112B, BENG 186B, and MAE 130A; majors only or consent of instructor. (Not offered in 2010–11.) (W)

#### **BENG 187A. Bioengineering Design Project: Planning (1)**

General engineering design topics, including project planning and design objectives, background research, engineering needs assessment, and technical design specifications and requirements. Introduction to biomedical and biotechnology design projects. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. **Prerequisites:** grade of C- or better in BENG 101 or BICD 100; BENG 112A or CENG 101A; BENG 140A or BIBC 102; BENG 186B or BENG 123; Bioengineering or Bioengineering; Biotechnology majors only or consent of instructor. (S)

#### **BENG 187B. Bioengineering Design Project: Development (1)**

Development of original bioengineering design to solution of problem in biology or medicine. Analysis of economic issues, manufacturing and quality assurance, ethics, safety, government regulations and patent requirements. Oral presentation and formal engineering reports. Majors must enroll in the course for a letter grade in order to count the sequence towards the major. No exceptions will be approved. **Prerequisites:** grade of C- or better in BENG 187A, MAE 170, and BENG 112B or BENG 123; concurrent enrollment in one of BENG 119A, BENG 126A, BENG 127A, BENG 128A, BENG 129A, BENG 139A, BENG 147A, BENG 148A, BENG 149A, BENG 169A, or BENG 179A; Bioengineering or Bioengineering; Biotechnology majors only or consent of instructor. (F)

#### **BENG 187C. Bio engineering Design Project: Implementation (1)**

Approaches to implementation of senior design project, including final report. Teams will report on construction of prototypes, conduct of testing, collection of data, and assessment of reliability and failure. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. **Prerequisites:** grade of C- or better in BENG 187B; concurrent enrollment in one of the following lab sections: BENG 119B, BENG 126B, BENG 127B, BENG 128B, BENG 129B, BENG 139B, BENG 147B, BENG 148B, BENG 149B, BENG 169B, or BENG 179B; Bioengineering or Bioengineering; Biotechnology majors only or consent of instructor. (W)

#### **BENG 187D. Bioengineering Design**

##### **Project: Presentation (1)**

Oral presentations of design projects, including design, development, and implementation strategies and results of prototype testing. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. **Prerequisites:** grade of C- or better in BENG 187C; Bioengineering or Bioengineering; Biotechnology majors only or consent of instructor. (S)

##### **BENG 191/291. Senior Seminar I: Professional Issues in Bioengineering (2)**

(Conjoined with BENG 291.) Instills skills for personal and organizational development during lifelong learning. Student prepares portfolio of personal attributes and experiences, prepares for career interviews plus oral report of interviewing organizational CEO. Graduate students will prepare a NIH small business research grant. **Prerequisite:** consent of instructor. (W)

##### **BENG 192. Senior Seminar in Bioengineering (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in bioengineering (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times with a change in topic and permission of the department. Enrollment is limited to twenty students, with preference given to seniors.

##### **BENG 195. Teaching (2–4)**

Teaching and tutorial assistance in a bioengineering course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. (P/NP grades only.) **Prerequisites:** B average in the major and departmental approval. (F,W,S)

##### **BENG 196. Bioengineering Industrial Internship (1–4)**

Under the joint supervision of a faculty advisor and industry mentor, the student will work at a bioengineering industrial site to gain practical bioengineering experience. No more than twelve units may be used to satisfy graduation unit requirements. (P/NP grades only.) **Prerequisites:** consent of department and completion of all lower-division course requirements, including general-science requirements; some laboratory experience; completion of ninety units with a 2.5 GPA; and consent of a bioengineering faculty coordinator. (F,W,S,Su)

##### **BENG 197. Engineering Internship (1–4)**

An enrichment program, available to a limited number of undergraduate students, which provides work experience with industry, government offices, hospitals, and their practices. Subject to the availability of positions, students will work in a local industry or hospital (on a salaried or unsalaried basis) under the supervision of a faculty member and industrial, government, or hospital employee. Coordination of the Engineering Internship is conducted through UCSD's Academic Internship Program. Time and effort to be arranged. Units may not be applied towards major graduation requirements unless prior approval of a faculty advisor is obtained and internship is an unsalaried position. **Prerequisites:** completion of ninety units with a 2.5 GPA and consent of a bioengineering faculty coordinator. (F,W,S,Su)

##### **BENG 198. Directed Group Study (1–4)**

Directed group study, on a topic or in a field not included in the regular department curriculum, by arrangement with a bioengineering faculty member. (P/NP grades only.) **Prerequisites:** upper-division standing, completion of ninety units of UCSD undergraduate study, a minimum UCSD GPA of 2.5, consent of instructor, and a completed and approved Special Studies form. (F,W,S)

##### **BENG 199. Independent Study for Undergraduates (4)**

Independent reading or research by arrangement with a bioengineering faculty member. May be taken for credit three times. (P/NP grades only.) **Prerequisites:** upper-division standing, completion of ninety units of UCSD undergraduate study, a minimum UCSD GPA of 2.5, consent of instructor, and a completed and approved Special Studies form. (F,W,S,Su)

## **GRADUATE**

#### **BENG 202/CSE 282. Bioinformatics II: Introduction to Bioinformatics Algorithms (4)**

(Formerly BENG 202/CSE 257A.) Introduction to methods for sequence analysis. Applications to genome and proteome sequences. Protein structure, sequence-structure analysis. **Prerequisite:** Pharm. 201 or consent of instructor. (W)

#### **BENG 203/CSE 283. Genomics, Proteomics, and Network Biology (4)**

Annotating genomes, characterizing functional genes, profiling, reconstructing pathways. **Prerequisites:** Pharm. 201, BENG 202/CSE 282 or consent of instructor. (S)

#### **BENG 207. Topics in Bioengineering (4)**

Course given at the discretion of the faculty on current topics of interest in bioengineering. (F,W,S)

#### **BENG 208. Topics in Bioengineering with Lab (4)**

Course given at the discretion of the faculty on topics of current interest in engineering science. This course is intended to be a lecture and lab companion topics course. **Prerequisite:** consent of instructor. (S)

#### **BENG 209/MAE 209. Continuum Mechanics Applied to Medicine/Biology (4)**

Introduction to the basic definitions of Continuum Mechanics and their mathematical formulation at the graduate level with applications to problems in medicine and biology. This course is intended for students with little or no background in mechanics; it is an introduction to the Biomechanics courses BENG 250 A–B in the Department of Bioengineering and to Solid and Fluid Mechanics courses MAE 210A and MAE 231A in the Department of Mechanical and Aerospace Engineering. This course should not be taken concurrently with MAE 210A or MAE 231A. **Prerequisite:** consent of instructor. (F)

#### **BENG 211. Systems Biology and Bioengineering I: Biological Components (4)**

Components of biological systems, their biochemical properties and function. The technology used for obtaining component lists. Relationship within and integration of component lists. Structured vocabularies and component ontologies. Algorithms for comparative approaches in deciphering and mining component lists. **Prerequisite:** BENG 230A or BIMM 100 or consent of instructor. (F)

#### **BENG 212. Systems Biology and Bioengineering II: Network Reconstruction (4)**

This course will cover the process of reconstructing complex biological reaction networks. Reconstruction of metabolic networks, regulatory networks and signaling networks. Bottom-up and top-down approaches. The use of collections of historical data. The principles underlying high-throughput experimental technologies and examples given on how this data is used for network reconstruction, consistency checking, and validation. **Prerequisite:** BENG 211 or consent of instructor. (W)

#### **BENG 213. Systems Biology and Bioengineering III: Building and Simulating Large-Scale In Silico Models (4)**

Mathematical models of reconstructed reaction networks and simulation of their emergent properties. Classical kinetic theory, stochastic simulation methods and constraints-based models. Methods that are scalable and integrate multiple cellular processes will be emphasized. Existing genome-scale models will be described and computations performed. Emphasis will be on studying the genotype-phenotype relationship in an in silico model driven fashion. Comparisons with phenotypic data will be emphasized. **Prerequisite:** BENG 212 or consent of instructor. (S)

#### **BENG 221. Mathematical Methods for Bioengineering (4)**

Introduction of the foundations of engineering by teaching the mathematical methods that describe the engineering principles. Analytical and numerical approaches to solving the equations. **Prerequisite:** graduate standing in bioengineering or consent of instructor. (F)

**BENG 222. Continuum Mechanics and Transport Phenomena in Living Systems (4)**

Introduction to engineering problems from a physics and a problem-solving perspective. Important bioengineering problems in mechanics and transport will be discussed with case studies. **Prerequisite:** graduate standing in bioengineering or consent of instructor. (S)

**BENG 223. Thermodynamics, Statistical Mechanics, Interfacial Phenomena in Living Systems (4)**

Thermodynamics, statistical mechanics, and interfacial phenomena that emphasize the chemical natures of living systems. Topics include intermolecular and surface forces, calculation of energetic processes, computation of electrical forces and fields, and principles of physics in multiscale engineering and design. **Prerequisite:** graduate standing in bioengineering or consent of instructor. (W)

**BENG 225. BioBusiness: Starting, Growing, and Harvesting a Biotech Company (4)**

Biotech is a special breed of business, especially in the start-up and early phases. Whether you are considering joining a biotech start-up or want to be successful in a life science organization, it pays to understand this unique business model. In this course, you will study and analyze (1) start-up proposals (2) the genesis of the biotech industry (3) biotech categories and growth strategies (4) the process of spinning out viable product concepts from academia (5) financing techniques (6) business development (7) acquisition/IPO valuation methods and (8) potentially disruptive technologies. The format is highly interactive and learning is enhanced by means of exercises, team presentations, and case studies. **Prerequisite:** bioengineering M.Eng. degree student or consent of instructor. (S)

**BENG 230A. Biochemistry (4)**

A graduate course in biochemistry especially tailored to the requirements and background of bioengineering graduate students. It will cover the important macro- and small molecules in cells that are the major constituents, or that function as signaling molecules or molecular machineries. The structures, pathways, interactions, methodologies, and molecular designs using recombinant DNA technology will be covered. **Prerequisites:** BIPN 100 and 102 or consent of instructor. (F)

**BENG 230B. Cell and Molecular Biology (4)**

A general survey of structure-function relationships at the molecular and cellular levels. Emphasis on basic genetic mechanisms; control of gene expression; membrane structure, transport and traffic; cell signaling; cell adhesion; mechanics of cell division; and cytoskeleton. **Prerequisites:** BIPN 100, 102, and BENG 230A or consent of instructor. (W)

**BENG 230C. Cardiovascular Physiology (4)**

Physical concepts of behavior of heart, large blood vessels, vascular beds in major organs and the microcirculation. Physical and physiological principles of blood flow, blood pressure, cardiac work, electrophysiology of the heart. Special vascular beds, including their biological and hemodynamic importance. Integration through nervous and humoral controls. **Prerequisites:** BIPN 100, 102, and BENG 230B or consent of instructor. (S)

**BENG 230D. Respiratory and Renal Physiology (4)**

Mechanics of breathing. Gas diffusion. Pulmonary blood flow. Stress distribution. Gas transport by blood. Kinetics of oxygen and carbon dioxide exchange. VA/Q relations. Control of ventilation. Glomerular and proximal tubule functions. Water metabolism. Control of sodium and potassium in the kidney. **Prerequisites:** BIPN 100, 102, and BENG 230C or consent of instructor. (F,W,S)

**BENG 231. Foundations of Physiology for Bioengineering (4)**

Introduction to human physiology emphasizing quantitative physiological principles and engineering applications to the study and understanding of physiological systems. The study of principal organ systems will be integrated with cell and molecular biology, biological control systems, and the physical sciences. **Prerequisite:** graduate standing in bioengineering or consent of instructor. (S)

**BENG 238/MED 238. Molecular Biology of the Cardiovascular System (4)**

An overview of heart, vascular development and associated diseases from a molecular biological perspective. Current approaches for generating mouse models of cardiovascular disease and recently developed technologies for physiological assessment in small animal models will be presented. (S)

**BENG 241A. Foundations of Tissue Engineering Science (4)**

Molecular and cell biological basis of tissue engineering science. Paracrine control of tissue growth and differentiation. Biomechanics and the molecular basis of cell-cell and cell-matrix interactions. Cell motility, mechanics of tissue growth and assembly, tissue repair. Mass transfer in tissues. Microcirculation of blood and lymph. **Prerequisite:** BENG 230A or consent of instructor. (F)

**BENG 241B. Methods in Tissue Engineering Science (4)**

Isolation of cells, cell and tissue culture systems. Fluorescence and confocal microscopy. Intracellular imaging. Mechanical testing of tissues. Micromechanical measurement and analysis of cell deformability and cell interaction. Methods in microcirculation and angiogenesis. **Prerequisite:** BENG 241A or consent of instructor. (S)

**BENG 242/MATS 257. Polymer Science and Engineering (4)**

Quantitative basic understanding of different branches of polymer science varying from polymer chemistry, characterization, thermodynamics, rheological properties, smart materials, self-assembly in biopolymers (natural) and synthetic polymers, and applications of polymers ranging from medicine to structure. **Prerequisite:** graduate standing in bioengineering or materials science or consent of instructor. (W)

**BENG 247A/ECE 247A. Advanced Biophotonics (4)**

Basic physics and chemistry for the interaction of photons with matter, including both biological and synthetic materials; use of photonic radiation pressure for manipulation of objects and materials; advanced optoelectronic detection systems, devices and methods, including time resolved fluorescent and chemiluminescent methods, fluorescent energy transfer (FRET) techniques, quantum dots, and near-field optical techniques; underlying mechanisms of the light sensitive biological systems, including chloroplasts for photosynthetic energy conversion and the basis of vision processes. **Prerequisite:** graduate standing. (F)

**BENG 247B/ECE 247B. Bioelectronics (4)**

Topics to be covered will include photolithographic techniques for high-density DNA microarray production, incorporation of CMOS control into electronic DNA microarrays, direct electronic detection technology used in microarrays and biosensor devices, and focus on problems related to making highly integrated devices (lab-on-a-chip, in vivo biosensors, etc.) form heterogeneous materials and components. **Prerequisite:** graduate standing. (W)

**BENG 247C/ECE 247C. Bionanotechnology (4)**

Topics include: nanosensors and nanodevices for both clinical diagnostics and biowarfare (bioterror) agent detection; nanostructures for drug delivery; nanoarrays and nanodevices; use of nanoanalytical devices and systems; methods and techniques for modification or functionalization of nanoparticles and nanostructures with biological molecules; nanostructural aspects of fuel cells and biofuel cells; potential use of DNA and other biomolecules for computing and ultra high-density data storage. **Prerequisite:** graduate standing. (S)

**BENG 250A. Biomechanics (4)**

An introduction to biomechanics and transport phenomena in biological systems at the graduate level. Biorheology, biosolid mechanics, muscle mechanics, mass transfer, momentum transfer, energy transfer. **Prerequisites:** CENG 101C, BENG 112B, and BENG 222 or consent of instructor. (W)

**BENG 250B. Advanced Biomechanics (4)**

Modern development of biomechanics at an advanced mathematical level. Selected topics in the dynamics of heart, pulsatile, blood flow, microcirculation, and muscle

mechanics. **Prerequisite:** BENG 253 or consent of instructor. (S)

**BENG 253. Biomedical Transport Phenomena (4)**

Nonequilibrium thermodynamic analysis of transport phenomena. The osmotic effect. Diffusion and exchange in biological systems. **Prerequisite:** BENG 222 or consent of instructor. (W)

**BENG 260/BGGN 260. Neurodynamics (4)**

Introduction to the nonlinear dynamics of neurons and neural systems using bifurcation theory and chaotic motions, at different levels of abstraction, e.g., biophysical and "reduced" models for analysis of regularly spiking and bursting cells. Laboratory exercises will accompany the lectures. **Prerequisite:** graduate standing or consent of instructor.

**BENG 267. Microcirculation in Health and Disease (4)**

Structural and functional aspects of transport and blood-tissue exchange in key organs during circulatory shock, bacterial toxemia, hypertension. Physical and ultrastructural techniques used to analyze small-vessel dynamics. **Prerequisite:** consent of instructor. (S)

**BENG 276/Chem. 276/Math. 276. Numerical Analysis in Multi-scale Biology (4)**

Introduces mathematical tools to simulate biological processes at multiple scales. Numerical methods for ordinary and partial differential equations (deterministic and stochastic), and methods for parallel computing and visualization. Hands-on use of computers emphasized; students will apply numerical methods in individual projects. **Prerequisite:** consent of instructor. (F,W,S)

**BENG 277/BIOM 287. Tissue Engineering Laboratory (4)**

Students will learn to conduct tissue engineering and developmental biology experiments, microfabricate cell culture systems, engineer biopolymer materials, and develop and analyze quantitative models of transport, cell fate, and growth mechanics. The understanding and manipulation of multicellular processes that comprise development and growth involves specialized areas of biomechanics, developmental biology, biomaterials, and the tools of molecular biology, as well as the integration of theory and experiment. To fabricate functional tissues, it is important to establish underlying molecular and physical mechanisms and then control and integrate these. **Prerequisite:** consent of instructor. (S)

**BENG 280A. Principles of Biomedical Imaging (4)**

Fundamentals of Fourier transform and linear systems theory including convolution, sampling, noise, filtering, image reconstruction and visualization with an emphasis on applications to biomedical imaging. Examples from optical imaging, CT, MR, ultrasound, nuclear, PET, and radiography. **Prerequisite:** graduate standing. (F)

**BENG 280B. Comparative Biomedical Imaging (4)**

Application of biomedical imaging to the measurement of structure, function, and dynamics of organ systems from the microscopic to the organ level. Emphasis on detailed evaluation and comparison of specific imaging modalities. **Prerequisite:** consent of instructor. (W,S)

**BENG 281. Seminar in Bioengineering (1)**

Weekly seminars by faculty, visitors, postdoctoral research fellows, and graduate students concerning research topics in bioengineering and related subjects. May be repeated for credit. Course does not apply toward M.S. graduation requirements. (S/U grades only.) (F,W,S)

**BENG 282. Seminar: Faculty Research (1)**

Weekly seminars by bioengineering faculty presenting their research. May be repeated for credit. (S/U grades only.) (F,W,S)

**BENG 283/Chem. 283/BIOM 283. Supramolecular Structure Determination Laboratory (4)**

A laboratory course combining hands-on mass spectrometry and bioinformatics tools to explore the relationship between structure and function in macromolecules. Tools for peptide sequencing, analysis of post-translational modification, and fragmentation analysis by mass spectrometry are examples of experiments students will run. **Prerequisite:** consent of instructor.

**BENG 290. Bioengineering Special Graduate Seminar (1-2)**

Seminars by faculty, visitors, postdoctoral research fellows, and/or graduate students in selected topic(s) in bioengineering and/or related subjects. This course does not apply toward M.S. graduation requirements.

**BENG 291/191. Senior Seminar I: Professional Issues in Bioengineering (2)**

(Conjoined with BENG 191.) Instills skills for personal and organizational development during lifelong learning. Student prepares portfolio of personal attributes and experiences, prepares for career interviews plus oral report of interviewing organizational CEO. Graduate students will prepare a NIH small business research grant. **Prerequisites:** none. (W)

**BENG 295. Bioengineering Design Project and Industrial Training (4)**

Independent work by graduate students focused on design, applied research, and professional experience. **Prerequisites:** consent of instructor and departmental approval. (F,W,S)

**BENG 296. Independent Study (4)**

**Prerequisite:** consent of instructor. (F,W,S)

**BENG 298. Directed Group Study (1-4)**

Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. (S/U grades only.) **Prerequisite:** consent of instructor. (F,W,S)

**BENG 299. Graduate Research (1-12)**

Independent work by graduate students engaged in research and writing theses. (S/U grades only.) **Prerequisite:** consent of instructor. (F,W,S)

**BENG 501. Teaching Experience (2 or 4)**

Teaching experience in an appropriate bioengineering undergraduate course under direction of the faculty member in charge of the course. Lecturing one to two hours per week in either a problem-solving section or regular lecture. (S/U grades only.) **Prerequisites:** consent of instructor and departmental approval. (F,W,S)

## THE UNDERGRADUATE PROGRAM

### *Degree and Program Options*

The Department of Computer Science and Engineering (CSE) offers four degree programs: the B.S. degree in computer science, the B.A. degree in computer science, the B.S. degree in computer engineering, and the B.S. degree in computer science with a specialization in bioinformatics.

The B.A. degree in computer science is a flexible program that allows comprehensive studies beyond computer science and engineering.

All CSE programs of study provide a broad and rigorous curriculum and are designed to provide students with the strong technical education necessary for placement in the competitive high-tech job market as well as for advanced studies in graduate school.

CSE offers courses in the following areas:

- Theory
- Artificial intelligence
- Software
- Hardware
- Computer security and cryptography
- Computer vision and graphics
- Databases and XML
- Systems and networking
- Bioinformatics
- Software engineering

In addition, CSE seniors can participate in challenging project-courses in: software systems, where teams create multiplayer games; Internet systems, where students create sophisticated Web transaction systems; and mobile wireless computing, where teams create applications for handheld devices.

The CSE department supports and encourages students to explore opportunities outside the classroom. Students assist in many CSE courses as paid lab tutors and readers, getting an excellent opportunity to interact more closely with faculty and other students. In addition, CSE students participate in research projects with graduate students and faculty in CSE, the San Diego Supercomputer Center, and the California Institute for Telecommunications and Information Technology (Calit2). Under the direction of our faculty, CSE students may also earn credit by participating in independent research projects. The CSE department has strong ties with local and national high-tech industry, where students can earn course credit while applying their academic knowledge toward exciting commercial technologies in paid internships.

## B.S. COMPUTER SCIENCE PROGRAM

The lower-division B.S. computer science program is designed to provide a strong foundation in mathematics, physics, electrical engineering, programming methodology and skills, and computer organization. Upper-division core courses deal with the theory and design of algorithms, hardware, and software. Students can gain additional breadth and/or depth in computer science and engineering by an appropriate selection of upper-division technical electives.

Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer programming, although helpful, are not required for the program.

The department requires a total of 128 units for the B.S. computer science program (not including the general-education requirements). There are

three varieties of requirements: lower-division, upper-division, and technical electives.

Advisory placement exam for CSE 3, CSE 8A/8AL and CSE 11: An advisory placement test is encouraged of all CSE majors to help accurately place students into the right starting point in the CSE undergraduate curriculum. This information is found at the following Web site: <http://www-cse.ucsd.edu/undergraduate-education.html>. Contact the CSE student affairs advising office at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu) if further assistance is needed.

### 1. Lower-Division Requirements

Students are expected to complete the following fifty-two units by the end of their sophomore year.

#### Computer Science and Engineering

CSE 8B or CSE 11, CSE 12, CSE 15L, CSE 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, , and CSE 91; twenty-four units.

**Note:** Students with little computer experience are encouraged to take CSE 3. Students without prior programming experience are advised to take CSE 8A, CSE 8AL, and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A, CSE 8AL, and CSE 8B, and requires experience in programming with a compiled language.

#### Mathematics

Math. 20A, Math. 20B, Math. 20C, and Math. 20F; sixteen units.

#### General Science

Phys 2A. and Phys. 2B, or Chem. 6A and Chem. 6B, or Chem. 6AH and Chem. BH, or BILD 1 and BILD 2, or BILD 3 and BICD 100; eight units.

Students who received high grades in both calculus and physics in high school may substitute the major's sequence, Phys. 4A-B-C for Phys. 2A-B-C.

#### Probability and Statistics

Math. 183 or CSE 103; four units.

### 2. Upper-Division Requirements

All B.S. computer science students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 110, CSE 120, 130, 131, 140, 140L, 141 and 141L; forty units.

Students are expected to complete almost all of these courses by the end of their junior year. If students want to accelerate their program, they should consider taking CSE 100 or Math. 176, CSE 105, and/or CSE 140 and 140L in the sophomore year.

### 3. Technical Electives

B.S. computer science students are required to complete one upper-division cluster of three to five CSE courses. The three to five CSE courses are part of the nine technical electives required for a total of thirty-six units. The purpose of the clusters is to help students identify groups of complementary courses, thus improving their education. Clusters are designed by the CSE faculty by grouping existing courses. Students who wish can also design their own clusters, with approval by the CSE Undergraduate Committee. For a complete list of clusters, visit [www.ucsd.edu](http://www.ucsd.edu) or see an advisor in the CSE advising offices.

- Choose one upper-division cluster consisting of three to five CSE courses. A three-course cluster is permitted when the cluster is a natural extension of one of the core upper-division requirements.
- A five-course cluster will be permitted when an additional foundational course may be required by other courses in the cluster.
- Within a cluster there can be choices, such as "take four of the five" or a choice between two course alternatives.
- May use up to eight units of CSE 198, CSE 199, or CSE 199H to meet the CSE upper-division technical requirement.
- Twelve credits of non-198, CSE 199, or CSE 199H must be completed.

Two technical electives (of the required nine technical electives) can be chosen from the wider set of courses that includes computer science and engineering upper-division courses, graduate courses, and other electives as listed under the section titled "[Electives](#)." Other restrictions in the selection of technical electives are also given in the section "[Electives](#)."

#### Notes for Selecting and Scheduling Classes for B.S. Computer Science

(All courses must be taken for a letter grade.)

- Advisory placement exam: Students may self-select which course they wish to take and are encouraged to take the advisory placement exam to help decide. Students with little computer experience are encouraged to take CSE 3. Students without experience in programming in a compiled language are advised to take CSE 8A and CSE 8AL, and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A, CSE 8AL, and CSE 8B. CSE 8B or CSE 11 must be taken before CSE 12.
- Computer Science Advanced Placement Credit: A Exam (Java Programming) two units
  - Score of 4 exempts CSE 8A and CSE 8AL. Student should take CSE 11.

- Score of 5 exempts CSE 11. Student should take CSE 12.
3. CSE 8A/8AL, or CSE 8B, or CSE 11 may be taken concurrently with CSE 20/Math. 15A. Please obtain department approval for enrollment permission for CSE 20/Math. 15A at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu).
  4. CSE 15L and CSE 70 are new courses starting fall 2007.
  5. Effective fall 2010, CSE 70 is renumbered to CSE 110.
  6. CSE 15L must be taken prior to or concurrently with CSE 12.
  7. The CSE Undergraduate Committee would like students to start taking technical electives as soon as possible after completing CSE 30. Effective fall 2010, students must complete nine technical electives. Students must complete one cluster consisting of three to five courses. Students may use a CSE graduate course for technical elective credit with approval. Once a graduate course is used for an undergraduate degree, that course may not be reused for a graduate degree. In addition, only four units of CSE 197 may be used toward technical elective credit.
  8. Students may take use up to eight units of CSE 198, CSE 199, or CSE 199H to meet the CSE upper-division technical requirement.
  9. 12 credits of non-198, CSE 199, or CSE 199H must be completed. Two of the technical electives may be chosen from a list of approved electives. This list is at <http://www.cse.ucsd.edu/undergrad/degreeprograms/electives.html>. If you want to deviate from this list of approved electives, you must petition the CSE student advisor at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu).

## B.S. COMPUTER ENGINEERING PROGRAM

(Curriculum is the same in both the CSE and ECE departments.)

The B.S. computer engineering program is jointly administered by the Departments of Computer Science and Engineering and Electrical and Computer Engineering. Students wishing to take the computer engineering program must be admitted to one of the departments.

The lower-division computer engineering program is designed to provide a strong foundation in mathematics, physics, electrical engineering, programming methodology and skills, and computer organization. Upper-division core courses deal with the theory and design of algorithms, hardware and software, as well as electronic systems. Students can gain additional breadth and/or depth in computer science and engineering by an appropriate selection of technical electives.

Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer programming, although helpful, are not required for the program.

B.S. computer engineering program requires a total of 152 units (not including the general-education requirements). There are three varieties

of requirements: lower-division, upper-division, and technical electives.

Advisory placement exam for CSE 3, CSE 8A/8AL, and CSE 11: An advisory placement test is encouraged of all CSE majors to help accurately place students into the right starting point in the CSE undergraduate curriculum. This information is found at the following Web site: <http://www-cse.ucsd.edu/undergraduate-education.html>. Contact the CSE student affairs advising office at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu) if further assistance is needed.

### 1. Lower-Division Requirements

Students are expected to complete the following seventy-six units by the end of their sophomore year.

#### Computer Science and Engineering

CSE 8B or CSE 11, CSE 12, CSE 15L, CSE 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, , and CSE 91; twenty-four units.

**Note:** Students with little computer experience are encouraged to take CSE 3. Students without prior programming experience are advised to take CSE 8A, CSE 8AL, and then CSE 8B, CSE 8AL, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B, and requires experience in programming with a compiled language.

#### Mathematics

Math. 20A, Math. 20B, Math. 20C, Math. 20D, and Math. 20F; twenty units.

#### Physics

Phys. 2A, Phys. 2B, Phys. 2C, Phys. 2D; sixteen units. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the Department of Mathematics placement test permits them to start with Math. 20B or a higher course may take Phys. 2A in the fall quarter of the freshman year; all others will take Phys. 2A in the winter quarter of the freshman year. Students who received high grades in both calculus and physics in high school may substitute the major's sequence, Phys. 4A-B-C-D for Phys. 2A-B-C-D.

#### Introduction to Electrical Engineering

ECE 35, 45, 65; twelve units. These courses give a comprehensive introduction to electrical engineering.

#### Probability and Statistics

ECE 109; four units. This course can be taken in the sophomore year.

### 2. Upper-Division Requirements

All B.S. Computer engineering students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 110, CSE 120, 130, 131, 140, 140L, 141, and 141L; forty units.

In addition, all B.S. Computer engineering students have to fulfill the following upper-division ECE requirements.

#### Linear Systems

ECE 101; four units. The department recommends that this course be taken in the junior year.

## Electronic Circuits and Systems

ECE 102, ECE 108; eight units. The department recommends that these courses be taken in the junior year.

If students want to accelerate their program, they should consider taking CSE 100 or Math. 176, CSE 105 or Math. 166, and/or CSE 140 and 140L in the sophomore year.

### 3. Technical Electives

All B.S. Computer engineering students are required to take six technical electives for a total of twenty-four units. One of these courses must be either ECE 111 or ECE 118. Of the remaining five courses, four must be computer science and engineering or electrical and computer engineering upper-division or graduate courses.

The remaining course can be any computer science and engineering or electrical and computer engineering upper-division or graduate course, or any other course listed under the section titled Electives. Other restrictions in the selection of technical electives are also given in the section Electives.

### 4. B.S. Computer Engineering, Sample Program

FALL	WINTER	SPRING
<b>FRESHMAN YEAR</b>		
CSE 8A, CSE 8AL, or CSE 11	CSE 15L	CSE 21 or Math. 15B
Math. 20A	CSE 12	Math. 20C
GE	Math. 20B	GE
CSE 91	CSE 20 or Math. 15A	GE
<b>SOPHOMORE YEAR</b>		
CSE 30	CSE 110	CSE 140
Math. 20D	CSE 100 or Math. 176	CSE 140L

	GE	

#### Notes for Selecting and Scheduling Classes for B.S. Computer Engineering

(All courses must be taken for a letter grade.)

1. Advisory placement exam: Students may self-select which course they wish to take and are encouraged to take the advisory placement exam to help decide. Students with little computer experience are encouraged to take CSE 3.
3. Students without experience in programming

in a compiled language are advised to take CSE 8A and CSE 8AL, and then CSE 8B, instead of CSE 11. CSE 11 is faster paced version of CSE 8A, CSE 8AL, and CSE 8B. CSE 8B or CSE 11 must be taken before CSE 12.

- Computer Science Advanced Placement Credit: A Exam (Java Programming) two units:
  - Score of 4 exempts CSE 8A and CSE 8AL. Student should take CSE 11.
  - Score of 5 exempts CSE 11. Students should take CSE 12, CSE 8A/8AL, or CSE 8B, or CSE 11 may be taken concurrently with and CSE 20/ Math. 15A. Please obtain department approval for enrollment permission in CSE 20/Math. 15A at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu). CSE 15L and CSE 70 are new courses starting fall 2007.
- CSE 15L must be taken prior to or concurrently with CSE 12.
- Effective fall 2006, ECE 35 and ECE 45 are new courses in computer engineering. These courses replace ECE 35A and 35B, respectively.
- Students must complete six technical electives. Four of the six technical electives must be CSE or ECE upper-division courses.
- Students must complete ECE 111 or ECE 118 to meet the design requirement.
- Students must obtain approval to use a CSE graduate course for technical elective credit. Once a graduate course is used for an undergraduate degree that course may not be reused for a graduate degree. In addition, only four units of either a CSE 197, 198, or 199 may be used toward technical elective credit.
- One of the technical electives may be chosen from a list of approved electives. This list is at <http://www.cse.ucsd.edu/undergrad/degreeprograms/electives.html>. If you want to deviate from this list of approved electives, you must petition the CSE student advisor at: [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu).

### B.S. COMPUTER SCIENCE WITH A SPECIALIZATION IN BIOINFORMATICS

The explosion in biological knowledge spawned by the various genome projects has created entirely new fields and industries, and a need for trained computational biologists who are familiar with biology, mathematics, and computer sciences. The computer science and engineering department offers rigorous, interdisciplinary training in the new and rapidly evolving field of bioinformatics.

Bioinformatics refers to advanced computational and experimental methods that model the flow of information (genetic, metabolic, and regulatory) in living systems to provide an integrated understanding of the system properties of organisms.

This interdisciplinary major is offered by three other programs (Division of Biological Sciences, Department of Chemistry and Biochemistry, and Department of Bioengineering). The computer science and engineering requirements comprise of 152 units to be taken from the divisions of physical sciences, biology, and engineering.

### 1. Lower-Division Requirements

Lower-division requirements, sixty-four units: Students are expected to complete all lower-division requirements by the end of their sophomore year.

- Math. 20A, Math. 20B, Math. 20C, and Math. 20F, (16 units)
- Chem. 6A, Chem. 6B, Chem. 6C, and one Chem. lab (15 units)
- BILD 1, BILD 2, and BILD 94 (9 units)
- CSE 11, CSE 12, and CSE 21 or Math. 15B (12 units)
- Phys. 2A, Phys. 2B, and Phys. 2C (12 units)

### 2. Upper-Division Requirements

Upper-division requirements, eighty-eight units (includes five CSE technical electives)

- CSE 100 or Math. 176 (Data Structures), (4 units)
- CSE 101 or Math. 188 (Algorithms), (4 units)
- Chem. 140A–140B (Organic Chemistry), (8 units)
- Chem. 114B (Biochemical Energetics and Metabolism) or BIBC 102 (Structural and Metabolic Biochemistry), (4 units)
- BIBC 103 (Biochemical Techniques), (4 units)
- BICD 100 (Genetics), (4 units)
- BIMM 100 (Molecular Biology) or Chem. 114D (Molecular and Cellular Biochemistry), (4 units)
- BIMM 101 (Recombinant DNA Lab), (4 units)
- BICD 110 (Cell Biology), (4 units)
- BIBC 110 (Physical Biochemistry) or Chem. 127 (Physical Chemistry), (4 units)
- Five additional CSE upper-division electives (electives 1, 2, 3, 4, and 5).

At least one course from each of the three groups for a total of five electives:

- Group I: CSE 30, 111, 131A, 131B, 134A
- Group II: CSE 105, 150, 151, Math. 184A
- Group III: CSE 132A, 132B, 133

The bioinformatics series comprises the following six courses, twenty-four units:

- CSE 181 or BIMM 181 or BENG 181 (Molecular Sequence Analysis), (4 units)
- CSE 182 or BIMM 182 or BENG 182 or Chem. 182 (Biological Databases), (4 units)
- BENG 183 (Applied Genomic Technologies), (4 units)
- CSE 184 or BIMM 184 or BENG 184 (Computational Molecular Biology), (4 units)
- BIMM 185 (Bioinformatics lab), (4 units)
- Math. 186 (Probability and Statistics), (4 units)

### 3. B.S. Computer science with a specialization in bioinformatics, sample program

FALL	WINTER	SPRING
FRESHMAN YEAR		

CSE 8A/8AL + 8B or 111	CSE 12	BILD 942
Math. 20A	Math. 20B	Math. 20C
Chem. 6A	Chem. 6B	Chem. 6C
GE 1	BILD 1	Chem. 6BL
	GE 2	GE 3

### SOPHOMORE YEAR

CSE 21 or Math. 15B	Math. 20F	Chem. 140B
BILD 2	Phys. 2B	BIBC 103
Phys. 2A	Chem. 140A	Phys. 2C
GE 4	GE 5	GE 6

### JUNIOR YEAR

CSE 100 or Math. 1763	CSE 101 or Math. 188	CSE 1814
BICD 100	Math. 186	BIMM 101 or Chem. 112B
GE 7	BIBC 102 or Chem. 114B	BICD 110
GE 8	BIMM 100 or Chem. 114D	Chem. 127

### SENIOR YEAR

CSE 182	CSE 184	BIMM 185
BENG 183	Elec. 2	Elec. 4
Elec. 15	Elec. 3	Elec. 5
GE 9	GE 10	GE 11

1 Students may take the slower paced version, CSE 8A + CSE 8AL + CSE 8B, instead of CSE 11.

2 BILD 94 (1 unit seminar) is recommended in students first spring quarter of study at UCSD. This course gives an overview of issues and topics in bioinformatics.

3 CSE 30 prerequisite will be waived.

4 New courses for the bioinformatics program: CSE 181 is cross-listed with BIMM 181 and BENG 181; CSE 182 is cross-listed with BIMM 182, Chem. 182, and BENG 182; CSE 184 is cross-listed with BIMM 184 and BENG 184; and (BENG 183, BIMM 185, and Math. 186 are not cross-listed with any other courses).

5 Students must complete five CSE technical electives from the approved list.

### B.A. COMPUTER SCIENCE PROGRAM

The B.A. computer science program gives students more latitude in designing their course of study. The lower-division program is designed to provide a strong foundation in mathematics, physics, programming methodology and skills, and computer organization. Upper-division core courses deal with the theory and design of algorithms, hardware, and software. Students can gain additional breadth and/or depth in computer science and engineering by an appropriate selection of technical electives. By requiring fewer technical electives, the B.A. computer science program serves those students desiring more time for undergraduate studies outside their major subject.

The department requires a total of 116 units for the B.A. computer science program (not including the general-education requirements). There are three varieties of requirements: lower-division, upper-division, and technical electives.

Advisory placement exam for CSE 3, CSE 8A/8AL, and CSE 11: An advisory placement test is encouraged of all CSE majors to help accurately place students into the right starting point in the CSE undergraduate curriculum. This information is found at the following Web site: <http://www-cse.ucsd.edu/undergraduate-education.html>. Contact the CSE student affairs advising office at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu) if further assistance is needed.

## 1. Lower-Division Requirements

Students are expected to complete the following forty-eight units by the end of their sophomore year.

### Computer Science and Engineering

CSE 8B or CSE 11, CSE 12, CSE 15L, CSE 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, and CSE 91; twenty-four units.

**Note:** Students with little computer experience are encouraged to take CSE 3. Students without prior programming experience are advised to take CSE 8A, CSE 8AL, and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A, CSE 8AL, and CSE 8B, and requires experience in programming with a compiled language.

### Mathematics

Math. 20A, Math. 20B, Math. 20C, and Math. 20F; sixteen units.

### General Science

Phys. 2A and Phys. 2B, or Chem. 6A and Chem. 6B, or Chem. 6AH and Chem. BH, or BILD 1 and BILD 2, or BILD 3 and BICD 100; eight units.

Students who received high grades in both calculus and physics in high school may substitute the major's sequence, Phys. 4A-B-C for Phys. 2A-B-C.

## 2. Upper-Division Requirements

All B.A. computer science students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 110, CSE 120, 131, 140, 140L, 141, and 141L; forty units.

Students are expected to complete almost all of these courses by the end of their junior year. If students want to accelerate their program, they should consider taking CSE 100 or Math. 176, CSE 105 or Math. 166, and/or CSE 140 and 140L in the sophomore year.

## 3. Technical Electives

B.A. computer science students are required to take seven technical electives for a total of twenty-eight units. Five technical electives must be computer science and engineering upper-division or graduate courses.

Two technical electives (of the required seven technical electives) can be chosen from a wider set of courses that includes computer science and engineering upper-division courses, graduate courses, and other electives as listed under the section titled "Electives." Other restrictions in the selection of technical electives are also given in the section "Electives."

## 4. B.A. Computer Science, Sample Program starting with CSE 3

## Notes for Selecting and Scheduling Classes for B.A. Computer Science

(All courses must be taken for a letter grade.)

- Advisory placement exam: Students may self-select which course they wish to take and are encouraged to take the advisory placement exam to help decide. Students with little computer experience are encouraged to take CSE 3. Students without experience in programming in a compiled language are advised to take CSE 8A and CSE 8AL, and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A, CSE 8AL, and CSE 8B. CSE 8B or CSE 11 must be taken before CSE 12.
- Computer Science Advanced Placement Credit: A Exam (Java Programming) two units
  - Score of 4 exempts CSE 8A and CSE 8AL. Student should take CSE 11.
  - Score of 5 exempts CSE 11. Student should take CSE 12.
- CSE 8A/8AL, or CSE 8B, or CSE 11 may be taken concurrently with CSE 20/Math. 15A, Please obtain department approval for enrollment permission in CSE 20/Math. 15A at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu).
- CSE 15L and CSE 70 are new courses starting fall 2007.
- CSE 15L must taken prior to or concurrently with CSE 12.
- Effective fall 2010, CSE 70 is renumbered to CSE 110.
- Effective fall 2010, students must complete seven technical electives. Four of the seven technical electives must be CSE upper-division courses. Students can use a CSE graduate course for technical elective credit with approval. Once a graduate course is used for an undergraduate degree that course may not be reused for a graduate degree. In addition, only four units of CSE 197 may be used toward technical elective credit.
- Students may take use up to eight units of CSE 198, CSE 199, or CSE 199H to meet the CSE upper-division technical requirement.
- Two of the technical electives may be chosen from a list of approved electives. This list is at <http://www.cse.ucsd.edu/undergrad/degreeprograms/electives.html>. If you want to deviate from this list of approved electives, you must petition the CSE student advisor at [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu).

## ELECTIVES

The discipline of computer science and engineering interacts with a number of other disciplines in a mutually beneficial way. These disciplines include mathematics, electrical engineering, and cognitive science. The following is a list of upper-division courses from these and other disciplines that can be counted as technical electives.

## Restrictions

- 1. At most four units of CSE 197 may be used towards technical elective requirements.
- 2. CSE 195 cannot be used towards course requirements.
- 3. Undergraduate students must get instructor's permission and departmental stamp to enroll in a graduate course.
- 4. Students may not get duplicate credit for equivalent courses.
- 5. The UC San Diego General Catalog should be consulted for equivalency information and any restrictions placed on the courses.
- 6. Additional restrictions are noted below. Any deviation from this list must be petitioned.

## Computer Science with a Specialization in Bioinformatics

Students must petition department for technical elective credit not on approved list.

### Mathematics

All upper-division courses except Math. 168A (Math. 183—Computer Engineering majors only), 184A, and 195–199.

If a student has completed CSE 167, then he or she cannot get elective credit for Math. 155A. Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. No credit for any of these courses will be given if Math. 170A-B-C is taken. Students may receive credit for either one of the following: Math. 166 or CSE 105 (but not both), Math. 188 or CSE 101 (but not both), Math. 176 or CSE 100 (but not both).

Credit will be given for only one of the following: ECE 109 or Math. 183 or Econ. 120A.

### Electrical and Computer Engineering

All ECE upper-division courses except 195–199. Students may not get credit for both CSE 123A and ECE 158A or CSE 143 and ECE 165. Credit will be given for only one of the following: ECE 109 or Math. 183 or Econ. 120A.

### Cognitive Science

Sensation and Perception 101A; Learning, Memory, and Attention 101B, Language 101C, Distributed Cognition 102A, Cognitive Ethnography 102B, Cognitive Engineering 102C, Neuroanatomy and Physiology 107A, Systems Neuroscience 107B, Cognitive Neuroscience 107C, Programming Methods for Cognitive Science 108D, Neural Network Models of Cognitive I 108E, Advanced Programming Methods for Cognitive Science 108F, Human Computer Interaction 120, Human Computer Interaction Programming 121, Natural and Artificial Symbolic Representational Systems 170, Neural Network Models of Cognition II 181, Representation, Search, and the Web 188.

Students may not get credit for both CSE 150 and Advanced Programming Methods for Cognitive Science 108F.

## Mechanical and Aerospace Engineering

All upper-division MAE courses except MAE 140 (ONLY Computer Science majors may take MAE 140) and 195–199.

Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. Students may only get credit for one of the two courses, CSE 167 or MAE 152.

### Economics

Microeconomics 100A-B-C, Game Theory 109, Macroeconomics 110A-B-C, Mathematical Economics 113, Econometrics 120A-B-C, Applied Econometrics 121, Decisions Under Uncertainty 171, Introduction to Operations Research 172A-B-C, Economic and Business Forecasting 178.

Credit will be given for only one of the following: ECE 109 or Math. 183 or Econ. 120A.

### Linguistics

Phonetics 110, Phonology I 111, Phonology II 115, Morphology 120, Syntax I 121, Syntax II 125, Semantics 130, Mathematical Analysis of Language 160, Computers and Language 163, Computational Linguistics 165, Principles of Discourse and Dialog 169, Psycholinguistics 170, Language and the Brain 172, and Sociolinguistics 175.

### Engineering

Principles of Team Engineering 100, Team Engineering Laboratory 100L, Team Engineering 101.

### Computer Science and Computer Engineering

Students are eligible to receive six units of technical elective credit for completing a combination of ENG 100 (two units) and ENG 100L (two units). Students must complete one quarter of ENG 100 for two units, and two quarters of ENG 100L for a total of four units. With this combination, students will get credit for one technical elective. To receive credit for two technical electives, students must complete one more quarter of ENG 100L. This credit can be applied to fulfill the technical elective requirements.

### Music

Computer Music II 172, Audio Production: Mixing and Editing 173.

### Psychology

Introduction to Engineering Psychology 161.

## CSE HONORS PROGRAM

The CSE Honors Program encourages eligible undergraduate students to perform advanced study in their major. Students in the honors program work closely with faculty on an undergraduate research project, typically completed over two quarters. As a result, the honors program is excellent preparation for further study in a graduate program. Students who complete the honors program also have an honors distinction officially bestowed upon them upon graduation.

### Eligibility for Admission

In accordance with university Honors Program guidelines, to apply for the CSE honors program students must meet the following prerequisites:

- Junior-level standing in a CSE major

- 3.5 GPA in CSE major courses, 3.25 GPA overall
- Completion of CSE 101, CSE 105, and CSE 110
- Completion of at least twelve units of upper-division CSE courses at UCSD

## Application Procedure

To apply for admission to the CSE Honors Program, students must submit a formal application that includes the following information:

- Name of CSE faculty advisor sponsoring the project
- Project proposal (one page)
- Signature from the faculty advisor acknowledging that the faculty member has agreed to advise the student in the honors program, and corroborates the specifics of the project
- Submit the application no later than the end of fall quarter of senior year. Submission during spring quarter of the junior year is strongly encouraged.

The application form is available online from the CSE department Web site and from the CSE undergraduate advising office. Admission to the honors program will be formally approved by the CSE honors committee based upon the materials provided in the application.

## Completion Requirements

In accordance with university Honors Program guidelines, to complete the CSE Honors Program students must meet the following requirements upon graduation:

- 3.25 GPA in a CSE major
- Eight units of CSE 199H with a GPA of 3.0 (letter grade of B) or higher
- Written honors thesis
- Presentation of honors project
- Signature from faculty advisor on an honors completion form
- Completion of requirements by the end of the spring quarter of graduation

Depending on students' performance on their honors project, students are eligible to receive the following honors designations on their diploma:

- "With distinction": Complete the eight units of CSE 199H with a GPA of 3.0 or higher
- "With high distinction": Complete the eight units of CSE 199H with a GPA of 3.5 or higher
- "With highest distinction": Complete the eight units of CSE 199H with a GPA of 3.8 or higher

Students must write a thesis describing their honors research project. The thesis must have the content, rigor, and format of scholarly publications in computer science and engineering. The faculty advisor must have reviewed and approved the honors thesis prior to submission by the student.

Students must orally present their project as a requirement for the honors program. Students have many opportunities for fulfilling this requirement:

- UCSD Annual Undergraduate Research Conference
- JSOE Engineering Undergraduate Research Konference & Assembly (EUREKA)
- An ORU research review or workshop (e.g., Calit2, CNS, CWC, CCMS, ITA Center)
- A conference or workshop presentation
- A graduate research seminar

The faculty advisor can also provide an alternative presentation opportunity.

## Unit Considerations

The CSE HonorsP does not increase the units required for graduation in a CSE major. Students participating in the Honors Program may apply eight units in CSE 199H for the equivalent of two technical elective courses for their major. Students may also apply unit credit in CSE 199H towards the cluster requirement in the undergraduate program.

## MINOR AND PROGRAM OF CONCENTRATION

The CSE minor requires successful completion of a total of nine CSE courses. Lower-division courses are CSE 8B or CSE 11, CSE 12, CSE 20, CSE 21, and CSE 30. The remaining four CSE courses are CSE 100, CSE 101, and two additional CSE upper-division courses subject to enforcement of prerequisites.

### CS Minor

Three-year plan for students starting with CSE 8A

FALL	WINTER	SPRING
<b>1st Year</b> CSE 8A and CSE 8AL	CSE 8B	CSE 12
<b>2nd Year</b> CSE 20	CSE 21	CSE 30
<b>3rd Year</b> CSE 100 CSE Elective	CSE 101	CSE Elective

### CS Minor

Three-year plan for students starting with CSE 11

FALL	WINTER	SPRING
<b>1st Year</b> CSE 11	CSE 20	CSE 12
<b>2nd Year</b> CSE 21	CSE 30	CSE 100
<b>3rd Year</b> CSE 101	CSE Elective	CSE Elective

### Scheduling Notes

Students without any programming experience are advised to take CSE 3 and CSE 5A before taking CSE 8A and CSE 8AL. Concurrent enrollment is required in CSE 8A and CSE 8AL. Students may also start with CSE 11, but they should be aware that CSE 11 is a faster paced version of CSE 8A, CSE 8AL, and CSE 8B, and requires experience in programming with a compiled language.

Students should consult their college provost's office concerning the rules for the minor or program of concentration.

## Restriction

Effective fall 2000, mathematics/computer science majors will not be allowed the minor in computer science.

## COMPUTING COURSES FOR NON-MAJORS

The department offers a slow-pace course providing a practical introduction to computers, computation, and programming: CSE 5A—an introduction to structured programming using the C/Java programming language. We also offer an introduction in fluency in information technology: CSE 3—an introduction to basic information students need to deal with information technology. It is more of a concepts course than a programming course, but some simple programming will be done as part of the teaching of concepts.

## ADMISSION TO MAJOR

### Freshmen Students

Freshmen students are invited to declare the CSE computer science, computer engineering, or computer science with a specialization in bioinformatics major. Starting fall 2008 the Department of CSE removed the "Impacted/Closed Status" and admission restrictions for freshmen applicants. This means the Department of CSE will accept all students that apply to the Department of CSE and are admitted by the UC San Diego Admissions Office.

Furthermore, freshmen students that start at UC San Diego as undeclared or in another major may also switch into a computer science or computer engineering major. Students may use the Major/Minor link under Tools at <http://tritonlink.ucsd.edu> to make this change.

### Major choices for your selection

**B.A. Computer Science (CS28)**

**B.S. Computer Science (CS26)**

**B.S. Computer Science with a Specialization in Bioinformatics (CS27)**

**B.S. Computer Engineering (CS25)**

Admission to the department as a major, transfer, or minor is in accordance with the general requirements established by the Jacobs School of Engineering.

### Transfer Students

Transfer students are invited to declare the CSE computer science, computer engineering, or computer science with a specialization in bioinformatics majors. Starting fall 2008 the Department of CSE removed the "Impacted/Closed Status" and admission restrictions for transfer applicants. This means the Department of CSE will accept all students that apply to the Department of CSE and are admitted by the UC San Diego Admissions Office.

Furthermore, transfer students that start at UC San Diego as undeclared or in another major may also switch into a computer science or computer engineering major. Students may use the Major/Minor link under Tools at <http://tritonlink.ucsd.edu> to make this change.

### Major choices for your selection

**B.A. Computer Science (CS28)**

**B.S. Computer Science (CS26)**

**B.S. Computer Science with a Specialization in Bioinformatics (CS27)**

**B.S. Computer Engineering (CS25)**

## Preparation for Success

To reduce the amount of time needed to complete degree requirements, transfer students should try to complete as many prerequisite courses they can take at a community college before starting at UC San Diego.

### Recommended courses and recommended 3.0 GPA

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series (Phys. 2A-B-C) [For computer engineering majors]
- Highest level of introductory computer programming language (i.e. Java, C or C++) course offerings at the community college

## B.S. in Computer Science with a Specialization in Bioinformatics

Freshmen and transfer students are invited to declare the CSE bioinformatics major. Starting fall 2008 the Department of CSE has removed the "Impacted/Closed Status" and admission restrictions for freshman and transfer applicants. This means the Department of CSE will accept all students that apply to the Department of CSE and are admitted by the UC San Diego Admissions Office.

Furthermore, freshmen and transfer students that start at UC San Diego as undeclared or in another major may also switch into the B.S. in Computer Science with a Specialization in Bioinformatics major (major code CS27). Students may use the Major/Minor link under Tools at <http://tritonlink.ucsd.edu> to make this change.

It is strongly recommended that students meet with an advisor in the Department of CSE to discuss requirements for the bioinformatics program.

## Advanced Placement Credit: Application to Major Requirements

Effective January 14, 2005, the following CSE advanced placement equivalencies have been approved (a four-unit maximum for both tests).

- Computer Science A Exam (Java Programming), two units:
  - Score of 4 = exempt CSE 8A and 8AL; student should take CSE 11
  - Score of 5 = exempt CSE 11
- Computer Science AB Exam (Java Programming, and Data Structures and Object-Oriented Programming), four units:
  - Score of 4 or 5 = exempt CSE 11
  - Score of 5 = exempt CSE 12 with department approval

## ENROLLMENT IN CSE COURSES

All CSE and non-CSE majors may enroll in lower- and upper-division CSE courses. Students must meet course prerequisites.

**Please note:** Student demands exceed capacity in many CSE graduate courses. Accordingly, many CSE graduate courses may have enrollment restrictions, which give priority to students in the following order:

1. CSE M.S. and CSE Ph.D. students.
2. All others, with permission of the Department of Computer Science and Engineering.

### *Enrolling in Upper-Division Courses*

The Department of Computer Science and Engineering will attempt to provide sufficient sections of all lower-division courses. Students will, however, be screened to ensure that they meet all course enrollment restrictions.

Admission to upper-division courses will be restricted to students having completed all prerequisites with a C– or better (or consent of the instructor.) You may also contact [ugradinfo@cs.ucsd.edu](mailto:ugradinfo@cs.ucsd.edu) for more information.

### **UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP)**

CSE majors are encouraged to participate in the UC Education Abroad Program (EAP) or UCSD's Opportunities Abroad Program (OAP). Subject to approval by the faculty director of the major, courses taken through EAP/OAP will be accepted for credit toward the major. Students interested in studying abroad should see a CSE undergraduate program advisor to discuss appropriate courses and programs for their plan of study. The advising office is located in Engineering Building Unit #3 (EBU 3B), Room 1231.

Information on EAP/OAP is given in the "Education Abroad Program" section of the *UC San Diego General Catalog*. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at <http://programsabroad.ucsd.edu>. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

## GRADUATION REQUIREMENTS

All major requirements and technical electives except CSE 197, 198, or 199 must be taken for a letter grade. To graduate, a grade-point average of 2.0 will be required in upper-division courses in the major, including technical electives. In addition, each student must satisfy general-education course requirements determined by the student's college, as well as major requirements determined by the department. The five colleges at UCSD require widely different numbers of general-education courses. Each student should choose his or her college carefully, considering the special nature of the college and breadth of education, realizing that some colleges require considerably more courses than others.

## THE GRADUATE PROGRAM

The graduate program offers master of science and doctor of philosophy degrees in computer science and computer engineering. To be accepted into either course of study, a student should have a B.A./B.S. degree in computer science, computer engineering, or a related area, or be able to demonstrate an equivalent competency.

The graduate program is concerned with fundamental aspects of computation. The computer science specialization is divided among the following areas:

- Algorithms and complexity
- Artificial intelligence
- Bioinformatics
- Computer architecture and compilers
- Computer graphics and computer vision
- Databases and information management
- Embedded systems and software
- High-performance computing
- Programming systems
- Security and cryptography
- Software engineering
- Systems and networking
- Ubiquitous Computing
- VLSI/CAD (computer-aided design)

The computer engineering specialization places a greater emphasis on hardware and the design of computer systems.

Admission to the graduate program is done through the Office of Graduate Admissions, Department of CSE. The application deadline is in December. Admissions are always effective the following fall quarter. For admission deadline and requirements, please refer to the departmental Web page: <http://www.cse.ucsd.edu/gradedu/admissions/graduateadmissions.html>.

Admission decisions for the M.S. and Ph.D. programs are made separately. A current M.S. student who wishes to enter the Ph.D. program must submit a petition, including a new statement of purpose and three new letters of recommendation, to the CSE Admissions Committee.

## FIVE-YEAR BACHELOR'S-MASTER'S PROGRAM

Undergraduate students in the Department of Computer Science and Engineering who are enrolled in the B.S. or B.A. Computer Science or B.S. Computer Engineering degree programs, and who have a cumulative GPA of a 3.4 and also a GPA of 3.4 in at least seven core courses, are eligible to apply for the Five-Year Bachelor's-Master's Degree Program. Students must apply four quarters before graduation. Acceptance into this program is an honor that carries with it practical benefits—the graduate application process is simplified (no GREs required), and students accepted into this program can be admitted fall, winter, and spring quarter, based upon availability of openings in the program. Advanced

students are given access to graduate level courses and have the opportunity to do graduate level research earlier under the direct supervision of UC San Diego's faculty, and students are able to complete the B.A., B.S., and M.S. degree within a five-year time period. Courses taken can be used toward either the B.A., B.S., or M.S. degree, but not counted toward both degrees. Additional information and applications can be obtained by contacting the CSE Student Affairs Office, EBU 3B, Room 1234. For an application, visit <http://www.cse.ucsd.edu/gradedu/degreeprograms/bachelormasterscombined.html>.

## COMPUTER SCIENCE PROGRAM

### MASTER OF SCIENCE PROGRAM

#### *Thesis or Comprehensive Exam*

The department offers the master of science degree in computer science. The degree can be pursued under either the Thesis Plan I or the Comprehensive Examination Plan II. There are two options for the Comprehensive Exam Plan II: the Standard Comprehensive Option or Interdisciplinary Comprehensive Option. Each plan requires forty-nine units of work. For full-time students, all the requirements can be completed within two years.

#### Required Courses

Students entering the M.S. Program in Computer Science will choose an area of concentration. Each concentration is an area in which the faculty has significant research expertise. A typical concentration is a collection of three courses that are designed to give the student in-depth training in the chosen field. Additionally, to ensure breadth, all students are required to take four core courses.

Core courses must be completed with an average grade of B. The four core courses required of all students are as follows:

CSE 202. Algorithms Design and Analysis

CSE 221. Operating Systems

CSE 240A. Principles of Computer Architecture

CSE 292. Faculty Research Seminar

The department expects to offer concentrations in the following areas:

Artificial Intelligence

Bioinformatics

Communication Networks

Computer Architecture and Compilers

Computer Graphics and Vision

Cryptography and Security

Databases

Design Automation for Microelectronic Designs

Distributed and Fault-Tolerant Computing

Embedded Systems and Software

Human-Computer Interaction

Parallel and Scientific Computing

Software Engineering

Storage Systems

Ph.D. Preparation

The specific courses involved in each of the concentrations are detailed in a separate bulletin which is available in the Graduate Student Affairs Office, EBU 3B 1234 or on the Web at <http://www.cse.ucsd.edu/gradedu/advising/newstudentinfo/mastersconcentration.html>.

## Electives

In addition to completing the required core courses and fulfilling either the thesis or comprehensive examination requirements described above, the student must also complete additional approved courses to bring the total number of units to forty-nine. The number of units of electives depends upon whether the student chooses Plan I or Plan II. The electives consist of other CSE graduate courses or courses from a list of approved electives. Units obtained in the courses CSE 293, 298, 299, 500, 501, 599, and any of the seminar courses CSE 209, 229, 259, 269, 290, and 294 do not count toward the elective requirement.

### Plan I: Thesis Option

This plan involves both course work and research, culminating in the preparation of a thesis. The student must take twelve units of CSE 298 (Independent Study) to fulfill the research requirement, and a thesis based on research must be written and subsequently reviewed by the thesis committee. This committee, which is appointed by the dean of Graduate Studies, consists of three faculty members, with at least two members from within the CSE department.

### Computer Science—Thesis, Plan I Forty-nine units

Core: CSE 202, CSE 221, CSE 240A, CSE 292

Concentration: twelve units in one of the concentration areas designated by the department. Concentration courses must be taken for a letter grade

Technical electives: twelve units (minimum of two courses in CSE, minimum of two courses graduate)

Research: twelve units of CSE 298

Capstone: thesis

### Plan II: Comprehensive Examination

Under this plan, the student must pass the comprehensive examination designed to test the student's knowledge in basic computer science material. The examination can normally be passed with a thorough knowledge of topics covered in the undergraduate and first-year graduate computer science programs. Each student is allowed three attempts to pass the examination. The student must secure at least a master's-level pass in the comprehensive examination. More information regarding the comprehensive examination can be found in a separate document provided by the CSE graduate office. In particular, the comprehensive examination is structured around the three CSE core areas: algorithms and data structures; operating systems; and computer architecture and digital logic design.

### Project

Students electing Plan II are required to execute a project with an advisor while enrolled in four units of CSE 293.

### Computer Science, Comprehensive Exam, Plan II Forty-nine units

Standard option:

Core: CSE 202, CSE 221, CSE 240A, CSE 292

Primary concentration: twelve units in one of the concentration areas designated by the department (current list is appended to this document). Concentration courses must be taken for a letter grade.

Technical electives: twenty units (minimum of three courses in CSE, minimum of three graduate level courses)

Project: four units of CSE 293

Capstone: comprehensive exam

Interdisciplinary option:

Core: CSE 202, CSE 221, CSE 240A, CSE 292

Primary concentration: twelve units in one of the concentration areas designated by the department (current list is appended to this document). Concentration courses must be taken for a letter grade.

Secondary concentration: twelve units in one of the approved areas outside of CSE. The twelve units of the secondary concentration must be taken from only one area and approved by the M.S. Committee: the Departments of Cognitive Science, Electrical and Computer Engineering, Mechanical and Aerospace Engineering, Structural Engineering, or the Rady School of Management. Technical electives: eight units (within CSE, graduate level)

Project: four units of CSE 293

Capstone: comprehensive exam

## COMPUTER ENGINEERING PROGRAM

The CSE computer engineering program offers master of science and doctoral degrees with the degree title computer science and engineering (computer engineering). Computer engineering explores the engineering analysis and design aspects of algorithms and technology. Specific research areas include computer systems, signal processing systems, architecture, networks, computer-aided design, fault tolerance, and data storage systems.

### MASTER OF SCIENCE PROGRAM

The degree can be pursued under either the Thesis Plan I or the Comprehensive Examination Plan II. There are two options for the Comprehensive Exam Plan II: the Standard Comprehensive Option or Interdisciplinary Comprehensive Option. Each plan requires forty-nine units of work. For full-time students, all the requirements must be completed within two years. Students with an adequate background in computer engineering can complete the M.S. program within four to five quarters of full-time study.

#### Plan I: Thesis Option

This plan of study involves both course work and research, culminating in the preparation of a thesis. A thesis based on research must be written and subsequently reviewed by a committee consisting of three faculty members, with at least two members from within the CSE department. The committee is appointed by the dean of Graduate Studies. Twelve units of CSE 298 must be taken with a faculty member in CSE who agrees to act as advisor for the thesis to fulfill the research requirement. A total of forty-nine units of credit is required, as follows:

### Computer Engineering—Thesis, Plan I Forty-nine units

Core: Core courses must be completed with an average grade of B. The four core courses required of all students are as follows:

CSE 292

Three of the following courses: CSE 202, CSE 221, CSE237A, CSE 240A, CSE 241A

Concentration courses: twelve units from a list of computer engineering courses maintained by the department

Electives: twelve units (minimum of eight units taken within CSE, minimum of eight units graduate level)

Research: twelve units of CSE 298

Capstone: thesis

#### Plan II: Comprehensive Examination

There are two options for the Computer Engineering, Comprehensive Exam Plan II: the Standard Comprehensive Option or Interdisciplinary Comprehensive Option.

In order to receive the M.S. degree in computer engineering under this plan, a student must complete the course requirements listed below and pass the comprehensive examination.

The comprehensive examination is designed to test the student's knowledge in basic computer science and engineering material. The examination can normally be passed with a thorough knowledge of topics covered in the undergraduate and the first-year graduate computer science or computer engineering programs. Each student is allowed three attempts to pass the examination. The student must secure at least a master's-level pass in the comprehensive examination. This examination is the same for both the computer science and the computer engineering graduate programs. More information about the comprehensive examination can be obtained in a separate document from the CSE graduate office.

### Computer Engineering—Comprehensive, Plan II Forty-nine units

Core: core courses must be completed with an average grade of B. The four core courses required of all students are as follows:

CSE 292

Three of the following courses: CSE 202, CSE 221, CSE237A, CSE 240A, CSE 241A

Standard option:

- Primary concentration: twelve units from a list of computer engineering courses maintained by the department. Concentration courses must be taken for a letter grade.
- Technical electives: twenty units (minimum of twelve units in CSE, minimum of twelve units at graduate level)
- Project: four units of CSE 293
- Capstone: comprehensive exam
- Interdisciplinary option:
- Primary concentration: twelve units from a list of computer engineering courses maintained by the department. Concentration courses must be

taken for a letter grade.

- Secondary concentration: twelve units within one of the approved areas outside of CSE. The twelve units of the secondary concentration must all be taken from only one area and approved by the M.S. Committee: the Departments of Cognitive Science, Electrical and Computer Engineering, Mechanical and Aerospace Engineering, Structural Engineering, and the Rady School of Management.
- Technical electives: eight units (within CSE, graduate level)
- Project: four units of CSE 293
- Capstone: comprehensive exam

## DOCTORAL PROGRAMS

### PH.D. DEGREE PROGRAMS IN COMPUTER SCIENCE AND COMPUTER ENGINEERING

CSE offers doctor of philosophy degrees in computer science and in computer engineering, providing a research-oriented education in preparation for a research, industrial, or entrepreneurial career. These programs explore both the fundamental aspects and application of computation, spanning theory, software, hardware, and applications. Our particular areas of research expertise include

- algorithms
- artificial intelligence
- bioinformatics
- complexity theory
- computer architecture/compiler
- VLSI/CAD and embedded systems
- databases and information management
- distributed systems and networking
- graphics and vision
- high performance computing
- mobile computing
- security and cryptography
- software engineering

### Competency Requirement

The competency requirement ensures that Ph.D. students already have or will acquire the necessary undergraduate background for Ph.D. studies. Competency at the advanced undergraduate level may be demonstrated by any of the following methods:

1. providing evidence of previous undergraduate or graduate course work; or
2. taking an undergraduate course at UCSD; or
3. taking the corresponding graduate course with consent of instructor; or
4. passing the final exam of an undergraduate course at UCSD.

Ph.D. students must demonstrate competency with respect to the following six undergraduate courses at UCSD. The corresponding graduate courses are listed in parentheses.

- CSE 101. Design and Analysis of Algorithms (CSE 202 Algorithm Design and Analysis)**
- CSE 105. Theory of Computability (no corresponding graduate course)**
- CSE 120. Principles of Computer Operating Systems (CSE 221 Operating Systems)**
- CSE 130. Programming Languages: Principles and Paradigms (CSE 230. Principles of Programming Languages)**
- CSE 131. Compiler Construction (CSE 231. Advanced Compiler Design)**
- CSE 141. Introduction to Computer Architecture (CSE 240A. Principles of Computer Architecture)**

A graduate course taken to satisfy the competency requirement may also be used to satisfy the breadth, depth, or elective course requirement.

### Course Requirements

The course requirement is intended to ensure that students are exposed to (1) fundamental concepts and tools, (2) advanced, up-to-date views in topics outside their area (the *breadth requirement*), and (3) a deep, up-to-date view of their research area (the *depth requirement*). Ph.D. students are expected to complete the breadth and depth requirements within the first three years of the program. All required course work must be taken for a letter grade, with the exception of CSE 291 (Topics in CSE), CSE 292 (Faculty Research Seminar), CSE 299 (Research), and CSE 500 (Teaching Assistantship), for which only S/U grades are allowed.

Units obtained from a single course cannot count more than once towards satisfying the requirement in each of the breadth, depth, or elective areas. Ph.D. students who have taken similar courses elsewhere may petition for a waiver of the required courses or for substitution by alternative courses.

### Breadth Requirement

The breadth requirement ensures that Ph.D. students share knowledge of fundamental concepts and tools from across broad areas of computer science and computer engineering. Each Ph.D. student must take each of these courses for a letter grade and maintain an overall breadth course GPA of 3.3 (except for CSE 292, for which a letter grade is not assigned). A student will typically complete all breadth courses within the first two years of graduate study.

Breadth courses are categorized into three areas: Theory, Systems, and Applications.

Students in **Computer Science** must take six (courses in the areas of Theory, Systems, and Applications: two in Theory, two in Systems, and two in Applications)

Students in **Computer Engineering** must take six courses in the areas of Theory, Systems, and Applications following one of two plans:

- Plan A: one in Theory, three in Systems, and two in Applications
- or
- Plan B: two in Theory, three in Systems, and one in Applications

Please refer to the department Web site for a complete list of all eligible courses by breadth area.

### Depth Requirements

The depth requirement ensures that a Ph.D. student acquires some depth of knowledge in a general research area early in his or her career. Each Ph.D. student must select one of the following areas as his or her depth area. The student must take three courses (twelve units) from this depth area. The student must take each of these courses for a letter grade and maintain an overall depth course GPA of 3.4. However, one of these three courses can be a CSE Topics course (CSE 291) or an Independent Study (CSE 299), which are not taken for a letter grade.

The department will maintain a list of appropriate courses for each depth area.

The depth areas are

- Theoretical Computer Science
- Programming Languages, Compilers, and Software Engineering
- Computer Systems
- Database Systems
- Computer Engineering
- Artificial Intelligence
- Graphics and Vision
- Bioinformatics

### Electives

In addition to the above, each student must take three additional courses (twelve units) including at most eight units of 299, with no grade lower than C-. Upper-division undergraduate courses satisfying the competency requirement may be used as electives. Undergraduate upper-division courses CSE 291 and CSE 299 may also be used to fulfill this requirement. Units obtained in the CSE 209 series, 229 series, 239 series, 249 series, 259 series, 269 series, 279 series, 289 series, 290, 292, 293, 294, 298, and 500, and 599 do not count toward the elective requirement.

### Research Exam Requirement

The research exam is intended to verify three components of the student's preparation for Ph.D. research: (1) breadth of comprehension sufficient to enable computer science research in areas beyond the topic(s) of the research exam and thesis; (2) ability to perform critical study, analysis, and writing in a focused area; and (3) research experience.

The research exam has both an oral part and a written part. The oral part of the research exam is distinct from, and cannot be combined with the University Qualifying Exam. Grading criteria for each part, and standards for passing, are available from the CSE department graduate office.

The research exam is conducted by a committee of three faculty members approved by the Graduate Committee and the chair of the department. At least two committee members must be CSE senate faculty. The student's advisor is not a member of the committee, but is free to attend the research examination. The normative time for passing the research exam is by the end of the second year of study. A petition to the CSE Graduate Committee is required

to take the research examination after the student's seventh quarter of study. The research exam must be passed by the end of the third year if the student is to continue in the Ph.D. Program. Passing the research exam may enable Ph.D. students to receive the M.S. degree if they have otherwise met their M.S. degree requirements concurrently. Ph.D. students who do not pass the exam after two attempts will be given the opportunity to write a thesis in order to receive a terminal M.S. degree. The M.S. degree is only granted to those students who do not already hold an M.S. degree prior to entering the CSE department at UCSD.

### Teaching Assistant Requirement

All students enrolled in the Ph.D. Program must have one quarter of training as a teaching assistant. This is a formal degree requirement and must be completed before the student is permitted to graduate. The requirement is met by serving as a 50 percent teaching assistant and taking CSE 500 (Teaching Assistantship).

### Qualifying Examination and Advancement to Candidacy

The qualifying examination is a requirement for advancement to candidacy. Prior to taking the qualifying examination a student must have satisfied the departmental competency, course, and research exam requirements and must have been accepted by a CSE faculty member as a Ph.D. thesis candidate. All doctoral students are expected to advance to candidacy by the end of their third year, and advancement is mandatory by the end of the fourth year. The examination is administered by a doctoral committee appointed by the dean of Graduate Studies and Research and consists of faculty from CSE and other departments. More information on the composition of the committee can be obtained from the CSE graduate office. The examination is taken after the student and his or her advisor have identified a topic for the dissertation and an initial demonstration of feasible progress has been made. The candidate is expected to describe his or her accomplishments to date as well as future work.

### Dissertation

The dissertation defense is the final Ph.D. examination. A candidate for the Ph.D. is expected to write a dissertation and defend it in an oral examination conducted by the doctoral committee.

### Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

### Financial Aid

Financial support is available to qualified graduate students in the form of fellowships, loans, and assistantships. Anticipated stipends for half-time research assistantships are \$2,100 per month, with the possibility of full-time employment during the summer months. For a half-time teaching assistantship, the anticipated stipend will be \$1,840 per

month. Requests for application forms for admission and financial support should be directed to the Department of Computer Science and Engineering.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

A tentative schedule of course offerings is available from the Department of CSE each spring for the following academic year. The tentative schedule for 2010–11 is also found at <http://www.cse.ucsd.edu/undergrad/courses/ugradnextyearcourses.html>.

### LOWER-DIVISION

#### CSE 3. Fluency in Information Technology (4)

Introduces the concepts and skills necessary to effectively use information technology. Includes basic concepts and some practical skills with computer and networks. **Prerequisite:** none.

#### CSE 4GS. Mathematical Beauty in Rome (4)

Exploration of topics in mathematics and engineering as they relate to classical architecture in Rome, Italy. In depth geometrical analysis and computer modeling of basic structures (arches, vaults, domes), and on-site studies of the Colosseum, Pantheon, Roman Forum, and St. Peter's Basilica. **Prerequisites:** Math. 10A or Math. 20A; departmental approval, and co-requisite of CSE 6GS.

#### CSE 6GS. Mathematical Beauty in Rome Lab (4)

Companion course to CSE 4GS where theory is applied and lab experiments are carried out "in the field" in Rome, Italy. For final projects, students will select a complex structure (e.g., the Colosseum, the Pantheon, St. Peter's, etc.) to analyze and model, in detail, using computer-based tools. **Prerequisites:** Math. 10A or Math. 20B; departmental approval, and co-requisite of CSE 4GS.

#### CSE 5A. Introduction to Programming I (4)

(Formerly CSE 62A) Introduction to algorithms and top-down problem solving. Introduction to the C language including functions, arrays, and standard libraries. Basic skills for using a PC graphical user interface operating system environment. File maintenance utilities are covered. (A student may not receive credit for CSE 5A after receiving credit for CSE 10 or CSE 11 or CSE 8B or CSE 9B or CSE 62B or CSE 65.) **Prerequisite:** A familiarity with high-school level algebra is expected, but this course assumes no prior programming knowledge.

#### CSE 8A. Introduction to Computer Science: JAVA (3)

Introductory computer science course designed for students interested in computing. No prior programming experience is assumed. Learn fundamental concepts of applied computer science using media computation. Must be taken concurrently with CSE 8AL. CSE 8A is part of a three-track course (CSE 8A, CSE 8AL, and CSE 8B) that is equivalent to CSE 11. Students should take CSE 8B to complete this track. Students who have taken CSE 8B or CSE 11 may not take CSE 8A. Recommended prep: High school algebra and familiarity with computing concepts. **Prerequisite:** co-requisite of CSE 8AL.

#### CSE 8AL. Introduction to Computer Science: JAVA Lab (1)

Exercises in the theory and practice of computer science under the supervision of an instructor. Hands-on experience with designing, editing, compiling, and executing programming constructs and applications. Must be taken concurrently with CSE 8A. CSE 8AL is part of a three-track course (CSE 8A, CSE 8AL, and CSE 8B) that is equivalent to CSE 11. Students should take CSE 8B to complete this track. Students who have taken CSE 8B or CSE 11 may not take CSE 8AL. Recommended prep: High school algebra and familiarity with computing concepts. **Prerequisite:** co-requisite of CSE 8A.

#### CSE 8B. Introduction to Computer Science: Java B (4)

Continuation of the Java language. Continuation of programming techniques. More on inheritance. Exception handling. CSE 8A is part of a three-track course (CSE 8A, CSE 8AL, and CSE 8B) that is equivalent to CSE 11. Students who have taken CSE 11 may not take CSE 8B. Recommended prep: High school algebra and familiarity with computing concepts or CSE 8A and CSE 8AL.

#### CSE 11. Introduction to Computer Science and Object-Oriented Programming: Java (4)

Introduction to computer science and programming using the Java language. Basic UNIX. Modularity and abstraction. Documentation, testing and verification techniques. Basic object-oriented programming including inheritance and dynamic bind. Exception handling. Event-driven programming. Experience with AWT library or other similar library. **Prerequisites:** high-school algebra and a course in programming in a compiled language. Majors only.

#### CSE 12. Basic Data Structures and Object-Oriented Design (4)

Basic data structures including stacks, queues, lists, binary trees, hash tables. Basic object-oriented design including encapsulation, polymorphism, classes as the implementation of abstract data types. Memory management, pointers, recursion, and big- $O$  notation. Uses the C/C++ and Java programming language. **Prerequisites:** CSE 8B or CSE 11, and CSE 15L.

#### CSE 15L. Tools and Technique Laboratory (2)

Hands-on exploration of software development tools and techniques. Investigation of the scientific process as applied to software development and debugging. Emphasis is on weekly hands-on laboratory experiences, development of laboratory notebooking techniques as applied to software design. **Prerequisites:** CSE 8B, or CSE 11. Concurrent enrollment with CSE 12.

#### CSE 20. Introduction to Discrete Mathematics (4)

Basic discrete mathematical structure: sets, relations, functions, sequences, equivalence relations, partial orders, and number systems. Methods of reasoning and proofs: propositional logic, predicate logic, induction, recursion, and pigeonhole principle. Infinite sets and diagonalization. Basic counting techniques; permutation and combinations. Applications will be given to digital logic design, elementary number theory, design of programs, and proofs of program correctness. Credit not offered for both Math. 15A and CSE 20. Equivalent to Math 15A. **Prerequisites:** CSE 8A or CSE 8B or CSE 11. CSE 8B or CSE 11 may be taken concurrently with CSE 20/ Math. 15A.

#### CSE 21. Mathematics for Algorithms and Systems (4)

This course will provide an introduction to the discrete mathematical tools needed to analyze algorithms and systems. Enumerative combinatorics: basic counting principles, inclusion-exclusion, and generating functions. Matrix notation. Applied discrete probability. Finite automata. Credit not offered for both Math. 15B and CSE 21. Equivalent to Math 15B. **Prerequisite:** CSE 20 or Math. 15A.

#### CSE 30. Computer Organization and Systems Programming (4)

Introduction to organization of modern digital computers—understanding the various components of a computer and their interrelationships. Study of a specific architecture/machine with emphasis on systems programming in C and Assembly languages in a UNIX environment. **Prerequisite:** CSE 12, CSE 15L, or consent of instructor.

#### CSE 70. Software Engineering (4)

Introduction to software development and engineering methods, including specification, design, implementation, testing, and process. An emphasis on team development, agile methods, and use of tools such as IDE's, version control, and test harnesses. **Prerequisite:** CSE 12.

#### CSE 80. UNIX Lab (2)

The objective of the course is to help the programmer create a productive UNIX environment. Topics include customizing the shell, file system, shell programming, process management, and UNIX tools. **Prerequisite:** CSE 8B or CSE 11. Majors only.

**CSE 86. C++ for Java Programmers (2)**

Helps the Java programmer to be productive in the C++ programming environment. Topics include the similarities and differences between Java and C++ with special attention to pointers, operator overloading, templates, the STL, the preprocessor, and the C++ Runtime Environment. **Prerequisite:** CSE 12 or consent of instructor.

**CSE 91. Perspectives in Computer Science and Engineering (2)**

A seminar format discussion led by CSE faculty on topics in central areas of computer science, concentrating on the relation among them, recent developments, and future directions. **Prerequisites:** majors only.

**CSE 92. Reading and Writing in Computer Science (2)**

This course helps students to read and write technical English better, and to read and write software better. They write short papers responding to a CSE-related book, learn the basics of functional programming, and do a project using a functional language. **Prerequisites:** CSE 12. Majors only.

**CSE 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. **Prerequisite:** none.

**CSE 99. Independent Study in Computer Science and Engineering (4)**

Independent reading or research by special arrangement with a faculty member. **Prerequisites:** lower-division standing. Completion of 30 units at UCSD with a UCSD GPA of 3.0. Special Studies form required. Department stamp required. Consent of instructor and approval of the department. Majors only.

**UPPER-DIVISION****CSE 100. Advanced Data Structures (4)**

High-performance data structures and supporting algorithms. Use and implementation of data structures like (un) balanced trees, graphs, priority queues, and hash tables. Also memory management, pointers, recursion. Theoretical and practical performance analysis, both average case and amortized. Uses C++ and STL. Credit not offered for both Math. 176 and CSE 100. Equivalent to Math. 176. **Prerequisite:** CSE 21 or Math. 15B or consent of instructor.

**CSE 101. Design and Analysis of Algorithms (4)**

Design and analysis of efficient algorithms with emphasis of non-numerical algorithms such as sorting, searching, pattern matching, and graph and network algorithms. Measuring complexity of algorithms, time and storage. NP-complete problems. Credit not offered for both Math. 188 and CSE 101. Equivalent to Math 188. **Prerequisites:** CSE 12, CSE 21 or Math. 15B or Math. 100A or Math. 103A and CSE 100 or Math. 176. Majors only.

**CSE 102. Storage System Architectures (2)**

Descriptive and analytic introduction to storage system architectures. Disk drive storage media organization and run-time performance; external indexing data structures B-trees and linear hashing algorithms. Disk arrays, RAID data organization, reliability, sparing, data declustering, and video servers. **Prerequisites:** CSE 100 or Math. 176, CSE 120, CSE 123A, or consent of the instructor. Majors only.

**CSE 103. A Practical Introduction to Probability and Statistics (4)**

Distributions over the real line. Independence, expectation, conditional expectation, mean, variance. Hypothesis testing. Learning classifiers. Distributions over  $R^n$ , covariance matrix. Binomial, Poisson distributions. Chernoff bound. Entropy. Compression. Arithmetic coding. Maximal likelihood estimation. Bayesian estimation. CSE 103 is not duplicate credit for ECE 109, ECON 120A, or Math. 183. **Prerequisites:** Math. 20A and Math 20B.

**CSE 105. Theory of Computability (4)**

An introduction to the mathematical theory of computability. Formal languages. Finite automata and regular

expression. Push-down automata and context-free languages. Computable or recursive functions: Turing machines, the halting problem. Undecidability. Credit not offered for both Math. 166 and CSE 105. Equivalent to Math 166. **Prerequisites:** CSE 12, CSE 21 or Math. 15B or Math. 100A or Math. 103A. Majors only.

**CSE 107. Introduction to Modern Cryptography (4)**

Topics include private and public-key cryptography, block ciphers, data encryption, authentication, key distribution and certification, pseudorandom number generators, design and analysis of protocols, zero-knowledge proofs, and advanced protocols. Emphasizes rigorous mathematical approach including formal definitions of security goals and proofs of protocol security. **Prerequisites:** CSE 21 or Math. 15B, CSE 101 or Math. 188, CSE 105 or Math. 166. Majors only.

**CSE 110. Software Engineering (4)**

Introduction to software development and engineering methods, including specification, design, implementation, testing, and process. An emphasis on team development, agile methods, and use of tools such as IDE's, version control, and test harnesses. CSE 70 is renumbered to CSE 110: students may not receive credit for both CSE 70 and CSE 110. **Prerequisite:** CSE 12, CSE 21, or Math. 15B.

**CSE 111. Object Oriented Software Design (4)**

Introduction to object-oriented analysis and design. Object-oriented modeling methods for analysis and design, object-oriented general design paradigms, object-oriented design techniques. Cyclic development of object-oriented systems. **Prerequisites:** CSE 8B or CSE 9B or CSE 10 or CSE 11, CSE 12, and CSE 100 or Math. 176. Majors only.

**CSE 112. Advanced Software Engineering (4)**

This course will cover software engineering topics associated with large systems development such as requirements and specifications, testing and maintenance, and design. Specific attention will be given to development tools and automated support environments. **Prerequisite:** CSE 111.

**CSE 118. Ubiquitous Computing (4)**

Explores emerging opportunities enabled by cheap sensors and networked computing devices. Small research projects will be conducted in teams, culminating in project presentations at the end of the term. Section will cover material relevant to the project, such as research methods, software engineering, teamwork, and project management. **Prerequisite:** any course from the following: CSE 131, CSE 132B, Cog Sci 102C, Cog Sci 121, Cog Sci 184, ECE 111, ECE 118, ECE 191, ECE 192, COMT 111B, COMT 115, or ICAM.; or consent of instructor.

**CSE 120. Principles of Computer Operating Systems (4)**

Basic functions of operating systems; basic kernel structure, concurrency, memory management, virtual memory, file systems, process scheduling, security and protection. **Prerequisites:** CSE 100 or Math. 176 and CSE 101 or Math. 188. Majors only.

**CSE 121. Operating Systems: Architecture and Implementation (4)**

(Formerly CSE 171B.) Case study of architecture and implementation of a selected modern operating system. In-depth analysis through a detailed study of source code. Topics include process creation, context-switching, memory allocation, synchronization mechanisms, interprocess communication, I/O buffering, device drivers, and file systems. **Prerequisite:** CSE 120.

**CSE 123. Computer Networks (4)**

(Renumbered from CSE 123A.) Introduction to concepts, principles, and practice of computer communication networks with examples from existing architectures, protocols, and standards with special emphasis on the Internet protocols. Layering and the OSI model; physical and data link layers; local and wide area networks; datagrams and virtual circuits; routing and congestion control; internetworking. Transport protocols. Credit may not be received for both CSE 123A and 158A or CSE 123B and 158B. **Prerequisites:** CSE 120 or consent of instructor. Majors only.

**CSE 124. Networked Services (4)**

(Renumbered from CSE 123B.) The architecture of modern networked services, including data center design,

enterprise storage, fault tolerance, and load balancing. Protocol software structuring, the Transmission Control Protocol (TCP), remote procedure calls, protocols for digital audio and video communication, overlay and peer-to-peer systems, secure communication. Credit may not be received for both CSE 124 and ECE 158B. Students may not receive credit for both CSE 123B and CSE 124. **Prerequisites:** CSE 120 or consent of instructor. Majors only.

**CSE 125. Software System Design and Implementation (4)**

Design and implementation of large, complex software systems involving multiple aspects of CSE curriculum. Emphasis is on software system design applied to a single, large group project with close interaction with instructor. **Prerequisites:** senior standing with substantial programming experience, and consent of instructor. Department stamp required. Majors only.

**CSE 127. Introduction to Computer Security (4)**

Topics include basic cryptography, security/threat analysis, access control, auditing, security models, distributed systems security, and theory behind common attack and defense techniques. The class will go over formal models as well as the bits and bytes of security exploits. **Prerequisites:** CSE 21 or Math. 15B, and CSE 120. Majors only.

**CSE 128. Concurrency (4)**

Specification of concurrent programs safety, liveness, and fairness: producer-consumer; mutual exclusion; atomic read/writes; semaphores; monitors; distributed algorithms and memory coherency; programming with threads; concurrency in popular programming languages and operating systems. **Prerequisites:** CSE 120. Majors only.

**CSE 130. Programming Languages: Principles and Paradigms (4)**

(Formerly CSE 173.) Introduction to programming languages and paradigms, the components that comprise them, and the principles of language design, all through the analysis and comparison of a variety of languages (e.g., Pascal, Ada, C++, PROLOG, ML.) Will involve programming in most languages studied. **Prerequisites:** CSE 12 and CSE 100 or Math. 176. Majors only.

**CSE 131. Compiler Construction (4)**

(Formerly CSE 131B.) Introduction to the compilation of programming languages, practice of lexical and syntactic analysis, symbol tables, syntax-directed translation, type checking, code generation, optimization, interpretation, and compiler structure. (Students may receive repeat credit for CSE 131A and CSE 131B by completing CSE 131.) **Prerequisites:** CSE 100 or Math. 176, CSE 105 or Math. 166, CSE 110, and CSE 130.

**CSE 132A. Database System Principles (4)**

Basic concepts of databases, including data modeling, relational databases, query languages, optimization, dependencies, schema design, and concurrency control. Exposure to one or several commercial database systems. Advanced topics such as deductive and object-oriented databases, time allowing. **Prerequisites:** CSE 100 or Math. 176. Majors only.

**CSE 132B. Database Systems Applications (4)**

Design of databases, transactions, use of trigger facilities and datablades. Performance measuring, organization of index structures. **Prerequisite:** CSE 132 or CSE 132A or equivalent.

**CSE 134A. Web Server Languages (4)**

Design and implementation of interactive World Wide Web documentation using server-side programs. Languages covered include HTML, Perl, and JavaScript. Other languages as time allows. **Prerequisites:** CSE 100 or Math. 176. Majors only.

**CSE 134B. Web Client Languages (4)**

Design and implementation of interactive World Wide Web clients using helper applications and plug-ins. The main language covered will be Java. **Prerequisites:** CSE 100 or Math. 176. Majors only.

**CSE 135. Server-side Web Applications (4)**

Design and implementation of dynamic Web-based applications. Multi-tier architecture, scripting languages, SQL, XML, session handling, non-browser clients, Web services,

and scalability, security, and usability in the Web context. **Prerequisites:** CSE 100 or Math. 176. Majors only.

**CSE 136. Enterprise-class Web Applications (4)**  
Design and implementation of large scale Web-based applications. Modeling organizational needs, design and revision management, J2EE or similar software platforms, Web and application server functionality, reuse of object-oriented components, model-view-controller and other design patterns, clustering, load-balancing, fault-tolerance, authentication, usage accounting. **Prerequisites:** CSE 135. Majors only.

**CSE 140. Components and Design Techniques for Digital Systems (4)**  
(Formerly CSE 170A) Design of Boolean logic and finite state machines; two-level, multi-level combinational logic design, combinational modules and modular networks, Mealy and Moore machines, analysis and synthesis of canonical forms, sequential modules. **Prerequisites:** CSE 20 or Math. 15A, CSE 30. CSE 140L must be taken concurrently. Majors only.

**CSE 140L. Digital Systems Laboratory (2)**  
(Formerly CSE 175B) Implementation with computer-aided design tools for combinational logic minimization and state machine synthesis. Hardware construction of a small digital system. **Prerequisites:** CSE 20, CSE 30. CSE 140 must be taken concurrently.

**CSE 141. Introduction to Computer Architecture (4)**  
Introduction to computer architecture. Computer system design. Processor design. Control design. Memory systems. **Prerequisites:** CSE 140, CSE 140L, or consent of the instructor. CSE 141L should be taken concurrently. Majors only.

**CSE 141L. Project in Computer Architecture (2)**  
Hands-on computer architecture project aiming to familiarize students with instruction set architecture, and design of process. Control and memory systems. **Prerequisites:** CSE 140, CSE 140L, or consent of the instructor. CSE 141 should be taken concurrently. Majors only.

**CSE 142. Advanced Digital Logic Design (4)**  
(Formerly CSE 170C) Digital logic optimization; functional decomposition and symmetric functions; reliable design and fault diagnosis; structure of sequential machines; asynchronous circuit design. Assignments using logic synthesis tools. **Prerequisites:** CSE 140, CSE 140L.

**CSE 143. Microelectronic System Design (4)**  
VLSI process technologies; circuit characterization; logic design styles; clocking strategies; computer-aided design tools; subsystem design; design case studies. System design project from hardware description, logic synthesis, physical layout to design verification. Students may not receive credit for both CSE 143 and ECE 161B. **Prerequisites:** CSE 140 and CSE 141. Majors only.

**CSE 145. Embedded System Design Project (4)**  
Project class building an embedded computing system. Learn fundamental knowledge of microcontrollers, sensors, and actuators. Introduction to the hardware and software tools to build project in a team environment and end-to-end system building. **Prerequisite:** CSE 30.

**CSE 146. Introduction to Reliable Hardware (4)**  
Fault models and tests, combinational circuit test generation, fault collapsing, fault simulation, synchronous sequential circuit testing, functional testing, memory testing. **Prerequisites:** CSE 140 and CSE 140L, or consent of instructor. Majors only.

**CSE 148. Advanced Processor Architecture Design Project (4)**  
Students will use hardware description language tools to add advanced architectural features to a basic processor design. These features may include pipelining, superscalar execution, branch prediction, and advanced cache features. Designs will be implemented in programmable logic devices. **Prerequisites:** CSE 141, CSE 141L, or consent of instructor. Majors only.

**CSE 150. Introduction to Artificial Intelligence: Search and Reasoning (4)**  
Search algorithms including BFS, DFS, iterative deepening and A\*, randomized search algorithms including Walksat,

syntax and semantics of first-order logic (FOL), knowledge representation in FOL including reasoning, basic reasoning with probabilities, basic Bayesian learning. **Prerequisites:** CSE 100 or Math. 176 or consent of instructors. Majors only.

**CSE 151. Introduction to Artificial Intelligence: Statistical Approaches (4)**  
Reasoning with probabilities, reasoning and learning with Bayesian networks, decision-making under uncertainty, sequential decision-making, statistical learning methods, and reinforcement learning. **Prerequisites:** CSE 100 or Math. 176 or consent of instructor. Majors only.

**CSE 152. Introduction to Computer Vision (4)**  
The goal of computer vision is to compute scene and object properties from images and video. This introductory course includes feature detection, image segmentation, motion estimation, object recognition, and 3-D shape reconstruction through stereo, photometric stereo, and structure from motion. **Prerequisites:** Math. 20F, CSE 100 or Math. 176, CSE 101 or Math. 188. Knowledge of C, C++ or Matlab programming. Majors only.

**CSE 160. Introduction to Parallel Computing (4)**  
Introduction to high performance parallel computing: parallel architecture, algorithms, software, and problem-solving techniques. Areas covered: Flynn's taxonomy, processor-memory organizations, shared and non-shared memory models: message passing and multithreading, data parallelism; speedup, efficiency and Amdahl's law, communication and synchronization, isoeficiency and scalability. Assignments given to provide practical experience. **Prerequisites:** CSE 100 or Math. 176. Majors only.

**CSE 166. Image Processing (4)**  
Principles of image formation, analysis, and representation. Image enhancement, restoration, and segmentation; stochastic image models. Filter design, sampling, Fourier and wavelet transforms. Selected applications in computer graphics and machine vision. **Prerequisites:** Math. 20F, CSE 100 or Math. 176. Majors only.

**CSE 167. Computer Graphics (4)**  
(Formerly CSE 177) Representation and manipulation of pictorial data. Two-dimensional and three-dimensional transformations, curves, surfaces. Projection, illumination, and shading models. Raster and vector graphic I/O devices; retained-mode and immediate-mode graphics software systems and applications. **Prerequisites:** Math. 2EA/20F and CSE 100 or Math. 176. Majors only.

**CSE 168. Computer Graphics II: Rendering (4)**  
Weekly programming assignments that will cover graphics rendering algorithms. During the course the students will learn about ray tracing, geometry, tessellation, acceleration structures, sampling, filtering, shading models, and advanced topics such as global illumination and programmable graphics hardware. **Prerequisites:** CSE 167 or concurrent enrollment. Majors only.

**CSE 169. Computer Animation (4)**  
Advanced graphics focusing on the programming techniques involved in computer animation. Algorithms and approaches for both character animation and physically based animation. Particular subjects may include skeletons, skinning, key framing, facial animation, inverse kinematics, locomotion, motion capture, video game animation, particle systems, rigid bodies, clothing, and hair. **Prerequisites:** a good understanding of linear algebra. CSE 167 or consent of instructor. Majors only.

**CSE 171. User Interface Design (4)**  
Explores usability, representation and coordination issues in user interface design with some focus on distributed cooperative work, semiotics, and the interplay between socio-cognitive and technical issues. Most examples and homework involve the Web. **Prerequisites:** CSE 8B or 11, CSE 20 or Math. 15A, and CSE 100 or Math. 176. Majors only.

**CSE 175. Social and Ethical Issues in Information Technology (4)**  
Social aspects of information technology, with an emphasis on ethical issues. Topics include ethical theories, privacy and security, spam, e-commerce, the digital divide, open source software, medical informatics, actor-network theory, and some neo-classical economics. **Prerequisites:** CSE 100 or Math. 176. Majors only.

**CSE 181. Molecular Sequence Analysis (4)**  
This course covers the analysis of nucleic acid and protein sequences, with an emphasis on the application of algorithms to biological problems. Topics include sequence alignments, database searching, comparative genomics, and phylogenetic and clustering analyses. Pairwise alignment, multiple alignment, DNS sequencing, scoring functions, fast database search, comparative genomics, clustering, phylogenetic trees, gene finding/DNA statistics. **Prerequisites:** CSE 100 or Math. 176, CSE 101 or Math. 188, BIBM 100 or Chem. 114D. Bioinformatics majors only. CSE 181 is crosslisted with BIBM 181 and BENG 181.

**CSE 182. Biological Databases (4)**  
This course provides an introduction to the features of biological data, how that data are organized efficiently in databases, and how existing data resources can be utilized to solve a variety of biological problems. Relational databases, object oriented databases, ontologies, data modeling and description, survey of current biological database with respect to above, implementation of a database focused on a biological topic. **Prerequisites:** CSE 100 or Math. 176. Bioinformatics majors only. CSE 182 is crosslisted with BIBM 182, Chem. 182, and BENG 182.

**CSE 184. Computational Molecular Biology (4)**  
This advanced course covers the application of machine learning and modeling techniques to biological systems. Topics include gene structure, recognition of DNA and protein sequence patterns, classification, and protein structure prediction. Pattern discovery, Hidden Markov models/support vector machines/neural network/profiles. Protein structure prediction, functional characterization or proteins, functional genomics/proteomics, metabolic pathways/gene networks. **Prerequisites:** BIBM 181 or BENG 181 or CSE 181, BIBM 182 or CSE 182 or CHEM 182. Bioinformatics majors only. CSE 184 is crosslisted with BIBM 184, BENG 184, and Chem. 184.

**CSE 190. Topics in Computer Science and Engineering (4)**  
Topics of special interest in computer science and engineering. Topics may vary from quarter to quarter. May be repeated for credit with the consent of instructor. **Prerequisites:** consent of instructor. Department stamp required. Majors only.

**CSE 191. Seminar in CSE (1-4)**  
A seminar course on topics of current interest. Students, as well as, the instructor will be actively involved in running the course/class. This course cannot be counted toward a technical elective. **Prerequisites:** consent of instructor. Department stamp required. Majors only.

**CSE 195. Teaching (4)**  
Teaching and tutorial assistance in a CSE course under the supervision of the instructor. (P/NP grades only.) **Prerequisites:** consent of the department chair. Department stamp required.

**CSE 197. Field Study in Computer Science and Engineering (4, 8, 12, or 16)**  
Directed study and research at laboratories away from the campus. (P/NP grades only.) **Prerequisite:** consent of the instructor and approval of the department. Department stamp required.

**CSE 198. Directed Group Study (2 or 4)**  
Computer science and engineering topics whose study involves reading and discussion by a small group of students under the supervision of a faculty member. (P/NP grades only.) **Prerequisites:** consent of the instructor. Department stamp required.

**CSE 199. Independent Study for Undergraduates (2 or 4)**  
Independent reading or research by special arrangement with a faculty member. (P/NP grades only.) **Prerequisites:** consent of the instructor. Department stamp required.

## GRADUATE

**CSE 200. Computability and Complexity (4)**  
Computability review, including halting problem, decidable sets, r.e. sets, many-one reductions; TIME( $t(n)$ ), SPACE( $s(n)$ ) and general relations between these classes;

L, P, PSPACE, NP; NP—completeness; hierarchy theorems; RP, BPP. **Prerequisite:** CSE 105 or equivalent.

#### **CSE 201A. Advanced Complexity (4)**

Polynomial-time hierarchy (PH); BPP in second level of PH; Savitch's theorem; NL=coNL; non-uniform and circuit complexity; some circuit lower bounds; IP=PSPACE; probabilistic proof checking (PCP); Application of PCP to approximation hardness; Complexity of proof systems; Parallel complexity classes NC and AC; P-completeness. **Prerequisite:** CSE 200.

#### **CSE 202. Algorithm Design and Analysis (4)**

The basic techniques for the design and analysis of algorithms. Divide-and-conquer, dynamic programming, data structures, graph search, algebraic problems, randomized algorithms, lower bounds, probabilistic analysis, parallel algorithms. **Prerequisite:** CSE 101 or equivalent.

#### **CSE 203A. Advanced Algorithms (4)**

Modern advances in design and analysis of algorithms. Exact syllabus varies. Topics include approximation, randomized algorithms, probabilistic analysis, heuristics, online algorithms, competitive analysis, models of memory hierarchy, parallel algorithms, number-theoretic algorithms, cryptanalysis, computational geometry, computational biology, network algorithms, VLSI CAD algorithms. **Prerequisite:** CSE 202.

#### **CSE 204A. Combinatorial Optimization (4)**

Linear programming, simplex method, duality, and column generating technique. Integer programming introduced via the Knapsack problem. The periodic nature of all integer programs. Why the round-off technique cannot work in general. The solution of the Knapsack problem in polynomial time since nonbasic columns form a group. **Prerequisite:** CSE 202 or linear algebra or consent of instructor.

#### **CSE 205A. Logic in Computer Science (4)**

(Formerly CSE 208D) Mathematical logic as a tool in computer science. Propositional logic, resolution, first-order logic, completeness and incompleteness theorems with computational viewpoint, finite model theory, descriptive complexity, logic programming, non-monotonic reasoning, temporal logic. Applications to databases, automatic theorem proving, program verification, and distributed systems. **Prerequisite:** CSE 200 or consent of instructor.

#### **CSE 206A. Lattice Algorithms and Applications (4)**

(Formerly CSE 207C) Introduction to the algorithmic theory of point lattices (A.K.A. algorithmic geometry of numbers), and some of its most important applications in cryptography and cryptanalysis. Topics usually include: LLL basis reduction algorithm, cryptanalysis of broadcast RSA, hardness of approximating lattice problems. **Prerequisites:** CSE 202, CSE 200, or concurrent.

#### **CSE 207. Modern Cryptography (4)**

Private and public key cryptography, introduction to reduction based proofs of security, concrete security, block ciphers, pseudorandom functions and generators, symmetric encryption, asymmetric encryption, computational number theory, RSA and discrete log systems, message authentication, digital signatures, key distribution and key management. **Prerequisite:** CSE 202 or consent of instructor.

#### **CSE 207C. Lattices and Cryptology (4)**

Renumbered to CSE 206A (see above).

#### **CSE 208. Advanced Cryptography (4)**

Zero-knowledge, secure computation, session-key distribution, protocols, electronic payment, one-way functions, trapdoor permutations, pseudorandom bit generators, hardcore bits. **Prerequisites:** CSE 202, CSE 200, and CSE 207 or consent of instructor.

#### **CSE 208D. Logic in Computer Science (4)**

Renumbered to CSE 205A (see above).

#### **CSE 209A. Topics/Seminar in Algorithms, Complexity, and Logic (1–4)**

Topics of special interest in algorithms, complexity, and logic to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

#### **CSE 209B. Topics/Seminar in Cryptography (1–4)**

Topics of special interest in cryptography to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

#### **CSE 210. Principles of Software Engineering (4)**

(Formerly CSE 264A.) General principles in modern software engineering. Both theoretical and practical topics are covered. Theoretical topics include proofs of correctness, programming language semantics, and theory of testing. Practical topics include structured programming, modularization techniques, design of languages for reliable programming, and software tools. **Prerequisites:** CSE 100, 131A, 120, or consent of instructor.

#### **CSE 211. Software Testing and Analysis (4)**

Survey of testing and analysis methods. Introduction to advanced topics in area as well as traditional production methods. Topics include inspections and reviews, formal analysis, verification and validation standards, non-statistical testing, statistical-testing and reliability models, coverage methods, testing and analysis tools, and organization management and planning. Methods special to special development approaches such as object-oriented testing will also be described. **Prerequisite:** undergraduate major in computer science or extensive industrial experience.

#### **CSE 218. Advanced Topics in Software Engineering (4)**

This course will cover a current topic in software engineering in depth. Topics in the past have included software tools, impacts of programming language design, and software system structure. (S/U grades permitted.) **Prerequisite:** none.

#### **CSE 221. Operating Systems (4)**

Operating system structures, concurrent computation models, scheduling, synchronization mechanisms, address spaces, memory management protection and security, buffering, streams, data-copying reduction techniques, file systems, naming, caching, disk organization, mapped files, remote file systems, case studies of major operating systems. **Prerequisites:** CSE 120 and 121, or consent of instructor.

#### **CSE 222. Communication Networks (4)**

Renumbered to CSE 222A (see below).

#### **CSE 222A. Computer Communication Networks (4)**

(Formerly CSE 222.) Computer communication network concepts, protocols, and architectures, with an emphasis on an analysis of algorithms, protocols, and design methodologies. Topics will include layering, error control, flow control, congestion control, switching and routing, quality of service management, mobility, naming, security, and selected contemporary topics. **Prerequisite:** CSE 123A or consent of instructor.

#### **CSE 222B. Internet Algorithmics (4)**

(Formerly CSE 228H.) Techniques for speeding up Internet implementations including system restructuring, new algorithms, and hardware innovations. Topics include: models for protocols, systems and hardware; efficiency principles; applying these principles to deriving techniques for efficient implementation of common endnode and router functions. **Prerequisite:** CSE 123A or CSE 222A or consent of instructor.

#### **CSE 223. Distributed Systems (4)**

Renumbered to CSE 223A (see below).

#### **CSE 223A. Principles of Distributed Computing (4)**

(Formerly CSE 223.) Logical and physical time, snapshot protocols, failure models, replication strategies, consensus and reliable broadcast, self-stabilization, atomic commit. **Prerequisite:** CSE 221 or consent of instructor.

#### **CSE 223B. Distributed Computing and Systems (4)**

Efficient primitives for distributed operating systems and high-performance network servers, including concurrent and event-driven server architectures, remote procedure calls, and load shedding. Distributed naming, directory, and storage services, replication for fault tolerance, and security in distributed systems. **Prerequisites:** CSE 221, CSE 222A, or consent of instructor.

#### **CSE 225. High Performance Distributed Computing (and Computational Grids) (4)**

Architecture of high performance distributed systems (e.g., frameworks and middleware). High performance distributed objects (DCOM, Corba, Java Beans) and networking with crosscut issues for performance, availability, and performance predictability. Scalable servers, metacomputing, and scientific computing. **Prerequisites:** CSE 121 and CSE 123A or consent of instructor.

#### **CSE 226. Storage Systems (4)**

(Formerly CSE 228B.) Secondary and tertiary storage systems, optical and magnetic media, performance analysis, modeling, reliability, redundant arrays of inexpensive disks, striping, log and maximum distance separable data organizations, sparing. **Prerequisite:** CSE 221 or consent of instructor.

#### **CSE 227. Computer Security (4)**

Security and threat models, risk analysis, authentication and authorization, auditing, operating systems security, access control mechanisms, protection mechanisms, distributed systems/network security, security architecture, electronic commerce security mechanisms, security evaluation. **Prerequisite:** CSE 221 or consent of instructor.

#### **CSE 228B. Storage Systems (4)**

Renumbered to CSE 226 (see above).

#### **CSE 228H. Internet Algorithmics (4)**

Renumbered to CSE 222B (see above).

#### **CSE 229A. Topics/Seminar in Computer Systems (1–4)**

Discussion on problems of current research interest in computer systems. Possible areas of focus include: distributed computing, computational grid, operating systems, fault-tolerant computing, storage systems, system services for the World Wide Web. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

#### **CSE 229B. Topics/Seminar in Networks and Communication (1–4)**

Discussion on problems of current research interest in computer networks and communication. Possible areas of focus include: wide-area networking, wireless networks, the Internet, computational grid, operating systems, fault-tolerant computing, storage systems. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

#### **CSE 229C. Topics/Seminar in Computer Security (1–4)**

Discussion on problems of current research interest in computer security. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

#### **CSE 230. Principles of Programming Languages (4)**

(Formerly CSE 273.) Functional versus imperative programming. Type systems and polymorphism; the ML language. Higher order functions, lazy evaluation. Abstract versus concrete syntax, structural and well-founded induction. The lambda calculus, reduction strategies, combinators. Denotational semantics, elementary domain theory. **Prerequisite:** CSE 130 or equivalent, or consent of instructor.

#### **CSE 231. Advanced Compiler Design (4)**

(Formerly CSE 264C.) Advanced material in programming languages and translator systems. Topics include compilers, code optimization, and debugging interpreters. **Prerequisites:** CSE 100, 131A–B, or consent of instructor.

#### **CSE 232. Principles of Database Systems (4)**

(Formerly CSE 264D.) Database models including relational, hierarchic, and network approaches. Implementation of databases including query languages and system architectures. **Prerequisite:** CSE 100 or consent of instructor.

#### **CSE 232B. Database System Implementation (4)**

A hands-on approach to the principles of databases implementation. Algebraic rewriters/optimizers, query processors, triggers. Beyond centralized relational databases. **Prerequisite:** CSE 232.

**CSE 233. Database Theory (4)**

Theory of databases. Theory of query languages, dependency theory, deductive databases, incomplete information, complex objects, object-oriented databases, and more. Connections to logic and complexity theory including finite model theory and descriptive complexity. **Prerequisite:** CSE 200.

**CSE 237A. Introduction to Embedded Computing (4)**

Embedded system technologies including processors, DSP, memory, and software. System interfacing basics, communication strategies, sensors, and actuators. Mobile and wireless technology in embedded systems. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains. **Prerequisites:** basic courses in digital hardware, algorithms and data structures, elementary calculus, and probability; or consent of instructor.

**CSE 237B. Software for Embedded Systems (4)**

Embedded computing elements, device interfaces, time-critical IO handling. Embedded software design under size, performance, and reliability constraints. Software timing and functional validation. Programming methods and compilation for embeddable software. Embedded runtime systems. Case studies of real-time software systems. **Prerequisites:** CSE 237A; or basic courses in programming, algorithms and data structures, elementary calculus, discrete math, computer architecture; or consent of instructor.

**CSE 237C. Validation and Testing of Embedded Systems (4)**

Embedded system building blocks including IP cores. Co-simulation. Formal verification using model checking. Verification environments. Test challenges in core integration: compliance, feature, random, and collision testing. Core access and test integration. Interface-based verification and standards. **Prerequisites:** CSE 237A; or basic courses in algorithms and data structures, elementary calculus, discrete math, symbolic logic, computer architecture; or consent of instructor.

**CSE 237D. Design Automation and Prototyping for Embedded Systems (4)**

System representation and modeling. Abstract and language models. Simulation as a modeling activity. Computational and hw/sw system prototypes. System analysis using models. Constraint and interface modeling. Behavioral compilation and synthesis. **Prerequisites:** CSE 237A; or basic courses in digital logic design, algorithms and data structures, elementary calculus, discrete math, symbolic logic, computer architecture; or consent of instructor.

**CSE 239A. Topics/Seminar in Databases (1-4)**

Discussion on problems of current research interest in databases. Possible areas of focus include: core database issues, data management on the Web, data integration, new database models and applications, formal methods in databases. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

**CSE 240. Principles in Computer Architecture I (4)**

Renumbered to CSE 240A (see below).

**CSE 240A. Principles of Computer Architecture (4)**

(Formerly CSE 240.) This course will cover fundamental concepts in computer architecture. Topics include instruction set architecture, pipelining, pipeline hazards, bypassing, dynamic scheduling, branch prediction, superscalar issue, memory-hierarchy design, advanced cache architectures, and multiprocessor architecture issues. **Prerequisite:** CSE 141 or consent of instructor.

**CSE 240B. Parallel Computer Architecture (4)**

This course covers advanced topics in parallel computer architecture, including on-chip and off-chip interconnection networks, cache coherence, cache consistency, hardware multithreading, multi-core and tiled architectures. It incorporates the latest research and development on parallel architectures and compilation techniques for those architectures. CSE 240A recommended. **Prerequisite:** graduate standing.

**CSE 240C. Advanced Microarchitecture (4)**

This course covers advanced topics in computer architecture. It incorporates the latest research and development on topics such as branch prediction, instruction-level parallelism, cache hierarchy design, speculative multithreading, reliable architectures, and power-management techniques. CSE 240A recommended. **Prerequisite:** graduate standing.

**CSE 240D. Application Specific Processors (4)**

This course covers advanced topics in design concepts and implementation principles of application specific processors, including embedded system design principles and application specific processors, application specific instruction set processors, domain specific processor architectures, embedded memories and dynamically customizable processors. CSE 240A recommended. **Prerequisite:** graduate standing.

**CSE 241A/ECE 260B. VLSI Integration of Computing Circuitry (4)**

VLSI integrated-circuit building blocks of computing systems, and their implementation. Computer-aided design and performance simulations, design exercises and projects. Devices, standard cells and interconnects, clocking, power/ground distribution, arithmetic modules, memories. Methodologies and tradeoffs in system implementation. **Prerequisites:** layout (CSE 165 or ECE 260A) and logic design (CSE 140 or ECE 111), or consent of instructor.

**CSE 242A. Integrated Circuit Layout Automation (4)**

Couplings among timing, circuits and spatial embedding in nanometer-scale CMOS design. The role, and key problems, of physical layout in IC implementation. Example topics: RTL-to-GDSII methodologies, analyses and estimations, partitioning, floor planning, placement, routing, special net routing, cell generation, compaction. **Prerequisite:** CSE 241A or consent of instructor.

**CSE 243A. Introduction to Synthesis Methodologies in VLSI CAD (4)**

Hardware software co-design, architectural level synthesis, control synthesis and optimization, scheduling, binding, register and bus sharing, interconnect design, module selection, combinational logic optimization, state minimization, state encoding, and retiming. **Prerequisite:** CSE 241A or consent of instructor.

**CSE 244A. VLSI Test (4)**

Design for test, testing economics, defects, failures and faults, fault models, fault simulation, automatic test pattern generation, functional testing, memory, PLA, FPGA, microprocessor test, and fault diagnosis. **Prerequisite:** CSE 241A or consent of instructor.

**CSE 244B. Testable and Fault Tolerant Hardware Design (4)**

Scan path design, BIST architectures, test point insertion, self-checking circuits, test and fault tolerance in architectural synthesis, reconfigurable fault tolerant hardware, and SOC test design. **Prerequisite:** CSE 244A or consent of instructor.

**CSE 245. Computer Aided Circuit Simulation and Verification (4)**

This course is about the computer algorithms, techniques, and theory used in the simulation and verification of electrical circuits. **Prerequisite:** CSE 241A or consent of instructor.

**CSE 246. Computer Arithmetic Algorithms and Hardware Design (4)**

Number representation, fixed point adders, subtractors, and multipliers; modified booth's recoding, high-radix multiplication, (non)restoring dividers, SRT division, high-radix dividers, division by convergence, square-rooting, floating point arithmetic, rounding schemes, errors and error control, and floating point adders, subtractors, multipliers, dividers. **Prerequisite:** CSE 241A or consent of instructor.

**CSE 247. Application Specific and Reconfigurable Computer Architecture (4)**

This course covers architecture concepts used to tailor processors to a specific application or sets of applications. It covers Field-Programmable Gate Arrays (FPGAs), various forms of Application Specific Integrated Circuit (ASIC) designs, Application Specific Integrated Processors (ASIP), and augmenting customizable VHDL cores. **Prerequisite:** CSE 241A or consent of instructor.

**CSE 248. Algorithmic and Optimization Foundations for VLSI CAD (4)**

Algorithmic techniques and optimization frameworks for large-scale, difficult optimizations. Primal-dual multicommodity flow approximations, approximations for geometric and graph Steiner formulations, continuous placement optimization, heuristics for Boolean satisfiability, multilevel methods, semidefinite programming, and application to other formulations (e.g., scheduling). **Prerequisites:** CSE 241A or CSE 242A or consent of instructor.

**CSE 249A. Topics/Seminar in Computer Architecture (1-4)**

Topics of special interest in computer architecture to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

**CSE 249B. Topics/Seminar in VLSI (1-4)**

Topics of special interest in VLSI to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

**CSE 249C. Topics/Seminar in CAD (1-4)**

Topics of special interest in CAD to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

**CSE 250A. Artificial Intelligence: Search and Reasoning (4)**

Heuristic search algorithms including A\*, constraint satisfaction algorithms including DPPL, randomized search, knowledge representation in first-order logic (FOL), resolution methods for reasoning in FOL, reasoning about action and planning, reasoning with Bayesian networks. CSE 101 recommended. **Prerequisite:** graduate standing in CSE or consent of instructor.

**CSE 250B. Artificial Intelligence: Learning (4)**

Classifier learning including linear separators, decision trees, and nearest neighbors. Generalization and overfitting; design of learning experiments; the PAC model. Possible topics include ensemble methods, boosting, kernel methods, online learning, and reinforcement learning. **Prerequisite:** graduate standing or consent of instructor.

**CSE 252A. Computer Vision I (4)**

Comprehensive introduction to computer vision providing broad coverage including low-level vision (image formation, photometry, color, image feature detection), inferring 3-D properties from images (shape-from shading, stereo vision, motion interpretation) and object recognition. Companion to CSE 252B covering complementary topics. **Prerequisites:** Math. 10D and Math. 20A-F or equivalent.

**CSE 252B. Computer Vision II (4)**

Comprehensive introduction to computer vision providing focused coverage of multiview geometry, structure from motion, image segmentation, motion segmentation, texture analysis and recognition, object detection, and image-based rendering. Companion to CSE 252A covering complementary topics. **Prerequisites:** Math. 10D and Math. 20A-F or equivalent.

**CSE 252C. Selected Topics in Vision and Learning (1-4)**

Selected topics in computer vision and statistical pattern recognition, with an emphasis on recent developments. Possible topics include: grouping and segmentation, object recognition and tracking, multiple view geometry, kernel-based methods, dimensionality reduction, and mixture models. **Prerequisite:** CSE 252 or equivalent and CSE 250B or equivalent.

**CSE 253. Neural Networks for Pattern Recognition (4)**

Probability density estimation, perceptrons, multilayer neural networks, radial basis function networks, support vector machines, error functions, data preprocessing. Possible topics include unsupervised learning methods, recurrent networks, and mathematical learning theory. CSE 250B recommended. **Prerequisite:** graduate standing.

**CSE 254. Statistical Learning (4)**

Learning algorithms based on statistics. Possible topics include minimum-variance unbiased estimators, maximum

likelihood estimation, likelihood ratio tests, resampling methods, linear logistic regression, feature selection, regularization, dimensionality reduction, manifold detection. An upper-division undergraduate course on probability and statistics such as Math. 183 or 186, or any graduate course on statistics, pattern recognition, or machine learning is recommended. **Prerequisite:** graduate standing.

#### **CSE 256/LING 256. Statistical Natural Language Processing (4)**

Introduction to modern statistical approaches to natural language processing: part-of-speech tagging, word-sense disambiguation and parsing, using Markov models, hidden Markov models and probabilistic context-free grammars. Recommended **Prerequisite:** one of LIGN 165, LIGN 245, CSE 151, CSE 250A, CSE 254. **Prerequisite:** graduate standing or consent of instructor.

#### **CSE 257. Computational Biology (4)**

Computational methods are indispensable to an understanding of the vast datasets emerging from human and other organisms' genomes. This course surveys algorithms underlying genome analysis, sequence alignment, phylogenetic trees, protein folding, gene expression, metabolic pathways, and biological knowledge base design. **Prerequisite:** Pharm. 201 or consent of instructor.

#### **CSE 257B. Algorithms in Computational Biology (4)**

Renumbered to CSE 206B (see above).

#### **CSE 258A. Cognitive Modeling (4)**

Connectionist models and a sampling of other cognitive modeling techniques. Models of language processing, memory, sequential processes, and vision. Areas covered may vary depending on student and faculty interests. Can be repeated for credit. CSE 151 or CSE 250B or CSE 253 or CSE 254, or equivalent experience recommended. **Prerequisite:** graduate standing.

#### **CSE 259. Seminar in Artificial Intelligence (1)**

A weekly meeting featuring local (and occasional external) speakers discussing their current research in Artificial Intelligence Neural Networks, and Genetic Algorithms. (S/U grades only.) **Prerequisite:** none.

#### **CSE 259C. Topics/Seminar in Machine Learning (1-4)**

Topics of special interest in machine learning to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. **Prerequisite:** consent of instructor.

#### **CSE 260. Parallel Computation (4)**

(Formerly CSE 274A.) This course provides an overview of parallel hardware, algorithms, models, and software. Topics include Flynn's taxonomy, interconnection networks, memory organization, a survey of commercially available multiprocessors, parallel algorithm paradigms and complexity criteria, parallel programming environments and tools for parallel debugging, language specification, mapping, performance, etc. **Prerequisite:** graduate standing or consent of instructor.

#### **CSE 262. System Support for Applications of Parallel Computation (4)**

This course will explore design of software support for applications of parallel computation. Topics include: programming languages, run time support, portability, and load balancing. The course will terminate in a project. **Prerequisite:** consent of instructor.

#### **CSE 271. User Interface Design: Social and Technical Issues (4)**

Web technologies (HTML, Java, JavaScript, etc.) can quickly build superb new systems, as well as phenomenally ugly systems that still fully meet their performance and functional requirements. This course explores interface usability and representation issues, with some focus on hypermedia and cooperative work. **Prerequisites:** CSE 20, CSE 100, or equivalent.

#### **CSE 272. Advanced Image Synthesis (4)**

Computer graphics techniques for creating realistic images. Topics include ray tracing, global illumination, subsurface scattering, and participating media. CSE 168 or equivalent recommended.

#### **CSE 274. Selected Topics in Graphics (2-4)**

Selected topics in computer graphics, with an emphasis on recent developments. Possible topics include computer animation, shape modeling and analysis, image synthesis, appearance modeling, and real-time rendering. CSE 168 or CSE 169 recommended. **Prerequisite:** graduate standing or consent of instructor.

#### **CSE 280A. Algorithms in Computational Biology (4)**

(Formerly CSE 206B.) The course focuses on algorithmic aspects of modern bioinformatics and covers the following topics: computational gene hunting, sequencing, DNA arrays, sequence comparison, pattern discovery in DNA, genome rearrangements, molecular evolution, computational proteomics, and others. **Prerequisite:** CSE 202 preferred or consent of instructor.

#### **CSE 280B. Advanced Topics in Computational Biology (4)**

The advanced topics include, but are not limited to: population genetics, pathways, RNA, database filtering, comparative genomics, and others. Students are expected to pick one of the topics for an intensive research project, and report on their findings at the end of the class. **Prerequisites:** CSE 280A preferred or consent of instructor.

#### **CSE 282/BENG 202. Bioinformatics II: Sequence and Structure Analysis—Methods and Applications (4)**

(Formerly CSE 257A/BENG 202.) Introduction to methods for sequence analysis. Applications to genome and proteome sequences. Protein structure, sequence-structure analysis. **Prerequisite:** Pharm. 201 or consent of instructor.

#### **CSE 283/BENG 203. Bioinformatics III: Functional Genomics (4)**

Annotating genomes, characterizing functional genes, profiling, reconstructing pathways. **Prerequisites:** Pharm. 201, BENG 202/CSE 282 or consent of instructor.

#### **CSE 290. Seminar in Computer Science and Engineering (1-4)**

(Formerly CSE 280A.) A seminar course in which topics of special interest in computer science and engineering will be presented by staff members and graduate students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. (S/U grades only.) **Prerequisite:** consent of instructor. (Offered as faculty resources permit.)

#### **CSE 291. Topics in Computer Science and Engineering (1-8)**

(Formerly CSE 281A.) Topics of interest in computer science and engineering. Topics may vary from quarter to quarter. May be repeated for credit with the consent of instructor. (S/U grades permitted.) **Prerequisite:** consent of instructor. (Offered as faculty resources permit.)

#### **CSE 292. Faculty Research Seminar (1)**

(Formerly CSE 282.) Computer science and engineering faculty will present one hour seminars of the current research work in their areas of interest. **Prerequisite:** CSE graduate status.

#### **CSE 293. Special Project in Computer Science and Engineering (1-12)**

The student will conceive, design, and execute a project in computer science under the direction of a faculty member. The project will typically include a large programming or hardware design task, but other types of projects are possible. **Prerequisites:** CSE graduate student status. (CS 75, 76, 77, 78, 79, 80, 81) (S/U grades only.)

#### **CSE 294. Research Meeting in CSE (2)**

Advanced study and analysis of active research in computer science and computer engineering. Discussion of current research and literature in the research specialty of the staff member teaching the course. **Prerequisite:** consent of instructor.

#### **CSE 298. Independent Study (1-16)**

Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the staff. (S/U grades only.) **Prerequisite:** consent of instructor.

#### **CSE 299. Research (1-16)**

Research. **Prerequisite:** consent of faculty.

#### **CSE 500. Teaching Assistantship (2-4)**

A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. May be used to meet teaching experience requirement for candidates for the Ph.D. degree. Number of units for credit depends on number of hours devoted to class or section assistance. **Prerequisites:** graduate standing and consent of instructor.

#### **CSE 501. Teaching Assistantship (2-4)**

Renumbered to CSE 500 (see above).

#### **CSE 599. Teaching Methods in Computer Science (2)**

Training in teaching methods in the field of computer science. This course examines theoretical and practical communication and teaching techniques particularly appropriate to computer science. **Prerequisite:** consent of faculty.

# Electrical and Computer Engineering (ECE)

## PROFESSORS

Anthony S. Acampora, Ph.D., *Emeritus Research Professor*  
Victor C. Anderson, Ph.D., *Emeritus (not in-residence)*  
Peter M. Asbeck, Ph.D., *Skyworks Endowed Chair*  
H. Neal Bertram, Ph.D., *Emeritus Research Professor*  
William S. C. Chang, Ph.D., *Emeritus Research Professor*  
William A. Coles, Ph.D.  
Pamela C. Cosman, Ph.D.  
Rene L. Cruz, Ph.D.  
Sujit Dey, Ph.D.  
Sadik C. Esener, Ph.D.  
Shaya Fainman, Ph.D., *Cymer Professor in Advanced Optical Technologies*  
Joseph Ford, Ph.D.  
Eric Fullerton, Ph.D., *CMRR Endowed Chair*  
Ian Galton, Ph.D.  
Carl W. Helstrom, Ph.D., *Emeritus*  
Ramesh C. Jain Ph.D., *Emeritus*  
Andrew B. Kahng, Ph.D.  
Kenneth Kreutz-Delgado, Ph.D.  
Walter H. Ku, Ph.D., *Emeritus*  
Lawrence E. Larson, Ph.D., *Chair, CWC Industry Endowed Chair in Wireless Communications*  
S. S. Lau, Ph.D.  
Sing H. Lee, Ph.D., *Emeritus*  
Yu Hwa Lo, Ph.D.  
Robert Lugannani, Ph.D.  
Huey-Lin Luo, Ph.D., *Emeritus*  
Elias Masry, Ph.D., *Emeritus*  
D. Asoka Mendis, Ph.D., *Emeritus Research Professor*  
Laurence B. Milstein, Ph.D., *Ericsson Endowed Chair*  
Farrokh Najmabadi, Ph.D., *Director, Center for Energy Research*  
Truong Q. Nguyen, Ph.D.  
Alon Orlitsky, Ph.D., *Qualcomm Professor of Information Theory and its Applications*  
George Papen, Ph.D., *Vice Chair*  
Kevin B. Quest, Ph.D.  
Stojan Radic, Ph.D.  
Bhaskar Rao, Ph.D., *Director, Center for Wireless Communications; Ericsson Endowed Chair in Wireless Access Networks*  
Ramesh Rao, Ph.D., *Qualcomm Endowed Chair, Director, Calit2, San Diego Division*  
Gabriel Rebeiz, Ph.D.  
Barnaby J. Rickett, Ph.D., *Emeritus Research Professor*  
Manuel Rotenberg, Ph.D., *Emeritus Research Professor*  
M. Lea Rudee, Ph.D., *Emeritus Research Professor*  
Victor H. Rumsey, Ph.D., *Emeritus (not in-residence)*  
Vitali Shapiro, Ph.D., *Emeritus*  
Paul H. Siegel, Ph.D., *Director and Professor, Center for Magnetic Recording Research*  
Daniel Sievenpiper, Ph.D.

Bang-Sup Song, Ph.D., *Charles Lee Powell Endowed Chair in Wireless Communications*  
David Sworder, Ph.D.  
Yuan Taur, Ph.D.  
Mohan Trivedi, Ph.D.  
Charles W. Tu, Ph.D., *Associate Dean, Jacobs School of Engineering*  
Alexander Vardy, Ph.D.  
Andrew J. Viterbi, Ph.D., *Emeritus*  
Harry H. Wieder, Ph.D., *Emeritus*  
Jack K. Wolf, Ph.D., *Stephen O. Rice Professor of Electrical and Computer Engineering*  
Edward T. Yu, Ph.D.  
Paul Yu, Ph.D., *Associate Vice Chancellor, Research Initiatives*  
Kenneth A. Zeger, Ph.D.

## ASSOCIATE PROFESSORS

Paul M. Chau, Ph.D.  
Massimo Franceschetti, Ph.D.  
Clark C. Guest, Ph.D.  
Tara Javidi, Ph.D.  
George J. Lewak, Ph.D., *Emeritus*  
Bill Lin, Ph.D.  
Vitaliy Lomakin, Ph.D.  
Shayan Mookherjea, Ph.D.  
Anthony V. Sebald, Ph.D., *Emeritus*  
Nuno Vasconcelos, Ph.D.  
Deli Wang, Ph.D.  
Kenneth Y. Yun, Ph.D., *Emeritus*

## ASSISTANT PROFESSORS

James F. Buckwalter, Ph.D.  
Young-Han Kim, Ph.D.  
Gert Lanckriet, Ph.D.  
Zhaowei Liu, Ph.D.  
Curt Schurgers, Ph.D.  
Jie Xiang, Ph.D.

## ADJUNCT PROFESSORS

C. K. Cheng, Ph.D., *Professor, Computer Science and Engineering*  
Pankaj K. Das, Ph.D., *Emeritus, Rensselaer Polytechnic Institute*  
Madhu Gupta, Ph.D., *Professor, San Diego State University*  
Rajesh Gupta, Ph.D., *Professor, Computer Science and Engineering*  
Robert Hecht-Nielsen, Ph.D., *Hecht-Nielsen Confabulation Inc.*  
John A. Hildebrand, Ph.D., *Professor, Marine Physical Laboratory, Scripps Institution of Oceanography*  
William S. Hodgkiss, Ph.D., *Professor, Marine Physical Laboratory, Scripps Institution of Oceanography*  
James U. Lemke, Ph.D., *Center for Magnetic Recording Research*  
Roberto Padovani, Ph.D., *Qualcomm Nasser Peyghambarian, Ph.D., Professor, University of Arizona*  
John Proakis, Ph.D., *Professor, Northeastern University*  
LuJeu Sham, Ph.D., *Professor, Physics*  
Jin-Joo Song, Ph.D., *ZN Technology*  
Edward T. Yu, Ph.D., *Professor, University of Texas at Austin*

## ASSOCIATED FACULTY

Gustaf O. S. Arrhenius, Ph.D., *Professor, Marine Research Division, Scripps Institution of Oceanography*  
George Tynan, Ph.D., *Associate Professor, Mechanical and Aerospace Engineering*

## AFFILIATED FACULTY

Prab Bandaru, Ph.D., *Professor, Mechanical and Aerospace Engineering*

## PROGRAM MISSION STATEMENT

To educate tomorrow's technology leaders.

## PROGRAM EDUCATIONAL OBJECTIVES

- To provide our students with training in the fundamental science and mathematics that underlie engineering, and with a general breadth and depth in engineering and in engineering design so that they are prepared for graduate school and for engineering careers. Students should have both proficiency in a specific technical area, and the flexibility and broad knowledge base needed for life-long engineering careers in a changing technical environment.
- To ensure that our students are educated in the classical sense. In particular, that they are broadly aware of social and environmental issues and of the impact of their profession on these issues.
- To assist our students in preparing themselves to work effectively in their profession. Specifically, to develop communications, teamwork, and leadership skills.

## PROGRAM OUTCOMES AND ASSESSMENT

Program outcomes have been established based on the Program Educational Objectives. Graduates of the ECE Program in Electrical Engineering are expected to have

- An understanding of the underlying principles of, and an ability to apply knowledge of mathematics, science, and engineering to electrical engineering problems
- An ability to design and conduct experiments, as well as to analyze and interpret data
- A knowledge of electrical engineering safety issues
- An ability to design a system, component, or process to meet desired needs
- An ability to collaborate effectively with others
  - An ability to function on multidisciplinary teams
- An ability to identify, formulate, and solve engineering problems
- An ability to use the techniques, skills, and modern engineering tools necessary for engineering

- practice, including familiarity with computer programming and information technology
8. An understanding of professional and ethical responsibility
  9.
    - a. An ability to communicate effectively in writing
    - b. An ability to communicate effectively in speech
    - c. An ability to communicate effectively with visual means
  10. The broad education necessary to understand the impact of engineering solutions in a global and societal context
  11. A recognition of the need for, and the ability to engage in, lifelong learning
  12. A knowledge of contemporary issues

## THE UNDERGRADUATE PROGRAMS

The Department of Electrical and Computer Engineering offers undergraduate programs leading to the B.S. degree in **electrical engineering**, **engineering physics**, and computer engineering, and the B.A. degree in **electrical engineering and society**. Each of these programs can be tailored to provide preparation for graduate study or employment in a wide range of fields. The Electrical Engineering Program is accredited by the Accreditation Board for Engineering and Technology (ABET).

The Electrical Engineering Program has a common lower-division and a very flexible structure in the upper-division. After the lower-division core, all students take six breadth courses during the junior year. They must then satisfy a depth requirement which can be met with five courses focused on some specialty, and a design requirement of at least one project course. The remainder of the program consists of seven electives, which may range as widely or as narrowly as needed.

The Engineering Physics Program is conducted in cooperation with the Department of Physics. Its structure is very similar to that of electrical engineering except the depth requirement includes seven courses and there are only five electives.

The Computer Engineering Program is conducted jointly with the Department of Computer Science and Engineering. It has a more prescribed structure. The program encompasses the study of hardware design, data storage, computer architecture, assembly languages, and the design of computers for engineering, information retrieval, and scientific research.

The B.A.-Electrical Engineering and Society Program intends to better prepare engineering students in the areas of social sciences and the humanities, as a response to the globalization of engineering and technology. We recognize that "engineering only" training may not be sufficient when students seek alternate career paths besides engineering upon graduation, such as in the law, finance, and public policy sectors.

For information about the program and about academic advising, students are referred to the section on ECE departmental regulations. In order to

complete the programs in a timely fashion, students must plan their courses carefully, starting in their freshman year. Students should have sufficient background in high school mathematics so that they can take freshman calculus in the first quarter.

For graduation, each student must also satisfy general-education requirements determined by the student's college. The six colleges at UC San Diego require widely different numbers of general-education courses. Students should choose their college carefully, considering the special nature of the college and the breadth of education required. They should realize that some colleges require considerably more courses than others. Students wishing to transfer to another college should see their college advisor.

Graduates of community colleges may enter ECE programs in the junior year. However, transfer students should be particularly mindful of the freshman and sophomore course requirements when planning their programs.

These programs have strong components in laboratory experiments and in the use of computers throughout the curricula. In addition, the department is committed to exposing students to the nature of engineering design. This is accomplished throughout the curricula by use of design-oriented homework problems, by exposure to engineering problems in lectures, by courses which emphasize student-initiated projects in both laboratory and computer courses, and finally by senior design-project courses in which teams of students work to solve an engineering design problem, often brought in from industry.

**IT IS IMPERATIVE THAT STUDENTS DISCUSS THEIR CURRICULUM WITH THE APPROPRIATE DEPARTMENTAL ADVISOR IMMEDIATELY UPON ENTRANCE TO UCSD, AND THEN AT LEAST ONCE A YEAR UNTIL GRADUATION.**

### B.S. ELECTRICAL ENGINEERING PROGRAM

Students must complete 180 units for graduation, including the general-education requirements (GER). Note that 144 units (excluding GER) are required.

#### *Lower-Division Requirements (total of seventy-two units)*

##### Mathematics (twenty-four units)

Math. 20A-B-C-D-E-F.

##### Physics (sixteen units)

Phys. 2A-B-C-D or Phys. 4A-B-C-D-E. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

##### Chemistry (four units)

Chem. 6A.

##### Programming Course (four units)

ECE 15.

##### Electrical engineering (twenty-four units)

ECE 25, 30, 35, 45, 65, and 75.

## Additional Notes

1. Students with AP math credit are strongly advised to take Math. 20B in the fall quarter, leaving room for a GER in the winter quarter.
2. The ECE undergraduate Web site shows several scheduling options. Please refer to the Web site and consult with the staff advisors in the undergraduate offices, rooms 2705 and 2707 in EBU1.

## *Upper-Division Requirements (total of seventy-two units)*

### a. Electrical Engineering BREADTH Courses (twenty-four units)

Courses required of all electrical engineering majors:

The six courses, ECE 101, 102, 103, 107, 108, and 109 are required of all electrical engineering majors and they are an assumed prerequisite for senior-level courses, even if they are not explicitly required. Although the courses are largely independent, there are some prerequisites. ECE 102 is a prerequisite for ECE 108. Students who delay some of the breadth courses into the spring should be careful that it does not delay their depth sequence. For the ECE 109 requirement, credit will not be allowed for ECON 120A, Math. 180A-B, Math. 183, or Math. 186.

### b. Electrical Engineering DESIGN Course (4 units)

**Note:** In order to fulfill the design requirement, students must complete one of the following courses with a grade C- or better. Graduation will not be approved until a written copy of the design project is submitted to the ECE undergraduate office. ECE 111, 118, 191 cannot be used to satisfy both the Design and Depth requirements.

The electrical engineering design requirement can be fulfilled in any of the following three ways:

1. Take ECE 191: Engineering Group Design Project
2. Take ECE 190: Engineering Design This course requires the department stamp. Specifications and enrollment forms are available in the undergraduate office.
3. Take one of the following courses:

- ECE 111: Advanced Digital Design Project
- ECE 118: Computer Interfacing
- ECE 155B or 155C: Digital Recording Projects

Students who wish to take one of these courses to satisfy the design requirement must fill out an enrollment form and have departmental approval for the design credit prior to taking the course. The project must meet the same specifications as ECE 190.

### c. Electrical Engineering ELECTIVES (twenty-four units)

- Three upper-division engineering, mathematics, or physics courses.
- Three additional electives which students may use to broaden their professional goals.

(For additional information, please refer to the section on "[Elective Policy for Electrical Engineering and Engineering Physics Majors](#).")

#### d. Electrical Engineering Depth Requirement (twenty units)

Students must complete a “depth requirement” of at least five quarter courses to provide a focus for their studies. This set must include a clear chain of study of at least three courses which depend on the “breadth” courses. Students may choose one of the approved depth sequences listed below, or propose another with the approval of their faculty advisor. Some of the approved sequences have lower-division prerequisites and thus list six courses. Students choosing one of these sequences will have to complete only two “professional” electives. Guidelines for meeting the depth requirement can be obtained from the undergraduate office. *ECE 111, 118, 191 cannot be used to satisfy both the Design and Depth requirements.*

#### Electronics Circuits and Systems

ECE 163, 164, 165, and any two of ECE 111, 118, 161A, 161B, 161C, and 166.

#### Electronic Devices and Materials

ECE 135A, ECE 135B, 136L, 139, and 183.

#### Controls and Systems Theory

ECE 171A, 171B, 174, 175, and 118 or 191.

#### Machine Intelligence

ECE 172A, 174, 175, and any two of ECE 161A, ECE 176A, 187, 253A, 285, and COGS 108F.

#### Photonics

ECE 181, 182, 183, 184, and 185.

#### Communications Systems

ECE 161A, 153, 154A-B-C.

#### Networks

ECE 153, 159A, 159B, 158A-B.

#### Queuing Systems

ECE 171A, 174, 159A-B, and Math. 181A.

#### Signal and Image Processing

ECE 161A, 161B, 161C, 153, and ECE 172A or 174.

#### Computer Design

CSE 12, 21, and 141, ECE 158A, 111 or 118, and 165.

#### Software Systems

CSE 12, 21, 100, 101, 141, and 120.

### B.S. ENGINEERING PHYSICS

Students must complete a total of 180 units for graduation, including the general-education requirements. Note that 146 units (excluding GER) are required.

All students will initially be placed in pre-major status. Upon successful completion of the following courses (with a minimum 2.0 GPA by the end of the first three quarters if a transfer student, six quarters

if an incoming freshman), students will be admitted into full Engineering-Physics major status.

1. Math. 20A-B-C
2. Phys. 2A-B
3. ECE 15, 25, and 35

To initiate the change from pre-major status to full major status, transfer students must see the ECE undergraduate advisor by the end of their third quarter at UCSD; incoming freshmen by the end of their sixth quarter.

Please refer to the section “[Undergraduate Regulations and Requirements](#)” for important details.

#### Lower-Division Requirements (total of seventy-four units)

##### Mathematics (twenty-four units)

Math. 20A-B-C-D-E-F.

##### Physics (sixteen units)

Phys. 2A-B-C-D or Phys. 4A-B-C-D-E. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

##### Physics Lab (two units)

Phys. 2DL is required.

##### Chemistry (four units)

Chem. 6A.

##### Programming Course (four units)

ECE 15.

##### Electrical engineering (twenty-four units)

ECE 25, 30, 35, 45, 65, and 75.

##### Additional Notes

1. Students with AP math credit are strongly advised to take Math. 20B in the fall quarter, leaving room for a GER in the winter quarter.
2. The ECE undergraduate Web site shows several scheduling options. Please refer to the Web site and consult with the staff advisors in the undergraduate offices, rooms 2705 and 2707 in EBU1.

#### Upper-Division Requirements (seventy-two units)

##### a. Engineering Physics BREADTH Courses (twenty-four units)

The electrical engineering breadth courses ECE 101, 102, 103, 107, 108, and 109, are also required of engineering physics majors. However, because of the scheduling of Math. 110, Phys. 110A and 130A, they can only be taken in a specific order (please consult the ECE Web site). For the ECE 109 requirement, credit will not be allowed for ECON 120A, Math. 180A-B, Math. 183, or Math. 186.

##### b. Engineering Physics DESIGN Course (four units)

**Note:** In order to fulfill the design requirement, students must complete one of the following courses with a grade C– or better. Graduation will

not be approved until a written copy of the design project is submitted to the ECE undergraduate office.

The engineering physics design requirement can be fulfilled in any of the following three ways:

1. Take ECE 191: Engineering Group Design Project
2. Take ECE 190: Engineering Design. This course requires the department stamp. Specifications and enrollment forms are available in the undergraduate office.
3. Take one of the following courses:

- ECE 111: Advanced Digital Design Project
- ECE 118: Computer Interfacing
- ECE 155B or 155C: Digital Recording Projects

Students who wish to take one of these courses to satisfy the design requirement must fill out an enrollment form and have departmental approval for the design credit prior to taking the course. The project must meet the same specifications as ECE 190.

##### c. Engineering Physics ELECTIVES (sixteen units)

- One upper-division engineering, mathematics, or physics course.
- Three additional electives which students may use to broaden their professional goals.

(For additional information, please refer to the section on “[Elective Policy for Electrical Engineering and Engineering Physics Majors](#).”)

##### d. Engineering Physics DEPTH Courses (twenty-eight Units)

All B.S. engineering physics students are required to take Phys. 110A, 130A-B, 140A, Math. 110, ECE 123 and 166; or ECE 135A and 135B; or ECE 182 and (181 or 183).

#### Elective Policy for Electrical Engineering and Engineering Physics Majors

##### 1. Technical Electives

Technical electives must be upper-division engineering, math or physics courses (except for the bioengineering track). At most one lower-division course in engineering may be used but it must receive prior approval from the ECE department. Certain courses listed below are not allowed as electives because of overlap with ECE courses.

##### Physics

Students may not receive upper-division elective credit for any lower-division physics courses. Students may not receive credit for both Phys. 100A and ECE 107, Phys. 100B and ECE 107, Phys. 100C and ECE 123.

Mathematic Math. 180A overlaps ECE 109 and 153, and therefore will not qualify for elective credit of either type. Math. 183 or Math. 186 will not be allowed as an elective. Math. 163 will only be allowed as a professional elective. All lower-division mathematics is excluded from elective credit of either type.

## Bioengineering

The following series of courses will provide "core" preparation in bioengineering and will satisfy up to five courses of the ECE elective requirements:

BILD 1, BILD 2, BE 100, BE 140A-B.

The bioengineering department will guarantee admission to these courses for ECE students on a space available basis.

## CSE

The following courses are excluded as electives: CSE 1, 2, 5A-B, 8A-B, 11, 123A (duplicates ECE 158A), 140 (duplicates ECE 25), 140L (duplicates ECE 36), 143 (duplicates ECE 165). CSE 12, 20, and 21 will count toward the three professional electives ONLY.

## Mechanical and Aerospace Engineering (MAE)

Credit will not be allowed for MAE 105, 139, 140, 143B, or 170.

## Special Studies

Courses 195–199: At most four units of 195–199 may be used for elective credit.

### 2. Professional Electives

Normally these will be upper-division courses in engineering, mathematics, or physics. Students may also choose upper-division courses from other departments provided that they fit into a coherent professional program. In such cases, a lower-division prerequisite may be included in the electives. Courses other than upper-division engineering, mathematics, or physics must be justified in terms of such a program, and must be approved by a faculty advisor.

## Biology and Chemistry

Of the three electives intended to allow for the professional diversity, one lower-division biology or chemistry course from BILD 1, 2, Chem. 6B-C may be counted for credit in combination with two upper-division biology or chemistry courses. Furthermore, this will count only if the student can demonstrate to a faculty advisor that they constitute part of a coherent plan for professional/career development.

Upper-division biology and chemistry courses will count toward the three professional electives but not the three math/physics/engineering electives.

## Economics

Suitable electives would include

Econ. 1 and 3 followed by the courses in one of the following tracks:

- Macroeconomics: Econ. 110A-B.
- Monetary economics: Econ. 111, and another economics upper division elective.
- Economics 1 and 2 followed by two courses in one of the following tracks:
- Public and Environmental: Econ. 118, 130, 131, 132, 133, 137, 145.
- Labor and Human Resources: Econ. 137, 139, 140.

**Note:** Econ. 100A can be substituted for Econ. 2

Econ. 1 and 100A followed by two courses in one of the following tracks:

- Microeconomics: Econ.100B-C.
- Financial Markets: Econ. 120B and 173A.
- Operations Research: Econ.172A-B (after taking ECE 109 and Math. 20F).
- Human Resources: Econ. 100B and 136.

**Note:** Econ. 120A, and 158A-B will not be allowed as professional electives. If Economics is chosen for professional electives, only three technical electives are required for electrical engineering majors; only one technical elective is required for engineering physics majors.

## B.S. COMPUTER ENGINEERING

Students wishing to pursue the computer engineering curriculum may do so in either the ECE or CSE department. The set of required courses and allowed electives is the same in both departments; please note that the curriculum requires twenty upper-division courses. The Computer Engineering Program requires a total of 151 units (not including the general-education requirements).

The Computer Engineering Program offers a strong emphasis on engineering mathematics and other basic engineering science as well as a firm grounding in computer science. Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer programming, although helpful, are not required for admission to the program.

### Lower-Division Requirements (total of seventy-five units)

#### Mathematics (twenty units)

Math. 20A-B-C-D-F.

#### Physics (sixteen units)

Phys. 2A-B-C-D, or Phys. 4A-B-C-D. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

#### Computer Science (twenty-seven units)

CSE 11 or 8B\*, 12, 15L, CSE 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, CSE 70, and CSE 91.

\*CSE 8A and CSE 8B are not required if a student completes CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B. Students will self-select which course they wish to take. Students without programming experience in a compiled language are advised to take CSE 8A and then CSE 8B instead of CSE 11.

#### Electrical Engineering (twelve units)

ECE 35, ECE 45, ECE 65.

### Upper-Division Requirements (total of seventy-six units)

1. All B.S. computer engineering students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 120, 131, 139, 140, 140L (CSE 140 and 140L must be taken

concurrently), 141, 141L (CSE 141 and 141L must be taken concurrently).

2. In addition, all B.S. computer engineering students must fulfill the following upper-division ECE requirements:
  - Engineering Probability and Statistics ECE 109. This course can be taken in the sophomore year.
  - Electronic Circuits and Systems ECE 102 and 108. The department recommends that these courses be taken in the junior year.
  - Linear systems ECE 101.
3. Technical electives: All B.S. computer engineering majors are required to take six technical electives.
  - One technical elective must be either ECE 111 or ECE 118.
  - Of the remaining five technical electives, four must be ECE or CSE upper-division or graduate courses.
  - The remaining course can be any upper-division course listed under the non-CSE/ECE electives. (See the section on electives below.)

## Electives

The discipline of computer engineering interacts with a number of other disciplines in a mutually beneficial way. These disciplines include mathematics, computer science, and cognitive science. The following is a list of upper-division courses from these and other disciplines that can be counted as technical electives.

At most four units of 197, 198, or 199 may be used towards technical elective requirements. ECE/CSE 195 cannot be used towards course requirements. Undergraduate students must get instructor's permission and departmental stamp to enroll in a graduate course.

Students may not get duplicate credit for equivalent courses. The *UC San Diego General Catalog* should be consulted for equivalency information and any restrictions placed on the courses. Additional restrictions are noted below. Any deviation from this list must be petitioned.

## Mathematics

All upper-division courses except Math. 168A-B, 179A-B, 183, 184A-B, 189A-B, and 195–199. If a student has completed CSE 167, then he or she cannot get elective credit for Math. 155A. Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, MAE 107, CENG 100. No credit for any of these courses will be given if Math. 170A-B-C is taken. Students will receive credit for either Math. 166 or CSE 105 (but not both), either Math. 188 or CSE 101 (but not both), and either Math. 176 or CSE 100 (but not both).

## Computer Science and Engineering

All CSE upper-division courses except CSE 195. Students will receive credit for either CSE 123A or ECE 158A (but not both).

## Cognitive Science

Sensation and Perception 101A, Learning, Memory, and Attention 101B, Language 101C, Distributed Cognition 102A, Cognitive Ethnography 102B, Cognitive Engineering 102C, Neuroanatomy and Physiology 107A, Systems Neuroscience 107B, Cognitive Neuroscience 107C, Programming Methods for Cognitive Science 108D, Neural Networks Models of Cognition I 108E, Advanced Programming Methods for Cognitive Science 108F, Human Computer Interaction 120, Human Computer Interaction Programming 121, Semantics 150, Language Comprehension 153, Natural and Artificial Symbolic Representational Systems 170, Neural Network Models of Cognition II 181, Artificial Intelligence Modeling II 182.

Students may not get credit for both CSE 150 and Advanced Programming Methods for Cognitive Science 108F or for both CSE 151 and Artificial Intelligence Modeling II 182.

## Mechanical and Aerospace Engineering (MAE)

All upper-division MAE courses except MAE 140, and MAE 195-199.

Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. Students may only get credit for one of the two courses, CSE 167 or MAE 152.

## Economics

Microeconomics 100A-B, Game Theory 109, Macroeconomics 110A-B, Mathematical Economics 113, Econometrics 120B-C, Applied Econometrics 121, Management Science Microeconomics 170A-B, Decisions Under Uncertainty 171, Introduction to Operations Research 172A-B-C, Economic and Business Forecasting 178.

Students cannot take Economics 120A since it duplicates ECE 109.

## Linguistics

Phonetics 110, Phonology I 111, Phonology II 115, Morphology 120, Syntax I 121, Syntax II 125, Semantics 130, Mathematical Analysis of Languages 160, Computers and Language 163, Computational Linguistics 165, Psycholinguistics 170, Language and the Brain 172, and Sociolinguistics 175.

## Engineering

Team Engineering 101 (see course description under the [Jacobs School of Engineering](#) section).

## Music

Computer Music II 172, Audio Production: Mixing and Editing 173.

## Psychology

Engineering Psychology 161.

## B.A. ELECTRICAL ENGINEERING AND SOCIETY

Students must complete a total of 180 units for graduation, including the general-education

requirements (GER). Note that 144 units (excluding GER) are required.

## Lower-Division Requirements (total of eighty units)

### Mathematics (twenty-four units)

Math. 20A-B-C-D-E-F.

### Physics (sixteen units)

Phys. 2A-B-C-D or Phys. 4A-B-C-D-E. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

### Chemistry (four units)

Chem. 6A.

### Programming Course (four units)

ECE 15.

### Electrical Engineering (twenty units)

ECE 25, 30, 35, 45, 65, and 75.

### Elective Courses in Social Sciences and Humanities Studies (eight units)

These can be prerequisite courses for the upper-division depth sequence in social sciences/humanities. For instance, for history studies, this can be two history lower-division courses (HILD 2,7,10-12). Historically oriented HUM, MMW, and CAT courses would count as well. At least one lower-division course should have a writing component. For economics studies, this can be two lower-division courses (ECON 1, and ECON 4 for the finance track); or one lower-division course (ECON 1) plus one upper-division course for the data analysis track. For political science, the following courses may be utilized: PS10, PS11, PS12, PS13, PS30. For sociology studies, students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended.

Other courses in social sciences/humanities will be available after an agreement between ECE and the respective departments/programs are established and approved.

### Additional Notes

1. Students with AP math credit are strongly advised to take Math. 20B in the fall quarter, leaving room for a GER in the winter quarter.
2. The ECE undergraduate Web site shows several scheduling options. Please refer to the Web site and consult with the staff advisors in the undergraduate offices, rooms 2705 and 2707 in EBU1.

## Upper-Division Requirements (total of sixty-four units)

### a. Electrical Engineering BREADTH Courses (twenty-four units)

Courses required of all electrical engineering majors:

The six courses—ECE 101, 102, 103, 107, 108, and 109—are required of all electrical engineering majors and they are an assumed prerequisite for

senior-level courses, even if they are not explicitly required. Although the courses are largely independent, ECE 102 is a prerequisite for ECE 108. Students who delay some of the BREADTH courses until the spring should be careful to not have delayed their depth sequence.

### b. Electrical Engineering DESIGN Course (four units)

**Note:** In order to fulfill the design requirement, students must complete one of the following courses with a grade C– or better. When taking this course, the student has the option of having a portion of the project related to his/her social sciences/humanities study. Graduation will not be approved until a written copy of the design project is submitted to the ECE undergraduate office.

The electrical engineering design requirement can be fulfilled in any of the following three ways:

1. Take ECE 191. Engineering Group Design Project
2. Take ECE 190. Engineering Design. This course requires the department stamp. Specifications and enrollment forms are available in the undergraduate office.
3. Take one of the following courses:
  - ECE 111. Advanced Digital Design Project
  - ECE 118. Computer Interfacing
  - ECE 155B or 155C. Digital Recording ProjectsStudents who wish to take one of these courses to satisfy the design requirement must fill out an enrollment form and have departmental approval for the design credit prior to taking the course. The project must meet the same specifications as ECE 190.

### c. Electrical Engineering ELECTIVES (twelve units)

Three upper-division engineering, mathematics, or physics courses.

### d. Social Sciences/Humanities Studies Depth Requirement (twenty-four units)

Students must complete a “depth requirement” of at least six quarter courses to provide a focus for their studies. Sample depth programs for history and economics students are discussed below. Students may choose this demonstrated sequence or they may propose another with the approval of their faculty co-advisor from the respective social sciences/humanities department.

### History Studies (six courses, twenty-four units)

- At least four of these should belong to the specific field the student is pursuing (e.g., History of: East Asia, United States, Europe, Science, etc.).
- At least one course should be in the field of history of science and technology.
- At least one course should be a colloquium (i.e., a small course, with an emphasis on essay writing).

### HISC 105. History of Environmentalism

### HISC 106. The Scientific Revolution

### HISC 107. The Emergence of Modern Science

### HISC 108. Science and Technology in the Twentieth Century

### HISC 109. Science in Western Civilization

### HISC 111. The Atomic Bomb and the Atomic Age

### HISC 115. Making Modern Medicine

### HISC 131. Science Technology and Law

HISC 173/273. Darwin and Darwinism  
 HILD 2A. United States History  
 HILD 7A. Race and Ethnicity  
 HILD 10. East Asia: The Great Tradition  
 HILD 11. East Asia and the West  
 HILD 12. Twentieth-Century East Asia  
 HIUS 140. Economic History of the United States  
 HIUS 151. American Legal History 1865 to the Present  
 HIUS 187. Social Movements in the United States  
 HIUS 148. American Cities in the Twentieth Century  
 HIEU 143. European Intellectual History  
 HIGR 222. European History  
 HILA 102. Latin America in the Twentieth Century

#### Economics Studies

- Track A: Finance (six courses, twenty-four units)
- Intermediate Microeconomic sequence: ECON 100A-B-C
  - Finance sequence: ECON 173A-B
  - One elective course from the following: ECON 104, 105, 109, 113, 119, 120B, 141, 142, 143, 147, 150, 151, 155, 171, 172A
- Track B: Data Analysis (seven courses, twenty-eight units, one of them can be taken during lower-division years)
- Intermediate Microeconomic sequence: ECON 100A-B-C
  - Data Analysis sequence: ECON 120B-C
  - Two elective courses from the following: ECON 104, 105, 109, 119, 121, 125, 150, 151, 152, 155, 173A, 173B, 174, 176, 178
  - Other upper-division courses for satisfying the depth sequences for other studies in social sciences/humanities will be available after an agreement is established between ECE and the respective department/program in social sciences/humanities.

#### Political Science Studies (six courses, twenty-four units)

Policy Analysis  
 At least four courses from  
 PS 160AA. Introduction to Policy Analysis  
 PS 160AB. Introduction to Policy Analysis  
 PS 162. Environmental Policy  
 PS 163. Analyzing Politics  
 PS 165. Special Topic: Policy Analysis  
 PS 168. Policy Assessment  
 PS 170A. Introductory Statistics for Political Science and Public Policy

and at least two courses from  
 PS 100H. Race and Ethnicity  
 PS 102J. Advanced Topics in Urban Politics  
 PS 103A. California Government and Politics  
 PS 103B. Politics and Policymaking in Los Angeles  
 PS 103C. Politics and Policymaking/San Diego  
 PS 125. Politics of Conservation  
 PS 125A. Communities and the Environment  
 PS 126AA. Modern Capitalism  
 PS 142A. United States Foreign Policy  
 PS 142B. U.S. Foreign Economic Policy  
 PS 142J. National Security Strategy  
 PS 142M. U. S. Foreign Policy/Regional Security

#### Sociology Studies (six courses, twenty-four units)

Students may specialize in one of four departmental concentrations or complete the “general sociology” track.

Students will choose eight courses, two lower-division and six upper-division courses from their choice of concentrations in Science and Medicine, Law and Society, Economy and Society, International Studies, or General Sociology. Note: SOCL 30 and SOCC 168T are highly recommended for all tracks.

**Concentration in Science and Medicine (eight courses, thirty-two units)**

Students will choose two lower division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper division courses from the list below, in which SOCC 168T is highly recommended.

#### Lower-Division

L 1A. The Study of Society  
 L 1B. The Study of Society  
 L 30. Science, Technology, and Society (highly recommended)

#### Upper-Division

C 168T. Sociology of Technology (highly recommended)  
 B 113. Sociology of the AIDS Epidemic  
 C 134A. The Making of Modern Medicine  
 C 135. Medical Sociology  
 C 136A. Sociology of Mental Illness: An Historical Approach  
 C 136B. Sociology of Mental Illness in Contemporary Society  
 C 138. Genetics and Society  
 C 149. Sociology of the Environment  
 C 167. Science and War  
 C 168E. Sociology of Science

**Concentration in Law and Society (eight courses, thirty-two units)**

Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper-division courses from the list below, in which SOCC 168T is highly recommended.

#### Lower-Division

L 1A. The Study of Society  
 L 1B. The Study of Society  
 L 30. Science, Technology, and Society (highly recommended)

#### Upper-Division

C 168T. Sociology of Technology (highly recommended)  
 B 111. Human Rights  
 B 112. Social Psychology  
 B 142. Social Deviance  
 B 143. Suicide  
 B 146. Law Enforcement in America  
 B 160L. Law and Culture  
 B 173. Elite Crime  
 C 140. Sociology of Law  
 C 140F. Law and the Workplace  
 C 141. Crime and Society

C 147. Organizations, Society, and Social Justice  
 C 159. Special Topics in Social Organizations and Institutions  
 C 163. Migration and the Law

**Concentration in Economy and Society (eight courses, thirty-two units)**

Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper-division courses from the list below, in which SOCC 168T is highly recommended.

#### Lower-Division

L 1A. The Study of Society  
 L 1B. The Study of Society  
 L 30. Science, Technology, and Society (highly recommended)

#### Upper-Division

C 168T. Sociology of Technology (highly recommended)  
 B 125. Sociology of Immigration  
 B 137. Sociology of Food  
 C 121. Economy and Society  
 C 132. Gender and Work  
 C 139. Social Inequality: Class, Race, and Gender  
 C 140F. Law and the Workplace  
 C 148L. Inequality and Jobs  
 C 152. Social Inequality and Public Policy  
 C 163. Migration and the Law  
 C 167. Science and War  
 D 185. Globalization and Social Development

**Concentration in International Studies (eight courses, thirty-two units)**

Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which L30 is highly recommended; and six upper-division courses from the list below, in which SOCC 168T is highly recommended.

#### Lower-Division

L 1A. The Study of Society  
 L 1B. The Study of Society  
 L 30. Science, Technology, and Society (highly recommended)

#### Upper-Division

C 168T. Sociology of Technology (highly recommended)  
 B 111A. Human Rights: Principles and Problems  
 B 111B. Human Rights: Practices and Cases  
 B 130. Population and Society  
 B 145. Violence and Society  
 B 151. Comparative Race and Ethnic Relations  
 B 162R. Religion and Popular Culture in East Asia  
 C 148. Political Sociology  
 C 152. Urban Sociology  
 C 157. Religion in Contemporary Society  
 D 158. Islam in the Modern World  
 D 169. Citizenship, Community, and Culture  
 D 176. War and Society  
 D 177. International Terrorism  
 D 178. The Holocaust  
 D 179. Social Change  
 D 180. Social Movements and Social Protest

- D 181. Modern Western Society
- D 182. Ethnicity and Indigenous Peoples in Latin America
- D 183. Minorities and Nations
- D 185. Globalization and Social Development
- D 187. African Societies Through Film
- D 188A. Community and Social Change in Africa
- D 188B. Chinese Society
- D 188F. Modern Jewish Societies and Israeli Society
- D 188D. Latin America: Society and Politics
- D 188J. Change in Modern South Africa
- D 189. Special Topics in Comparative-Historical Sociology

**General Sociology (eight courses, thirty-two units)**

Students will choose two lower-division courses from SOCL 1A, 1B, and 30, of which 30 is highly recommended; and six upper-division courses, including one from EACH of the following four concentrations:

- Science and Medicine
- Law and Society
- Economy and Society
- International Studies

Note: SOCL 30 and SOCC 168T are highly recommended as two of the eight total courses.

**Sample of a four-year program for the B.A. in Engineering Majors**

1. Lower-Division Requirements (total of seventy-six units excluding GERs)

FALL	WINTER	SPRING
<b>FRESHMEN YEAR</b>		
Math. 20A ECE 15 (Computer Programming)	Math. 20B Phys. 2A	Math. 20C Phys. 2B
Chem. 6A	ECE 25 (Intro to EE, Digital)	ECE 35 (Intro to EE, Analog)
GER	GER	GER
<b>SOPHMORE YEAR</b>		
Math. 20F Phys. 2C ECE 30 (Intro to CE)	Math. 20D Phys. 2D ECE 45 (Circuits and Systems)	Math. 20E GER ECE 65 (Components and Circuit Lab)
GER	S/H Elective	S/H Elective

2. Upper-Division Requirements (total of sixty-eight units excluding GERs)

FALL	WINTER	SPRING
<b>JUNIOR YEAR</b>		
ECE 101 (Linear Systems)	ECE 107 (Electromagnetism)	GER
ECE 102 (Active Circuits)	ECE 108 (Digital Circuits)	Depth #1
ECE 109 (Prob. and Statistics)	ECE 103 (Devices and Materials)	Depth #2
GER	GER	GER
<b>SENIOR YEAR</b>		
Depth #3	Depth #5	Depth #6
Depth #4	E. Elective	E. Elective
E. Elective	E. Elective	E. Elective
GER	GER	GER

**Notes:**

- Depth = Depth sequence courses
- S/H Elective = Social sciences/humanities elective courses
- E. Elective = Electrical engineering elective courses, which can be engineering, mathematics, or physics courses. Three of these electives must be upper division. The fourth may be either lower or upper division.
- GER = General-Education Requirements

**MINOR CURRICULA**

ECE offers three minors in accord with the general university policy that a minor requires five upper-division courses. Students must realize that these upper-division courses have extensive lower-division prerequisites (please consult the ECE undergraduate office). Students should also consult their college provost's office concerning the rules governing minors and programs of concentration.

Electrical Engineering: Twenty units chosen from the breadth courses ECE 101, 102, 103, 107, 108, 109.

Engineering Physics: Twenty units chosen from the junior year courses Phys. 110A, 130A, Math. 110, ECE 101, 102, 103, 107, 108, 109.

Computer Engineering: Twenty units chosen from the junior year courses ECE 102, 108, CSE 100, 101, 105, 120, 140, 140L, 141, 141L.

The department will consider other mixtures of upper-division ECE, CSE, physics, and mathematics courses by petition.

**UNDERGRADUATE ADMISSIONS, POLICIES, AND PROCEDURES**

**FRESHMAN ELIGIBILITY**

**1. Computer Engineering**

Freshmen students who have declared Computer Engineering on their application will be directly admitted into the major.

**2. Electrical Engineering**

Freshmen students who have declared Electrical Engineering on their application will be directly admitted into the major.

**3. Engineering Physics**

All students will initially be placed in pre-major status. Upon successful completion of the following courses (with a minimum 2.0 GPA by the end of the first three quarters if a transfer student, six quarters if an incoming freshman), students will be admitted into full Engineering-Physics major status.

1. Math. 20A-B-C
2. Phys. 2A-B
3. ECE 15, 25, and 35

To initiate the change from pre-major status to full major status, transfer students must see the ECE undergraduate advisor by the end of their third

quarter at UCSD; incoming freshmen by the end of their sixth quarter.

Please refer to the section "[Undergraduate Regulations and Requirements](#)" for important details.

**TRANSFER STUDENTS ELIGIBILITY**

It is strongly recommended that transfer students complete the following course preparation for engineering majors:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Phys. 2A-B-C)
- Chemistry 6A (except computer science and computer engineering majors)
- Highest level of introductory computer programming language course offerings at the community college\*

\*Refer to the UC San Diego General Catalog to select major prerequisite requirement for computer language courses.

**1. Computer Engineering**

Applicants seeking admission as transfer students will be directly admitted into the Computer Engineering major.

**2. Electrical Engineering**

Applicants seeking admission as transfer students will be directly admitted into the electrical engineering major.

**3. Engineering Physics**

Students are accepted into the pre-major and must complete the following courses in order to be accepted into the engineering physics major: Math. 20A-B-C, Phys. 2A-B, ECE 15, 25, and 35. Students who wish to enter in the engineering physics major must contact the department before the beginning of the fall quarter, submitting course descriptions and transcripts for courses used to satisfy their lower-division requirements. Normally, admission will be for the fall quarter; students entering in the winter or spring quarter should be aware that scheduling difficulties may occur because upper-division sequences normally begin in the fall quarter.

**GRADE REQUIREMENT IN THE MAJOR**

Courses required for the major must be taken for a letter grade. All major courses must be completed with a grade of C– or better.

A GPA of 2.0 is required in all upper-division courses in the major, including technical electives. The grade of D will not be considered an adequate prerequisite for any ECE course and will not be allowed for graduation. The engineering design requirement must be completed with a grade of C– or better.

## ADVISING

Students are required to complete an academic planning form and to discuss their curriculum with the appropriate departmental advisor immediately upon entrance to UCSD, and then every year until graduation. This is intended to help students in: a) their choice of depth sequence, b) their choice of electives, c) keeping up with changes in departmental requirements. A faculty advisor will be assigned by the ECE department undergraduate office.

## NEW TRANSFER STUDENTS IN ELECTRICAL ENGINEERING AND ENGINEERING PHYSICS

The entire curriculum is predicated on the idea of actively involving students in engineering from the time they enter as freshmen. The freshman courses have been carefully crafted to provide an overview of the engineering mindset with its interrelationships among physics, mathematics, problem solving, and computation. All later courses are specifically designed to build on this foundation. All transfer students should understand that the lower-division curriculum is demanding. Transfer students will be required to take all lower-division requirements or their equivalent. Transfer students are advised to consult the ECE Web site for sample recommended course schedules and for the ECE course requirement guide.

## NEW TRANSFER STUDENTS IN COMPUTER ENGINEERING

Transfer students are advised to consult the ECE Web site for sample recommended course schedules and for the ECE course requirement guide.

Students who do not have any programming experience are encouraged to take the CSE 8A-B sequence instead of CSE 11. Experience has shown that most students who are not familiar with programming and take CSE 11 have to retake the class because the accelerated pace makes it difficult to learn the new material.

**Note:** Transfer students are encouraged to consult with the ECE undergraduate office for academic planning upon entrance to UCSD.

## ECE HONORS PROGRAM

The ECE Undergraduate Honors Program is intended to give eligible students the opportunity to work closely with faculty in a project, and to honor the top graduating undergraduate students.

### ELIGIBILITY FOR ADMISSION TO THE HONORS PROGRAM

1. Students with a minimum GPA of 3.5 in the major and 3.25 overall will be eligible to apply. Students may apply at the end of the winter quarter of their junior year and no later than the end of the second week of fall quarter of their senior year. No late applications will be accepted.
2. Students must submit a project proposal (sponsored by an ECE faculty member) to the honors program committee at the time of application.
3. The major GPA will include ALL lower-division required for the major and all upper-division

required for the major that are completed at the time of application (a minimum of twenty-four units of upper-division course work).

### REQUIREMENTS FOR AWARD OF HONORS

1. Completion of all ECE requirements with a minimum GPA of 3.5 in the major based on grades through winter quarter of the senior year.
2. Formal participation (i.e., registration and attendance) in the ECE 290 graduate seminar program in the winter quarter of their senior year.
3. Completion of an eight-unit approved honors project (ECE 193H: Honors Project) and submission of a written report by the first day of spring quarter of the senior year. This project must contain enough design to satisfy the ECE B.S. four-unit design requirement.
4. The ECE honors committee will review each project final report and certify the projects which have been successfully completed at the honors level.

### PROCEDURE FOR APPLICATION TO THE HONORS PROGRAM

Between the end of the winter quarter of their junior year and the second week of the fall quarter of their senior year, interested students must advise the department of their intention to participate by submitting a proposal for the honors project sponsored by an ECE faculty member. Admission to the honors program will be formally approved by the ECE honors committee based on GPA and the proposal.

### UNIT CONSIDERATIONS

Except for the two-unit graduate seminar, this honors program does not increase a participant's total unit requirements. The honors project will satisfy the departmental design requirement and students may use four units of their honors project course as a technical elective.

## THE GRADUATE PROGRAMS

### FIVE-YEAR B.S./MASTER'S PROGRAM

Undergraduates in the ECE department who have maintained a good academic record in both departmental and overall course work are encouraged to participate in the five-year B.S./master's program offered by the department. Participation in the program will permit students to complete the requirements for the M.S. or M.Eng. degree within one year following receipt of the B.S. degree. Complete details regarding admission to and participation in the program are available from the ECE Undergraduate Affairs office.

### ADMISSION TO THE PROGRAM

Students should submit an application for the B.S./master's program, including three letters of recommendation, by the program deadline during the spring quarter of their junior year. Applications are available from the ECE Undergraduate Affairs office. No GRE's are required for application to the B.S./master's program. A GPA of at least 3.0

both overall and in the major and strong letters of recommendation are required to be considered for program admission. Students should indicate at that time whether they wish to be considered for the M.S. degree program.

In the winter quarter of the senior year, applications of students admitted to the program will be forwarded by the department to the UC San Diego Office of Graduate Studies. Each student must submit the regular graduate application fee prior to the application deadline for their application to be processed. Students who have been accepted into the B.S./master's program will automatically be admitted for graduate study beginning the following fall provided they maintain an overall GPA through the winter quarter of the senior year of at least 3.0. Upper-division (up to twelve units) or graduate courses taken during the senior year that are not used to satisfy undergraduate course requirements may be counted towards the forty-eight units required for the M.S. degree.

### CONTINUATION IN THE PROGRAM

Once admitted to the B.S./master's program, students must maintain a 3.0 cumulative GPA in all courses through the winter quarter of the senior year and in addition must at all times maintain a 3.0 cumulative GPA in their graduate course work. Students not satisfying these requirements may be re-evaluated for continuation in the program.

Admission for graduate study through the B.S./master's program will be for the M.S. or M.Eng. degree only. Undergraduate students wishing to continue toward the Ph.D. degree must apply and be evaluated according to the usual procedures and criteria for admission to the Ph.D. program.

### CURRICULUM

Students in the five-year B.S./master's program must complete the same requirements as those in the regular M.S. program. Completion of the M.S. degree requirements within one year following receipt of the B.S. degree will generally require that students begin graduate course work in their senior year. All requirements for the B.S. degree should be completed by the end of the senior (fourth) year, and the B.S. degree awarded prior to the start of the fifth year. Courses taken in the senior year may be counted toward the B.S. degree requirements or the M.S. degree requirements, but not both. Students must have received their B.S. degree before they will be eligible to enroll as graduate students in the department.

The department offers graduate programs leading to the M.Eng., M.S., and Ph.D. degrees in electrical engineering. Students can be admitted into ECE graduate studies through either the M.Eng., M.S. or Ph.D. programs.

The Ph.D. program is strongly research oriented and is for students whose final degree objective is the Ph.D. If a student with a B.S. is admitted to this program, he or she will be expected to complete the requirements for the M.S. degree (outlined below) before beginning doctoral research. The M.S. is a technically intensive, research-oriented degree intended as preparation for advanced technical work in the engineering profession, or subsequent pursuit of a Ph.D. By contrast, the M. Eng. is intended to be a

terminal professional degree, for those not planning to pursue the Ph.D. The M. Eng. has only a course work requirement.

In addition, the department offers M.S. and Ph.D. programs in computer engineering jointly with CSE, and a Ph.D. program in applied ocean science jointly with MAE and Scripps Institution of Oceanography.

Admission to an ECE graduate program is in accordance with the general requirements of the UCSD graduate division, and requires at least a B.S. Degree in engineering, physical sciences, or mathematics with a minimum upper division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE General Test scores. TOEFL or IELTS scores are required from international applicants whose native language is not English. Applicants should be aware that the University does not permit duplication of degrees.

Support: The department makes every effort to provide financial support for Ph.D. students who are making satisfactory progress. Support may take the form of a fellowship, teaching assistantship, research assistantship, or some combination thereof. International students will not be admitted unless there is reasonable assurance that support can be provided for the duration of their Ph.D. Program. Students in the M.Eng. and M.S. programs may also obtain support through teaching or research assistantships, but this is less certain.

Advising: Students should seek advice on requirements and procedures from the departmental graduate office and/or the departmental Web site <http://www.ece.ucsd.edu>. All students will be assigned a faculty academic advisor upon admission and are strongly encouraged to discuss their academic program with their advisor immediately upon arrival and subsequently at least once per academic year.

## MASTER OF ENGINEERING

The Master of Engineering (M. Eng.) program is intended primarily for engineers who desire master's-level work but do not intend to continue with Ph.D.-level research. It differs from the M.S. program in that it is a terminal professional degree, whereas the M.S. may serve as an entry to a Ph.D. program. Salient features of the M. Eng. program include the following: It can be completed in four quarters at full-time or eight quarters at half time; it does not require a thesis, a research project, or a comprehensive exam; and it has an option of three courses in business, management, and finance.

### Course Requirements

The total course requirements are forty-eight units (twelve quarter courses). At least thirty-six units must be at the graduate level. The choice of courses is subject to general focus and breadth requirements. Students will be assigned a faculty advisor who will help select courses.

**1. The Focus Requirement:** (five courses) The M.Eng. program should reflect, among other things, a continuity and focus in one subject area. The course selection must therefore include at least twenty units (five quarter courses) in closely related courses leading to the state of the art in that area. The requirement may be met by selecting five courses from within one of the focus areas

listed below. In some cases it may be appropriate to select five closely related courses from two of the areas listed below. Such cases must be approved by a faculty advisor and the ECE Graduate Affairs Committee.

**2. The Breadth Requirement:** (two courses) A graduate student often cannot be certain of his or her future professional career activities and may benefit from exposure to interesting opportunities in other subject areas. The breadth requirement is intended to provide protection against technical obsolescence, open up new areas of interest, and provide for future self-education and interaction with people from related and sometime disparate disciplines. The minimum breadth requirement is eight units (two quarter courses) of ECE/CSE graduate courses selected from among the courses listed below, in an area distinctly different from that of the focus requirement.

**3. Technical Electives:** (two courses) Two technical electives may be any graduate courses in ECE, CSE, Physics, or Mathematics. Other technical courses may be selected with the approval of the faculty advisor and the ECE Graduate Affairs Committee. Technical electives may include a maximum of four units of ECE 298 (Independent Study), or ECE 299 (Research).

**4. Professional Electives:** (three courses) The three professional electives may be used in several ways: for the IP/Core 401, 420, 421 series in business, management, and finance; for upper-division undergraduate technical courses specified as prerequisites for graduate-level focus, breadth, or technical elective courses taken to satisfy the M.Eng. Degree requirements; or for additional graduate technical electives. Use of other courses to satisfy the Professional Elective requirement must be approved by the faculty advisor.

**Scholarship Requirement:** The forty-eight units of required course work must be taken for a letter grade (A–F), except for ECE 298 or 299, for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

## MASTER OF ENGINEERING PROGRAM FOCUS COURSES

Please consult the ECE graduate office or the ECE Web site <http://www.ece.ucsd.edu> for the current list of focus areas and courses.

### 1. Applied Physics

Allied Ph.D. research areas: Applied Physics—Applied Optics, Applied Physics—Electronic Devices and Materials, Photonics, Radio Space Science, and Magnetic Recording.

ECE 222A-B-C. **Electromagnetic Theory**  
ECE 230A-B-C. **Solid State Electronics**  
ECE 236A-B-C-D. **Semiconductors**  
ECE 238A-B. **Materials Science**  
MS 201A-B-C. **Materials Science**  
ECE 240A-B-C. **Optics**  
ECE 241A-B-C. **Optics**

## 2. Communications and Signal Analysis

Allied Ph.D. Research areas: Communication Theory and Systems, Intelligent Systems, Robotics, and Control, Magnetic Recording, Signal and Image Processing.

ECE 250. **Random Processes**  
ECE 251AN-BN-CN-DN. **Digital Signal Processing**  
ECE 252A-B. **Speech Compression and Recognition**  
ECE 253A-B. **Digital Image Analysis**  
ECE 254. **Detection Theory**  
ECE 255AN. **Information Theory**  
ECE 255BN-CN. **Source Coding**  
ECE 256A-B. **Time Series Analysis**  
ECE 257A-B. **Wireless Communications**  
ECE 258A-B. **Digital Communications**  
ECE 259AN-BN-CN. **Channel Coding**  
ECE 275A-B. **Statistical Parameter Estimation**  
ECE 285. **Special Topic: Computer Vision; Pattern Recognition (offerings vary annually)**

## 3. Electronic Circuits and Systems

Allied Ph.D. Research areas: Computer Engineering, Electronic Circuits and Systems.

ECE 222A-B-C. **Applied Electromagnetic Theory**  
ECE 230A-B-C. **Solid State Electronics**  
ECE 236A-B-C. **Semiconductor Hetero-structure Materials**  
ECE 250. **Random Processes**  
ECE 260A-B-C. **VLSI Circuits**  
ECE 264A-B-C-D. **Analog IC Design**  
ECE 265A-B. **Wireless Circuit Design**  
CSE 240A, 240B. **Computer Architecture**  
CSE 242A, 243A. **Computer Aided Design**  
ECE 251AN-BN-CN-DN. **Digital Signal Processing**

## TRANSFERRING TO THE PH.D. PROGRAM

Although the M. Eng. is intended as a terminal degree, the department recognizes that degree goals can change, including the possibility that a student admitted to the M. Eng. may wish to pursue a Ph.D. To this end, we outline below the procedure that must be followed to effect such a change. At the outset, however, we stress that this option should not be used in an attempt to circumvent the normal Ph.D. admissions process. Students who fail to meet the standards for the Ph.D. program at the time of admission have little chance of being allowed into the Ph.D. program at a later date.

Students in the M.Eng. program wishing to be considered for admission to the Ph.D. program should consult their academic advisor as soon as possible. Transfer from M. Eng. to the Ph.D. program is possible provided that the student

- Satisfy all requirements for initial admission to the Ph.D. program, including submission of GRE General Test Scores, and be approved for consideration for transfer to the Ph.D. program by the ECE Graduate Admissions Committee.
- Identify a faculty member who agrees, in writing, to serve as that student's academic and Ph.D. research advisor.
- In consultation with the academic advisor, design and complete a program of course work that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to their research. All students in the Ph.D. programs are required to

satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of course work will serve, with the approval of the academic advisor and the ECE Graduate Affairs Committee, to satisfy the course work requirements for the M.S. or M.Eng. degree (see below).

- Pass the comprehensive examination at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M.S. or M.Eng. degree program (see below).
- Maintain a GPA of at least 3.4 in the appropriate core graduate courses.

A student who has fulfilled all of the above requirements should, after passing the departmental comprehensive exam, submit a petition to change their degree objective from M.Eng. to Ph.D.

### MASTER OF SCIENCE

The ECE department offers M.S. programs in electrical and computer engineering. The M.S. program in computer engineering is jointly administered with the Department of Computer Science and Engineering. The M.S. programs are research oriented, are intended to provide the intensive technical preparation necessary for advanced technical work in the engineering profession or subsequent pursuit of a Ph.D. The M.S. degree may be earned either with a thesis (Plan 1) or with a research project followed by a comprehensive examination (Plan 2). However, continuation in the Ph.D. program requires a comprehensive examination so most students opt for Plan 2.

**Course Requirements:** The total course requirements for the master of science degrees in electrical engineering and in computer engineering are forty-eight units (twelve quarter courses) and forty-nine units, respectively, of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the department graduate office or the official Web site of the department. Students in interdisciplinary programs may select other core courses with the approval of their academic advisor. The course requirements must be completed within two years of full-time study. Students will be assigned a faculty advisor who will help select courses and approve their overall academic curriculum.

**Scholarship Requirement:** The forty-eight units of required course work must be taken for a letter grade (AF), except for graduate research (e.g. ECE 298, 299) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

**Thesis and Comprehensive Requirements:** The department offers both M.S. Plan 1 (thesis) and M.S. Plan 2 (written comprehensive exam). Students in the M.S. program may elect either Plan 1 or Plan 2 any time. Students in the M.S. Plan 1 (thesis) must take twelve units of ECE 299 (Research) and must

submit a thesis as described in the general requirements of the university. Students in the M.S. Plan 2 (written comprehensive exam) may count four units of ECE 299 (Research) toward the thirty-six graduate units required and must pass the departmental written comprehensive examination not later than the end of the fall quarter of their second year of study. Students who pass the written examination at the MS level will receive a terminal masters degree, if they do not already have one.

Students in the computer engineering discipline may elect to take examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the written comprehensive examination in ECE.

**Transfer to the Ph.D. Program:** Students in the M.S. program wishing to be considered for admission to the Ph.D. program should consult their academic advisor as soon as possible. Transfer from the M.S. to the Ph.D. program is possible provided that the student

- Satisfy all requirements for initial admission to the Ph.D. program, including submission of GRE general test scores, and be approved for consideration for transfer to the Ph.D. program by the ECE Graduate Admissions Committee.
- Identify a faculty member who agrees, in writing, to serve as that student's academic and Ph.D. research advisor.
- In consultation with the academic advisor, design and complete a program of course work that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to the student's research. All students in the Ph.D. program are required to satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of course work will serve, with the approval of the academic advisor and the ECE Graduate Affairs Committee, to satisfy the course work requirements for the M.S. degree.
- Pass the comprehensive examination at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M.S. degree program.
- Maintain a GPA of at least 3.4 in the appropriate core graduate courses.

A student who has fulfilled all of the above requirements should, after passing the departmental comprehensive exam, submit a petition to change his or her degree objective from M.S. to Ph.D.

### THE DOCTORAL PROGRAMS

The ECE department offers graduate programs leading to the Ph.D. degree in ten disciplines within electrical and computer engineering, as described in detail below. The Ph.D. is a research degree requiring completion of the Ph.D. Program course requirements, satisfactory performance on the comprehensive (Ph.D. Preliminary) examination and university Qualifying Examination, and submission and defense of a doctoral thesis (as described under the "Graduate Studies" section of this catalog). Students in the Ph.D. Program must pass the comprehensive

exam (Ph.D. Preliminary) before the beginning of the winter quarter of the second year of graduate study. To ensure timely progress in their research, students are strongly encouraged to identify a faculty member willing to supervise their doctoral research by the end of their first year of study.

Students should begin defining and preparing for their thesis research as soon as they have passed the comprehensive exam (Ph.D. Preliminary). They should plan on taking the university Qualifying Examination about one year later. The university does not permit students to continue in graduate study for more than four years without passing this examination. At the Qualifying Examination the student will give an oral presentation on research accomplishments to date and the thesis proposal to a campus-wide committee. The committee will decide if the work and proposal has adequate content and reasonable chance for success. They may require that the student modify the proposal and may require a further review.

The final Ph.D. requirements are the submission of a dissertation and the dissertation defense (as described under the "Graduate Studies" section of this catalog).

**Course Requirements:** The total course requirements for the Ph.D. degree in electrical engineering are essentially the same as the M.S. degree and consists of forty-eight units (twelve quarter courses), of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the ECE department graduate office or the official Web site of the department. Students in the interdisciplinary programs may select other core courses with the approval of their academic advisor. The course requirements must be completed within two years of full-time study.

Students in the Ph.D. programs may count no more than eight units of ECE 299 towards their course requirements.

Students who already hold an M.S. degree in electrical engineering must nevertheless satisfy the requirements for the core courses. However, graduate courses taken elsewhere can be substituted for specific courses with the approval of the academic advisor.

**Scholarship Requirement:** The forty-eight units of required courses must be taken for a letter grade (AF), except for ECE 299 (Research) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall. In addition, a GPA of 3.4 in the core graduate courses is generally expected.

**Comprehensive Exam (Ph.D. Preliminary):** Ph.D. students must find a faculty member who will agree to supervise their thesis research. This should be done before the start of the second year of study. They should then devote at least half their time to research and must pass the Ph.D. Preliminary Examination by the end of their second year of study. This is an oral exam in which the student presents his or her research to a committee of three ECE faculty members, and is examined orally for proficiency in his or her area of specialization. The outcome of the

exam is based on the student's research presentation, proficiency demonstrated in the student's area of specialization and overall academic record and performance in the graduate program. Successful completion of the Ph.D. Preliminary Examination will also satisfy the M.S. Plan 2 comprehensive exam requirement.

\*Students in the computer engineering discipline may elect to take examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the ECE comprehensive examination as described above.

**University Qualifying Exam:** Students who have passed the comprehensive exam (Ph.D. Preliminary) should plan to take the university Qualifying Examination approximately a year after passing the comprehensive exam (Ph.D. Preliminary). The university does not permit students to continue in graduate study for more than four years without passing this examination. The university Qualifying Examination is an oral exam in which the student presents his or her thesis proposal to a university-wide committee. After passing this exam the student is "advanced to candidacy."

**Dissertation Defense:** The final Ph.D. requirements are the submission of a dissertation, and the dissertation defense (as described under the "Graduate Studies" section of this catalog). Students who are advanced to candidacy may register for any ECE course on an S/U basis.

**Departmental Time Limits:** Students who enter the Ph.D. Program with an M.S. degree from another institution are expected to complete their Ph.D. requirements a year earlier than B.S. entrants. They must discuss their program with an academic advisor in their first quarter of residence. If their Ph.D. Program overlaps significantly with their earlier M.S. work, the time limits for the comprehensive and qualifying exams will also be reduced by one year. Specific time limits for the Ph.D. Program, assuming entry with a B.S. degree, are as follows:

**1. The Comprehensive Exam (Ph.D. Preliminary)**

must be completed before the start of the winter quarter of the second year of full-time study.

**2. The University Qualifying Exam** must be completed before the start of the fifth year of full-time study.

**3. Support Limit:** Students may not receive financial support through the university for more than seven years of full-time study (six years with an M.S. degree).

**4. Registered Time Limit:** Students may not register as graduate students for more than eight years of full-time study (seven years with an M.S. degree).

**Half-Time Study:** Time limits are extended by one quarter for every two quarters of approved half-time status. Students on half-time status may not take more than six units each quarter.

## PH.D. RESEARCH PROGRAMS

**1. Applied Ocean Sciences:** This program in applied science related to the oceans is interdepartmental with the Graduate Department of the Scripps Institution of Oceanography (SIO) and the Department of Mechanical and Aerospace Engineering (MAE). It is administered by SIO.

All aspects of man's purposeful and unusual intervention into the sea are included.

## 2. Applied Physics—Applied Optics and Photonics:

These programs encompass a broad range of interdisciplinary activities involving optical science and engineering, optical and optoelectronic materials and device technology, communications, computer engineering, and photonic systems engineering. Specific topics of interest include ultrafast optical processes, nonlinear optics, quantum cryptography and communications, optical image science, multi-dimensional optoelectronic I/O devices, spatial light modulators and photodetectors, artificial dielectrics, multifunctional diffractive and micro-optics, volume and computer-generated holography, optoelectronic and micromechanical devices and packaging, wave modulators and detectors, semiconductor-based optoelectronics, injection lasers, and photodetectors. Current research projects are focused on applications such as optical interconnects in high-speed digital systems, optical multidimensional signal and image processing, ultrahigh-speed optical networks, 3D optical memories and memory interfaces, 3D imaging and displays, and biophotonic systems. Facilities available for research in these areas include electron-beam and optical lithography, material growth, microfabrication, assembly, and packaging facilities, cw and femtosecond pulse laser systems, detection systems, optical and electro-optic components and devices, and electronic and optical characterization and testing equipment.

## 3. Communication Theory and Systems:

Communications theory and systems concerns the transmission, processing, and storage of information. Topics covered by the group include wireless and wireline communications, spread-spectrum communication, multi-user communication, network protocols, error-correcting codes for transmission and magnetic recording, data compression, time-series analysis, and image and voice processing.

## 4. Computer Engineering

consists of balanced programs of studies in both hardware and software, the premise being that knowledge and skill in both areas are essential both for the modern-day computer engineer to make the proper unbiased tradeoffs in design, and for researchers to consider all paths towards the solution of research questions and problems. Toward these ends, the programs emphasize studies (course work) and competency (comprehensive examinations, and dissertations or projects) in the areas of VLSI and logic design, and reliable computer and communication systems. Specific research areas include computer systems, signal processing systems, multiprocessing and parallel and distributed computing, computer communications and networks, computer architecture, computer-aided design, fault-tolerance and reliability, and neurocomputing. The faculty is composed of interested members of the Departments of Electrical and Computer Engineering (ECE), Computer Science and Engineering (CSE), and related areas. The specialization is administered by both departments;

the requirements are similar in both departments, with students taking the comprehensive exam, if necessary, given by the student's respective department.

## 5. Electronic Circuits and Systems:

This program involves the study and design of analog, mixed-signal (combined analog and digital), and digital electronic circuits and systems. Emphasis is on the development, analysis, and implementation of integrated circuits that perform analog and digital signal processing for applications such as wireless and wireline communication systems, test and measurement systems, and interfaces between computers and sensors. Particular areas of study currently include radio frequency (RF) power amplifiers, RF low noise amplifiers, RF mixers, fractional-N phase-locked loops (PLLs) for modulated and continuous-wave frequency synthesis, pipelined analog-to-digital converters (ADCs), delta-sigma ADCs and digital-to-analog converters (DACs), PLLs for clock recovery, adaptive and fixed continuous-time, switched-capacitor, and digital filters, echo cancellation circuits, adaptive equalization circuits, wireless receiver and transmitter linearization circuits, mixed-signal baseband processing circuits for wireless transmitters and receivers, high-speed digital circuits, and high-speed clock distribution circuits.

## 6. Applied Physics—Electronic Devices and Materials:

This program addresses the synthesis and characterization of advanced electronic materials, including semiconductors, metals, and dielectrics, and their application in novel electronic, optoelectronic, and photonic devices. Emphasis is placed on exploration of techniques for high-quality epitaxial growth of semiconductors, including both molecular-beam epitaxy (MBE) and metalorganic chemical vapor deposition (MOCVD); fabrication and characterization of materials and devices at the nanoscale; development of novel materials processing and integration techniques; and high-performance electronic devices based on both Group IV (Si/SiGe) and III-V compound semiconductor materials. Areas of current interest include novel materials and high-speed devices for wireless communications; electronic and optoelectronic devices for high-speed optical networks; high-power microwave-frequency devices; nanoscale CMOS devices and circuits; heterogeneous materials integration; novel device structures for biological and chemical sensing; advanced tools for nanoscale characterization and metrology; and novel nanoscale electronic, optoelectronic, and photonic devices. Extensive facilities are available for research in this area, including several MBE and MOCVD systems; a complete microfabrication facility; electron-beam lithography and associated process tools for nanoscale fabrication; a Rutherford backscattering system; x-ray diffractometers; electron microscopy facilities; extensive scanning-probe instrumentation; cryogenic systems; and comprehensive facilities for DC to RF electrical device characterization and optical characterization of materials and devices.

**7. Intelligent Systems, Robotics, and Control:** This information sciences-based field is concerned with the design of human-interactive intelligent systems that can sense the world (defined as some specified domain of interest); represent or model the world; detect and identify states and events in the world; reason about and make decisions about the world; and/or act on the world, perhaps all in real-time. A sense of the type of systems and applications encountered in this discipline can be obtained by viewing the projects shown at the Web site <http://www.ece.ucsd.edu/grad/curricula/MS-PhD/ISRC/index.php>.

The development of such sophisticated systems is necessarily an interdisciplinary activity. To sense and succinctly represent events in the world requires knowledge of signal processing, computer vision, information theory, coding theory, and data-basing; to detect and reason about states of the world utilizes concepts from statistical detection theory, hypothesis testing, pattern recognition, time series analysis, and artificial intelligence; to make good decisions about highly complex systems requires knowledge of traditional mathematical optimization theory and contemporary near-optimal approaches such as evolutionary computation; and to act upon the world requires familiarity with concepts of control theory and robotics. Very often learning and adaptation are required as either critical aspects of the world are poorly known at the outset, and must be refined online, or the world is non-stationary and our system must constantly adapt to it as it evolves. In addition to the theoretical information and computer science aspects, many important hardware and software issues must be addressed in order to obtain an effective fusion of a complicated suite of sensors, computers, and problem dynamics into one integrated system.

Faculty affiliated with the ISRC subarea are involved in virtually all aspects of the field, including applications to intelligent communications systems; advanced human-computer interfacing; statistical signal- and image-processing; intelligent tracking and guidance systems; biomedical system identification and control; and control of teleoperated and autonomous multiagent robotic systems.

**8. Magnetic Recording** is an interdisciplinary field involving physics, material science, communications, and mechanical engineering. The physics of magnetic recording involves studying magnetic heads, recording media, and the process of transferring information between the heads and the medium. General areas of investigation include: nonlinear behavior of magnetic heads, very high frequency loss mechanisms in head materials, characterization of recording media by micromagnetic and many body interaction analysis, response of the medium to the application of spatially varying vectorial head fields, fundamental analysis of medium nonuniformities leading to media noise, and experimental studies of the channel transfer function emphasizing non-linearities, interferences, and noise. Current projects include numerical simulations of high density digital recording in metallic thin films,

micromagnetic analysis of magnetic reversal in individual magnetic particles, theory of recorded transition phase noise and magnetization induced nonlinear bit shift in thin metallic films, and analysis of the thermal-temporal stability of interacting fine particles.

Research laboratories are housed in the Center for Magnetic Recording Research, a national center devoted to multidisciplinary teaching and research in the field.

**9. Applied Physics—Radio and Space Science:**

The Radio Science Program focuses on the study of radio waves propagating through turbulent media. The primary objectives are probing of otherwise inaccessible media such as the solar wind and interstellar plasma. Techniques for removing the effects of the turbulent medium to restore the intrinsic signals are also studied.

The Space Science Program is concerned with the nature of the sun, its ionized and supersonic outer atmosphere (the solar wind), and the interaction of the solar wind with various bodies in the solar system. Theoretical studies include: the interaction of the solar wind with the earth, planets, and comets; cosmic dusty-plasmas; waves in the ionosphere; and the physics of shocks. A major theoretical effort involves the use of supercomputers for modeling and simulation studies of both fluid and kinetic processes in space plasmas.

Students in radio science will take measurements at various radio observatories in the U.S. And elsewhere. This work involves a great deal of digital signal processing and statistical analysis. All students will need to become familiar with electromagnetic theory, plasma physics, and numerical analysis.

**10. Signal and Image Processing:** This program explores engineering issues related to the modeling of signals starting from the physics of the problem, developing and evaluating algorithms for extracting the necessary information from the signal, and the implementation of these algorithms on electronic and opto-electronic systems. Examples of research areas include filter design, fast transforms, adaptive filters, spectrum estimation and modeling, sensor array processing, image processing, image restoration, video processing, pattern recognition, and the implementation of signal processing algorithms using appropriate technologies. Signal and image processing techniques have found application in a number of areas such as sonar, radar, speech, geophysics, medical imaging, robotic vision, digital communications, and multimedia systems among others.

**11. Nanoscale Devices and Systems:** This program area will address the science and engineering of materials and device structures at length scales of ~100nm and below, at which phenomena such as quantum confinement and single-electron effects in electronics, near-field behavior in optics and electromagnetics, single-domain effects in magnetism, and a host of other effects in mechanical, fluidic, and biological systems emerge and become dominant. Engineering activities such as

scaling of transistors and other circuit elements in microelectronics, design of new, artificial materials with engineered optical properties and of photonic components and systems based on these materials, engineering of high-density magnetic storage media and systems, development of new technologies for renewable energy conversion and storage, advancement of sensor technology, and others now depend upon engineering both solid-state and “soft” materials and device structures at the nanoscale. Furthermore, the integration of such technologies into complex systems, as well as consideration of system drivers and constraints as guides for the development of new materials and devices, is emerging as a critical aspect of nanotechnology.

## RESEARCH FACILITIES

Most of the research laboratories of the department are associated with individual faculty members or small informal groups of faculty. Larger instruments and facilities, such as those for electron microscopy and e-beam lithography are operated jointly. In addition the department operates several research centers and participates in various university wide organized research units.

The department-operated research centers are the Center for Wireless Communications which is a university-industry partnership; the Institute for Neural Computation, and the Center for Information Theory and Application in conjunction with Calit2.

Department research is also associated with the Center for Astronomy and Space Science, the Center for Magnetic Recording Research, the California Space Institute, the Institute for Nonlinear Science, and Calit2 (<http://www.calit2.net>). Departmental researchers also use various national and international laboratories, such as the National Nanofabrication Facility, the National Radio Astronomy Laboratory, and the Center for Networked Systems (CSE).

The department emphasizes computational capability and maintains numerous computer laboratories for instruction and research. One of the NSF national supercomputer centers is located on the campus. This is particularly useful for those whose work requires high data bandwidths.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

The department will endeavor to offer the courses as outlined below; however, unforeseen circumstances sometimes require a change of scheduled offerings. Students are strongly advised to check the Schedule of Classes or the department before relying on the schedule below. For the names of the instructors who will teach the course, please refer to the quarterly Schedule of Classes. The departmental Web site <http://www.ece.ucsd.edu> includes the present best estimate of the schedule of classes for the entire academic

## LOWER-DIVISION

### 1A-B-C. Mesa Orientation Course (1-1-1)

Students will be given an introduction to the engineering profession and our undergraduate program. Exercises and practicums will develop the problem-solving skills needed to succeed in engineering. **Prerequisite:** none. (F,W,S)

### 15. Engineering Computation (4)

Students learn the C programming language with an emphasis on high-performance numerical computation. The commonality across programming languages of control structures, data structures, and I/O is also covered. Techniques for using MatLab to graph the results of C computations are developed. **Prerequisites:** a familiarity with basic mathematics such as trigonometry functions and graphing is expected but this course assumes no prior programming knowledge. (F,W)

### 25. Introduction to Digital Design (4)

This course emphasizes digital electronics. Principles introduced in lectures are used in laboratory assignments, which also serve to introduce experimental and design methods. Topics include Boolean algebra, combination and sequential logic, gates and their implementation in digital circuits. (Course material and/or program fees may apply.) **Prerequisite:** none. (F,W,S)

### 30. Introduction to Computer Engineering (4)

The fundamentals of both the hardware and software in a computer system. Topics include: representation of information, computer organization and design, assembly and microprogramming, current technology in logic design. (Students who have taken CSE 30 may not take ECE 30 for credit.) **Prerequisites:** ECE 15 and 25 with grades of C- or better. (F,S)

### 35. Introduction to Analog Design (4)

Fundamental circuit theory concepts, Kirchoff's voltage and current laws, Thevenin's and Norton's theorems, loop and node analysis, time-varying signals, transient first order circuits, steady-state sinusoidal response. (Course material and/or program fees may apply.) **Prerequisites:** Math. 20A-B; Math. 20C and Physics 2B must be taken concurrently. (F,W,S)

### 45. Circuits and Systems (4)

Steady-state circuit analysis, first and second order systems, Fourier Series and Transforms, time domain analysis, convolution, transient response, Laplace Transform, and filter design. **Prerequisites:** Math. 20A-B-C, ECE 15, and ECE 35. (F,W,S)

### 65. Components and Circuits Laboratory (4)

Introduction to linear and nonlinear components and circuits. Topics will include: two terminal devices, bipolar and field-effect transistors, and large and small signal analysis of diode and transistor circuits. (Course material and/or program fees may apply.) **Prerequisites:** ECE 15, 25, and 35. (F,W,S)

### 80. Photonics of Everyday Life (4)

This course is a general elective for students interested in the impact of photonic technology in our everyday lives. Topics include digital camera and photography, photography vs. holography, holograms for counterfeiting, LCD display and optical storage (CD and DVD) in computers, some varieties of lasers, differences between laser light and ordinary light, optics for telecom, telescope, microscope, spectroscopy, and biophotonics. **Prerequisite:** simple concepts of calculus (see instructor), or Math. 10A or 20A. (W or S)

### 87. Freshman Seminar (1)

The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. **Prerequisite:** none.

### 90. Undergraduate Seminar (1)

This seminar class will provide a broad review of current research topics in both electrical engineering and computer engineering. Typical subject areas are signal processing, VLSI design, electronic materials and devices,

radio astronomy, communications, and optical computing.

**Prerequisite:** none. (F,W,S)

## UPPER-DIVISION

### 100. Linear Electronic Systems (4)

Linear active circuit and system design. Topics include frequency response; use of Laplace transforms; design and stability of filters using operational amplifiers. Integrated lab and lecture involves analysis, design, simulation, and testing of circuits and systems. **Prerequisites:** ECE 15, ECE 25, ECE 35, and ECE 45. **Corequisite:** ECE 102 (F,W)

### 101. Linear Systems Fundamentals (4)

Complex variables. Singularities and residues. Signal and system analysis in continuous and discrete time. Fourier series and transforms. Laplace and z-transforms. Linear Time Invariant Systems. Impulse response, frequency response, and transfer functions. Poles and zeros. Stability. Convolution. Sampling. Aliasing. **Prerequisite:** ECE 45 with grade of C- or better (F,W)

### 102. Introduction to Active Circuit Design (4)

Design and stability of linear active circuits. Nonlinear models for diodes, bipolar and field-effect transistors. Design of analog transistor circuits, biasing, and small-signal transfer functions. Design of digital transistor circuits, logic levels, noise margins, and fanout. Circuit designs simulated by computer and tested in the laboratory. **Prerequisites:** ECE 65 and 101, with grades of C- or better. (F,W)

### 103. Fundamentals of Devices and Materials (4)

Introduction to semiconductor materials and devices. Semiconductor crystal structure, energy bands, doping, carrier statistics, drift and diffusion. p-n junctions, metal-semiconductor junctions. Bipolar junction transistors: current flow, amplification, switching, non-ideal behavior. Metal-oxide-semiconductor structures, MOSFETs, device scaling. **Prerequisites:** Phys. 2D or Phys. 4D and 4E with grades of C- or better. (F,W)

### 107. Electromagnetism (4)

Electrostatics and magnetostatics; electrodynamics; Maxwell's equations; plane waves; skin effect. Electromagnetics of transmission lines: reflection and transmission at discontinuities, Smith chart, pulse propagation, dispersion. Rectangular waveguides. Dielectric and magnetic properties of materials. Electromagnetics of circuits. **Prerequisites:** Phys. 2A-D or 4A-E and ECE 45 or 53B with grades of C- or better. (W,S)

### 108. Digital Circuits (4)

Digital integrated electronic circuits for processing technologies. Analytical methods for static and dynamic characteristics. MOS field-effect transistors and bipolar junction transistors, circuits for logic gates, flip-flop, data paths, programmable logic arrays, memory elements. (Course material and/or program fees may apply.) **Prerequisites:** Math. 20A-B, 21C-D, 20F-E; Phys. 2A-D or 4A-E; (ECE 25, 35, 45, and 65); ECE 30 or CSE 30; ECE 102 with grades of C- or better. (W,S)

### 109. Engineering Probability and Statistics (4)

Axioms of probability, conditional probability, theorem of total probability, random variables, densities, expected values, characteristic functions, transformation of random variables, central limit theorem. Random number generation, engineering reliability, elements of estimation, random sampling, sampling distributions, tests for hypothesis. . Students who completed Math. 180A-B, Math. 183, Math. 186, Econ. 120A, or Econ. 120AH will not receive credit for ECE 109. **Prerequisites:** Math. 20A-B-C or 21C, 20D or 21D, 20F, with grades of C- or better. (ECE 101 recommended). (W,S)

### 111. Advanced Digital Design Project (4)

Advanced topics in digital circuits and systems. Use of computers and design automation tools. Hazard elimination, synchronous/asynchronous FSM synthesis, synchronization and arbitration, pipelining and timing issues. Problem sets and design exercises. A large-scale design project. Simulation and/or rapid prototyping. **Prerequisite:** ECE 108 or CSE 140 with grades of C- or better. (F,W,S)

### 118. Computer Interfacing (4)

Interfacing computers and embedded controllers to the real world: busses, interrupts, DMA, memory mapping, concurrency, digital I/O, standards for serial and parallel communications, A/D, D/A, sensors, signal conditioning, video, and closed loop control. Students design and construct an interfacing project. (Course material and/or program fees may apply.) **Prerequisites:** ECE 30 or CSE 30 and ECE 60A-B-L or ECE 53A-B. (S)

### 120. Solar System Physics (4)

General introduction to planetary bodies, the overall structure of the solar system, and space plasma physics. Course emphasis will be on the solar atmosphere, how the solar wind is produced, and its interaction with both magnetized and unmagnetized planets (and comets). **Prerequisites:** Phys. 2A-C or 4A-D, Math. 20A-B, 20C or 21C with grades of C- or better. (S)

### 123. Antenna Systems Engineering (4)

The electromagnetic and systems engineering of radio antennas for terrestrial wireless and satellite communications. Antenna impedance, beam pattern, gain, and polarization. Dipoles, monopoles, paraboloids, phased arrays. Power and noise budgets for communication links. Atmospheric propagation and multipath. **Prerequisite:** ECE 107 with a grade of C- or better. (W or S)

### 134. Electronic Materials Science of Integrated Circuits (4)

Electronic materials science with emphasis on topics pertinent to microelectronics and VLSI technology. Concept of the course is to use components in integrated circuits to discuss structure, thermodynamics, reaction kinetics, and electrical properties of materials. **Prerequisites:** Phys. 2C-D with grades of C- or better. (S)

### 135A. Semiconductor Physics (4)

Crystal structure and quantum theory of solids; electronic band structure; review of carrier statistics, drift and diffusion, p-n junctions; nonequilibrium carriers, imrefs, traps, recombination, etc; metal-semiconductor junctions and heterojunctions. **Prerequisite:** ECE 103 with a grade of C- or better. (F)

### 135B. Electronic Devices (4)

Structure and operation of bipolar junction transistors, junction field-effect transistors, metal-oxide-semiconductor diodes and transistors. Analysis of dc and ac characteristics. Charge control model of dynamic behavior. **Prerequisite:** ECE 135A with a grade of C- or better. (W)

### 136. Fundamentals of Semiconductor Device Fabrication (4)

Crystal growth, controlled diffusion, determination of junction-depth and impurity profile, epitaxy, ion-implantation, oxidation, lithography, chemical vapor deposition, etching, process simulation and robust design for fabrication. **Prerequisite:** ECE 103 with a grade of C- or better. (S)

### 136L. Microelectronics Laboratory (4)

Laboratory fabrication of diodes and field effect transistors covering photolithography, oxidation, diffusion, thin film deposition, etching and evaluation of devices. (Course material and/or program fees may apply.) **Prerequisite:** ECE 103. (F,S)

### 138L. Microstructuring Processing Technology Laboratory (4)

A laboratory course covering the concept and practice of microstructuring science and technology in fabricating devices relevant to sensors, lab-chips and related devices. (Course material and/or program fees may apply.) **Prerequisite:** upper-division standing for science and engineering students. (W)

### 139. Semiconductor Device Design and Modeling (4)

Device physics of modern field effect transistors and bipolar transistors, including behavior of submicron structures. Relationship between structure and circuit models of transistors. CMOS and BiCMOS technologies. Emphasis on computer simulation of transistor operation and application in integrated circuits. **Prerequisites:** ECE 135A-B with grades of C- or better. (S)

**145AL-BL-CL. Acoustics Laboratory (4-4-4)**

Automated laboratory based on H-P GPIB controlled instruments. Software controlled data collection and analysis. Vibrations and waves in strings and bars of electromechanical systems and transducers. Transmissions, reflection, and scattering of sound waves in air and water. Aural and visual detection. **Prerequisite:** ECE 107 with a grade of C- or better or consent of instructor. (F,W,S)

**146. Introduction to Magnetic Recording (4)**

A laboratory introduction to the writing and reading of digital information in a disk drive. Basic magnetic recording measurements on state-of-art disk drives to evaluate signals, noise, erasure, and non-linearities that characterize this channel. Lectures on the recording process will allow comparison of measurements with basic voltage expressions. E/M FEM software utilized to study geometric effects on the record and play transducers. **Prerequisite:** ECE 107 with a grade of C- or better. (W)

**153. Probability and Random Processes for Engineers (4)**

Random processes. Stationary processes: correlation, power spectral density. Gaussian processes and linear transformation of Gaussian processes. Point processes. Random noise in linear systems. **Prerequisite:** ECE 109 with a grade of C- or better. (F,S)

**154A. Communications Systems I (4)**

Study of analog modulation systems including AM, SSB, DSB, VSB, FM, and PM. Performance analysis of both coherent and noncoherent receivers, including threshold effects in FM. **Prerequisite:** ECE 101 and 153 with a grade of C- or better. (F)

**154B. Communications Systems II (4)**

Design and performance analysis of digital modulation techniques, including probability of error results for PSK, DPSK, and FSK. Introduction to effects of intersymbol interference and fading. Detection and estimation theory, including optimal receiver design and maximum-likelihood parameter estimation. **Prerequisite:** ECE 154A with a grade of C- or better. (W)

**ECE 15154C. Communications Systems III (4)**

Introduction to information theory and coding, including entropy, average mutual information, channel capacity, block codes and convolutional codes. **Prerequisite:** ECE 154B with a grade of C- or better. (S)

**155A. Digital Recording Systems (4)**

This course will be concerned with modulation and coding techniques for digital recording channels. **Prerequisites:** ECE 109 and 153 with grades of C- or better and concurrent registration in ECE 154A required. Department stamp required. (F)

**155B. Digital Recording Projects I (4)**

Students registered in this course work one-on-one with a researcher on a project involving the design and evaluation of a digital recording system based upon material covered in ECE 155A. **Prerequisites:** ECE 155A with grade of C- or better. Concurrent registration in ECE 154B. Department stamp required. (W,S)

**155C. Digital Recording Projects II (4)**

Students registered in this course work one-on-one with a researcher on a project involving the design and evaluation of a digital recording system based upon material covered in ECE 155A. The project can be a continuation of a project initiated in Digital Recording Projects I or it can be an entirely new project. **Prerequisites:** ECE 155B with grade of C- or better. Concurrent registration in ECE 154C. Department stamp required. (W,S)

**156. Sensor Networks (4)**

Characteristics of chemical, biological, seismic, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Undergraduate students must take a final exam; graduate students must write a term paper or complete a final project. Cross-listed with MAE 149 and SIO 238. **Prerequisite:** upper-division standing and consent of instructor, or graduate student in science and engineering. (S)

**157A. Communications Systems Laboratory I (4)**

Experiments in the modulation and demodulation of baseband and passband signals. Statistical characterization of signals and impairments. (Course material and/or program fees may apply.) **Prerequisite:** ECE 154A with a grade of C+ or better. (W)

**157B. Communications Systems Laboratory II (4)**

Advanced Projects in communication systems. Students will plan and implement design projects in the laboratory, updating progress weekly and making plan/design adjustments based upon feedback. (Course material and/or program fees may apply.) **Prerequisite:** ECE 154A with a grade of C+ or better. (S)

**158A. Data Networks I (4)**

Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. **Prerequisite:** ECE 109 with a grade of C- or better. ECE 159A recommended. (W)

**158B. Data Networks II (4)**

Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. **Prerequisite:** ECE 158A with a grade of C- or better. (S)

**159A. Queuing Systems: Fundamentals (4)**

Analysis of single and multiserver queuing systems; queue size and waiting times. Modeling of telephone systems, interactive computer systems and the machine repair problems. **Prerequisite:** ECE 109 with a grade of C- or better. (F)

**159B. Queuing Systems: Computer Systems and Data Networks (4)**

M/G/1 queuing systems. Computer systems applications: priority scheduling; time-sharing scheduling. Open and closed queuing networks; modeling and performance of interactive computer systems. Elements of computer-communication networks: stability and delay analysis; optimal design issues. **Prerequisite:** ECE 159A with a grade of C- or better. (W)

**161A. Introduction to Digital Signal Processing (4)**

Review of discrete-time systems and signals, Discrete-Time Fourier Transform and its properties, the Fast Fourier Transform, design of Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) filters, implementation of digital filters. (Course material and/or program fees may apply.) **Prerequisite:** ECE 101 with grades of C- or better. (F,S)

**161B. Digital Signal Processing I (4)**

Sampling and quantization of baseband signals; A/D and D/A conversion, quantization noise, oversampling and noise shaping. Sampling of bandpass signals, undersampling downconversion, and Hilbert transforms. Coefficient quantization, roundoff noise, limit cycles and overflow oscillations. Insensitive filter structures, lattice and wave digital filters. Systems will be designed and tested with Matlab, implemented with DSP processors and tested in the laboratory. **Prerequisite:** ECE 161A with a grade of C- or better. (W)

**161C. Applications of Digital Signal Processing (4)**

This course discusses several applications of DSP. Topics covered will include: speech analysis and coding; image and video compression and processing. A class project is required, algorithms simulated by MATLAB. **Prerequisite:** ECE 161A with a grade of C- or better. (S)

**163. Electronic Circuits and Systems (4)**

Analysis and design of analog circuits and systems. Feedback systems with applications to operational amplifier circuits. Stability, sensitivity, bandwidth, compensation. Design of active filters. Switched capacitor circuits. Phase-locked loops. Analog-to-digital and digital-to-analog conversion. (Course material and/or program fees may apply.) **Prerequisites:** ECE 101 and 102 with grades of C- or better. (S)

**164. Analog Integrated Circuit Design (4)**

Design of linear and non-linear analog integrated circuits including operational amplifiers, voltage regulators, drivers, power stages, oscillators, and multipliers. Use of feedback and evaluation of noise performance. Parasitic effects of integrated circuit technology. Laboratory simulation and testing of circuits. **Prerequisite:** ECE 102 with a grade of C- or better. ECE 163 recommended. (F)

**165. Digital Integrated Circuit Design (4)**

VLSI digital systems. Circuit characterization, performance estimation, and optimization. Circuits for alternative logic styles and clocking schemes. Subsystems include ALUs, memory, processor arrays, and PLAs. Techniques for gate arrays, standard cell, and custom design. Design and simulation using CAD tools. (Students who have taken CSE 143 may not take ECE 165 for credit.) **Prerequisite:** ECE 108 with a grade of C- or better. (S)

**166. Microwave Systems and Circuits (4)**

Waves, distributed circuits, and scattering matrix methods. Passive microwave elements. Impedance matching. Detection and frequency conversion using microwave diodes. Design of transistor amplifiers including noise performance. Circuits designs will be simulated by computer and tested in the laboratory. (Course material and/or program fees may apply.) **Prerequisites:** ECE 102 and 107 with grades of C- or better. (F)

**171A. Linear Control System Theory (4)**

Stability of continuous- and discrete-time single-input/single-output linear time-invariant control systems emphasizing frequency domain methods. Transient and steady-state behavior. Stability analysis by root locus, Bode, Nyquist, and Nichols plots. Compensator design. **Prerequisite:** ECE 60B or ECE 53A-B or MAE 140 with a grade of C- or better. (S)

**171B. Linear Control System Theory (4)**

Time-domain, state-variable formulation of the control problem for both discrete-time and continuous-time linear systems. State-space realizations from transfer function system description. Internal and input-output stability, controllability/observability, minimal realizations, and pole-placement by full-state feedback. **Prerequisite:** ECE 171A with a grade of C- or better. (F)

**172A. Introduction to Intelligent Systems: Robotics and Machine Intelligence (4)**

This course will introduce basic concepts in machine perception. Topics covered will include edge detection, segmentation, texture analysis, image registration, and compression. **Prerequisite:** ECE 101 with a grade of C- or better, ECE 109 recommended. (F)

**174. Introduction to Linear and Nonlinear Optimization with Applications (4)**

The linear least squares problem, including constrained and unconstrained quadratic optimization and the relationship to the geometry of linear transformations. Introduction to nonlinear optimization. Applications to signal processing, system identification, robotics, and circuit design. **Prerequisite:** Math. 20F with a grade of C- or better. (S)

**175. Elements of Machine Intelligence: Pattern Recognition and Machine Learning (4)**

Introduction to pattern recognition and machine learning. Decision functions. Statistical pattern classifiers. Generative vs. discriminant methods for pattern classification. Feature selection. Regression. Unsupervised learning. Clustering. Applications of machine learning. **Prerequisites:** ECE 109 and ECE 174 with grades of C- or better. (S)

**181. Physical Optics and Fourier Optics (4)**

Ray optics, wave optics, beam optics, Fourier optics, and electromagnetic optics. Ray transfer matrix, matrices of cascaded optics, numerical apertures of step and graded index fibers. Fresnel and Fraunhofer diffractions, interference of waves. Gaussian and Bessel beams, the ABCD law for transmissions through arbitrary optical systems. Spatial frequency, impulse response and transfer function of optical systems, Fourier transform and imaging properties of lenses, holography. Wave propagation in various (inhomogeneous, dispersive, anisotropic or nonlinear) media. (Course material and/or program fees may

apply.) **Prerequisites:** ECE 103 and 107 with grades of C– or better. (S)

### 182. Electromagnetic Optics, Guided-Wave, and Fiber Optics (4)

Polarization optics: crystal optics, birefringence. Guided-wave optics: modes, losses, dispersion, coupling, switching. Fiber optics: step and graded index, single and multimode operation, attenuation, dispersion, fiber optic communications. Resonator optics. (Course material and/or program fees may apply.) **Prerequisites:** ECE 103 and 107 with grades of C– or better. (F)

### 183. Optical Electronics (4)

Quantum electronics, interaction of light and matter in atomic systems, semiconductors. Laser amplifiers and laser systems. Photodetection. Electrooptics and acousto-optics, photonic switching. Fiber optic communication systems. Labs: semiconductor lasers, semiconductor photodetectors. (Course material and/or program fees may apply.) **Prerequisites:** ECE 103 and 107 with grades of C– or better. (W)

### 184. Optical Information Processing and Holography (4)

(Conjoined with ECE 241AL) Labs: optical holography, photorefractive effect, spatial filtering, computer generated holography. Students enrolled in ECE 184 will receive four units of credit; students enrolled in ECE 241AL will receive two units of credit. (Course material and/or program fees may apply.) **Prerequisite:** ECE 182 with a grade of C– or better. (W)

### 185. Lasers and Modulators (4)

(Conjoined with ECE 241BL) Labs: CO<sub>2</sub> laser, HeNe laser, electrooptic modulation, acousto-optic modulation, spatial light modulators. Students enrolled in ECE 185 will receive four units of credit; students enrolled in ECE 241BL will receive two units of credit. (Course material and/or program fees may apply.) **Prerequisite:** ECE 183 with a grade of C– or better. (S)

### 186L. Optical Information Systems (4)

Lab covering concepts in optical data systems including free-space communications, remote sensing and wavelength-multiplexed optical fiber transmission. (Course material and/or program fees may apply.) **Prerequisites:** ECE 181 and 182 or 183 with grades of C– or better, or consent of instructor.

### 187. Introduction to Biomedical Imaging and Sensing (4)

Image processing fundamentals: imaging theory, image processing, pattern recognition; digital radiography, computerized tomography, nuclear medicine imaging, nuclear magnetic resonance imaging, ultrasound imaging, microscopy imaging. **Prerequisite:** Math. 20A-B-F, 20C or 21C, 20D or 21D, Phys. 2A–D, ECE 101 (may be taken concurrently) with grades of C– or better. (F)

### 190. Engineering Design (4)

Students complete a project comprising at least 50 percent or more engineering design to satisfy the following features: student creativity, open-ended formulation of a problem statement/specifications, consideration of alternative solutions/realistic constraints. Written final report required. **Prerequisites:** students enrolling in this course must have completed all of the breadth courses and one depth course. The department stamp is required to enroll in ECE 190. (Specifications and enrollment forms are available in the undergraduate office.)

### 191. Engineering Group Design Project (4)

Groups of students work to design, build, demonstrate, and document an engineering project. All students give weekly progress reports of their tasks and contribute a section to the final project report. **Prerequisites:** completion of all of the breadth courses and one depth course. (F,W,S)

### 192. Senior Seminar (1)

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small setting to explore an intellectual topic in ECE (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. ECE 192 is no longer valid for ECE design credit, students

should take ECE 190 instead. **Prerequisites:** department stamp and/or consent of instructor.

### 193H. Honors Project (4–8)

An advanced reading or research project performed under the direction of an ECE faculty member. Must contain enough design to satisfy the ECE program's four-unit design requirement. Must be taken for a letter grade. May extend over two quarters with a grade assigned at completion for both quarters. **Prerequisite:** admission to the ECE departmental honors program.

### 195. Teaching (2 or 4)

Teaching and tutorial activities associated with courses and seminars. Not more than four units of ECE 195 may be used for satisfying graduation requirements. (P/NP grades only.) **Prerequisite:** consent of the department chair.

### 197. Field Study in Electrical and Computer Engineering (4, 8, 12, or 16)

Directed study and research at laboratories and observatories away from the campus. (P/NP grades only.) **Prerequisites:** consent of instructor and approval of the department.

### 198. Directed Group Study (2 or 4)

Topics in electrical and computer engineering whose study involves reading and discussion by a small group of students under direction of a faculty member. (P/NP grades only.) **Prerequisite:** consent of instructor.

### 199. Independent Study for Undergraduates (2 or 4)

Independent reading or research by special arrangement with a faculty member. (P/NP grades only.) **Prerequisite:** consent of instructor.

## GRADUATE

### 200. Research Conference (2)

Group discussion of research activities and progress of group members. (Consent of instructor is strongly recommended.) (S/U grades only.) **Prerequisite:** graduate standing. (F,W,S)

### 212AN. Principles of Nanoscience and Nanotechnology (4)

Introduction to and rigorous treatment of electronic, photonic, magnetic, and mechanical properties of materials at the nanoscale. Concepts from mathematical physics, quantum mechanics, quantum optics, and electromagnetic theory will be introduced as appropriate. Students may not receive credit for both ECE 212A and ECE 212AN. **Prerequisite:** graduate standing. (F)

### 212BN. Nanoelectronics (4)

Quantum states and quantum transport of electrons; single-electron devices; nanoelectronic devices and system concepts; introduction to molecular and organic electronics. Students may not receive credit for both ECE 212BN and ECE 212C. **Prerequisites:** ECE 212AN; graduate standing. (S)

### 212CN. Nanophotonics (4)

Photonic properties of artificially engineered inhomogeneous nanoscale composite materials incorporating dielectrics, semiconductors, and/or metals. Near-field localization effects and applications. Device and component applications. Students may not receive credit for both ECE 212CN and 212B. **Prerequisites:** ECE 212BN; graduate standing. (W)

### 222A. Antennas and Their System Applications (4)

Antennas, waves, polarization. Friis transmission and Radar equations, dipoles, loops, slots, ground planes, traveling wave antennas, array theory, phased arrays, impedance, frequency independent antennas, microstrip antennas, cell phone antennas, system level implications such as MIMO, multi-beam and phased array systems. (Recommended prerequisite: ECE107 or an equivalent undergraduate course in electromagnetics.) **Prerequisite:** graduate standing. (F)

### 222B. Applied Electromagnetic Theory—Electromagnetics (4)

Graduate-level introductory course on electromagnetic theory with applications. Topics covered include Maxwell's equations, plane waves in free space and in the presence

of interfaces, polarization, fields in metallic and dielectric waveguides including surface waves; fields in metallic cavities, Green's functions, electromagnetic field radiation and scattering. **Prerequisites:** ECE 222A; graduate standing. (W)

### 222C. Applied Electromagnetic Theory—Computational Methods for Electromagnetics (4)

Computational techniques for numerical analysis of electromagnetic fields, including the finite difference time domain (FDTD) method, finite difference frequency domain (FDFD) method, method of moments (MOM), and finite element method (FEM). Practice in writing numerical codes. Review of commercial electromagnetic simulators. **Prerequisites:** ECE 222B; graduate standing. (S/even years)

### 222D. Advanced Antenna Design (4)

Review of 222A–B. Fourier transform, waveguide antennas. Mutual coupling, active impedance, Floquet modes in arrays. Microstrip antennas, surface waves. Reflector and lens analysis: taper, spillover, aperture and physical optics methods. Impedance surfaces. Advanced concepts: Sub-wavelength propagation, etc. (chosen by instructor). (Recommended prerequisite(s): ECE 222A, ECE 222B, or equivalent.) **Prerequisites:** ECE 222C; graduate standing. (S/odd years)

### 230A. Solid State Electronics I (4)

This course is designed to provide a general background in solid state electronic materials and devices. Course content emphasizes the fundamental and current issues of semiconductor physics related to the ECE solid state electronics sequences. (Recommended prerequisite: ECE 135A–B or equivalent.) **Prerequisite:** graduate standing. (F)

### 230B. Solid State Electronics II (4)

Physics of solid-state electronic devices, including p-n diodes, Schottky diodes, field-effect transistors, bipolar transistors, pnnp structures. Computer simulation of devices, scaling characteristics, high frequency performance, and circuit models. **Prerequisites:** ECE 230A; graduate standing. (W)

### 230C. Solid State Electronics III (4)

This course is designed to provide a treatise of semiconductor devices based on solid state phenomena. Band structures carrier scattering and recombination processes and their influence on transport properties will be emphasized. (Recommended prerequisite: ECE 230A or equivalent.) **Prerequisites:** ECE 230B; graduate standing. (S)

### 235. Nanometer-Scale VLSI Devices (4)

This course covers modern research topics in sub-100 nm scale, state-of-the-art silicon VLSI devices. Starting with the fundamentals of CMOS scaling to nanometer dimensions, various advanced device and circuit concepts, including RF CMOS, low power CMOS, silicon memory, silicon-on-insulator, SiGe bipolar, strained silicon MOSFET's, etc. will be taught. The physics of nearballistic transport in an ultimately scaled 10 nm MOSFET will be discussed in light of the recently developed scattering theory. **Prerequisite:** graduate standing. (F)

### 236A. III-V Compound Semiconductor Materials (4)

This course covers the growth, characterization, and heterojunction properties of III-V compound semiconductors and group-IV heterostructures for the subsequent courses on electronic and photonic device applications. Topics include epitaxial growth techniques, electrical properties of heterojunctions, transport and optical properties of quantum wells and superlattices. (Recommended prerequisite: ECE 230A-B-C.) **Prerequisite:** graduate standing. (W)

### 236B. Optical Processes in Semiconductors (4)

Absorption and emission of radiation in semiconductors. Radiative transition and nonradiative recombination. Laser, modulators, and photodetector devices will be discussed. (Recommended prerequisites: ECE 230A and ECE 230C or equivalent.) **Prerequisites:** ECE 236A; graduate standing. (S)

### 236C. Heterojunction Field Effect Transistors (4)

Device physics and applications of isotype and anisotype heterojunctions and quantum wells, including band-edge discontinuities, band bending and space charge layers at heterojunction interfaces, charge transport normal and parallel to such interfaces, two-dimensional electron

gas structures, modulation doping, heterojunction and insulated gate field effect transistors. **Prerequisites:** ECE 236B; graduate standing. (S, alternating years)

**236D. Heterojunction Bipolar Transistors (4)**  
Current flow and charge storage in bipolar transistors. Use of heterojunctions to improve bipolar structures. Transient electron velocity overshoot. Simulation of device characteristics. Circuit models of HBTs. Requirements for high-speed circuit applications. Elements of bipolar process technology, with emphasis on III-V materials. **Prerequisites:** ECE 236C; graduate standing. (F, alternating years)

**238A. Thermodynamics of Solids (4)**  
The thermodynamics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. Multiple listed with Materials Science 201A. **Prerequisite:** consent of instructor. (F)

**238B. Solid State Diffusion and Reaction Kinetics (4)**  
Thermally activated processes. Boltzmann factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick's law, diffusion mechanisms, Kirkendall effects, Boltzmann-Manato analysis, high diffusivity paths. Multiple listed with Materials Science 201B. **Prerequisite:** ECE 238A. (W)

**240A. Lasers and Optics (4)**  
Fresnel and Fraunhofer diffraction theory. Optical resonators, interferometry. Gaussian beam propagation and transformation. Laser oscillation and amplification, Q-switching and mode locking of lasers, some specific laser systems. (Recommended prerequisites: ECE 107 and ECE 182 or equivalent, introductory quantum mechanics or ECE 183.) **Prerequisite:** graduate standing. (F)

**240B. Optical Information Processing (4)**  
Space-bandwidth product, superresolution, space-variant optical system, partial coherence, image processing with coherent and incoherent light, processing with feedback, real-time light modulators for hybrid processing, nonlinear processing. Optical computing and other applications. (Recommended prerequisite: ECE 182 or equivalent.) **Prerequisites:** ECE 240A; graduate standing. (W)

**240C. Optical Modulation and Detection (4)**  
Propagation of waves and rays in anisotropic media. Electro-optical switching and modulation. Acousto-optical deflection and modulation. Detection theory. Heterodyne detection, incoherent and coherent detection. (Recommended prerequisites: ECE 181, ECE 183 or equivalent.) **Prerequisites:** ECE 240B; graduate standing. (S)

**241A. Nonlinear Optics (4)**  
Second harmonic generation (color conversion), parametric amplification and oscillation, photorefractive effects and four-wave mixing, optical bistability; applications. (Recommended prerequisites: ECE 240A, C.) **Prerequisite:** graduate standing. (F)

**241B. Optical Devices for Computing. (4)**  
Application of electro-optic, magneto-optic, acousto-optic, and electro-absorption effects to the design of photonic devices with emphasis on spatial light modulation and optical storage techniques. (Recommended prerequisites: ECE 240A-C.) **Prerequisites:** ECE 241A; graduate standing. (F)

**241C. Holographic Optical Elements (4)**  
Fresnel, Fraunhofer, and Fourier holography. Analysis of thin and volume holograms, reflection and transmission holograms, color and polarization holograms. Optically recorded and computer-generated holography. Applications to information storage, optical interconnects, 2-D and 3-D display, pattern recognition, and image processing. (Recommended prerequisite: ECE 182 or equivalent.) **Prerequisites:** ECE 241B; graduate standing. (W)

**243B. Optical Fiber Communication (4)**  
Optical fibers, waveguides, laser communication system., Modulation and demodulation; detection processes and communication-receivers. (Recommended prerequisites: ECE 240A-B-C or equivalent.) **Prerequisites:** ECE 243A; graduate standing. (W)

**244A. Statistical Optics (4)**  
Introduction to statistical phenomena in optics including first order properties of light waves generated from various sources. Coherence of optical waves, high-order coherence. Partial coherence and its effects on imaging systems. Imaging in presence of randomly inhomogeneous medium. Limits in photoelectric detection of light. (Recommended prerequisites: ECE 240A-B.) **Prerequisite:** graduate standing. (F)

**244B. Quantum Electronics of Femtosecond Optical Pulses (4)**  
Femtosecond optical pulses in linear dispersive media. Self-action of optical pulses. Parametric interaction of optical pulses. Self- and cross-phase modulation. Fast phase control, compression and shaping of optical pulses. Optical solutions. Applications of femtosecond optical pulses. (Recommended prerequisites: ECE 240A-B-C.) **Prerequisites:** 244A; graduate standing. (W)

**247A. Advanced BioPhotonics (4)**  
Basic physics and chemistry for the interaction of photons with matter, including both biological and synthetic materials; use of photonic radiation pressure for manipulation of objects and materials; advanced optoelectronic detection systems, devices and methods, including time resolved fluorescent and chemiluminescent methods, fluorescent energy transfer (FRET) techniques, quantum dots, and near-field optical techniques; underlying mechanisms of the light sensitive biological systems, including chloroplasts for photosynthetic energy conversion and the basis of vision processes. Cross-listed with BENG 247A. **Prerequisite:** graduate standing. (F)

**247B. BioElectronics (4)**  
Topics to be covered will include photolithographic techniques for high-density DNA microarray production, incorporation of CMOS control into electronic DNA microarrays, direct electronic detection technology used in microarrays and biosensor devices, and focus on problems related to making highly integrated devices (lab-on-a-chip, in-vivo biosensors, etc.) from heterogeneous materials and components. Cross-listed with BENG 247B. **Prerequisite:** graduate standing. (W)

**247C. BioNanotechnology (4)**  
Topics include: nanosensors and nanodevices for both clinical diagnostics and biowarfare (bioterror) agent detection; nanostructures for drug delivery; nanoarrays and nanodevices; use of nanoanalytical devices and systems; methods and techniques for modification or functionalization of nanoparticles and nanostructures with biological molecules; nanostructural aspects of fuel cells and bio-fuel cells; potential use of DNA and other biomolecules for computing and ultra-high-density data storage. Cross-listed with BENG 247C. **Prerequisite:** graduate standing. (S)

**250. Random Processes (4)**  
Random variables, probability distributions and densities, characteristic functions. Convergence in probability and in quadratic mean, Stochastic processes, stationarity. Processes with orthogonal and independent increments. Power spectrum and power spectral density. Stochastic integrals and derivatives. Spectral representation of wide sense stationary processes, harmonizable processes, moving average representations. (Recommended prerequisite: ECE 153.) **Prerequisite:** graduate standing.

**251A. Digital Signal Processing I (4)**  
Discrete random signals; conventional (FFT based) spectral estimation. Coherence and transfer function estimation; model-based spectral estimation; linear prediction and AR modeling. Levinson-Durbin algorithm and lattice filters, minimum variance spectrum estimation. Cross-listed with SIO 207B. SIO 207A is intended for graduate students who have not had an undergraduate course in DSP. (Recommended prerequisites: ECE 153 in addition to either ECE 161 or 161A and SIO 207A or equivalent background.) **Prerequisite:** graduate standing. (W)

**251B. Digital Signal Processing II (4)**  
Adaptive filter theory, estimation errors for recursive least squares and gradient algorithms, convergence and tracking analysis of LMD, RLS, and Kalman filtering algorithms, comparative performance of Weiner and adaptive filters, transversal and lattice filter implementations,

performance analysis for equalization, noise cancelling, and linear prediction applications. Cross-listed with SIO 207C. (Recommended prerequisite: ECE 251A or ECE 251AN.) **Prerequisites:** graduate standing; ECE 251A (for ECE 251B); SIO 207B (for SIO 207C). (S)

**251C. Filter Banks and Wavelets (4)**  
Fundamentals of multirate systems (Noble Identities, Polyphase representations), maximally decimated filter banks (QMF filters for 2-channels, M-channel perfect reconstruction systems), Paraunitary perfect reconstruction filter banks, the wavelet transform (Multiresolution, discrete wavelet transform, filter banks and wavelet). (Recommended prerequisite: ECE 161 or equivalent.) **Prerequisites:** ECE 251B; graduate standing.

**251D. Array Processing (4)**  
The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection purposes or wavefield directionality estimation. Conventional and adaptive beamforming. Matched field processing. Sparse array design and processing techniques. Applications to acoustics, geophysics, and electromagnetics. Cross-listed with SIO 207D. (Recommended prerequisite: ECE 251A or ECE 251AN.) **Prerequisites:** graduate standing; ECE 251C (for ECE 251D); SIO 207C (for SIO 207D). (F)

**252A. Speech Compression (4)**  
Speech signals, production and perception, compression theory, high rate compression using waveform coding (PCM, DPCM, ADPCM, . . .), DSP tools for low rate coding, LPC vocoders, sinusoidal transform coding, multi-band coding, medium rate coding using code excited linear prediction (CELP). (Recommended prerequisite: ECE 161A.) **Prerequisite:** graduate standing. (W)

**252B. Speech Recognition (4)**  
Signal analysis methods for recognition, dynamic time warping, isolated word recognition, hidden markov models, connected word, and continuous speech recognition. **Prerequisites:** ECE 252A; graduate standing. (S)

**253. Fundamentals of Digital Image Processing (4)**  
Image quantization and sampling, image transforms, image enhancement, image compression. (Recommended prerequisites: ECE 109, 153, ECE 161, ECE 161A.) (W)

**254. Detection Theory (4)**  
Hypothesis testing, detection of signals in white and colored Gaussian noise; estimation of signal parameters, maximum-likelihood detection; resolution of signals; detection and estimation of stochastic signals; applications to radar, sonar, and communications. (Recommended prerequisite: ECE 153.) **Prerequisite:** graduate standing. (F)

**255AN. Information Theory (4)**  
Introduction to basic concepts, source coding theorems, capacity, noisy-channel coding theorem. **Prerequisite:** ECE 154A-B-C or consent of instructor. (F)

**255BN. Source Coding I (4)**  
Theory and practice of lossy source coding, vector quantization, predictive and differential encoding, universal coding, source-channel coding, asymptotic theory, speech and image applications. **Prerequisite:** ECE 250 and 259A or 259AN, or consent of instructor. (W)

**256A-B. Time Series Analysis and Applications (4-4)**  
Stationary processes; spectral representation; linear transformation. Recursive and nonrecursive prediction and filtering; Wiener-Hopf and Kalman-Bucy filters. Series expansions and applications. Time series analysis; probability density, covariance and spectral estimation. Inference from sampled-data, sampling theorems; equally and non-equally spaced data, applications to detection and estimation problem. **Prerequisite:** ECE 153. (F;W)

**257A. Multiuser Communication Systems (4)**  
Congestion control, convex programming and dual controller, fair end-end rate allocation, max-min fair vs. proportional fairness. Markov Chains and recurrence, Lyapunov-Foster theorem, rate stable switch scheduling, stable (back-pressure) routing versus minimum delay routing versus shortest path routing. **Prerequisite:** graduate standing. (W)

### 257B. Principles of Wireless Networks (4)

This course will focus on the principles, architectures, and analytical methodologies for design of multi-user wireless networks. Topics to be covered include cellular approaches, call processing, digital modulation, MIMO technology, broadband networks, ad-hoc networks, and wireless packet access. (Recommended prerequisites: ECE 159A and 154B, or equivalent.) **Prerequisites:** ECE 257A; graduate standing. (S)

### 257C. Stochastic Wireless Networks Models (4)

Elements of spatial point processes. Spatial stochastic models of wireless networks. Topological structure, interference, stochastic dependencies. Elements of network information theory/statistical physics models of information flow. Role of signal propagation/random fading models. Decentralized operation, route discovery, architectural principles. Energy limitations/random failures. (Recommended prerequisites: previous exposure to stochastic processes and information theory.) **Prerequisites:** ECE 257A–B. (S)

### 258A–B. Digital Communication (4-4)

Digital communication theory including performance of various modulation techniques, effects of inter-symbol interference, adaptive equalization, spread spectrum communication. **Prerequisites:** ECE 154A–B–C and ECE 254 or consent of instructor. (W,S)

### 259A. Algebraic Coding (4)

Fundamentals of block codes, introduction to groups, rings and finite fields, nonbinary codes, cyclic codes such as BCH and RS codes, decoding algorithms, applications. Students who have taken ECE 259AN may not receive credit for ECE 259A. **Prerequisite:** graduate standing.

### 259B. Probabilistic Coding (4)

Convolutional codes, maximum-likelihood (ML) decoding, maximum a-posteriori (MAP) decoding, parallel and serial concatenation architectures, turbo codes, repeat-accumulate (RA) codes, the turbo principle, turbo decoding, graph-based codes, message-passing decoding, low-density parity check codes, threshold analysis, applications. Students who have taken ECE 259BN may not receive credit for ECE 259B. (Recommended prerequisites: ECE 154A–B–C.) **Prerequisites:** ECE 259A or 259AN; graduate standing. (W)

### 259C. Advanced Topics in Coding (4)

Advanced topics in coding theory. Course contents vary by instructor. Example course topics: Coded-modulation for bandwidth-efficient data transmission; advanced algebraic and combinatorial coding theory; space-time coding for wireless communications; constrained coding for digital recording. Students who have taken ECE 259CN may not receive credit for ECE 259C. **Prerequisites:** ECE 259A–B or 259AN–BN; graduate standing. (S)

### 260A. VLSI Digital System Algorithms and Architectures (4)

Custom and semi-custom VLSI design from both the circuit and system designer's perspective. MOS transistor theory, circuit characterization, and performance estimation. CMOS logic design will be emphasized. Computer-aided design (CAD) tools for transistor level simulation, layout and verification will be introduced. (Recommended prerequisites: undergraduate-level semiconductor electronics and digital system design, ECE 165 or equivalent.) **Prerequisite:** graduate standing. (F)

### 260B. VLSI Integrated Circuits and Systems Design (4)

VLSI implementation methodology across block, circuit, and layout levels of abstraction. Circuit building blocks including embedded memory and clock distribution. Computer-aided design (synthesis, place-and-route, verification) and performance analyses, and small-group block implementation projects spanning RTL to tape-out using leading-edge EDA tools. (Recommended prerequisite: ECE 165.) **Prerequisites:** ECE 260A; graduate standing. (W)

### 260C. VLSI Advanced Topics (4)

Advanced topics in design practices and methodologies for modern system-on-chip design. Different design alternatives are introduced and analyzed. Advanced design tools are used to design a hardware-software system. Class discussion, participation, and presentations of projects and

special topics assignments are emphasized. **Prerequisites:** ECE 260B; graduate standing. (S)

### 264A. CMOS Analog Integrated Circuits and Systems I (4)

Frequency response of the basic CMOS gain stage and current mirror configurations. Advanced feedback and stability analysis; compensation techniques. High-Performance CMOS operational amplifier topologies. Analysis of noise and distortion. (Recommended prerequisites: ECE 164 and ECE 153, or equivalent courses.) **Prerequisite:** graduate standing. (W)

### 264B. CMOS Analog Integrated Circuits and Systems II (4)

Non-ideal effects and their mitigation in high-performance operational amplifiers. Switched-capacitor circuit techniques: CMOS circuit topologies, analysis and mitigation of non-ideal effects, and filter synthesis. Overview of CMOS samplers, data converters, and PLLs. (Recommended prerequisite: ECE 251A or ECE 251AN.) **Prerequisites:** ECE 264A; graduate standing. (S)

### 264C. CMOS Analog Integrated Circuits and Systems III (4)

Integrated CMOS analog/digital systems: Analog to digital and digital to analog converters, Nyquist versus oversampling, linearity, jitter, randomization, calibration, speed versus resolution, pipeline, folding, interpolation, averaging. (Recommended prerequisites: ECE 163 and 164.) **Prerequisites:** ECE 264B; graduate standing. (W)

### 264D. CMOS Analog Integrated Circuits and Systems IV (4)

PLL: Phase noise effect, VCO, phase detector, charge pump, integer/fractional-N frequency synthesizer, clock and data recovery, decision feedback. Filter: Continuous-time filter, I-Q complex filter, raised-cosine, Gaussian, delay, zero equalizers. (Recommended prerequisites: ECE 163 and 164.) **Prerequisites:** ECE 264C; graduate standing

### 265A. Communication Circuit Design I (4)

Introduction to noise and linearity concepts. System budgeting for optimum dynamic range. Frequency plan tradeoffs. Linearity analysis techniques. Down-conversion and up-conversion techniques. Modulation and de-modulation. Microwave and RF system design communications. Current research topics in the field. **Prerequisite:** ECE 166 or consent of instructor. (W)

### 265B. Communication Circuit Design II (4)

Radio frequency integrated circuits: low-noise amplifiers, AGCs, mixers, filters, voltage-controlled oscillators. BJT and CMOS technologies for radio frequency and microwave applications. Device modeling for radio frequency applications. Design and device tradeoffs of linearity, noise, power dissipation, and dynamic range. Current research topics in the field. **Prerequisites:** ECE 166 and ECE 265A or consent of instructor. (S)

### 265C. Power Amplifiers for Wireless Communications (4)

Design of power amplifiers for mobile terminals and base-stations, with emphasis on high linearity and efficiency. After a discussion of classical designs (Class A, AB, B, C, D, E, F, and S), linearization procedures are presented and composite architectures (envelope tracking, EER, and Doherty) are covered. Familiarity with basic microwave design and communication system architecture is assumed. (Recommended prerequisite: ECE 166.) **Prerequisites:** ECE 265A and B; consent of instructor. (F)

### 267. Wireless Embedded and Networked Systems (4)

Study of wireless networked systems from a system design perspective, covering the protocol stack from physical to network layer with a focus on energy. Topics include digital communications, networking and programming, and a basic knowledge of these is recommended. **Prerequisite:** graduate standing. (F)

### 270A–B–C. Neurocomputing (4-4-4)

Neurocomputing is the study of biological information processing from an artificial intelligence engineering perspective. This three-quarter sequence covers neural network structures for arbitrary object (perceptual, motor, thought process, abstraction, etc.) representation, learning of pairwise object attribute descriptor antecedent support

relationships, the general mechanism of thought, and situationally responsive generation of movements and thoughts. Experimental homework assignments strongly reinforce the fundamental concepts and provide experience with myriad associated technical issues. **Prerequisite:** graduate standing, an understanding of mathematics through basic linear algebra and probability, or consent of instructor. (F,W,S)

### 271A. Statistical Learning I (4)

Bayesian decision theory; parameter estimation; maximum likelihood; the bias-variance trade-off; Bayesian estimation; the predictive distribution; conjugate and noninformative priors; dimensionality and dimensionality reduction; principal component analysis; Fisher's linear discriminant analysis; density estimation; parametric vs. kernel-based methods; expectation-maximization; applications. (Recommended Prerequisite: ECE 109.) **Prerequisite:** graduate standing.

### 271B. Statistical Learning II (4)

Linear discriminants; the Perceptron; the margin and large margin classifiers; learning theory; empirical vs. structural risk minimization; the VC dimension; kernel functions; reproducing kernel Hilbert spaces; regularization theory; Lagrangian optimization; duality theory; the support vector machine; boosting; Gaussian processes; applications. (Recommended prerequisite: ECE 109.) **Prerequisites:** ECE 271A; graduate standing.

### 272A. Stochastic Processes in Dynamic Systems (4)

Stochastic processes, focusing on detailed discussion of discrete-time Markov chains. Demonstrate the relationship to dynamic systems under uncertainty, introducing ergodicity, diffusion, estimation, and detection. Extend to continuous-time Markov chains and optimization of stochastic dynamic systems. (Recommended prerequisite: ECE 250.) **Prerequisite:** graduate standing.

### 273. Convex Optimization and Applications (4)

This course covers some convex optimization theory and algorithms. It will mainly focus on recognizing and formulating convex problems, duality, and applications in a variety of fields (system design, pattern recognition, combinatorial optimization, financial engineering, etc.). (Recommended prerequisite: basic linear algebra.) (F)

### 275A. Parameter Estimation I (4)

Linear least Squares (batch, recursive, total, sparse, pseudo-inverse, QR, SVD); Statistical figures of merit (bias, consistency, Cramer-Rao lower-bound, efficiency); Maximum likelihood estimation (MLE); Sufficient statistics; Algorithms for computing the MLE including the Expectation Maximization (EM) algorithm. The problem of missing information; the problem of outliers. (Recommended prerequisites: ECE 109 and ECE 153.) **Prerequisite:** graduate standing.

### 275B. Parameter Estimation II (4)

The Bayesian statistical framework; Parameter and state estimation of Hidden Markov Models, including Kalman Filtering and the Viterbi and Baum-Welsh algorithms. A solid foundation is provided for follow-up courses in Bayesian machine learning theory. (Recommended prerequisite: ECE 153.) **Prerequisites:** ECE 275A; graduate standing.

### 280. Special Topics in Electronic Devices and Materials/Applied Physics (4)

A course to be given at the discretion of the faculty at which topics of interest in electronic devices and materials or applied physics will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

### 281. Special Topics in Nanoscience/Nanotechnology (4)

A course to be given at the discretion of the faculty at which topics of interest in nanoscience and nanotechnology will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

### 282. Special Topics in Photonics/Applied Optics (4)

A course to be given at the discretion of the faculty at which topics of interest in photonics, optoelectronic materials, devices, systems, and applications will be presented by

visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

**283. Special Topics in Electronic Circuits and Systems (4)**

A course to be given at the discretion of the faculty at which topics of interest in electronic circuits and systems will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

**284. Special Topics in Computer Engineering (4)**

A course to be given at the discretion of the faculty at which topics of interest in computer engineering will be presented by visiting or resident faculty members. Subject matter will not be repeated may be taken for credit more than once. **Prerequisite:** graduate standing.

**285. Special Topics in Signal and Image Processing/Robotics and Control Systems (4)**

A course to be given at the discretion of the faculty at which topics of interest in signal and image processing or robotics and control systems will be presented by visiting or resident faculty members. Subject matter will not be repeated, may be taken for credit more than once. **Prerequisite:** graduate standing.

**286. State-of-the-Art Topics in Computational Statistics and Machine Learning (4)**

Class discusses both fundamental and state-of-the-art research topics in computational statistics and machine learning. Topics vary based upon current research, and have included: non-parametric Bayesian models; sampling methods for inference in graphical models; Markov Chain Monte Carlo (MCMC) methods. **Prerequisite:** graduate standing.

**287. Special Topics in Communication Theory and Systems (4)**

A course to be given at the discretion of the faculty at which topics of interest in information science will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. **Prerequisite:** graduate standing.

**290. Graduate Seminar on Current ECE Research (2)**

Weekly discussion of current research conducted in the Department of Electrical and Computer Engineering by the faculty members involved in the research projects. (S/U grade only.) **Prerequisite:** graduate standing.

**291. Industry Sponsored Engineering Design Project (4)**

Design, build, and demonstrate an engineering project by groups. All students give weekly progress reports on tasks and write final report, with individual exams and presentations. Projects/sponsorships originate from the needs of local industry. May count toward M.Eng. degree. (Recommended prerequisites: ECE 230 or ECE 240 or ECE 251 or ECE 253 or ECE 258 or equivalent.) **Prerequisite:** graduate standing.

**292. Graduate Seminar in Electronic Circuits and Systems (2)**

Research topics in electronic circuits and systems. **Prerequisite:** graduate standing.

**293. Graduate Seminar in Communication Theory and Systems (2)**

Weekly discussion of current research literature.

**294. Graduate Seminar in Electronic Devices and Materials/Applied Physics (2)**

Research topics in electronic devices and materials or applied solid state physics and quantum electronics.

**295R. Graduate Seminar in Signal and Image Processing/Robotics and Control Systems (2)**

Weekly discussion of research topics in signal and image processing of robotics and control systems. **Prerequisite:** graduate standing.

**296. Graduate Seminar in Photonics/ Applied Optics (2)**

Research topics of current interest in photonics and applied optics, including imaging, photonic communications, sens-

ing, energy and signal processing. **Prerequisite:** graduate standing.

**298. Independent Study (1-16)**

Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the staff. (S/U grades only.) **Prerequisite:** consent of instructor.

**299. Research (1-16)**

(S/U grade only.)

**501. Teaching (1-4)**

Teaching and tutorial activities associated with courses and seminars. Number of units for credit depends on number of hours devoted to class or section assistance. (S/U grade only.) **Prerequisite:** consent of department chair.

# Mechanical and Aerospace Engineering (MAE)

## PROFESSORS

F. Beg, Ph.D.  
T. Bewley, Ph.D.  
R. Bitmead, Ph.D., *Cymer Corporation Endowed Chair*  
R. J. Cattolica, Ph.D.  
C. H. Gibson, Ph.D.  
S. Gille, Ph.D.  
J. D. Goddard, Ph.D.  
A. Hoger, Ph.D.  
S. Jin, Ph.D., *Director, Materials Science Program, Kazuo Iwama Endowed Chair*  
J. Kosmatka, Ph.D., *Calloway Golf Endowed Chair*  
S. Krasheninnikov, Ph.D.  
M. Krstic, Ph.D.  
R. Lal, Ph.D.  
J. Lasheras, Ph.D.  
P. F. Linden, Ph.D., *Blasker Chair in Environmental Engineering*  
S. G. Llewellyn Smith, Ph.D.  
X. Markenscoff, Ph.D.  
W. M. McEneaney, Ph.D.  
J. M. McKittrick, Ph.D.  
M. A. Meyers, Ph.D.  
H. Murakami, Ph.D.  
S. Nemat-Nasser, Ph.D., *Director, Center of Excellence for Advanced Materials*  
V. Nesterenko, Ph.D.  
K. Nomura, Ph.D.  
S. Sarkar, Ph.D.  
K. Seshadri, Ph.D.  
F. E. Talke, Ph.D., *CMRR Endowed Chair*  
D. Tartakovsky, Ph.D.  
G. Tynan, Ph.D.  
F. A. Williams, Ph.D.

## PROFESSORS EMERITI

H. Bradner, Ph.D.  
R. W. Conn, Ph.D.  
P. A. Libby, Ph.D.  
S.-C. Lin, Ph.D.  
S. Middleman, Ph.D.  
John W. Miles, Ph.D.  
D. R. Miller, Ph.D.  
D. B. Olfe, Ph.D.  
S. S. Penner, Ph.D.  
C. Pozrikidis, Ph.D.  
A. M. Schneider, Sc.D.  
R.E. Skelton, Ph.D.  
H. W. Sorenson, Ph.D.

## ASSOCIATE PROFESSORS

P. Bandaru, Ph.D.  
J. Cortes, Ph.D.  
R. deCallafon, Ph.D.

E. Lauga, Ph.D.  
S. Martinez Diaz, Ph.D.

## ASSISTANT PROFESSORS

J.C. del Alamo, Ph.D.  
R. Chen, Ph.D.  
J. Kleissl, Ph.D.  
A. Marsden, Ph.D.

## AFFILIATED FACULTY

M. Anderson, Ph.D., *Lecturer with Potential Security of Employment*,  
L. Armi, Ph.D., *Professor, SIO*  
M. Baskes, *Adjunct Professor, MAE*  
M. Buckingham, Ph.D., *Professor, SIO*  
N. Delson, Ph.D., *Lecturer with Security of Employment*  
A. Groisman, Ph.D., *Assistant Professor, Physics*  
G. Hegemier, Ph.D., *Professor, Structural Engineering*  
V. Lubarda, Ph.D., *Adjunct Professor, MAE*  
W. K. Melville, Ph.D., *Professor, SIO*  
F. Najmabadi, *Professor, Electrical and Computer Engineering*

## DEPARTMENT FOCUS

The instructional and research programs are grouped into two major areas: mechanical engineering and aerospace engineering. Both the undergraduate and graduate programs are characterized by strong interdisciplinary relationships with the Departments of Physics, Mathematics, Bioengineering, Chemistry, Electrical and Computer Engineering, Computer Science and Engineering, Structural Engineering, the Materials Science Program, and associated campus institutes such as the UCSD Center for Energy Research, the Institute for Nonlinear Science, Institute of Geophysics and Planetary Physics, Institute for Pure and

Applied Physical Sciences, Institute for Biomedical Engineering, Center for Magnetic Recording Research, Center of Excellence for Advanced Materials, California Space Institute, and Scripps Institution of Oceanography.

This broad mission is supported by the following specific educational objectives:

- To provide our students with a strong technical education that will enable them to have successful careers as engineers, technology leaders and innovators.
- To prepare our students for rapid technological change with the core knowledge central to assuring that they are able to further their knowledge across a range of disciplines throughout their professional careers and pursue advanced education.
- To prepare our students to communicate effectively and to deal knowledgeably and ethically with the impact of technology in our society and on global issues.

## THE UNDERGRADUATE PROGRAM

### DEGREE AND PROGRAM OPTIONS

The Department of Mechanical and Aerospace Engineering (MAE) offers traditional ABET accredited engineering programs leading to the B.S. degree in mechanical engineering, and aerospace engineering. MAE also offers traditional nonaccredited engineering programs leading to the B.S. degree in engineering science and environmental engineering. The B.S. programs require a minimum of 196 units.

All MAE programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses that include student-initiated projects, and finally by senior design project courses which often involve teams of students working to solve engineering design problems brought in from industry. The MAE programs are designed to prepare students receiving bachelor's degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in nontechnical fields such as business administration, law, or medicine.

**Mechanical engineering** is a traditional four-year curriculum in mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates find employment in the mechanical and aerospace industries as well as electro-mechanical or biomedical industries. Mechanical engineers are involved in material processing, manufacturing, assembling, and maintenance of life-line facilities such as power plants.

Mechanical design includes conceptual design, drafting with 3D CAD programs, stress, dynamics, heat transfer or fluid dynamics analyses, and the optimization of the total system for superior performance and customer satisfaction. In manufacturing, the objective is to enhance efficiency and economy

by utilizing numerical control (NC) of machine tools, mechatronics, micro-machining, and rapid prototyping. Currently, engineers have available computers, process models, and sensors to improve the quality and productivity of the manufacturing lines. In preparation for this modern era, the mechanical engineering curriculum emphasizes CAD courses, computer courses, laboratory courses, and design courses in addition to providing a strong background in basic science.

**Aerospace engineering** is a four-year curriculum that prepares students for a career in the aeronautical and astronautical industries, related technology industries, or for graduate school.

The curriculum was developed to emphasize engineering fundamentals, aerospace topics, and the integration of these fundamentals and topics into the design of an aerospace system. Courses in engineering fundamentals include materials, solid and fluid mechanics, thermodynamics, computer modeling, computer-aided-design, numerical analysis, and controls. Courses covering the aerospace engineering topics include aerodynamics, aerospace structures, flight mechanics, dynamics and control of aerospace vehicles, and propulsion. Students complete the program by taking a two-quarter capstone design course that integrates all of their aerospace education into the design, development, and testing of an aeronautical or astronautical vehicle or component. Throughout the program, students take laboratory courses that expose them to modern testing techniques and enhance their understanding of complex engineering topics. The program's main objectives are to provide students with a strong foundation in engineering fundamentals; in-depth knowledge of key topics in aerospace engineering including aerodynamics, propulsion, flight mechanics, orbital mechanics, aerospace structures and materials, and design and control of aerospace systems; and an awareness of the value of life-long learning.

The **engineering science** program resembles the Mechanical Engineering Program, except the amount of mechanical design is reduced and control theory is not required. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisors to develop a sound course of study to fulfill the technical elective of this program. Although a sequence in non-sciences may be permitted, the faculty advisors may insist on a substantial number of MAE or other science courses as technical electives.

**Environmental engineering** is a four-year curriculum with fundamental engineering courses in mechanics, thermodynamics, physics, chemistry, and mathematics. In the third and fourth year, an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical electives, both from within MAE and other departments. The environmental engineering major focuses on conveying an understanding and awareness of the fundamental

processes associated with human industrial activity that have environmental implications, and on equipping the next generation of engineers with the tools to develop technologies that enable sustainable economic growth.

### **OTHER UNDERGRADUATE PROGRAMS OF STUDY IN MAE**

The **engineering mechanics minor** involves successful completion of seven MAE courses, including at least five upper-division courses open to students who meet the course prerequisites: one must be MAE 130A; one must be 101A (or CENG 101A) or 131A (or both may be taken); and the balance must be selected from MAE 3, 9, 20, 110A, 130B, 160, and CENG 102. This set of courses provides a good introduction to engineering analysis and would be useful to non-engineering majors desiring a background that could be used in professional communication with engineers.

### **DOUBLE MAJORS AND MINORS**

It is the policy of the UC San Diego Academic Senate not to approve double majors within engineering departments.

### **PROGRAM ACCREDITATION**

The B.S. Programs in mechanical engineering and aerospace engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET/EAC).

### **MAJOR REQUIREMENTS**

Specific course requirements for each major program are outlined in tables in this section of the catalog. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C- grade in each course required for the major.

Deviations from these programs of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited programs, TE courses are restricted to meet ABET standards. Courses such as MAE 195, 197, and 198 are not allowed as a technical elective in meeting the upper-division major requirements. MAE 199 can be used as a technical elective only under restrictive conditions. Policy regarding these conditions may be obtained from the department's Student Affairs Office.

Students with different academic preparation may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department. Deviations in scheduling MAE upper-division courses are discouraged and require prior approval. Most lower-division courses are offered more than once each year to permit students some flexibility in their program scheduling. However, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as

shown in the tables. When possible, MAE does offer large enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

### **GENERAL-EDUCATION/COLLEGE REQUIREMENTS**

For graduation each student must satisfy general-education course requirements determined by the student's college as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

Each MAE program allows for humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges require more than the nine or ten HSS courses indicated in the curriculum tables. Accordingly, students in these colleges could take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.

### **PROFESSIONAL LICENSING**

After graduation, all students are encouraged to take the Fundamentals of Engineering (FE) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after FE certification and two years of work experience; students graduating from a non-accredited program can take the PE examination after FE certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors.

### **MECHANICAL ENGINEERING**

The Mechanical Engineering Program has a traditional ABET accredited four-year curriculum involving mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. An ability to apply knowledge of mathematics including multivariable calculus, differential equations, linear algebra, science, and engineering to mechanical engineering problems
2. An ability to design and conduct experiments, as well as to analyze and interpret data
3. An ability to design a system, component, or process to meet desired needs
4. An ability to function on multi-disciplinary teams

5. An ability to identify, formulate, and solve engineering problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively
8. The broad education necessary to understand the impact of engineering solutions in a global and societal context
9. A recognition of the need for, and an ability to engage in lifelong learning
10. A knowledge of contemporary issues
11. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
12. A familiarity with chemistry and calculus-based physics
13. A familiarity with statistics
14. Ability to work professionally in mechanical system areas including the design and realization of such areas
15. Ability to work professionally in thermal systems areas including design and realization of such systems

**Recommended Course Sequence—  
Mechanical Engineering**

FALL	WINTER	SPRING
<b>Freshman Year</b>		
Math. 20A	Math. 20B	Math. 20C
MAE 9	Phys. 2A	Phys. 2B & 2BL

MAE 156A	MAE 156B	TE
MAE 150	TE	TE
TE	HSS	HSS

Chem. 6AH–6BH sequence may be taken in place of Chem. 6A–B.

- In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Ten HSS courses are listed here; individual college requirements may be higher.
- Technical electives (TE) must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics.

See the MAE Student Affairs Office for a complete list of technical electives.

**ENGINEERING SCIENCE**

The **engineering science** program resembles the mechanical engineering program, except that the course load of mechanical design is reduced, and control theory is not required. In addition to core courses in dynamics, vibrations structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility, permitting specialization and in-depth study in one area of the engineering sciences or development of a sequence of courses emerging from the current research interests of the faculty of MAE and/or other departments, e.g., sequences in the earth sciences, transportation, or energy-related studies. Students intending to pursue postgraduate professional careers in non-technical fields such as business administration, law, or medicine may develop an appropriate sequence of courses. Although a sequence in the non-sciences may be permitted, the faculty advisor may insist on a substantial number of MAE or other science courses as technical electives. Students must consult their advisors to develop a balanced course of study to fulfill the technical elective requirements of this program. This curriculum also allows the highest number of humanities and social science courses (HSS) to meet college general-education requirements.

**Recommended Course Sequence—  
Engineering Science**

FALL	WINTER	SPRING
<b>Freshman Year</b>		
Math. 20A	Math. 20B	Math. 20C
MAE 9	Phys. 2A	Phys. 2B & 2BL
Chem. 6A	Chem. 6B	MAE 3
HSS	HSS	HSS
<b>Sophomore Year</b>		
Math. 20D	Math. 20F	Math. 20E
Phys. 2C & 2CL	HSS	MAE 130B or SE 101B
MAE 20	MAE 130A or SE 101A	MAE 131A
HSS	HSS	HSS
<b>Junior Year</b>		
MAE 110A	MAE 101A	MAE 101B
MAE 105	MAE 160 or MAE 131B	MAE 170
MAE 140	MAE 130C	HSS
MAE 107	HSS	HSS
<b>Senior Year</b>		
MAE 101C	MAE 171A	MAE 171B
MAE 150	TE	TE
TE	TE	TE
HSS	HSS	HSS

Chem. 6AH–6BH sequence may be taken in place of Chem. 6A–B.

- Humanities and social science (HSS) courses should be selected to meet general-education requirements of the colleges. Individual college requirements may be higher or lower than what is listed here.
- Four technical elective (TE) courses must be upper-division or graduate courses in the engineering sciences, natural sciences or

mathematics selected with prior approval of the department. A sequence of non-science courses may also be selected with prior approval (see program description).

See the Student Affairs Office for a complete list of technical electives.

**AEROSPACE ENGINEERING**

**Aerospace engineering** is an ABET-accredited four-year curriculum that begins with fundamental engineering courses in mechanics, thermodynamics, materials, solid mechanics, fluid mechanics, and heat transfer. Additional courses are required in aerospace structures, aerodynamics, flight mechanics, propulsion, controls, and aerospace design. Graduates of this program enter graduate school or enter the aerospace industry to develop aircraft and spacecraft, but also they find employment in other areas that use similar technologies, such as mechanical and energy-related fields. Examples include automobile, naval, and sporting equipment manufacturing.

Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. an ability to apply knowledge of mathematics, science, and engineering
2. an ability to design and conduct experiments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs
4. an ability to function on multidisciplinary teams
5. an ability to identify, formulate, and solve engineering problems
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively with written, oral, and visual means
8. the broad education necessary to understand the impact of engineering solutions in a global and societal context
9. a recognition of the need for, and an ability to engage in lifelong learning
10. a knowledge of contemporary issues
11. an ability to use modern engineering techniques, skills, and computing tools necessary for engineering practice
12. knowledge of key topics in aeronautical engineering including aerodynamics, aerospace materials, structures, propulsion, flight mechanics, and stability and control
13. knowledge of topics in astronautical engineering including attitude determination and control, space structures, orbital mechanics, and rocket propulsion
14. an ability to integrate knowledge of the fundamental topics in the design of an aerospace system

## Recommended Course Sequence— Aerospace Engineering

FALL	WINTER	SPRING
<b>Freshman Year</b>		
Math. 20A	Math. 20B	Math. 20C
MAE 2	Phys. 2A	Phys. 2B & 2BL
Chem. 6A	HSS	SE 2
HSS	HSS	HSS

### Sophomore Year

Math. 20D	Math. 20F	Math. 20E
Phys. 2C & 2CL	MAE 9 or 10	MAE 131A
MAE 3	MAE 130A or SE 101A	MAE 130B or SE 101B
HSS	HSS	HSS

### Junior Year

MAE 105	MAE 101A	MAE 101B
MAE 110A	MAE 130C	MAE 143B
MAE 140	MAE 143A	MAE 170
MAE 107	HSS	SE 160A

### Senior Year

MAE 101C	MAE 155A	MAE 155B
MAE 104	MAE 142	HSS
MAE 150	MAE 175A	HSS
SE 160B	MAE 113	TE

Chem. 6AH may be taken in place of Chem. 6A.

- In fulfilling the humanities and social science (HSS) requirements, students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Ten HSS courses are listed here; individual college requirements may be higher.
- Technical elective (TE) course must be upper-division or graduate courses in engineering sciences, natural sciences, or mathematics selected with a prior approval of the department. See Student Affairs in MAE for a current list of approved TEs.

## ENVIRONMENTAL ENGINEERING

The **environmental engineering** is a four-year curriculum with fundamental engineering courses in mechanics, thermodynamics, physics, chemistry, and math. In the third and fourth year, an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical elective (TE) courses, both from within MAE and in other departments.

The environmental engineering curriculum is currently undergoing review for future ABET accreditation. Please see MAE Student Affairs for more information.

FALL	WINTER	SPRING
<b>Freshman Year</b>		
Math. 20A	Math. 20B	Math. 20C
MAE 9 or 10	Phys. 2A	Phys. 2B & 2BL
Chem. 6A	Chem. 6B	Chem. 6C/6BL
HSS	HSS	HSS

### Sophomore Year

Math. 20D	Math. 20F	Math. 20E
Phys. 2C & 2CL	CENG 100	CENG 102
Chem. 131	Chem. 132	Chem. 140A
HSS	HSS	HSS

### Junior Year

MAE 105	MAE 101A	MAE 101B
CENG 120	TE	MAE 170
MAE 107	TE	MAE 124
HSS	HSS	HSS

### Senior Year

MAE 101C	MAE 126A	MAE 126B
MAE 125A	MAE 125B	TE
TE	TE	TE
HSS	HSS	HSS

Humanities and social science (HSS) courses should be selected to meet general-education requirements of the colleges. Individual college requirements may be higher or lower than what is listed here.

- Technical electives (6): At least four technical electives must be upper-division, and two or more of them must be from the MAE department.
- See MAE Student Affairs Office for a complete list of TE's.

## POLICIES AND PROCEDURES FOR MAE UNDERGRADUATE STUDENTS

### ADMISSION TO THE MAJOR

The B.S. degrees in mechanical and aerospace engineering are impacted. Because of heavy student interest in these two majors, and the limited resources available to accommodate this demand, maintenance of a high-quality program makes it necessary to limit enrollments.

Environmental engineering and engineering science continue to be open majors.

### FRESHMAN STUDENTS

Freshman students who have excelled in high school and have declared mechanical, aerospace, environment engineering, or engineering sciences on their UCSD application are eligible for direct admission into those majors. Enrollment is limited in the mechanical and aerospace majors due to its heavy demand and limited resources. Students will be notified by the UC San Diego Office of Admissions whether they have been admitted into their chosen major, based on admissions criteria and their ranking in the applicant pool.

### TRANSFER STUDENTS

Applicants seeking admission as transfer students will be considered for admission into the mechanical, aerospace, environmental engineering, and engineering science majors. Enrollment is limited in the mechanical and aerospace majors due to its heavy demand and limited resources. Impacted status will be in effect in 2011. Transfer students who have excelled in their community college courses, especially courses in math., physics, and chemistry, will have the strongest advantage.

Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department's major requirements. To receive transfer credit, complete a MAE Student Petition form and submit it to MAE Student Affairs. For mathematics, chemistry and physics, transfer equivalencies are determined by the respective departments. An Undergraduate Student Petition must be submitted to each department from which you are requesting transfer credit.

It is **strongly recommended** that transfers complete the following preparation for all engineering majors.

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A, B, and C)
- Chemistry 6A
- Highest level of introductory computer programming language course offerings at the community college

## CONTINUING STUDENTS CHANGING MAJORS

Continuing students who wish to change into an impacted major (mechanical engineering and aerospace engineering) must submit an application to the department. Applications will be accepted twice a year. Please see the department Web site [maeweb.ucsd.edu](http://maeweb.ucsd.edu) for details.

Continuing students who wish to be considered must submit an application to the MAE department on or before the target dates and must meet the following minimum requirements:

- completed at least one year/three quarters in residence at UCSD
- complete all lower-division requirements for the requested major

Applications will be ranked by their UCSD GPA on the date of the application. Students will be allowed into the major based on a ranking system, up to a maximum number.

Students who apply later than the final day of their sixth academic quarter at UCSD will not be considered.

## ACADEMIC ADVISING

Upon admission to the major, students should consult the catalog or MAE Web site (<http://maeweb.ucsd.edu>) for their program of study or their undergraduate advisor if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department's undergraduate advisor on an annual basis.

Some MAE courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete an MAE major within the normal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical

advice may be obtained from MAE faculty members. A specific MAE faculty mentor is assigned to each MAE student. It is recommended that all MAE students meet with their faculty mentor at least once a quarter.

### PROGRAM ALTERATIONS/EXCEPTIONS TO REQUIREMENTS

Variations from or exceptions to any program or course requirements are possible only if a petition is approved by the MAE Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the MAE Student Affairs Office and must be processed through this office.

### INDEPENDENT STUDY

MAE students may take MAE 199, Independent Study for Undergraduates, under the guidance of an MAE faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify an MAE faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member's concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and an MAE 199 as Technical Elective Contract form to the Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the add/drop deadline. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

### TEACHING

Students interested in participating in the instructional activities of the department may take MAE 195, Undergraduate Teaching. Normally, this course is taken as an elective on a P/NP basis. Under very restrictive conditions, it may be used to satisfy upper-division technical elective course requirements for the major. Policy in this regard and the appropriate forms may be obtained from the Student Affairs Office.

## THE GRADUATE PROGRAM

The Department of Mechanical and Aerospace Engineering at UC San Diego offers graduate instruction leading to the **M.S. and Ph.D. degrees in engineering sciences** with a designated specialization in each of the following areas: aerospace engineering, applied mechanics, applied ocean sciences, engineering physics, and mechanical engineering.

In fall 2007, a new Ph.D. specialization was introduced: computational science. Computational science seeks to gain understanding principally through the analysis of mathematical models on high performance computers. It is a blend of applications, computations, and mathematics. It is a mode of scientific investigation that supplements the traditional lab and theoretical models of acquiring knowledge. This is done by formulating mathematical models whose solutions are approximated by computer simulations.

The computational science specialization leverages the strength of the existing mathematics, science, and engineering departments. Ph.D. students must demonstrate advanced undergraduate-level proficiency in numerical analysis and in computer algorithms and data structures.

For more information, please contact the MAE Graduate Affairs Office at (858) 534-4387.

Admission to the graduate program is in accordance with the general requirements of the graduate division, which requires a B.S. and/or M.S. degree in some branch of engineering, the physical sciences, or mathematics; an overall GPA of 3.0; and three letters of recommendation from individuals who can attest to the applicant's academic or professional competence and to the depth of their interest in pursuing graduate study. In addition, all applicants are required to submit GRE General Test scores.

A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the TOEFL examination are strongly encouraged to enroll in an English as a second language program before beginning graduate work. (UC San Diego Extension offers an excellent English language program during the summer as well as the academic year.)

Applicants are judged competitively. Based on the candidate's background, qualifications, and goals, admission to the program is in one of three categories: M.S. only, M.S., or Ph.D. Admission to the M.S. only category is reserved for students for whom the M.S. degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. program is reserved for qualified students whose final aim is a doctoral degree. Policies for possible changes in status are given under "[Master's Degree Program](#)" below.

Non-matriculated students are welcome to seek enrollment in MAE courses via UC San Diego's Extension's Concurrent Enrollment program but an extension student's enrollment in an MAE graduate course must be approved by the instructor.

## MASTER'S DEGREE PROGRAM

The M.S. program is intended to extend and broaden an undergraduate background and/or equip practicing engineers with fundamental knowledge in their particular fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II (see "[Graduate Studies: Master's Degree](#)"). A strong effort is made to schedule M.S. level course offerings so that students may obtain their M.S. degree in one year of full-time study or two years of part-time study.

**M.S. Time Limit Policy:** Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

**Course requirements** are flexible in the applied mechanics and engineering physics programs. Specific departmental requirements for the M.S. degree are as follows:

### MASTER'S PLAN I—THESIS DEFENSE

This plan of study involves both course work and research, culminating in the preparation of a thesis. A total of thirty-six units of credit is required: twenty-four units (six courses) must be in course work, and twelve units must be in research. The student's program is arranged, with prior approval of the faculty advisor, according to the following policies:

1. Course work must include at least sixteen units (four courses) of MAE 200-level courses.
2. Units obtained in MAE 205 or 299 may not be applied toward the course work requirement.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the course work requirement.
4. No more than twelve units of upper-division 100-level courses (engineering-based or technically serious) may be applied toward the course work requirement.
5. Only four units from the ENG series may be applied to the degree.
6. Twelve units of MAE 299 must be taken to fulfill the research requirement.

The thirty-six units are arranged into three areas of specialization, organized as follows:

- Specialization 1: Three courses (four units each course)
- Specialization 2: Three courses (four units each course)
- Specialization 3: Three courses (four units each course)

At least two of the three areas of specialization must be chosen from the list below of MAE research areas. The third specialization can be one of the listed MAE areas or a math./science area.

### Current MAE Research Areas

- Applied and Solid Mechanics
- Material Sciences
- Fluid Mechanics
- Thermal Sciences
- Engineering Physics
- Dynamics Systems and Controls
- Environmental Engineering
- Biomechanics
- Design

Students should reference the MAE Graduate Course Structure to see which courses fall into which of the research areas.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. A thesis based on the research is written and subsequently reviewed by the thesis advisor and two other faculty members appointed by the dean

of Graduate Studies. The review is normally an oral defense of the thesis.

## COMPREHENSIVE EXAMINATION PLAN II (EFFECTIVE JANUARY 2010)

This plan of study involves a written report on a topical area of current research. A total of thirty-six units of credit (nine courses) are required. The student's program is arranged, with prior approval of the faculty advisor, according to the following policies:

1. A written report on a science/technology topic that has relevance today.
2. The topic must be interdisciplinary and cover two different core areas of MAE (for example, energy and dynamics/controls).
3. The report must be between fifteen and thirty pages in length.
4. There must be a minimum of five papers cited in the report. These five papers must be reviewed and approved by the student's faculty advisor.
5. Two faculty members will read the report and grade it. One of the members must be the student's faculty advisor. The other member may be chosen by the student.
6. Both faculty members will sign the report as a "pass" or a "no pass."
7. The final report is due to the committee members during finals week but no later than the last day of finals.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements.

Students already in the M.S. program in MAE have the option of joining the new Written Plan II or following the previous MS Plan I or II. Beginning fall 2010, all M.S. students will be required to follow the new Written Plan II or the Thesis Defense Plan I.

The thirty-six units of course work must be arranged accordingly:

1. Course work must include sixteen units (four courses) of MAE 200-level courses.
2. Units obtained in MAE 205 or 299 may not be applied toward the course work requirement.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the course work requirement.
4. No more than twelve units of upper-division 100-level courses (engineering-based or technically serious) may be applied toward the course work requirement.
5. Only four units from the ENG series may be applied to the degree.
6. Twelve units of MAE 299 must be taken to fulfill the research requirement.

The thirty-six units are arranged into three areas of specialization, organized as follows:

- Specialization 1: Three courses (four units each course)
- Specialization 2: Three courses (four units each course)
- Specialization 3: Three courses (four units each

course)

At least two of the three areas of specialization must be chosen from the list below of MAE research areas. The third specialization can be one of the listed MAE areas or a math./science area.

### Current MAE Research Areas

- Applied and Solid Mechanics
- Material Sciences
- Fluid Mechanics
- Thermal Sciences
- Engineering Physics
- Dynamics Systems and Controls
- Environmental Engineering
- Biomechanics
- Design

Students should reference the MAE Graduate Course Structure to see which courses fall into which of the research areas.

**Change of Degree.** Upon completion of the requirements for the M.S. degree, students admitted as M.S. only or M.S. candidates are not automatically eligible for admission to the Ph.D. Program. M.S. only candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. If the recommendation is positive and the request approved, the student must submit a general petition for graduate students to effect the change of status. In addition, the examining committee may recommend that the examination satisfy one of the three topics required in the departmental qualifying examination for the doctorate.

M.S. candidates who subsequently wish to pursue a doctorate must also submit an application for a change in status to their examining committee. In this case, a special examination is not required. The application, however, must be approved and signed by an MAE faculty member who expects to serve as the student's Ph.D. advisor. When the request is approved, the student must submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive written plan for the M.S. degree, this report may be used not only to fulfill the requirement for the M.S. degree but also to satisfy one of the three topics required in the departmental qualifying examination for the doctorate.

### M.S. PROGRAM

To complete an M.S. degree with specialization in aerospace engineering, engineering physics, mechanical engineering, applied mechanics, or applied ocean sciences, students must complete a sequence of courses unique to their area. Students should consult with their faculty advisor, as well as the MAE Graduate Student Affairs Office, when choosing their courses.

### DOCTORAL DEGREE PROGRAM

The MAE Ph.D. Program is intended to prepare students for a variety of careers in research and

teaching. Therefore, depending on the student's background and ability, research is initiated as soon as possible. In general, there are no formal course requirements for the Ph.D. All students, in consultation with their advisors, develop course programs that will prepare them for the MAE Departmental Qualifying Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Examination may take any course for an S/U grade, with the exception of any course that the student's Departmental or Ph.D. Qualifying Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all MAE graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Qualifying Examination. Specific details in this regard can be obtained from the MAE Student Affairs Office.

**Doctoral Examinations:** An MAE Ph.D. student is required to pass three examinations. The first is a **Departmental Qualifying Examination (DQE)** that is intended to determine the candidate's ability to successfully pursue a research project level appropriate for the doctorate. This first exam must be taken within the first six quarters of registration as a graduate student. The DQE is an oral examination by a committee of four persons (two of which must be in the MAE department) and is based on material taught over 36 units in three areas of study: a major area (four courses), a minor area (two introductory courses), and a study in mathematics or basic science (three courses). Students must submit a plan of study, approved by their advisor, to the Graduate Affairs Committee for final approval by the end of their second quarter of graduate study.

**Teaching Experience** is required of all MAE Ph.D. students prior to taking the Ph.D. Qualifying Exam. The teaching experience is defined as lecturing one hour per week in either a problem-solving section or regular lecture for one quarter in a course designated by the department. The requirement can be fulfilled by teaching assistant service or taken as a course for academic credit (MAE 501). Students must contact the Student Affairs Office to plan for completion of this requirement.

The **Ph.D. Qualifying Examination** is the second examination required of MAE Ph.D. Students In preparation for the Ph.D. Qualifying Examination, students must have completed the Departmental Qualifying Examination and the Departmental Teaching Experience requirement, obtained a faculty research advisor, and have identified a topic for their dissertation research and have made initial progress. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. The committee conducts the Ph.D. Qualifying Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon

successful completion of this examination, students are advanced to candidacy and are awarded the candidate in philosophy degree (see “[Graduate Studies](#)” section in this catalog). The **Dissertation Defense** is the final Ph.D. Examination. Upon completion of the dissertation research project, the student writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student’s dissertation must be submitted to each member of the doctoral committee approximately four weeks before the defense. It is understood that the copy of the dissertation given to committee members will not be the final copy, and that the committee members may suggest changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the university librarian represents the final step in completion of all requirements for the Ph.D. There is no formal foreign language requirement for doctoral candidates. Students are expected to master whatever language is needed for the pursuit of their own research.

**Ph.D. Time Limit Policy.** Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years (engineering physics, seven years). The defense and submission of the doctoral dissertation must be within seven years (engineering physics, eight years).

**Evaluations.** In the spring of each year, faculty advisors evaluate each doctoral student’s overall performance in course work, research during the past academic year, and prospects for financial support for the next year. A written assessment is given to the student. If a student’s work is found to be inadequate, the faculty advisor may determine that the student cannot continue in the doctoral program and will recommend dismissal to the dean of Graduate Studies.

#### JOINT DOCTORAL PROGRAM WITH SAN DIEGO STATE UNIVERSITY

The Department of Mechanical and Aerospace Engineering at UCSD participates in a joint doctoral program with the Graduate Group in Applied Mechanics at SDSU. The program leads to the degree of doctor of philosophy in engineering sciences (applied mechanics). Participants in the program are required to spend one year enrolled at UCSD; their dissertation research is carried out under the supervision of an SDSU faculty member. Information regarding admission may be obtained from the departmental Student Affairs Office.

#### THE GRADUATE CURRICULUM IN CHEMICAL ENGINEERING

The chemical engineering (CENG) graduate program is an interdepartmental program and is described more completely under the Chemical Engineering Program in this catalog.

#### PH.D. IN MECHANICAL AND AEROSPACE ENGINEERING WITH SPECIALIZATION IN MULTI-SCALE BIOLOGY

As of fall 2010, the UCSD campus is offering a new Ph.D. specialization in multi-scale biology that

Lab	Course Numbers	Title	Contributing Programs or Departments	Instructors	Quarter
1	BENG 283 Chem. 28/ BIOM 283	Supramolecular Complex Characterization	Chemistry and Biochemistry, Bioinformatics	Komives (Chemistry and Biochemistry), Bafna (Computer Science and Engineering)	Spring
2	BENG 276 Chem. 276 Math. 276 PHARM 276	Numerical Analysis for Multi-Scale Biology	Chemistry and Biochemistry, Mathematics, Bioengineering	McCammon (Chemistry and Biochemistry), Holst (Mathematics), Sejnowski (Biological Sciences) McCulloch (Bioengineering)	Spring
3	NEU 260 Chem. 260	Light and Electron Microscopy of Cells and Tissues	Neuroscience, Chemistry and Biochemistry, Molecular Pathology, Biology	Martone, Sosinsky, Ellisman (Neurosciences), Baker (Chemistry and Biochemistry), Hanein (Pathology)	Spring
4	BENG 278 RAD 278	Magnetic Resonance Imaging	Radiology, Bioengineering	Wong, Buxton, Frank, Liu (Radiology), Dale (Neurosciences)	Winter
5	PHYS 245 BGGN 265	Optical Imaging of Structure and Function in Excitable Systems	Physics, Neurosciences, Radiology, Bioengineering, Medicine, Biology	Kleinfeld (Physics), Wang (Biological Sciences), Berns (Bioengineering)	Spring
6	BENG 277 BIOM 287	Tissue Engineering	Bioengineering, Biomedical Science, Pediatrics, Pharmacology	Sah, Christman, Varghese (Bioengineering), Nigam (Pediatrics), Evans (Pharmacology)	TBA
7	BENG 260 BGGN 260	Neurodynamics	Bioengineering, Biology	Cauwenberghs (Bioengineering)	Winter

will be available to doctoral candidates in participating programs that span four divisions: Biological Sciences, Physical Sciences, Jacobs School of Engineering, and Health Sciences at UCSD.

The Ph.D. specialization is designed to allow students to obtain standard basic training in their chosen field within the biological sciences, physical sciences, engineering, and health sciences with training in integrative and quantitative analysis across multiple scales of biological organization from molecule to organism in health and disease into their graduate studies. It trains a new cadre of Ph.D. scientists and provides a unique interdisciplinary education at the interfaces between the biological, medical, physical and engineering sciences.

The specific objectives of this program are

- 1. Focused Collaboration** across nine graduate degree programs at UCSD to train a new generation of cross-disciplinary scientist
- 2. State-of-the-art interdisciplinary training** through a new technology-centered hands-on graduate laboratory course curriculum
- 3. Novel emphasis on research** aimed at integrative and quantitative analysis across multiple scales of biological organization from molecule to organism in health and disease

Students in the specialization are required to take at minimum three laboratory courses and serve as a TA one course. Courses offered are shown in the table at the top right portion of this page.

Prospective students must apply and be admitted into the Ph.D. program in mechanical and aerospace engineering described previously. (For more information, see the Mechanical and Aerospace Engineering Graduate program and/or the Interfaces Graduate Training Program administered within the Department of Chemistry and Biochemistry, 4010 York Hall, Revelle College)

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

All undergraduate students enrolled in MAE courses or admitted to an MAE program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any MAE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog. Furthermore, the majority of MAE courses have enrollment restrictions which give priority to or are open only to students who have been admitted to an MAE major. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards. The department expects that students will adhere to these policies of their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites have not been met.

While most lower-division courses are offered more than once each year, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, MAE does offer selected large enrollment courses more than once each year.

## LOWER-DIVISION

### MAE 02. Introduction to Aerospace Engineering (4)

An introduction to topics in aeronautical and astronautical engineering including aerodynamics, propulsion, flight mechanics, structures, materials, orbital mechanics,

design, mission planning, and environments. General topics include historical background, career opportunities, engineering ethics, and professionalism. Must be taken for a letter grade. **Prerequisite:** none.

#### **MAE 03. Introduction to Engineering Graphics and Design (4)**

Introduction to design process through a hands-on design project performed in teams. Topics include problem identification, concept generation, project management, risk reduction. Engineering graphics and communication skills are introduced in the areas of: Computer-Aided Design (CAD), hand sketching, and technical communication. **Prerequisite:** grade of C- or better in Physics 2A or 4A (or concurrent enrollment). Priority enrollment given to engineering majors.

#### **MAE 05. Quantitative Computer Skills (4)**

Introductory course for non-engineering majors. Use of computers in solving problems; applications from life sciences, physical sciences, and engineering. Students run existing computer programs and complete some programming in BASIC. **Prerequisite:** none.

#### **MAE 09. C/C++ Programming (4)**

C/C++ computer programming under the UNIX environment with applications to numerical problems fundamental to computational mechanics. Arithmetic operations, branches, arrays, data structures, and use of pointers are introduced. Programming ethics are discussed. Priority enrollment given to pre-engineering and engineering majors.

#### **MAE 20. Elements of Materials Science (4)**

The structure of materials: metals, ceramics, glasses, semiconductors, superconductors and polymers. Control of internal structure to produce desired properties. Mechanical, rheological, electrical, optical, superconducting and magnetic properties and classification. **Prerequisites:** Phys. 2A or 4A, Chem. 6A, Math. 21C or 20D (or concurrent registration).

#### **MAE 87. Freshman Seminar (1)**

The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. **Prerequisite:** none.

#### **MAE 92A. Design Competition—Design, Build, and Fly Aircraft (1)**

(Cross-listed with SE 10A.) Student teams design, build, and fly unmanned aircraft for a national student competition. Students concentrate on vehicle system design including aerodynamics, structures, propulsion, and performance. Teams engineer, fabricate the aircraft, submit a design report, and prep aircraft for competition. **Prerequisites:** consent of instructor.

#### **MAE 93. Design Competition—Design, Build, and Test Race Car (1)**

Student teams design, build, and test a formula-style racing car for an international student competition. Students concentrate on vehicle system analysis and design, manufacturability, and performance. Teams engineer, fabricate car, submit a design report, and prep car for competition. **Prerequisite:** department stamp.

#### **MAE 99R. Independent Study (1)**

Independent study or research under direction of a member of the faculty. **Prerequisites:** student must be of first-year standing and a Regent's Scholar; approved Special Studies form.

## **UPPER-DIVISION**

#### **MAE 101A. Introductory Fluid Mechanics (4)**

Fluid statics; fluid kinematics; integral and differential forms of the conservation laws for mass, momentum and energy; Bernoulli equation; potential flows; dimensional analysis and similitude. **Prerequisites:** admission to an engineering major and grades of C- or better in Phys. 2A, Math. 20D, 20E, or consent of instructor.

#### **MAE 101B. Advanced Fluid Mechanics (4)**

Laminar and turbulent flow. Pipe flow including friction factor. Boundary layers, separation, drag, and lift. Compressible flow including shock waves. **Prerequisites:** grade of C- or better in MAE 101A, or CENG 101A or CENG 103A, and MAE 110A or CENG 102 or consent of instructor.

#### **MAE 101C. Heat Transfer (4)**

Extension of fluid mechanics in MAE 101A-B to viscous, heat-conducting flows. Application of the energy conservation equation to heat transfer in ducts and external boundary layers. Heat conduction and radiation transfer. Heat transfer coefficients in forced and free convection. Design applications. **Prerequisites:** MAE 101A or CENG 101A, MAE 101B, and MAE 105, or consent of instructor.

#### **MAE 102. Fluid Mechanics for Structural Engineers (4)**

(Cross-listed with SE 112.) Fluid statics, hydrostatic forces; integral and differential forms of conservation equations for mass, momentum, and energy; Bernoulli equation; dimensional analysis; viscous pipe flow; external flow, boundary layers; open channel flow. **Prerequisites:** grade of C- or better in Phys. 2A, Math. 20D, and Math. 20E or consent of instructor.

#### **MAE 104. Aerodynamics (4)**

Basic relations describing flow field around wings and bodies at subsonic and supersonic speed. Thin-wing theory. Slender-body theory. Formulation of theories for evaluating forces and moments on airplane geometries. Application to the design of high-speed airplanes. **Prerequisites:** open to MC 25, MC 27, MC 28 and SE 27 only and grade of C- or better in MAE 101A-B, or consent of the instructor.

#### **MAE 105. Introduction to Mathematical Physics (4)**

Fourier series, Sturm Liouville theory, elementary partial differential equations, integral transforms with applications to problems in vibration, wave motion, and heat conduction. **Prerequisites:** admission to engineering major or and grades of C- or better in Phys. 2A-B and Math. 20D or Math. 21D.

#### **MAE 107. Computational Methods in Engineering (4)**

Introduction to scientific computing and algorithms; iterative methods, systems of linear equations with applications; nonlinear algebraic equations; function interpolation and differentiation and optimal procedures; data fitting and least-squares; numerical solution of ordinary differential equations. **Prerequisites:** engineering majors only and grades of C- or better in MAE 9 or MAE 10 and Math. 20F.

#### **MAE 108. Probability and Statistical Methods for Mechanical and Environmental Engineering (4)**

Probability theory, conditional probability, Bayes theorem, random variables, densities, expected values, characteristic functions, central limit theorem. Engineering reliability, elements of estimation, random sampling, sampling distributions, hypothesis testing, confidence intervals. Curve fitting and data analysis. **Prerequisite:** Math. 20F.

#### **MAE 110A. Thermodynamics (4)**

Fundamentals of engineering thermodynamics: energy, work, heat, properties of pure substances, first and second laws for closed systems and control volumes, gas mixtures. Application to engineering systems, power and refrigeration cycles, combustion. **Prerequisites:** grades of C- or better in Phys. 2C and Chem. 6A. Enrollment restricted to engineering majors only.

#### **MAE 110B. Thermodynamic Systems (4)**

Thermodynamic analysis of power cycles with application to combustion driven engines: internal combustion, diesel, and gas turbines. Thermodynamics of mixtures and chemical and phase equilibrium. Computational methods for calculating chemical equilibrium. **Prerequisite:** grade of C- or better in MAE 110A.

#### **MAE 113. Fundamentals of Propulsion (4)**

Compressible flow, thermodynamics, and combustion relevant to aircraft and space vehicle propulsion. Analysis and design of components for gas turbines, including turbines, inlets, combustion chambers and nozzles. Fundamentals of rocket propulsion. **Prerequisites:** engineering majors MC 25, MC 27 and MC 28 only and grades of C- or better in MAE 110A or CENG 102 and MAE 101A-B or CENG 101A and 101C (or CENG 103A-B).

#### **MAE 117A. Elementary Plasma Physics (4)**

(Cross-listed with Physics 151.) Particle motions, plasmas as fluids, waves, diffusion, equilibrium and stability, nonlinear effects, controlled fusion. **Prerequisites:** Math. 21D or consent of instructor. Phys. 100B-C or ECE 107 are recommended.

#### **MAE 117B. Industrial Plasma Applications (4)**

Charged particle motion in DC and RF electro-magnetic; atomic processes in plasmas; ionization, excitation, dissociation, rate constants, electron energy balance electric breakdown of the gases; debye length, plasmas quasi-neutrality, sheath; DC, capacitive, inductive, and wave-heated discharges; etching, deposition, and implantation. **Prerequisite:** Math. 20D or 21D, or consent of instructor.

#### **MAE 117L. Elements of Experimental Plasma Physics (4)**

Measurements of electron density and temperature with the langmuire probes, emission spectroscopy measurements of neutrals and ions in plasmas; electric breakdown of the gases; plasmas etching of materials. **Prerequisites:** none.

#### **MAE 118A. Introduction to Energy Systems (4)**

Overview of present-day primary energy sources and availability; stationary and mobile power plant technologies; air pollution and controls; introduction to climate change; overview of renewable energy resources and technologies. **Prerequisites:** MAE 101A or CENG 101A, or consent of instructor.

#### **MAE 118B. Twenty-First Century Energy Technologies I (4)**

A survey of projected energy demands and resources. Climate change physics and impacts on energy systems. Basic physics of photovoltaics, fuel cells, wind power, and other renewable and developing energy technologies. An exploration of the "Hydrogen Economy." **Prerequisites:** MAE 101A or CENG 101A, or consent of instructor.

#### **MAE 118C. Twenty-First Century Energy Technologies II (4)**

Overview of basic fission processes and fusion processes. Elementary fission reactor physics and engineering; environmental and waste disposal issues. Introduction to power producing fusion reactor physics. Survey of fusion technology issues, status and prospects for fusion energy. **Prerequisite:** MAE 101A or CENG 101A, or consent of instructor.

#### **MAE 124. Environmental Challenges: Science and Solutions (4)**

(Cross-listed with ESYS 103.) This course explores the impacts of human social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation and governmental regulation on local, national, and global scales. **Prerequisites:** grade of C- or better in Math. 20B or Math. 10A-C, or consent of instructor.

#### **MAE 125A. Flow and Transport in the Environment (4)**

Study of river flow and hydraulic control; surface waves; applications to reservoirs and estuaries. Introduction to stratification and buoyancy; applications to atmospheric surface layer and the ocean mixed layer. Ideas behind turbulent dispersion. Turbulent and scaling laws. Gravity currents and katabatic flows. **Prerequisites:** engineering majors and students receiving a grade of C- or better in MAE 101A or CENG 103A or CENG 101A.

#### **MAE 125B. Fluid-Solid Interactions in Environment Engineering (4)**

Introduction to groundwater flow. Pollution transport through the water table. Chemical processes in ozone hole. Fundamentals of flow. Darcy flow. Diffusion and dispersion. Gravity currents and plumes in porous media. Mushy layers. Chemistry of fluid-solid interactions. Fundamentals of adsorption and surface reactions. **Prerequisites:** engineering majors and students receiving a grade of C- or better in MAE 125A.

#### **MAE 125C. Case Studies In Environmental Engineering (4)**

This course is project-oriented. Students will conduct research in small groups, give oral presentations and write

reports. Topics reflect material in MAE 125A and MAE 125B. Possible topics: air pollution modeling, building ventilation, wetland preservation. **Prerequisites:** engineering majors and students receiving a grade of C– or better in MAE 125A–B.

#### **MAE 126A. Environmental Engineering Laboratory I (4)**

Design and analysis of experiments in environmental engineering. Experiments in wind tunnel, water tunnel, and other equipment. Use of instrumentation. Laboratory report writing; error analysis; engineering ethics. **Prerequisites:** grade of C– or better in MAE 101A or CENG 101A, MAE 125A.

#### **MAE 126B. Environmental Engineering Laboratory II (4)**

Design and analysis of original studies in environmental engineering. Students work on environmental projects and use computational and laboratory facilities. Students propose and design studies, collect and analyze data, and prepare a major report. **Prerequisite:** grade of C– or better in MAE 126A.

#### **MAE 127. Statistical Methods for Environmental Sciences and Engineering (4)**

Methods for evaluating environmental data including probability distributions, confidence intervals, functional fitting, spectral analysis, and programming methods for data analysis. **Prerequisite:** grade of C– or better in Math. 20C.

#### **MAE 130A. Mechanics I: Statics (4)**

(Cross-listed with SE 101A.) Statics of particles and rigid bodies in two and three dimensions. Free body diagrams. Internal forces. Static analysis of trusses, frames, and machines. Shear force and bending moment diagrams in beams. Equilibrium problems with friction. **Prerequisites:** Math. 20C and Phys. 2A with grades of C– or better. Students cannot also receive credit for SE 101A.

#### **MAE 130B. Mechanics II: Dynamics (4)**

(Cross-listed with SE101B.) Kinematics and kinetics of particles in 2-D and 3-D motion. Newton's equations of motion. Impulsive motion and impact. Energy and momentum methods. Systems of particles. Kinematics and kinetics of rigid bodies in 2-D. Introduction to 3-D dynamics of rigid bodies. **Prerequisites:** Math. 20D, MAE 130A, or SE 101A with grades of C– or better.

#### **MAE 130C. Mechanics III: Vibrations (4)**

(Cross-listed with SE 101C.) Free and forced vibrations of undamped and damped single degree of freedom systems. Harmonically excited vibrations. Vibrations under general loading conditions. Vibrating systems with multiple degrees of freedom. Modal analysis with application to realistic engineering problems. Vibration of continuous systems. **Prerequisites:** grades of C– or better in Math. 20F and MAE 130B or SE 101B.

#### **MAE 131A. Solid Mechanics I (4)**

(Cross-listed with SE 110A.) Students may not receive credit for SE 110A or MAE 131A and SE 110A/MAE 131A. Concepts of stress and strain. Hooke's Law. Axial loading of bars. Torsion of circular shafts. Shearing and normal stresses in beam bending. Deflections in beams. Statically determinate and indeterminate problems. Combined loading. Principal stresses and design criteria. Buckling of columns. **Prerequisites:** grades of C– or better in Math. 20F and MAE 130A or SE 101A.

#### **MAE 131B. Fundamentals of Solid Mechanics II (4)**

Continuous mechanics of solids and its application to the mechanical response of machine and structural elements. Stress and strain in indicial notation; field equations and constitutive relations. Linear elastic stress analysis in torsion, plane stress and plane strain; stress concentrations; fracture mechanics. Extremum principles and structural stability. Viscoelasticity, plasticity, and failure criteria. Theorems of plastic limit analysis. **Prerequisites:** grades of C– or better in MAE 131A and MAE 105 (or concurrent) and admission to engineering major.

#### **MAE 131C. Solid Mechanics III (4)**

Small deflection of plate bending. Solutions for rectangular and circular plates. Buckling of plates. Membrane and bending stresses in cylindrical shells. Pressure vessels.

Energy methods and finite element analysis. **Prerequisite:** grade of C– or better in MAE 131A or SE 110A.

#### **MAE 132. Intermediate Dynamics (4)**

Kinematics and kinetics of 3-D rigid body motion. Angular momentum and its rate of change. Euler's and general equations of motion. Rotation about a fixed axis and a fixed point. Gyroscopic motion. Dynamic reactions. Lagrange's equations of motion with applications. **Prerequisite:** grade of C– or better in MAE 130B or SE 101B.

#### **MAE 133. Finite Element Methods in Mechanical and Aerospace Engineering (4)**

Development of stiffness and mass matrices based upon variational principles and application to static, dynamic, and stability design problems in structural and solid mechanics. Architecture of computer codes for linear and nonlinear finite element analysis and basic computer implementation. The use of general purpose finite element structural analysis computer codes. **Prerequisites:** grade of C– or better in MAE 131A or SE 110A.

#### **MAE 135. Computational Mechanics (4)**

Mathematical modeling in terms of systems of algebraic and differential equations. Overview of numerical methods. Problem statement, boundary, and initial conditions. Overview of commercial packages for solving the equations of Mathematical and Engineering Physics. Numerical solutions of selected examples drawn from real-life applications of fluid flow, solid mechanics, and heat transfer with emphasis on design. **Prerequisite:** consent of instructor.

#### **MAE 140. Linear Circuits (4)**

Steady-state and dynamic behavior of linear, lumped-parameter electrical circuits. Kirchoff's laws. RLC circuits. Node and mesh analysis. Operational amplifiers. Signal acquisition and conditioning. Electric motors. Design applications in engineering. **Prerequisites:** admission to the engineering major and grades of C– or better in Math. 20D, 20F, and Phys. 2B.

#### **MAE 142. Dynamics and Control of Aerospace Vehicles (4)**

The dynamics of vehicles in space or air are derived for analysis of the stability properties of spacecraft and aircraft. The theory of flight, lift, drag, dutch roll and phugoid modes of aircraft are discussed. Optimal state space control theory for the design of analog and digital controllers (autopilots). **Prerequisites:** admission to the engineering major and grades of C– or better in MAE 104 and MAE 143B or ECE 171A, or consent of instructor.

#### **MAE 143A. Signals and Systems (4)**

Dynamic modeling and vector differential equations. Concepts of state, input, output. Linearization around equilibria. Laplace transform, solutions to ODEs. Transfer functions and convolution representation of dynamic systems. Discrete signals, difference equations, z-transform. Continuous and discrete Fourier transform. **Prerequisites:** grades of C– or better in Math. 20D, 20E, and 20F and MAE 105, or consent of instructor.

#### **MAE 143B. Linear Control (4)**

Analysis and design of feedback systems in the frequency domain. Transfer functions. Time response specifications. PID controllers and Ziegler-Nichols tuning. Stability via Routh-Hurwitz test. Root locus method. Frequency response: Bode and Nyquist diagrams. Dynamic compensators, phase-lead and phase-lag. Actuator saturation and integrator wind-up. **Prerequisite:** grade of C– or better in MAE 143A or CENG 100, or consent of instructor.

#### **MAE 143C. Digital Control Systems (4)**

Discrete time systems: sampling, aliasing, stability, Z-transform, discrete time signals, state space models; state equations, canonical forms, observability, controllability. Pole placement design, observer design, output feedback, linear quadratic regulator design. Implementation: digital approximation, computational and numerical issues. **Prerequisite:** grade of C– or better in MAE 143B.

#### **MAE 149. Sensor Networks (4)**

(Cross-listed with ECE 156 and SIO 238) Characteristics of chemical, biological, seismic and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust

sensor fabrics; current experience with low power, low-cost sensor deployments. **Prerequisites:** upper-division standing and consent of instructor, or graduate student in science or engineering.

#### **MAE 150. Computer-Aided Design (4)**

Computer-Aided Analysis and Design. Design methodology, tolerance analysis, Monte Carlo analysis, kinematics and computer-aided design of linkages, numerical calculations of moments of inertia, design of cams and cam dynamics; finite element analysis, design using Pro-E, Mechanica Motion and Mechanica Structures. **Prerequisites:** grade of C– or better in MAE 130A or SE 101A or BENG 110, MAE 107 or SE 121, and MAE 3, senior standing in engineering major, or consent of instructor.

#### **MAE 152. Computer Graphics for Engineers and Scientists (4)**

Computer graphics algorithms using C programming and Ironcad. Applications in engineering and science. Line-drawing algorithms. Area fill algorithms, color, CAD user interface, spline curves and surfaces, 2-D and 3-D transformations, wireframe and solid models. Hidden-surface elimination. **Prerequisites:** grade of C– or better in MAE 3 and MAE 9 or 10. Not offered every year.

#### **MAE 155A. Aerospace Engineering Design I (4)**

Fundamental principles of aerospace vehicle design including the conceptual, preliminary, and detailed design phases. Aeronautical or astronautical design project that integrates all appropriate engineering disciplines as well as issues associated with optimization, teamwork, manufacturability, reporting, and professionalism. **Prerequisites:** grade of C– or better in MAE 2, 104, 113, 130C, 142, 150, SE 2 and SE 160B or consent of instructor. Students may enroll concurrently with MAE 113, 142, and 150.

#### **MAE 155B. Aerospace Engineering Design II (4)**

Fundamental principles of aerospace vehicle design including the conceptual, preliminary, and detailed design phases. Aeronautical or astronautical design project that integrates all appropriate engineering disciplines as well as issues associated with optimization, teamwork, manufacturability, reporting, and professionalism. **Prerequisites:** grade of C– or better in MAE 113, 142, 150, 155A or consent of instructor.

#### **MAE 156A. Fundamental Principles of Mechanical Design I (4)**

Fundamental principles of mechanical design and the design process. Application of engineering science to the design and analysis of mechanical components. Initiation of team design projects that culminate in MAE 156B with a working prototype designed for a real engineering application. Professional ethics discussed. Course material fee may apply. **Prerequisites:** grades of C– or better in MAE 3, MAE 130C, MAE 131A, MAE 160, or MAE 131B, and MAE 170 or consent of instructor.

#### **MAE 156B. Fundamental Principles of Mechanical Design II (4)**

Fundamental principles of mechanical design and the design process. Culmination of a team design project initiated in MAE 156A which results in a working prototype designed for a real engineering application. **Prerequisite:** grade of C– or better in 156A in the immediately preceding quarter, MAE 101C, MAE 150 or consent of instructor.

#### **MAE 160. Mechanical Behavior of Materials (4)**

Elasticity and anelasticity, dislocations and plasticity of crystals, creep, and strengthening mechanisms. Mechanical behavior of ceramics, composites, and polymers. Fracture: mechanical and microstructural. Fatigue. Laboratory demonstrations of selected topics. **Prerequisites:** grade of C– or better in MAE 20, MAE 130A (or SE 101A) and MAE 131A, or consent of instructor.

#### **MAE 161. Electronic, Magnetic, and Photonic Materials (4)**

Introduction to the worlds of electronic, magnetic/photonic materials, the unique properties of advance engineering materials in relation to processing, fabrication, and microstructure. Semiconductors, metals, alloys, ceramics, polymers, and composite materials and their practical applications. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 165. Fatigue and Failure Analysis of Engineering Components (4)**

The engineering and scientific aspects of crack nucleation, slow crack growth, and unstable fracture in crystalline and amorphous solids. Microstructural effects on crack initiation, fatigue crack growth and fracture toughness. Methods of fatigue testing and fracture toughness testing. Fractography and microfractography. Design safe methodologies and failure prevention. Failure analysis of real engineering structures. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 166. Nanomaterials (4)**

Basic principles of synthesis techniques, processing, microstructural control and unique physical properties of materials in nano-dimensions. Nanowires, quantum dots, thin films, electrical transport, optical behavior, mechanical behavior, and technical applications of nanomaterials. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 167. Wave Dynamics in Materials (4)**

Pressure and shear waves in infinite solids. Reflection and diffraction. Rayleigh and Love waves in semi-infinite space. Impulse load on a half space. Waveguides and group velocity. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 168. MEME Materials, Fabrication, and Applications (4)**

The principles of micro-electro-mechanical systems (MEMS) fabrication, materials involved, actuation principles utilized, and the fundamentals of MEMS operation in relation to stresses and deformation. Novel device applications, future trends, and nano-electro-mechanical (NEMS) systems. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 170. Experimental Techniques (4)**

Principles and practice of measurement and control and the design and conduct of experiments. Technical report writing. Lectures relate to dimensional analysis, error analysis, signal-to-noise problems, filtering, data acquisition and data reduction, as well as background of experiments and statistical analysis. Experiments relate to the use of electronic devices and sensors. **Prerequisite:** Grade of C- or better in Phys. 2CL and admission to any engineering major.

#### **MAE 171A. Mechanical Engineering Laboratory I (4)**

Design and analysis of experiments in fluid mechanics, solid mechanics, and control engineering. Experiments in wind tunnel, water tunnel, vibration table and material testing machines, and refined electromechanical systems. Laboratory report writing; error analysis; engineering ethics. **Prerequisites:** grade of C- or better in MAE 101C or CENG 101B, MAE 130C or SE 101C, MAE 160 or MAE 131B or SE 110B, MAE 140, MAE 143B or CENG 120, MAE 170, and senior standing in engineering major or consent of instructor.

#### **MAE 171B. Mechanical Engineering Laboratory II (4)**

Design and analysis of original experiments in mechanical engineering. Students research projects using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, and testing machine and control systems. Students propose and design experiments, obtain data, complete engineering analysis and write a major report. **Prerequisite:** requires a grade of C- or better in MAE 171A.

#### **MAE 175A. Aerospace Engineering Laboratory I (4)**

Analysis of aerospace engineering systems using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, and testing machine. Students operate facilities, obtain data, complete engineering analysis and write major reports. **Prerequisites:** grade of C- or better in MAE 101C or CENG 103C or CENG 101C; MAE 143B, and MAE 170.

#### **MAE 180A. Spacecraft Guidance I (4)**

Astrodynamics, orbital motion, perturbations, coordinate systems and frames of reference. Geosynchronous orbits, stationkeeping. Orbital maneuvers, fuel consumption, guidance systems. Observation instrument point, tracking, control. Basic rocket dynamics. Navigation, telemetry, re-entry, and aero-assisted maneuvers. Mission design. Students perform analyses based on mission require-

ments. **Prerequisite:** upper-division standing in physics, mathematics, or engineering department.

#### **MAE 181. Space Mission Analysis and Design (4)**

Space mission concepts, architectures, and analysis. Mission geometry. Astrodynamics. Orbit and constellation design. Space environment. Payload and spacecraft design and sizing. Power sources and distribution. Thermal management. Structural design. Guidance and navigation. Space propulsion. Orbital debris and survivability. Cost modeling and risk analysis. **Prerequisite:** upper-division standing or consent of instructor.

#### **MAE 192. Senior Seminar in Aerospace, Environmental or Mechanical Engineering (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in aerospace, environmental or mechanical engineering (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic and permission from the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp or consent of instructor.

#### **MAE 195. Teaching (2-4)**

Teaching and tutorial assistance in an MAE course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. P/NP grades only. **Prerequisites:** junior status and a B average in major and consent of department chair.

#### **MAE 197. Engineering Internship (1-4)**

Students work in local industry or hospitals under faculty supervision. Units may not be applied toward graduation requirements. Salaried or unsalaried. Number of units determined by enrollment frequency. First quarter up to four units. Subsequent quarters cannot exceed one unit. **Prerequisites:** consent of instructor and department stamp, 2.50 overall GPA minimum, at least ninety units.

#### **MAE 198. Directed Group Study (1-4)**

Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. May be taken P/NP only. **Prerequisite:** consent of instructor.

#### **MAE 199. Independent Study for Undergraduates (4)**

Independent reading or research on a problem by special arrangement with a faculty member. P/NP grades only. **Prerequisite:** consent of instructor.

### **GRADUATE COURSES**

#### **MAE 205. Graduate Seminar (1)**

Each graduate student in MAE is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in fluid mechanics, solid mechanics, applied plasma physics and fusion, chemical engineering, applied ocean sciences, energy and combustion, environmental engineering, or materials science, and dynamics and controls. Topics will vary. (S/U grades only)

#### **MAE 207. Topics in Engineering Science (4)**

A course to be given at the discretion of the faculty in which topics of current interest in engineering will be presented. **Prerequisite:** consent of instructor.

#### **MAE 209. Continuum Mechanics Applied to Medicine/Biology (4)**

(Cross-listed with BENG 209.) Introduction to the basic definitions of continuum mechanics and their mathematical formulation at the graduate level with applications to problems in medicine and biology. This course is intended for students with little or no background in mechanics; it is an introduction to the Biomechanics courses BENG 250 A-B in the Department of Bioengineering and to Solid and Fluid Mechanics courses MAE 210A and MAE 231A in the Department of Mechanical and Aerospace Engineering. This course should NOT be taken concurrently with MAE 210A or MAE 231A. **Prerequisite:** consent of instructor.

#### **MAE 210A. Fluid Mechanics I (4)**

(Cross-listed with CENG 210A.) Basic conservation laws. Flow kinematics. The Navier-Stokes equations and some

of its exact solutions. Non-dimensional parameters and different flow regimes, vorticity dynamics. **Prerequisites:** MAE 101A-B and MAE 110A, or consent of instructor.

#### **MAE 210B. Fluid Mechanics II (4)**

Potential flows, boundary layers, low-Reynolds number flows. **Prerequisites:** MAE 210A, MAE 101A-B, and MAE 110A, or consent of instructor.

#### **MAE 210C. Fluid Mechanics III (4)**

Flow instabilities, linear stability theory; introduction to turbulent flows. **Prerequisites:** MAE 210A-B, MAE 101A-B, and MAE 110A, or consent of instructor.

#### **MAE 211. Introduction to Combustion (4)**

Fundamental aspects of flows of reactive gases, with emphasis on processes of combustion, including the relevant thermodynamics, chemical kinetics, fluid mechanics, and transport processes. Topics may include deflagrations, detonations, diffusion flames, ignition, extinction, and propellant combustion. **Prerequisites:** MAE 101A-B-C or CENG 101A-B-C, MAE 110A, or consent of instructor.

#### **MAE 212. Introductory Compressible Flow (4)**

Equations of motion for compressible fluids; one-dimensional gas dynamics and wave motion, waves in supersonic flow, including oblique shock waves; flow in ducts, nozzles, and wind tunnels; methods of characteristics. **Prerequisites:** MAE 101A-B-C or CENG 101A-B-C, MAE 110A, or consent of instructor.

#### **MAE 213. Mechanics of Propulsion (4)**

Fluid mechanics, thermodynamics and combustion processes involved in propulsion of aircraft and rockets by air breathing engines, and solid and liquid propellant rocket engines characteristics and matching of engine components; diffusers, compressors, combustors, turbines, pumps, nozzles. **Prerequisites:** MAE 101A-B-C, MAE 110A, MAE 212, or consent of instructor.

#### **MAE 214A. Introduction to Turbulence and Turbulent Mixing (4)**

Basic features of turbulent flows. Analytical description of turbulence: random variables, correlations, spectra, Reynolds-averaging, coherent structures. Length and time scales. Kolomogorov similarity theory. Turbulence transport equations. Free shear flows. Homogeneous turbulence. Wall-bounded flows. Mixing of velocity and scalar fields. **Prerequisites:** MAE 210A, MAE 101A,B or equivalent or consent of instructor.

#### **MAE 216. Ocean Turbulence and Mixing (4)**

(Cross-listed with SIO 213.) Mixing mechanisms, their identification, description and modeling. Introduction to turbulence, semi-empirical theories, importance of coherent structures, effects of stratification and rotation on turbulent structure, entrainment and mixing. S/U grades permitted.

#### **MAE 217A. Introduction to Gas Discharge Plasma Physics (4)**

Charged particle motion in electromagnetic field, atomic processes in plasmas, electric breakdown of the gases, plasma quasi-neutrality, sheath, probes. Electron kinetics in low-temperature plasma, particle and energy fluxes, DC and RF driven discharges, instabilities of gas discharge plasmas. **Prerequisites:** Physics 100A-B-C or consent of instructor.

#### **MAE 217B. Introduction to Non-Magnetized Hot Plasma Physics (4)**

Coulomb collisions, collisionless approximation for hot plasma dynamics, Vlasov equation, waves in non-magnetized plasma, dispersion equation, WKB approximation, Landau damping, plasma instabilities, quasi-linear theory. **Prerequisite:** MAE 217A or consent of instructor.

#### **MAE 217C. Introduction to Magnetized Hot Plasma Physics (4)**

Drifts of magnetized charged particles, charged particle motion in different magnetic configurations, toroidal plasma equilibrium, Grad-Shafranov equation, neoclassical plasma transport in tokamak, waves in homogeneous magnetized plasma, waves in inhomogeneous magnetized plasma, instabilities of magnetized plasma. **Prerequisites:** MAE 217A-B or consent of instructor.

**MAE 218A. Introduction to High Energy Density Physics (MHD and Pinches) (4)**

Equation of state, Saha equilibrium. Shock rarefaction, and blast waves, self-equilibrating motion. Rayleigh-Taylor, Kelvin-Helmholtz, and Richtmyer-Meshkov instabilities. Z-pinch, Bennett equilibrium, radiation collapse, and radiation sources. **Prerequisites:** MAE 217A-B-C or consent of instructor.

**MAE 218B. Introduction to High Energy Density Physics (Laser-Plasma Interactions) (4)**

Propagation and absorption of laser beam in plasma, ablation pressure. Laser scattering and laser-plasma instabilities (stimulated Raman and Brillouin scattering, filamentation and decay instabilities). Electron heat transport, mechanisms of magnetic field generation. **Prerequisites:** MAE 217A-B-C or consent of instructor.

**MAE 220A. Physics of Gases (4)**

Thermodynamics of gases for use in gas dynamics. Derivation of thermodynamic functions from statistical mechanics. Applications of classical and quantum statistical mechanics to chemical, thermal, and radiative properties of gases. Equilibrium and nonequilibrium radiation, chemical equilibrium, and elements of chemical kinetics. Laser and reacting-flow applications. **Prerequisite:** MAE 110A or consent of instructor.

**MAE 220B. Physical Gas Dynamics (4)**

Velocity distribution functions, the Boltzmann equation, moment equations and the Navier-Stokes equations. The dynamics of molecular collisions. The Chapman-Enskog expansion and transport coefficients: shear and bulk viscosity, heat conduction, molecular and thermal diffusion. Linearizations about equilibrium: applications to acoustics and supersonic flows with relaxation. **Prerequisite:** MAE 101A-B-C or CENG 101A-B-C, MAE 220A, or consent of instructor.

**MAE 220C. Nonequilibrium Gas Dynamics (4)**

Applications of thermodynamics, statistical mechanics, kinetic theory of gases and fluid mechanics to nonequilibrium flow problems. Shock structure. Chemical relaxation. Chemically reacting boundary layers. Ionized gases. Radiative heat transfer. **Prerequisite:** MAE 220B or consent of instructor.

**MAE 221A. Heat Transfer (4)**

(Cross-listed with CENG 221A.) Conduction, convection, and radiation heat transfer. Development of energy conservation equations. Analytical and numerical solutions to transport problems. Specific topics and applications vary. **Prerequisite:** MAE 101A-B-C or CENG 101A-B-C, or consent of instructor.

**MAE 221B. Mass Transfer (4)**

(Cross-listed with CENG 221B.) Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transport problems. Specific topics and applications will vary. **Prerequisite:** MAE 101A-B-C or CENG 101A-B-C, or consent of instructor.

**MAE 223. Computational Fluid Dynamics (4)**

Numerical methods in fluid dynamics and convective transport processes. Numerical solution of the Euler and Navier-Stokes equation. Additional topics will vary according to instructor. Examples include eigenvalue problems in hydrodynamic stability, vortex methods, spectral and panel methods. **Prerequisite:** MAE 210A, 210B, 290A-B or equivalent.

**MAE 224A. Environmental Fluid Dynamics I (4)**

Basics of stratified flows. Linear waves: surface waves, internal gravity waves, dispersion, reflection, mountain waves. Ray tracing. Gravity currents and intrusions. Hydraulic control. Stability of and mixing in stratified shear flows. Recommended preparation: MAE 210A.

**MAE 224B. Environmental Fluid Dynamics II (4)**

Plumes and thermals. Application to building ventilation. Basics of rotating flows. Geostrophic flow. Thermal wind balance. Ekman boundary layer. Shallow water equations. Normal modes of a stratified fluid. Potential vorticity. Waves in a rotating fluid. Recommended preparation: MAE 210A. **Prerequisite:** MAE 224A.

**MAE 225A. Nanoscale and Microscale Heat Transfer for Energy Conversion Applications I (4)**

An advanced introduction to the principles underlying conduction, convection, and radiation phenomena at the atomic/molecular scale; overview of macroscopic thermal sciences, kinetic theory and fluidics, statistical thermodynamics and quantum theory, thermal properties as a function of dimensionality; experimental methods. **Prerequisites:** MAE 221A, MAE 101A-B-C, or consent of instructor.

**MAE 225B. Nanoscale and Microscale Heat Transfer for Energy Conversion Applications II (4)**

Energy conversion and coupled transport processes; electron and phonons, equilibrium and non-equilibrium energy transfer in nanostructures. Ballistic-diffusive treatment, thermal radiation issues in nanomaterials, near-field energy transfer, molecular dynamics, and experimental methods. **Prerequisites:** MAE 225A, MAE 221A, MAE 101A-B-C, or consent of instructor.

**MAE 227A. Fundamentals of Modern Plasma Physics (Magnetized Plasma) (4)**

Turbulence in magnetized plasma, statistical analysis of turbulent processes, magnetic reconnection, issues of plasma astrophysics and space plasmas, plasma based propulsion, edge plasma in fusion devices. **Prerequisites:** MAE 217A-B-C or consent of instructor.

**MAE 227B. Fundamentals of Modern Plasma Physics (Laser-Plasma Interactions) (4)**

Motion of charged particle in relativistic electromagnetic fields. Nonlinear laser absorption mechanisms, harmonic generation, Coulomb explosion. Relativistic self-focusing of laser beam. Generation of intense electron and ion beams, beam instabilities (Wiebel and thermal instabilities). Fast ignition concept. **Prerequisites:** MAE 217A-B-C or consent of instructor.

**MAE 228. Selected Topics in Plasma Physics (4)**

Collisionless magnetic reconnection, interactions of relativistic laser field with plasma, plasma in astrophysics, computational plasma physics. **Prerequisites:** MAE 217A-B-C or consent of instructor.

**MAE 229A. Mechanical Properties (4)**

(Cross-listed with MATS 211A.) Review of basic concepts in mechanics of deformation: elasticity, plasticity, viscoelasticity and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. **Prerequisite:** consent of instructor.

**MAE 231A. Foundations of Solid Mechanics (4)**

Specification of stress and strain; infinitesimal and finite deformation; conservation equations; typical constitutive equations; minimum potential energy principle. **Prerequisite:** MAE 131B or consent of instructor.

**MAE 231B. Elasticity (4)**

Basic field equations. Typical boundary value problems of classical linear elasticity. Problems of plane stress and plane strain. Variational principles. **Prerequisite:** MAE 209/BENG 209 or MAE 231A or consent of instructor.

**MAE 231C. Anelasticity (4)**

Mechanical models of viscoelastic, plastic, and viscoplastic behavior in simple shear or uniaxial stress. Constitutive relations for three-dimensional states of stress and strain. Application to selected technological problems. **Prerequisites:** graduate standing and MAE 231A and 231B, or SE 271 and 272, or consent of instructor.

**MAE 232A. Finite Element Methods in Solid Mechanics I (4)**

(Cross-listed with SE 276A.) Finite element methods for linear problems in solid mechanics. Emphasis on the principle of virtual work, finite element stiffness matrices, various finite element formulations and their accuracy, and the numerical implementation required to solve problems in small strain, isotropic elasticity in solid mechanics. **Prerequisite:** graduate standing.

**MAE 232B. Finite Element Methods in Solid Mechanics II (4)**

(Cross-listed with SE 276B.) Finite element methods for linear problems in structural dynamics. Beam, plate, and

doubly curved shell elements are derived. Strategies for eliminating shear locking problems are introduced. Formulation and numerical solution of the equations of motion for structural dynamics are introduced and the effect of different mass matrix formulations on the solution accuracy is explored. **Prerequisites:** graduate standing and MAE 230 or MAE 232A.

**MAE 232C. Finite Element Methods in Solid Mechanics III (4)**

(Cross-listed with SE 276C.) Finite element methods for problems with both material and geometrical (large deformations) nonlinearities. The total LaGrangian and the updated LaGrangian formulations are introduced. Basic solution methods for the nonlinear equations are developed and applied to problems in plasticity and hyperelasticity. **Prerequisites:** graduate standing and MAE 232B or SE 276B.

**MAE 233A. Fracture Mechanics (4)**

Theoretical strength; stress concentration. Linear and nonlinear fracture mechanics: stress singularity, fracture modes, crack tip plastic zone, dugdale model, the R-curve; power-law materials, the J-integral; fatigue; special topics. **Prerequisite:** MAE 231A, MAE 231B, or consent of instructor.

**MAE 233B. Micromechanics (4)**

General theory of transformation strains and corresponding elastic fields; Green's functions and other solution methods; dislocations; inclusions and inhomogeneities; micromechanics of plastic flow, microcracking, cavitation, and damage in crystalline and other solids. **Prerequisite:** MAE 231A-B-C or consent of instructor.

**MAE 238. Stress Waves in Solids (4)**

Linear wave propagation; plane waves; reflection and refraction; dispersion induced by geometry and by material properties. Application of integral transform methods. Selected topics in nonlinear elastic, anelastic, and anisotropic wave propagation. **Prerequisite:** MAE 231A-B-C or consent of instructor.

**MAE 241. Advances in Control Applications (4)**

Study of problems of control design, identification, and optimization for flexible and smart structures, fluid flows, propulsion, power generation, vehicle dynamics (aerospace, ocean, and automotive), magnetic recording, semiconductor manufacturing, biological systems, robot manipulators, and other applications. **Prerequisite:** MAE 143B or equivalent.

**MAE 242. Robot Motion Planning (4)**

Modeling, solving, and analyzing planning problems for single robots or agents. Configuration space for motion planning, sampling-based motion planning, combinatorial motion planning, feedback motion planning, differential models, and non-holonomic constraints. Basic decision-theory and dynamic programming, sensor and information spaces.

**MAE 247. Cooperative Control of Multi-agent Systems (4)**

Tools for the design of cooperative control strategies for multi-agent systems are presented. Topics include continuous and discrete-time evolution models, proximity graphs, performance measures, invariance principles, and coordination algorithms for rendezvous, deployment, flocking, formation of autonomous vehicles and consensus. **Prerequisites:** none.

**MAE 251. Structure and Analysis of Solids (4)**

(Cross-listed with MATS 227 and Chem. 222.) Key concepts in the atomic structure and bonding of solids. Symmetry operations, point groups, lattice types, space groups, inorganic compounds, structure/property comparisons, X-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orbitals, bands vs. bonds, free electron theory. **Prerequisite:** consent of instructor.

**MAE 252AB. Processing and Synthesis of Advanced Materials (4)**

(Cross-listed with MATS 233A-B.) Introduction to various materials processing techniques used in fabricating dense bodies with optimal structure and properties. Solidification processing, chemical synthesis of ceramics, theory of

densification, composite fabrication, superconductor synthesis, electronic and optical materials processing, and techniques to generate amorphous solids. **Prerequisite:** consent of instructor.

#### **MAE 253. Advanced Ceramics (4)**

(Cross-listed with MATS 236.) Topics include phase equilibria and crystallography, defects and thermodynamics (Kröger-Vink notation), glass scone, electrical and ionic transport behavior, Bronner diagrams, powder synthesis and compaction, sintering theory and grain growth, mechanical optical, magnetic, electrical properties, fuel cells. **Prerequisite:** consent of instructor.

#### **MAE 254. Energy Materials and Applications (4)**

(Cross-listed with MATS 256.) This class will cover the fundamentals/engineering aspects of various energy materials based on metallic, ceramic, semiconductor, and chemical structures, and their applications related to solar cells, fuel cells, batteries, fusion energy, and hydrogen storage will be discussed. **Prerequisite:** consent of instructor or department stamp.

#### **MAE 255. Boundary Layer and Renewable Energy Meteorology (4)**

Radiative and convective heat transfer in the atmosphere. Surface energy balance and the urban heat island. Turbulence and dispersion in the atmospheric boundary layer. Solar and wind energy systems, resource assessment, and intermittency. **Prerequisite:** MAE 210A or consent of instructor.

#### **MAE 261. Cardiovascular Fluid Mechanics (4)**

Topics in the mechanics of blood flow including analytical solutions for flow in deformable vessels, one-dimensional equations, cardiovascular anatomy, lumped parameter models, vascular trees, scaling laws, and an introduction to the biomechanics and treatment of adult and congenital cardiovascular diseases. **Prerequisite:** MAE 210A, 290A, or consent of instructor.

#### **MAE 262. Fluid Mechanics of the Cell (4)**

Fluids phenomena relevant to the function, environment, and dynamics of biological cells. Topics include: low-Reynolds number flows, cell motility, internal cellular flows, development and morphogenesis, hydrodynamics of suspensions and polymers, rheology, diffusion, hydrodynamics of deformable bodies (vesicles, membranes, filaments), cells under shear flow. **Prerequisite:** MAE 209, MAE 210A, or consent of instructor.

#### **MAE 263. Experimental Methods in Cell Mechanics (4)**

Methods to measure mechanical aspects of cellular nature and behavior such as intracellular rheology, intracellular force distribution and propagation, cell adhesion strength, generation of propulsive forces during locomotion, interaction with the extracellular matrix, and response to external mechanical stimuli. **Prerequisites:** MAE 209 or MAE 210A, MAE 131A or equivalent, or consent of instructor.

#### **MAE 265A. Electronic and Photonic Properties of Materials (4)**

(Cross-listed with MATS 251A.) The electronic and optical properties of metals, semiconductors, and insulators. The concept of the band structure. Electronic and lattice conductivity. Type I and Type II superconductivity. Optical engineering using photonic band gap crystals in one-, two-, and three-dimensions. Current research frontiers. **Prerequisite:** consent of instructor.

#### **MAE 265B. Magnetic Materials: Principles and Applications (4)**

(Cross-listed with MATS 251B.) The basis of magnetism: Classical and quantum mechanical points of view. Different kinds of magnetic materials. Magnetic phenomena including anisotropy, magnetostriction, domains, and magnetization dynamics. Current frontiers of nano-magnetics research including thin films and particles. Optical, data storage, and biomedical engineering applications of soft and hard magnetic materials. **Prerequisite:** consent of instructor.

#### **MAE 266. Biomaterials (4)**

(Cross-listed with MATS 252.) This class will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the

structure-property relationships, biocompatibility/degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic materials will also be discussed. **Prerequisite:** consent of instructor.

#### **MAE 267. Nanomaterials and Properties (4)**

(Cross-listed with MATS 253.) This course discusses synthesis techniques, processing, microstructural control and unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. **Prerequisite:** consent of instructor.

#### **MAE 268. Frontier Micro-Electro-Mechanical Systems (MEMS) Materials and Devices (4)**

(Cross-listed with MATS 254.) Fabrication of Micro-Electro Mechanical Systems (MEMS) by bulk and surface micro-machining of single crystal, polycrystal and amorphous silicon and other materials. Performance issues including electrostatic, magnetic, piezoelectric actuators, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. **Prerequisite:** consent of instructor.

#### **MAE 269. Presentations, Inventions and Patents (4)**

(Cross-listed with MATS 255.) This course covers methodology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. **Prerequisite:** consent of instructor. Not offered in 2008–09.

#### **MAE 271A. Thermodynamics of Solids (4)**

(Cross-listed with MATS 201A and ECE 238A.) The thermodynamics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. **Prerequisite:** consent of instructor.

#### **MAE 271B. Solid State Diffusion and Reaction Kinetics (4)**

(Cross-listed with MATS 201B and ECE 238B.) Thermally activated processes, Boltzmann factor, homogenous and heterogeneous reactions, solid state diffusion, Fick's laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. **Prerequisite:** consent of instructor.

#### **MAE 271C. Phase Transformations (4)**

(Cross-listed with MATS 201C and ECE 238C.) Classification of phase transformations; displacive and reconstructive transformations; classical and non-classical theories of nucleation; Becker-Doering, Volmer-Weber, lattice instabilities, spinodal decomposition. Growth theories; interface migration, stress effects, terrace-ledge mechanisms, epitaxial growth, kinetics and mechanics. Precipitation. Order-disorder transformations. Solidification. Amorphization. **Prerequisites:** consent of instructor.

#### **MAE 272. Imperfections in Solids (4)**

(Cross-listed with MATS 205A.) Point, line, and planar defects in crystalline solids, including vacancies, self interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements.

#### **MAE 273A. Dynamic Behavior of Materials (4)**

(Cross-listed with MATS 213A.) Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves, Rankine-Hugoniot relations. Method of characteristics, differential and difference form of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. **Prerequisite:** consent of instructor.

#### **MAE 280A. Linear Systems Theory (4)**

Linear algebra: inner products, outer products, vector norms, matrix norms, least squares problems, Jordan forms, coordinate transformations, positive definite matrices, etc. Properties of linear dynamic systems described by ODEs: observability, controllability, detectability, stabilizability, trackability, optimality. Control systems design: state

estimation, pole assignment, linear quadratic control. **Prerequisite:** MAE 143B or consent of instructor.

#### **MAE 280B. Linear Control Design (4)**

Parameterization of all stabilizing output feedback controllers, covariance controllers, H-infinity controllers, and L-2 to L-infinity controllers. Continuous and discrete-time treatment. Alternating projection algorithms for solving output feedback problems. Model reduction. All control design problems reduced to one critical theorem in linear algebra. **Prerequisite:** MAE 280A.

#### **MAE 281A. Nonlinear Systems (4)**

Existence and uniqueness of solutions of EDE's, sensitivity equations. Stability, direct and converse Lyapunov theorems, LaSalle's theorem, linearization, invariance theorems. Center manifold theorem. Stability of perturbed systems with vanishing and non-vanishing perturbations, input-to-state ability, comparison method. Input-output stability. Perturbation theory and averaging. Singular perturbations. Circle and Popov criteria. **Prerequisite:** MAE 280A.

#### **MAE 281B. Nonlinear Control (4)**

Small gain theorem, passivity. Describing functions. Nonlinear controllability, feedback linearization, input-state and input-output linearization, zero dynamics. Stabilization, Brockett's necessary conditions (local), control Lyapunov functions, Sontag's formula (global). Integrator back stepping, forwarding. Inverse optimality, stability margins. Disturbance attenuation, deterministic and stochastic, nonlinear H-infinity. Nonlinear observers. **Prerequisite:** MAE 281A.

#### **MAE 282. Adaptive Control (4)**

Parametric models. Parameter identifiers and algorithms, Spr-Lyapunov, gradient, least-squares, persistence of excitation, adaptive observers. Model reference adaptive control, certainty equivalence. Pole placement, polynomial, LQR, indirect. Robustification, parameter drift, leakage, projection, dead zone, dynamic normalization. Adaptive nonlinear control, tuning functions, modular design. Extremum seeking. **Prerequisites:** MAE 281A or consent of instructor.

#### **MAE 283A. Parametric Identification: Theory and Methods (4)**

Constructing dynamical models from experimental data. Deterministic and stochastic discrete time signals. Discrete time systems. Non-parametric identification: correlation and spectral analysis. Parametric identification: realization and prediction error methods, least squares estimation, approximate modeling. Experiment design. Frequency domain identification. **Prerequisite:** MAE 143C recommended.

#### **MAE 283B. Approximate Identification and Control (4)**

Identification for control: approximate identification, estimation of models via closed-loop experiments. Closed-loop identification techniques. Estimation of model uncertainty. Model invalidation techniques. Iterative techniques for model estimation and control design. **Prerequisite:** MAE 283A.

#### **MAE 284. Robust and Multi-Variable Control (4)**

Multivariable feedback systems: transfer function matrices, Smith-McMillan form, poles, zeros, principal gains, operator norms, limits on performance. Model uncertainties, stability and performance robustness. Design of robust controllers, H<sub>inf</sub> and mu synthesis. Controller reduction. **Prerequisite:** MAE 143C or MAE 280A.

#### **MAE 286. Hybrid Systems (4)**

Definition of hybrid system. Examples in mechanics, vision, and multi-agent systems. Trajectories of hybrid systems. Chattering, Zeno phenomena. Stability analysis. Arbitrary switching: common Lyapunov functions. Slow switching: dwell time. State-dependent switching: multiple Lyapunov functions, Invariance Principle. Hybrid control design. Applications. **Prerequisite:** MAE 281A or consent of instructor.

#### **MAE 287. Control of Distributed Parameter Systems (4)**

Strongly continuous semigroups, infinitesimal generators, unbounded closed linear operators, Hille-Yosida theorem, Riesz-spectral operators. Existence and uniqueness of

solutions of abstract evolution equations, perturbation and composite systems. Boundary control systems. Controllability, exact and approximate, Hilbert uniqueness method, fixed point method. Input-output maps, transfer functions. Exponential stability, stabilizability, Lyapunov equation. Controllability via stabilizability. Compensator design. **Prerequisite:** MAE 280A or consent of instructor.

#### **MAE 288A. Optimal Control (4)**

Deterministic methods: Pontryagin's Maximum Principle, dynamic programming, calculus of variations. Stochastic methods: Gauss-Markov processes, Linear Quadratic control, Markov chains. Linear Quadratic Gaussian Control and the Separation Principle. **Prerequisite:** graduate standing or consent of instructor.

#### **MAE 288B. Optimal Estimation (4)**

Least Squares and Maximum Likelihood Estimation methods, Gauss-Markov models, State Estimation and Kalman Filtering, prediction and smoothing. The extended Kalman filter. **Prerequisite:** MAE 280A completed or concurrent.

#### **MAE 289. Functional Analysis and Applications (4)**

Functional analysis without measure theory. Banach spaces and Hilbert spaces. Spaces of continuous functions,  $L_p$  spaces and  $L_\infty$  spaces. Bounded linear functionals, dual spaces, reflexivity and linear operators. Strong and weak convergence. Hahn-Banach Theorem. Nonlinear functionals and differentials. Applications. **Prerequisites:** Math. 20A-B-C-D-E-F or consent of instructor.

#### **MAE 290A. Efficient Numerical Methods for Simulation, Optimization, and Control (4)**

Linear algebra, numerical methods, and numerical analysis. Direct and iterative methods for systems of linear and nonlinear equations, the fundamental matrix decompositions (eigenvector/SVD/Jordan), transform methods (Fourier/Laplace/Z), function approximation, differentiation, integration (quadrature/ODEs), and minimization. **Prerequisite:** MAE 107 or consent of instructor.

#### **MAE 290B. Numerical Methods for Differential Equations (4)**

Numerical solution of differential equations in mathematical physics and engineering, ordinary and partial differential equations. Linear and nonlinear hyperbolic parabolic, and elliptic equations, with emphasis on prototypical cases, the convection-diffusion equation, Laplace's and Poisson equation. Finite difference methods will be considered in depth, and additional topics. **Prerequisite:** MAE 290A or consent of instructor.

#### **MAE 291. Design and Mechanics in Computer Technology (4)**

Design and mechanics problems inherent in computer peripherals such as disk files, tape drives, and printers. Formulation and solution of problems involving mechanics, fluid mechanics, and materials; Reynolds equation, slider bearings; friction and wear; actuator design, impact printing; silicon fluid jets. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 292. Computer-Aided Design and Analysis (4)**

Introduction to 2-D and 3-D computer-aided design. Design problems may include: ball bearing kinematics, Weibull statistics, non-repeatable spindle run-out, four bar linkages, beam deflection and vibration, design of magnetic head suspension, hydrodynamic theory of lubrication, air bearings, heat transfer, optical servo, design of ink jet print head. **Prerequisite:** consent of instructor. Not offered every year.

#### **MAE 293. Advanced Computer Graphics for Engineers and Scientists (4)**

Advanced topics used to enhance scientific and engineering visualization. C programming assignments and the use of advanced graphics software. Continuation of topics from MAE 152, including color, computational geometry, 3-D contouring, volume visualization, and hardware architectures. **Prerequisite:** MAE 152 or consent of instructor.

#### **MAE 294A. Introduction to Applied Mathematics (4)**

(Cross-listed with SIO 203A.) Review of exact methods for ordinary differential equations. Expansions about regular and irregular singular points. Introduction to asymptotic expansions. Approximate methods for nonlinear differential equations. Regular and singular perturbation theory.

Additional topics depending upon the interests of the instructor. **Prerequisites:** Math. 110, Math. 120A or consent of instructor.

#### **MAE 294B. Introduction to Applied Mathematics II (4)**

(Cross-listed with SIO 203B.) Asymptotic methods: method of steepest descent (if not covered in I) WKB, method of multiple scales, boundary layer theory. Elements of complex analysis. **Prerequisite:** MAE 294A or SIO 203A or consent of instructor.

#### **MAE 294C. Introduction to Applied Mathematics III (4)**

(Cross-listed with SIO 203C.) Partial differential equations: characteristics, similarity solutions, Green's functions, images, wave equation, diffusion equation, Laplace's equation. Applications to continuum mechanics, potential fields, and transport phenomena such as diffusion, linear and nonlinear waves, Burger's equation and shocks. Other topics according to the interests of the instructor. **Prerequisites:** MAE 294B or SIO 203B or consent of instructor.

#### **MAE 295. Field Study (1-12)**

Provides field study in industry with faculty supervision. Analysis and problem solving using real world applications. **Prerequisite:** consent of advisor and department; 3.0 GPA.

#### **MAE 296. Independent Study (1-4)**

Independent reading or research on a problem as arranged by a designated faculty member. Must be taken for a letter grade only. **Prerequisite:** consent of instructor.

#### **MAE 298. Directed Group Study (1-4)**

Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. **Prerequisite:** consent of instructor. (S/U grades permitted.)

#### **MAE 299. Graduate Research (1-12)**

Independent work by graduate students engaged in research and writing theses. MAE graduate students only. (S/U grades only.)

#### **MAE 501. Teaching Experience (2)**

Teaching experience in an appropriate MAE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. (S/U grade only.) **Prerequisites:** consent of instructor and the MAE department.

## DEPARTMENTAL FOCUS

The Department of NanoEngineering focuses on nanoscale science, engineering, and technology that have the potential to make valuable advances in different areas that include, to name a few, new materials, biology and medicine, energy conversion, sensors, and environmental remediation. Nanoengineering is a highly diversified and multi-disciplinary field. The graduate research programs cover a broad range of topics, but focus particularly on biomedical nanotechnology, nanotechnologies for energy conversion and storage, computational

nanotechnology, and molecular and nanomaterials. Undergraduate degree programs focus on integrating the various science and engineering disciplines necessary for successful careers in the evolving nanotechnology industry.

## DEGREE AND PROGRAM OPTIONS

The Department of NanoEngineering offers undergraduate programs leading to the **B.S. degrees in NanoEngineering and Chemical Engineering**. The Chemical Engineering Program is accredited by the Engineering Accreditation Commission of the Accreditation Board of Engineering and Technology (ABET/EAC). The Nanoengineering Program is newly introduced, but the program is designed using ABET accreditation criteria; the department will apply for accreditation once there are graduates to measure the program outcomes. These two degree programs have very different requirements and are described in separate sections.

## NANOENGINEERING PROGRAM (NANO)

### PROGRAM MISSION AND OBJECTIVES

The mission of the Nanoengineering Program is to provide a multidisciplinary education in nanoscale science and technology. The primary goals are

- Prepare students for a career in nanotechnology by providing them with a sound grounding in multidisciplinary areas of nanoscale science and engineering.
- Increase students' understanding of materials and their properties at the atomic and nanometer scales, including an understanding of the intimate relationship between the scale and the properties of materials. This is referred to as the third dimension in the periodic table, where elements, and combinations thereof, have properties and functions that depend on the material dimension, spanning from the nanoscale to macroscale.
- Prepare graduates who, while skilled in nanoscale science and engineering, will be qualified for jobs in traditional science-based industries and government laboratories and, as nanotechnologies mature, well positioned for jobs in this applied area. This program will be anticipating trends and providing students with integrated, cross-disciplinary scientific knowledge and professional skills.
- Educate a new generation of engineers who can participate in, and indeed seed, new high-technology companies that will be the key to maintaining jobs, wealth, and educational infrastructures as nanotechnology results in a new industrial revolution.
- Enable students to develop a range of professional, scientific, and computational skills that will enhance employment opportunities in a wide range of industrial and governmental institutions.
- Prepare students for the workplace through developing their ability to have effective communication skills, modern science and engineering skills, and contribute constructively

to multidisciplinary teams.

- Form strong multidisciplinary educational links through joint team projects that cross the traditional areas of science and engineering.

## THE UNDERGRADUATE PROGRAM

The B.S. program in NanoEngineering is tailored to provide breadth and flexibility by taking advantage of the strength of basic sciences and other engineering disciplines at UC San Diego. The intention is to graduate nanoengineers who are multidisciplinary and can work in a broad spectrum of industries.

All NANO courses are taught only once per year, and courses are scheduled to be consistent with the curriculum as shown in the tables below. Under normal circumstance, students must follow the prescribed curriculum. Unavoidable deviation from the curriculum, for example, to participate in the Education Abroad Program, must be approved by the Undergraduate Affairs Committee prior to taking alternative courses elsewhere. Approvals are also needed for engineering courses not listed under the current selections for different engineering focus areas. Courses such as NANO 195, 197, and 198 are not allowed as a NanoEngineering elective in meeting the upper-division major requirements. NANO 199 can be used as a technical elective only under restrictive conditions. Policy regarding these conditions may be obtained from the department's Student Affairs Office. All students are encouraged to visit the Student Affairs Office or visit the Department of NanoEngineering Web site for any clarification and updated information. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C- grade in each course required for the major.

## GENERAL-EDUCATION/COLLEGE REQUIREMENTS

For graduation each student must satisfy general-education course requirements determined by the student's college as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

The NANO curriculum allows for forty-eight units of humanities and social science (HSS) courses, which are sufficient to fulfill most but not all college requirements. Regardless the specific college, students must develop a program that includes a total of at least forty-eight units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Students must consult with their college to determine which HSS courses to take.

## MAJOR REQUIREMENTS

To receive a B.S. in NanoEngineering, students must complete 192 units. The specific breakdown is as follows:

**Humanities and social sciences (forty-eight units):** This requirement is intended to fulfill the general-education requirements (GER) from respective colleges.

**Basic sciences and mathematics (fifty-nine units):** This lower-division requirement includes twenty-four units of mathematics (Math. 20A–F), sixteen units of physics (Phys. 2A–D), fifteen units of chemistry (Chem. 6A–C, 6BL), and four units of biology (BILD 1).

**Engineering preparation (sixteen units):** This requirement covers basics in computer programming, circuit analysis and circuits lab (ECE 15, 35, 45, 65).

**Nanoengineering core (thirty-seven units):** This requirement is constituted of a one-unit seminar (NANO 1) and nine core courses (NANO 101 to 104, 110 to 112, and 120A–B).

**Nanoengineering electives (eight units):** This requirement must be chosen from among the upper-division NANO courses offered by the department.

**Engineering focus (twenty-four units):** Students are recommended to select all six engineering electives from within one single major to constitute an engineering focus. However, to allow for unforeseen class scheduling conflicts and to comply with the prerequisites of some Bioengineering courses, students are required to take only four of the six courses in one major, with the other two outside their chosen engineering focus. Preapproved accepted courses of each of the four focuses are listed below.

- Bioengineering:**  
BENG 100, 101, 103B\*, 109, 110, 112A, 112B, 122A\*, 130, 186A  
\*BENG 103B requires CENG 101A and 122A requires MAE 140. Both prerequisites are accepted as part of the twenty-four-unit bioengineering focus.
- Chemical engineering:**  
CENG 100, 101A, 101B, 101C, 102, 113, 120.
- Electrical engineering:**  
ECE 103, 107, 109, 134, 135A, 135B, 136, 136L, 138L, 139, 183, 187.
- Mechanical engineering:**  
MAE 20, 101A, 101B, 101C, 105, 113, 110A, 130A, 130B, 131A, 143A, 143B, 160, 161, 166, 168.
- Materials science:**  
NANO 108, 140, 148, 150, 156, 158, 161, 164, 168.

All students follow the same basic science preparation and core set of classes in NanoEngineering during the first two years.

Fall	Winter	Spring
<b>Freshman Year</b>		
Math. 20A	Math. 20B	Math. 20C
Chem. 6A	Chem. 6B	Chem 6C
ECE 15	BILD 1	Phys. 2A
HSS	HSS	HSS
	NANO 1	
<b>Sophomore Year</b>		
Math. 20D	Math. 20F	Math. 20E
Phys. 2B	Phys. 2C	Phys. 2D
Chem. 6BL	NANO 101	ECE 25
HSS	HSS	HSS

After the sophomore year, students must choose an engineering focus. Sample programs of the five choices are shown below. Students must keep in mind that the NANO courses are only offered once a year.

## Recommended Course Sequence—Bioengineering Focus

Fall	Winter	Spring
<b>Junior Year</b>		
NANO 102	NANO 103	NANO 104

NANO 161	NE Elective	NANO 168
HSS	HSS	HSS

## POLICIES AND PROCEDURES FOR UNDERGRADUATE STUDENTS

[In this policy section, much is in common with the Chemical Engineering major. Duplicate sections will be consolidated in the final catalog edition.]

### Application for Admission to the Major

Admission to the department as a NANO major or minor, or to fulfill a major in another department that requires NANO courses, is in accordance with the general requirements established by the Jacobs School of Engineering. The admission requirements and procedures are described in detail in the section on "[Acceptance to Departmental Majors in the Jacobs School of Engineering](#)" in this catalog. Applicants who have demonstrated excellent academic performance prior to being admitted to UC San Diego will be admitted directly to the engineering major of their choice. These directly admitted students and all students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

### Academic Advising

Upon admission to the major, students should consult the catalog or NanoEngineering Web site (<http://nanoengineering.ucsd.edu>) for their program of study or their undergraduate advisor if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department's undergraduate advisor on an annual basis.

As aforementioned, NANO and CENG courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete the major within the nominal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical advice may be obtained from faculty members. A specific faculty mentor is assigned to each student. All students are required to meet with their faculty mentor at least once a quarter.

### Program Alterations/Exceptions to Requirements

Variations from or exceptions to any program or course requirements are possible only if the Undergraduate Affairs Committee approves a

petition before the courses in question are taken. Petition forms may be obtained from the Student Affairs Office and must be processed through this office.

### Independent Study

Students may take NANO 199, Independent Study for Undergraduates, under the guidance of a NANO faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify a faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member's concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and NANO 199 as Technical Elective Contract form to the Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the add/drop deadline. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

### Transfer Students

The undergraduate engineering curriculum is designed to integrate four years of college educational experience. It is not easy for transfer students to complete the major requirements in only two additional years beyond their junior college work. Students should consult their advisor for a transition program compatible with their junior college preparation.

Requirements for admission as a NANO major or into NANO courses are the same for transfer students as they are for continuing students (see section on "[Acceptance to Departmental Majors in the Jacobs School of Engineering](#)" in this catalog). Accordingly, when planning their program, transfer students should be mindful of lower-division prerequisite course requirements, as well as for meeting collegiate requirements.

Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department's major requirements. To receive transfer credit, complete a Student Petition form and submit it to Student Affairs. For mathematics, chemistry, and physics, the respective department determines transfer equivalencies. An Undergraduate Student Petition must be submitted to each department from which you are requesting transfer credit.

The following courses are strongly recommended for all engineering transfer students for success in their major.

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab

experience (Physics 2A-B-C)

- Chemistry 6A (except computer science and computer engineering majors)
- Highest level of introductory computer programming language course offerings at the community college\*
- Community college equivalent courses can be found at: <http://www.assist.org>

\*Refer to the *UC San Diego General Catalog* to select major prerequisite recommendations for computer language courses.

## GRADUATE PROGRAM

### DEGREE AND PROGRAM OPTIONS

Plans are currently underway to develop graduate curricula leading to the **M.S. and Ph.D. degrees in nanoengineering by 2011**. Until NanoEngineering graduate programs are in place, students wishing to pursue nanoengineering as a graduate focus are encouraged to apply to related graduate programs in bioengineering, chemical engineering, and mechanical and aerospace engineering. Transfer to NanoEngineering will be considered upon approval of its degree programs.

The Chemical Engineering Program offers graduate instruction leading to the **M.S. and Ph.D. degrees in chemical engineering**. Effective fall 2009, Chemical Engineering will offer a concentration in nanotechnology within the graduate program, which also will bridge with the future graduate degree program in nanoengineering.

### CHEMICAL ENGINEERING PROGRAM (CENG)

Student Affairs: 2802 Atkinson Hall, Warren College

### PROGRAM OBJECTIVES

The Chemical Engineering Program has affiliated faculty from the Department of NanoEngineering, Department of Mechanical and Aerospace Engineering, Department of Chemistry and Biochemistry, and the Department of Bioengineering. The curricula at both the undergraduate and graduate levels are designed to support and foster chemical engineering as a profession that interfaces engineering and all aspects of basic sciences (physics, chemistry, and biology).

The primary educational objectives of the Chemical Engineering Program are

- To provide chemical engineering students with a strong technical education and communication skills that will enable them to have successful careers in a wide range of industrial and professional environments.
- To prepare chemical engineering students for rapidly changing technological environments with the core knowledge central to multidisciplinary development and personal improvement throughout their professional careers.
- To instill in chemical engineering students a strong sense of humanistic values and professionalism such that they can conduct ethically and knowledgeably regarding technological

impact in societal issues.

The curriculum is designed to prepare chemical engineering graduates for further education and personal development through their entire professional career. We strive to accomplish these goals by providing a rigorous and demanding curriculum that incorporates lectures, discussions, laboratory and project development experiences in basic sciences, mathematics, engineering sciences, and design as well as the humanities and social sciences.

### **B.S./M.S. Contiguous Program**

A contiguous program leading to a bachelor of science and a master of science degree in chemical engineering is offered to a student with junior standing who has an upper-division GPA of 3.5 or better and a 3.0 overall UCSD GPA. During the last quarter of their junior year (more specifically, the fourth quarter prior to the receipt of the B.S. degree), students interested in obtaining the M.S. degree within one year following receipt of the B.S. degree may apply to the department for admission to the program.

The M.S. program is intended to extend and broaden an undergraduate background and/or equip practicing engineers with fundamental knowledge in their particular fields. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

### **Integrated B.S./M.S. Requirements**

An integrated co-terminal program leading to a bachelor of science and a master of science degree in chemical engineering is offered to a student with junior standing who has an upper-division GPA of 3.5 or better and a 3.0 overall UCSD GPA. Details of the program are available from the Student Affairs Office.

### **Program Accreditation**

The B.S. Program in chemical engineering is accredited by the Accreditation Board of Engineering and Technology (ABET/EAC).

## **GRADUATE PROGRAM**

The Chemical Engineering Program offers graduate instruction leading to the M.S. and Ph.D. degrees in chemical engineering. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

Admission is in accordance with the general requirements of the graduate division, which requires at least a B.S. in some branch of engineering, sciences, or mathematics; an overall GPA of 3.0, and three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study.

In addition, all applicants are required to submit GRE General Test Scores. A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English. Students who score below 600 on the TOEFL are strongly encouraged to enroll in an English as a second language program before beginning graduate work. UC San Diego Extension

offers an excellent English language program during the summers as well as the academic year.

Applicants are judged competitively. Based on the candidate's background, qualifications, and goals, admission to the program is in one of three categories: M.S. only, MS, or Ph.D. Admission to the M.S. only category is reserved for students for whom the M.S. degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. Program is reserved for qualified students whose final aim is a doctoral degree.

Non-matriculated students are welcome to seek enrollment in graduate-level courses via UC Extension's concurrent registration program, but an extension student's enrollment in a graduate course must be approved by the instructor.

### **MASTER'S DEGREE PROGRAM**

The M.S. Program is intended to extend and broaden an undergraduate education with fundamental knowledge in different fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

**M.S. Time Limit Policy:** Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there is no written time limit for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

**Course requirements:** All M.S. students must complete a total of forty-eight units, which include a core of five courses (twenty units) chosen among fluid dynamics (CENG 210A, MAE 210B), heat and mass transfer (CENG 221AB), kinetics (CENG 252), and mathematics. To maintain a certain balance in the core, no more than two mathematics courses should be chosen among the choices of applied mathematics (MAE 294AB or Math. 210AB) and numerical mathematics (MAE 290AB or Math. 270AB).

No more than three courses (twelve units) of upper-division courses may be applied toward the total course work requirement. No more than a total of eight units of CENG 296 and 298 may be applied toward the course work requirement. Units in seminars (CENG 259) may not be applied toward the degree requirement.

**Thesis Plan I:** Completion of the research thesis (CENG 299) fulfills twelve units toward the total graduation requirement. The balance is made up of the five core courses (twenty units) and additional four elective courses (sixteen units) subject to the restrictions described above. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

**Comprehensive Examination Plan II:** This plan involves course work only and culminates in an oral comprehensive examination based on topics selected from the core courses. In addition to the five core courses (twenty units), one must choose an additional seven electives (twenty-eight units) subject to the restrictions of CENG 259, 296, and 298 described above. Sample electives are listed in the table below. A student should consult his or her academic advisor to choose an appropriate course

schedule, including alternatives in bioengineering, electrical and computer engineering, materials science, basic sciences, and mathematics. The nanotechnology concentration signifies that four elective courses are chosen from the approved courses in this area.

<b>Fall</b>	<b>Winter</b>	<b>Spring</b>
<b>Core selections</b>		
CENG 210A	CENG 221A	CENG 221B
MAE 290A or 294A	MAE 210B	CENG 252
	MAE 290B or 294B	
<b>Suggested electives</b>		
MS 201A	MS 201B	MS 201C
MAE 211	MAE 212	MAE 213
Math. 270A	Math. 270B	Math. 270C
Chem. 211	Chem. 212	Chem. 213
<b>Nanotechnology concentration</b>		
CENG 211	CENG 213	
CENG 212	CENG 214	CENG 215

**Change of Degree:** Upon completion of the requirements for the M.S. degree, students admitted as M.S. only or M.S. candidates are not automatically eligible for admission to the Ph.D. Program.

M.S. only and M.S. candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. The application, if approved by the committee, must be signed by a faculty member who expects to serve as the student's Ph.D. advisor. The student must also submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive examination plan for the M.S. degree, the examining committee may recommend that the comprehensive examination may replace the preliminary qualifying examination expected of Ph.D. students.

### **DOCTORAL DEGREE PROGRAM**

The Ph.D. Program is intended to prepare students for a variety of careers in research and teaching. The emphasis is on research. In general, there are no formal course requirements. All students, in consultation with their advisors, develop appropriate course programs that will prepare them for the Preliminary Qualifying Examination and for their dissertation research. These programs must be planned to meet the time limits established to advance to candidacy and to complete the requirements of the degree.

All Ph.D. students are required to pass three examinations. The first is a Preliminary Qualifying Examination, which should be taken within three to four quarters of full-time graduate study. The second is the Ph.D. Qualifying Examination. The last is the Dissertation Defense.

**Preliminary Qualifying Examination:** The examination is intended to determine a candidate's basic understanding of engineering fundamentals and the candidate's ability to pursue successfully a research project at a level appropriate for the doctorate. The scope of the examination is based on topics selected from the core curriculum as listed under the M.S. degree program. A candidate is expected to demonstrate knowledge equivalent to these courses and formal enrollment record is not a prerequisite. The format is an oral examination administered by a committee of three faculty members in the Chemical

Engineering Program. The candidate should present to the committee, prior to the examination, the five core courses that will constitute the basis of the examination.

**Depth Requirement:** A candidate must have the ability to perform in-depth analysis in the dissertation topic. A candidate should consult with the thesis advisor to develop a proper course program if it is deemed necessary. Depending on an individual's background and the nature of the research problem, a candidate should either complete a set of a minimum of four courses or demonstrate to the thesis advisor the equivalent knowledge and ability.

**Ph.D. Qualifying Examination:** Prior to taking this examination, the candidate must have completed the departmental qualifying examination, obtained a faculty research advisor, and must have made initial progress on a chosen dissertation project. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council under the policy listed in the "Graduate Studies" section of the *UC San Diego General Catalog*. The committee conducts the Ph.D. Qualifying Examination, during which the student must demonstrate the ability to engage in thesis research. The process involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon successful completion of the examination, subject to the UCSD time limit policy, the student is advanced to candidacy and is awarded the candidate in philosophy degree (see "Graduate Studies" section in this catalog).

**Teaching Experience:** Prior to the dissertation defense, the candidate must serve at least once as a teaching assistant with the responsibility to hold a problem-solving section one hour a week.

**Dissertation Defense:** This is the final Ph.D. examination. Upon completion of the dissertation research project, the candidate writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may request changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the University Librarian represents the final step in completion of all requirements for the Ph.D. degree.

**Ph.D. Time Limit Policy:** Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

**Annual Evaluation:** In the spring of each year, the faculty advisor evaluates each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the

evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate department.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### COURSES IN CHEMICAL ENGINEERING (CENG)

All undergraduate students enrolled in CENG courses or admitted to the CENG program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any CENG courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The program does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the program outline, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog.

#### LOWER-DIVISION

##### CENG 1. The Scope of Chemical Engineering (1)

Demonstrations and discussions of basic knowledge and the opportunities in chemical engineering for professional development. Introduction to campus library and computer resources. Use of personal software tools such as spread-sheeting and student edition of MATLAB. **Prerequisites:** none. (P/NP grading only.)

#### UPPER-DIVISION

##### CENG 100. Process Modeling and Computation in Chemical Engineering (4)

Introduction to elementary numerical methods with applications to chemical engineering problems using a variety of problem solving strategies. Error analysis. Concepts of mathematical modeling, material and energy balances, and probability and statistics with applications to design problems. **Prerequisites:** admission to the chemical engineering major only and grades of C– or better in MAE 9 or 10, and Chem. 6C or consent of instructor.

##### CENG 101A. Introductory Fluid Mechanics (4)

Kinematics and equation of motion; hydrostatics; Bernoulli's equation; viscous flows; turbulence, pipe flow; boundary layers and drag in external flows; applications to chemical, structural, and bioengineering. Students may not receive credit for both MAE 101A and CENG 101A. **Prerequisites:** admission to the major and grades of C– or better in Phys. 2A and Math. 21D or 20D, and 20E or consent of instructor.

##### CENG 101B. Heat Transfer (4)

Conduction, convection, radiation heat transfer; design of heat exchangers. Students may not receive credit for both MAE 101C and CENG 101B. **Prerequisites:** admission to the major and a grade of C– or better in CENG 101A.

##### CENG 101C. Mass Transfer (4)

Diffusive and convective mass transfer in solids, liquids, and gases; steady and unsteady state; mass transfer coefficients; applications to chemical engineering and bioengineering. **Prerequisites:** admission to the major and grade of C– or better in CENG 101A.

##### CENG 102. Chemical Engineering Thermodynamics (4)

Thermodynamic behavior of pure substances and mixtures. Properties of solutions, phase equilibria. Thermodynamic cycles. Chemical equilibria for homogeneous and heterogeneous systems. **Prerequisites:** CENG 100 and Math. 20D or consent of instructor.

##### CENG 113. Chemical Reaction Engineering (4)

Principles of chemical reactor analysis and design. Experimental determination of rate equations, design of batch and continuous reactors, optimization of selectivity in multiple reactions, consideration of thermal effects and residence time distribution. Introduction to multi-phase reactors. **Prerequisites:** grade of C– or better in CENG 100 or consent of instructor and Math. 20D.

##### CENG 120. Chemical Process Dynamics and Control (4)

Examination of dynamic linear and linearized models of chemical processes. Stability analysis. Design of PID controllers. Selection of control and manipulated variables. Root locus, Bode and Nyquist plots. Cascade, feed-forward and ratio controls. **Prerequisites:** admission to the major and grades of C– or better in Math. 21D or Math. 20D. (Students may not receive credit for both MAE 141A or MAE 143B and CENG 120.)

##### CENG 122. Separation Processes (4)

Principles of analysis and design of systems for separation of components from a mixture. Topics will include staged operations (distillation, liquid-liquid extraction), and continuous operations (gas absorption, membrane separation) under equilibrium and nonequilibrium conditions. **Prerequisites:** admission to the major and grades of C– or better in CENG 100, CENG 102, and CENG 101C.

##### CENG 124A. Chemical Plant and Process Design I (4)

Principles of chemical process design and economics. Process flow diagrams and cost estimation. Computer-aided design and analysis. Representation of the structure of complex, interconnected chemical processes with recycle streams. Ethics and professionalism. Health, safety, and the environmental issues. **Prerequisites:** admission to chemical engineering major and grades of C– or better in CENG 113 and CENG 122 or consent of instructor.

##### CENG 124B Chemical Plant and Process Design II (4)

Engineering and economic analysis of integrated chemical processes, equipment, and systems. Cost estimation, heat and mass transfer equipment design and costs. Comprehensive integrated plant design. Optimal design. Profitability. **Prerequisites:** admission to chemical engineering major and grade of C– or better in CENG 124A.

##### CENG 176A. Chemical Engineering Process Laboratory I (4)

Laboratory projects in the areas of applied chemical research and unit operations. Emphasis on applications of engineering concepts and fundamentals to solution of practical and research problems. **Prerequisites:** admission to the major and grades of C– or better in CENG 113, CENG 122, and MAE 170 or consent of instructor and departmental approval.

##### CENG 176B. Chemical Engineering Process Laboratory II (4)

Training in planning research projects, execution of experimental work, and articulation (both oral and written) of the research plan and results in the areas of applied chemical technology and engineering operations related to mass, momentum, and heat transfer. **Prerequisites:** admission to the major and grade of C– or better in CENG 176A.

##### CENG 192. Senior Seminar in Chemical Engineering (1)

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in chemical engineering (at the upper division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students with preference given to seniors. **Prerequisite:** department stamp or consent of the instructor.

##### CENG 199. Independent Study for Undergraduates (4–4)

Independent reading or research on a problem by special arrangement with a faculty member. **Prerequisite:** consent of instructor. (P/NP only.)

## CHEMICAL ENGINEERING GRADUATE COURSES

### CENG 205. Graduate Seminar in Chemical Engineering (1)

Each graduate student in CENG is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in chemical engineering. Topics will vary. **Prerequisites:** none.

### CENG 207. Nanomedicine (4)

Introduction to nanomedicine; diffusion and drug dispersion; diffusion in biological systems; drug permeation through biological barriers; drug transport by fluid motion; pharmacokinetics of drug distribution; drug delivery systems; nanomedicine in practice: cancers, cardiovascular diseases, immune diseases, and skin diseases. **Prerequisites:** none.

### CENG 208. Nanofabrication (4)

Basic engineering principles of nanofabrication. Topics include: photo-, electron beam and nanoimprint lithography, block copolymers and self-assembled monolayers, colloidal assembly, biological nanofabrication. **Prerequisites:** none.

### CENG 210A. Fluid Mechanics I (4)

(Cross-listed with MAE 210A.) Basic conservation laws, flow kinematics. The Navier-Stokes equations and some of its exact solutions, non-dimensional parameters and different flow regimes, vorticity dynamics. **Prerequisites:** MAE 101A-B and MAE 110A or consent of instructor.

### CENG 211. Introduction to Nanoengineering (4)

Understanding nanotechnology, broad implications; miniaturization: scaling laws; nanoscale physics; types and properties of nanomaterials; nanomechanical oscillators, nano(bio)electronics, nanoscale heat transfer; fluids at nanoscale; machinery cell; applications of nanobiotechnology and nanobiotechnology. **Prerequisites:** none.

### CENG 212. Intermolecular and Surface Forces (4)

Development of quantitative understanding of the different intermolecular forces between atoms and molecules and how these forces give rise to interesting phenomena at the nanoscale, such as flocculation, wetting, and self-assembly in biological (natural) and synthetic systems. **Prerequisites:** none.

### CENG 213. Nanoscale Synthesis and Characterization (4)

Examination of nanoscale synthesis—top-down and bottom-up; physical deposition; chemical vapor deposition; plasma processes; sol-gel processing; soft-lithography; self-assembly and layer-by-layer; molecular synthesis. Nanoscale characterization; microscopy (optical and electron: SEM, TEM); scanning probe microscopes (SEM, AFM); profilometry; reflectometry, and ellipsometry; x-ray diffraction; spectroscopies (EDX, SIMS, Mass spec, Raman, XPS); particle size analysis; electrical, optical, magnetic, mechanical, thermal. **Prerequisites:** none.

### CENG 214. Nanoscale Physics and Modeling (4)

Expanded mathematical analysis of topics introduced in CENG 212. Introduction of both analytical and numerical methods through application to problems in nanoengineering. Nanoscale systems of interest include colloidal systems, block-copolymer based self-assembled materials, molecular motors made out of DNA, RNA, or proteins, etc. Nanoscale phenomena including self-assembly at the nanoscale, phase separation within confined spaces, diffusion through nanopores and nanoslits, etc. Modeling techniques include quantum mechanics, diffusion and kinetics theories, molecular dynamics, etc. **Prerequisite:** CENG 212 or consent of the instructor.

### CENG 215. Nanosystems Integration (4)

Discussion of scaling issues and how to carry out the effective hierarchical assembly of diverse molecular and nanoscale components into higher order structures that retain the desired electronic/photonics, structural, mechanical, or catalytic properties at the microscale and macroscale levels. Novel ways to combine the best aspects of both top-down and bottom-up processes to create a totally unique paradigm change for the integration of heterogeneous molecules and nanocomponents into higher order structures. **Prerequisites:** none.

### CENG 221A Heat Transfer (4)

(Cross-listed with MAE 221A.) Conduction, convection, and radiation heat transfer development of energy conservation equations. Analytical and numerical solutions to heat transport problems. Specific topics and applications vary. **Prerequisites:** MAE 101A-B-C or CENG 101A-B-C or consent of instructor.

### CENG 221B Mass Transfer (4)

(Cross-listed with MAE 221B.) Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transport problems. Specific topics and applications will vary. **Prerequisites:** MAE 101A-B-C or CENG 101A-B-C or consent of instructor.

### CENG 251. Thermodynamics (4)

Principles of thermodynamics of single and multi-component systems. Phase equilibria. Estimation, calculation, and correlation of properties of liquids and gases. **Prerequisite:** consent of instructor.

### CENG 252. Chemical Reaction Engineering (4)

Analysis of chemical rate processes; complex kinetic systems. Chemical reactor properties in steady state and transient operations; optimal design policies. The interaction of chemical and physical transport processes in affecting reactor design and operating characteristics. Uniqueness/multiplicity and stability in reactor systems. Applications of the heterogeneous reactor systems. **Prerequisite:** consent of instructor.

### CENG 253. Heterogeneous Catalysis (4)

Physics and chemistry of heterogeneous catalysis. Adsorption/desorption kinetics, chemical bonding, isotherms, kinetic models, selection of catalysts, poisoning, experimental techniques. **Prerequisite:** consent of instructor.

### CENG 254. Biochemical Engineering Fundamentals (4)

Introduction to microbiology as relevant to the main topic, biological reactor analysis. Fermentation and enzyme technology. **Prerequisite:** consent of instructor.

### CENG 255. Electrochemical Engineering (4)

Fundamentals of electrochemistry and electrochemical engineering. Structure of the double layer, cell potential and electrochemical thermodynamics, charge transfer kinetics, electrochemical transport phenomena, and introduction to colloidal chemistry. Applications such as corrosion prevention, electroplating, reactor design, batteries and fuel cells. **Prerequisite:** consent of instructor.

### CENG 259. Seminar in Chemical Engineering (4)

Presentations on research progress by graduate students and by visitors from industrial and academic research laboratories. (May be repeated for credit. S/U grades only.) **Prerequisite:** consent of instructor.

### CENG 296. Independent Study in Chemical Engineering (4)

Independent reading or research on a problem as arranged by a faculty member. Must be taken for a letter grade only. **Prerequisite:** consent of instructor.

### CENG 299. Graduate Research in Chemical Engineering (1-12)

S/U grades only. **Prerequisite:** consent of instructor.

### CENG 501. Teaching Experience (2)

Teaching experience in an appropriate CENG undergraduate course under the direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. (S/U grades only) **Prerequisites:** consent of instructor and departmental stamp.

## COURSES IN NANOENGINEERING (NANO)

All students enrolled in NANO courses or admitted to the NANO major are expected to meet prerequisite and performance standards, i.e., students may not enroll in any NANO courses or courses in

another department that are required for the major prior to having satisfied prerequisite courses with a C- or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the program outline, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog.

## LOWER-DIVISION

### NANO 1. Nanoengineering Seminar (1)

Overview of nanoengineering. Presentations and discussions of basic knowledge and career opportunities in nanotechnology for professional development. Introduction to campus library resources. **Prerequisites:** none. (P/NP grading only.)

### NANO 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

## UPPER-DIVISION

### NANO 101. Introduction to Nanoengineering (4)

Introduction to nanoengineering; nanoscale fabrication: nanolithography and self-assembly; characterization tools; nanomaterials and nanostructures: nanotubes, nanowires, nanoparticles, and nanocomposites; nanoscale and molecular electronics; nanotechnology in magnetic systems; nanotechnology in integrative systems; nanoscale optoelectronics; nanobiotechnology; biomimetic systems, nanomotors, nanofluidics, and nanomedicine. **Prerequisites:** grade of C- or better in Chem. 6B, Phys. 2B, Math. 20C.

### NANO 102. Foundations in Nanoengineering: Chemical Principles (4)

Chemical principles involved in synthesis, assembly, and performance of nanostructured materials and devices. Chemical interactions, classical and statistical thermodynamics of small systems, diffusion, carbon-based nanomaterials, supramolecular chemistry, liquid crystals, colloid and polymer chemistry, lipid vesicles, surface modification, surface functionalization, catalysis. **Prerequisites:** grade of C- or better in Chem. 6C, Math. 20D, NANO 101, or at least concurrent enrollment.

### NANO 103. Foundations in Nanoengineering: Biochemical Principles (4)

Principles of biochemistry tailored to nanotechnologies. The structure and function of biomolecules and their specific roles in molecular interactions and signal pathways. Nanoscale detection methods. **Prerequisites:** grade of C- or better in BILD 1, Chem. 6C, NANO 101, or at least concurrent enrollment.

### NANO 104. Foundations in Nanoengineering: Physical Principles (4)

Introduction to quantum mechanics and nanoelectronics. Wave mechanics, the Schrodinger equation, free and confined electrons, band theory of solids. Nanosolids in 0D, 1D, and 2D. Application to nanoelectronic devices. **Prerequisites:** Grade of C- or better in Phys. 2D or Chem. 133, Math. 20D, NANO 102 or at least concurrent enrollment.

### NANO 110. Modeling of Nanoengineering Systems (4)

Engineering computation applied to nanotechnology including linear systems, nonlinear equations, optimization, solution of ordinary and partial differential equations, microfluidics simulation, quantum mechanical methods, Monte Carlo and molecular dynamics methods. Students will write programs and use open-source and commercial software. **Prerequisites:** grade of C- or better in Math. 20F, ECE 15, NANO 101.

**NANO 111. Characterization of Nanoengineering Systems (4)**

Fundamentals and practice of methods to image, measure, and analyze materials and devices that are structured at the nanometer scale. Optical and electron microscopy; scanning probe methods; photon-, ion-, electron-probe methods, spectroscopic, magnetic, electrochemical, and thermal methods. **Prerequisites:** grade of C- or better in NANO 104.

**NANO 112. Synthesis and Fabrication of Nanoengineering Systems (4)**

Introduction to methods for fabricating materials and devices in nanoengineering. Nano-particle, -vesicle, -tube, and -wire synthesis. Top-down methods including chemical vapor deposition, conventional and advanced lithography, doping, and etching. Bottom-up methods including self-assembly. Integration of heterogeneous structures into functioning devices. **Prerequisites:** grade of C- or better in NANO 102 and 103.

**NANO 120A. Nanoengineering System Design I (4)**

Principles of product design and the design process. Application and integration of technologies in the design and production of nanoscale components. Engineering economics. Initiation of team design projects to be completed in NANO 120B. **Prerequisites:** grade of C- or better in NANO 110, 111, and 112.

**NANO 120B. Nanoengineering System Design II (4)**

Principles of product quality assurance in design and production. Professional ethics. Safety and design for the environment. Culmination of team design projects initiated in NANO 120A with a working prototype designed for a real engineering application. **Prerequisites:** grade of C- or better in NANO 120A.

**NANO 140. Introduction to Molecular Simulations (4)**

Principles of molecular simulations. The students will gain hands-on experience with development of a molecular dynamics and Monte Carlo codes, performing simulations, and analyzing simulation results. The students will also learn to apply molecular simulation techniques for solving nanoengineering problems. **Prerequisite:** NANO 110.

**NANO 143. Nanomedicine (4)**

History of nanomedicine; length scale; main topics of nanomedicine: drug delivery, drugs and therapy, in vivo imaging, in vitro diagnosis, biomaterials, and active implants; nanomedicine in practice for disease treatment and diagnostics: cancers, cardiovascular diseases, immune diseases, and skin diseases. **Prerequisites:** NANO 101, 102, 103, 104, or consent of instructor.

**NANO 145. Introduction to Nanomachines (4)**

Understanding nanoscale motion, scaling laws, motion control at the nanoscale, biological nanomotors, molecular nanomachines, design of artificial nanomotors, propulsion mechanisms of artificial nanomotors, applications, and future opportunities and challenges. **Prerequisites:** NANO 101, 102, 103, 104, or consent of instructor.

**NANO 146. Nanoscale Optical Microscopy and Spectroscopy (4)**

Fundamentals in optical imaging and spectroscopy at the nanometer scale. Diffraction-limited techniques, near-field methods, multiphoton imaging and spectroscopy, Raman techniques, plasmon-enhanced methods, scan-probe techniques, novel sub-diffraction-limit imaging techniques, and energy transfer methods. **Prerequisite:** consent of instructor.

**NANO 147. BioNanotechnology (4)**

Introduction to biofabrication and bioengineering as applied to nanoscience and nanoengineering. Biological nanostructures, bioelectronics, and biophysics. Basic biochemistry, genetic engineering, and library screening techniques. Bioconjugation and characterization of biological systems on surfaces and nanoscale materials. Biological synthesis of inorganic nanocrystals. **Prerequisite:** NANO 101, 102, 103, 104, or consent of instructor.

**NANO 148. Thermodynamics of Materials (4)**

Fundamental laws of thermodynamics for simple substances; application to flow processes and to nonreacting mixtures; statistical thermodynamics of ideal gases and crystalline solids; chemical and materials thermodynamics;

multiphase and multicomponent equilibria in reacting systems; electrochemistry. **Prerequisite:** NANO 20.

**NANO 150. Mechanics of Nanomaterials (4)**

Continuum, quantum and, statistical mechanics, interatomic forces and intermolecular interactions, nanomechanics of self-assembly, pattern formation, hierarchical ordering, defects, surfaces, and interfaces, plasticity, creep, fracture and fatigue, adhesion, friction and wear, nanorheology, nanotribology, composite materials, carbon nanomaterials, biological materials. **Prerequisite:** NANO 20.

**NANO 156. Nanomaterials (4)**

Basic principles of synthesis techniques, processing, microstructural control and unique physical properties of materials in nanodimensions. Nanowires, quantum dots, thin films, electrical transport, optical behavior, functional behavior, and technical applications of nanomaterial. **Prerequisite:** NANO 20.

**NANO 158. Phase Transformations and Kinetics (4)**

Materials and microstructures changes. Understanding of diffusion to venable changes in the chemical distribution and microstructure of materials, rates of diffusion. Phase transformations, effects of temperature and driving force on transformations and microstructure. **Prerequisite:** NANO 20.

**NANO 161. Material Selection in Engineering Design (4)**

Selection of materials for engineering systems, based on constitutive analyses of functional requirements and material properties. The role and implications of processing on material selection. Optimizing material selection in a quantitative methodology. **Prerequisite:** NANO 20.

**NANO 162. Nanosensors: Principles, Design, and Applications (4)**

Why nanosensors? Nanosensors based on different nanomaterials, fabrication of nanosensors, large-scale integration of nanosensor arrays, common recognition elements, surface chemistry and functionalization, signal transduction, practical applications. **Prerequisite:** consent of instructor.

**NANO 164. Advanced Micro- and Nanomaterials for Energy Storage and Conversion (4)**

Materials for energy storage and conversion in existing and future power systems, including fuel cells and batteries, photovoltaic cells, thermoelectric cells, and hybrids. **Prerequisite:** consent of instructor.

**NANO 168. Electrical, Dielectric, and Magnetic Properties of Engineering Materials (4)**

Introduction to physical principles of electrical, dielectric, and magnetic properties. Semiconductors, control of defects, thin film, and nanocrystal growth, electronic and optoelectronic devices. Processing-microstructure-property relations of dielectric materials, including piezoelectric, pyroelectric and ferroelectric, and magnetic materials. **Prerequisite:** NANO 20.

**NANO 192. Senior Seminar in NanoEngineering (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in chemical engineering (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students with preference given to seniors. **Prerequisite:** department stamp or consent of the instructor.

**NANO 195. Teaching (2-4)**

Teaching and tutorial assistance in a NANO course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. **Prerequisites:** junior status with a B average in major and consent of instructor. (P/NP only.)

**NANO 197. Engineering Internship (1-4)**

Coordinated through the UCSD Academic Internship Program, this course provides work experience through industry, government offices, hospitals, and their practices. Students work in local industry or hospitals under faculty supervision. Units may not be applied toward major graduation requirements. Internship is unsalaried. **Prerequisites:**

completion of ninety units with 2.5 GPA and consent of instructor.

**NANO 198. Directed Group Study (1-4)**

Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. **Prerequisite:** consent of instructor. (P/NP only.)

**NANO 199. Independent Study for Undergraduates (4)**

Independent reading or research on a problem by special arrangement with a faculty member. **Prerequisite:** consent of instructor. (P/NP only.)

I. Bartoli, Ph.D., *Assistant Project Scientist*  
G. Benzioni, Ph.D., *Research Scientist*  
S. Coccia, Ph.D., *Assistant Project Scientist*  
B. Kad, Ph.D., *Research Scientist*  
J. Lu, Ph.D., *Assistant Project Scientist*

STUDENT AFFAIRS: 240-1 Science and Engineering Research Facility (SERF), University Center  
<http://www.structures.ucsd.edu>

**Structural Engineering** is the branch of engineering concerned with the design and analysis of civil, mechanical, aerospace, marine, naval and offshore structures. It requires knowledge and competence in the areas of materials, response of individual structural components and the behavior of entire structural systems.

## DEPARTMENT FOCUS

The instructional and research programs of the department are grouped into four programmatic focus areas: civil structures, aerospace and composite structures, renewal of structures, and earthquake engineering. Both the undergraduate and graduate programs are characterized by strong interdisciplinary relationships with the Departments of Mechanical and Aerospace Engineering, Physics, Mathematics, Bioengineering, Chemistry, Electrical and Computer Engineering, Computer Science and Engineering, the Materials Science Program, and associated campus institutes such as the Institute of Geophysics and Planetary Physics, Institute for Pure and Applied Physical Sciences, Institute for Biomedical Engineering, Center of Excellence for Advanced Materials, California Space Institute, Calit2, and Scripps Institution of Oceanography.

The programs and curricula of the Department of Structural Engineering will educate and train engineers in a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures in materials, mechanics, analysis and design across the engineering disciplines of civil, aerospace, marine and mechanical engineering.

Although structural engineering is traditionally viewed as an activity within civil engineering, in actuality many other engineering disciplines such as aerospace, marine (naval, offshore), and mechanical engineering contain well established discipline-specific structural systems and components. In all of the various engineering disciplines there exists a large commonality in the structural materials used, in the general principles of structural mechanics, in the overall design philosophy and criteria, and in the modeling and analysis tools employed for the numerical quantification and visualization of structural response. Particularly, small disciplinary differences in materials and computational tools are rapidly disappearing with the civil engineering community opening up to new structural materials developed and used to date primarily in the aerospace industry, and with computational developments which are less product specific but more geared towards a holistic structural systems design approach with interactive graphics, object-oriented database management and concurrent visualization and data processing. Developments in overall structural systems design are increasingly cross-disciplinary over many traditional engineering areas.

## THE UNDERGRADUATE PROGRAM

### DEGREE AND PROGRAM OPTIONS

The Department of Structural Engineering offers a unique engineering program leading to the B.S. degree in structural engineering which is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (EAC/ABET). The Department of Structural Engineering also offers a nonaccredited B.S. degree in engineering sciences. The B.S. programs require a minimum of 148 units, plus college requirements in humanities and social sciences.

All Structural Engineering programs of study have strong components in laboratory experimentation,

numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses which include student-initiated projects, and finally, by senior design project courses which involve teams of students working to solve engineering design problems brought in from industry. The Structural Engineering programs are designed to prepare students receiving bachelor's degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in non-technical fields such as business administration, law or medicine.

**Structural Engineering** is concerned with the design and analysis of civil, mechanical, aerospace, marine, naval, and offshore structures. Examples include bridges, dams, buildings, aircraft, spacecraft, ships, oil platforms, automobiles, and other transportation vehicles. This field requires a thorough knowledge of the behavior of solids (concrete, soils, rock, metals, plastics, and composite materials), fluid mechanics as it relates to structural loads, dynamics as it relates to structural response, mathematics for the generation of theoretical structural models and numerical analysis, and computer science for simulation purposes associated with computer-aided design, response analyses, and data acquisition. Basic understanding of materials behavior and structural performance is enhanced by laboratory courses involving static and dynamic stress failure tests of structural models, and response of structural systems. Within this area, students can specialize in (a) civil structures, (b) aerospace structures, (c) renewal of structures, or (d) earthquake engineering.

The **engineering sciences** program follows the overall Structural Engineering program except that the number of required design courses is reduced. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisors to develop a sound course of study to fulfill the technical elective requirements of this program.

### MAJOR REQUIREMENTS

Specific course requirements for the major are outlined in a table herein. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C- grade in each course required for the major.

Deviations from the program of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In cases where a student needs to take a course outside UC San Diego, prior departmental approval is essential. In

addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited program, TE courses are restricted to meet ABET standards. Courses such as SE 195, SE 197 and SE 198 are not allowed as technical electives in meeting the upper-division major requirements. SE 199 can be used as a technical elective only under restrictive conditions. Policies regarding these conditions may be obtained from the department's Student Affairs Office. Graduate level courses may be petitioned for technical elective credit.

Students with different academic preparations may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department prior to doing so. Deviations in scheduling lower-division Structural Engineering courses are discouraged due to scheduling constraints. A tentative schedule of course offerings is available from the department each spring quarter for the following academic year.

### GENERAL-EDUCATION/COLLEGE REQUIREMENT

For graduation, each student must satisfy general-education course requirements determined by the student's college, as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

The Structural Engineering program allows for twelve humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges may require more than twelve HSS courses indicated in the curriculum tables. Accordingly, students in these colleges may take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.

### PROFESSIONAL LICENSING

All students are encouraged to take the Engineering-in-Training (EIT) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after EIT certification and two years of work experience; students graduating from a nonaccredited program can take the PE examination after EIT certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors or visit <http://www.dca.ca.gov/pels>.

## STRUCTURAL ENGINEERING (ABET ACCREDITED PROGRAM)

### Program Mission and Objectives

The B.S. Structural Engineering program is accredited by the ABET Inc. Engineering Accreditation Commission (Accreditation Board for Engineering and Technology). Accreditation is an assurance that the program meets established quality standards.

### B.S. Structural Engineering Mission

To provide a comprehensive education and training to engineers using a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures at the levels of materials, mechanics, analysis, and design.

### B.S. Structural Engineering Objectives

Program objectives represent graduates' performance three to five years after completing the B.S. program:

1. To provide our students receiving bachelor's degrees with a strong technical education that will prepare them for successful professional careers in industry, or for continued graduate education in their area of specialization
2. To provide our students with fundamental structural engineering principles that can be applied across multiple engineering applications (such as aerospace, civil, marine, and mechanical).
3. To provide our students with broad multidisciplinary skills necessary to accomplish professional objectives in a rapidly changing technological world.
4. To provide our students with the ethical standards, communication and collaboration skills essential for professional practice and career advancement.

### B.S. Structural Engineering Outcomes

Program outcomes are the expected knowledge, skills, attitudes, and behaviors of students at the time of completing the B.S. program:

1. An ability to apply knowledge of mathematics, science, and engineering
2. An ability to design and conduct experiments, as well as being able to analyze and interpret data
3. An ability to design a system, component, or process to meet desired needs
4. An ability to function in multidisciplinary teams
5. An ability to identify, formulate, and solve engineering problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively with written, oral, and visual means
8. The broad education necessary to understand the impact of engineering solutions in a global and societal context

9. A recognition of the need for and an ability to engage in lifelong learning
10. A knowledge of contemporary issues
11. An ability to use modern engineering techniques, skills, and computing tools necessary for engineering practice

FALL	WINTER	SPRING

<sup>1</sup>In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Twelve HSS courses are listed here; individual college requirements may be higher.

<sup>2</sup>Transfer students admitted to the university prior to fall 2010 who have completed MAE 9 are not required to take SE 9. Freshman students admitted to the university prior to fall 2007 who have completed MAE 9 are not required to take SE 9.

<sup>3</sup>Technical elective (TE) course must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics, selected with prior approval of the department to meet ABET standards.

<sup>4</sup>Students must take one full-focus sequence (FS) in: (a) Civil Structures, (b) Aerospace Structures, (c) Renewal of Structures, or (d) Geotechnical Engineering. Students should note that not all focus sequence classes will be offered every year. Students admitted to the university prior to fall 2010 will be allowed to use the courses outlined in past focus sequences from the catalog year in which they entered the university.

SE 1	HSS	SE 2
Chem. 6A	Phys. 2A	Phys. 2B/2BL
HSS <sup>1</sup>	HSS	HSS
<b>SOPHOMORE YEAR</b>		
Math. 20D	Math. 20F	Math. 20E
Phys. 2C/2CL	SE 110A	SE 102
SE 101A	SE 101B	SE 110B
HSS	SE 9 <sup>2</sup>	SE 101C
<b>JUNIOR YEAR</b>		
SE 121	SE 130A	MAE 170
SE 103	SE 115	TE <sup>3</sup>
HSS	HSS	SE 130B
HSS	HSS	HSS
<b>SENIOR YEAR</b>		
SE 125	SE 131	SE 140
TE	SE 120	TE
TE	TE	TE
HSS	HSS	TE

<sup>1</sup>In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Twelve HSS courses are listed here; individual college requirements may be higher.

<sup>2</sup>Transfer students admitted to the university prior to fall 2010 who have completed MAE 9 are not required to take SE 9. Freshman students admitted to the university prior to fall 2007 who have completed MAE 9 are not required to take SE 9.

<sup>3</sup>Technical elective (TE) course must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics, selected with prior approval of the department to meet ABET standards.

## POLICIES AND PROCEDURES FOR STRUCTURAL ENGINEERING UNDERGRADUATE STUDENTS

### ADMISSION TO THE MAJOR

Students who declare a Structural Engineering major will be directly admitted to the major. All students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

### TRANSFER STUDENTS

Requirements for a Structural Engineering major, or into Structural Engineering courses, are the same for transfer students as they are for continuing students. Accordingly, when planning their program, transfer students should be mindful of lower-division prerequisite course requirements, as well as for meeting collegiate requirements.

Students who have taken equivalent courses elsewhere may request to have transfer credits apply toward the department's major requirements. This is accomplished by submitting a petition for transfer credits together with a transcript and catalog course description from the institution where the course(s) were taken. These documents are reviewed for approval by the Structural Engineering Undergraduate Affairs Committee.

No transfer credit will be given for courses similar to SE 1, SE 2, SE 9. SE 1, SE 2, and SE 9 must be taken by all students majoring in structural engineering.

Transfer petitions are available from the Structural Engineering Student Affairs Office.

### ACADEMIC ADVISING

Upon arrival, students must make an appointment with the undergraduate advisor in the Structural Engineering Student Affairs Office to plan a program of study. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate advisor or the Undergraduate Affairs Committee. Because some courses and/or curricular changes may be made every year, it is imperative that students consult with the department's undergraduate advisor and their assigned faculty advisor on an annual basis.

**Many Structural Engineering courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in subsequent courses as desired or needed.** If this occurs, students should seek immediate department advice. When a student deviates from the sequence of courses specified for the curriculum

in this catalog, it may be impossible to complete the Structural Engineering major within the normal four-year period. Students should refer to the four-year plan and course prerequisite map on the department Web site at <http://www.structures.ucsd.edu>.

In addition to the advising available through the Structural Engineering Student Affairs Office, programmatic or technical advice may be obtained from Structural Engineering faculty members. A specific Structural Engineering faculty advisor is assigned to each Structural Engineering student. All Structural Engineering students are required to meet with their faculty advisor at least once a year, preferably before the beginning of fall quarter.

### PROGRAM ALTERATIONS/EXCEPTIONS TO REQUIREMENTS

Variations from, or exceptions to, any program or course requirements are possible only if a petition is approved by the Structural Engineering Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the Structural Engineering Student Affairs Office and must be processed through this office.

### INDEPENDENT STUDY

Structural Engineering students may take SE 199, Independent Study for Undergraduates, under the guidance of a Structural Engineering faculty member. Normally, this course is taken as an elective on a P/NP basis. Under restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in taking an SE 199 course must identify a faculty member with whom they wish to work and propose a research or study topic. After obtaining the faculty member's concurrence on the topic and scope of the study, the student must submit a Special Studies Course form to the Structural Engineering Undergraduate Affairs Committee. Students who are interested in having the course count as a technical elective requirement must take the course(s) for a total of four units and must also submit an Undergraduate Petition form. The forms must be completed, approved, and processed prior to the beginning of the quarter in which the course is to be taken. This should not be done during the add/drop period. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

## GRADUATE PROGRAM

The Department of Structural Engineering offers instruction leading to the degrees of master of science (M.S.) and doctor of philosophy (Ph.D.) in structural engineering (SE). In addition, an M.S. degree in structural health monitoring, prognosis, and validated simulations has been activated. The graduate program is aimed at training a select number of highly skilled professionals in structural engineering with the academic and engineering credentials to assume leadership roles in industry and academia.

The M.S. degree program is intended to provide students with additional fundamental knowledge as well as specialized advanced knowledge in selected

structural engineering aspects over and above the undergraduate degree course work.

The doctor of philosophy (Ph.D.) degree program is intended to prepare students for careers in teaching, research, and/or in their chosen professional specialties. The Ph.D. program requires a departmental comprehensive examination, a Ph.D. candidacy examination, a Ph.D. dissertation based on new and unique research, and a dissertation defense.

Both degrees offer opportunities for training in one or more of the four primary research focus areas within the SE department: (1) Earthquake Engineering, (2) Advanced Composites and Aerospace Structural Systems, (3) Renewal Engineering, and (4) Structural Health Monitoring, Prognosis, and Validated Simulations.

Admission to the UC San Diego graduate program in Structural Engineering requires at least a B.S. degree in engineering, physical sciences, or mathematics with an overall upper-division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE general test scores. International applicants whose native language is not English are required to demonstrate proficiency in English by taking the TOEFL test. The minimum TOEFL score required is 550 (paper-based), 213 (computer-based), and 80 (Internet-based text [iBt]). Based on the candidate's choice, qualifications, and career objectives, admission to the program is in one of two categories: M.S. or Ph.D.

Applicants seeking enrollment in SE courses via UC Extension's concurrent registration program are advised to refer to the "[Graduate Studies Transferring Credit](#)" section of the *UC San Diego General Catalog* for clarification.

### BACHELOR'S/MASTER'S PROGRAM

The department offers a bachelor's/master's degree program to enable students to complete both the B.S. and M.S. degrees in an accelerated time-frame. Undergraduate students in the Department of Structural Engineering who have at least 148 quarter units with a cumulative GPA of 3.5 or higher are eligible to apply. Admission to the bachelor's/master's degree program is not automatic. Student applications are reviewed and the final decision is made by the Department of Structural Engineering. Acceptance into this program is an honor that carries with it practical benefits—the graduate application process is simplified (no GREs required) and advanced students are given access to graduate level courses. Upon acceptance as an undergraduate into the program, a faculty member will be assigned who will serve as the student's advisor. Interested students should contact the Structural Engineering Student Affairs Office. Students must fulfill all requirements for the B.S. degree prior to being formally admitted to graduate status.

### MASTER'S DEGREE PROGRAM

The M.S. degree program is intended to provide the student with additional fundamental knowledge as well as specialized advanced knowledge in selected structural engineering aspects over and above the undergraduate degree course work. Two plans, the M.S. Thesis Plan and the M.S. Comprehensive Examination Plan, are offered.

The M.S. Thesis Plan is designed for those students with an interest in research prior to entering the structural engineering profession or prior to entering a doctoral degree program. The M.S. Thesis Plan involves course work leading to the completion and defense of a master's thesis. The M.S. Comprehensive Examination Plan involves course work and requires the completion of a written comprehensive examination covering multiple courses that the student has taken. The M.S. Comprehensive examination will be comprehensive and cover two focus sequences and at least one additional technical elective that the student has taken. The examination must be completed no later than the end of the eighth week of the quarter the student intends to graduate.

Master students will be required to complete three core courses before they can graduate with their master's degree. The courses are SE 200 Applied Mathematics in Structural Engineering (or one of the following two similar courses: MAE294A and Math. 210A), SE 201 Advanced Structural Analysis, and SE 271 Solid Mechanics for Structural and Aerospace Engineering.

M.S. students must complete forty-eight units of credit for graduation. For the M.S. Comprehensive Examination Plan all forty-eight units of credit must consist of regular courses (twelve courses). For the M.S. Thesis Plan, thirty-six units (nine courses) from regular courses are required, in addition to twelve units of graduate research for the master's thesis. For both M.S. plans, students are required to complete a minimum of two sequences from the following focus areas:

1. Structural Analysis
2. Structural Design
3. Computational Mechanics
4. Earthquake Engineering
5. Geotechnical Engineering
6. Advanced Composites
7. Solid Mechanics
8. Advanced Structural Behavior

A sequence is composed of three regular courses from the same focus area. The courses comprising the focus sequences are listed in the table in this section. To meet the specific needs of some students, other focus areas may be developed by a student in consultation with his or her advisor, but these must be pre-approved by the SE Graduate Affairs Committee. To allow for greater flexibility in the program, the remaining credits required from courses may be earned by completing additional focus sequences, parts of focus sequences, or other appropriate courses. Students may elect to take other appropriate technical electives (with the approval of their advisor and the SE Graduate Affairs Committee). In general, no undergraduate courses are allowed for the M.S. degree. In special cases where an undergraduate course may be used, the arrangement must be preapproved by both the academic advisor and the Graduate Affairs Committee.

Units obtained in SE 290 and 298 may not be applied towards course work requirements. No more than four units of SE 296 may be applied toward

course work requirements and only with prior approval of the SE Graduate Affairs Committee.

The department also offers a seminar course each quarter dealing with current research topics in Structural Engineering (SE 290). Students must take SE 290 every quarter in the first year, and are strongly recommended to take it for at least one quarter in every subsequent year.

## FOCUS SEQUENCES

### Structural Analysis

- SE 201. Advanced Structural Analysis
- SE 202. Structural Stability
- SE 203. Structural Dynamics
- SE 204. Advanced Structural Dynamics
- SE 205. Nonlinear Mechanical Vibrations
- SE 206. Random Vibrations

### Structural Design

- SE 211. Advanced RC/PC Design
- SE 212. Advanced Structural Steel Design
- SE 213. Bridge Design
- SE 223. Advanced Seismic Design of Structures
- SE 254. FRP Rehabilitation of Civil Structures

### Computational Mechanics

- SE 233. Computational Techniques in Finite Elements
- SE 276A. Finite Element Methods in Solid Mechanics I
- SE 276B. Finite Element Methods in Solid Mechanics II
- SE 277. Error Control in Finite Element Analysis
- SE 278A. Finite Element Methods for Computational Fluid Dynamics

### Earthquake Engineering

- SE 203. Structural Dynamics
- SE 206. Random Vibrations
- SE 221. Earthquake Engineering
- SE 222. Geotechnical Earthquake Engineering
- SE 223. Advanced Seismic Design of Structures
- SE 243. Soil Structure Interaction

### Geotechnical Engineering

- SE 222. Geotechnical Earthquake Engineering
- SE 241. Advanced Soil Mechanics
- SE 242. Advanced Foundation Engineering
- SE 243. Soil Structure Interaction

### Advanced Composites

- SE 253A. Mechanics of Laminated Composite Structures I
- SE 253B. Mechanics of Laminated Composite Structures II
- SE 253C. Mechanics of Laminated Anisotropy Plates and Shells
- SE 252. Experimental Mechanics and NDE
- SE 251A. Processing Science of Composites
- SE 251B. Mechanical Behaviors of Polymers and Composites
- SE 254. FRP Rehabilitation of Civil Structures

### Solid Mechanics

- SE 234. Plates and Shells
- SE 235. Wave Propagation in Elastic Media
- SE 252. Experimental Mechanics and NDE
- SE 271. Solid Mechanics for Structural and Aerospace Engineering

SE 272. Theory of Elasticity

SE 273. Anelasticity

### Advanced Structural Behavior

- SE 205. Nonlinear Mechanical Vibrations
- SE 224. Structural Reliability and Risk Analysis
- SE 206. Random Vibrations
- SE 252. Experimental Mechanics and NDE
- SE 265. Structural Health Monitoring Principles

Students taking the Solid Mechanics focus sequence are required to take SE 271, SE 272, and one of these courses: SE 273, SE 252 or SE 235.

SE 207 Topics in Structural Engineering will be acceptable to use towards a focus sequence requirement pending petition and approval of the Graduate Affairs Committee (GAC).

Students taking the Advanced Composites focus sequence have the opportunity of taking either one or both of the following sequences:

### Suggested Sequence A

- SE 253A. Mechanics of Laminated Composite Structures I
- SE 253B. Mechanics of Laminated Composite Structures II
- SE 253C or other class approved by advisor

### Suggested Sequence B

- SE 253B. Mechanics of Laminated Composite Structures II
- SE 251A. Processing Science of Composites
- SE 251B or other class approved by advisor

Note: Students who have previously taken an equivalent course must choose suggested Sequence B.

The thesis defense is the final examination for students enrolled in the M.S. thesis plan and must be conducted after completion of all course work. Upon completion of the research project, the student writes a thesis that must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty. A complete copy of the student's thesis must be submitted to each member of the M.S. thesis committee (comprised of a minimum of three faculty) at least two weeks before the defense.

## M.S. DEGREE IN STRUCTURAL ENGINEERING WITH SPECIALIZATION IN HEALTH MONITORING, PROGNOSIS, AND VALIDATED SIMULATIONS (SHMP&VS)

The M.S. degree in SHMP&VS provides specialized multidisciplinary knowledge in the three technology areas of (1) sensing technology, (2) data interrogation, and (3) predictive modeling. Many courses currently offered within the Jacobs School of Engineering may be grouped into numerous focus sequences within each technology area, as shown in the following list:

### A. SENSING TECHNOLOGY AREA

#### Sensing Methodologies

- SE 252. Experimental Mechanics and NDE

MAE 261. Sensors and Measurements  
MAE 268. MEMS Materials, Fabrication, and Applications

#### Data Acquisition Systems

ECE 257B. Principles of Wireless Networks  
ECE 258A-B. Digital Communications  
ECE 259CN. Advanced Coding and Modulation for Digital Communications  
MAE 261. Sensors and Measurements  
CSE 237A. Introduction to Embedded Computing  
CSE 237B. Software for Embedded Computing  
CSE 237C. Validation/Testing of Embedded Systems  
CSE 237D. Design Automation and Prototyping for Embedded Systems

#### Controls

MAE 280A. Linear Systems Theory  
MAE 280B. Linear Control Design  
MAE 282. Adaptive Control  
MAE 284. Robust and Multi-Variable Control  
MAE 285. Optimal Control and Estimation

### B. DATA INTERROGATION TECHNOLOGY AREA

#### Signal Processing

ECE 161A/SIO 207A. Introduction to Digital Signal Processing  
ECE 251AN/SIO 207B. Digital Signal Processing I  
ECE 251BN/SIO 207C. Digital Signal Processing II  
ECE 251CN. Filter Banks and Wavelets  
ECE 251DN or SIO 207D. Array Processing  
ECE 253A. Fundamentals of Digital Image Processing  
ECE 253B. Digital Image Analysis  
ECE 254. Detection Theory  
ECE 255AN. Information Theory

#### System Identification

MAE 283A. Parameter Identification: Theory and Methods  
MAE 283B. Approximate Identification and Control  
ECE 256A-B. Time Series Analysis and Applications  
ECE 275A. Parameter Estimation I  
ECE 275B. Parameter Estimation II

#### Pattern Recognition

CSE 250A. Artificial Intelligence: Search and Reasoning  
CSE 250B. Artificial Intelligence: Learning  
CSE 253. Neural Networks for Pattern Recognition  
CSE 254. Statistical Learning  
CSE 255. Data Mining and Artificial Intelligence Applications  
ECE 270A-B-C. Neurocomputing

#### Statistical/Probabilistic Methods

MTH 281A-B-C. Mathematical Statistics  
CSE 254. Statistical Learning  
SE 206. Random Vibrations  
SE 224. Structural Reliability and Risk Analysis

### C. PREDICTIVE MODELING TECHNOLOGY AREA

#### Structural Analysis

SE 201. Advanced Structural Analysis  
SE 202. Structural Stability  
SE 203. Structural Dynamics

SE 204. Structural Reliability and Risk Analysis  
Finite Element

MAE 232A. Finite Element Methods in Solid Mechanics I

MAE 232B. Finite Element Methods in Solid Mechanics II

MAE 232C. Advances in Materials Computations  
SE 274. Nonlinear Finite Element Methods

#### Solid Mechanics

SE 271. Solid Mechanics for Structural and Aerospace Engineering  
SE 272. Theory of Elasticity  
SE 273. Theory of Plasticity and Viscoelasticity  
SE 252. Experimental Mechanics and NDE  
SE 235. Wave Propagation in Elastic Media

#### Material Behavior/Modeling

MAE 233B. Micromechanics  
MAE 233C. Advanced Mechanics of Composite Materials  
MAE 232C. Advances in Materials Computations  
MAE 250. Fatigue, Fracture, and Failure Analysis in Engineering Materials  
MAE 273A. Dynamic Behavior of Materials  
SE 245. Constitutive Modeling and Numerical Implementation

#### Advanced Structural Behavior

SE 205. Nonlinear Mechanical Vibrations  
SE 206. Random Vibrations  
SE 224. Structural Reliability and Risk Analysis  
SE 252. Experimental Mechanics and NDE  
SE 265. Structural Health Monitoring Principles

#### Earthquake Engineering

SE 203. Structural Dynamics  
SE 206. Random Vibrations  
SE 221. Earthquake Engineering  
SE 222. Geotechnical Earthquake Engineering  
SE 223. Advanced Seismic Design of Structures

#### Advanced Composites

SE 142. Design of Composite Structures  
SE 251. Processing Science of Composites  
SE 253. Mechanics of Laminated Composite Structures  
MAE 233C. Advanced Mechanics of Composite Materials  
SE 254. FRP Rehabilitation of Civil Structures

Two degree plans in SHMP&VS will be offered: M.S. Thesis Plan and M.S. Comprehensive Examination Plan. Students in both plans must complete forty-eight units of credit for graduation. For both plans, students must complete thirty-six units of course work consisting of one focus sequence from each of the three technology areas A, B, and C listed above. Any three of the courses listed under a specific topic area constitute a focus sequence. Courses must be chosen in consultation with the student's advisor. The remaining twelve units must be completed as graduate research SE 299.

For the M.S. SHMP&VS Comprehensive Examination Plan, the twelve-unit graduate research SE 299 must be conducted as a mentored research project. This project is intended to provide a mentored practicum whereby students integrate knowledge learned from their technology areas into

comprehensively solving a problem from structural health monitoring/prognosis or model validation and uncertainty quantification, at their discretion. This project will emphasize professional practice, with both oral and written communication of technical data, and will include a strong design component. The project will be presented to a committee of two faculty members in Structural Engineering and one from another department within the Jacobs School of Engineering or an adjunct faculty member in an appropriate area of focus.

For the M.S. SHMP&VS Thesis Plan, the twelve-unit graduate research SE 299 culminates with the preparation of a research thesis. The thesis must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty members. The committee will consist of two faculty members in Structural Engineering and one from another department within the Jacobs School of Engineering or an adjunct faculty member in an appropriate area of focus. A complete copy of the student's thesis must be submitted to each member of the M.S. thesis committee at least two weeks prior to the defense.

Because of the inherent multidisciplinary nature of the M.S. SHMP&VS degree, research within SE 299 can be conducted at outside locations (industry or government facilities). In this case a scientist on location, with an adjunct faculty appointment at UCSD, will be part of the student's committee.

All students in the M.S. SHMP&VS program are required to take a seminar course (SE 290) each quarter they are registered.

### DOCTORAL DEGREE PROGRAM

The Ph.D. program is intended to prepare students for a variety of careers in research, teaching and advanced professional practice in the broad sense of structural engineering, encompassing civil and aerospace structures, earthquake and geotechnical engineering, composites, and engineering mechanics. Depending on the student's background and ability, research is initiated as soon as possible. All students, in consultation with their advisors, develop course programs that will prepare them for the Departmental Comprehensive Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Comprehensive Examination may take any course for an S/U grade, with the exception of any course that the student's Departmental Comprehensive or Ph.D. Candidacy Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all Structural Engineering graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Comprehensive Examination.

The department also offers a seminar course each quarter dealing with current research topics in Earthquake Engineering (SE 290). Students must take SE 290 every quarter in the first year of graduate study, and it is strongly recommended to take it for at least one quarter in every subsequent year.

All doctoral students will be required to take SE 200, Applied Mathematics in Structural Engineering, prior to taking the departmental comprehensive exam.

**Doctoral Examinations:** A Structural Engineering Ph.D. student is required to pass three examinations. The first is a **Departmental Comprehensive Examination** which should be taken within three to six quarters of full-time graduate study and requires a 3.5 GPA. This examination is intended to determine the student's ability to successfully pursue a research project at a level appropriate for the doctoral degree. It is administered by at least four faculty, three of whom must be in Structural Engineering. The student is responsible for material pertaining to four focus areas. One focus area can be satisfied by course work, provided that all courses in that area have been taken at UCSD, the grade in each course is B or better, and the overall GPA in that area is at least 3.5. In order to insure appropriate breadth, the focus areas should consist of the following: (a) two focus areas within Structural Engineering which are closely related to the student's research interests, (b) one focus area within Structural Engineering that is not directly related to the student's area of research, and (c) one minor focus area outside the Department of Structural Engineering. An update list of sample focus areas for Ph.D. students is available in the Structural Engineering Graduate Handbook. Minor areas too closely related to the major areas will not be approved by the SE Graduate Affairs Committee. The Solid Mechanics Focus Sequence, which is jointly taught by the Department of Structural Engineering and the Department of Mechanical and Aerospace Engineering, cannot be used to satisfy the outside Structural Engineering requirement. Students intending to specialize in the emerging areas of structural health monitoring, damage prognosis, and validated simulations are advised to take courses in the focus areas of Advanced Structural Behavior and elective courses MAE 283, MAE 261, ECE 251AN, ECE 251BN, ECE 254, and CSE 291 which can be used to satisfy the outside Structural Engineering requirement.

Since the examination areas must be approved by the Structural Engineering Graduate Affairs Committee, students are advised to seek such approval well before their expected examination date, preferably while planning their graduate studies. Although students are not required to take particular courses in preparation for the Departmental Comprehensive Examination, the scope of the examination in each area is associated with a set of three graduate courses, generally in focus areas offered or approved by the department. A list of focus areas is available in the Structural Engineering Graduate Handbook. A candidate can develop a sense of the level of knowledge expected to be demonstrated during the examination by studying the appropriate syllabi and/or discussing the course content with faculty experienced in teaching the courses involved. The Departmental Comprehensive Examination may be a written or an oral examination, at the discretion of the committee.

**Teaching experience** is required of all Structural Engineering Ph.D. students prior to taking the Ph.D. Candidacy Examination. Teaching experience is

defined as lecturing one hour per week in either a problem-solving section or laboratory session, for one quarter in an undergraduate course designated by the department. The requirement can be fulfilled by serving as a teaching assistant or by taking SE 501 for academic credit. Students must contact the Student Affairs Office to plan for completion of this requirement.

The **Ph.D. Candidacy Examination** is the second examination required of Structural Engineering doctoral students. In preparation for the Ph.D. Candidacy Examination, students must have completed the Departmental Comprehensive Examination and the Departmental Teaching Experience requirement, obtained a faculty research advisor, have identified a topic for their dissertation research, and have made initial progress in that research. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. In accordance with Academic Senate Regulations 715(D): "A doctoral committee of five or more members shall be appointed by the dean of Graduate Studies under the authority of the Graduate Council. The committee members shall be chosen from at least two departments, and at least two members shall represent academic specialties that differ from the student's chosen specialty. In all cases, each committee must include one tenured UCSD faculty member from outside the student's major department." The committee conducts the Ph.D. Candidacy Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. A short written document describing the research plan must be submitted to each member of the committee at least two weeks before the Ph.D. Candidacy Examination. The committee may ask questions directly or indirectly related to the research project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the candidate of philosophy degree. The Ph.D. Candidacy Examination is an oral examination.

**The Dissertation Defense** is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must then be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee at least four weeks before the defense. While the copy of the dissertation handed to the committee is expected to be complete and in final form, it should be noted that students are expected to make changes in the text per direction of the committee as a result of the defense. This examination cannot be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and the university librarian represents the final step in completion of all requirements for the Ph.D.

**Ph.D. Time Limit Policy.** Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and

submission of the doctoral dissertation must be within seven years.

**Evaluations.** In the spring of each year, the department faculty members evaluate each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

All undergraduate students enrolled in Structural Engineering courses or admitted into a Structural Engineering program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any SE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the School of Engineering in this catalog. Furthermore, the majority of SE courses have enrollment restrictions which give priority to, or are open only to, structural engineering students. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards. The department expects that students will adhere to these policies on their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites and/or performance standards have not been met.

While some courses may be offered more than once each year, most SE courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, SE does offer selected large-enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

Program and or materials fees may apply to those courses with large lab components.

### LOWER-DIVISION

#### SE 1. Introduction to Structures and Design (4)

Introduction to structural components, systems from aerospace, civil, mechanical, marine and offshore areas. Structural action, the design process. History of structural engineering. Role and responsibility of structural engineers in society. Engineering economics, costs-benefits analysis. Implications on safety. Professional ethics. Priority enrollment given to structural engineering majors.

#### SE 2. Structural Materials (4)

Structure of engineering materials (metals, ceramics, concrete, composites) tailoring to produce desired properties and response in structural components and systems. Mechanical tests, elasticity, plastic deformation, fracture, toughness, creep and fatigue. Selection based on performance requirements/application. Laboratory demonstrations and tests. **Prerequisites:** Chem. 6A, Phys.

2A. Priority enrollment given to structural engineering majors and mechanical and aerospace engineering majors.

#### **SE 9. Algorithms and Programming for Structural Engineering (4)**

Introduction to the Matlab environment. Variables and types, statements, functions, blocks, loops, and branches. Algorithm development. Functions, function handles, input and output arguments. Data encapsulation and object-oriented programming. Toolboxes and libraries. Models from physics (mechanics and thermodynamics) are used in exercises and projects. **Prerequisites:** grade of C– or better in Math. 20D and Math. 20F (20F may be concurrent).

#### **SE 10A. Design Competition—Design, Build, and Fly Aircraft (1)**

Student teams design, build, and fly unmanned aircraft for a national student competition. Students concentrate on vehicle system design including aerodynamics, structures, propulsion, and performance. Teams engineer and fabricate the aircraft, submit a design report, and prep aircraft for competition. **Prerequisite:** consent of instructor.

#### **SE 87. Freshman Seminar (1)**

The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. **Prerequisite:** open to freshmen only.

### **UPPER-DIVISION**

#### **SE 101A. Mechanics I: Statics (4)**

Principles of statics using vectors. Two- and three-dimensional equilibrium of statically determinate structures under discrete and distributed loading including hydrostatics; internal forces and concept of stress; free body diagrams; moment, product of inertia; analysis of trusses and beams. **Prerequisites:** grade of C– or better in Math. 20C and Phys. 2A.

#### **SE 101B. Mechanics II: Dynamics (4)**

Kinematics and kinetics of particles in two- and three-dimensional motion. Newton's equations of motion. Energy and momentum methods. Impulsive motion and impact. Systems of particles. Kinetics and kinematics of rigid bodies in 2-D. Introduction to 3-D dynamics of rigid bodies. **Prerequisites:** grades of C– or better in SE 101A (or MAE 130A).

#### **SE 101C. Structural Mechanics III: Structural Dynamics (4)**

Free and forced vibrations of damped 1-DOF systems; vibrations isolation, impact and packaging problems. Analysis of discrete MDOF systems using matrix representation; normal mode of frequencies and modal matrix formulation. Lagrange's equations. Modal superposition for analysis of continuous vibrating systems. **Prerequisites:** grade of C– or better in Math. 20F and SE 101B (or MAE 130B).

#### **SE 102. Numerical, Computational, and Graphical Tools for Structural Engineering I (4)**

Numerical methods for initial value problems. Errors, Taylor series. Convergence. Solutions of linear equations. Gaussian elimination, multiplicative decomposition. Matlab is used for programming exercises and projects. **Prerequisites:** grade of C– or better in SE 1, SE 9, and SE 101A (or MAE 130A).

#### **SE 103. Conceptual Structural Design (4)**

Introduction to design principles and structural action. Development of design theories, approaches and methodology. Concepts of load and resistance factors, factors of safety, limit and ultimate states, design allowables. Simple design examples from aerospace, civil, marine, offshore and mechanical structural systems. **Prerequisites:** grade of C– or better in SE 2, SE 9, and SE 101A (or MAE 130A).

#### **SE 110A. Solid Mechanics I (4)**

Concepts of stress and strain. Hooke's law. Axial loading of bars. Torsion of circular shafts. Shearing and normal stresses in beam bending. Deflections in beams. Statically determinate and indeterminate problems. Combined loading. Principal stresses and design criteria. Buckling of columns. Students may not receive credit for SE 110A or MAE 131A

and SE 110A/MAE 131A. **Prerequisites:** grade of C– or better in Math. 20D and SE 101A (or MAE 130A).

#### **SE 110B. Solid Mechanics II (4)**

Advanced concepts in the mechanics of deformable bodies. Unsymmetrical bending of symmetrical and unsymmetrical sections. Bending of curved beams. Shear center and torsional analysis of open and closed sections. Stability analysis of columns, lateral buckling. Application of the theory of elasticity in rectangular coordinates. **Prerequisites:** grade of C– or better in SE 110A (or MAE 131A), SE majors.

#### **SE 111A–B. Steel Bridge Design Competition (2-2)**

Student teams design, test, and build a steel bridge for regional and national ASCE design competition. Students focus on learning ASCE guidelines, rules, and constraints for adherence to national competition policy. **Prerequisites:** grade of C– or better in SE 103 and SE 110A (or MAE 131A), SE 111A for SE 111B.

#### **SE 112A–B. Concrete Canoe Design Competition (2-2)**

Student teams design, test, and build a concrete canoe for regional and national ASCE design competition. Students focus on learning and applying specific fundamental ASCE competition rules, guidelines, and constraints into design. **Prerequisites:** grade of C– or better in SE 110A (or MAE 131A), SE 112A for SE 112B.

#### **SE 115. Fluid Mechanics for Structural Engineering (4)**

Fluid statics, hydrostatics; integral and differential forms of conservation equations for mass, momentum, and energy; Bernoulli equation; dimensional analysis; viscous pipe flow; external flow, boundary layers; open channel flow. **Prerequisites:** grade of C– or better in Phys. 2A, Math. 20D, and Math. 20E.

#### **SE 120. Engineering Graphics & Computer Aided Structural Design (4)**

Engineering graphics, solid modeling, CAD applications including 2-D and 3-D transformations, 3-D viewing, wire frame and solid models, Hidden surface elimination. **Prerequisite:** grade of C– or better in SE 102 and SE 103, SE majors.

#### **SE 121. Numerical Methods in Engineering (4)**

Advanced numerical methods for applications for engineering problems. Solution of systems of linear and nonlinear equations, function interpolation and curve fitting, function approximation, computation of integrals, numerical differentiation, and solution of systems of ordinary differential equations. **Prerequisites:** grade of C– or better in SE 102, SE major.

#### **SE 125. Statistics, Probability and Reliability (4)**

Probability theory. Statistics, data analysis and inferential statistics, distributions, confidence intervals. Introduction to structural reliability and random phenomena. Applications to components and systems. **Prerequisites:** SE majors.

#### **SE 130A–B. Structural Analysis (4)**

Classical methods of analysis for statically indeterminate structures. Development of computer codes for the analysis of civil, mechanical, and aerospace structures from the matrix formulation of the classical structural theory, through the direct stiffness formulation, to production-type structural analysis programs. **Prerequisites:** grades of C– or better in SE 110A (or MAE 131A), SE 130A for SE 130B. Priority enrollment given to structural engineering majors.

#### **SE 131. Finite Element Analysis (4)**

Development of stiffness and mass matrices based upon variational principles. Application to static and dynamic problems in structural and solid mechanics. The use of general purpose finite element structural analysis codes. **Prerequisites:** grade of C– or better in SE 121, SE 130B, and SE major.

#### **SE 140. Structures and Materials Laboratory (4)**

Introduction to instrumentation and testing techniques. Discussion of standard tension and compression tests. Similitude relationships for structural models. Term project in model structure including complete engineering report on theory, design and results of the term project. Program and or materials fee may apply. **Prerequisites:** grade of C– or better in SE 103, SE 130B, MAE 170, and senior standing in the major.

#### **SE 142. Design of Composite Structures (4)**

Design and analysis of lightweight structures composed of laminated composite materials. Stiffness, strength, failure mechanisms, micromechanics, and hygrothermal behavior. Fabrication and experimental testing. Design projects that involve computer implementation. **Prerequisites:** SE 110A (or MAE 131A) and SE 110B.

#### **SE 150. Design of Steel Structures (4)**

Design concepts and loadings for structural systems. Working stress and ultimate strength design theories. Properties of structural steel. Elastic design of tension members, beams, and columns. Design of bolted and welded concentric and eccentric connections. Design of composite floors. Introduction to plastic design. **Prerequisites:** grade of C– or better in SE 103, and SE 130A. Priority enrollment given to structural engineering majors.

#### **SE 151A. Design of Reinforced Concrete (4)**

Concrete and reinforcement properties. Service and ultimate limit state analysis and design. Design and detailing of structural components. **Prerequisites:** grade of C– or better in SE 103 and SE 130A.

#### **SE 151B. Design of Prestressed Concrete (4)**

Time-dependent and independent properties of concrete and reinforcing material. Concept and application of prestressed concrete. Service and ultimate limit state analysis and design of prestressed concrete structures and components. Detailing of components. Calculation of deflection and prestress losses. **Prerequisite:** grade of C– or better in SE 151A.

#### **SE 152. Seismic Design of Structures (4)**

Seismic design philosophy. Ductility concepts. Lateral force resisting systems. Mechanisms of nonlinear deformation. Methods of analysis. Detailing of structural steel and reinforced concrete elements. Lessons learned from past earthquakes. Multistory building design project. **Prerequisites:** grade of C– or better in SE 103, SE 130A, SE 150, and SE 151A; concurrent enrollment in SE 151B.

#### **SE 154. Design of Timber Structures (4)**

Properties of wood and lumber grades. Beam design. Design of axially loaded members. Design of beam-column. Properties of plywood and structural-use panels. Design of horizontal diaphragms. Design of shear walls. Design of nailed and bolted connections. **Prerequisites:** grade of C– or better in SE 103 and SE 130A; SE major.

#### **SE 160A. Aerospace Structural Mechanics I (4)**

Aircraft and spacecraft flight load definition and operational envelopes, metallic and composite material selection and comparison, applied elasticity, failure theories, stiffened shear panels, thin-wall open and closed-cell torsion pressure vessels, unsymmetrical beam bending, shear center, and bending of plates. **Prerequisites:** grade of C– or better in SE 2, SE 101B (or MAE 130B), and SE 110A (or MAE 131A). Priority enrollment given to engineering majors.

#### **SE 160B. Aerospace Structural Mechanics II (4)**

Work-energy principles, matrix models, bending of plates and shells, structural stability of beams and plates, tension field beams, wing divergence and control reversal, vibration damping and flutter, fasteners and structural joints, structural test methods. **Prerequisites:** grade of C– or better in SE 160A. Priority enrollment given to engineering majors.

#### **SE 163. Nondestructive Evaluation (4)**

Damage detection, materials characterization. Introduction to nondestructive evaluation. Impedance-based methods, ultrasonics, acoustic, thermography, shearography, liquid penetrant, proof testing, stress coatings, vibrational techniques. **Prerequisites:** grade of C– or better in SE 110A and SE 110B or consent of instructor; SE major.

#### **SE 168. Structural System Testing and Model Correlation (4)**

Dynamic/model testing of structures: test planning/execution, actuation, sensing, and data acquisition, signal processing, data conditioning, test troubleshooting. Methods of updating finite element structural models to correlate with dynamic test results. Model/test correlation assessment in industrial practice. Knowledge of MATLAB strongly encouraged. **Prerequisites:** grade of C– or better in SE 101C (or MAE 130C) and SE 131.

**SE 170. Civil Structures Rehabilitation (4)**

Identification of structural distress, lessons from past history, materials and structural concepts related to rehabilitation, seismic retrofit. Strengthening of beams, slabs and walls, design detailing, safety factors, fabrication/installation methods. **Prerequisites:** grade of C– or better in SE 103, SE 130A-B, SE 151A.

**SE 171. Aerospace Structures Repair (4)**

Identification of structural distress, corrosion/stress corrosion cracking, fatigue cracking, damage tolerance, integrity and durability of built-up members, patching, health monitoring. **Prerequisites:** grade of C– or better in SE 130B or SE 160B.

**SE 180. Earthquake Engineering (4)**

Elements of seismicity and seismology. Seismic hazards. Dynamic analysis of structures underground motion. Elastic and inelastic response spectra. Modal analysis, nonlinear time-history analysis. Earthquake resistant design. Seismic detailing. **Prerequisites:** grade of C– or better in SE 110A, and SE 130A. Priority enrollment given to structural engineering majors.

**SE 181. Geotechnical Engineering (4)**

General introduction to physical and engineering properties of soils. Soil classification and identification methods. Compaction and construction control. Total and effective stress. Permeability, seepage, and consolidation phenomena. Shear strength of sand and clay. **Prerequisites:** grade of C– or better in SE 110A or MAE 131A; SE major.

**SE 182. Foundation Engineering (4)**

Application of soil mechanics to the analysis, design, and construction of foundations for structures. Soil exploration, sampling, and in-situ testing techniques. Stress distribution and settlement of structures. Bearing capacities of shallow foundations. Axial and lateral capacity of deep foundations, earth pressures on retaining walls. **Prerequisites:** grade of C– or better in SE 181; SE major.

**SE 183/246. Engineering Geology (4)**

Influence of geology on design of engineering works. Mineral and rock identification and their engineering behavior. Geologic mapping. Rock mechanics, rock slope stability, and tunnel engineering. Local field trips. **Prerequisites:** senior standing; priority enrollment is given to structural engineering majors; graduate standing required for SE 246.

**SE 192. Senior Seminar (1)**

The Senior Seminar is designed to allow senior undergraduates to meet with faculty members to explore an intellectual topic in structural engineering. Topics will vary from quarter to quarter. Enrollment is limited to twenty students with preference given to seniors. **Prerequisites:** SE major. Department stamp and/or consent of instructor.

**SE 195. Teaching (2–4)**

Teaching and tutorial assistance in a SE course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. (P/NP grades only.) **Prerequisites:** B average in major, upper-division standing and consent of department chair. Department stamp required.

**SE 197. Engineering Internship (1–4)**

An enrichment program, available to a limited number of undergraduate students, which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industrial supervisor. Coordination of the Engineering Internship is conducted through UCSD's Academic Internship Program. **Prerequisites:** completion of ninety units with a 2.5 GPA and consent of department chair. Department stamp required.

**SE 198. Directed Study Group (4)**

Directed group study, on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. (P/NP grades only.) **Prerequisite:** consent of instructor or department stamp.

**SE 199. Independent Study (1–4)**

Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) **Prerequisite:** consent of instructor or department stamp.

**GRADUATE****SE 200. Applied Mathematics in Structural Engineering (4)**

This course is designed to give beginning graduate students the basic preparation in mathematical methods required for graduate Structural Engineering courses. Topics include systems of linear algebraic equations; ordinary differential equations; diffusion and wave propagation problems; and calculus variation. **Prerequisite:** graduate standing.

**SE 201. Advanced Structural Analysis (4)**

Applications of advanced analytical concepts to structural engineering problems. Effects of approximations in the discretization and the type of finite elements under consideration. An introduction is given to the nonlinear behavior of structural systems focusing on basic concepts and computational techniques. **Prerequisites:** SE 130A-B or equivalent, or consent of instructor.

**SE 202. Structural Stability (4)**

Static, dynamic, and energy-based techniques and predicting elastic stability. Linear and nonlinear analysis of classical and shear deformable beams and plates. Ritz, Galerkin, and finite element approaches for frames and reinforced shells. Nonconservative aerodynamic (divergence flutter) and follower forces. **Prerequisite:** SE 110B or consent of instructor.

**SE 203. Structural Dynamics (4)**

Response of the linear systems to harmonic, periodic and transient excitations. Duhamel's integral response spectra. Principles of dynamics, Lagrange's equations. Linearization of the equations of motion. Free and forced vibrations. Normal mode and frequency response method. **Prerequisite:** graduate standing or consent of instructor.

**SE 204. Advanced Structural Dynamics (4)**

Free- and forced-vibration response of continuous systems including axial and torsional vibrations of bars and transverse vibrations of beams, membranes and plates. Differential integral formulations of the eigenvalue problem. Perturbation and iteration methods. Introduction to nonlinear vibrations structural control. **Prerequisite:** graduate standing.

**SE 205. Nonlinear Mechanical Vibrations (4)**

Advanced analytical techniques to understand nonlinearity in mechanical vibration. Phase plane analysis instability, and bifurcations. Application in nonlinear structural resonance. Introduction to chaotic dynamics, advanced time series analysis, and using chaotic dynamics in applications such as structural damage assessment. **Prerequisite:** SE 206 or consent of instructor.

**SE 206. Random Vibrations (4)**

Introduction to probability theory and random processes. Correlation and power spectral density functions. Estimation of correlation functions, ergodicity. Stochastic dynamic analysis of structures subjected to stationary and non-stationary random excitations. Crossings, first-escursion probability, distributions of peaks and extremes.

**SE 207. Topics in Structural Engineering (4)**

A course to be given at the discretion of the faculty in which topics of current interest in structural engineering will be presented.

**SE 211. Advanced Reinforced and Prestressed Concrete Design (4)**

Advanced topics in concrete design, including frame and shear wall structures, design of connections. reinforced and prestressed concrete system evaluation for seismic resistance including confinement and ductility requirements. Upper and lower bound theories for slab design. **Prerequisite:** SE 151A, or equivalent background in basic RC/PC design, or consent of instructor.

**SE 212. Advanced Structural Steel Design (4)**

Load and Resistance Factor Design (LRFD) philosophy. Behavior and design of steel elements for global and local buckling. Background of seismic codes. Ductility requirements and capability design concept. Seismic design of steel moment frames and braced frames. **Prerequisites:** SE 201 and SE 150, or equivalent course, or consent of instructor.

**SE 213. Bridge Design (4)**

Design and analysis of bridge structures, construction methods, load conditions. Special problems in analysis—box girders, curved and skewed bridges, environmental and seismic loads. Bearings and expansion joints. Time-temperature-dependent superstructure deformations. Conceptual/preliminary bridge design project. **Prerequisites:** SE 201 and fundamental courses in RC and PC design, or consent of instructor.

**SE 214. Masonry Structures (4)**

Analysis and design of unreinforced and reinforced masonry structure using advanced analytical techniques and design philosophies. Material properties, stability, and buckling of unreinforced masonry. Flexural strength, shear strength, stiffness, and ductility of reinforced masonry elements. Design for seismic loads. **Prerequisites:** SE 151A, B, or equivalent basic reinforced concrete course, or consent of instructor; graduate standing.

**SE 215. Cable Structures (4)**

The course deals with cable structures from a structural mechanics point of view. The theoretical and practical aspects of the application of cables to moorings, guyed structures, suspension bridges, cable-stayed bridges, and suspended membranes are discussed. **Prerequisite:** graduate standing or consent of instructor.

**SE 220. Seismic Isolation and Energy Dissipation (4)**

Concepts, advantages and limitations of seismic isolation techniques; fundamentals of dynamic response under seismic excitation; spectral analysis; damping; energy approach; application to buildings and structures. **Prerequisite:** background in structural dynamics, or consent of instructor

**SE 221. Earthquake Engineering (4)**

Introduction to plate tectonics and seismology. Rupture mechanism, measures of magnitude and intensity, earthquake occurrence and relation to geologic, tectonic processes. Probabilistic seismic hazard analysis. Strong earthquake ground motion; site effects on ground motion; structural response; soil-structure interaction; design criteria; code requirements.

**SE 222. Geotechnical Earthquake Engineering (4)**

Influence of soil conditions on ground motion characteristics; dynamic behavior of soils, computation of ground response using wave propagation analysis and finite element analysis; evaluation and mitigation of soil liquefaction; soil-structure interaction; lateral pressures on earth retaining structures; analysis of slope stability.

**SE 223. Advanced Seismic Design of Structures (4)**

Fundamental concepts in seismic design. Innovative earthquake resistant system. Passive energy dissipation systems. Metallic friction, viscoelastic dampers. Self-centering devices. Tuned-mass dampers. Theory of seismic isolation. Metallic bearings. Lead-extrusion bearings. Sliding bearings. Laminated rubber bearings. Lead-rubber bearings. **Prerequisite:** graduate standing.

**SE 224. Structural Reliability and Risk Analysis (4)**

Probability theory and random processes; fundamentals of structural reliability theory. Modern methods of structural reliability analysis including computational aspects; structural component and system reliability. Reliability-based design codes; structural modeling for performance and safety. Risk analysis of structural systems. **Prerequisite:** basic knowledge of probability theory (e.g., SE 125)

**SE 233. Computational Techniques in Finite Elements (4)**

Practical application of the finite element method to problems in solid mechanics including basic preprocessing and postprocessing. Topics include element types, mesh refinement, boundary conditions, dynamics, eigenvalue problems, and linear and nonlinear solution methods.

**SE 234. Plates and Shells (4)**

General mathematical formulation of the theory of thin elastic shells; linear membrane and bending theories; finite strain and rotation theories; shell of revolution; shallow shells; selected static and dynamic problems; survey of recent advances. **Prerequisite:** graduate student standing.

**SE 235. Wave Propagation in Elastic Media (4)**

Wave propagation in elastic media with emphasis on waves in unbound media and on uniform and layered half-spaces. Fundamental aspects of elastodynamics. Application to strong-motion seismology, earthquake engineering, dynamics of foundations, computational wave propagation, and non-destructive evaluations. **Prerequisite:** graduate standing or consent of instructor.

**SE 236. Wave Propagation in Continuous Structural Elements (4)**

Propagation of elastic waves in thin structural elements such as strings, rods, beams, membranes, plates and shells. An approximate strength-of-materials approach is used to consider propagation of elastic waves in these elements and obtain the dynamic response to transient loads. **Prerequisite:** graduate standing or consent of instructor.

**SE 241. Advanced Soil Mechanics (4)**

Advanced treatment of topics in soil mechanics, including state of stress, pore pressure, consolidation and settlement analysis, shear strength of cohesionless and cohesive soils, mechanisms of ground improvement, and slope stability analysis. Concepts in course reinforced by laboratory experiments.

**SE 242. Advanced Foundation Engineering (4)**

Advanced treatment of topics in foundation engineering, including earth pressure theories, design of earth retaining structures, bearing capacity, ground improvement for foundation support, analysis and design of shallow and deep foundations, including drilled piers and driven piles.

**SE 243. Soil-Structure Interaction (4)**

Advanced treatment of soils interaction with structures, including shallow and deep foundations, bridge abutments, retaining walls, and buried structures subjected to static and dynamic loading. Elastic approximation. Linear and nonlinear Winkler models p-y and t-z curves.

**SE 245. Constitutive Modeling and Numerical Implementation (4)**

Development and numerical implementation of procedures to model the nonlinear behavior of engineering materials, including soil and concrete. Inelastic hyperbolic and elasto-plastic modeling of hysteretic response to cyclic loading. Behavior of soil-structure systems under transient loading, such as seismic earthquake excitation.

**SE 246. Engineering Geology (4)**

Influence of geology on design of engineering works. Mineral and rock identification and their engineering behavior. Geologic mapping. Rock mechanics, rock slope stability, and tunnel engineering. Local field trips. (Graduate students are required to submit a term project based on two extended weekend field trips and self-guided research.)

**SE 251A. Processing Science of Composites (4)**

Introduction to processing, fabrication methods; process models; materials-process-microstructure interaction; materials selection; form and quality control. Wet layup/sprayup, autoclave cure, SMC; injection molding, RTM; resin infusion; winding and fiber placement; pultrusion. Process induced defects, environmental considerations. **Prerequisite:** graduate standing.

**SE 251B. Mechanical Behaviors of Polymers and Composites (4)**

Material science oriented course on polymers and composites. Mechanical properties of polymers; micromechanisms of elastic and plastic deformations, fracture, and fatigue of polymers and composites. Graduate student standing required.

**SE 252. Experimental Mechanics and NDE (4)**

Theory of electrical resistance strain gages, full-field coherent optical methods including photoelasticity, moiré and speckle interferometry, ultrasonics, thermography and fiberoptic sensing. Applications to materials characterization, defect detection and health monitoring of structures with emphasis on fiber-reinforced composites. **Prerequisites:** SE 101A, SE 110A, and MAE 131B, or consent of instructor.

**SE 253A. Mechanics of Laminated Composite Structures I (4)**

Graduate-level introductory course on mechanics of composites and anisotropic materials. Overview of composite materials and processes, 3-D properties and stress-strain relationships, micromechanics, classical laminated plate theory, basic failure criteria, thermal/moisture/CTE. Students may not receive credit for both SE 253A and SE 250. **Prerequisite:** graduate standing.

**SE 253B. Mechanics of Laminated Composite Structures II (4)**

Advanced topics, with prerequisite being SE 253A, or equivalent. Macro- and micro-material modeling, classical and shear deformable laminate beam and plate theories developed via energy principles, Ritz, Galerkin, and Finite element based solutions, advanced failure theories, fracture, holes/notches and hole-size effect, interlaminar stresses, free-edge problems, impact, damage tolerance, fatigue, elastic tailoring, thermally stable/zero CTE structures, etc. **Prerequisites:** SE 253A or equivalent, graduate standing.

**SE 253C. Mechanics of Laminated Anisotropy Plates and Shells (4)**

Static, dynamic, and elastic stability of laminated anisotropic plates and cylindrical shells. Theories covered include thin-plate (classical lamination theory), first- and third-order shear-deformable (Reissner-Mindlin, and Reddy) thick plates, and refined layer-wise theories. Solution methods covered include exact, approximate (Ritz, Galerkin) and the finite element method. Additional topics include sandwich construction, elastic couplings, thermal response, shear factor determination, fiber and interlaminar stress recovery, strength, and safety considerations. **Prerequisites:** graduate student standing required; must have taken SE 253B or equivalent, or consent of instructor.

**SE 254. FRPs in Civil Structures (4)**

Strengthening of existing reinforced concrete structures with fiber reinforced composites. Mechanics of Fiber Reinforced Plastic lamina, bond strength of FRP-to-concrete joints, shear and flexural strengthening of beams and walls, increased strength and ductility of axially loaded columns, and seismic retrofit of columns. **Prerequisites:** SE 142 Design of Composite Structures or equivalent, SE 251A Processing Science of Composites.

**SE 255. Textile Composite Structures (4)**

Introduction to textile structure and behavior, mechanics of yarns and fabrics as relevant to structural composites and geotechnical applications. Mechanics of textiles and fabric-based composites. Applications in fiber reinforced composites, coated textile structures, geotextiles.

**SE 261. Aerospace Engineering Design (4)**

Advanced topics in the design of weight-critical aerospace structures. Topics include: static, dynamic and environmental load definitions; metallics and polymeric composite material selection; semi-monocoque analysis techniques, and bolted/bonded connections. Design procedures for sizing the structural components of aircraft and spacecraft will be reviewed.

**SE 262. Aerospace Structures Repair (4)**

Design and analysis for repairing weight-critical aerospace structures. Identification of primary and secondary structural components, review of NASA/FAA approved repair techniques for metallic and composite structural components.

**SE 265. Structural Health Monitoring (4)**

A modern paradigm of structural health monitoring as it applies to structural and mechanical systems is presented. Concepts in data acquisition, feature extraction, data normalization, and statistical modeling will be introduced in an integrated context. MATLAB-based exercises. Term project. **Prerequisites:** graduate student, undergraduate vibrations or structural dynamics course.

**SE 271. Solid Mechanics for Structural and Aerospace Engineering (4)**

Application of principles of solid mechanics to structural components and systems, description of stresses, strains, and deformation. Use of conservation equations and principle of minimum potential energy. Development

of constitutive equations for metallic cementitious and polymeric materials. **Prerequisite:** SE 110A or consent of instructor.

**SE 272. Theory of Elasticity (4)**

Development, formulation, and application of field equations of elasticity and variational principles for structural applications in civil and aerospace area. Use of plane stress and plane strain formulation, solution of typical boundary value problems. **Prerequisite:** SE 271 or consent of instructor.

**SE 273. Anelasticity (4)**

Mechanical models of viscoelastic, plastic, and viscoplastic behavior in simple shear or uniaxial stress. Constitutive relations for three-dimensional states of stress and strain. Application to selected technological problems. **Prerequisites:** graduate standing and SE 271 and SE 272, or MAE 231A and MAE 231B, or consent of instructor.

**SE 274. Nonlinear Finite Element Methods for Solid Mechanics (4)**

Modeling of mechanical deformation processes in solids and structures by the finite element method. PDE models of deformations in solids and structures. Weak form. Weighted residual method. Material models for 3D solids and rods, beams, shells: elasticity, plasticity, viscoplasticity. **Prerequisite:** graduate standing.

**SE 275. Hydrodynamics in Marine Engineering (4)**

Fluid dynamics equations; potential flow-theory; basic potential-flow solutions; added mass; 6-DOF hydrodynamic forces/moments on a body; water wave theory; irregular wave field; wave-body interactions; high/low-frequency responses; vortex-induced vibrations; galloping; numerical methods. **Prerequisite:** graduate standing.

**SE 276A. Finite Element Methods in Solid Mechanics I (4)**

Finite element methods for linear problems in solid mechanics. Emphasis on the principle of virtual work, finite element stiffness matrices, various finite element formulations and their accuracy and the numerical implementation required to solve problems in small strain, isotropic elasticity in solid mechanics.

**SE 276B. Finite Element Methods in Solid Mechanics (4)**

Finite element methods for linear problems in structural dynamics. Beam, plate, and doubly curved shell elements are derived. Strategies for eliminating shear locking problems are introduced. Formulation and numerical solution of the equations of motion for structural dynamics are introduced and the effect of different mass matrix formulations on the solution accuracy is explored.

**SE 276C. Finite Element Methods in Solid Mechanics III (4)**

Finite element methods for problems with both material and geometrical (large deformations) nonlinearities. The total LaGrangian and the updated LaGrangian formulations are introduced. Basic solution methods for the nonlinear equations are developed and applied to problems in plasticity and hyperelasticity. **Prerequisites:** graduate standing and SE 276A or MAE 232A and MAE 231A or SE 271.

**SE 277. Error Control in Finite Element Analysis (4)**

This course will provide an overview of the latest technology for evaluating and improving the accuracy and validity of linear and nonlinear finite element models, solution verification, finite element model validation, sensitivity analysis, uncertainty analysis, and test-analysis correlation. **Prerequisite:** SE 232B or MAE 232B.

**SE 278A. Finite Element Methods for Computational Fluid Dynamics (4)**

Development and application of advanced computational techniques for fluid flow. Stabilized and variational multiscale methods for finite element and related discretizations are stressed. Applications involve advection-diffusion equations and systems, and incompressible and compressible Navier-Stokes equations. Turbulence modeling will also be covered. **Prerequisite:** MAE 232A or SE 276A or consent of instructor.

**SE 278B. Computational Fluid-Structure Interaction (4)**

Conservation laws on general moving domains. Arbitrary Lagrange-Eulerian (ALE) and space-time approaches to fluid-structure interaction are covered. Suitable discretizations, mesh motion, and discrete solution strategies are discussed. **Prerequisite:** SE 278A.

**SE 290. Seminar in Earthquake Engineering (2)**

Weekly seminar and discussion by faculty, visitors, postdoctoral research fellows and graduate students concerning research topics in earthquake engineering and related subjects. May be repeated for credit. (S/U grades only.)

**SE 296. Independent Study (4)**

**Prerequisite:** consent of instructor.

**SE 298. Directed Group Study (1-4)**

Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. **Prerequisite:** consent of instructor.

**SE 299. Graduate Research (1-12)**

(S/U grades permitted.)

**SE 501. Teaching Experience (2)**

Teaching experience in an appropriate SE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. **Prerequisites:** consent of instructor and the department. (S/U grades permitted.)

# English as a Second Language

---

OFFICE: 232 Literature Building, Warren College  
<http://basicwriting.ucsd.edu>

The English as a Second Language Program (ESL) offers course work specific to the language needs of students for whom English is a second (or subsequent) language. This course is SDCC 4.

SDCC 4 is a required course for all undergraduates who have not satisfied the UC Entry Level Writing requirement and who have been designated as needing the course based on their UC Analytical Writing Placement Examination. A combination of instructor recommendation, Entry Level Writing Exit Exam result, and a possible portfolio review places students in SDCC 4 for another quarter, in SDCC 1, or in a college writing sequence. Like SDCC 1, SDCC 4 is taught through a cooperative agreement with the San Diego Community College District. Under Academic Senate regulations, SDCC 4 cannot be counted toward graduation requirements; however, the course units do count as workload credit toward the Minimum Progress requirement and toward eligibility for financial assistance.

For further information about the UC Entry Level Writing Requirement or the UC Analytical Writing Placement Exam, please visit the Basic Writing office, or call (858) 534-6177.

# Entry Level Writing

---

OFFICE: 232 Literature Building  
<http://basicwriting.ucsd.edu/>

For information about satisfying the University of California Entry Level Writing requirement, especially prior to enrollment, please refer to "[UC Entry Level Writing Requirement](#)" in the catalog section "[Academic Regulations](#)."

Students who have not satisfied the UC Entry Level Writing requirement before enrolling at UC San Diego must satisfy the requirement by achieving a grade of C or better in SDCC 1 (English Composition—Entry Level Writing) and by passing the Entry Level Writing Exit Examination given at the end of SDCC 1. That examination is administered by the Basic Writing Program office. Students must enroll in SDCC 1 or SDCC 4 during the first quarter of residence at UCSD. SDCC 1 and SDCC 4 are Mesa College courses taught at UCSD as part of a cooperative program with the San Diego Community College District.

Under Academic Senate regulations, SDCC 1 and SDCC 4 cannot be counted toward graduation requirements; however, the course units do count as workload credit toward the minimum progress requirement and toward eligibility for financial assistance.

For further information about the UC Entry Level Writing requirement or the UC Analytical Writing Placement Examination, please visit the Basic Writing office, 232 Literature Building, or call (858) 534-6177.

## MINOR IN ENVIRONMENTAL STUDIES

The Environmental Studies minor offers students from every major a basic grounding in the scientific, technical, social, and cultural issues presented by the interaction of human beings with their environment and the need to build a more environmentally sustainable future.

The two required courses, ENVR30 and ENVR130, have no prerequisites. Some of the other courses related to the minor, particularly those in Group A, have significant prerequisites; students planning an Environmental Studies minor should check catalog course descriptions carefully. Some credit toward the minor may be gained through independent study, field research, study abroad, the Academic Internship Program, and others (prior approval strongly recommended). Petitions for petitionable courses, transfer courses, and individual additions to the courses listed below must be approved by the chair of the Environmental Studies Steering Committee. For updates, individual advising, and quarterly lists, please come to the Environmental Studies Office: Muir Interdisciplinary Studies, 2113 H&SS # 0106, phone (858) 534-3589.

## APPLICABLE AND PETITIONABLE COURSES

Environmentally-based courses offered by UC San Diego departments fall into two categories: applicable and petitionable. Applicable courses are those which have been approved as always applying to the ENVR minor. Petitionable courses are either

new and therefore not yet approved as applicable or are "topics" courses which focus on environmental matters only in particular quarters. Petitionable courses may be approved by petition to the minor during the quarters in which they appear in the ENVR quarterly lists.

## QUARTERLY LISTS

Each quarter, when the upcoming quarter's *Schedule of Classes* is published, the Environmental Studies quarterly list is available in 2113 HSS and at the Web site. It is an important, comprehensive source of information about ENVR course offerings as well as those from departments throughout the campus. It identifies applicable as well as petitionable courses for a given quarter. For reference, the office and the Web site maintain archives of quarterly lists.

The minor is structured as follows:

- Required:
- Environmental Studies 30, usually offered in the fall quarter.
  - Environmental Studies 130, usually offered in the winter quarter (need not be taken consecutively).
- Required:
- Five additional courses, at least four in the upper-division, from the following two groups. At least one course must be taken from Group A and one from Group B.

### Group A—Natural Sciences

Biology LD 3. Organismic and Evolutionary Biology  
BIEB 121. General Ecology Laboratory  
BIEB 131. Marine Invertebrate Ecology Laboratory  
BIEB 132. Introduction to Marine Biology  
BIEB 134. Introduction to Biological Oceanography  
BIEB 140. Biodiversity  
BIEB 165. Behavioral Ecology Laboratory  
BIEB 166. Animal Behavior and Communication  
BIEB 176. Conservation and the Human Predicament (cross-listed with ANBI 132)  
Chemistry 15. Chemistry of the Universe  
Chemistry 149A. Environmental Chemistry  
Chemistry 149B. Environmental Chemistry  
Chemistry 173. Atmospheric Chemistry  
Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a natural sciences perspective)  
Environmental Systems 101. The Living Earth  
Environmental Systems 103. The Human Earth  
Environmental Systems 120. Science and Environmental Writing  
MAE 118A. Energy: Non-Nuclear Energy Technologies  
Physics 12. Energy and the Environment  
Science, Technology, Public Affairs 35. Society and the Sea  
SIO 10. The Earth  
SIO 12. History of Earth and Evolution  
SIO 15. Natural Disasters  
SIO 16. Geology of National Parks  
SIO 20. The Atmosphere  
SIO 30. The Oceans  
SIO 35. Water  
SIO 110. Introduction to GIS and GPS for Scientists

### Group B—Social Sciences/Humanities

ANAR 108. Archaeology of the UCSD Campus  
ANAR 182. Origins of Agriculture and Sedentism  
ANBI 132. Conservation and the Human Predicament (cross-listed with BIEB 176)  
ANSC 160. Nature, Culture and Environmentalism Communication  
CUL 148. Communication and the Environment  
Economics 131. Economics of the Environment  
Economics 132. Energy Economics  
Economics 145. Economics of Ocean Resources  
Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a humanities/social sciences perspective)  
Environmental Studies 110. Environmental Law  
Environmental Studies 140. Wilderness and Human Values  
Ethnic Studies 103. Environmental Racism  
History US 154. Western Environmental History  
IRPS GN 458. International Environmental Policy and Politics  
IRPS GN 459. Conflict Resolution of Environmental Issues  
Philosophy 148. Philosophy and the Environment  
Philosophy 164. Technology and Human Values  
Political Science 162. Environmental Policy  
Soc/C 149. Sociology of the Environment  
Urban Studies & Planning 2. Urban World System  
Urban Studies & Planning 124. Land Use Planning  
Urban Studies & Planning 144. Environmental and Preventive Health Issues  
Urban Studies & Planning 171. Sustainable Development

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### 30. Environmental Issues: Natural Sciences (4)

Examines global and regional environmental issues. The approach is to consider the scientific basis for policy options. Simple principles of chemistry and biology are introduced. The scope of problems include: air and water pollution, climate modification, solid-waste disposal, hazardous-waste treatment, and environmental impact assessment. **Prerequisite:** none.

### 87. Environmental Studies Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

### 102. Selected Topics in Environmental Studies (4)

An interdisciplinary course focusing on one of a variety of topics related to environmental studies such as environmental policy and politics, foreign study in environmental problems, environmental history, nature writers, ethics and the environment. May be repeated for credit as topics vary. **Prerequisite:** upper-division standing or consent of instructor.

### 110. Environmental Law (4)

Explores environmental policy in the United States and the ways in which it is reflected in law. The social and political issues addressed include environmental justice and environmental racism, as well as the role of government in implementing environmental law. **Prerequisite:** upper-division standing or consent of instructor.

**120. Coastal Ecology (4)**

Explores the diverse ecosystems of coastal San Diego County (salt marsh, rocky intertidal, sandy beach, etc.) in the classroom and in the field with attention to basic principles of field ecology, natural history, and techniques for collecting ecological data. Course and/or materials fee may apply. **Prerequisite:** upper-division standing or consent of instructor.

**130. Environmental Issues: Social Sciences (4)**

Explores contemporary environmental issues from the perspective of the social sciences. It includes the cultural framing of environmental issues and appropriate social action, the analysis of economic incentives and constraints, and a comparison of policy approaches. **Prerequisite:** upper-division standing or consent of instructor.

**140. Wilderness and Human Values (4)**

"Wilderness" plays a central role in the consciousness of American environmentalists and serves as focal point for public policies, recreation, and political activism. This course explores its evolving historical, philosophical, ecological, and aesthetic meanings and includes guest speakers and a field component. **Prerequisite:** upper-division standing or consent of instructor.

**141. Wilderness and Human Values Workshop (2)**

A course to prepare students to serve as discussion leaders for ENVR 140, Wilderness and Human Values. Includes reading, discussion, library and on-line research, and field trips. **Prerequisites:** consent of instructor and department stamp.

**192. Senior Seminar in Environmental Studies (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in Environmental Studies (at the upper-division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** upper-division standing, department stamp and/or consent of instructor. (Not offered in 2009–10.)

**195. Apprentice Teaching (0-4)**

Instructor will define assistant's responsibilities in preparing class presentations, leading students' discussions, and evaluating students' work.

**198. Directed Group Study (4)**

Directed group research and study, normally with a focus on areas not otherwise covered in the curriculum. **Prerequisites:** upper-division standing or consent of instructor. Department stamp required.

**199. Independent Study (4)**

Independent study in a topic not generally covered in the regular curriculum.

**500. Apprentice Teaching in Environmental Studies (4)**

A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. **Prerequisite:** graduate standing.

## PROGRAM FACULTY

Mark H. Thiemens, *Professor, Chemistry and Biochemistry, Program Director*  
Jane Teranes, *Lecturer, Associate Director*  
Eric E. Allen, *Assistant Professor, Marine Biology, SIO*  
Donna Blackman, *Research Geophysicist, SIO*  
Ronald S. Burton, *Professor, Marine Biology, SIO*  
Richard T. Carson, *Professor, Economics*  
Christopher D. Charles, *Professor, Oceanography, SIO*  
Elsa E. Cleland, *Assistant Professor, Biology*  
Clark Gibson, *Professor, Political Science*  
Sarah T. Gille, *Associate Professor, MAE, SIO*  
Joshua S. Graff Zivin, *Associate Professor, International Relations and Pacific Studies*  
Kim Griest, *Professor, Physics*  
Amro M. Hamdoun, *Assistant Professor, Marine Biology, SIO*  
Philip Hastings, *Professor, Marine Biology, SIO*  
Myrl C. Hendershott, *Professor, Oceanography, SIO*  
David R. Hilton, *Professor, Geochemistry, SIO*  
William S. Hodgkiss, *Professor, Electrical Engineering, SIO*  
David A. Holway, *Associate Professor, Biology*  
Miriam Kastner, *Professor, Geosciences, SIO*  
Lisa Levin, *Professor, Integrative Oceanography, SIO*  
Paul Linden, *Professor, MAE*  
Kim McDonald, *Lecturer, Director of Science Communication*  
Joel Norris, *Associate Professor, Climate Sciences, SIO*  
Brian Palenik, *Professor, Marine Biology, SIO*  
Keith Pezzoli, *Lecturer, Urban Studies and Planning*  
Frank L. Powell, *Professor, Medicine/Director, White Mountain Research Station*  
Jeffrey B. Rimmel, *Professor, Mathematics*  
Lisa Shaffer, *Executive Director, Environmental Sustainability Initiative*  
John Sclater, *Professor, Marine Geophysics, SIO*  
Richard C. J. Somerville, *Professor Emeritus, Climate Sciences, SIO*  
Hubert Staudigel, *Research Geophysicist, SIO*  
Lynne Talley, *Professor, Physical Oceanography, SIO*  
Lisa Tauxe, *Professor, Geosciences, SIO*  
David Woodruff, *Professor, Biology*  
Junjie Zhang, *Assistant Professor, International Relations and Pacific Studies*  
OFFICE: 188 Galbraith Hall, Revelle College

There can be little doubt that in the twenty-first century the global human community is facing a substantial growth in the environmental consequences in providing food, energy, materials, and basic services to a population of almost 6.5 billion inhabitants. The Environmental Systems Program (ESYS) recognizes the growing demand for environmental specialists and is designed to prepare undergraduates to enter a broad spectrum of environmental careers and graduate programs in, for example, the natural sciences, the social sciences, public policy, law, and business.

This interdisciplinary program recognizes that local, national, regional, international, and global environmental problems do not fit neatly into traditional academic departments. A measurable part of society's inability to effectively manage complex environmental problems stems from the lack of specialists who can apply analytical tools that cross disciplinary boundaries. Many environmental specialists possess little training in the natural sciences including both the fundamental ideas and methodologies of the earth and environmental sciences. The environmental systems major was created to address both of these shortcomings.

To encourage and foster an interdisciplinary focus in the major, the Environmental Systems Program is supported by a wide range of UC San Diego faculty representing the natural sciences, the social sciences, the humanities, engineering, and medicine. The program includes a required lower-division core, an upper-division "integrating course sequence," two other upper-division courses and statistics, an advanced track, and a senior integrative project and seminar. There is a strong emphasis on a rigorous natural science foundation as well as an introduction to the policy sciences for all students enrolled in the major. The Environmental Systems Program places a significant value on interdisciplinary problem solving and all majors are expected to complete an integrative Senior Project in their final year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic. Appropriate topics for the Senior Project could conceivably include biodiversity conservation, coastal zone management, environmental health, climate change, environmental justice, and/or urban air quality. An important component of the Senior Project is an off-campus or laboratory internship where students might work on, for example, the development of a comprehensive management plan for a threatened ecosystem. The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects.

## THE ENVIRONMENTAL SYSTEMS MAJOR

The requirements for completion of the environmental systems major include a lower-division core, two upper-division courses, a three course upper-division integrating sequence (ESYS 101, ESYS 102, ESYS 103), an upper-division statistics course, advanced courses in one of four tracks, and the Senior Project (ESYS 190A) and Senior Seminar (ESYS 190B). It is suggested that the integrating sequence ESYS 101, 102, and 103 should be completed by sophomore year, if possible. Any questions concerning the requirements should be directed to the associate director or the program advisor. Students completing the advanced tracks in Earth Sciences, Ecology, Behavior, and Evolution, and Environmental Chemistry will be awarded a B.S. in environmental systems. The B.A. In environmental systems will be granted to students completing the Environmental Policy track within the major.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of

2.5 or greater may petition to have one grade of D accepted.

All courses (lower- and upper-division) required for the major must be taken for a letter grade.

## Lower-Division Core Requirements

(Should be completed early in student's degree program.)

**Biology 3—BILD 3**

**Chemistry 6A-B, 6BL, 6C**

**Physics 1A, 1AL, 1B, 1BL, 1C, 1CL (Physics 2A-B-C recommended for Earth Sciences track.)**

**Mathematics 10A-B-C (Math. 20A-B-C recommended for Earth Sciences track.)**

**Economics 1**

**SIO 50—for Earth Sciences track only**

## Upper-Division Core Requirements

**Economics 131. Economics of the Environment**

**Political Science 160AA. Introduction to Policy Analysis**

## Integrating Course Sequence

It is suggested that the Integrating Course Sequence of Esys 101, 102 and 103 be completed by the sophomore year, if possible.

**Environmental Systems 101. Environmental Biology**

**Environmental Systems 102. The Solid and Fluid Earth**

**Environmental Systems 103. Environmental Challenges: Science and Solutions**

**Environmental Systems 190A. Senior Project (two quarters)**

**Environmental Systems 190B. Senior Seminar**

## ENVIRONMENTAL SYSTEMS MAJOR TRACKS

There are four advanced tracks in which students must complete a minimum of seven upper-division courses. Students will select courses following the requirements below in consultation with a faculty advisor.

### Earth Sciences

**Ecology, Behavior, and Evolution**

**Environmental Chemistry**

**Environmental Policy**

It is possible to complete the requirements for any of the Environmental Systems tracks with five upper-division electives and a specialization that consists of two additional upper-division electives from any other track. For example, a student interested in the policy and scientific dimensions of habitat conservation planning for endangered species might plan a course of study to include five advanced courses from the Ecology, Behavior, and Evolution track and two advanced courses from the Environmental Policy track.

## EARTH SCIENCES TRACK

Required lower-division course:

**SIO 50. Introduction to Earth and Environmental Sciences**

Required upper-division courses:

SIO 102. Introduction to Geochemistry  
 MATH 183. Statistical Methods

Upper-division electives: Students complete a minimum of seven courses selected from the following list.

SIO 100. Introduction to Field Methods  
 SIO 104/255. Paleobiology and History of Life  
 SIO 105. Sedimentology and Stratigraphy  
 SIO 110. Introduction to GIS and GPS for Scientists  
 SIO 112. Urban Landscapes  
 SIO 120. Introduction to Mineralogy  
 SIO 144/252A. Introduction to Isotope Geochemistry  
 SIO 160. Introduction to Tectonics  
 SIO 162. Structural Geology  
 SIO 199. Independent Study  
 ESY 120. Science and Environmental Writing  
 ESY 199. Independent Study  
 BIEB 132. Introduction to Marine Biology  
 BIEB 134. Introduction to Biological Oceanography  
 SIO 210. Physical Oceanography  
 SIO 240. Marine Geology  
 SIO 260. Marine Chemistry  
 SIO 263. Aqueous Chemistry  
 SIO 280. Biological Oceanography  
 Chemistry 149A. Environmental Chemistry  
 Chemistry 173/273. Atmospheric Chemistry

Other courses may be substituted by petition.

### ECOLOGY, BEHAVIOR, AND EVOLUTION TRACK

Required upper-division courses:

BICD 100. Genetics  
 BIEB 100. Biometry (satisfies upper-division statistics requirement)

Upper-division electives (a total of seven courses required, one of which must be a lab course, selected from the courses below):

BIBC 100. Structural Biochemistry  
 BIBC 102. Metabolic Biochemistry  
 BIBC 103. Biochemical Techniques  
 BIBC 120. Nutrition  
 BIBC 130/SIO 281. Marine Biochemistry  
 BICD 110. Cell Biology

BICD 120. Fundamental of Plant Biology  
 BICD 130. Embryos, Genes, and Development  
 BICD 134. Human Reproduction and Development  
 BIEB 102. Introductory Ecology—Organisms and Habitats  
 BIEB 121. Ecology Laboratory  
 BIEB 126. Plant Ecology  
 BIEB 131. Marine Invertebrate Ecology Lab  
 BIEB 132. Introduction to Marine Biology  
 BIEB 134. Introduction to Biological Oceanography  
 BIEB 140. Biodiversity  
 BIEB 144. Quantitative Ecology  
 BIEB 150. Evolution  
 BIEB 156. Population Genetics  
 BIEB 164. Behavioral Ecology  
 BIEB 165. Behavioral Ecology Laboratory  
 BIEB 166. Animal Communication  
 BIEB 167. Animal Communication Lab  
 BIEB 176/ANBI 132. Conservation and the Human Predicament

BIMM 100. Molecular Biology  
 BIMM 110. Molecular Basis of Disease  
 BIMM 114. Virology  
 BIMM 120. Bacteriology  
 BIMM 121. Laboratory in Microbiology  
 BIMM 124. Medical Microbiology

### ENVIRONMENTAL CHEMISTRY TRACK

Students must complete two of the following courses:

Chemistry 149A. Environmental Chemistry  
 Chemistry 149B. Environmental Chemistry  
 Chemistry 173/273. Atmospheric Chemistry  
 SIO 141/Chem 174. Chemical Principles of Marine Systems

Students must complete:

Math. 183. Statistical Methods OR  
 Math. 186. Probability Statistics for Bioinformatics  
 Chemistry 100A. Analytical Chemistry Laboratory  
 Chemistry 140A and B. Organic Chemistry I and II  
 One upper-division lab from either:  
 Chemistry 100B. Instrumental Analysis Laboratory  
 Chemistry 143A. Organic Chemistry Laboratory

Two upper-division restricted electives from:  
 Chemistry 124. Bioinorganic Chemistry  
 Chemistry 126. Physical Chemistry or Chem. 133  
 (Note: Chem. 126 and Chem. 133 both require Physics 2D and Math. 20D as prerequisites.)  
 Chemistry 127. Physical Chemistry or Chem. 131, Chem. 132  
 Chemistry 140C. Organic Chemistry III  
 ESY 199. Independent Study

Other courses may be substituted by petition.

### ENVIRONMENTAL POLICY TRACK

Required upper-division course

One upper-division Statistics course—Math 183  
 Statistical Methods or Economics 120A Econometrics

Upper-division electives

Students complete a minimum of seven courses selected from the following:

Economics 116. Economic Development  
 Economics 125. Economics of Population Growth  
 Economics 130. Public Policy  
 Economics 132. Energy Economics  
 Environmental Systems 120. Science and Environmental Writing  
 Environmental Systems 150. Environmental Perils  
 Environmental Systems 199. Independent Study  
 Political Science 102L. The Politics of Regulation  
 Political Science 125. The Politics of Conservation in Developing Countries  
 Political Science 125A. Communities and the Environment  
 Political Science 150A. Politics of Immigration  
 Political Science 160AB. Introduction to Policy Analysis

\*IR-GN 457/257. Cost Benefit Analyses  
 \*IR-GN 459/259. Conflict Resolution of Environmental Issues  
 \*IR-GN 487/289. Applied Environmental Issues  
 \*IR-GN 488/206. Corporate Strategy and the Environment  
 \*IR-GN 490/290. Special Topics in Pacific International Affairs (petition only)  
 \*IR-GN 453/253. Sustainable Development  
 \*IR-GN 458/258. International Environmental Policy  
 HISC 105. History of Environmentalism  
 HIUS 154. Western Environmental History  
 ANBI 132. Conservation and the Human Predicament  
 Com/Cul 148. Communication and the Environment  
 Env. Studies 102. Selected Topics in Environmental Studies  
 Env. Studies 110. Environmental Law  
 Env. Studies 130. Environmental Issues  
 Philosophy 148. Philosophy and the Environment  
 Philosophy 164. Technology and Human Values  
 SIO 110. Introduction to GIS and GPS for Scientists  
 SIO 112. Urban Landscapes  
 USP 124. Land Use Planning  
 USP 144. Environmental and Preventive Health Issues  
 USP 170. Sustainability Planning  
 USP 171. Sustainable Development

Other courses may be substituted by petition.

\*These graduate courses are offered through the Graduate School of International Relations and Pacific Studies. Enrollment in these courses requires the permission of the instructor.

## ENVIRONMENTAL SYSTEMS MINOR

A minor in Environmental Systems will expose students to the interdisciplinary approach necessary to address environmental problems. The program places a strong emphasis on a rigorous natural science foundation. Thus, most of the courses related to the minor have significant prerequisites; students planning an Environmental Systems minor should check catalog course description carefully.

The minor consists of twenty-eight units, at least twenty of which must be upper-division. Any upper division course used to satisfy major requirements

may not be applied toward a minor. Up to two courses for the minor may be taken on a Pass/Not Pass basis, (upper or lower division). Students must earn at least a letter grade of C- in the remaining five or more courses used for the minor. Students considering the Environmental Systems minor are strongly advised to meet with the associate director or the program advisor.

The minor is structured as followed:

### Lower-Division Courses

Any two of the following lower-division courses, if they are not lower-division requirements for the student's major, may be applied to satisfy eight of the total units necessary for the minor:

Biology 3  
 Math. 10A-B-C  
 Chemistry 6A-B-6BL-C  
 Physics 1A-AL, 1B-BL, 1C-CL  
 Economics 1  
 Scripps Undergraduate Education (SIO): any lower-division course  
 Environmental Systems 10  
 Environmental Studies 30

### Required Core Courses

Environmental Systems 101, offered every fall quarter  
 Environmental Systems 102, offered every winter quarter  
 Environmental Systems 103, offered every spring quarter

**Note:** ESYS 102 and ESYS 103 all have significant prerequisites; students planning an Environmental Systems minor should check course descriptions and prerequisites carefully.

### Upper-Division Electives

At least two additional upper-division courses from the advanced tracks in the Environmental Systems major. The lists of upper-division electives are reviewed and updated each quarter. They are available in the Environmental Systems Office and on the program Web site (<http://esys.ucsd.edu>). Students are advised to consult with the Environmental Systems program advisors or associate director.

### SPECIAL STUDIES COURSES

Special Studies in the environmental systems is offered as ESYS 199. This course is subject to consent of the instructor and approval by the Environmental Systems faculty advisor. This course is open to students who have accrued at least ninety quarter-units and have a GPA of least 3.0. No more than two quarters of environmental systems special studies may be counted toward the environmental systems major.

Study abroad through the Education Abroad Program or Opportunities Abroad Program can enhance a student's major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Environmental Systems Office as early as possible if you are planning to study abroad.

## COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.

Many of the courses that are used to fulfill the requirements of the environmental systems major are offered by other departments and programs. Most of these courses are offered on a regular basis. Students should consult the Schedule or contact the Environmental Systems office in order to obtain current information. The courses below are offered directly through the Environmental Systems Program.

### LOWER-DIVISION

**ESYS 10. Introduction to Environmental Systems (4)**  
 This course explores the interdisciplinary character of environmental issues through an examination of a particular topic [climate change, for example] from numerous disciplinary perspectives [e.g., biology, chemistry, physics, political science, and economics]. **Prerequisite:** none. (F)

**ESYS 87. Freshman Seminar (1)**  
 The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate college, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students with preference given to entering freshmen.

**ESYS 90. Perspectives on Environmental Issues (1)**  
 Provides an introduction to environmental systems. Faculty members from departments in the natural sciences, geosciences, and social sciences will offer perspectives in these areas. (F)

### UPPER-DIVISION

**ESYS 101. Environmental Biology (4)**  
 This course surveys biochemical and physiological processes governing the relationship between organisms and their environments, such as those involved in element cycling and cellular homeostasis. The course introduces biological perspectives on human activities ranging from antibiotic use to genetic engineering. **Prerequisite:** BILD 1 or 2 or equivalent, or consent of instructor. (F)

**ESYS 102. The Solid and Fluid Earth (4)**  
 Earth's dynamic physical systems interact in complex ways with profound impact on our environment. Processes such as volcanism and weathering enable geochemical exchange between solid and fluid (ocean and atmosphere) systems. Sea-level and climate changes interface with tectonic processes. **Prerequisites:** Math. 10A, Chem. 6A, Physics 1A or consent of instructor. (W)

**ESYS 103/MAE 124. Environmental Challenges: Science and Solutions (4)**  
 This course explores the impacts of human, social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation, and government regulation on local, national, and global scales. **Prerequisite:** Math 10A-C or Math 20B or consent of instructor. (S)

**ESYS 120. Science and Environmental Writing (4)**  
 Course designed to improve the written communication of science majors through frequent writing assignments that develop the practical skills needed to communicate science to lay audiences. Topics include news writing, news releases, grant writing, broadcast script writing, and editorial writing. **Prerequisites:** upper-division standing in

science or mathematics major and completion of college composition requirement (or consent of instructor). (W)

**ESYS 150. Environmental Perils (4)**

An advanced field-oriented course for engineering and science students stressing the geologic basis for environmental perils such as earthquakes, erosion, flooding, and waste disposal. Two one-hour lectures, and a two-hour lab/field trip each week. **Prerequisites:** Math. 10 A-B-C sequence and Physics 1A,AL; 1B,BL; 1C,1CL sequence or equivalent. (S)

**ESYS 190A. Senior Project (8)**

All majors are required to complete an integrative Senior Project in their senior year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic and is developed either individually or as part of a team over two quarters. Appropriate topics could include biodiversity conservation, environmental health, and/or global change. An important component of the Senior Project is an off-campus or laboratory internship. **Prerequisites:** ESYS 103 and upper-division standing, departmental approval, majors only. (F,W)

**ESYS 190B. Environmental Systems**

**Senior Seminar (4)**

The seminar provides a venue for the development, presentation, and evaluation of the Environmental Systems Integrative Project. The seminar will include work on research methods as well as paper presentation skills.

**Prerequisites:** Completion of ESYS 190A or ESYS 190A(W) sequence, senior standing and majors only. (S)

**ESYS 199. Independent Study (2-4)**

Individually guided readings or projects in the area of environmental systems.

# Ethnic Studies

## FACULTY

Robert R. Alvarez, Ph.D., *Professor and Director, California Cultures in Comparative Perspective*  
Kirstie A. Dorr, Ph.D., *Assistant Professor*  
Yen Le Espiritu, Ph.D., *Professor*  
Ross H. Frank, Ph.D., *Associate Professor*  
Adria L. Imada, Ph.D., *Assistant Professor*  
Sara C. Kaplan, Ph.D., *Assistant Professor*  
Roshanak Kheshti, Ph.D., *Assistant Professor*  
Gabriel Mendes, Ph.D., *Assistant Professor*  
Curtis F. Marez, Ph.D., *Associate Professor*  
Natalia M. Molina, Ph.D., *Associate Professor*  
Denise Ferreira da Silva, Ph.D., *Associate Professor*  
Kalindi A. Vora, Ph.D., *Assistant Professor*  
K. Wayne Yang, Ph.D., *Assistant Professor*

## PROFESSOR EMERITA

Ana Celia Zentella, Ph.D.

## ASSOCIATED FACULTY

Luis A. Alvarez, *Associate Professor, History*  
Patrick W. Anderson, *Assistant Professor, Communication*  
John D. Blanco, *Associate Professor, Literature*  
David Borgo, *Associate Professor, Music*  
Robert Cancel, *Associate Professor, Literature*  
Matthew Chen, *Professor Emeritus, Linguistics*  
Dennis Childs, *Assistant Professor, Literature*  
Wayne Cornelius, *Director, Center for Comparative Immigration Studies and Professor, Political Science*  
Anthony Davis, *Professor, Music*  
Ricardo R. Dominguez, *Associate Professor, Visual Arts*  
Gerald Doppelt, *Professor, Philosophy*  
Steven Epstein, *Associate Professor, Sociology*  
Steve Erie, *Director, Urban Studies and Planning Program and Professor, Political Science*  
Ivan Evans, *Associate Professor, Sociology*  
Claudio Fenner-Lopez, *Lecturer with Security of Employment Emeritus, Communication/Visual Arts*  
Camille Forbes, *Assistant Professor, Literature*  
Takashi Fujitani, *Professor, History*  
Nadine A. George, *Associate Professor, Theatre and Dance*  
Rosemary George, *Associate Professor, Critical Gender Studies Program and Literature*  
Nora Gordon, *Assistant Professor, Economics*  
David Gutiérrez, *Professor, History*  
Michael Hardimon, *Associate Professor, Philosophy*  
Louis Hock, *Professor, Visual Arts*  
Jorge Huerta, *Professor, Theatre and Dance*  
Sara Johnson, *Assistant Professor, Literature*  
Bennetta Jules-Rosette, *Professor, Sociology*  
Matha Lampland, *Associate Professor, Critical Gender Studies and Sociology*  
Arend Lijphardt, *Professor Emeritus, Political Science*  
James Lin, *Professor, Mathematics*  
Lisa Lowe, *Professor, Literature*  
Cecil Lytle, *Professor Emeritus, Music*  
George Mariscal, *Professor, Literature*  
Michael Meeker, *Professor Emeritus, Anthropology*  
Masao Miyoshi, *Professor Emeritus, Literature*

John C. Moore, *Professor, Linguistics*  
Elizabeth Newsome, *Associate Professor, Visual Arts*  
Edward Reynolds, *Professor Emeritus, History*  
Emily Roxworthy, *Assistant Professor, Theatre and Dance*

Ramón Eduardo Ruíz, *Professor Emeritus, History*  
Marta Sánchez, *Professor Emerita, Literature*  
Rosaura Sánchez, *Professor, Literature*  
Gershon Shafir, *Professor, Sociology*  
Nayan Shah, *Associate Professor, History*  
Faustina Solís, *Professor Emerita, Urban Studies/Family and Preventive Medicine*  
Roberto Tejada, *Associate Professor, Visual Arts*  
Olga Vásquez, *Associate Professor, Communication*  
Daniel Widener, *Associate Professor, History*  
Lisa Yoneyama, *Associate Professor, Literature*  
Elana Zilberg, *Associate Professor, Communication*

OFFICE: Social Science Building, Room 201  
<http://www.ethnicstudies.ucsd.edu>

Ethnic studies is the study of the social, cultural, and historical forces that have shaped the development of America's diverse ethnic peoples over the last 500 years and which continue to shape our future. Focusing on immigration, slavery, and confinement, those three social processes that combined to create in the United States a nation of nations, ethnic studies intensively examines the histories, languages, and cultures of America's racial and ethnic minority groups in and of themselves, in their relationships to one another, and particularly, in structural contexts of power.

The curriculum of the Department of Ethnic Studies is designed (1) to study intensively the particular histories of different ethnic and racial groups in the United States, especially intragroup stratification; (2) to draw larger theoretical lessons from comparisons among these groups; (3) to articulate general principles that shape racial and ethnic relations both currently and historically; and (4) to explore how ethnic identity is constructed and reconstructed over time both internally and externally.

A degree in ethnic studies offers training of special interest to those considering admission to graduate or professional schools and careers in education, law, medicine, public health, social work, journalism, business, city planning, politics, psychology, international relations, or creative writing. A major in ethnic studies is designed to impart fundamental skills in critical thinking, comparative analysis, social theory and research analysis, and written expression. These skills will give students the opportunity to satisfy the increasingly rigorous expectations of graduate admissions committees and prospective employers for a broad liberal arts perspective.

## THE MAJOR

To receive a B.A. degree with a major in ethnic studies, students must meet the following requirements:

1. A three-quarter course lower-division sequence (Ethnic Studies 1A-B-C). Ideally this sequence should be taken during the sophomore year as an intensive introduction to the history and theoretical dimensions of ethnic diversity in the United States. Ethnic Studies 1A-B-C, Introduction

to Ethnic Studies, will consist of the following three courses: Population Histories of the United States, Immigration and the Transformation of American Life, Race and Ethnic Relations in the United States.

2. A minimum of twelve four-unit upper-division courses in the Department of Ethnic Studies must be completed from the following five categories:

- a. One four-unit upper-division course that intensively explores the theory and comparative methods of ethnic studies (Ethnic Studies 100, Theories and Methods of Ethnic Studies). All ethnic studies majors should complete this course before proceeding with the other requirements listed below.
- b. Four upper-division ethnic studies history and social science courses from those listed below:  
ETHN 103. Environmental Racism  
ETHN 104. Race, Space, and Segregation  
ETHN 105. Ethnic Diversity and the City  
ETHN 107. Field Work in Racial and Ethnic Communities  
ETHN 108. Race, Culture, and Social Change  
ETHN 109. Race and Social Movements  
ETHN 112A. History of Native Americans in the United States I  
ETHN 112B. History of Native Americans in the United States II  
ETHN 116. The United States-Mexico Border in Comparative Perspective  
ETHN 117. Organic Social Movements  
ETHN 118. Contemporary Immigration Issues  
ETHN 119. Race in the Americas  
ETHN 120. Race and Performance: The Politics of Popular Culture  
ETHN 121. Contemporary Asian-American History  
ETHN 123. Asian-American Politics  
ETHN 125. Asian-American History  
ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities  
ETHN 127. Sexuality and Nation  
ETHN 129. Asian and Latina Immigrant Workers in the Global Economy  
ETHN 130. Social and Economic History of the Southwest I  
ETHN 131. Social and Economic History of the Southwest II  
ETHN 134. Immigration and Ethnicity in Modern American Society  
ETHN 149. African American History in the Twentieth Century  
ETHN 151. Ethnic Politics in America  
ETHN 152. Law and Civil Rights  
ETHN 159. Topics in African American History  
ETHN 161. Black Politics and Protest Since 1941  
ETHN 165. Sex and Gender in African American Communities  
ETHN 167. African-American History in War and Peace: 1917 to the Present  
ETHN 170A. Origins of the Atlantic World, c. 1450-1650  
ETHN 170B. Slavery and the Atlantic World  
ETHN 183. Gender, Race, Ethnicity, and Class

ETHN 188. African Americans, Religion, and the City

\*ETHN 197. Fieldwork in Racial and Ethnic Communities

\*ETHN 198. Directed Group Studies

\*ETHN 199. Supervised Independent Study and Research

\*Only two will be counted in fulfillment of this requirement.

Colloquia

ETHN 180. Topics in Mexican-American History

ETHN 181. Topics in the Comparative History of Modern Slavery

ETHN 184. Black Intellectuals in the Twentieth Century

ETHN 187. Black Nationalism

ETHN 189. Special Topics in Ethnic Studies (students may repeat this course three times for credit toward major requirements)

- c. At least three upper-division courses that focus on language, ethnicity, and institutional discourses:

ETHN 120. Race and Performance: The Politics of Popular Culture

ETHN 140. Language and American Ethnicity

ETHN 141. Language, Culture, and Inequality

ETHN 142. Medicine, Race, and the Global Politics of Inequality

ETHN 144. Bilingual Communities in the U.S.A.

ETHN 145. Spanish Language in the United States

ETHN 164. African Americans and the Mass Media

ETHN 185. Discourse, Power, and Inequality

ETHN 186. The Ethnic Press in the United States

Students may petition to count one course on language, ethnicity, and institutional discourses offered by other departments. In addition, one course in foreign language at the upper-division level may be counted in partial fulfillment of this requirement, with the consent of the department. Students must seek faculty advice on which courses would best satisfy the requirement and yield the most rigorous training.

- d. At least three upper-division ethnic studies courses on the literature and cultural expressions of American racial and ethnic minorities.

ETHN 101. Ethnic Images in Film

ETHN 110. Cultural World Views of Native Americans

ETHN 111. Native American Literature

ETHN 120. Race and Performance: The Politics of Popular Culture

ETHN 122. Asian-American Culture and Identity

ETHN 123. Asian-American Politics

ETHN 124. Asian-American Literature

ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities

ETHN 128. Hip Hop: The Politics of Culture

ETHN 132. Chicano Dramatic Literature

ETHN 133. Hispanic-American Dramatic Literature

ETHN 135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960

ETHN 135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present

ETHN 136. Topics in Chicano/a-Latino/a Cultures

ETHN 138. Chicano/a-Latino/a Poetry

ETHN 139. Chicano Literature in English

ETHN 146A. Theatrical Ensemble

ETHN 148. Latino/a and Chicano/a Literature

ETHN 168. Comparative Ethnic Literature

ETHN 172. Afro-American Prose

ETHN 174. Themes in Afro-American Literature

ETHN 175. Literature of the Harlem Renaissance

ETHN 176. Black Music/Black Texts: Communication and Cultural Expression

ETHN 178. Blues: An Oral Tradition

ETHN 179A. Jazz Roots and Early Development (1900–1943)

ETHN 179B. Jazz Since 1946: Freedom and Form

- e. One four-unit field methods course (Ethnic Studies 190, Research Methods: Studying Ethnic and Racial Communities).
3. Since the goal of the Department of Ethnic Studies is to intensively study both the particular histories of various ethnic and racial groups in the United States and to draw larger theoretical lessons from comparisons among and between groups, students may not fulfill requirements 2B and 2D by focusing all of the seven required courses on only one ethnic or racial group.
4. Ethnic studies majors, including students who are double majors, may petition up to four upper-division courses to fulfill major requirements as long as each of the following three conditions is met for each course: (1) the course is taken from another UC San Diego department, taken from a UCSD approved study abroad program, or taken at another UC campus; (2) the course work is appropriate to the ethnic studies major; and (3) the student completes at least one course offered by the UCSD ethnic studies department in each of the five upper-division categories.
5. To satisfy the requirements for the major, lower- and upper-division courses must be completed with a P, C–, or better grade.
6. Except for independent study course electives (ETHN 197, 198, or 199) which are always taken with a Pass/Not Pass grade option, students majoring in ethnic studies may take up to two courses, either lower- or upper-division, with a Pass/Not Pass option.

## THE HONORS PROGRAM

Consistent with other research opportunities offered to undergraduates on the UCSD campus, the department offers the Honors Program to ethnic studies majors in their senior or junior year the opportunity to conduct original research using interdisciplinary methodologies in the comparative

study of race and ethnicity. To enroll in the Honors Program, an undergraduate must have a minimum grade-point average of 3.5 in ethnic studies classes counted toward the major. Students with a GPA lower than 3.5 in the major may be admitted by exception if they show promise of success in research.

The Honors Program will be an extension of current departmental offerings using existing faculty resources. Ethnic studies and affiliated faculty will choose to advise students who successfully complete ETHN 191A and continue in the Honors Program based on related research interests. The student will enroll in ETHN 191B and ETHN 191C and work with the appropriate faculty advisor. Students will present their research projects at the annual Ethnic Studies Honors Symposium in June. Students who complete the sequence ETHN 191A, ETHN 191B, and ETHN 191C will receive one credit toward the B (Social Studies/Humanities) requirements for the ethnic studies major. Students who complete their research project with a grade of B or better and maintain a minimum 3.25 GPA in the ethnic studies major will receive Distinction in the major upon graduation from UCSD. Ethnic Studies 191A, 191B, and 191C must be taken for letter grade only.

### 191A. Undergraduate Research in Ethnic Studies (4)

This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans.

### 191B. Honors Research in Ethnic Studies (4)

This course is a continuation of Ethnic Studies 191A, Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191A and selected a faculty research advisor may enroll in this course. During the quarter the research for the honors project will be completed under the faculty advisor's supervision. Faculty advisors will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. Formerly ETHN 192. **Prerequisites:** upper-division standing, consent of instructor, and completion of 191A.

### 191C. Honors Research in Ethnic Studies (4)

This course is a continuation of Ethnic Studies 191B Honors Research in Ethnic Studies. Students who have completed ETHN 191B and are continuing to work with a faculty research advisor may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty advisor's supervision. The student will meet weekly with the faculty advisor in order to prepare drafts and the final version of the honors paper. Formerly ETHN 193. **Prerequisites:** ETHN 191A and ETHN 191B.

## EDUCATION ABROAD PROGRAM

Students are able to participate in the UC Education Abroad Program (EAP) or UCSD's Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate advisor prior to going abroad, and courses taken abroad must be approved by the department. Interested students should contact the Programs Abroad Office in the International Center.

## THE MINOR

Students may minor in ethnic studies. Consistent with the provision for a minor curriculum for students entering after January 1, 1998, students

wishing to minor in ethnic studies must satisfy the following requirements:

1. Students must take two four-unit courses in the history and theoretical dimensions of ethnic diversity in the United States from the lower-division sequence (Ethnic Studies 1A-B-C); or students must take two four-unit upper-division courses in analytic and comparative study of ethnicity. Theories and Methods of Ethnic Studies (ETHN 100); and Research Methods, Studying Ethnic and Racial Communities (ETHN 190).
2. Students must take five four-unit upper-division ethnic studies elective courses; at least two, but no more than three of the five elective courses must be selected from either the ethnic studies history and social studies courses (listed above in section 2B) or the ethnic studies literature and cultural expressions courses (listed above in section 2D). While language and ethnicity courses offered by the department (listed above in section 2C) may also be used to satisfy this requirement, foreign language and area studies courses from other departments may not. No more than two independent study courses (ETHN 197, 198, or 199) may be used to satisfy this requirement.
3. To satisfy the requirements for the minor, lower- and upper-division courses must be completed with a P, C-, or better grade.
4. Except for independent study course electives (ETHN 197, 198, or 199) that are always taken with a Pass/Not Pass grade option, students minoring in ethnic studies may take one course, either lower- or upper-division, with a Pass/Not Pass grade option.

Students interested in the African-American experience should consider the following courses:

- ETHN 149. African American History in the Twentieth Century**  
**ETHN 159. Topics in African American History**  
**ETHN 161. Black Politics and Protest since 1941**  
**ETHN 164. African Americans and the Mass Media**  
**ETHN 165. Sex and Gender in African American Communities**  
**ETHN 167. African-American History in War and Peace. 1917 to the Present**  
**ETHN 170A. Origins of the Atlantic World, c. 1450–1650**  
**ETHN 170B. Slavery and the Atlantic World**  
**ETHN 172. Afro-American Prose**  
**ETHN 174. Themes in Afro-American Literature**  
**ETHN 175. Literature of the Harlem Renaissance**  
**ETHN 176. Black Music/Black Texts. Communication and Cultural Expression**  
**ETHN 178. Blues: An Oral Tradition**  
**ETHN 179A. Jazz Roots and Early Development (1900–1943)**  
**ETHN 179B. Jazz Since 1946: Freedom and Form**  
**ETHN 181. Topics in the Comparative History of Modern Slavery**  
**ETHN 184. Black Intellectuals in the Twentieth Century**  
**ETHN 187. Black Nationalism**  
**ETHN 188. African Americans, Religion, and the City**

Students interested in the Chicano experience should consider the following courses:

- ETHN 116. The United States-Mexico Border in Comparative Perspective**  
**ETHN 130. Social and Economic History of the Southwest I**  
**ETHN 131. Social and Economic History of the Southwest II**  
**ETHN 132. Chicano Dramatic Literature**  
**ETHN 133. Hispanic-American Dramatic Literature**  
**ETHN 135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960**  
**ETHN 135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present**  
**ETHN 136. Topics in Chicano/a-Latino/a Cultures**  
**ETHN 138. Chicano/a-Latino/a Poetry**  
**ETHN 139. Chicano Literature in English**  
**ETHN 145. Spanish Language in the United States**  
**ETHN 148. Latino/a and Chicano/a Literature**  
**ETHN 180. Topics in Mexican American History**  
Students interested in the Asian-American experience should consider the following courses:  
**ETHN 20. Introduction to Asian American History**  
**ETHN 120. Race and Performance: The Politics of Popular Culture**  
**ETHN 121. Contemporary Asian-American History**  
**ETHN 122. Asian-American Culture and Identity**  
**ETHN 123. Asian-American Politics**  
**ETHN 124. Asian-American Literature**  
**ETHN 125. Asian-American History**  
**ETHN 126. Comparative Filipino- and Vietnamese-American Identities and Communities**  
Students interested in the Native American experience should consider the following courses:  
**ETHN 110. Cultural World Views of Native Americans**  
**ETHN 111. Native American Literature**  
**ETHN 112A. History of Native Americans in the United States I**

## **ETHN 112B. HISTORY OF NATIVE AMERICANS IN THE UNITED STATES I** **THE GRADUATE PROGRAM**

The UC San Diego Department of Ethnic Studies emphasizes comparative, analytic, and relational study of ethnicity and race in the United States. Our fields of emphasis include intercultural communication and conflict, population histories of the Americas, ethnicity and identity, immigration and assimilation, ethnic politics and social movements, race and racism, urban ethnicity, gender and ethnicity, sexuality, intellectual and cultural histories of ethnic groups, cultural pluralism, national integration, language and ethnic life, and mass media representations of ethnic identity.

### **ADMISSION**

New students are admitted in the fall quarter of each academic year. Prospective applicants should submit the official application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant's own writing, such as term papers. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). Applicants are encouraged to visit the department to talk with faculty and graduate students. The application deadline is January 15.

### **PROGRAM OF STUDY**

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.2 or better. To obtain an M.A. degree students must take fifty-four units of course work and write a master's thesis.

### **CORE CURRICULUM SEQUENCE REQUIREMENTS**

1. Ethnic Studies 200A-B-C, Core Seminar  
All graduate students will be required to take the introductory three-quarter core seminar (four units each, twelve units total) during their first year in the program. This course covers the genealogy of critical racial and ethnic studies (its antecedents and development as a distinct and interdisciplinary method of inquiry), interdisciplinarity and knowledge production in ethnic studies, and research in ethnic studies (Pro Seminar).
2. Ethnic Studies 230, Department Colloquium  
During the first two years of graduate study, all students will be required to enroll in six one-quarter colloquia required by the department. In Ethnic Studies 230, department faculty and visiting lecturers will make presentations about research in progress in our field. This colloquium is a one-unit course and must be taken for a total of six quarters.
3. Ethnic Studies 240, 241, and 242, Research Methods Series  
All graduate students will be required to take the three-quarter core research methods course (four units each, twelve units total) during their first year in the program. ETHN 240A, Historical Methods and Archives; ETHN 240B, Cultural Studies and Cultural Production; and ETHN 240C Qualitative Methods/Ethnography.
4. Ethnic Studies 290A-B, Master's Thesis Preparation  
Students are required to write a master's thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

### **FOREIGN LANGUAGE REQUIREMENT**

Competence in one or more foreign languages is encouraged but not required at the M.A. level. All doctoral candidates must satisfy the department's graduate committee that they have adequate linguistic competence in one foreign language relevant to their area of research by translating three pages of scholarly text written in the designated foreign language. The graduate committee may waive the language requirement and test the candidate on other specialized skills in instances where knowledge of a foreign language is not relevant to the candidate's areas of research.

### **INSTRUCTION IN QUANTIFICATION**

The department encourages graduate students to employ quantitative methods where appropriate. Instruction in quantitative methods can fulfill elective requirements; recommended courses include Sociology 205 and 206, Survey and Demographic

Methods; Political Science 270, Quantitative Methods in Political Science. In cases where a reading knowledge of evidence assembled through quantitative methods would be useful, students who obtain the permission of the director of Graduate Studies may fulfill elective requirements by taking no more than two selected undergraduate courses including Sociology 103, Computer Applications to Data Management in Sociology; Sociology 107, Demographic Methods; Sociology 108, Quantitative Analysis of Survey Data; Sociology 109, Quantitative Analysis of Sociological Data; and Political Science 170, Quantitative Political Science, among others.

## THE MASTER'S DEGREE

Students entering the ethnic studies doctoral program must first complete a master's degree before continuing toward the doctorate. University regulations prohibit entering students who already have a master's degree in ethnic studies from receiving a second master's degree. Nonetheless, students who are admitted to the ethnic studies doctoral program with a master's degree must complete all the requirements for the ethnic studies master of arts degree. The M.A. will also be a terminal degree for those students denied admission to candidacy.

To obtain the M.A. degree, students must complete the department's course requirements satisfactorily. At the end of the second year in the graduate program, students must submit a written thesis to their Master's Thesis Committee (MTC). The committee will assess the quality of the work and determine whether it demonstrates the likelihood of success in conducting doctoral research.

The final decision regarding the M.A. degree is based on grades, the master's thesis, and yearly faculty evaluations. The Graduate Program Committee awards three possible grades: Pass, M.A. Only, and Not Pass. All passing students (with the exception of those who already have a master's degree in ethnic studies from another institution) receive the master of arts degree and proceed in their course of studies for the doctorate. Students who receive M.A. Only evaluations gain the master's degree but may not continue in the department's Ph.D. program. Students who receive a Not Pass evaluation must withdraw from the program without a graduate degree. The master's degree is earned as one of the requirements for the Ph.D. and is based on the quality of the student's work during the first two years in the graduate program. At the end of the second year, students are evaluated by the Graduate Program Committee for the master's degree. At that time, the committee (GPC) ascertains the student's suitability for doctoral work and recommends either advancement to Ph.D. work or termination.

## REQUIREMENTS FOR THE QUALIFYING EXAMINATIONS

When students complete all the core curriculum requirements and have taken five four-unit elective courses in appropriate areas or disciplines, they are eligible to take the qualifying examination for the Ph.D. degree. Students will be encouraged to take the exam by the end of their third year in the program, but this examination must be completed by the end of the student's fourth year in the program. The qualifying exam is both written and

oral; it consists of two parts. Part one tests the student's basic competence and knowledge of ethnic studies scholarship as spelled out in the Department of Ethnic Studies required graduate reading list. The reading list will be distributed to every student entering the graduate program. Over the next three years, students are required to read all of these books and articles, and to have their mastery of these readings tested during the qualifying examination. Part two of the examination requires the submission of a dissertation prospectus. The dissertation prospectus is a written document that (1) specifies the dissertation research topic; (2) places the dissertation research in the context of the relevant literature in the field; (3) identifies the significance of the project as original discovery scholarship; (4) explains and justifies the research methods to be employed; (5) establishes the feasibility of the research and identifies the primary sources or data bases to be used; (6) indicates the anticipated steps leading to completion of the project; and (7) provides a timetable for the research and writing phases of the project.

The Doctoral Committee consists of five persons proposed by the student and accepted by the department chair and the office of Graduate Studies according to graduate council regulations. A sixth member of the committee may be added with the approval of the department chair. Students are expected to select the chair of their examination committee by the winter quarter of the third year of study. The chair of the Ph.D. Examination Committee serves as the student's advisor for the remainder of the student's graduate program. Three of the Examination Committee members must be Department of Ethnic Studies faculty; the other two must be from other departments.

Fourteen days before the scheduled qualifying examination, the student must submit the written dissertation prospectus to the examination committee. On this same day, the student will receive from the chair of the examination committee a three-question written exam testing knowledge of the required graduate reading list. Seven days before the scheduled qualifying examination, the student must submit written answers to the questions that have been posed, distributing copies of these essays to all examination committee members. A two-hour oral examination will occur on the appointed date. At the two-hour oral exam, the student will answer questions posed by the committee about the student's dissertation prospectus, mastery of the required graduate reading list, answers to the written part of the exam, and comprehensive knowledge of ethnic studies scholarship. Based on written papers and on oral performance, three possible grades will be selected by the examination committee: Not Pass, Pass, and High Pass. Students who receive a Not Pass must retake the qualifying examination within one year and obtain a Pass grade to remain in the doctoral program.

## THE DOCTORAL DISSERTATION

Once students pass the qualifying exam, they may begin dissertation research. Students are expected to consult with their committee members on a regular basis during the research process.

All doctoral students will be evaluated annually by the doctoral committee and given a written report signed by the thesis advisor according to campus policy.

When the dissertation has been substantially completed and once committee members have had the opportunity to review drafts of the written work, the committee meets (with or without the student present at the discretion of the committee chair) to consider the progress made and to identify concerns, changes to be made, or further research to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, the defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. Having successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. degree. The final version of the dissertation is then filed with the university librarian via the office of Graduate Studies. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

## DEPARTMENTAL PH.D. TIME LIMITS POLICY

Pre-candidacy status, that is, the registered time before a student passes the qualifying examination and thereby advances to Ph.D. candidacy, may not exceed four years. Normative time for a Ph.D. in ethnic studies is six years. Normative time is defined as that period of time in which students under normal circumstances are expected to complete their doctoral program. To provide an incentive for students to complete the Ph.D. within normative time, students will only be eligible for departmental financial support for six years (eighteen quarters). By university policies, the doctoral dissertation must be submitted and defended within eight years. To meet this normative time limit, and to meet departmental requirements, students must complete the Qualifying Examination by the end of the fourth year.

In the spring quarter each year, the Graduate Program Committee will assess the progress of each pre-candidacy student on the basis of evaluations submitted by three faculty members chosen by the student. The committee will establish that the student is in good standing, recommend additional course work, or recommend dismissal. The committee may wish to meet with some students in person to discuss the student's evaluation and progress toward the degree.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## LOWER-DIVISION

### 1A. Introduction to Ethnic Studies: Population Histories of the United States (4)

This course examines the comparative historical demography of what is today the United States, focusing on the arrival, growth, distribution, and redistribution of immigrants from Asia, Europe, Africa, and Latin America.

### **1B. Introduction to Ethnic Studies: Immigration and the Transformation of American Life (4)**

A history of immigration to the United States from colonial times to the present, with emphasis on the roles of ethnic and racial groups in economics, power relations between dominant and subordinate groups, and contemporary ethnic and racial consciousness.

### **1C. Introduction to Ethnic Studies: Race and Ethnic Relations in the United States (4)**

This course examines the theoretical literature on race and ethnicity, focusing on issues of domination and subordination, and the historical emergence of racism and ethnic conflict. Attention is given to class and gender differences within racial and ethnic groups.

### **20. Introduction to Asian-American History (4)**

This course introduces students to key issues in Asian-American lives, with emphasis on the global historical context of migration; changing ethnic and racial consciousness; economic, social, and political status; cultural production; and family and gender relations.

### **87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

### **97. Field Studies in Racial and Ethnic Communities (1-4)**

Supervised community fieldwork on topics of importance to racial and ethnic communities in the San Diego County region. Regular individual meetings with faculty sponsor and final project and/or written report are required. **Prerequisites:** lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

### **98. Directed Group Studies (1-4)**

Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. **Prerequisites:** lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

### **99. Independent Study (1-4)**

Directed study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. **Prerequisites:** lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies Form.

## **UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor.

### **100. Theories and Methods in Ethnic Studies (4)**

An introduction to research in ethnic studies with special emphasis on theories, concepts, and methods. Students will explore how racial and ethnic categories are shaped by gender, class, and regional experiences and will study ethnicity and race in comparative perspective.

### **101. Ethnic Images in Film (4)**

An upper-division lecture course studying representations of ethnicity in the American cinema. Topics include ethnic images as narrative devices, the social implications of ethnic images, and the role of film in shaping and reflecting societal power relations.

### **103. Environmental Racism (4)**

This course will examine the concept of environmental racism, the empirical evidence of its widespread existence, and the efforts by government, residents, workers, and activists to combat it. We will examine those forces that create environmental injustices in order to understand its

causes as well as its consequences. Students are expected to learn and apply several concepts and social scientific theories to the course material.

### **104. Race, Space, and Segregation (4)**

Through in-depth studies of housing segregation, urban renewal and displacement, neighborhood race effects, and the location of hazards and amenities, this course examines how space becomes racialized and how race becomes spatialized in the contemporary United States.

### **105. Ethnic Diversity and the City (4)**

This course will examine the city as a crucible of ethnic identity, exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. (Cross-listed with USP 104.)

### **107. Fieldwork in Racial and Ethnic Communities (4)**

This is a research course examining social, economic, and political issues in ethnic and racial communities through a variety of research methods that may include interviews and archival, library, and historical research. (Cross-listed with USP 130.)

### **108. Race, Culture, and Social Change (4)**

Aggrieved groups often generate distinctive forms of cultural expression by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with MUS 151.)

### **109. Race and Social Movements (4)**

This course explores collective mobilizations for resources, recognition, and power by members of aggrieved racialized groups, past and present. Emphasis will be placed on the conditions that generate collective movements, the strategies and ideologies that these movements have developed, and on the prospect for collective mobilization for change within aggrieved communities in the present and future.

### **110. Cultural World Views of Native Americans (4)**

Using interdisciplinary methods, this course examines the cultural world views of various Native American societies in the United States through an exploration of written literary texts and other expressive cultural forms such as dance, art, song, religious and medicinal rituals.

### **111. Native American Literature (4)**

This course analyzes Native American written and oral traditions. Students will read chronicles and commentaries on published texts, historic speeches, trickster narratives, oratorical and prophetic tribal epics, and will delve into the methodological problems posed by tribal literature in translation.

### **112A. History of Native Americans in the United States I (4)**

This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the European colonial powers and the emerging United States until 1870. (Cross-listed with HIUS 108A.)

### **112B. History of Native Americans in the United States II (4)**

This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the United States from 1870 to the present. (Cross-listed with HIUS 108B.)

### **116. The United States-Mexico Border in Comparative Perspective (4)**

This course critically explores the U.S.-Mexico frontier and the social-cultural issues on both sides of the international demarcation. Social-historical and political-economic patterns illuminate border life, ethnic identity, social diversity, and cultural expression. Border ethnography is complemented by film and music.

### **117. Organic Social Movements (4)**

Examination of local responses to global change and social disruption through the examination of organic movements in indigenous societies. In-depth analysis of the Kuna Indians of San Blas, Panama; Maya-Zapatistas of Chiapas, Mexico; and Micronesians of the western Pacific.

### **118. Contemporary Immigration Issues (4)**

This course examines the diversity of today's immigrants—their social origins and contexts of exit and their adaptation experiences and contexts of incorporation.

### **119. Race in the Americas (4)**

This course explores the genesis, evolution, and contradictions of racially heterogeneous societies in the Americas, from European conquest to the present. Topics: the social history of Native Americans, blacks, and Asians, their interactions with European settlers, and racial, sexual, and class divisions. **Prerequisite:** upper-division standing.

### **120. Race and Performance: The Politics of Popular Culture (4)**

This course explores how racial categories and ideologies have been constructed through performance and displays of the body in the United States and other sites. Racialized performances, whether self-displays or coerced displays, such as world's fairs, museums, minstrelsy, film, ethnography, and tourist performances are considered. **Prerequisite:** upper-division standing or consent of instructor.

### **121. Contemporary Asian-American History (4)**

The course will study changes in Asian-American communities as a result of renewed immigration since 1965; the influx of refugees from Vietnam, Kampuchea, and Laos; the impact of contemporary social movements on Asian-Americans' current economic, social, and political status.

### **122. Asian-American Culture and Identity (4)**

A survey of Asian-American cultural expressions in literature, art, and music to understand the social experiences that helped forge Asian-American identity. Topics: culture conflict, media portrayals, assimilation pressures, the model minority myth, and interethnic and class relations.

### **123. Asian-American Politics (4)**

This course will examine the development of Asian-American politics by studying the historical and contemporary factors, such as political and economic exclusion, that have contributed to the importance and complexity of ethnicity as a mobilizing force in politics. **Prerequisite:** upper-division standing or instructor approval.

### **124. Asian-American Literature (4)**

Selected topics in the literature by men and women of Asian descent who live and write in the United States. May be repeated for credit when topics vary. (Cross-listed with LTEN 181.)

### **125. Asian-American History (4)**

Explore how Asian Americans were involved in the political, economic and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship. (Cross-listed with HIUS 124.)

### **126. Comparative Filipino and Vietnamese-American Identities and Communities (4)**

This course compares the historical and contemporary social, political, and economic experiences of Filipino and Vietnamese-Americans, paying particular attention to the impact of U.S. wars in the Philippines and in Vietnam on their respective lives. **Prerequisite:** upper-division standing.

### **127. Sexuality and Nation (4)**

This course explores the nexus of sex, race, ethnicity, gender, and nation and considers their influence on identity, sexuality, migration, movement, and borders and other social, cultural, and political issues that these constructs affect. (Cross-listed with CGS 112.)

### **128. Hip Hop: The Politics of Culture (4)**

Examination of hip hop's technology, lyrics, and dance and its influences in graffiti, film, music video, fiction, advertising, gender, corporate investment, government, and censorship with a critical focus on race, gender, and popular culture and the politics of creative expression. (Cross-listed with MUS 152.)

**129. Asian and Latina Immigrant Workers in the Global Economy (4)**

This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. (Cross-listed with USP 135.)

**130. Social and Economic History of the Southwest I (4)**

This course examines the history of the Spanish and Mexican Borderlands (what became the U.S. Southwest) from roughly 1400 to the end of the U.S.-Mexican War in 1848, focusing specifically on the area's social, cultural, and political development. (Cross-listed with HIUS 158.)

**131. Social and Economic History of the Southwest II (4)**

This course examines the history of the American Southwest from the U.S.-Mexican War in 1846–48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity. (Cross-listed with HIUS 159.)

**132. Chicano Dramatic Literature (4)**

Focusing on the contemporary evolution of Chicano dramatic literature, the course will analyze playwrights and theatre groups that express the Chicano experience in the United States, examining relevant actors, plays, and documentaries for their contributions to the developing Chicano theatre movement. (Cross-listed with THHS 110.)

**133. Hispanic-American Dramatic Literature (4)**

This course examines the plays of leading Cuban-American, Puerto Rican, and Chicano playwrights in an effort to understand the experiences of these Hispanic-American groups in the United States. (Cross-listed with THHS 111.)

**134. Immigration and Ethnicity in Modern American Society (4)**

Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be required to submit a more substantial piece of work. (Cross-listed with HIUS 180 and conjoined with HIUS 280.) **Prerequisites:** upper-division standing and department stamp.

**135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)**

Cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a literature, folklore, music, testimonio, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. (Cross-listed with LTSP 150A.) **Prerequisite:** LTSP 50B or consent of instructor.

**135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present (4)**

Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of "Hispanic" or Latino/a identities. Repeatable for credit when topics vary. (Cross-listed with LTSP 150B.) **Prerequisite:** LTSP 50B or consent of instructor.

**136. Topics in Chicano/a-Latino/a Cultures (4)**

Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender and sexuality, cultures of the U.S.-Mexican border, and Chicano/a-Mexicano/a literary relations. Repeatable for a credit when topics vary. (Cross-listed with LTSP 151.) **Prerequisite:** LTSP 50B or consent of instructor.

**138. Chicano/a and Latino/a Poetry (4)**

A study of themes and issues in the poetic production of Latino communities in the United States. Every effort will be made to select text in Spanish but some will be bilingual. Repeatable for credits when topics vary. (Cross-listed with LTSP 153.) **Prerequisite:** LTSP 50B or consent of instructor.

**140. Language and American Ethnicity (4)**

This course examines the intersection of language and ethnicity in the United States, focusing on the social and political impact of bilingualism, ethnically based English dialects, and standard and nonstandard English.

**141. Language, Culture, and Inequality (4)**

A critical review of conceptions of language and how they have been deployed in constructing images of culture, race, ethnicity, gender, sexuality, and class. Topics include cultural and linguistic relativism, structuralism, symbolic and cognitive approaches, ethnomethodology, sociolinguistics, ethnography of speaking, performance, and ethnopoetics.

**142. Medicine, Race, and the Global Politics of Inequality (4)**

Globalization fosters both the transmission of AIDS, cholera, tuberculosis, and other infectious diseases and gross inequalities in the resources available to prevent and cure them. This course focuses on how race, ethnicity, gender, sexuality, class, and nation both shape and are shaped by the social construction of health and disease worldwide.

**144. Bilingual Communities in the U.S.A. (4)**

This course compares the many ways of "doing being bilingual" that exist among communities of speakers of varied national origins, generations, networks, localities, races, classes, and genders. Of particular interest are the varied types of bilingual individuals and linguistic repertoires that exist in communities of Native American, Chicano/Latino, and Asian origin, and the implications of shifting and hybrid linguistic identities for the drawing of community boundaries and the shaping of national language policy. Specific topics include factors that promote language loss or maintenance in families, the linguistic and cultural repercussions of code switching and word borrowing, bilingual education, linguistic profiling, and language ideologies.

**145. Spanish Language in the United States (4)**

A sociolinguistic study of the popular dialects in the United States and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects. (Cross-listed with LTSP 162.)

**146A. Theatrical Ensemble (4)**

An intensive theatre practicum designed to generate theatre created by an ensemble, with particular emphasis upon the analysis of text. Students will explore and analyze scripts and authors. Ensemble segments include black theatre, Chicano theatre, feminist theatre, commedia dell'arte theatre. (Cross-listed with TDAC 120.)

**148. Latino/a and Chicano/a Literature (4)**

This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicano/a writers. May be repeated for credit as topics, texts, and historical periods vary. (Cross-listed with LTSP 154.) **Prerequisite:** LTSP 50B or consent of instructor.

**149. African American History in the Twentieth Century (4)**

This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics.

**151. Ethnic Politics in America (4)**

This course will survey the political effects of immigration, ethnic mobilization, and community building in America, and the contemporary role of ethnicity in politics and intergroup relations.

**152. Law and Civil Rights (4)**

In this course students explore the relationship between race, class, and law as it applies to civil rights both in a

historical and a contemporary context. Topics include racism and the law, history of the Fourteenth Amendment, equal protection, school desegregation, and affirmative action.

**159. Topics in African American History (4)**

A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. (Cross-listed with HIUS 183 and conjoined with HIUS 283.)

**161. Black Politics and Protest Since 1941 (4)**

Discussion of black social, political, and intellectual experiences since the publication of Richard Wright's *Native Son*. Close examination of blacks' involvement in and relationships to World War II, cold war, civil rights movement, black power movement, Reagan revolution, and underclass debate.

**164. African Americans and the Mass Media (4)**

Examination of the media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes; their relationship to changing social, political, and economic frameworks; and African Americans' responses to and interpretations of these mediated images. (Cross-listed with MUS 153.)

**165. Sex and Gender in African American Communities (4)**

This course will investigate the changing constructions of sex, gender, and sexuality in African American communities defined by historical period, region, and class. Topics will include the sexual division of labor, myths of black sexuality, the rise of black feminism, black masculinity, and queer politics.

**167. African-American History in War and Peace: 1917 to the Present (4)**

The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. This course examines how the pressures of "total war" and "cold war" shaped the African-American experience in both war and peacetime. (Cross-listed with HIUS 138)

**168. Comparative Ethnic Literature (4)**

A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary. (Cross-listed with LTEN 178.)

**170A. Origins of the Atlantic World, c. 1450–1650 (4)**

An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected "Atlantic World." Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade, and early development of plantation slavery in the New World. (Cross-listed with HIUS 135A.)

**170B. Slavery and the Atlantic World (4)**

The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. (Cross-listed with HIUS 135B.)

**172. Afro-American Prose (4)**

Students will analyze and discuss the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characters of Afro-American narrative and the cultural and social circumstances that influence their development. (Cross-listed with LTEN 183.)

**174. Themes in Afro-American Literature (4)**

This course focuses on the influence of slavery upon African American writers. Our concern is not upon what slavery was but upon what it is within the works and what these texts reveal about themselves, their authors, and their audiences. (Cross-listed with LTEN 185.)

#### 175. Literature of the Harlem Renaissance (4)

The Harlem Renaissance (1917–39) focuses on the emergence of the “New Negro” and the impact of this concept on black literature, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms. (Cross-listed with LTEN 186.)

#### 176. Black Music/Black Texts: Communication and Cultural Expression (4)

Explores role of music as a traditional form of communication among Africans, Afro-Americans, and West Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. (Cross-listed with LTEN 187 and MUS 154.)

#### 178. Blues: An Oral Tradition (4)

This course will examine the development of the blues from its roots in work-songs and the minstrel show to its flowering in the Mississippi Delta to the development of urban blues and the close relationship of the blues with jazz, rhythm and blues, and rock and roll. (Cross-listed with MUS 126.)

#### 179A. Jazz Roots and Early Development (1900–1943) (4)

This course will trace the early development of jazz and the diverse traditions which helped create this uniquely American art form. We will witness the emergence of Louis Armstrong in New Orleans and examine the composer's role in jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with MUS 127A.)

#### 179B. Jazz Since 1946: Freedom and Form (4)

This course will examine the evolution of jazz from 1943 to the present. The course will survey the contrasting and competing styles in jazz from bebop to cool to the avant garde and fusion. (Cross-listed with MUS 127B.)

### COLLOQUIA

#### 180. Topics in Mexican-American History (4)

This colloquium studies the racial representation of Mexican-Americans in the United States from the nineteenth century to the present, examining critically the theories and methods of the humanities and social sciences. (Cross-listed with HIUS 167.)

#### 181. Topics in the Comparative History of Modern Slavery (4)

Slavery was both a thread of continuity in the history of the Americas and distinctive institution in the specific social settings. The purpose of this course is to examine and discuss readings that explore topics in the Caribbean and the U.S. Because topics will vary, the seminar may be taken more than once for credit, with permission of the instructor. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. (Cross-listed with HIUS 164 and conjoined with HIUS 264.)

#### 183. Gender, Race, Ethnicity, and Class (4)

Gender is often neglected in studies of ethnic/racial politics. This seminar explores the relationship of race, ethnicity, class, and gender by examining the participation of working class women of color in community politics and how they challenge mainstream political theory.

#### 184. Black Intellectuals in the Twentieth Century (4)

An analysis of black cultural and intellectual production since 1895. Course will explore how race and race-consciousness have influenced the dialogue between ideas and social experience; and how other factors—i.e., age, gender, and class—affected scholars' insights.

#### 185. Discourse, Power, and Inequality (4)

While discourse analysis has transformed numerous disciplines, a gap separates perspectives that envision discourse as practices that construct inequality from approaches that treat discourse as everyday language. This course engages both perspectives critically in analyzing law, medicine, and popular culture.

#### 186. The Ethnic Press in the United States (4)

Readings and research on news media institutions established in ethnic communities since the nineteenth century.

The course will trace the emergence, development, and longevity of ethnic presses, their role in cultivating and maintaining ethnic identity, and their attempts to respond to and resist images in mainstream media.

#### 187. Black Nationalism (4)

This course will investigate the ideologies and practices of black nationalist movements in the United States and/or across the black diaspora, focusing on their political philosophy, political culture, and gender and class structure.

#### 188. African Americans, Religion, and the City (4)

This course details the history of African American migration to urban areas after World War I and World War II and explores the role of religion in their lives as well as the impact that their religious experiences had upon the cities in which they lived. (Cross-listed with USP 132.)

#### 189. Special Topics in Ethnic Studies (4)

A reading and discussion course that explores special topics in ethnic studies. Themes will vary from quarter to quarter; therefore, course may be repeated three times as long as topics vary.

### SEMINARS AND INDEPENDENT STUDIES

#### 190. Research Methods: Studying Racial and Ethnic Communities (4)

The course offers students the basic research methods with which to study ethnic and racial communities. The various topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations. (Cross-listed with USP 129.)

#### 191A. Undergraduate Research in Ethnic Studies (4)

This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans. **Prerequisite:** instructor approval.

#### 191B. Honors Research in Ethnic Studies (4)

This course is a continuation of Ethnic Studies 191 Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191 and selected a faculty research advisor may enroll in this course. During the quarter the research for the honors project will be completed under the faculty advisor's supervision. Faculty advisors will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. **Prerequisite:** completion of 191.

#### 191C. Honors Research in Ethnic Studies (4)

This course is a continuation of Ethnic Studies 192, Honors Research in Ethnic Studies. Students who have completed ETHN 192 and are continuing to work with a faculty research advisor may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty advisor's supervision. The student will meet weekly with the faculty advisor in order to prepare drafts and the final version of the honors paper. **Prerequisite:** instructor approval.

#### 197. Fieldwork in Racial and Ethnic Communities (4)

This course comprises supervised community fieldwork on topics of importance to racial and ethnic communities in the greater San Diego area. Regular individual meetings with faculty sponsor and written reports are required. (May be repeated for credit.)

#### 198. Directed Group Studies (4)

Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. (May be repeated for credit.)

#### 199. Supervised Independent Study and Research (4)

Individual research on a topic that leads to the writing of a major paper. (May be repeated for credit.)

### GRADUATE

#### 200A. Departures: A Genealogy of Critical Racial and Ethnic Studies (4)

Introduction to critical racial and ethnic studies and how this perspective departs from traditional constructions of race and culture; examination of relevant studies to identify themes, concepts, and formulations that indicate the critical departures that characterize the field. **Prerequisite:** graduate standing or consent of instructor.

#### 200B. Formulations: Interdisciplinarity and Knowledge Production in Ethnic Studies (4)

This course uses model studies to explore how comparative and relational problems are posed as research projects, how research questions are constructed, and how they employ theory to frame the project and establish what is at stake in the research. **Prerequisite:** graduate standing or consent of instructor.

#### 200C. Projects (ProSeminar): Research in Ethnic Studies (4)

Students examine research designs presented by faculty and advanced graduate students to study how to conceive of and pose research questions, integrate theoretical and methodological models, and conceptualize their own research project. **Prerequisite:** graduate standing or consent of instructor.

#### 230. Departmental Colloquium (1)

This course is a forum for the presentation of recent research by guests, faculty, and students. This course may be taken for credit six times.

#### 240. Historical Methods and Archives (4)

This course seeks to develop research skills in historical methods; to understand techniques and tools historians use to create historical narratives using archival and historical sources; and to compare and relate the value of these to ethnic studies research.

#### 241. Cultural Studies and Cultural Production (4)

This course will train students in approaches to interdisciplinary research concerned with power and the production of knowledge, with a focus on conducting multimedia field research, applying discourse analysis, and recognizing forms of data across disciplinary divides.

#### 241A. Community Ethnography I: Method and Theory (4)

This course reviews the major tenets of ethnography using case studies of ethnographic work and critical theory pertaining to epistemological concerns in the social sciences. Critical here are the major ethical parameters of conducting ethnography in ethnic communities, the role of researchers, and the practical implications of such research.

#### 241B. Community Ethnography II: Practicum (4)

This course focuses on the practical application of ethnographic concepts and methods in actual field research in a local San Diego community. The purpose here is to provide experience in conducting ethnography through participant observation, interviews, and contributing to communities. This will include a brief overview of ethnographic method, but will focus on hands-on research, analysis, and ethnographic writing.

#### 242. Qualitative Methods/Ethnography (4)

This course focuses on conceptual and methodological frameworks of ethnography and qualitative inquiry, including research design, grounded theory, the field note journal, participant observation, and interviewing; major themes include the role of indigenous/insider researchers, ethics of involvement, and community collaboration.

#### 253. Mass Media and Ethnic Identity (4)

This course examines the ways that ethnic identity influences the practices of mass media, and the ways in which mass media shape and reflect ethnic identity.

#### 254. Race and Racism (4)

This course examines inequality based on race with a focus on the institutions, symbols, and social practices which structure and maintain racism. Particular attention is given to laws and social policy that reinforce racial inequality.

**256. Gender, Sexuality, and Race (4)**

This course studies the body cross-culturally as the site for the construction of gender, sex, ethnic, and racial identities.

**Prerequisite:** graduate standing or consent of instructor.

**257A-B. Social Theory (4-4)**

An intensive survey of social and cultural theory, focusing on how constructions of science, language, politics, and social inequality shaped early modernity, romantic nationalism, Marxism, cultural relativity, psychoanalysis, and fin de siècle social thought. The second quarter surveys poststructuralist, postmodern, feminist, subaltern studies, globalization, and other critiques. ETHN 257A is not a prerequisite for ETHN 257B.

**259. Comparative Conquests, Colonization, and Resistance in the Americas (4)**

This course will offer a comparative survey of the impact of European interactions with Native nations and populations in the New World, from Peru to Canada. Readings will emphasize modes of initial interaction, patterns of European colonization, and Native adaptation and resistance, and broader changes in Native culture and cosmology as a result of conquest and colonization.

**260. Transnationalism and Borderlands: The Local and Global (4)**

This course critically reviews the analytical frameworks of transnationalism and borderlands. The goals are to assess traditional and current social science practice on immigration, identity, and community studies, and to understand how diverse peoples engage and participate in global processes.

**261. Race and Law (4)**

This seminar advances a critique of law's innocence—of its claims for universality. The reading of legal and scientific texts will indicate how, by incorporation existing constructions of the meanings of race, the law produces racialized modern subjects.

**262. Race, Inequality, and Health (4)**

New critical and multidisciplinary perspectives provide tools for examining entrenched and newly emerging diseases and inequalities. This course examines medicine and public health in relationship to race, gender, sexuality, class, and nation and explores how these connections affect the distribution of health and health services locally, nationally, and internationally.

**263. Language and Socialization across Cultures (4)**

This course will focus on the ways in which children in different ethnic and racial groups are socialized to language and through language. We will explore racial and class and gender ideologies that underpin the ways parents expect children to learn to speak; examine effective and appropriate methods for studying cultural patterns and understanding ideologies; and consider impacts of bilingualism, stigmatized dialects, immigration, religious training, and home-school conflicts in ways of speaking and using language(s). **Prerequisite:** graduate standing or consent of instructor.

**264. War, Race, and Violence (4)**

This course critically examines theories and research on war, race, and violence, including everyday forms of state violence, war and the making of empire, the politics of war memory, and war refugees. **Prerequisite:** graduate standing or consent of instructor.

**265. Critical Immigration and Refugee Studies (4)**

This course surveys the field of immigration and refugee studies and introduces students to recent theories and cutting-edge research in the field. Key topics: gender and migration; diaspora and transnationalism; immigration, race, and citizenship; and globalization and immigrant labor. **Prerequisite:** graduate standing or consent of instructor.

**266. Popular Culture and Pedagogy (4)**

This course examines popular culture as a site of domination and resistance, and pedagogy broadly as (always political) educational projects in a variety of social contexts with a focus on youth popular culture in U.S. urban public schools. **Prerequisite:** graduate standing or consent of instructor.

**289. Topics in Ethnic Studies Research (4)**

This course is a research seminar on themes of contemporary and historic importance in ethnic studies. Themes will be determined by instructor. Course may be repeated three times for credit.

**290A-B. Master's Thesis Preparation (4-4)**

All graduate students are required to write a master's thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in the thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

**298. Directed Reading (1-12)**

This is an independent research or individual guided tutorial in an area not covered by present course offerings. This course may be repeated for an indefinite number of times due to the independent nature of the content of the course.

**299. Thesis Research (1-12)**

Open to graduate students conducting doctoral thesis research. This course may be repeated for an indefinite number of times due to the independent nature of thesis research and writing.

**500. Apprentice Teaching in Ethnic Studies (4)**

A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations.

## THE EUROPEAN STUDIES MINOR

The European Studies minor is for students with strong European interests or who plan to study in Europe on an Education Abroad Program (EAP)

or Opportunities Abroad Program (OAP) but also those who seek to complement their major with the study of Europe as a political, cultural, and economic entity. To receive a minor in European Studies, a student must complete seven four-unit courses (twenty-eight units).

## (A) Language requirement

ALL minors must demonstrate basic proficiency in a single European language other than English by completing four quarters of language instruction (or equivalent). Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam. Students completing the language requirement through waiver (700 or better on SAT II language, score of 4 or better on AP language), or proficiency exam will fulfill the language component of the minor by completing one of these requirements but no course credit will be applied toward the (seven) courses required for the minor.

Up to TWO four-unit courses in foreign language can be included in the seven courses required for the minor. These may be lower-division courses.

## (B) Additional course requirements

1. The remaining five to seven courses (depending on the number of language courses applied to the minor) must include at least three courses on Europe as a whole including one course in each of the two broad tracks.
  - a. Economics and Politics
  - b. Culture and Society (See course listings for each track.)
2. At least one of the track courses should be in the Department of History.
3. No more than three courses in any one department.
4. All courses applied to the minor must receive a letter grade of C– or better.
5. Upper-division courses may include up to two 198 and 199 courses and up to three courses from UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) with the approval of the minor advisor.
6. Minors in European Studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP). Students should consult with the faculty director before going abroad to determine which courses will be approved for minor credit.

## TRACKS IN THE EUROPEAN STUDIES MINOR

Courses preceded by an asterisk are petitionable for credit towards the minor as content warrants.

## ECONOMICS AND POLITICS

## COMMUNICATION

### COSF 140B. Comparative Media Systems: Europe

## HISTORY

HIEU 109. European Nationalism from a Historical Perspective

HIEU 113. Rule, Conflict, and Dissent in the Middle Ages

HIEU 126. Age of Expansion: Europe and the World, 1400–1600

HIEU 128. Europe Since 1945

HIEU 141. European Diplomatic History, 1870–1945

HIEU 146. Fascism, Communism, and the Crisis of Liberal Democracy: Europe 1919–1945

## PHILOSOPHY

PHIL 166. Classics in Political Philosophy

PHIL 167. Contemporary Political Philosophy

## POLITICAL SCIENCE

POLI 110A. Citizens and Saints: Political Thought from Plato to Augustine

## THE MINOR

---

In the course of the twentieth century, film in all its applications—as storytelling, as documentary, as propaganda, as popular entertainment—became a powerful social and cultural force on an international scale. The importance of film is reflected in the number of faculty at UC San Diego whose scholarship and teaching involves film and in the number of courses regularly offered that focus on some aspect of film studies and use film as an essential component of the course material. The Film Studies minor is designed to give students a flexible introduction to the full range of courses on film available here. As noted below, the only constraints are that five of the seven courses must be in the upper division and that the seven courses must come from at least two different departments. This latter requirement is designed to insure some level of breadth in the minor. The minor should be of interest to students with a wide range of interests, from those who plan graduate study in film to those who simply wish

to understand better this powerful and influential medium.

## REQUIREMENTS

Seven courses, at least five of which must be upper-division, from the following list. The seven courses must be drawn from at least two different departments.

---

## COURSES

---

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

- COCU 110. Cinema in Latin America (4)**
- COCU 125. How to Read a Film (4)**
- COCU 132 Gender and Media (4)**
- COSF 186. Film Industry (4)**
- ETHN 101. Ethnic Images in Film (4)**
- FILM 87. Film Studies Freshman Seminar (1)**
- FILM 192. Senior Seminar in Film Studies (1)**
- HIEA 133. Twentieth-Century China: Cultural History (4)**
- HIUS 122. History and Hollywood: America and the Movies since the Great Depression (4)**
- LTWL 4A-B-C-D-E-M. Fiction and Film in Twentieth-Century Societies (4-4-4-4-4-4)**
- LTAF 120. Literature and Film of Modern Africa (4)**

# Freshman Seminar Program

---

Office of the Senior Vice Chancellor—Academic  
Affairs  
Associate Vice Chancellor—Undergraduate  
Education

OFFICE: University Center, Room 104  
(858) 822-5855  
<http://ugseminars.ucsd.edu>

The Freshman Seminar Program debuted in 2003–04 to offer students early intellectual contact with faculty members, spark their interest in a broad range of topics, and enrich the undergraduate experience at UC San Diego. These seminars create a unique classroom environment by providing new students with opportunities to engage in intellectual discussions with faculty and peers in a small supportive class setting, and by fostering the development of critical thinking and analytical skills. Incoming students are highly encouraged to enroll in freshman seminars during their first year at UCSD. Students can select from an interesting and exciting array of seminars each quarter, designated by courses numbered 87 (e.g., PHYS 87).

Faculty from all departments offer approximately 150 seminars each academic year. Seminars offer one unit of credit and are graded Pass/Not Pass. Enrollment is limited to twenty students per seminar, with preference given to entering freshmen, and up to four seminars may be taken for credit.

Please visit the Freshman Seminar Program Web site at <http://ugseminars.ucsd.edu> for a description of seminars currently offered. This site also contains useful information, such as enrollment procedures for freshmen with advanced standing, and additional program details. Questions about a specific freshman seminar should be directed to the department offering the seminar.

## OFFICE:

History Undergraduate Advising  
Humanities and Social Sciences Building, Fifth Floor  
Muir College  
(858) 534-0491  
<http://history.ucsd.edu/programs/caesar-programs/german-stud/>

## PROGRAM DESCRIPTION

German Studies is an interdisciplinary program that offers both a major and a minor for students with broad academic interests in the German-speaking world.

In consultation with a faculty advisor in the program, students design individual plans of study from the many core courses offered in the Departments of History, Literature, Music, Philosophy, Political Science, Sociology, and Theatre and Dance. Further courses, including some offered by other departments, may be incorporated into the student's program, if they bear directly on German studies. Students considering a major or minor should consult a member of the German Studies faculty as early as possible.

Students need to attain competence in German (two years of university-level language courses or the equivalent) before they can take certain required upper-division courses. It is recommended that students attain this level of competence early in the program.

## STUDY ABROAD

All German Studies students are strongly encouraged to make overseas study an integral part of their program. The UC Education Abroad Program (EAP) conducts formal programs of study in Berlin, Göttingen, and Bayreuth ranging from one-quarter, intensive beginning language programs to a full year of study at a German university. Students may petition to use up to five courses completed while

studying abroad in their major, and three in their minor.

## SENIOR HONORS THESIS

At the beginning of his or her senior year, a student major in German Studies may elect to write a Senior Honor's Thesis. To be eligible, the student must have a GPA of 3.5 in the German Studies major at the beginning of the senior year.

To begin work, the student forms a committee of three appropriate faculty members, including a committee chair, who is chosen from among the German Studies Core Faculty. The chair supervises the student in a two-quarter program of independent study to research and write an Honor's Thesis of approximately thirty to fifty pages (GMST 196A/B; the two courses count among the required twelve for the major). The student defends the thesis in a one-hour oral exam with the full committee, which is charged with recommending the degree of honors that will appear on the student's transcript and diploma.

## THE MAJOR

The major in German Studies requires twelve upper-division courses chosen from the core course list, and includes **German Studies I and II (LTGM 100 and 101) three courses in German Literature two courses in History five additional core courses, taken in at least two different departments. At least two of these courses must be taken outside the literature department.**

Students plan their major in consultation with their German Studies faculty advisor, and submit it to the program director for approval.

## THE MINOR

The minor in German Studies consists of seven courses, at least five of which must be upper-division, including **German Studies I or II (LTGM 100 or 101) At least six additional core courses, taken in at least two departments.**

Students plan their minor in consultation with their German Studies faculty advisor, and submit it to the program director for approval.

## CORE COURSES

Courses marked with an asterisk (\*) frequently cover topics bearing on German Studies. Students should check the departments' quarterly course descriptions and yearly course spreads for their applicability to the program, and discuss them in advance with their German Studies advisor.

## GERMAN STUDIES

**GMST 196A/B. Honors Thesis**

## HISTORY

**HIEU 125. Reformation Europe**

**HIEU 132. Germany from Luther to Bismarck**

**HIEU 142. European Intellectual History: 1780–1870**

**HIEU 143. European Intellectual History: 1870–1945**

**HIEU 146. Fascism, Communism, and the Crisis of Liberal Democracy: Europe 1919–1945**

**HIEU 154. Modern German History: From Bismarck to Hitler**

**HIEU 155. Modern Austria**

**HIEU 177. Special Topics in Modern German Thought**

## LITERATURE

**LTGM 2A. Intermediate German I**

**LTGM 2B. Intermediate German II**

Kelly O'Sullivan, *Academic Integration Officer*

UC San Diego Global Seminars are summer study abroad experiences led by a UCSD professor. These programs are five weeks in duration. Students enroll in two courses for a total of eight UCSD units. Class sizes are between fifteen and thirty students, so there are excellent opportunities for interaction with some of the best professors at UCSD. All courses are taught in English, but several programs have some very basic, elementary language instruction to help students navigate the local community. The Programs Abroad Office assists students with advising, application, financial aid, predeparture orientation, and reentry issues. Special study abroad scholarships are available. For more information, consult the UC San Diego Global Seminars section of the Programs Abroad Web site at <http://globalseminar.ucsd.edu>.

## PROGRAM DESCRIPTION

The Master of Advanced Studies (MAS) in the Leadership of Healthcare Organizations provides depth and focus on management for healthcare professionals with an emphasis on clinical process improvement. The goal of the program is to prepare healthcare professionals to participate more effectively in the business decisions that affect the quality of patient care by teaching participants to deal with error prevention, process quality, and systems of care. Students gain the advanced knowledge and skills that are essential to manage escalating challenges in the competitive business environment of health care. The MAS program crosses many fields and clinical and administrative professions in the health industry, including medicine, nursing, mental health, dentistry, insurance, pharmacy, and other related areas. The program is appropriate for nurses, managers, physicians, allied health professionals,

healthcare executives, and medical students as they assume more active roles in healthcare leadership and on management teams.

The MAS in the Leadership of Healthcare Organizations is a part-time, self-supporting degree program with a flexible course schedule designed for working professionals. It is the first graduate degree of its kind within the University of California system. The UC San Diego graduate division confers the MAS degree and the Department of Family and Preventive Medicine in the UCSD School of Medicine is responsible for the academic management of the curriculum. UCSD Extension administers the program and provides student advising and career counseling services.

## ADMISSION

New students are admitted in the fall, winter, and spring quarter of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates have a minimum of five years of professional experience in health care. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadlines are July 15 (fall), October 15 (winter), and January 15 (spring).

## PROGRAM OF STUDY

The part-time degree program is designed to be completed in one, two, or three years, depending upon a participant's time to devote to the program. Classes are typically scheduled in the late afternoons, evenings, or weekends to meet the demands of working professionals. Students are required to complete forty-two units of required courses.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## CURRICULUM

### LHCO 201A-B. Topics in Healthcare Management and Innovation (2-2)

Weekly discussions with healthcare entrepreneurs and managers will expose students to real-life experiences. How are solutions to healthcare delivery identified and implemented? How are solutions brought to the marketplace?

### LHCO 202. Organizational Dynamics and Change Management (4)

This course examines principles and applications of management and organization theory as applied to healthcare organizations. It covers methods for assessing key features of organizational environments and internal structures and identifying, developing, and implementing strategies for improved performance.

### LHCO 203. Using and Managing Information and Information Technologies (4)

Designed to familiarize health administrators and professionals with the principles of information systems design and management for health care. Provides an understanding of current trends in information technologies for

health care and management issues unique to it. Includes hands-on computer lab.

### LHCO 204. Managing People and Teams (2)

This course studies key management concepts and roles of management and how they apply in successful, dynamic organizations. It also examines competencies of effective managers in developing customer focus, planning, selecting and developing individuals and teams, communicating, managing resources, using technology and being adaptable.

### LHCO 205. Modern Healthcare Organizations (4)

Describes and analyzes the dynamics responsible for the change in healthcare delivery and effects on development of modern healthcare organizations. Describes actions taken by employers, insurers, consumers, and government, analyzing the effects on physicians and provider organizations. Note: It is recommended that students take this course in their first winter quarter in the program.

### LHCO 206. Topics in Financial Management and Decision Making (2)

This course presents real-life applications in healthcare provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range financial forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs.

### LHCO 207. Health Law and Medical Liability (4)

This course provides an introduction to the relationship of law to health care, including liability, government regulation, financial and ethical issues, contracting and negotiation and dispute resolution.

### LHCO 209. Patient Outcomes and Quality of Care (4)

This course provides a critical overview of the tools used to measure outcomes and quality of care, development and use of practical guidelines, advantages and disadvantages of various methods, and the use of such analysis in administrative decision-making.

### LHCO 211. Healthcare Leadership and Political Advocacy (2)

Within the context of healthcare advocacy, the course examines the organizational and individual issues that impact success in promoting and advocating for a healthcare agenda. The course aims to provide clarity to that process and assist students with understanding how to navigate the political landscape. Students learn about the legislative process, lobbying, the impact of political campaigns, the involvement of the media, and how healthcare economics impact politics.

### LHCO 212. Statistics and Applied Decision Making (2)

Students will learn statistical methods and their most common applications in healthcare management. Topics covered include data presentation, sampling, the development and use of confidence intervals, hypothesis testing, analysis of variance and simple regression. We will also explore elementary probability theory and decision making under uncertainty. Students who have taken LHCO 208 may not receive credit for LHCO 212. **Prerequisite:** admission to MAS in LHCO or consent of department.

### LHCO 213. Financial Accounting and Analysis (2)

Students will learn the use of financial information within a healthcare organization. Topics covered will include capital structure, working capital and cash management, the time value of money, and capital budgeting. Students who have taken LHCO 208 may not receive credit for LHCO 213. **Prerequisites:** admission to the MAS in the Leadership of Healthcare Organizations Program or consent of department.

### LHCO 214. Practical Business Communication Skills for Healthcare Professionals (2)

This course focuses on developing effective business communication skills for professionals in managerial/senior roles in healthcare. Writing scenarios include: preparing briefings and updates using presentation software and/or briefing packets; organizing data; constructing proposals and reports; solicitations; coordinating projects via email; and drafting and editing group documents. On-the-job examples from the student's workplace are used throughout the course. **Prerequisite:** admission to the MAS in

the Leadership of Healthcare Organizations Program or consent of department.

**LHCO 296A. Independent Study**

**Project (ISP) Prospectus (2)**

As part of preparing for the ISP, each student must prepare a prospectus based on some topic of research interest relevant to leadership of healthcare organizations. The prospectus will consist of an integrative literature review and a proposal for an applied research project based on the chosen topic. **Prerequisite:** admission to the MAS in the Leadership of Healthcare Organizations Program or consent of department.

**LHCO 296B. Independent Study Project**

**in the Management of Healthcare (4)**

The Independent Study Project (ISP) is the cornerstone of the MAS Program. Students will be involved in a high-level applied research project that integrates what they have learned in their formal course work. The ISP will be an independent and creative scholarly activity in an area related to one or more of the topics covered in the formal curriculum. Students' work will be evaluated by a committee consisting of faculty and, when appropriate, industry advisors.

# Health Care— Social Issues

OFFICE: Interdisciplinary Programs, EBU 3B  
Computer Science and Engineering Building  
Room 1114, Warren College

<http://provost.ucsd.edu/warren/health/>

Health Care–Social Issues is an interdisciplinary minor designed to enhance students' competence in analyzing complex social and ethical implications and ramifications of health care issues, policies, and delivery systems. Students gain an understanding of how the economy, culture, technology, and sociological and psychological processes influence modern health care. Although it is administered by Warren College, it is available to all UC San Diego undergraduate students with a general interest in health care as well as to students considering health care careers. This minor offers students the opportunity to examine health care related issues from the perspectives of a wide range of disciplines, including anthropology, biology, cognitive science, contemporary issues, economics, ethnic studies, philosophy, psychology, science, technology, public affairs, sociology, and urban studies. By bringing together course work from these academic departments, this interdisciplinary curriculum offers a breadth of intellectual experience that enhances students' undergraduate education and their preparation for professional and postgraduate education in the health care field.

Students should consult an academic advisor at their college to determine how the Health Care–Social Issues minor can best meet their college graduation requirements. Minor declarations must be made online using the [TritonLink](#) major and minor application.

Students are urged to supplement the Health Care–Social Issues minor with a health-related internship. The Academic Internship Program offers internship placements in clinical settings and with medical research teams that provide valuable experience, career clarification, and an opportunity to apply theories learned in course work.

Further information on the program is available at the Warren College Interdisciplinary Programs Office.

## HEALTH CARE–SOCIAL ISSUES MINOR REQUIREMENTS

The minor consists of three required courses and four elective courses. At least five courses must be taken at the upper-division level. Upper-division courses must not overlap with courses in the student's major. No more than three courses may be taken in any one discipline. For full descriptions of the following courses, please see departmental listings.

### Required Courses

Sociology 40—Sociology of Health Care Issues  
Philosophy 163—Biomedical Ethics

One course in Urban Studies and Planning chosen from the following:

- 143—The U.S. Health Care System
- 144—Environmental and Preventive Health Issues
- 145—Aging: Social and Health Policy Issues
- 147—Case Studies in Health Care Programs/Poor and Underserved Population

(Additional Urban Studies and Planning courses may be taken to fulfill elective requirements in the minor.)

### Elective Course Options

#### Anthropology

- ANTH 2—Human Origins
- ANBI 100—Special Topics in Biological Anthropology (topic approval required)
- ANBI 141—The Evolution of Human Diet
- ANSC 100—Special Topics in Socio-Cultural Anthropology (topic approval required)
- ANSC 164—The Anthropology of Medicine

#### Biology

- BILD 36—AIDS, Science, and Society
- BICD 136—AIDS, Science, and Society

#### Cognitive Science

- 174—Drugs: Brain, Mind, and Culture  
Contemporary Issues

- 22—Human Sexuality
- 40—The AIDS Epidemic
- 136—The Anthropology of Medicine

#### Economics

- 140—Economics of Health Producers
- 141—Economics of Health Consumers

#### Ethnic Studies

- 142—Medicine, Race, and the Global Politics of Inequality

#### History

- HISC 115—History of Modern Medicine
- HISC 116—History of Bioethics
- HISC 174—History of Localization of Brain Function

#### Philosophy

- 147—Philosophy of Biology
- 148—Philosophy and the Environment
- 151—Philosophy of Neuroscience
- 162—Contemporary Moral Issues
- 164—Technology and Human Values

#### Psychology

- 2—General Psychology: Biological Foundations
- 60—Introduction to Statistics
- 104—Introduction to Social Psychology
- 124—Introduction to Clinical Psychology
- 132—Hormones and Behavior
- 134—Eating Disorders
- 154—Behavior Modification
- 155—Social Psychology and Medicine
- 163—Abnormal Psychology
- 168—Psychological Disorders of Childhood
- 169—Brain Damage and Mental Function
- 172—Psychology of Human Sexuality
- 179—Drugs, Addiction, and Mental Disorders
- 181—Drugs and Behavior

188—Impulse Control Disorders  
Science, Technology, and Public Affairs

181—Essentials of Global Health

#### Sociology

Soc 60—The Practice of Social Research

Soc 120T—Special Topics in Culture, Language, and Social Interaction (topic approval required)

Soc 134E—The Making of Modern Medicine

Soc 135—Medical Sociology

Soc 136E—Sociology of Mental Illness: A Historical Approach

Soc 136F—Sociology of Mental Illness in Contemporary Society

Soc 138—Genetics and Society

Soc 143—Suicide

Soc 159—Special Topics in Social Organizations and Institutions (topic approval required)

#### Urban Studies and Planning

- 143—The U.S. Health Care System
- 144—Environmental and Preventive Health Issues
- 145—Aging: Social and Health Policy Issues
- 147—Case Studies in Health Care Programs/Poor and Underserved Population

Students may petition to substitute courses in the minor that have substantial content related to health care and society. Petitions should be submitted to the Warren College Interdisciplinary Programs Office.

### RECOMMENDED INTERNSHIP EXPERIENCE

A health care related internship (AIP 197) is recommended and should be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor, <http://aip.ucsd.edu/>. Clinical and research placements are available.

### FACULTY ADVISORY COMMITTEE

Sandra Brown, *Professor, Psychology, Program Director*  
Gerald Doppelt, *Professor, Philosophy*  
John Evans, *Associate Professor, Sociology*  
Leslie Lewis, *Lecturer, Urban Studies and Planning*  
Dana Nelkin, *Associate Professor, Philosophy*  
Vivian Reznik, *Professor of Pediatrics, School of Medicine*  
Andrew Scull, *Professor, Sociology*

## PROGRAM DESCRIPTION

The Master of Advanced Studies (M.A.S.) in Health Law is a joint-degree offering from UC San Diego and California Western School of Law. The program was developed in response to the increasing need to equip professionals from the health care and legal disciplines with a more complete understanding of

the best scientific, ethical, regulatory, and management practices. As medical decisions grow more complicated and far-reaching, the intersection of legal and medical/health care practices will be one of the most critical focal points of society for decades to come. Managed care, advances in medical treatment and biotechnology, issues of access, and bioethics all absorb the attention of our regulatory, legislative, and judicial systems. Health care and legal professionals will need to have the specialized skills and training to be effective and influential in this complex environment.

Led by select faculty from the School of Medicine at UC San Diego and California Western School of Law, the rigorous and timely graduate-level curriculum is designed to orient professionals to the common activities, philosophy of practice, and challenges of the companion discipline in health care or law. The program focuses on acculturating practitioners in both fields to become leaders in providing integrated, sensitive solutions to everyday practice and policy issues.

## ADMISSION

New students are admitted in the fall quarter of each academic year. Prospective candidates should submit an official UCSD on-line graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional letters of recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates possess, or currently be pursuing, a graduate degree in a scientific or health care related field and also have some level of experience in scientific or clinical research. In some instances candidates without an advanced degree may be admitted to the joint-degree program if they have demonstrated substantial professional experience in the field at increasing levels of responsibility. The application deadline is April 2.

## PROGRAM OF STUDY

The part-time master's degree program is designed to be completed in eighteen months to two or three years, depending upon a participant's time to devote to the program. Responsibility for course offerings is shared between UC San Diego School of Medicine and California Western School of Law and students will be expected to enroll in courses at both institutions. Classes are typically held in the late afternoons or evenings, to allow flexibility for participants' home and work life. The forty-five-unit degree comprises fifteen units of required courses, twelve units of core courses, twelve units of general electives, and six units of a capstone project.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## REQUIRED COURSES (FROM UCSD)

### HLAW 201. Introduction to Medical/Health Care Practice (3)

This overview for the non-medical professional examines the environment in which the medical practitioner must manage the patient relationship and deal with legal concerns. Topics include patient safety and privacy, medical technology and research, pharmaceuticals, and economics. Cases are used. **Prerequisite:** M.A.S. health law student or consent of instructor.

### HLAW 207A. Principles in Health Law and Policy A (6)

This course presents a comprehensive view of modern issues at the intersection of healthcare and law, with an emphasis on improving understanding and synergy between the professions. The course stresses foundational understanding of how health law and policy is formulated and the application of health law and policy in current practice. A portion of the class is devoted to group work where students select and study issues in depth to build a framework for resolving enduring challenges in the field. A variety of timely topics on the health law system and procedures/processes, such as Medicare and MediCal coverage, are introduced to reinforce understanding. Students who have taken HLAW 202A–C, HLAW 203A–C, or HLAW 204A–C may not receive credit for HLAW 207A. **Prerequisite:** M.A.S. health law student or consent of department.

### HLAW 207B. Principles in Health Law and Policy B (6)

This course presents a comprehensive view of modern issues at the intersection of healthcare and law, with an emphasis on improving understanding and synergy between the professions. The course stresses foundational understanding of how health law and policy is formulated and the application of health law and policy in current practice. A portion of the class is devoted to group work where students select and study issues in depth to build a framework for resolving enduring challenges in the field. A variety of timely topics on the health law system and procedures/processes, such as Medicare and MediCal coverage, are introduced to reinforce understanding. Students who have taken HLAW 202A–C, HLAW 203A–C, or HLAW 204A–C may not receive credit for HLAW 207B. **Prerequisite:** HLAW207A, M.A.S. health law student, or consent of department.

### HLAW 296A. Independent Study Project Proposal (2)

As part of preparing for the independent study project, each student must prepare a proposal based on a topic of research interest directly relevant to health law. The proposal will consist of an integrative literature review and a proposal for an applied research project based on the chosen topic. **Prerequisite:** admission to the M.A.S. in Health Law Program or consent of the department.

### HLAW 296B. Independent Study Project in Health Law (4)

The independent study project is the cornerstone of the M.A.S. Program. Students will be involved in a high-level applied research project that integrates what they have learned in their formal course work. The project will be an independent and creative scholarly activity in an area of health law related to one or more of the topics covered in the formal curriculum. Students' work will be evaluated by a committee of faculty and may also include industry advisors when appropriate. **Prerequisites:** admission to the M.A.S. in Health Law Program or consent of department; HLAW 296A.

## PRESCRIBED ELECTIVES (FROM UCSD)

### HLAW 205A. Bioethics Seminar—Clinical Focus A (2)

This seminar examines bioethical concerns and considerations from a clinical perspective. Using medical literature and case law, topics such as bioethics principles, informed consent, technology and reproduction, surrogacy, fetal rights, and the right to die are presented and discussed. **Prerequisite:** M.A.S. health law student or consent of instructor.

**HLAW 205B. Bioethics Seminar—Clinical Focus B (2)**

The seminar broadens the focus on the patient/doctor relationship and medical ethical issues in healthcare policy at the national and global levels. Topics include allocation of scarce medical resources; compulsory public health measures; clinical research in the developing world; and cross-cultural medical practice. **Prerequisite:** M.A.S. health law student or consent of instructor.

**LHCO 205. Modern Health Care Organizations (4)**

Describes and analyzes the dynamics responsible for the change in health care delivery and effects on development of modern health care organizations. Describes actions taken by employers, insurers, consumers, and government, and analyzes the effects on physicians and provider organizations. **Prerequisite:** M.A.S. health law student or consent of instructor.

**LHCO 206. Topics in Financial Management/ Decision-Making in Health Care (2)**

Presents real-life applications in health care provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs. **Prerequisite:** M.A.S. health law student or consent of instructor.

**LHCO 213. Financial Accounting and Analysis (2)**

Students will learn the use of financial information within a healthcare organization. Topics covered will include capital structure, working capital and cash management, the time value of money, and capital budgeting. Students who have taken LHCO 208 may not receive credit for LHCO 213. **Prerequisite:** admission to the M.A.S. in the leadership of healthcare organizations program or consent of department.

**HLAW 208. Influencing Public Policy (2)**

Students will learn the basic policy framework in the U.S. (i.e., the "legal process") and points at which this framework can be influenced to formulate public policy in healthcare. **Prerequisite:** M.A.S. health law student or consent of department.

**GENERAL ELECTIVES**

Varies. Refer to list of elective courses from UCSD and California Western School of Law.

# History

## PROFESSORS

Robert S. Edelman, Ph.D.  
Joseph W. Esherick, Ph.D., *Hsiu Professor of Chinese Studies, Hwei-Chih and Julia Hsiu, Endowed Chair in Chinese Studies*  
Takashi Fujitani, Ph.D.  
Thomas Gallant, Ph.D., *Nicholas Family Endowed Chair, Modern Greek History*  
David M. Goodblatt, Ph.D., *Endowed Chair, Judaic Studies*  
David G. Gutiérrez, Ph.D.  
Deborah Hertz, Ph.D., *Herman Wouk Endowed Chair in Modern Jewish Studies*  
Judith M. Hughes, Ph.D.  
Christine F. Hünefeldt, Ph.D., *Director, Center for Iberian and Latin American Studies*  
John A. Marino, Ph.D., *Chair*  
Michael P. Monteón, Ph.D.  
Naomi Oreskes, Ph.D., *Provost, Sixth College*  
Michael E. Parrish, Ph.D.  
Paul G. Pickowicz, Ph.D., *Endowed Chair, Modern Chinese History*  
William H. Propp, Ph.D., *Endowed Chair, Harriet and Louis Bookheim Professor of Biblical and Related Languages*  
Stefan A. Tanaka, Ph.D.  
Eric Van Young, Ph.D.  
Robert S. Westman, Ph.D.

## ASSOCIATE PROFESSORS

Luis Alvarez, Ph.D.  
Frank Biess, Ph.D.  
Nancy Caciola, Ph.D.  
Tal Golan, Ph.D.  
Hasan Kayali, Ph.D.  
Rachel Klein, Ph.D.  
Weijing Lu, Ph.D.  
Rebecca Jo Plant, Ph.D.  
Jeremy Prestholdt, Ph.D.  
Michael Provence, Ph.D.  
Pamela B. Radcliff, Ph.D.  
Sarah Schneewind, Ph.D.  
Nayan B. Shah, Ph.D.  
Cynthia M. Truant, Ph.D.  
Daniel L. Widener, Ph.D.

## ASSISTANT PROFESSORS

Catherina M. Gere, Ph.D.  
Mark Hanna, Ph.D.  
Mark Hendrickson, Ph.D.  
Todd A. Henry, Ph.D. (In Residence), Professorship is supported by a grant from the Korea Foundation.  
Nancy H. Kwak, Ph.D.  
Everard Meade, Ph.D.  
Patrick Patterson, Ph.D.

## ADJUNCT FACULTY

Michal Belknap, Ph.D., *Earl Warren Professor of Law, California Western School of Law*  
Amy Bridges-Kronick, Ph.D., *Professor, Political Science*  
Suzanne Cahill, Ph.D., *Adjunct Professor*

Paul Drake, Ph.D., *Professor, Political Science and Institute of the Americas Chair for Inter-American Affairs; Senior Vice Chancellor, Academic Affairs*  
Steve Erie, Ph.D., *Professor, Political Science*  
Peter H. Smith, Ph.D., *Professor, Political Science and Simón Bolívar Chair in Latin American Studies*

## LECTURER WITH POTENTIAL SECURITY OF EMPLOYMENT

Jane Kuo, Ph.D.

## PROFESSORS EMERITI

Guillermo Cespedes, Ph.D.  
Stanley A. Chodorow, Ph.D.  
Gabriel Jackson, Ph.D.  
David Luft, Ph.D.  
Thomas A. Metzger, Ph.D.  
Allan Mitchell, Ph.D.  
Alden A. Mosshammer, Ph.D.  
Edward Reynolds, Ph.D.  
David R. Ringrose, Ph.D.  
Martin J. S. Rudwick, Ph.D.  
Ramón Eduardo Ruíz, Ph.D.

## EMERITUS LECTURER WITH SECURITY OF EMPLOYMENT

Ping C. Hu

## THE UNDERGRADUATE PROGRAM

"Whereas other subjects may make us smarter for next time," said the great historian of the Renaissance, Jakob Burckhardt, "the study of history makes us wiser forever." History prepares students for careers in law, government, diplomacy, international business, nonprofit administration, and education. But history is also good preparation for any other field that requires assessing evidence and making written and oral arguments, fields including engineering, medicine, and entrepreneurship. Moreover, history opens the mind to the full range of the human experience as it has unfolded over the ages. As an academic discipline at the crossroads of the humanities, the arts, and the social sciences, history is a unique gateway to the richness of the American cultural heritage, to the immense variety of world civilizations, and to understanding what has happened in the past and why.

To declare a major in history, consult with the undergraduate student affairs advisor on the fifth floor of H&SS. In selecting your field of emphasis, you may also consult with the director of undergraduate studies or other faculty members. The fields of emphasis are as follows: Africa (HIAF), East Asia (HIEA), Europe (HIEU), Near East (HINE), Latin America (HILA), History of Science (HISC), United States (HIUS); as well as the following three thematic fields: gender and sexuality; race, ethnicity, and migration;

and war, revolution, and social change. A list of courses approved for the thematic fields is available in the department office or on its Web site <http://history.ucsd.edu>. In special cases, upon approval of the director of undergraduate studies, students may devise a different field of emphasis (e.g., economic, legal, or social history).

The department also administers the following special research and instructional units: Chinese Studies; Judaic Studies; and the Committee on Area and Ethnic Studies and Research (CAESAR), which includes Classical Studies, European Studies, German Studies, Italian Studies, Japanese Studies, Middle East Studies, and Russian and Soviet Studies.

The department is fortunate in having the research and professional activities of its faculty supported by the Laura and John Galbraith Faculty Development Fund.

Basic requirements for the major are as follows:

1. Three lower-division courses in history.

Lower-division courses may be selected from the following:

HILD 2 A-B-C. United States History

HILD 7 A-B-C. Race and Ethnicity in the U.S.A.

HILD 10-11-12. East Asia

Majors may also satisfy the lower-division requirement by completing the Revelle College Humanities Sequence or the Eleanor Roosevelt College Sequence "Making of the Modern World." Majors may petition to fulfill all or part of the lower-division requirement with AP credit in history or courses from another school.

2. Twelve four-unit upper-division courses, distributed as follows:

- a. At least three courses in the field of emphasis.
- b. At least three courses in other fields within the department.
- c. Three of the twelve courses must focus on the period before 1800, indicated by the (+).
- d. At least one of the twelve courses must be a colloquium in which students write a substantial term paper. Colloquia are courses with numbers between 160 and 190, or others approved by the undergraduate advisor. Note: the colloquium need not be in the major field of emphasis.

Students majoring in history will normally take at least eight of their twelve upper-division history courses at UC San Diego. Exceptions may be made for transfer students and for students participating in the EAP/OAP program.

Special independent study courses, such as HITO 198, Directed Group Study, and HITO 199, Independent Study, are available, especially for students interested in the Honors Program and in graduate study.

With the exception of 199 courses, all work in the major must be taken for a letter grade. Of the twelve upper-division courses required in the major, no more than two may be History 199 credits. Exceptions to these rules may be approved by the director of undergraduate studies.

Established in 1983, the Armin Rappaport Memorial Fund endows an annual prize for the best

graduating student in the major. The recipient of the award is announced at every June commencement.

---

## THE HONORS PROGRAM

---

The department offers a special program for outstanding students. The Honors Program is especially recommended for those students interested in pursuing graduate study in history or allied fields. It is also a particularly effective preparation for professional careers. Candidates for History Honors are chosen during the spring quarter from among juniors in history who have taken at least four upper-division courses in the department. Juniors with a 3.5 GPA in history (3.0 overall) are eligible to apply. Admission to the program is based on the student's academic work. Interested candidates should complete the application form (available in the Department of History office) by the second Friday of May.

In addition to regular course work in the department, the Honors Program consists of a colloquium in historiography offered in the fall quarter of the senior year and a program of independent study leading to the completion of an honors essay on a topic of the student's choice. During the fall quarter of the senior year, candidates select a topic and begin preliminary work on the Honors essay in consultation with a major field advisor (HITO 194). During the winter quarter the student pursues a course of independent study devoted to the completion of the Honors essay (HITO 195). The award of History Honors is based on satisfactory completion of the colloquium in history and the Honors essay. Students are expected to maintain an average of 3.5 or better in all work taken within the department. Honors candidates must include at least three colloquia in their regular course work.

Candidates for history honors should organize their upper-division course work as follows:

1. Six quarter-courses in one of the major fields offered by the department.
2. Three quarter-courses in a field other than the primary one.
3. Three of these nine quarter-courses must be colloquia.
4. HITO 196. Colloquium in History.
5. HITO 194 and 195. History Honors—Honors Essay.

---

## MINORS IN HISTORY

---

The minor consists of at least seven courses, five of which must be upper-division. Although there is no specific distribution requirement, the courses should be selected to constitute a coherent curriculum. No more than two upper-division courses applied to a minor may be taken for Pass/Not Pass. Prospective minors in history should consult with an undergraduate advisor for approval of their program.

## EDUCATION ABROAD PROGRAM

History majors are encouraged to participate in the UC Education Abroad Program (EAP) or UCSD's

Opportunities Abroad Program (OAP), while still making progress toward completing their major. Students considering this option should discuss their plans with the departmental Educational Abroad faculty advisor before going abroad, and courses taken abroad must be approved by the department. (For more information on departmental procedures for study abroad see undergraduate program <http://history.ucsd.edu>.) EAP is detailed in the Educational Abroad Program of the *UC San Diego General Catalog*, or visit <http://programsabroad.ucsd.edu>. Financial aid is applicable to study abroad, and study abroad scholarships are available. Interested students should contact the Programs Abroad Office in the International Center.

---

## THE GRADUATE PROGRAM

---

### THE MASTER'S PROGRAM

The M.A. program is designed to introduce students to the basic skills of historical research as well as to the debates about, and the approaches to, historical scholarship in a specific field. Master's students ordinarily do not receive financial aid from the department or the university except when funds are not utilized for support of Ph.D. candidates.

The department offers M.A.s in European history, United States history, and history of science. In addition, the Department of History administers an interdisciplinary M.A. program in Judaic studies. Students interested in pursuing an M.A. degree in Latin American history are encouraged to apply for admission to the Latin American Studies program. The department also offers the opportunity for students to design special M.A. programs in areas such as African history or medieval European history. In consultation with an appropriate faculty member, students may petition the department for approval of a special M.A.

### Admissions

Admission is based on the applicant's undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two papers (preferably written for history courses); and scores from the Graduate Record Examination (GRE). The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test, a score of 213 for the computer-based test, or a score of 80 on the Internet-based test is required on the TOEFL. The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. Refer to the online application for filing deadline.

For online application visit <http://ogs.ucsd.edu/>.

### General Requirements

The master's program can be completed in one year of full-time study or two years of half-time study, and includes nine four-unit courses (thirty-six units) in a major field. Required courses vary for each major field (see below), but all courses must be taken for a letter grade. With very few exceptions, students are expected to begin their programs in the

fall quarter. In addition to the course requirements, completion of the M.A. degree requires that students pass a one-hour oral examination at the end of their final quarter of enrollment.

Language requirement: While proficiency in a foreign language is only required in European history (see below), prospective applicants are strongly urged to begin study of a foreign language appropriate to the proposed area of concentration as early as possible in their academic career.

### Area of Concentration: Judaic Studies

Judaic Studies is an interdisciplinary program that allows students interested in many areas to build a coordinated graduate program leading to an M.A. Courses that count toward the degree may be in a wide array of university programs and departments, including history, literature, anthropology, political sciences, sociology, and philosophy.

#### 1. Admission Requirements

- a. B.A. or equivalent.
- b. Two years of course work in the language or languages appropriate to the field of Judaic studies.
- c. Applicants should apply through the Department of History.

#### 2. Degree Requirements

- a. The M.A. degree will be granted for thirty-six credits, ordinarily completed in one or two years.
- b. Students may enroll in no more than two undergraduate courses. All courses should be approved by the faculty mentor of the student.

### Area of Concentration: Europe

Candidates for the M.A. degree in European history pursue a program concentrating on the history of early modern and modern Europe. Some training in a discipline other than history is also recommended. The requirement of nine courses (thirty-six units) is normally distributed as follows:

1. A two-quarter research seminar, either HIGR 230 or 231.
2. Cross-field historiography course: HIGR 200.
3. European historiography courses: HIGR 220, 221, and/or 222. Each year one to two of these historiography courses are offered, and the student must take these.
4. Two courses in pre-industrial Europe, 1450–1750: HIGR 220 and 221, or HIGR 230 may be counted for this distribution requirement.
5. Two courses in industrial Europe since 1750: HIGR 221, 222, or HIGR 231 may be counted for this requirement, as well as appropriate graduate level colloquia.  
**Note:** HIGR 221 may NOT be used for both (3) AND (4).
6. One course in a discipline other than history, if relevant to the student's program.
7. The remaining courses may be chosen, in consultation with the graduate advisor in the student's

field, from among the available undergraduate/graduate colloquia (#260S–280S).

Language requirement: M.A. candidates in European history must demonstrate reading competency in one European language other than English.

### Area of Concentration: History of Science

The master's program in history of science provides a broad background in preparation for a variety of careers related to science and technology, business, journalism, education, government, or for more advanced degree work. The nine courses (thirty-six units) required are normally distributed as follows:

1. Two courses in science in early modern Europe.
2. Two courses in science since 1750.
3. A two-quarter research seminar.
4. The remaining courses are chosen in consultation with the faculty in history of science. For students whose previous training has been mainly scientific, these will include courses in historical fields other than the history of science. For students who already have historical training, they may include one or more courses related to the sciences.

### Area of Concentration: Latin America

This program offers the student a general preparation in the history of Latin America. Students will have the opportunity to specialize in national or colonial periods and can emphasize work in one country. Advanced work in another discipline related to Latin America may also be included in the program. Thirty-six units normally should be distributed as follows:

1. HILA 267, 268, 269
2. Three graduate courses in Latin American history
3. Three other courses related to Latin America in history or in other disciplines

### Area of Concentration: United States

This area of concentration offers the M.A. candidate a broad grounding in the literature of American history from the colonial period to the present. In addition to a shared core of courses, students specialize in a topical field of their own choosing. Training in a related discipline outside of history is encouraged. The requirement of nine courses (thirty-six units) is ordinarily distributed as follows:

1. HIGR 265A-B-C. The Literature of American History. These colloquia are required of all entering graduate students in American history.
2. A two-quarter research seminar.
3. Two courses in a single topical field chosen from African-American history, Asian American history, Atlantic history, history of the borderlands and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women, gender, and sexuality.

4. Two additional courses chosen in consultation with the student's advisor. These courses may be in a related field outside the department.
5. At least six of the nine courses must be colloquia or graduate-level courses. Students may take conjoined courses, directed readings, research seminars, or the 265 series to meet this requirement.

## PH.D. PROGRAM

### Admission

The Department of History offers the doctor of philosophy degree in the fields of ancient history, East Asian history, European history, history of science, Latin American history, Middle Eastern history, and United States history. Applicants must indicate to which of these programs they seek admission.

Admission is based on the applicant's undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two writing samples (preferably written for history courses); and scores from the Graduate Record Examination (GRE). The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test or a score of 213 for the computer-based test is required on the TOEFL. The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. With very few exceptions, students are expected to begin their programs in the fall quarter.

In most areas of concentration, knowledge of at least two foreign languages will be required during a student's academic career. In general, applicants are expected to have a reading knowledge of the languages most appropriate to their major field at the time of admission. Thus, students in ancient history, East Asian history, European history, history of science, Latin American history, and Middle Eastern history should have a working knowledge of *at least* one foreign language at the time of admission. Refer to the online application for filing deadline.

For online application visit: <http://ogs.ucsd.edu/>

### Fields of Study

Each student will pursue a major field within one of the Ph.D. programs, and two minor fields. The first minor field can be a supplementary field within their program (e.g., medieval Chinese history for a modern Chinese historian), while the second minor field is usually chosen from outside the geographical area or outside the discipline. During the first two years, the student should identify a special area of interest in the major field to pursue a dissertation project.

#### I. Ancient History

Students in ancient history will be expected to demonstrate a broad mastery of the entire field, with special concentration as follows:

1. Major Fields
  - a. The history of Israel in the biblical period
  - b. The history of the Jewish people in antiquity
2. First Minor

- a. One of the fields listed above not chosen as the major field
  - b. Greek and Roman history
  - c. The Middle East before Islam (western Asia and northeastern Africa from the sixth century B.C.E. to the seventh century C.E.)
3. Second Minor
    - a. A field of history outside of ancient history
    - b. A related discipline, offered through another department
  4. Language Requirements

- a. All students will be expected to demonstrate a reading knowledge of two modern foreign languages, usually French and German. This requirement may be satisfied by any of the means recognized by the department.
- b. All students will be expected to demonstrate a reading knowledge of at least one and usually two of the three following ancient languages: Greek, Hebrew, and Latin. The languages will be chosen as appropriate to the student's particular interests and the requirement will be satisfied by departmental examination.
- c. The second and sometimes third language not elected under (2) may be required if necessary for the student's research. Additional languages, such as Akkadian, Aramaic, Egyptian, Ugaritic, Phoenician, and middle and modern Hebrew, may be required as necessary for the student's research. The required level of competence will be set as appropriate to the student's needs and the requirement will be satisfied by departmental examination.

5. Core Courses

HIGR 255 Historical Scholarship in Ancient History

HIGR 260 Research Seminar in Ancient History (two quarters)

#### II. East Asian History

Students in East Asian history will be expected to demonstrate a broad competence in the entire field, with special concentration as follows:

1. Major Fields

- a. Modern China
- b. Modern Japan
- c. Pre-modern China

2. Minor Fields

Students majoring in modern Chinese history will be expected to pass three minor fields for a broad perspective on East Asian history:

- a. Pre-modern Chinese history
- b. Modern Japanese history
- c. A history field outside of East Asia, or a discipline outside of history

For students majoring in Japanese history:

- d. A field in history
- e. A related field offered through another department

**Note:** One of the minor fields must not focus exclusively on East Asia.

Students majoring in pre-modern Chinese history will pass three minor fields:

- g. Modern Chinese history
- h. Pre-modern history of another area

- i. One of modern Japanese history; a relevant field outside of East Asia; or a discipline outside of history
3. Language Requirements  
For students majoring in Chinese history: students must demonstrate a reading knowledge of Chinese and a reading knowledge of a second foreign language related to the student's research interests.

For students majoring in Japanese history: students must demonstrate a reading and speaking knowledge of Japanese. Depending on specialization, reading knowledge of a second foreign language might be necessary.

Students majoring in pre-modern Chinese history must demonstrate proficiency in Chinese, classical Chinese, and another relevant Asian or European language.

#### 4. Core Courses

For Chinese history students:

HIGR 210: Historical Scholarship on Modern Chinese History (three quarters)

HIGR 211: Historical Scholarship on Modern Japanese History (two quarters)

HIGR 212: Historical Scholarship on Modern East Asian History

HIGR 213: Sources on Modern Chinese History

HIGR 215A-B: Research Seminar in Modern Chinese History

HIGR 217A-B-C: Historical Scholarship on Pre-Modern Chinese History

For Japanese history students:

HIGR 211: Historical Scholarship on Modern Japanese History (two quarters)

HIGR 212: Historical Scholarship on Modern East Asian History

HIGR 214: Readings in Japanese on Modern Japan

HIGR 216A-B: Research Seminar in Modern Japanese History

### III. European History

The graduate program in European history aims to achieve a dual objective: to develop a broad mastery of the major themes and scholarship in the field, as well as to encourage a special focus of research within a single nation or region in either the modern or early modern era.

#### 1. Major Fields

Within the major field, national specialization is offered in modern Germany, Spain, Russia and Greece, and in early modern Italy and France. Regional specialization is offered in central/eastern Europe and in the Mediterranean.

- a. Modern Europe
- b. Early modern Europe

#### 2. First Minor Field

The first minor field should be selected from within the parameters of European history, but in

a chronological period outside that of the major field.

- a. Ancient Mediterranean
- b. Medieval Europe
- c. Early modern Europe
- d. Modern Europe
- e. A second national history

#### 3. Second Minor Field

The second minor field is designed either to develop a non-European teaching expertise or to pursue broader theoretical reading related to the research interests of the student.

- a. A geographical area outside Europe
- b. History of science
- c. A transnational thematic or theoretical concentration, such as gender history, citizenship, nationalism, etc.
- d. A thematic or theoretical concentration rooted in another discipline, such as anthropology, sociology, art history, ethnic studies, or literature.

#### 4. Language Requirement

All European Ph.D. students must show reading proficiency in two European languages other than English.

#### 5. Core Required Courses

HIGR 200: History and Social Theory

HIGR 220: Historical Scholarship on European History, 1500–1715

HIGR 221: Historical Scholarship on European History, 1715–1850

HIGR 222: Historical Scholarship on European History Since 1850

HIGR 230A-B: Research Seminar in Early Modern Europe

HIGR 231A-B: Research Seminar in Modern Europe

### IV. History of Science

**Note:** Students should indicate whether they are also applicants for admission to the interdepartmental program in Science Studies (history, philosophy, and sociology of science).

#### 1. Major Fields

- a. Science in early modern Europe
- b. Science in the eighteenth and nineteenth centuries
- c. Science in the twentieth century
- d. Another field of comparable breadth, defined in consultation with the major field advisor

#### 2. First and Second Minor Fields (any two of the following may be selected, in consultation with the major field advisor).

- a. Science Studies (mandatory for students in the Science Studies program).
- b. Any of the other fields offered by the department, provided that it offers general historical understanding of the same period as the major field.
- c. A field of history of science not chosen as the major field.

- d. A second field of history, provided that it concentrates on a period or region other than that chosen for the first minor field.
- e. A related discipline, offered through another department. **Note:** This field may be in the physical or life sciences.

#### 3. Language Requirement

Competency in one or two languages in addition to English before advancement to candidacy is required. The requirement will vary depending on chosen major field.

#### 4. Core Required Courses

HIGR 236A-B: Seminar in History of Science

HIGR 238: Introduction to Science Studies

HIGR 239: Seminar in Science Studies

HIGR 240: Colloquium in Science Studies

HIGR 241: Advanced Approaches to Science Studies

### V. Latin American History

Doctoral candidates in Latin American history are expected to gain a broad chronological and geographical mastery of the field as a whole. The oral examination in the major field, while concentrating on the student's special area of interest, will be a comprehensive examination covering the whole field of Latin American history.

#### 1. Major Fields

- a. The national period of Latin America, with a specialty in the Andean Republics, Brazil, the Caribbean, Mexico, or the Southern Cone countries
- b. Colonial Latin America, with an emphasis on one major region

#### 2. First Minor

The student should select either the national period or the colonial period as a chronological supplement to the major.

#### 3. Second Minor

- a. The history of another geographic area outside Latin America and the Caribbean
- b. An area of discipline, offered through another department, related to the student's dissertation or preparation for university teaching

#### 4. Language Requirement

Competency in two languages in addition to English before advancement to candidacy is required. Normally the first of these will be Spanish. The second may be Portuguese or another European or non-European language, including an indigenous language of the Americas.

#### 5. Core Required Classes

HIGR 200: History and Social Theory

HILA 267/268/269: Seminar in the Literature of Latin American History

HIGR 247A-B: Readings and Seminar on Colonial Latin America

HIGR 248A-B-C: Readings and Seminar on Latin America, National Period

## VI. Middle Eastern History

The objective of the doctoral program in Middle Eastern history is to achieve broad expertise in the modern history of the Middle East and to develop a special focus in the history of the late Ottoman Empire or its successor states.

1. Major Fields
  - a. Late Ottoman history (approximately 1780 to 1920)
  - b. Colonial and national period of the post-Ottoman Middle East with a specialty in the Arab East, Turkey, Egypt, etc.
2. Minor Fields  
Any two of the following:
  - a. The field of Middle Eastern history not chosen as a major field (see above)
  - b. The modern history of a geographic area outside of the Middle East (ordinarily in European history)
  - c. A related geographical or topical field (e.g., medieval Middle East, Iran, gender studies) offered through another department
3. Language Requirement  
Students must possess a sound foundation in reading Arabic or Turkish (Ottoman Turkish or modern Turkish) as a requirement for admission to the program. Reading competence in two languages in addition to English is required before advancement to candidacy: the regional language Arabic or Turkish (above), and a modern European language (other than English) related to the major field of specialization.
4. Core Required Classes  
HIGR 275A-B: Research Seminar in Middle Eastern History

## VII. United States History

1. Major Fields
  - a. United States History
2. First Minor
  - a. One of the following topical fields: African-American history, Asian-American history, Atlantic history, history of the borderlands and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women, gender, and sexuality, or one designed in consultation with the advisor
3. Second Minor
  - a. A geographic area outside the United States in either the premodern or modern period
  - b. A related discipline offered through another department
4. Language Requirement  
Competency in one language in addition to English before advancement to candidacy is required.
5. Third-Year Seminar  
U.S. History students are encouraged in their third year of study to complete HIGR 271: New Research Directions in U.S. History.

## 6. Core Courses

- HIGR 200: History and Social Theory  
HIGR 265A-B-C: The Literature of American History  
HIGR 267A-B: Research Seminar in United States History  
HIGR 271: New Research Directions in U.S. History

## VIII. Dual Degree Program

Students who wish to earn both the Ph.D. in history from UC San Diego and the Juris Doctor from California Western School of Law must apply to and be independently accepted into both programs under each of the campus' standards and procedures.

Students pursuing the dual degree program will normally alternate years at each institution, in a manner agreed on by the student's advisors and appropriate committees. Thus, for example, a student may spend his or her first year at Cal Western, his or her second year at UCSD, and so on through the program. At least one year at each institution must be completed by the end of three years.

Each institution will accept a small number of course credits from the other institution to satisfy its degree requirements. Cal Western remains on a semester system, while UCSD continues on a quarter system. With the exception of the historiography and research seminars and subject to approval by a faculty advisor and the graduate committee, the Department of History will accept for credit up to two classes from Cal Western.

## IX. Other Fields

Students may be admitted to graduate study leading to the Ph.D. in fields other than those listed above upon the recommendation of an appropriate faculty member. In such cases, a special program of study appropriate to the field will be devised by the major field advisor, subject to the approval of the department's graduate committee.

**Note:** The department also offers graduate work in African history. When appropriate, students may select a minor field in this area.

## Ph.D. Course Work

A normal full-time program consists of twelve units (or three four-unit courses) per quarter. Ph.D. students are expected to complete at least one of the following minimum formal courses of study prior to their qualifying examination: (1) two two-quarter research seminars, three one-quarter historiography courses in their major field, and five other courses (which may be a combination of colloquia, conjoined courses, or directed readings, but which must include one cross-field graduate colloquium like HIGR 200); or (2) three two-quarter research seminars (not necessarily in the same field), three one-quarter historiography courses in their major field, and three other courses (which may be a combination of colloquia, conjoined courses, or directed readings, but which must include one cross-field graduate colloquium like HIGR 200). Students are encouraged to take their first research seminar in their major field during the initial year of graduate

study. After the first year, most students' full-time program includes two regular academic courses each quarter (eight units) and employment as a 50 percent teaching assistant (four units).

## Cross-Field Thematic Graduate Colloquia

In addition to the graduate courses offered by the field groups, the department will offer at least one and up to three cross-field colloquia each year, which are designed to cross geographical and chronological boundaries. Two of these courses are taught at least every other year under this rubric:

### HIGR 200: History and Theory [required for U.S., Europe, and L.A.]

An introductory graduate course for students in all fields. Themes include cross-field historiography and theory, interdisciplinary approaches to history and historical method. (May be taken twice for credit, if the reading list is significantly different.)

### HIGR 205: Feminist Historical Studies

An introduction to feminist historical studies. This course will provide students with training in women's history, in the feminist theories that undergird that scholarship, and in gender analysis. (May be taken twice for credit, if the reading list is significantly different.)

### HIGR 207: Nationalism, Colonialism, and Race

A transdisciplinary and comparative course on the interplay of nationalism, colonialism, and race (as well as class and gender/sexuality) in the nineteenth and twentieth centuries.

All Ph.D. students are required to complete at least one cross-field graduate course (typically in the HIGR 200-HIGR 208 series) before advancement to candidacy. Students are strongly encouraged to meet this requirement in their first year, as their field and program of study permits.

## Part-time Study

Students who enroll in fewer than twelve graduate or upper-division units per quarter are considered part-time students. Part-time study may be pursued in several master's programs and a few Ph.D. programs at UCSD. Approval for individual students to enroll on a part-time basis may be given for reasons of occupation, family responsibilities, or health. Individuals who are interested in part-time study and meet the above qualifications should see the department's graduate coordinator.

Part-time students must satisfy the same admission requirements as full-time students and are eligible, at the discretion of the department, for 25 percent time teaching or research assistantships. Students who are approved by the dean of Graduate Studies for enrollment in a program of half-time study or less (maximum of six units) may be eligible for a reduction in fees. All other students pay the same fees as full-time students.

## Ph.D. and M.A. Language Requirements

Ph.D. candidates in Chinese, European, Middle Eastern, and Latin American history must demonstrate competency in two foreign languages.

Ph.D. candidates in history of science, Japanese, and United States history, as well as M.A. candidates in European and Latin American history, must demonstrate competency in one foreign language.

Ph.D. candidates in ancient history must demonstrate competency in two modern foreign languages as well as the relevant ancient languages.

Ph.D. candidates in Middle Eastern history must possess a sound foundation in reading Arabic or Turkish (Ottoman Turkish or modern Turkish) as a requirement for admission to the program. Reading competence in two languages in addition to English is required before advancement to candidacy: the regional language Arabic or Turkish above, and a modern European language (other than English) related to the major field of specialization.

Additional languages appropriate to the special field of study as well as language requirements for a candidate in a field other than those already mentioned may be required by the graduate committee in consultation with the student's major field advisor.

Students may satisfy the foreign language requirement in one of the following ways:

1. By completing, with a grade of B– or better in each term, a two-year language sequence from the student's undergraduate institution. Such a sequence must have been completed within two years of the time the request is made to the graduate committee for certification of competency.
2. By completing, while as a graduate student, with a satisfactory (S) grade in each term, a two-year, lower-division sequence in the language approved by the graduate committee.
3. By completing, while as a graduate student, with a satisfactory (S) grade in each term, a one-year, upper-division sequence in the language approved by the graduate committee.
4. By passing a translation examination administered by the department. (This is the only option available for Chinese and Japanese.)

Students are urged to complete at least one foreign language examination by the end of the first year of study and must do so by the beginning of their third year. Failure to meet this requirement is grounds for denial of financial support. No student may take the oral qualifying examination before completing all language requirements.

## Ph.D. Examinations

### A. Minor Fields

Ph.D. candidates are strongly encouraged to take at least one minor field examination by the end of the first year and to complete the second minor exam by the end of the second year. All minor fields must be completed before the major field exam can be taken. Generally, the department recognizes two types of minor fields. The first is a teaching field. That is, passing a minor field in an area certifies, on a student's record and resume, that the student has mastered the literature and the major issues in another geographical or chronological field such that the student is qualified to teach in that area. (An example would be a minor field in modern Japanese

history for an East Asian history student specializing in modern China; or early modern European history for a modern Europeanist.) A second type of minor field is designed to familiarize a student with a range of theoretical, comparative, and/or transnational issues, which will be useful in the formulation of a dissertation topic and future research in the student's major field.

In some cases, this minor field is pursued outside the department (in consultation with the student's advisor): an example might be a minor in the Department of Ethnic Studies for a student working on race and ethnicity in the U.S. In other cases, the student may identify a faculty member or series of faculty members within the department who focus on a particular theme, such as gender, citizenship, or imperialism.

The minor field is defined by a reading list agreed on by the student and the minor field advisor(s). As a guideline, the reading list should encompass about three quarters' worth of course work (which may be taken with up to three faculty members), and include about fifty titles, with forty to seventy titles representing a reasonable range, depending on the combination of books and articles. The list is intended to establish what will be expected of the student and to prevent confusion over the material to be covered. The list should be finalized at the beginning of the quarter during which the student plans to complete the minor field.

Completion or evaluation of a minor field takes several forms, depending on the policies of different field groups or individual professors.

1. A one-hour oral examination.
2. A three-hour or twenty-four-hour take-home written exam.
3. An "un-timed" synthetic essay, twenty-five to thirty pages, that organizes the scholarship of the field.
4. Three shorter papers (eight to ten pages) each encompassing a single quarter's worth of reading. This option is especially appropriate in cases where the student is working with more than one faculty member on a minor field.
5. Developing a course syllabus in the field.

### B. The Major Field: Oral Qualifying Examination and Candidacy

Students are normally expected to take their qualifying examination no later than the spring of their third year of study (except as otherwise specified by the individual fields), and required to do so within four years. Students must fulfill all course work, minor field, and language requirements before taking the qualifying examination. The qualifying examination is an oral test in the student's major field of study, conducted by at least five examiners. A minimum of three examiners must be members of the Department of History, and usually they will be in the student's major field. The fourth can be either a faculty member from inside the department but outside the major field, or someone from another department. The fifth must be a tenured faculty member in another department. The student's minor field advisor(s), whether inside the department or

in another department, often serve in this "outside" capacity on the orals committee, although this is not required. Students should consult with their advisor about the composition of the examining committee well before their examination. In addition, the membership of the committee must be approved before the exam by the department chair and the dean of Graduate Studies. The student must meet with the graduate coordinator at least three weeks prior to the orals date to arrange for the submission of this paperwork.

The purpose of the major field oral examination is twofold: 1) to evaluate the student's knowledge of the major research field and 2) to discuss the student's dissertation project (with the exception of the U.S. field, which holds a separate meeting for this purpose, no later than two months after the exam).

The exam lasts between two and three hours, and is structured to give each of the five committee members an opportunity to ask questions of the student, based on the major field reading list. When the prospectus is also under discussion, usually the last half-hour is reserved for this purpose. When the exam is over, the student leaves the room and the committee decides whether the student has passed the exam and advanced to candidacy.

1. The major field book list should be drawn up by the student in consultation with the faculty advisor, and should be finalized at least thirty days before the date of the exam. Each major field list will reflect the unique interests of the student, while also incorporating core themes of the field. Some field groups have formal core lists that may comprise a part of each student's total list, while others do not. In all cases, students are expected to organize their major field lists according to the specific themes/nations/issues that have informed their graduate study, since no major field list can be all-inclusive. The number of titles on a major field list should be around 100, with 80–120 titles representing a reasonable range. The date of the examination is determined by consultation between the candidate and the examining committee.
2. The discussion of the dissertation project will be framed by a five- to ten-page prospectus written by the student and submitted to the committee with the book list, at least three weeks before the exam. The purpose of the discussion is to determine the feasibility of the scope of the project and to offer suggestions about source materials and research strategies.

Should a student fail the examination, the examining committee will clarify the weaknesses in the exam, so that the student can prepare to take it a second time. If a second oral examination is warranted, the department requires that it should be taken no later than one quarter after the first examination. If the student fails the oral examination a second time, his or her graduate studies in the department will be terminated.

An M.A. degree may also be awarded to continuing Ph.D. students upon successfully passing the oral qualifying examination. The M.A. is not automatically awarded; students must apply in advance to receive the degree, but no additional work is required. **Note:** Students who wish to receive an M.A. degree as part

of the Ph.D. program must apply for master's degree candidacy by the end of the second week of the quarter in which they expect to receive the degree. Please see the graduate coordinator regarding this application.

The various requirements noted above apply to students who have done no previous graduate work in history. If a candidate has completed some graduate work before entering UCSD, appropriate adjustments in course work may be approved by general petition to the graduate committee. Nevertheless, all candidates are required to meet language requirements, pass field examinations, and complete and defend a dissertation.

## Dissertation

After completing all relevant examinations and language requirements, the student is expected to write a dissertation under the supervision of his or her faculty advisor and the doctoral committee. The Department of History has established the following guidelines for dissertation work. The dissertation should

- represent an original and significant contribution to knowledge
- be based upon primary research
- clearly demonstrate the capacity of the student to pursue independent historical research
- be written in clear and coherent prose

The scope of the dissertation and its length will depend upon the nature of the problem and the documentation. The department encourages students to complete their research and writing by the end of their sixth year of study. The scope and length of the dissertation should therefore be such that a complete project can be executed in no more than three years, but it should also be capable of further development for publication as a series of articles in scholarly journals, or as a book.

## Guidelines for Ph.D. Completion

**First Year** All courses must be taken for a letter grade.

Research seminar and field group historiography courses.

Cross-field graduate colloquium (recommended).

One language requirement.

Select an advisor in major field.

Define major and two minor fields with advisor.

Complete one minor field.

**Second Year** Second research seminar and remaining field group required courses.

Complete language requirement.

Complete second minor field.

**Third Year** If not done so already, complete all minor field exams, language requirements, and course work (twelve four-unit courses required).

Write a dissertation prospectus in preparation for the major field exam.

Pass qualifying exam in major field.

**Fourth Year** Primary/field/archival research for the dissertation.

**Fifth–Seventh Years** Writing and completing dissertation.

**Note:** While students may take an eighth year to complete the Ph.D., they may not receive financial support from the university or the department, including TAs or readerships after the seventh year.

## Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

## Financial Support

Upon recommendation of the department, several types of financial aid are available to graduate students: teaching assistantships, readerships, research assistantships, fellowships, and travel grants, and full or partial remission of fees and tuition. Graduate students are eligible for one or a combination of the six forms of financial support.

Entering students who are offered a multi-year financial package are either offered fellowships or readerships, along with fee and tuition remission during their first year, followed by guaranteed employment as a teaching assistant in subsequent years. In some cases, guaranteed dissertation writing funds are part of such a package. Regardless of the initial financial package, the department seeks to ensure that all continuing Ph.D. students are financially supported, usually through TAs. In recent years all students needing support have received either fellowships, teaching assistant, or research assistant positions. To the extent that resources are insufficient to meet the need, the department, on the advice of the graduate committee, will rank students using a combined criterion of academic performance and financial need.

Fellowships, travel grants, and research assistantships are granted by the Office of Graduate Studies (OGS) upon the recommendation of the department. Teaching assistants are appointed by the department upon the recommendation of the graduate committee and by the college writing programs. Readers are appointed by the department upon the recommendation of the professor whose course requires such assistance. At the discretion of the department, half-time graduate students are eligible for 25 percent TAs. Graduate students must maintain a minimum grade-point average of 3.0 to be considered for any type of financial aid. Financial support is not renewed automatically but is approved by the department on a yearly basis.

Departmental policy has been to seek seven years of support for students in the program. The Office of Graduate Studies grants partial remission

of fees for nine quarters after advancement to candidacy ("normative time") if the student is advanced to candidacy by the end of the third year. (If the student delays advancement, the amount of normative time is reduced accordingly.) Upon expiration of normative time the student must complete the dissertation or resume full payment of fees.

## Opportunities for Teaching

Undergraduate teaching, for which graduate teaching assistants earn regular academic credit, is an integral part of the graduate program at UCSD. The department considers experience in teaching an important part of a graduate student's professional training. To prepare for an academic career, the Ph.D. candidate is encouraged to assist in courses offered by the department, ordinarily as a course Reader (grader) or Teaching Assistant. A maximum of four units per quarter may be taken in undergraduate teaching.

Readerships are available in a variety of upper-division history courses, while the department offers positions for teaching assistantships in lower-division East Asian and U.S. history courses. Graduate students in other fields usually serve as TAs in the interdisciplinary college programs, such as ERC's "Making of the Modern World," Revelle's "Humanities," Marshall's "Dimensions of Culture," Sixth's "CAT," and the Muir College Writing Program.

Students must maintain a minimum grade-point average of 3.0 in order to receive academic employment on campus.

## Job Placement

In recent years, 85 percent of the department's Ph.D. graduates received positions as tenure-track assistant professors at colleges and universities around the country. The remaining 15 percent are currently administrators, visiting scholars, lecturers, or postdoctoral fellows at various educational institutions. Experience indicates that many from this latter group will eventually get professional appointments.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

+ Courses that focus on the period before 1800.

## LOWER-DIVISION

### HILD 2A-B-C. United States

A year-long lower-division course that will provide students with a background in United States history from colonial times to the present, concentrating on social, economic, and political developments. (Satisfies Muir College humanities requirement and American History and Institutions requirement.)

### HILD 7A-B-C. Race and Ethnicity in the United States

Lectures and discussions surveying the topics of race, slavery, demographic patterns, ethnic variety, rural and urban life in the U.S.A., with special focus on European, Asian, and Mexican immigration.

### HILD 7A. Race and Ethnicity in the United States (4)

A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be

slavery, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

**HILD 7B. Race and Ethnicity in the United States (4)**  
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Asian-American and white ethnic groups, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

**HILD 7C. Race and Ethnicity in the United States (4)**  
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Mexican-American, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

**HILD 10-11-12. East Asia**  
A lower-division survey that compares and contrasts the development of China and Japan from ancient times to the present. Themes include the nature of traditional East Asian society and culture, East Asian responses to political and economic challenges posed by an industrialized West, and war, revolution and modernization in the twentieth century.

**HILD 10. East Asia: The Great Tradition (4)**  
The evolution of East Asian civilization from the first writing through classical Hei'an Japan and late imperial Song China. Primary and secondary readings on basic ideas, institutions and practices of the Confucian, Daoist, and Buddhist paths and of the state and family.

**HILD 11. East Asia and the West, 1279–1911 (4)**  
From the Mongol conquests to China's last dynasty and Japan's annexation of Korea, this course examines political, institutional, and cultural ruptures and continuities as the East Asian countries responded to the challenges of Western imperialism with defense, reform, conservative reaction and creative imitation.

**HILD 12. Twentieth-Century East Asia (4)**  
Examines the emergence of a regionally dominant Japan before and after World War II; the process of revolution and state-building in China during the Nationalist and Communist eras; and Korea's encounter with colonialism, nationalism, war, revolution and industrialization.

**HILD 14. Film and History in Latin America (4)**  
Students watch films on Latin America and compare them to historical research on similar episodes or issues. Films will vary each year but will focus on the social and psychological consequences of colonialism, forced labor, religious beliefs, and "Modernization."

## UPPER-DIVISION

Please note: The following upper-division courses are offered on a regular basis, although not every class is available every year. Check with the department to see what is available each quarter.

### AFRICA

#### Lecture Courses

**HIAF 111. Modern Africa Since 1880 (4)**  
A survey of African history dealing with the European scramble for territory, primary resistance movements, the rise of nationalism and the response of metropolitan powers, the transfer of power, self-rule and military coups, and the quest for identity and unity. **Prerequisite:** upper-division standing.

**HIAF 112. West Africa Since 1880 (4)**  
West Africa from the nineteenth century onwards and examines the broad outlines of historical developments in the sub-region through the twentieth century, including such themes as religious, political, and social changes. **Prerequisite:** upper-division standing.

**HIAF 113. Small Wars and the Global Order: Africa and Asia (4)**  
Examines the traumas, interrelation, and global repercussions of national conflicts ('small wars') in the postcolonial world. Focus on Africa and Asia from the Cold War to the present with particular attention to the intersection of foreign interests, insurgency, and geopolitics. **Prerequisite:** upper-division standing or instructor consent.

**HIAF 120. History of South Africa (4)**  
The origins and the interaction between the peoples of South Africa. Special attention will be devoted to industrial development, urbanization, African and Afrikaner nationalism, and the origin and development of apartheid and its consequences. **Prerequisite:** upper-division standing.

**HIAF 122. Traditional African Religions (4)**  
A study of the meaning, structure, and sources of African traditional religion. The course examines the attitudes of mind and belief and practices which have evolved in many societies in Africa.

**HIAF 123. West Africa from Earliest Times to 1800 (4)**  
Plant and animal domestication, iron-working and the distribution of ethnic/language groups, urbanization, regional and long-distance commerce, and the rise of medieval kingdoms. **Prerequisite:** upper-division standing. +

**HIAF 124. Islam in Contemporary African Societies (4)**  
The spread of Islam in Africa. The rise of Islamic orthodoxy during the eighteenth and nineteenth centuries, and the social movements in the contemporary period geared towards the establishment of Islamic theocracies. **Prerequisite:** upper-division standing.

**HIAF 130. African Society and the Slave Trade (4)**  
Topics include trans-Saharan trade, slavery with African societies, Atlantic slave trade, East African slave trade, problems of numbers exported and profitability, impact of slave trade on African society, and the abolition of the slave trade. **Prerequisite:** upper-division standing.

#### Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

**HIAF 161/261. Special Topics in African History (4)**  
This colloquium is intended for students with sufficient background in African history. Topics, which vary from year to year, will include traditional political, economic, and religious systems, and theory and practice of indirect rule, decolonization, African socialism, and pan-Africanism. Department stamp required.

**HIAF 162/262. The African Diaspora in the Atlantic World (4)**  
Expose students to the competing paradigms adopted by scholars in the search for an appropriate analytical framework for understanding the African diaspora in the Atlantic world, as well as examine the African impact on Atlantic communities. Graduate students are required to submit an additional paper. **Prerequisite:** upper-division or graduate standing. Department stamp required.

**HIAF 199. Independent Study in African History (4)**  
Directed readings for undergraduates. **Prerequisite:** consent of instructor and academic advisor required.

### EAST ASIA

#### Lecture Courses

**HIEA 111. Japan: Twelfth to Mid-Nineteenth Centuries (4)**  
Covers important political issues—such as the medieval decentralization of state power, unification in the sixteenth and seventeenth centuries, the Tokugawa system of rule, and conflicts between rulers and ruled—while examining long-term changes in economy, society, and culture. +

**HIEA 112. Japan: From the Mid-Nineteenth Century through the U.S. Occupation (4)**  
Topics include the Meiji Restoration, nationalism, industrialization, imperialism, Taisho Democracy, and the Occupation. Special attention will be given to the costs as well as benefits of "modernization" and the relations between dominant and subordinated cultures and groups within Japan.

**HIEA 113. The Fifteen-Year War in Asia and the Pacific (4)**  
Lecture-discussion course approaching the 1931–1945 war through various "local," rather than simply national, experiences. Perspectives examined include those of marginalized groups within Japan, Japanese Americans, Pacific Islanders, and other elites and nonelites in Asian and Pacific settings.

**HIEA 114. Postwar Japan (4)**  
Examines social, cultural, political, and economic transformations and continuities in Japan since World War II. Emphases will differ by instructor. **Prerequisite:** upper-division standing.

**HIEA 115. Social and Cultural History of Twentieth-Century Japan (4)**  
Japanese culture and society changed dramatically during the twentieth century. This course will focus on the transformation of cultural codes into what we know as "Japanese," the politics of culture, and the interaction between individuals and society.

**HIEA 116. Japan-U.S. Relations (4)**  
Survey of relations between Japan and the United States in the nineteenth and twentieth centuries. Although the focus will be on these nation-states, the course will be framed within the global transformation of societies. Topics include cultural frameworks, political and economic changes, colonialism and imperialism, and migration.

**HIEA 117. Ghosts in Japan (4)**  
By examining the roles of ghosts in Japanese belief systems in a non-scientific age, this course addresses topics including folk beliefs and ghost stories, religiosity, early science, tools of amelioration and authoritative knowledge, and the relationship between myth and history. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 119/SOCB 162R. Religion and Popular Culture in East Asia (4)**  
Historical, social, and cultural relationships between religion and popular culture. Secularization of culture through images, worldviews, and concepts of right and wrong which may either derive from, or pose challenges to, the major East Asian religions. **Prerequisite:** upper-division standing.

**HIEA 120. Classical Chinese Philosophy and Culture (4)**  
The relation of social, political, and economic developments to the philosophical and religious traditions of China c. 1200 B.C. to 400 A.D., including Confucianism, Daoism, Legalism, correlative cosmology, and ideas about fate, spirits, and health. Previous course work on China helpful but not required. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEA 121. Medieval Chinese Culture and Society (4)**  
This course covers the period from the sixth century to thirteenth century, the time of the glorious Tang and Song dynasties. We focus on the "medieval revolution" that changed the political, economic, and social life of the empire. As much as possible we study these changes from the eyes of the people who lived through them—aristocrats, peasants, soldiers, merchants, women. **Prerequisite:** HIEA 120 recommended but not required. +

**HIEA 122. Late Imperial Chinese Culture and Society (4)**  
Using primary and secondary sources, we survey the interactions of ideas and institutions in the commercial economy of China from the tenth through the eighteenth centuries, and consider their impact on the lives of individuals. Previous course work on China helpful but not required. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEA 125. Women and Gender in East Asia (4)**

The impact of modern transformations on female roles and gender relations in China, Japan, and Korea, focusing on the late imperial/early modern periods through the twentieth-century. **Prerequisite:** upper-division standing or instructor consent.

**HIEA 126. The Silk Road in Chinese and Japanese History (4)**

This course studies the peoples, cultures, religions, economics, arts, and technologies of the trade routes known collectively as the Silk Road from c. 200 BCE to 1000 CE. We will use an interdisciplinary approach. Primary sources will include written texts and visual materials. We will examine these trade routes as an early example of globalization. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEA 128. History of Material Culture in China (4)**

Introduction to material culture in China from a historical perspective. Consider Chinese primary sources (including both historical texts and objects) from the point of view of the new interdisciplinary field of material culture studies. **Prerequisite:** upper-division standing. +

**HIEA 129. Faces of the Chinese Past (4)**

Through the biographies and autobiographies of prominent and ordinary men and women from antiquity to today, this course explores the relation of the individual to social structures, class and gender in personal experience, and the production of primary and secondary sources. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEA 130. End of the Chinese Empire, 1800–1911 (4)**

From the Opium War to the 1911 Revolution. Key topics include ethnic identity under Manchu rule, the impact of Western imperialism, the Taiping and other rebellions, overseas Chinese, social change and currents of reform, and the rise of Chinese nationalism. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 131. China in War and Revolution, 1911–1949 (4)**

An exploration of the formative period of the twentieth-century Chinese Revolution: the New Culture Movement, modern urban culture, the nature of Nationalist (Guomindang) rule, war with Japan, revolutionary nationalism, and the Chinese Communist rise to power. **Prerequisite:** upper-division standing or instructor consent.

**HIEA 132. History of the People's Republic of China (4)**

This course analyzes the history of the PRC from 1949 to the present. Special emphasis is placed on the problem of postrevolutionary institutionalization, the role of ideology, the tension between city and countryside, Maoism, the Great Leap Forward, the Cultural Revolution.

**HIEA 133. Twentieth-Century China: Cultural History (4)**

This course looks at how the historical problems of twentieth-century China are treated in the popular and elite cultures of the Nationalist and Communist eras. Special emphasis is placed on film and fiction. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 134. History of Thought and Religion in China: Confucianism (4)**

Course will take up one of the main traditions of Chinese thought or religion, Confucianism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. **Prerequisite:** upper-division standing or instructor consent. +

**HIEA 135. History of Thought and Religion in China: Buddhism (4)**

Course will take up one of the main traditions of Chinese thought or religion, Buddhism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. **Prerequisite:** upper-division standing or instructor consent. +

**HIEA 136. History of Thought and Religion in China: Daoism (4)**

Course will take up one of the main traditions of Chinese thought or religion, Daoism, and trace it from its origins to the present. The course will explain the system of thought and trace it as it changes through history and within human lives and institutions. **Prerequisite:** upper-division standing or instructor consent. +

**HIEA 137. Women and the Family in Chinese History (4)**

The course explores the institutions of family and marriage, and women's roles and experiences within the family and beyond, from classical times to the early twentieth century. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEA 138. Women and the Chinese Revolution (4)**

Examines women's roles and experiences in the twentieth-century Chinese revolution, the ways in which women participated in the process of historical change, the question of to what extent the revolution "liberated" women from "Confucian tradition." **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 150. Modern Korea, 1800–1945 (4)**

This course examines Korea's entrance into the modern world. It utilizes both textual and audio-visual materials to explore local engagements with global phenomenon, such as imperialism, nationalism, capitalism, and socialism. HILD 10, 11, and/or 12 recommended. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 151. The Two Koreas, 1945–Present (4)**

This course traces the peninsula's division into two rival regimes. It utilizes both textual and audio-visual materials to reveal the varied experiences of North and South Koreans with authoritarianism, industrialization, and globalization. HILD 10, 11, and/or 12 recommended. **Prerequisite:** upper-division standing or consent of instructor.

**Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

**HIEA 160/260. Seminar in Modern Japanese History (4)**

This colloquium examines controversial domestic and international issues in Japanese history from 1850 to recent times. Topics will vary from year to year. **Prerequisite:** department stamp, consent of instructor.

**HIEA 162/262. History of Women in China (4)**

This course concerns women in Chinese history in Imperial times. This course will focus on women's changing roles in the family, society, and culture. Topics will vary from year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. **Prerequisite:** upper-division standing.

**HIEA 163/263. Cinema and Society in Twentieth-Century China (4)**

This colloquium will explore the relationship between cinema and society in twentieth-century China. The emphasis will be on the social, political, and cultural impact of filmmaking. The specific period under examination (1930s, 1940s, post-1949) may vary each quarter. Graduate students will be expected to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

**HIEA 164/264. Seminar in Late Imperial Chinese History (4)**

Pairs primary sources with scholarship built on them to illuminate later imperial state, society, and individual lives, and to show how historians generate and answer questions. Topics vary; may be repeated for credit. Graduate students will be expected to submit an additional paper or project. **Prerequisite:** upper-division or graduate standing and department stamp. +

**HIEA 165/265. Topics in Medieval Chinese History (4)**

Topics will vary in the history of medieval China. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and department stamp. +

**HIEA 166/266. Creating Ming Histories (4)**

The Ming (1368–1644) is often considered expanding Europe's opposite: absolutist, closed, and stagnant. Reading new scholarship in conjunction with its primary sources, we'll explore the period's dynamic politics and competitive society, and the production of historical knowledge. Graduate students will be required to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

**HIEA 167/267. Special Topics in Modern Chinese History (4)**

This seminar examines various domestic and international issues in Chinese history from 1800 to recent times. When topics vary, may be repeated for credit. Graduate students will be required to submit a more substantial piece of work or an additional paper. **Prerequisite:** upper-division standing or consent of instructor.

**HIEA 168/268. Topics in Classical and Medieval Chinese History (4)**

Chinese society, thought, religion, culture, economy and politics from the Shang through the Song dynasties, through primary and secondary sources. Topics vary; may be repeated for credit. Requirements differ for undergraduate, M.A. and Ph.D. students. Graduate students will be required to submit a more substantial piece of work or an additional paper. **Prerequisite:** upper-division standing or consent of instructor and department stamp. +

**HIEA 171/271. Society and Culture in Premodern China (4)**

Explores premodern Chinese society and culture through the reading and discussion of classics and masterpieces in history. Examines how values and ideas were represented in the texts and how they differed, developed, or shifted over time. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. **Prerequisites:** upper-division or graduate standing, department stamp. +

**HIEA 180. Topics in Modern Korean History (4)**

This colloquium will examine selected topics in modern Korean history through both primary sources (in translation) and secondary sources. Topics will vary year to year. **Prerequisites:** upper-division standing and departmental stamp.

**HIEA 199. Independent Study in East Asian History (4)**

Directed reading for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor required.

**EUROPE**

See History of Science for more European courses (HISC 101ABC, HISC 106).

**Lecture Courses****HIEU 101. Greece in the Classical Age (4)**

The social, political, and cultural history of the ancient Greek world from the Persian Wars to the death of Alexander the Great (480–323 B.C.). +

**HIEU 101A. Ancient Greek Civilization (4)**

The social, political, and cultural history of the ancient Greek world from the earliest settlements to the empire of Alexander the Great (c. 2000–323 B.C.). **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 102. The Roman Republic (4)**

The political, economic, and intellectual history of the Roman world from the foundation of Rome to the time of Julius Caesar. +

**HIEU 103. The Roman Empire (4)**

The political, economic, and intellectual history of the Roman world from the time of Julius Caesar to the death of Justinian (A.D. 565). +

**HIEU 104. Byzantine Empire (4)**

A survey course of the history of the Byzantine state from the reign of Constantine to the fall of Constantinople. This course will emphasize the importance of the Byzantine state within a larger European focus, its relationship to the emerging Arab states, its political and cultural contributions to Russia and the late medieval west. +

**HIEU 105. The Early Christian Church (4)**

A study of the origin and development of early Christian thought, literature, and institution from the New Testament period to the Council of Chalcedon. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 110. The Rise of Europe (4)**

The development of European society and culture from the decline of the Roman Empire to 1050. **Prerequisite:** Humanities

**HIEU 111. Europe in the Middle Ages (4)**

The development of European society and culture from 1050 to 1400. **Prerequisite:** Humanities sequence or its equivalent. +

**HIEU 112. Saints and Sinners in the Middle Ages (4)**

This class examines medieval history through the lens of hagiography and biography. Such texts provide intimate views of the culture, including: family and social structures; attitudes towards the supernatural; the body, gender, and aging; peace and violence; hierarchy and dissent. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 113. Rule, Conflict, and Dissent in the Middle Ages (4)**

This course explores the question of religious and political dissent in Europe from the twelfth through the fifteenth centuries. We will explore the tensions between ideal models of religious and cultural unity, and the realities of community conflict, heretical controversies, and popular uprisings. +

**HIEU 113A. Conflict and Settlement in Medieval Europe (4)**

This course studies conflict resolution in Europe during the ninth to thirteenth centuries when governments were too weak to enforce norms of peace and order. We will read medieval literature and histories and anthropological accounts of conflict resolution in stateless societies. **Prerequisite:** upper-division standing or instructor consent. +

**HIEU 115. The Pursuit of the Millennium (4)**

The year 2000 provokes questions about the transformation of time, culture, and society. Taking the year 1000 as a touchstone, this class examines the history of apocalyptic expectations in the Middle Ages through a close scrutiny of both texts and art. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 116. The Greek Diaspora (4)**

This course examines the history of the Greek Diaspora in Canada, South America, Australia, and Africa from 1700 to the present. Special attention is paid to the Greek migration to North America during the twentieth century. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 117A. Greece and the Balkans in the Age of Nationalism (4)**

This course examines the history of Greece and the Balkans (1683–1914). Topics covered: social and economic development in the eighteenth century, nationalism, independence wars, state-nation formation, interstate relations, the Eastern Question, rural society, urbanization, emigration, and the Balkan Wars. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 117B. Greece and the Balkans during the Twentieth Century (4)**

This course examines the history of Greece and the Balkans (1914–2001). Topics covered: World War I, population exchanges, authoritarianism, modernization, World War II, resistance, civil wars, Cold War, Greek-Turkish relations, Cyprus, collapse of Communism, 1990s conflicts, and EU expansion. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 118. Americanization in Europe (4)**

Examines problems surrounding the transfer of American culture, values, and styles to Europe in the twentieth and twenty-first centuries. Topics may include: consumer society, popular culture, commercial and business practices, "McDonaldization," political and military influence, democratization, and resistance to Americanization. Students may not receive credit for both HIEU 117S and HIEU 118. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 119. Modern Italy: From Unification to the Present (4)**

History of Italy from the 1860s to the present with special focus on the changing relationship between state and society. Topics include the "Southern problem," the Catholic Church, the fascist dictatorship, the Cold War, terrorism, contemporary politics and culture. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 120. The Renaissance in Italy (4)**

The social, political, and cultural transformation of late-medieval Italy from the heyday of mercantile expansion before the plague to the dissolution of the Italian state system with the French invasions of 1494. Special focus upon family, associational life and factionalism in the city, the development of the techniques of capitalist accumulation, and the spread of humanism. **Prerequisite:** upper-division standing. +

**HIEU 122. Politics Italian Renaissance Style (4)**

Modern political and historical thought find their roots in the realistic examination of fifteenth- and sixteenth-century Italian political experience. Contemporary Renaissance humanists and thinkers—Machiavelli, Guicciardini, Castiglione, Botero, and Campanella—tested classical, Christian, and legal models against practical necessities. +

**HIEU 125. Reformation Europe (4)**

The intellectual and social history of the Reformation and Counter-Reformation from the French invasions to the Edict of Nantes. Emphasis is upon reform from below and above, the transformation of grass-roots spirituality into institutional control. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 126. Age of Expansion: Europe and the World, 1400–1600 (4)**

Course will begin with a survey of the major empires of the fifteenth century, concentrating on the links between them. It will then examine the entrance of Europeans on the global scene in the sixteenth century. This part of the course will examine European/ non-European encounters, focusing on perceptions, economic interaction, and institutional adaptation and will emphasize the Hispanic American, Ottoman, and Indian Ocean cases. +

**HIEU 127. Sport in the Modern World (4)**

This course looks at the phenomenon of sport in all of its social, cultural, political, and economic aspects. The starting point will be the emergence of modern sport in nineteenth-century Britain, but the focus will be global. Since the approach will be topical rather than chronological, students should already have a good knowledge of world history in the nineteenth and twentieth centuries. **Prerequisite:** upper-division standing.

**HIEU 128. Europe Since 1945 (4)**

An analysis of European history since the end of the Second World War. Focus is on political, social, economic, and cultural developments within European societies as well as on Europe's relationship with the wider world (the Cold War, decolonization).

**HIEU 129. Paris, Past and Present (4)**

This course surveys the historical and cultural significance of Paris from about 1500 to the present. The focus is on

interactions between political, architectural, and urban evolutions, and the changing populations of Paris in times of war, revolutions, and peace. +

**HIEU 130. Europe in the Eighteenth Century (4)**

A lecture-discussion course focusing on Europe from 1688–1789. Emphasis is on the social, cultural, and intellectual history of France, Germany, and England. Topics considered will include family life, urban and rural production and unrest, the poor, absolutism, and the Enlightenment from Voltaire to Rousseau. **Prerequisite:** upper-division standing. +

**HIEU 131. The French Revolution: 1789–1814 (4)**

This course examines the Revolution in France and its impact in Europe and the Caribbean. Special emphasis will be given to the origins of the Revolution, the development of political and popular radicalism and symbolism from 1789 to 1794, the role of political participants (e.g., women, sans-culottes, Robespierre), and the legacy of revolutionary wars and the Napoleonic system on Europe. **Prerequisite:** upper-division standing. +

**HIEU 132. Germany from Luther to Bismarck (4)**

How Germany, from being a maze of tiny states rife with religious conflict, became a nation. Did the nations-building process lead to Nazism? **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 133. Gender in Antiquity and the Early Medieval Mediterranean (4)**

This course discusses sex and gender at the end of the classical period and its development into the Middle Ages in both Eastern and Western Mediterranean. Course will examine the ways in which our medieval predecessors assigned gender traits and relationships to members of society. It will approach the topic in part through an examination of the language used about gender and in part through use of modern gender theories. **Prerequisite:** upper-division standing. +

**HIEU 134. The Formation of the Russian Empire, 800–1855 (4)**

State-building and imperial expansion among the peoples of the East Slavic lands of Europe and Asia from the origins of the Russian state in ninth-century Kiev, through Peter the Great's empire up to the middle of the nineteenth century. **Prerequisite:** upper-division standing or consent of instructor. +

**HIEU 136. Social History of Crime and Criminal Justice in Europe, 1700–1914 (4)**

This course investigates the social history of crime, criminal justice, and policing in Europe between approximately 1700 and 1900. The topic enables historians to investigate a variety of issues, including state-formation, gender relations, and class relations. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 136A. European Society and Social Thought, 1688–1870 (4)**

A lecture and discussion course on European political and cultural development and social theory from 1688–1870. Important writings will be considered both as responses to and as provocations for political and cultural change. +

**HIEU 136B. European Society and Social Thought, 1870–1989 (4)**

A lecture and discussion course on European political and cultural development and theory from 1870–1989. Important writings will be considered both as responses to and as provocations for political and cultural change.

**HIEU 137. History of Colonialism: From New Imperialism to Decolonization (4)**

This course surveys the age of colonialism in the nineteenth and twentieth century. The course will focus on the debates on colonialism in the metropolis as well as on the conflicts inside the colonies. Considerable emphasis will be placed on colonialism in Africa. **Prerequisite:** upper-division standing or consent of instructor.

**HIEU 138. Imperial Spain, 1476–1808 (4)**

The rise and decline of Spain's European empire from Ferdinand and Isabella to 1700. The revival of Spain and her return to European affairs in the eighteenth century.

**Prerequisite:** upper-division standing or graduate standing. +

#### **HIEU 139. The Origins of Constitutions (4)**

The course will cover the development of constitutional ideas and institutions from the twelfth century to the U.S. Constitution. Students will read legal texts and commentaries that established the foundations of the ideas of the rule of law, limited government, inalienable rights, and the independent judiciary. Students will study the formation of institutions such as parliament, the court system, and common law. The course will start and finish with an analysis of the U.S. Constitution. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIEU 141. European Diplomatic History, 1870–1945 (4)**

European imperialism, alliances, and the outbreak of the First World War. The postwar settlement and its breakdown. The advent of Hitler and the disarray of the western democracies. The Second World War and the emergence of the super powers.

#### **HIEU 142. European Intellectual History, 1780–1870 (4)**

European thought from the late Enlightenment and the French Revolution to Marx and Baudelaire, emphasizing the origins of romanticism, idealism, and positivism in England, Germany, and France. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 143. European Intellectual History, 1870–1945 (4)**

A lecture-discussion course on the crisis of bourgeois culture, the redefinition of Marxist ideology, and the transformation of modern social theory. Readings will include Nietzsche, Sorel, Weber, Freud, and Musil. (This course satisfies the minor in the Humanities Program.) **Prerequisite:** upper-division standing.

#### **HIEU 145. The Holocaust as Public History (4)**

We will study historical accounts, memoirs, diaries, and oral histories to master the Holocaust epoch. We will contrast scholarly narratives to personal experience as different ways to learn about the past. Students will design projects for public education. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 146. Fascism, Communism, and the Crisis of Liberal Democracy: Europe 1919–1945 (4)**

A consideration of the political, social, and cultural crisis that faced Western liberal democracies in the interwar period, with emphasis on the mass movements that opposed bourgeois liberalism from both the left and the right.

#### **HIEU 147. Women and Gender in Early Modern Europe (4)**

This course examines the history of European women and gender issues from about 1500 to 1700. Three major themes are covered: intellectual and cultural trends; the nature of the human body and work roles; and, spiritual beliefs, experiences, and practices. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIEU 147A. Women in the Middle Ages (4)**

This course examines the image and the reality of women in the period from 200–1500. We will focus upon the ambivalent status of women in this period as “internal others” to medieval—simultaneously necessary to the functioning of society, yet viewed as marginal to its interests or even as outsiders. **Prerequisite:** upper-division standing or instructor consent. +

#### **HIEU 148. Women and Gender from the Enlightenment to the Victorian Eras (4)**

This course examines European women and gender issues from about 1700 to 1871. Major themes covered are: intellectual and cultural trends (e.g., education and politics); attitudes toward female and male bodies and work roles; and, spiritual beliefs and practices. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIEU 149. History of Women in Europe: 1870 to the Present (4)**

This course explores the history of women across classes from 1870 to the present, with an emphasis on the variety of women's experience and the efforts towards and obstacles to empowerment. Topics include: women and the

state, science and gender, feminist movements and the evolution of women's work. **Prerequisite:** upper-division standing.

#### **HIEU 150. Modern British History (4)**

Emphasis on changes in social structure and corresponding shifts in political power. The expansion and the end of empire. Two World Wars and the erosion of economic leadership. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 151. Spain since 1808 (4)**

Social, political, cultural history of Spain since Napoleon. Features second Spanish Republic, the Civil War, Franco era, and transition to democracy. **Prerequisite:** upper-division standing.

#### **HIEU 152. The Worst of Times: Everyday Life in Authoritarian and Dictatorial Societies (4)**

Examines how ordinary citizens coped with the problems of life under Europe's authoritarian regimes. Topics may include Nazism, fascism, and quasi-fascist societies (e.g., Franco's Spain, Salazar's Portugal), and communist practice from Leninism to Stalinism to the milder Titoism of Yugoslavia. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 154. Modern German History: From Bismarck to Hitler (4)**

An analysis of the volatile course of German history from unification to the collapse of the Nazi dictatorship. Focus is on domestic developments inside Germany as well as on their impact on European and global politics in the twentieth century.

#### **HIEU 155. Modern Austria (4)**

The political, social, and intellectual history of Austria from Maria Theresa to the First Republic with special emphasis on the crisis of liberal culture in the late nineteenth century. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 156. History of the Soviet Union, 1905–1991 (4)**

This course explores war, revolution, development, and terror in the Soviet Union from 1905–1991. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 157. Religion and the Law in Modern European History (4)**

Comparative examination of the relationship between religious commitments and legal norms in Europe from the Reformation to the present. Topics may include government sponsorship; religious expression; conflicts with secular law; religious rights as human rights; and religious and cultural politics. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 158. Why Hitler? How Auschwitz? (4)**

Why did Germany in 1919 produce an Adolf Hitler; how did the Nazis take power in 1933; and why did the Third Reich last until 1945? Why did the war against the Jews become industrial and absolute? **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 159. Three Centuries of Zionism, 1648–1948 (4)**

For centuries the land of Israel was present in Jewish minds and hearts. Why and how did the return to Zion become a reality? Which were the vicissitudes of Jewish life in Palestine? **Prerequisite:** upper-division standing or consent of instructor.

#### **Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

#### **HIEU 160/260. Topics in the History of Greece (4)**

A seminar focusing on selected topics in Greek history from the Bronze Age to the Roman Conquest. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIEU 163/263. Special Topics in Medieval History (4)**

Intensive study of special problems or periods in the history of medieval Europe. Topics vary from year to year, and students may therefore repeat the course for credit. **Prerequisites:** background in European history and upper-division standing. +

#### **HIEU 164/264. Special Topics in Early Modern Europe (4)**

This course looks at the European and non-European in the early modern era. Topics will vary year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIEU 166/266. Europeans Abroad 1400–1700 (4)**

Between 1400 and 1700 Europeans spread around the world. This course looks at the personal, face-to-face ways in which Europeans survived and prospered in early modern Asia, Africa, and Latin America—religious conversion, intermarriage, collaboration, coercion. Graduate students are expected to submit an additional piece of work. **Prerequisite:** upper-division standing. Department stamp required. +

#### **HIEU 171/271. Special Topics in Twentieth-Century Europe (4)**

This course alternates with HIEU 170. Topics will vary from year to year. **Prerequisite:** background in European history.

#### **HIEU 172/272. Comparative European Fascism (4)**

This course will be a comparative and thematic examination of the fascist movement and regimes in Europe from the 1920s to the 1940s. In particular, it will focus on the emergence of the two major fascist movements in Italy and Germany. Graduate students will be required to submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and departmental stamp.

#### **HIEU 174/274. The Holocaust: A Psychological Approach (4)**

An examination of how traditional moral concerns and human compassion came to be abandoned and how the mass murder of the Jews was organized and carried out. The focus of this course will be on the perpetrators. Requirements will vary for undergraduate M.A. and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisites:** upper-division or consent of instructor. Department stamp required.

#### **HIEU 176/276. Politics in the Jewish Past (4)**

This seminar addresses Jewish civic autonomy in the late medieval era, the terms of emancipation in the European states, the politics of Jewish socialists, the costs of assimilation, and the consequences of a successful Zionist state in 1948. Graduate students will be required to submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and departmental stamp.

#### **HIEU 177/277. Special Topics in Modern German Thought (4)**

Topics will vary from year to year. (Satisfies the Humanities Program minor.) **Prerequisite:** background in European history.

#### **HIEU 178/278. Soviet History (4)**

Topics will vary from year to year. Graduate students are required to submit a more substantial paper. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIEU 181/281. Immigration, Ethnicity, and Identity in Contemporary European Society. (4)**

Comparative study of immigration and migration in Europe since 1945. Topics include (im)migrant adaptation, assimilation, and identity; labor systems, opposition to and regulation of migration; competing concepts of nationality

and citizenship, conflicts over Muslim immigration; and implications for European integration. Students may not receive credit for both HIEU 181/281 and ERC 101. Graduate students will be expected to submit an additional paper. **Prerequisites:** upper-division or graduate standing and department stamp.

#### **HIEU 182/282. The Muslim Experience in Contemporary European Society (4)**

Comparative study of Islam in Europe since 1945. Topics include: indigenous populations; immigration; Islamic law/church-state questions; EU expansion/integration; gender issues; terrorism; Islamophobia; "Europeanizing" Islam; the historical tradition of European-Muslim encounter and its present political/cultural issues. Graduate students will be required to do an additional paper. **Prerequisites:** upper-division or graduate standing and department stamp.

#### **HIEU 183/283. Social History and Anthropology of the Mediterranean (4)**

This seminar examines the social history and anthropology of the Mediterranean. Topics covered are: the Mediterranean debate, rural economy, peasant society, gender relations, honor and shame, rural violence, class formation, and emigration. The seminar introduces the methodology of historical anthropology. Graduate students will be expected to complete an additional paper or project. **Prerequisite:** upper-division or graduate standing and department stamp.

#### **HIEU 184/284. Yugoslavia: Before, During, and After (4)**

Examines the multi-ethnic Yugoslav states that existed from 1918 until the 1990s. Topics include inter-ethnic relations, foreign affairs, Tito's revisionist communism, the consumerist Yugoslav Dream, culture and society, the violent break-up of the 1990s, and the post-Yugoslav order. Graduate students will be required to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

#### **HIEU 198. Directed Group Study (1, 2, 3, 4)**

Directed group study on European history under the supervision of a member of the faculty on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. **Prerequisites:** upper-division standing, completion of at least ninety units of UCSD undergraduate study, a minimum UCSD G.P.A. of 2.95, a completed and approved Special Studies form, and department stamp.

#### **HIEU 199. Independent Study in European History (4)**

Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor.

## **LATIN AMERICA**

### **Lecture Courses**

#### **HILA 100. Latin America—Colonial Transformations (4)**

Lecture-discussion survey of Latin America from the pre-Columbian era to 1825. It addresses such issues as the nature of indigenous cultures, the implanting of colonial institutions, native resistance and adaptations, late colonial growth and the onset of independence. +

#### **HILA 101. Latin America: The Construction of Independence 1810–1898 (4)**

Lecture-discussion survey of Latin America in the nineteenth century. It addresses such issues as the collapse of colonial practices in the society and economy as well as the creation of national governments, political instability, disparities among regions within particular countries, and of economies oriented toward the export of goods to Europe and the United States.

#### **HILA 102. Latin America in the Twentieth Century (4)**

This course surveys the history of the region by focusing on two interrelated phenomena: the absence of democracy in most nations and the region's economic dependence on more advanced countries, especially the United States. Among the topics discussed will be the Mexican Revolution, the military in politics, labor movements, the wars in Central America, liberation theology, and the

current debt crisis. **Prerequisite:** upper-division standing or consent of instructor.

#### **HILA 103. Revolution in Modern Latin America (4)**

A political, economic, and social examination of the causes and consequences of the Mexican, Cuban, and Nicaraguan revolutions. Also examine guerrilla movements that failed to gain power in their respective countries, namely the Shinning Path in Peru, FARC in Colombia, and the Zapatistas in Mexico. **Prerequisite:** upper-division standing.

#### **HILA 104. Modern U.S.–Latin American Relations (4)**

A survey of inter-American relations during the twentieth century. Emphasis will be placed on U.S. territorial and economic expansion, U.S. national-security and ideological morality, and Latin American efforts to influence U.S. policy in order to strengthen, in most cases, elite domination of society. **Prerequisite:** upper-division standing.

#### **HILA 112. Economic and Social History of the Andean Region (4)**

Study of the economic and social problems of the Andean region from the colonial period until the crisis of 1912, with special attention to theoretical models to explain the processes of change. **Prerequisite:** upper-division standing.

#### **HILA 113. Lord and Peasant in Latin America (4)**

Examination of the historical roots of population problems, social conflict, and revolution in Latin America, with emphasis on man-land relationships. Special emphasis on modern reform efforts and on Mexico, Cuba, Brazil, and Argentina. Lecture, discussion, reading, and films. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HILA 114. Dictatorships in Latin America (4)**

How did dictatorships come about? Who were the authoritarian leaders? How did they organize their regimes and what were the consequences? Recent publications on dictators in Latin America allow for comparisons across countries and throughout time to answer those questions. **Prerequisite:** upper-division standing.

#### **HILA 115. The Latin American City, a History (4)**

A survey of the development of urban forms of Latin America and of the role that cities played in the region as administrative and economic centers. After a brief survey of pre-Columbian centers, the lectures will trace the development of cities as outposts of the Iberian empires and as "city-states" that formed the nuclei of new nations after 1810. The course concentrates primarily on the cities of South America, but some references will be made to Mexico City. It ends with a discussion of modern social ills and Third World urbanization. Lima, Santiago de Chile, Buenos Aires, Rio de Janeiro, and Sao Paulo are its principal examples. **Prerequisite:** upper-division standing.

#### **HILA 116. El Salvador and the United States: Human Rights and Revolution (4)**

From coffee boom through rebellion, militarization, revolution, state terrorism, and migration, the U.S. has loomed large in the history of El Salvador. This course explores this relationship from 1920 to the present through the prisms of revolution and human rights. **Prerequisite:** upper-division standing.

#### **HILA 120. History of Argentina (4)**

A survey from the colonial period to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the expansion of the frontier, the creation of a cosmopolitan, predominately European culture, and the failure of industrialization to provide an economic basis for democracy. **Prerequisite:** upper-division standing.

#### **HILA 121. History of Brazil (4)**

From colonial times to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the evolution of a slave-based economy, the key differences among regions, the military in politics, and the creation of the most populous and industrialized country in Latin America. **Prerequisite:** upper-division standing.

#### **HILA 121A. History of Brazil, 1808 to 1904 (4)**

This course will discuss transformations in Brazilian society from 1808 to 1904, covering the Independence, the Empire, end of slavery, beginning of a Republican system, modernization, social protests, popular culture, nation

building, and changes in the politics of social dominance. **Prerequisite:** upper-division standing or consent of instructor.

#### **HILA 122. Cuba: From Colony to Socialist Republic (4)**

A lecture-discussion course on the historical roots of revolutionary Cuba, with special emphasis on the impact of the United States on the island's development and society. **Prerequisite:** upper-division standing.

#### **HILA 124A. History of Women and Gender in Latin America (4)**

A broad historical overview of Hispanic-American women's history focusing on issues of gender, sexuality, and the family as they relate to women, as well as the historiographical issues in Latin American and Chicana women's history. **Prerequisite:** upper-division standing or consent of instructor.

#### **HILA 126. From Columbus to Castro: Caribbean Culture and Society (4)**

Exploration of the relationships between socioeconomic and cultural development in Caribbean history; slavery and empire; nationalism and migration; vodun and Rastafarianism, and the literary arts. **Prerequisite:** upper-division standing.

#### **HILA 127. History, Culture, and Power (4)**

What is the historical evidence on the relationship between culture and power: from the indigenous "national" revolution (eighteenth century) to "indigenismo"; from indigenous upheavals in Ecuador, Bolivia, Mexico and Peru, to the intellectual "archaic utopia" (twentieth century). **Prerequisite:** upper-division standing or instructor consent.

#### **HILA 131. A History of Mexico (4)**

A century of Mexican history, 1821–1924: the quest for political unity and economic solvency, the forging of a nationality, the Gilded Age and aftermath, the ambivalent Revolution of Zapata and his enemies. **Prerequisite:** upper-division standing or consent of instructor.

#### **HILA 132. A History of Contemporary Mexico (4)**

The paradox of a conservative state as heir to a legendary social upheaval, with special emphasis on the mural art renaissance, the school crusade, the economic dilemma, and the failure to eradicate poverty and inequality. Lectures and discussion. **Prerequisite:** upper-division standing or consent of instructor.

### **Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

#### **HILA 161/261. History of Women in Latin America (4)**

A broad historical overview of Hispanic-American women's history focusing on issues of gender, sexuality, and the family as they relate to women, as well as the historiographical issues in Latin American and Chicana women's history. **Prerequisites:** upper-division standing and consent of instructor.

#### **HILA 162/262. Special Topics in Latin American History (4)**

Topics will vary from year to year or quarter to quarter. May be repeated for an infinite number of times due to the nature of the content of the course always changing. **Prerequisite:** upper-division standing or consent of instructor.

#### **HILA 163/263. The History of Chile 1880–Present (4)**

The course surveys Chile's basic developments beginning with the era of nitrate exports. Students will have the opportunity to address a specific issue of his/her own choosing and develop the topic for class presentation and a final paper. Graduate students are expected to submit a more substantial piece of work. **Prerequisite:** upper-division standing or consent of instructor.

#### **HILA 164/264. Women's Work and Family Life in Latin America (4)**

Inside or outside of the household, women have always worked. Where do we find Latin American women, how has the labor market changed, how was and is women's work perceived, what were the consequences of changing work patterns on family life? Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisite:** upper-division standing or consent of instructor and department stamp.

#### **HILA 167/267. Scholarship on Latin American History in the Colonial Period (4)**

Introduction to the historiography on Latin America for the colonial period from Spanish and Portuguese conquests to the Wars of Independence. Requirements will vary for undergraduate, M.S., and Ph.D. students. Graduate students are required to submit an additional research paper. **Prerequisites:** upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp. +

#### **HILA 168/268. Scholarship on Latin American History in the Nineteenth Century (4)**

Introduction to the historiography on Latin America for the nineteenth century: world economy, nation-state building, agrarian processes, incipient industrialization, political and cultural thought, and social structure. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional research paper. **Prerequisites:** upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp.

#### **HILA 169/269. Scholarship on Latin American History in the Twentieth Century (4)**

Introduction to the historiography on Latin America for the twentieth century: agrarian reforms, unionization, industrialization by import substitution, the political left, social development, and international relations. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional research paper. **Prerequisites:** upper-division standing or consent of instructor; reading knowledge of Spanish; department stamp.

#### **HILA 199. Independent Study in Latin American History (4)**

Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor and department stamp.

### **NEAR EAST**

#### **Lecture Courses**

##### **HINE 101A. History of Ancient Mesopotamia (4)**

Course will trace the political and cultural history of Mesopotamia (modern Iraq), beginning with rise of cities in the fourth millennium B.C.E., continuing through the Sumerian, Akkadian, Assyrian, and Babylonian periods, and ending with the fall of Babylon (539 B.C.E.). **Prerequisite:** upper-division or instructor consent. +

##### **HINE 102. The Jews in Their Homeland in Antiquity (4)**

The Jews in Israel from the sixth century BCE to the seventh century CE. Statehood, nationalism, and autonomy within the framework of the Persian empire, the Hellenistic kingdoms, and the Roman-Byzantine empire. Cultural and religious developments will be explored. **Prerequisite:** upper-division standing. +

##### **HINE 103. The Jewish Diaspora in Antiquity (4)**

The Jews outside their homeland and in pre-Islamic times, concentrating on the Greco-Roman West and the Parthian-Sasanian East. Topics include assimilation and survival; anti-Semitism and missionizing; patterns of organization and autonomy; cultural and religious developments. **Prerequisite:** upper-division standing. +

##### **HINE 108. The Middle East before Islam (4)**

The peoples, politics, and cultures of Southwest Asia and Egypt from the sixth century B.C.E. to the seventh century C.E. The Achaemenid Empire, the Ptolemaic and Seleucid

kingdoms, the Roman Orient, the Parthian and Sasanian states. **Prerequisite:** upper-division standing. +

##### **HINE 109B. Learning to Read Biblical Hebrew II (4)**

Continued study of the language of the Bible with emphasis on advanced grammar and vocabulary. **Prerequisite:** HINE 109A. Offered during the summer.

##### **HINE 111. Anthropology and the Hebrew Bible (4)**

This course approaches the Hebrew Bible (Old Testament) from the perspective of cultural anthropology. Institutions studied will include the family, rites of passage, food taboos, warfare, animism, demons, sorcery, and animal sacrifice. **Prerequisite:** upper-division or instructor consent. Not off A close reading of select prose narratives from the Hebrew Bible/Old Testament. **Prerequisite:** upper-division standing or consent of instructor. +

##### **HINE 112AL. Great Stories from the Hebrew Bible/Foreign Language (1)**

Students with advanced Hebrew can study the texts in HINE 112A in the original language. **Prerequisite:** upper-division standing or consent of instructor.

##### **HINE 112B. Great Poems from the Hebrew Bible (4)**

A close reading of select poetic passages from the Hebrew Bible/Old Testament. **Prerequisite:** upper-division standing or consent of instructor. +

##### **HINE 112BL. Great Poems from the Hebrew Bible/Foreign Language (1)**

Students with advanced Hebrew can study the texts in HINE 112B in the original language. **Prerequisite:** upper-division standing or consent of instructor.

##### **HINE 113. Ancient Near East Mythology (4)**

Course will analyze and compare major myths from Egypt, Israel, Ugarit, and Mesopotamia, employing a variety of modern approaches. **Prerequisite:** upper-division standing or consent of instructor. +

##### **HINE 114. History of the Islamic Middle East (4)**

A survey of the Middle East from the rise of Islam to the region's economic, political, and cultural integration into the West (mid-nineteenth century). Emphasis on socioeconomic and political change in the early Arab empires and the Ottoman state. +

##### **HINE 115. Islamic Civilization (4)**

An introductory survey of Islamic civilizations. History and society, law, science and philosophy, arts and letters, and architecture. A broad picture of the dynamics and achievements of Islamic societies over time. **Prerequisite:** upper-division standing or consent of instructor. +

##### **HINE 116. The Middle East in the Age of European Empires (1798-1914) (4)**

Examines the contacts of the late Ottoman Empire and Qajar Iran with Europe from the Napoleonic invasion of Egypt to World War I, the diverse facets of the relationship with the West, and the reshaping of the institutions of the Islamic states and societies.

##### **HINE 118. The Middle East in the Twentieth Century (4)**

An introduction to the history of the Middle East since 1914. Themes such as nationalism, imperialism, the oil revolution, and religious revivalism will be treated within a broad chronological and comparative framework drawing on the experience of selected countries.

##### **HINE 119. US Mid-East Policy Post-WWII (4)**

An examination of post-WWII Middle East conflicts, including the Israeli-Arab conflicts, the Lebanese Civil War, and the Gulf War of the 1980s. The roles of the superpowers and Middle Eastern states during the period.

##### **HINE 122. Politicization of Religion in the Middle East (4)**

Islamic formulations of dissent from the nineteenth century to our day; social, cultural, and political movements inflected by religion; domestic, interregional, and international dimensions with emphasis on the Arab East, Iran, and Turkey. **Prerequisite:** upper-division standing.

##### **HINE 123. The Emergence of Middle East Nationalisms (4)**

A survey of nationalism in the modern Middle East with reference to current theories of identity formation in Europe and South Asia. The course will examine shifting identities in the Ottoman Empire, its Turkish and Arab successor states, and Iran. **Prerequisite:** upper-division standing or consent of instructor.

##### **HINE 126. Iranian Revolution in Historical Perspective (4)**

Iran's social and political history in the twentieth century with emphasis on the Constitutional movement of the late Qajar period, formation and development of the Pahlavi state, anatomy of the 1978-79 Revolution, and a survey of the Islamic Republic. **Prerequisite:** upper-division or instructor consent.

##### **HINE 127. History of Modern Turkey (4)**

Eastern problems on the example of Turkey and with special attention to collective identities, state-society dynamics, foreign and regional policies, and varieties of modernity. **Prerequisite:** upper-division standing or consent of instructor.

##### **HINE 151B/251B. Introduction to Aramaic Dialects (4)**

Study of Ancient Inscriptional Persian Imperial and Syriac Aramaic. +

##### **HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)**

Principles of historical linguistics, application to the languages of the ancient Levant. **Prerequisites:** knowledge of at least one Semitic language; a course in general linguistics is also desirable. +

##### **HINE 152B/252B. Introduction to Ugaritic (4)**

Decipherment of Ugaritic tablets, history, and culture of ancient Ugarit, study of Ugaritic mythic texts. +

##### **HINE 152C/252C. Advanced Ugaritic (4)**

Continued study of Ugaritic literature, comparison with Canaanite inscriptions. +

##### **HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)**

Students study cuneiform script and elements of Babylonian-Assyrian grammar, as well as the history of Ancient Mesopotamia. +

##### **HINE 153B/253B. Continued Akkadian Language (4)**

Student begin to read and analyze ancient Mesopotamian texts from a variety of genres. +

##### **HINE 153C/253C. Advanced Akkadian Language (4)**

Continued study of Mesopotamia literature and history. +

#### **Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

##### **HINE 161/HINE 261. Seminar in the Hebrew Bible (4)**

Systematic reading and rendering of the books of the Hebrew Bible in order. Each time the class is taught, we will look at a different book. Adequate knowledge of Biblical Hebrew is required. Graduate students will have to write an extra paper or exam. **Prerequisites:** Judaic Studies 103, graduate standing, or consent of instructor. +

##### **HINE 162/262. Anthropology and the Hebrew Bible (4)**

This course approaches the Hebrew Bible (Old Testament) from the perspective of cultural anthropology. Institutions studied will include the family, rites of passage, food taboos, warfare, animism, demons, sorcery, and animal sacrifice. Formerly HINE 111; students may not receive credit for HINE 111 and HINE 162/262. Graduate students will be required to complete an extra paper. **Prerequisites:** upper-division or graduate standing and department stamp. +

### **HINE 163/263. Topics in the Ancient World (4)**

Topics on the ancient world will vary from year to year. Requirements will vary for undergraduate and graduate students. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisite:** upper-division or graduate standing and departmental stamp. +

### **HINE 166/266. Nationalism in the Middle East (4)**

Growth of nationalism in relation to imperialism, religion, and revolution in the nineteenth- and twentieth-century Middle East. Emergence of cultural and political ethnic consciousness in the Ottoman state. Comparative study of Arab, Iranian, and Turkish nationalism as well as Zionism. **Prerequisite:** department stamp or consent of instructor.

### **HINE 170/270. Special Topics in Jewish History (4)**

This course studies a period or theme in Jewish history. Topics will vary from year to year. **Prerequisite:** department stamp required.

### **HINE 181/281. Problems in the Study of Hebrew Manuscripts (4)**

Detailed study of a portion of biblical text. Focus on text-critical and source-critical problems. **Prerequisite:** upper-division or graduate standing. +

### **HINE 186/286. Special Topics in Middle Eastern History (4)**

Focused study of historical roots of contemporary problems in the Middle East: Islamic modernism and Islamist movements; contacts with the West; ethnic and religious minorities; role of the military; economic resources and development. Department stamp and permission of instructor.

### **HINE 199. Independent Study in Near Eastern History (4)**

Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor.

## **HISTORY OF SCIENCE**

### **Lecture Courses**

#### **HISC 101A. Science in the Greek and Roman World (4)**

A survey of the principal features of ancient science: the origins of Greek naturalism, the criticism of magic, notions of quantification. Topics may include astronomy, astrology, geography, geometry, optics, mechanics and physical theory, classification of living beings, and human cognition. Emphasis on primary sources, such as the presocratic natural philosophers: Plato, Aristotle, Euclid, Archimedes, Ptolemy, Pliny Galen, and Proclus. **Prerequisite:** upper-division standing. +

#### **HISC 101B. Medieval Science in the Latin West, ca. 500–1500 (4)**

Styles of the medieval scientific imagination. Reception and assimilation of the learning of the ancient world, especially Aristotle, Plato, Euclid, Galen, and Ptolemy. Struggles to reconcile Greek, Arabic, and Christian ideals of knowledge. Rise of universities. Natural philosophy, logic, geometry, optics, astronomy, astrology, mechanics, geography, and classification of living beings. **Prerequisite:** upper-division standing. +

#### **HISC 101C. Early Modern Science (4)**

Early forms of modern science, mid-15th to 17th centuries. The revolution in printing. Sites of knowledge-making: university and court cultures, museums, academies. Astrology, astronomy, literature of the heavens, prophecy and apocalyptic expectation. Natural history, medicine, alchemy, magic and the physico-mathematical sciences. **Prerequisite:** upper-division standing. +

#### **HISC 102. Technology in World History (4)**

Technology as an agent of change. How have humans harnessed the power of nature? What factors have contributed to successes and failures? How has technology

changed human life? How should we evaluate the quality of these changes? **Prerequisite:** upper-division standing.

#### **HISC 103. Gender and Science in Historical Perspective (4)**

History of women's struggles and strategies for access and equality in professional science. Questions related to gender bias in science—as a social institution and as an epistemological enterprise—will be addressed in light of the historical and biographical readings. **Prerequisite:** upper-division standing.

#### **HISC 104. History of Popular Science (4)**

Historical aspects of the popularization of science. The changing relation between expert science and popular understanding. The reciprocal impact of scientific discoveries and theories, and popular conceptions of the natural world. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 105. History of Environmentalism (4)**

History of human effects on the natural environment, with emphasis on understanding the roles of the physical and biological sciences in providing insights into environmental processes. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 106. The Scientific Revolution (4)**

A cultural history of the formation of early modern science in the sixteenth and seventeenth centuries: the social forms of scientific life; the construction and meaning of the new cosmologies from Copernicus to Newton; the science of politics and the politics of science; the origins of experimental practice; how Sir Isaac Newton restored law and order to the West. **Prerequisite:** upper-division standing. +

#### **HISC 107. The Emergence of Modern Science**

The development of the modern conception of the sciences, and of the modern social and institutional structure of scientific activity, chiefly in Europe, during the eighteenth and nineteenth centuries. **Prerequisite:** upper-division standing.

#### **HISC 108. Life Sciences in the Twentieth Century (4)**

The history of twentieth-century life sciences, with an emphasis on the way in which model organisms such as fruit flies, guinea pigs, bacteriophage, and zebra fish shaped the quest to unlock the secrets of heredity, evolution, and development. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 109. Science in Western Civilization (4)**

An introduction to scientific thought as it relates to Western culture. Among the topics considered: Aristotelian, medieval, and Renaissance science; the scientific revolution; the Newtonian universe; science and the Enlightenment; evolution; science and the modern state; technoscience and biotechnology. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 111. The Atomic Bomb and the Atomic Age (4)**

Development of nuclear science and weapons—1930s to present—including the discovery of radioactivity and fission, the Manhattan project, the bombings of Hiroshima and Nagasaki and end of WWII, the H-bomb, and legacies of nuclear proliferation, environmental damage, and radioactive waste. **Prerequisites:** upper-division standing or consent of instructor.

#### **HISC 114. The Darwinian Legacy (4)**

The Origin of Species by means of Natural Selection, and its scientific, intellectual, and political legacies. Topics include social Darwinism, eugenics, Nazi racial hygiene, population control, neo-Malthusianism in the modern environmental movement. **Prerequisite:** upper-division standing.

#### **HISC 115. History of Modern Medicine (4)**

Explores the origin of clinical method, the hospital, internal surgery, and the medical laboratory, as well as the historical roots of debates over health-care reform, genetic determinism, and the medicalization of society. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 116. History of Bioethics (4)**

The story behind the postwar rise of bioethics—medical scandals breaking in the mass media, the development of novel technologies for saving and prolonging life, the

emergence of new diseases, the unprecedented scope for manipulation opened up by biology. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 117. History of the Neurosciences (4)**

A survey of the history of the neurosciences from the seventeenth century to the present, exploring the political, philosophical, cultural, aesthetic and ethical aspects of research into the workings of the human brain. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 118. History of Sexology (4)**

Analyzes the history of sexology as a series of episodes in the science of human difference, from the European reception of the first translation of the Kama Sutra in 1883 to the search for the “gay gene” in the 1990s. **Prerequisite:** upper-division standing or consent of instructor.

#### **HISC 120A. Technology in America I (4)**

The role of technology in American history through the Civil War. Indigenous and colonial development, transportation infrastructures, and industrialization are explored to understand the connections among technology, society, and culture. **Prerequisite:** upper-division standing. +

#### **HISC 120B. Technology in America II (4)**

The role of technology in the history of the United States since the Civil War. Mass production and consumption, information technologies, and the changing role of inventors and engineers are explored to understand the connections among technology, society, and culture. **Prerequisite:** upper-division standing.

#### **HISC 121. Listening In: Sound, Music, and Noise in America (4)**

Explores the cultural meaning of sound by examining the history of the phonograph, radio, movies, Muzak, noise-abatement, and architectural acoustics. What needs did these technologies fulfill? How did they reinforce and challenge the society in which they were developed? **Prerequisite:** upper-division standing.

#### **HISC 130. Technology in the Twentieth Century (4)**

Major technological developments in the twentieth century, including the rise and decline of technologies, unexpected hazards and unanticipated consequences, and why some technologies fail. **Prerequisite:** upper-division standing.

#### **HISC 131. Science, Technology, and Law (4)**

Science and law are two of the most powerful establishments of modern Western culture. Science organizes our knowledge of the world; law directs our action in it. Will explore the historical roots of the interplay between them. **Prerequisite:** upper-division standing.

### **Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

#### **HISC 160/260. Historical Approaches to the Study of Science (4)**

Major recent publications in the history of science will be discussed and analyzed; the topics will range in period from the seventeenth century to the twentieth, and will deal with all major branches of natural science. Special topics. Topics will vary from year to year. **Prerequisite:** consent of instructor.

#### **HISC 161/261. Seminar in Newton and Newtonianism (4)**

This course focuses on the single most important figure of the scientific revolution, Isaac Newton, and on his science and philosophy which set the frame of reference for physics and general science until the twentieth century. Graduate students are required to submit an additional piece of work. **Prerequisite:** upper-division or graduate standing and department stamp.

### **HISC 163/263. History, Science, and Politics of Climate Change (4)**

The complex historical development of human understanding of global climate change, including key scientific work, and the cultural dimensions of proof and persuasion. Special emphasis on the differential political acceptance of the scientific evidence in the U.S. and the world. Graduate students are required to submit an additional paper. **Prerequisite:** upper-division or graduate standing. Department stamp required.

### **HISC 164/264. Topics in the History of the Physical Sciences (4)**

Intensive study of specific problems in the physical (including chemical and mathematical) sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit.

### **HISC 165. Topics in Twentieth-Century Science and Culture (4)**

This seminar explores topics at the interface of science, technology, and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor's permission. **Prerequisite:** upper-division standing or consent of instructor.

### **HISC 166/266. The Galileo Affair (4)**

Galileo's condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Disobedience? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work. +

### **HISC 167/267. Gender and Science (4)**

Why have women been traditionally excluded from science? How has this affected scientific knowledge? How have scientists constructed gendered representations not only of women, but also of science and nature? We will address these questions from perspectives including history, philosophy, and psychoanalytic theory. **Prerequisite:** upper-division standing or consent of instructor.

### **HISC 168/268. The Extraterrestrial Life Question (4)**

The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750–present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief-systems. Graduate students will be expected to submit a more substantial piece of work. **Prerequisite:** upper-division or graduate standing or consent of instructor.

### **HISC 170/270. Topics in the History of Science and Technology (4)**

This seminar explores topics at the interface of science, technology, and society, ranging from the seventeenth century to the twentieth. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit an additional paper. **Prerequisite:** upper-division standing or consent of instructor.

HISC 172/272. Building The history of the built environment in the United States, from skyscrapers to suburbs, canals and railroads to factories and department stores. The technological history of structures and infrastructures, and the social and cultural values that have been "built into" our material environment. Graduate students are required to submit an additional paper. **Prerequisite:** upper-division standing or consent of instructor.

**HISC 173/273. Seminar on Darwin and Darwinisms (4)** Examines evolutionary theory before Darwin, the development of the theory of natural selection, the ongoing challenge from Lamarckism, nineteenth-century social Darwinism, the emergence of the neo-Darwinist synthesis, and the recent controversies over evolutionary psychology and creationism. Graduate students are expected to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

### **HISC 174/274. History of Localization of Brain Function (4)**

From the beginnings of brain anatomy in the 1660s to the current rage for functional magnetic resonance imaging

studies, this class investigates philosophical, ethical, and cultural dimensions of the quest to localize psychological phenomena in the physical brain. Graduate students are required to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

### **HISC 175/275. The Historical Sciences in the Nineteenth Century (4)**

A critical analysis of the host of "historical sciences" that developed over the course of the long nineteenth century, from archaeology and paleontology to psychoanalysis and craniotomy, including the science of history itself. Graduate students will be required to submit an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

### **HISC 199. Independent Study in the History of Science (4)**

Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor.

## **TOPICS**

### **Courses**

#### **HITO 87. Special Freshman Seminar (1)**

A seminar intended for exposing undergraduate students, especially freshmen, to exciting research programs conducted by department faculty. Enrollment is limited. Topic will vary quarter by quarter.

#### **HITO 99. Independent Study on**

##### **History Topics (1, 2, 3, 4)**

Independent study for undergraduates with lower-division standing under the supervision of a member of the faculty on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. **Prerequisites:** lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD G.P.A. of 3.0, and a completed and approved Special Studies form.

#### **HITO 102. Religious Traditions: East Asian Religious Traditions (4)**

Introduction to the major religious traditions of Asia: Hinduism, Buddhism, Taoism, Shinto, and Confucianism. The course will focus on one religion each year. Since special topics will vary from year to year the course may be repeated for credit three times. **Prerequisite:** upper-division standing. +

#### **HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)**

The political and cultural history of the Jews through the early modern period. Life under ancient empires, Christianity and Islam. The post-biblical development of the Jewish religion and its eventual crystallization into the classical, rabbinic model. +

#### **HITO 105. The Jews and Judaism in the Modern World (4)**

Topics include the political emancipation of the Jews of Europe; the emergence of Reform, Conservative, and Modern Orthodox Judaism; hasidism; modern anti-semitism; Jewish socialism; zionism; the Holocaust; the American Jewish community; the State of Israel.

#### **HITO 106. Love and Family in the Jewish Past (4)**

Jewish women's experiences from the seventeenth century to the present, covering Europe, the United States, and Israel. We examine work, marriage, motherhood, spirituality, education, community, and politics across three centuries and three continents. **Prerequisite:** upper-division standing.

#### **HITO 111/211. Marxian Theory (4)**

A survey and examination of the principal writings of Marx concerning economic theory and analysis. Emphasis on the theory of value, production, technical change, reproduction and accumulation. Some consideration will also be made of certain neo-Marxist contributions and critiques. **Prerequisite:** introductory economics or consent of instructor.

#### **HITO 117. World History 1200–1800 (4)**

This course examines the interaction between sections of the globe after 1200. It emphasizes factors operating on a transcontinental scale (disease, climate, migration) and historical/cultural phenomena that bridge distance (religion, trade, urban systems). This is not narrative history, but a study of developments that operated on a global scale and constituted the first phase of globalization. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HITO 119/HMNR 100. Human Rights I: History and Theory (4)**

Explores where human rights come from and what they mean by integrating them into a history of modern society, from the Conquest of the Americas and the origins of the Enlightenment, to the Holocaust and the contemporary human rights regime. **Prerequisite:** upper-division standing or consent of instructor.

#### **HITO 126. A History of Childhood (4)**

This course will examine the different ways that attitudes toward children have changed throughout history. By focusing on the way that the child was understood, we will examine the changing role of the family, the role of culture in human development, and the impact of industrialization and modern institutions on the child and childhood.

#### **HITO 133. War and Society: The Second World War (4)**

An examination of the Second World War in Europe, Asia, and the United States. Focus will be on the domestic impact of the war on the belligerent countries as well as on the experiences of ordinary soldiers and civilians. **Prerequisite:** upper-division standing or consent of instructor.

#### **HITO 134. International Law—War Crimes and Genocide (4)**

Comparative study of genocide and war crimes, stressing European developments since 1900 with reference to cases elsewhere. Topics include historical precedents; evolving legal concepts; and enforcement mechanisms. Emphasis on the Holocaust, the USSR under Stalin, ex-Yugoslavia, and the Armenian genocide. Students may not receive credit for both HITO 134 and ERC 102. **Prerequisite:** upper-division standing or consent of instructor.

#### **HITO 135. Historical Anthropology (4)**

This course will give an interdisciplinary introduction to anthropological thought in the nineteenth and twentieth centuries. Secondly, it will deal with different fields of historical anthropology. Central questions and approaches will be discussed by presenting selected case studies. **Prerequisite:** upper-division standing or consent of instructor.

## **Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

#### **HITO 166/266. Death Penalty Global Perspectives Since 1492 (4)**

From early modern witches, rebels, and heretics to hyper-modern gangsters, terrorists, and serial killers, applying capital punishment to foreign nationals and ethnic minorities has sustained a global conversation about the sanctity of human life and the meaning of citizenship in the Americas and Europe. Graduate students must complete an additional paper. **Prerequisite:** upper-division or graduate standing and department stamp.

#### **HITO 172/272. War in the Twentieth Century: A Psychological Approach (4)**

Reckoning by novelists, essayists, and biographers with the phenomenon of contemporary warfare as an unprecedented experience and an abiding threat. Graduate students are required to submit a more substantial piece of work. **Prerequisite:** upper-division or graduate standing and department stamp.

**HITO 174. The Foundations of Constitutional Law (4)**  
Medieval and early modern origins of constitutional ideas and institutions. The question of the course is: Where did the ideas and institutions embodied in the constitutions of the U.S. (1787) and France (1791) come from? Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisite:** department stamp or consent of instructor.

**HITO 180/280. Housing in the Developing World (4)**  
The majority of the world's citizens now live in cities; this course examines the evolution of housing architecture and finance in the twentieth-century context of rapid urbanization, dissolving empire, industrialization, and globalization. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and consent of instructor.

**HITO 192. Senior Seminar in History (1)**  
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in history (at the upper-division level). Topics will vary from quarter to quarter. Senior Seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**HITO 193/POLI 194/COM GEN 194/USP 194. Research Seminar in Washington, D.C. (6)**  
Course attached to six-unit internship taken by student participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial historical research paper. **Prerequisites:** department stamp required; participating in UCDC program.

**HITO 194. History Honors (4)**  
A program of independent study providing candidates for history honors an opportunity to develop, in consultation with an advisor, a preliminary proposal for the honors essay. An IP grade will be awarded at the end of this quarter. A final grade will be given for both quarters at the end of HITO 195. **Prerequisite:** consent of instructor. Department stamp required.

**HITO 195. The Honors Essay (4)**  
Independent study under the supervision of a faculty member leading to the preparation of an honors essay. A letter grade for both HITO 194 and 195 will be given at the completion of this quarter. **Prerequisite:** consent of instructor. Department stamp required.

**HITO 196. Honors Seminar (4)**  
The nature and uses of history are explored through the study of the historian's craft based on critical analysis of historical literature relating to selected topics of concern to all historians. Required of all candidates for history honors and open to other interested students with the instructor's consent. Department stamp required.

**HITO 198. Directed Group Study (1–4)**  
Directed group study on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. (P/NP grades only.) **Prerequisites:** upper-division standing, completion of at least ninety units of UCSD undergraduate study, a minimum G.P.A. of 2.5, and a completed and approved Special Studies form.

**HITO 199. Independent Study for Undergraduates (4)**  
Independent study on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. (P/NP grades only.) **Prerequisites:** upper-division standing and consent of instructor.

## UNITED STATES

See History of Science for more U.S. courses (HISC 105, HISC 108, HISC 111).

### Lecture Courses

**HIUS 100. Colonial Period to 1763 (4)**  
Political and social history of the thirteen colonies: European background, settlement and expansion, beginnings of culture, and the imperial context. **Prerequisite:** upper-division standing. +

**HIUS 101. The American Revolution (4)**  
Causes and consequences of the revolution: intellectual and social change, the problems of the new nation, the Constitution, and the origins of political parties. **Prerequisite:** upper-division standing. +

**HIUS 103. The World We Have Lost: Social History of Early America (4)**  
Selected themes in early American social history—including race, gender, faith, economy, and age—from an anthropological perspective. What distinguished it from our own world? **Prerequisite:** upper-division standing. +

**HIUS 104. The Revolutionary Atlantic (4)**  
The upheavals that transformed the early modern Atlantic emphasizing the United States, Caribbean, and Great Britain. Topics: struggles to define democracy, the reorganization of the Atlantic state system, the Enlightenment, and international responses to the American and French Revolutions. **Prerequisite:** upper-division standing. +

**HIUS 106B. American Foreign Relations, since 1900 (4)**  
Examines foreign relations of the United States from acquisition of a formal overseas empire in the aftermath of the Spanish-American War to the end of the Cold War. Topics cover a range of public and private interactions with the world. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 107. The Early Republic (4)**  
This course will examine the transformation of American society and politics between the American Revolution and the Jacksonian period. Topics to be considered include the emergence of domesticity, the development of political parties, the expansion of capitalist relations, the debate over slavery, the early labor movement, and the origins and motivations of middle-class reform. +

**HIUS 108A/ETHN 112A. History of Native Americans in the United States I (4)**  
This course examines the history of the Native Americans in the United States with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the European colonial powers and the emerging United States until 1870. **Prerequisite:** upper-division standing or consent of instructor. +

**HIUS 108B/ETHN 112B. History of Native Americans in the United States II (4)**  
This course examines the history of the Native Americans in the United States with emphasis on the lifeways, mores, warfare, cultural adaptation, and relations with the United States from 1870 to the present. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 109. Intellectual History: From Contact to Civil War (4)**  
An exploration of cultural, political, religious, and social thought in early America. Emphasis will be placed on the trans-Atlantic context and on the relationships between intellectuals and authority. **Prerequisite:** upper-division standing or consent of instructor. +

**HIUS 114. California History (4)**  
This course examines California history from 1800 onward, with an emphasis on social, economic, and political change. The course will explore the effect of national and international events as well as the ways in which California—the ideal and the real—shapes the American experience.

**HIUS 115. History of Sexuality in the United States (4)**  
Constructions of sex and sexuality in the United States from the time of pre-contact Native America to the present,

focusing on sexual behaviors, sexual ideologies, and the uses of sexuality for social control.

**HIUS 116. War and American Society (4)**  
The connection between social relations and America's wars. Ways that American society has influenced decisions to prepare for or go to war as well as the impact of war on class relations and ideologies of race and gender. **Prerequisite:** upper-division standing.

**HIUS 117. History of Los Angeles (4)**  
This course examines the history of Los Angeles from the early nineteenth century to the present. Particular issues to be addressed include urbanization, ethnicity, politics, technological change, and cultural diversification.

**HIUS 120. Peace Movements in America (4)**  
Topics will include Quaker origins of the American peace movements and examples of opposition to wars in the twentieth century from World Wars I and II, Vietnam, anti-nuclear movements, and intervention in Central America to Iraq. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 122. History and Hollywood: America and the Movies Since the Great Depression (4)**  
A lecture-discussion course utilizing written texts and films to explore major themes in American politics and culture from the Great Depression through the 1990s. Topics will include the wars of America, McCarthyism, the counter-culture of the 1960s, and the transformation of race and gender relations. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 123/USP 167. History of New York City (4)**  
New York City breathes history. Whether it is in the music, the literature, or the architecture, the city informs our most basic conceptions of American identity. This course examines the evolution of Gotham from the colonial era to today. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 124/ETHN 125. Asian American History**  
Explore how Asian Americans were involved in the political, economic, and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship.

**HIUS 128. African-American Legal History (4)**  
This course sketches the shifting experience persons of African descent have had with the law in the United States. Films, cases, articles, and book excerpts are used to convey the complex nature of this four hundred year journey. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 130. Cultural History from 1607 to the Civil War (4)**  
This course will explore connections between American culture and the transformations of class relations, gender ideology, and political thought. Topics will include the transformations of religious perspectives and practices, republican art and architecture, artisan and working class culture, the changing place of art and artists in American society, antebellum reform movements, antislavery and proslavery thought. **Prerequisite:** upper-division standing or consent of instructor. +

**HIUS 131. Cultural History from the Civil War to the Present (4)**  
This course will focus on the transformation of work and leisure and the development of consumer culture. Students will consider connections between culture, class relations, gender ideology, and politics. Topics will include labor radicalism, Taylorism, the development of organized sports, the rise of department stores, the transformation of middle-class sexual morality, the growth of commercial entertainment, and the culture of the cold war.

**HIUS 132. Civil War–Reconstruction in Pop Culture (4)**  
This course considers how cultural processes have shaped histories of the Civil War and Reconstruction. Students will analyze the relationship between popular culture and major themes of the era through the use of literature, texts, film, television, and print. Students may not receive

credit for both HIUS 132 and HIUS 132S. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 133. The Golden Age of Piracy (4)**

This interdisciplinary lecture course focuses on the history and literature of global piracy in the English-speaking world from Sir Francis Drake to Blackbeard and how this Golden Age was remembered in the popular fiction of the nineteenth and twentieth centuries. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIUS 134. From Be Bop to Hip Hop: African American Cultural History Since 1945 (4)**

Explore the politics of black culture in the postwar period. Topics include: the dynamic interplay of social factors (migration, civil rights, black power, deindustrialization, globalization) and the production of African American culture, including music, film, and literature. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 135A/ETHN 170A. Origins of the Atlantic World, c. 1450–1650 (4)**

An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected "Atlantic World." Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade and the early development of plantation slavery in the New World. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIUS 135B/ETHN 170B. Slavery and the Atlantic World (4)**

The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIUS 138/ETHN 167. African-American History in War and Peace: 1917 to the Present (4)**

The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. The course examines how the pressures of "total war" and "cold war" shaped the African-American experience in both war and peacetime. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 139/ETHN 149. African-American History in the Twentieth Century (4)**

This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics. **Prerequisite:** upper-division standing.

#### **HIUS 140/Econ 158A. Economic History of the United States I (4)**

The United States as a raw materials producer, as an agrarian society, and as an industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and nineteenth- and early twentieth-century transformations of American capitalism.

#### **HIUS 141/Econ 158B. Economic History of the United States II (4)**

The United States as modern industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and twentieth-century transformations of American capitalism.

#### **HIUS 142. Great Trials of the Anglo-American World (4)**

Examines important constitutional, criminal, and civil trials in English and American courts from the early modern period to the present. The topics will vary from year to year. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 142A. United States in the Twentieth Century, 1900–1945 (4)**

Examines the political, economic, and social history of the American people from the turn of the twentieth century to the end of World War II. Topics: progressive movement,

impact of the Great Depression, and the consequences of two world wars. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 142B. United States in the Twentieth Century, 1945 to the Present (4)**

Examines the political, economic and social history of the American people from the end of World War II to present. Topics: origins of the Cold War, struggle for racial justice and the rise of American conservatism since the 1980s. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 146. Race, Riots, and Violence in the U.S (4)**

Examining the history of urban riots in the U.S. since the late nineteenth century. Exploring how different groups of Americans have constructed competing notions of race, gender, labor, and national belonging by participating in street violence. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 147/USP 165. History of the American Suburb (4)**

This lecture explores the development of suburbs in America, from the early nineteenth century to the contemporary era. Topics include suburban formation, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore competing theories of suburbanization as it surveys the major literature.

#### **HIUS 148/USP 103. The American City in the Twentieth Century (4)**

This course focuses on the phenomenon of modern American urbanization. Case studies of individual cities will help illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which urban problems have been dealt with historically.

#### **HIUS 149. The United States in the 1960s (4)**

An overview of the social and political developments that polarized American society in the tumultuous decade of the 1960s. Themes include the social impact of the post-war "baby boom," the domestic and foreign policy implications of the Cold War; the evolution of the civil rights and women's movements; and the transformation of American popular culture.

#### **HIUS 150. American Legal History to 1865 (4)**

The history of American law and legal institutions. This quarter focuses on crime and punishment in the colonial era, the emergence of theories of popular sovereignty, the forging of the Constitution and American federalism, the relationship between law and economic change, and the crisis of slavery and Union. **Prerequisite:** upper-division standing. +

#### **HIUS 151. American Legal History since 1865 (4)**

The history of American law and legal institutions. This course examines race relations and law, the rise of big business, the origins of the modern welfare state during the Great Depression, the crisis of civil liberties produced by two world wars and McCarthyism, and the Constitutional revolution wrought by the Warren Court. HIUS 150 is not a prerequisite for HIUS 151. **Prerequisite:** upper-division standing.

#### **HIUS 152A. A Constitutional History of the United States to 1865 (4)**

The historical development of constitutional thought and practice in the United States from the era of the American Revolution through the Civil War, with special attention to the role of the Supreme Court under Chief Justices Marshall and Taney. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 152B. A Constitutional History of the United States Since 1865 (4)**

The historical development of constitutional thought and practice in the United States since 1865, with special attention to the role of the Supreme Court from Chief Justices Chase to Rehnquist. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIUS 153. American Political Trials (4)**

Survey of politicized criminal trials and impeachments from Colonial times to the 1880s. Examines politically-motivated

prosecutions and trials that became subjects of political controversy, were exploited by defendants for political purposes, or had their outcomes determined by political considerations. +

#### **HIUS 154. Western Environmental History (4)**

This course examines human interaction with the western American environment and explores the distinction between the objective environmental understanding of science and the subjective views of history and historians. The course will also analyze the most compelling environmental issues in the contemporary West.

#### **HIUS 155. From Zoot Suits to Hip Hop: Race and Popular Culture since World War II (4)**

Tracing popular cultural production and consumption in the U.S. since World War II. It historicizes popular culture as an arena where social relations are negotiated and where race, class, and gender identities are constructed, transformed, and contested. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 155A. Religion and Law in American History: Foundations to the Civil War (4)**

Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in the Anglo-American world. Topics include the English background, religion in the age of the American Revolution and the antebellum period. **Prerequisite:** upper-division standing or consent of instructor. +

#### **HIUS 155B. Religion and Law in American History: Civil War to the Present (4)**

Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in America from the Civil War to the present. Topics include the religion and government aid; sacred duties and the law; and religion and cultural politics. **Prerequisite:** upper-division standing or consent of instructor.

#### **HIUS 156. American Women, American Womanhood (4)**

This course explores the emergence of a dominant ideology of womanhood in America in the early nineteenth century and contrasts the ideal with the historically diverse experience of women of different races and classes, from settlement to 1870. Topics include witchcraft, evangelicalism, cult of domesticity, sexuality, rise of industrial capitalism and the transformation of women's work, Civil War, and the first feminist movement. **Prerequisite:** upper-division standing. +

#### **HIUS 157. American Women, American Womanhood 1870 to Present**

This course explores the making of the ideology of womanhood in modern America and the diversity of American women's experience from 1870 to the present. Topics include the suffrage movement, the struggle for reproductive rights and the ERA; immigrant and working-class women, women's work, and labor organization; education, the modern feminist movement and the contemporary politics of reproduction, including abortion and surrogate motherhood. **Prerequisite:** upper-division standing. +

#### **HIUS 158/ETHN 130. Social and Economic History of the Southwest I (4)**

This course examines the history of the Spanish and Mexican borderlands (what became the U.S. South-west) from roughly 1400 to the end of the U.S.-Mexico War in 1848, focusing specifically on the area's social, cultural, and political development. +

#### **HIUS 159/ETHN 131. Social and Economic History of the Southwest II (4)**

(Cross-listed as Ethnic Studies 131.) This course examines the history of the American Southwest from the U.S.-Mexican War in 1846–48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity.

#### **Colloquia**

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course.

Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

**HIUS 160/260. Colloquium on the American Empire (4)**

Course explores the concept of an American Empire by examination of the literature on the topic. Particular attention will be on the work since 9/11/01. Students are expected to produce original work concerning the definition and/or existence of an American Empire. Graduate students are expected to submit an additional piece of work. **Prerequisite:** upper-division standing or consent of instructor. Department stamp required.

**HIUS 162/262. The American West (4)**

This seminar will trace major themes in the history of the American West. Topics will include ethnicity, the environment, urbanization, demographics, and shifting concepts surrounding the significance of the West. Graduate students will be required to submit additional work in order to receive graduate credit for the course. **Prerequisite:** department stamp required.

**HIUS 164/264/ETHN 181. Topics in Comparative History of Modern Slavery (4)**

Slavery was both a thread of continuity in the history of the Americas and a distinctive institution in specific social settings. The purpose of this course is to examine and discuss readings that explore topics of the Caribbean and the United States. Because topics will vary, the seminar may be taken more than once for credit, with consent of the instructor. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. **Prerequisite:** upper-division standing or consent of instructor. +

**HIUS 166/266. Topics in Southern History (4)**

Specific topics will vary from year to year, including slavery, Civil War and Reconstruction, the Afro-American experience, race relations. +

**HIUS 167/267/ETHN 180. Topics in Mexican-American History (4)**

This colloquium studies the racial representation of Mexican Americans in the United States from the nineteenth century to the present, examining critically the theories and methods of the humanities and social sciences. **Prerequisite:** upper-division standing.

**HIUS 168/268. Race, Resistance, and Cultural Politics (4)**

The course investigates race, resistance, and culture in the U.S. since the late nineteenth century. It interrogates how working-class whites, African Americans, Latinos, Asian Americans, and others have simultaneously challenged, shaped, and assimilated into U.S. society. Graduate students are required to submit an additional paper. **Prerequisite:** upper-division standing or consent of instructor. Department stamp required.

**HIUS 169/269. Topics in American Legal and Constitutional History (4)**

A reading and discussion course on topics that vary from year to year, including American federalism, the history of civil liberties, and the Supreme Court. **Prerequisite:** consent of instructor.

**HIUS 173/273. Topics in American Women's History (4)**

The specific content of the course will vary from year to year but will always analyze in depth a limited number of issues in American women's history. Special topics. Requirements will vary for undergraduate, M.A., Ph.D. students. Graduate students will be required to submit a more substantial piece of work. **Prerequisite:** consent of instructor or department stamp.

**HIUS 176/276. Race and Sexual Politics (4)**

This seminar will explore the histories of sexual relations, politics, and cultures that both cross and define racial boundaries in the nineteenth and twentieth centuries. Reading will focus on the United States as well as take up studies sited in Canada and Latin America. Graduate students are expected to submit a more substantial piece of work. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 178/278 The Atlantic World, 1400–1800 (4)**

This course explains the origin of the Atlantic as a zone of interaction for Europeans, indigenous Americans, and Africans, and evaluates the consequences of the interaction over several centuries by exploring contests over political power and economic/demographic change. Graduate students will submit a more substantial piece of work with in-depth analysis and with an increased number of sources cited. A typical undergraduate paper would be ten pages, whereas a typical graduate paper would require engagement with primary sources, more extensive reading of secondary material, and be about twenty pages. **Prerequisites:** upper-division or graduate standing and departmental stamp. +

**HIUS 180/ETHN 134. Immigration and Ethnicity in Modern American Society (4)**

Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. **Prerequisite:** upper-division standing.

**HIUS 181/281. Topics in Twentieth Century United States History (4)**

A colloquium dealing with special topics in U.S. history from 1900 to the present. Themes will vary from year to year. **Prerequisite:** department stamp or consent of instructor.

**HIUS 183/283/ETHN 159. Topics in African American History (4)**

A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. **Prerequisite:** upper-division standing or consent of instructor.

**HIUS 187/287. Topics in American Social History (4)**

Colloquium on selected topics in American social history. Topics will vary from year to year, and the course may therefore be repeated for credit.

**HIUS 188/288. Topics in Culture and Politics (4)**

Colloquium on select topics in culture and politics in the United States. Topics will vary from quarter to quarter. Graduate students will be required to submit an additional piece of work. **Prerequisite:** upper-division or graduate standing and department stamp.

**HIUS 189/289. The Social History of Seafaring in Early America (4)**

All American colonies were originally maritime colonies. This seminar examines the history of fishing, whaling, shipping, and freebooting during the age of sail and investigates through primary and secondary sources the experience of living in communities that followed the sea. Graduate students are required to submit an additional paper. **Prerequisites:** upper-division standing or consent of instructor and department stamp. +

**HIUS 199. Independent Study in United States History (4)**

Directed readings for undergraduates under the supervision of various faculty members. **Prerequisite:** consent of instructor and department stamp required.

## GRADUATE

Graduate standing is a prerequisite for all graduate-level courses. For more graduate courses (200+), look at history undergraduate colloquia (courses numbered 160–190).

**HIGR 200. History and Theory (4)**

An introductory graduate course for students in all fields. Themes include cross-field historiography and theory, interdisciplinary approaches to history and historical method. (May be taken twice for credit, if the reading list is significantly different.)

**HIGR 204A-B. The History of the University (4-4)**

Traces the history and idea of the university from its medieval origins, with emphasis on its post-WWII incarnation as an engine of scientific investigation, economic growth, socio-cultural analysis, and artistic experimentation. Research project will utilize original sources in UCSD's archives. Students must complete both HIGR 204A and 204B in order to get credit for both. HIGR 204A focuses on the research portion of the class.

**HIGR 205. Feminist Historical Studies (4)**

An introduction to feminist historical studies, this course is designed for interested graduate students from all history field groups. Graduate students from other disciplines are also encouraged to participate. The course will provide students a rigorous training in women's history, in the feminist theories that undergird that scholarship, and in the emergent field of gender analysis. The particular content of the course will change from year to year, but each course will include theoretical texts, historical case studies, and primary sources. Readings will be drawn from different times and places. This course is strongly recommended for those preparing minor fields in women's history. The course can be repeated twice for credit.

**HIGR 210. Historical Scholarship on Modern Chinese History (4)**

This course will introduce students to the monographic literature and the main historiographic controversies of modern Chinese history.

**HIGR 211. Historical Scholarship on Modern Japanese History (4)**

This course will introduce students to the monographic literature and the main historiographic controversies of modern Japanese history.

**HIGR 212. Historical Scholarship on Modern East Asian History (4)**

This course will introduce students to the monographic literature and the main historiographic controversies of modern East Asian history.

**HIGR 213. Sources on Modern Chinese History (4)**

An introduction to Chinese documentary sources and collections on Qing and Republican History. This course will introduce students to the language of Qing documents, and to the contents and uses of imperial documents and archives, documentary collections, periodicals, gazetteers, etc.

**HIGR 215A-B. Research Seminar in Modern Chinese History (4-4)**

A two-quarter research seminar in Chinese history. A paper, based on original research, will be due in the second quarter. Seminar topics will vary. Reading knowledge of Chinese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. **Prerequisite:** 215A is a prerequisite for 215B.

**HIGR 216A-B. Research Seminar in Modern Japanese History (4-4)**

A two-quarter research seminar in Japanese history. A paper, based on original research, will be due in the second quarter. Seminar topics will vary. Reading knowledge of Japanese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. **Prerequisite:** 216A is a prerequisite for 216B.

**HIGR 217A. Historical Scholarship on Pre-Modern Chinese History: Foundations—China before Buddhism (4)**

Ancient society differed dramatically from the imperial, bureaucratic, commercial, Buddhist China of later times. Yet the texts and artifacts of antiquity echoed powerfully through the centuries. We will study foundational texts, practices, and objects in their own contexts and also consider their later uses.

**HIGR 217B. Historical Scholarship on Pre-Modern Chinese History: Han Dynasty through the Song Dynasty (4)**

Course introduces history and society during the Chinese Middle Ages (c. 200 BCE–1200 CE), including the Han, Six, Tang, and Song Dynasties. Examination of the birth and

development of China's great religions, Buddhism and Daoism, and the international culture of the Silk Road, and political and cultural systems that still resonate in China today.

**HIGR 217C. Historical Scholarship on Pre-Modern Chinese History: Late Imperial Chinese History, 1200–1800 (4)**

Course introduces major topics in scholarship on the Yuan, Ming, and Qing periods. It is intended to prepare graduate students to teach the history of late imperial China.

**HIGR 218A. Graduate Seminar in Pre-Modern Chinese History (4)**

Course subject varies among periods before 1900. 218A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 218B students write an original research paper using primary sources. **Prerequisites:** graduate standing or consent of instructor. Reading knowledge of Chinese.

**HIGR 218B. Graduate Seminar in Pre-Modern Chinese History (4)**

Course subject varies among periods before 1900. 218A includes secondary scholarship studied for content, method, and structure; research methods and resources; and development of the research topic. In 218B students write an original research paper using primary sources. **Prerequisites:** graduate standing or consent of instructor. Reading knowledge of Chinese. HIGR 218A.

**HIGR 220. Historical Scholarship on European History, 1500–1715 (4)**

Introduction to the historiography on Renaissance, Reformation, and early modern Europe: an overview of methodologies with emphasis on sources and critical approaches. Required for all beginning European history graduate students.

**HIGR 221. Historical Scholarship on European History, 1715–1850 (4)**

Selected topics in European history from the early modern to the modern era. Readings and discussions focus on issues of methodology and interpretation. Required for all beginning European history graduate students.

**HIGR 222. Historical Scholarship on European History, since 1850 (4)**

Critical evaluation of selected topics in the period of modern Europe from the mid-nineteenth century to the present. Required for all beginning European history graduate students.

**HIGR 230A-B. Research Seminar in Early Modern Europe (4-4)**

Selected topics in the period from the sixteenth century through the early nineteenth, with an emphasis on the theory and practice of socio-economic history. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. **Prerequisite:** 230A is a prerequisite for 230B.

**HIGR 231A-B. Research Seminar in Modern European History (4-4)**

Selected topics in the period of the nineteenth and twentieth centuries. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. **Prerequisite:** 231A is a prerequisite for 231B.

**HIGR 235. Science, Empire, and Exploration (4)**

Examines links between scientific work, particularly expeditions and exploration, and political programs of empire in the seventeenth to twentieth centuries. Topics: collecting expeditions as expressions of empire; role of colonial administrative networks in facilitating field-based investigations; relation between European and non-European knowledge systems.

**HIGR 236A-B. Research Seminar in History of Science (4-4)**

A two-quarter research seminar comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chiefly to the writing of individual research papers. Topics vary from year to year, and students may therefore repeat

the course for credit. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

**HIGR 237. Topics in the History of Ocean Sciences (4)**

(Cross-listed with SIO 201.) Intensive study of specific problems in the history of the ocean sciences, and of related earth and atmospheric sciences, in the modern period. Topics vary from year to year, and students may therefore repeat the course for credit.

**HIGR 238. Introduction to Science Studies (4)**

(Cross-listed as Communication 225A, Philosophy 209A, and Sociology 255A.) Study and discussion of classic work in history of science, sociology of science and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. **Prerequisite:** enrollment in Science Studies Program.

**HIGR 239. Seminar in Science Studies (4)**

(Cross-listed as Communication 225B, Philosophy 209B, and Sociology 255B.) Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. May be repeated as course content changes annually. **Prerequisite:** enrollment in Science Studies Program.

**HIGR 240. Colloquium in Science Studies (4)**

(Cross-listed as Communication 225C, Philosophy 209C, and Sociology 255C.) A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. May be repeated as course content changes annually. **Prerequisite:** enrollment in the Science Studies Program.

**HIGR 241. Advanced Approaches to Science Studies (4)**

(Cross-listed as COGR 225D, PHIL 209D, SOCG 255D.) Focus on recent literature in the history, philosophy, and sociology of science, technology, and medicine. Required for all students in the Science Studies Program. **Prerequisites:** HIGR 238 is a prerequisite for HIGR 241; enrollment in Science Studies Program or instructor's permission.

**HIGR 242. Topics in the History of Earth and Life Sciences (4)**

Intensive study of specific problems in the history of the life sciences and earth sciences, ranging in period from the Renaissance to the twenty-first century. May be repeated for credit as topics will vary annually. **Prerequisites:** graduate standing and department stamp required.

**HIGR 243. Historical Scholarship in Technology (4)**

An introduction to the historiography of technology. This reading seminar provides an overview of scholarly approaches to the history of technology by critically examining classic and contemporary works in the field. **Prerequisite:** graduate-standing or consent of instructor.

**HIGR 244. Introduction to Sound Studies (4)**

Study and discussion of classic and recent scholarship on sound production and cultures of listening. Emphasizes historical literature but also includes works in literary studies, art history, music, and other fields. **Prerequisite:** graduate standing or consent of instructor.

**HIGR 245A-B-C. Historical Scholarship on Latin American History (4-4-4)**

Introduction to the literature of Latin American history. A three-quarter sequence of readings and discussions taught each quarter by members of the staff. Required for all beginning students for a graduate degree specializing in Latin American history; open and strongly recommended to other students using Latin American history as a secondary field for a graduate degree. HIGR 245A covers the colonial period, from conquest to independence to today; HIGR 245B covers South America from independence to today; HIGR 245C covers Mexico, Cuba, and Central America from independence to today. The three quarters need not be taken in sequence. Reading knowledge of Spanish is required.

**HIGR 247A-B. Research Seminar in Colonial Latin America (4-4)**

A two-quarter course involving readings and research on sixteenth- through eighteenth-century Latin America. Students are expected to compose a paper based on original research that is due in the second quarter. Reading knowledge of Spanish required. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

**HIGR 248A-B. Research Seminar in Latin America, National Period (4-4)**

A two-quarter course involving readings and research; the first quarter is devoted to the nineteenth and the second quarter to the twentieth century. Students are expected to compose a paper based on original research that is due in the second quarter. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. Reading knowledge of Spanish and/or Portuguese is helpful but not required.

**HIGR 252. History, Social Evolution, and Intellectuals in the Andes: Mariátegui, Haya de la Torre, and Arguedas (4)**

The course will study three major twentieth-century interpreters of Andean history and society. Mariátegui is Latin America's most original socialist intellectual; Haya de la Torre is the founder of Peru's most important party; and Arguedas was the most profound interpreter of the role of Indian peasants in the Andean nations.

**HIGR 255. The Literature of Ancient History (4)**

An introduction to the bibliography, methodology, and ancillary disciplines for the study of ancient history together with readings and discussion on selected topics within the field. May be repeated for credit, topic will vary year to year.

**HIGR 257A. Historical Scholarship on Modern Middle East, Eighteenth to Twentieth Century (4)**

Readings in the historiographical literature on the late Ottoman Empire (eighteenth to twentieth century). **Prerequisite:** graduate standing or consent of instructor.

**HIGR 257B. Historical Scholarship on Modern Middle East, Colonial Period (4)**

Readings in the historiographical literature on Middle Eastern states in the colonial period. **Prerequisite:** graduate standing or consent of instructor.

**HIGR 257C. Historical Scholarship on Modern Middle East, Post-Colonial Eras (4)**

Readings in the historiographical literature on the Middle East in the national/post-colonial eras. **Prerequisite:** graduate standing or consent of instructor.

**HIGR 260A-B-C. Historical Scholarship on Judaic Studies (4-4-4)**

Weekly graduate seminar. Faculty and students present results of research. Student research may be towards course work on thesis.

**HIGR 265A-B-C. Historical Scholarship on American History (4-4-4)**

A three-quarter sequence of readings and discussions on the bibliographical and monographic literature of American history from the colonial period to the present. Taught by different members of the staff each quarter, the course is required of all beginning graduate students in American history.

**HIGR 267A-B. Research Seminar in United States History (4-4)**

Readings and discussion in selected areas of American history for advanced graduate students. An IP (in progress) grade will be awarded the first quarter. The second quarter will be devoted to the presentation, discussion, and evaluation of work in progress. A final grade will be awarded at the end of the second quarter. **Prerequisite:** 267A is a prerequisite for 267B.

**HIGR 271. New Research Directions in U.S. History (4)**

Students will develop skills in presenting and assessing new research and offering feedback to work in progress by senior students and faculty. Course is required to be taken twice by third-year students and highly recommended for audit by all students in U.S. History. (S/U grades only.)

**HIGR 275A. Research Seminar in Middle Eastern History (4)**

HIGR 275A is the first quarter of a two-quarter research seminar in Middle Eastern history. Seminar topics will vary. Reading knowledge of Arabic or Turkish is expected. A paper, based on original research, will be due at the end of the second quarter. Final grade will not be given until the end of the second quarter. **Prerequisite:** graduate standing or consent of instructor.

**HIGR 275B. Research Seminar in Middle Eastern History (4)**

HIGR 275B is the second quarter of a two-quarter research seminar in Middle Eastern history. Seminar topics will vary. Reading knowledge of Arabic or Turkish is expected. A paper, based on original research, will be due at the end of the quarter. Final grade will be awarded for HIGR 275A and B at the end of the second quarter. **Prerequisites:** 275A and graduate-standing or consent of instructor.

**HIGR 295. Thesis Seminar (4)**

For students advanced to candidacy to the doctorate. Discussion, criticism, and revision of drafts of chapters of theses and of work to be submitted for publication.

**HIGR 298. Directed Reading (1–12)**

Guided and supervised reading in the literature of the several fields of history. This course may be repeated for an indefinite number of times due to the independent nature of the content of the course. (S/U grades permitted.)

**HIGR 299. Ph.D. Thesis Direction (1–12)**

Independent work by graduate students engaged in research and writing of doctoral theses. This course may be repeated for an indefinite number of times due to the independent nature of thesis writing and research. (S/U grades only.)

**HIGR 500. Apprentice Teaching in History (1–4)**

A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. (S/U grades only.)

## THE HUMAN DEVELOPMENT MAJOR

The scientific study of human development focuses on issues of growth, development, and behavioral change across the lifespan. The Human Development Program is interdisciplinary, incorporating courses from the Departments of Anthropology, Biology, Cognitive Science, Communication, Ethnic Studies, History, Linguistics, Literature, Psychology, Sociology, Education Studies Program, and Urban Studies and Planning Program. The curriculum is designed to emphasize the idea of development as an essential perspective from which to understand human behavior. The courses cover

a broad spectrum of issues in human development: from brain and perceptual development, to reasoning and problem solving, to social interaction and the evolution of cultural systems. The Human Development Program unifies and coordinates the excellent research and teaching resources currently available on campus in this area and profiles the factors that influence the ways in which humans develop and change.

Human development is a very large field, but there is a set of basic questions which serve to define and integrate it: What underlies the development of human knowledge? To what extent is the capacity to know, indeed the concepts themselves, encoded in the genes? How is the role of learning and environmental influences accounted for? How do we learn? What are the ways in which children become competent participants in their social groups? What is the origin and nature of social interaction and organization?

The study of human development has become increasingly central to a wide range of important issues affecting infants, young children, and adolescents, as well as the changing structure of the American family and public policy on children and education. An understanding of the processes that underlie human development is crucial to our evaluation of these issues and to our ability to offer avenues for remediation of the attendant problems. The three major areas of study within the Human Development Program are: Biological Development, Ontogenetic Development, and Socio-Cultural Development. These areas consider issues that pertain to development of specific neural and cognitive processes and development within a larger social and cultural context.

## CAREER GUIDANCE

A degree in human development offers training of special interest to those considering admission to graduate or professional schools and careers in medicine, law, education, counseling, clinical psychology, public health, public policy, public administration, or social work. Students who are interested in these areas are advised to see a Human Development Program advisor for assistance in selecting elective and major courses. A major in human development is designed to impart fundamental skills in critical thinking, comparative analysis, research analysis, and written expression.

A human development major can offer preparation for teaching in elementary schools. However, if you are interested in earning a California teaching credential from UC San Diego, contact the Education Studies Program (EDS) for information about prerequisite and professional preparation requirements. It is recommended you contact EDS as early as possible in your academic career.

## EDUCATION ABROAD

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in studying abroad should see a Human Development Program advisor to discuss curriculum plans and appropriate courses. It is strongly recommended that students obtain HDP pre-approval

for EAP courses that are intended to count toward the major. Information on EAP/OAP is detailed in the Education Abroad Program section of the *UC San Diego General Catalog*. Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at <http://programsabroad.ucsd.edu/>. Financial aid is applicable and special study abroad scholarships are available.

## PREREQUISITES FOR HUMAN DEVELOPMENT MAJORS

A bachelor of arts degree in human development will be given to students who satisfactorily complete the general-education and graduation requirements of Marshall, Muir, Revelle, Roosevelt, Sixth, or Warren College in addition to the Human Development Program requirements. In accordance with UCSD academic regulations, upper-division courses used to satisfy major requirements cannot be applied towards minors (please note there is some overlap permitted for double majors). See college advisor and major advisor for questions and restrictions.

## APPLYING FOR THE HDP MAJOR

Students who wish to declare the Human Development Program major must meet premajor requirements and apply for entrance into the major. All lower-division requirements must be fulfilled before applying for the major. All lower-division courses must be completed with a grade of C or better. The cumulative GPA for the eight lower-division courses must equal or exceed 2.75. Students must meet with an HDP advisor and obtain approval to declare the human development major, no later than the second quarter of the student's junior year.

## GRADE REQUIREMENTS FOR THE MAJOR

A minimum grade-point average of 2.0 is required in the major. Students must receive a grade of C- or better in any course counted toward fulfillment of the major requirements. **All courses taken to satisfy the program's lower- and upper-division requirements must be taken for a letter grade.** *HDP 1, HDP 150, HDP 181, and HDP 191 must be taken in residence.* No substitutions will be approved.

## LOWER-DIVISION REQUIREMENTS

- 1. Introduction to Human Development: HDP1**
- 2. One statistics course** selected from the approved list: PSYC 60, COGS 14, BIEB 100, ECON 120A, POLI 30, or MATH 11
- 3. One formal skills course** selected from the approved list: PHIL 10, PHIL 12, LIGN 17, or one course from the MATH 10 sequence or MATH 20 sequence
- 4 & 5. Two biological sciences courses** selected from the approved list: ANTH 2, BILD 1, BILD 2, BILD 3, BILD 7, BILD 10, BILD 12, BILD 18, BILD 20, BILD 26, COGS 11, COGS 17, PSYC 2
- 6 & 7. Two social sciences courses** selected from the approved list: ANTH 1, ANTH 3, CAT 1, CAT 2, COGN 20, COGS 1, One course from the HILD 7A, B, or C sequence (only one allowed), LIGN 4, LIGN 7, LIGN 8, LIGN 101, MMW 1, MMW 2, PSYC 1, PSYC 3, PSYC 6, PSYC 7, SOCI 1, SOCI 20

8. **One computer literacy course** selected from the approved list: MAE 5, COGS 3, COGS 8, COGS 18, CSE 3, CSE 5A, CSE 11

## UPPER-DIVISION REQUIREMENTS FOR THE HDP MAJOR

1. **Two Methods courses**
2. **Four Core Series courses**
3. **Six Development courses**
4. **HDP 150**  
(Full information follows)

### A. Methods Courses

1. **HDP 181** (Students are encouraged to take this course their junior year.)
2. **HDP 191** (Students are encouraged to take this course their junior year.)

### B. Core Series Courses

(Four courses selected from the approved list required, one from each DOMAIN)

Domain 1: The biological basis of human development

HDP 110. Brain and Behavioral Development  
ANBI 111. Advanced Principles of Human Evolution  
BIPN 144. Developmental Neurobiology

Domain 2: Ontogenetic—the social-cognitive and linguistic basis of human development (Two required—one from each area)

#### A. Social-Cognitive Development (One required)

HDP 121/COGS 110. The Developing Mind  
HDP 122. Social Development  
PSYC 187. Development of Social Cognition

#### B. Language Development (One required)

HDP 120. Language Development  
COGS 156. Language Development  
LIGN 171. Child Language Acquisition

Domain 3: The socio-cultural basis of human development

HDP 133. Socio-cultural Foundations of Human Development  
ANSC 126. Childhood and Adolescence  
HITO 126. History of Childhood

### C. Development Courses

(Six courses required; at least one from each area of focus)

#### Biological Development

ANBI 116. The Evolution of Primate Reproduction  
ANBI 140. The Evolution of the Human Brain  
ANBI 159. Biological and Cultural Perspectives on Intelligence  
ANBI 173. Cognition in Animals and Humans  
ANTH 102. Humans are Cultural Animals  
BICD 100. Genetics  
BICD 130. Embryos, Genes, and Development  
BICD 131. Embryology Laboratory  
BICD 134. Human Reproduction and Development  
BIPN 144. Developmental Neurobiology

COGS 115. Neurological Development and Cognitive Change  
COGS 184. Modeling the Evolution of Cognition  
PSYC 168. Psychological Disorders of Childhood  
Ontogenetic Development

COGS 113. Cognitive Development  
COGS 154. Communication Disorders in Children and Adults  
COGS 156. Language Development  
COHI 100. Introduction to Communication and the Individual  
COHI 114. Bilingual Communication  
COHI 119. Learning to Read  
COHI 121. Literacy, Social Organization, and the Individual  
EDS 119/LIGN 119. First and Second Language Learning: From Childhood through Adolescence  
LIGN 171. Child Language Acquisition  
LIGN 179. Second Language Acquisition  
PSYC 101. Introduction to Developmental Psychology  
PSYC 136. Cognitive Development  
PSYC 146. Language and Conceptual Development  
PSYC 156. Cognitive Development in Infancy  
PSYC 168. Psychological Disorders of Childhood  
PSYC 172. Psychology of Human Sexuality  
PSYC 180. Adolescence  
PSYC 187. Development of Social Cognition  
PSYC 190. Parenting  
Socio-Cultural Development

ANBI 159. Biological and Cultural Perspectives on Intelligence  
ANSC 125. Gender, Sexuality, and Society  
ANSC 126. Childhood and Adolescence  
ANSC 127. Discourse, Interaction, and Social Life  
COHI 123. Children and Media  
EDS 115. Cognitive Development and Education  
EDS 117. Language, Culture, and Education  
HDP 115/COMT 115. Media and Design of Social Learning Contexts  
HDP 135/COMT 116. Practicum in Child Development  
LTWL 114. Children's Literature  
LTWL 116. Adolescent Literature  
PSYC 180. Adolescence  
PSYC 190. Parenting  
SOC 117. Language, Culture, and Education  
SOC 116 / LIGN 174. Gender and Language in Society  
SOC 129. The Family  
SOC 131. Sociology of Youth  
SOC 159. Special Topics in Organizations and Institutions (Only when topic is approved for HDP major)  
SOC 161. Sociology of The Life Course  
USP 145. Aging—Social and Health Policy Issues

### D. HDP 150. Advanced Human Development

(HDP students should enroll in this course in their senior year.)

### ADVANCED HUMAN DEVELOPMENT REQUIREMENT HDP 150

Seminar for graduating HDP seniors. Readings and discussion of special topics in human

development. Provides advanced-level study on subfields of human development. Topics vary quarterly. **Prerequisites:** HDP1, HDP 181, HDP 191, senior standing, and department approval one quarter prior to enrollment.

### FIELD RESEARCH REQUIREMENT HDP 191

This course provides students with the opportunity to participate jointly in a research project in conjunction with a mentor/collaborator from a local service site. This applied research experience allows students to design and conduct research projects in a variety of settings ranging from laboratory research settings to service oriented placements. In addition to literature research and a final paper at the end of the quarter, students will participate at an off-campus site for a minimum of four hours per week. Research sites are prearranged one academic year in advance (see the student affairs office or the HDP Web site for enrollment information). Students' interests and future career plans are considered for site placement. Various research orientations and methodologies are reviewed in class. **Prerequisites:** HDP 1 and department approval one academic year prior to enrollment.

### HONORS IN HUMAN DEVELOPMENT HDP 194A-B-C

The Human Development Program offers an honors option for those students who have demonstrated excellence in the human development major. The honors program allows eligible undergraduates to explore advanced issues in the field through an honors thesis on a topic of their choice and under faculty supervision. In order to be admitted to the honors program, students must have 1) junior standing and 2) maintained a minimum cumulative grade-point average of 3.2, and a 3.5 GPA for courses taken in the human development major. Interested students need to apply for departmental honors in spring quarter of their junior year. Students in the honors program are expected to complete the following additional requirements:

1. An advanced course in statistics or methods design (see the HDP student affairs office for more information).
2. HDP 194A-B-C, a year-long independent research project, which results in an Honors Thesis.
3. Weekly attendance of the Center for Human Development Seminar and participation.

### PETITIONING COURSES

There are three circumstances under which petitions to receive credit for courses not explicitly approved for the major will be considered (all approved courses are detailed in the *UC San Diego General Catalog*, HDP section): Requests from transfer students, requests from students planning to study abroad, and exceptional courses identified by a student. In all cases, students are required to submit a petition **in writing** that clearly describes the course for which they wish to receive HDP major credit, and to attach to the petition as much information as possible about the content of the course (e.g., syllabus, course description, etc.). With the exception of courses petitioned by transfer students, ALL REQUESTS FOR APPROVAL OF COURSES NOT

EXPLICITLY LISTED IN THE UC San Diego General Catalog SHOULD BE SUBMITTED BEFORE THE COURSE IS TAKEN BY THE STUDENT.

**Transfer students.** Students transferring from a community college or other university must petition for HDP credit for courses taken at their previous institution. For students transferring from the California Community College System, articulation agreements for many courses have been developed that facilitate the petition process. Transfer students should make an appointment with an HDP advisor to review courses for which they will most likely receive credit and fill out a written petition for each course.

**Education Abroad.** Students planning to study abroad may receive credit toward the major for courses taken in another country. IT IS STRONGLY RECOMMENDED THAT STUDENTS RECEIVE PRELIMINARY APPROVAL (BEFORE LEAVING THE COUNTRY) FOR COURSES THEY ARE CONSIDERING TAKING DURING THEIR TIME ABROAD. While the preliminary approval does not guarantee that the actual course will be approved, the great majority of courses for which preliminary approval has been obtained are approved when the actual petition is submitted upon the student's return.

**Other courses.** Occasionally students identify a UCSD course that has the potential to fulfill an HDP requirement. Students may petition **in writing** to request credit for such courses. However, it is important to note that very few such petitions are successful, and students are strongly cautioned to petition and receive approval for such a course BEFORE ENROLLING IN THE COURSE.

**Note:** Courses are not officially approved for credit until the written petition has been approved by the HDP Executive Committee and signed by the HDP director.

## THE MINOR PROGRAM

(Courses must be discussed with and approved by a Human Development academic advisor.) A total of **seven** courses are required to complete a minor in human development. These include **Introduction to Human Development** (HDP 1), and **six** developmental courses, one from each major area of study from the developmental course list. All courses for the HDP minor must be taken for a letter grade.

## Finish-in-Four Plan

Students interested in a particular career field should see the student affairs office for more specific Finish-in-Four plans for their particular college.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## LOWER-DIVISION

### HDP 1. Introduction to Human Development (4)

This course introduces students to the central issues in the basic areas in human development. The course will explain relationships between biological, cognitive, social, and cultural aspects of development. Offered once per year. (F)

### HDP 87. Freshman Seminar (1)

This seminar is designed to provide new students with the opportunity to explore an intellectual topic in a small seminar setting. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

### HDP 98. Directed Group Study (1-2)

Directed group study, on a topic or in a field not included in the department curriculum, by arrangement with a faculty member. Topics will vary from quarter to quarter. Pass/Not Pass grades only. Enrollment requires prior consent of the instructor; students must have at least thirty units completed and a minimum 3.0 GPA. Student may enroll for no more than a total of two units in one quarter. Cannot be used towards HDP major credit. **Prerequisites:** 3.0 GPA and at least thirty units completed.

### HDP 99. Independent Study in Human Development (2-4)

Independent study and research under the direction of a human development program, or affiliated, faculty member. Pass/Not Pass only. Cannot be used towards HDP major credit. **Prerequisites:** lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved Special Studies form: UCSD Application for Enrollment Special Studies Courses 97, 98, 99.

## UPPER-DIVISION

### HDP 110. Brain and Behavioral Development (4)

The purpose of this course is to familiarize students with basic mechanisms of brain and behavioral development from embryology through aging. Multiple levels of analysis will be discussed, including the effects of hormones on behavior, developmental events at the level of cells, structures, and neural systems, and the neural basis of cognition, social, perceptual, and language development. **Prerequisite:** HDP 1 or PSYC 101.

### HDP 115. Media and Design of Social Learning Contexts (6)

(Same as COMT 115) A combined lecture/lab course cross-listed in communication and human development. Students attend lecture, write field notes, and spend three hours per week in specially designed after-school setting working with children and designing new educational media and producing special projects. **Prerequisite:** HDP 1 or COHI 100. (F,W,S)

### HDP 120. Language Development (4)

Examination of children's acquisition of language from babbling to the formation of sentences. Topics covered include: pre-linguistic gestures, relationships between babbling and sound systems, speech perception, linking words with objects, rule overgeneralization, bilingualism, nature vs. nurture, individual differences, cultural differences. **Prerequisite:** HDP 1.

### HDP 121. The Developing Mind (4)

(Same as COGS 110.) This course examines changes in thinking and perceiving the physical and social world from birth through childhood. Evidence of significant changes in encoding information, forming mental representations, and solving problems is culled from psychological research, cross-cultural studies, and cognitive science. **Prerequisite:** HDP 1 or COGS 1.

### HDP 122. Social Development (4)

This course covers topics in social development research. Content will address general principles such as the mutual influences of caregivers and children upon each other and the interplay of person and context. Discussion areas will include attachment, parenting styles, gender differences, aggression, social cognition, social components of achievement motivation, and development of conscience. **Prerequisite:** HDP 1.

### HDP 133. Socio-cultural Foundations of Human Development (4)

This course will provide students with an understanding of the social and cultural foundations of human development. The topics will be explored with both national and inter-

national comparisons from infancy through adolescence. **Prerequisite:** HDP 1 or PSYC 1.

### HDP 135. Practicum in Child Development (6)

(Same as COMT 116) A combined lecture and laboratory course for students in psychology, communication, and human development. Student backgrounds should include a background in general psychology or communication. Students will be expected to spend four hours a week in a supervised practical after-school setting at one of the community field sites involving children. Additional time will be devoted to readings and class prep, as well as six hours a week transcribing field notes and writing a paper on some aspect of the fieldwork experience as it relates to class lectures and readings. **Prerequisite:** HDP 1 or COHI 100 or PSYC 101. (F,W,S)

### HDP 150. Advanced Human Development (4)

Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Provides advanced-level study on subfields of human development. Topics vary quarterly. **Prerequisites:** HDP 1, HDP 181, HDP 191, senior standing, and department approval. (F,W,S)

### HDP 160. Special Topics Seminar in Human Development (4)

Special topics in human development are discussed. (May repeat when topics vary.) **Prerequisite:** department approval.

### HDP 181. Experimental Projects in Human Development Research (6)

This laboratory course in human development is designed around a variety of intensive experimental projects. With lectures providing background information on research methods and child development, each assignment will include data collection and/or analysis, and a written laboratory report. **Prerequisites:** HDP 1, Statistics, and must be a declared HDP major. (F,W,S)

### HDP 191. Field Research in Human Development (6)

This course combines lectures on research methodology (three hours/week) with an applied field research experience (four hours/week) conducted at a pre-approved study site. Required: Completion of a field notebook, review paper, oral presentation, and final paper. **Prerequisites:** HDP 1. Students must submit the pre-enrollment questionnaire one academic year prior to enrollment. See HDP Web site for details. (F,W,S)

### HDP 193. Advanced Research in Human Development (4)

Specialized research project under the direction of a human development affiliated faculty member. May be taken for one or two quarters of credit. **Prerequisites:** declared HDP major, overall GPA of 2.8, ninety units completed, three HDP core courses completed, and consent of instructor.

### HDP 194A-B-C. Honors Thesis (4-4-4)

Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis for their senior honors thesis. **Prerequisites:** overall GPA of 3.2, and a 3.5 GPA for courses taken in the human development major; an advanced course in statistics or experimental design, and consent of instructor.

### HDP 195. Instructional Apprenticeship in Human Development (4)

Introduction to teaching within the discipline of human development. Students will attend lecture, be responsible for assisting the instructor with course preparation, and will lead a discussion section of one of the lower-division courses in the human development program. Limited to upper-division students majoring in human development with consent of instructor. Pass/Not Pass only. **Prerequisites:** Declared HDP major, overall GPA of 3.0, 90 units completed, and consent of instructor.

### HDP 199. Independent Study in Human Development (4)

Independent study and research under the direction of a faculty member. Pass/Not Pass only. **Prerequisites:** consent of the instructor, completion of at least ninety undergraduate units with a minimum of 2.5 GPA, and a completed and approved Special Studies Form.

# Humanities

---

OFFICE: Galbraith Hall, Room 180, Revelle College  
<http://humanities.ucsd.edu>

The Humanities Program offers interdisciplinary courses in history, philosophy, and literature, with a focus on major aspects of the Western humanistic tradition. In these courses, students examine the development of a wide variety of ideas and forms of expression that exert a major influence on modern America. Through lectures and class discussions, and through the writing of essays, students learn to interpret literary, historical, and philosophical texts and to conduct independent critical assessments of documents and ideas.

The sequence of courses, Humanities 1 through 5, meets the humanities and writing requirement of Revelle College. Instruction in university-level writing is part of all five courses, but students in Humanities 1 and 2 (six units each) receive intensive writing instruction.

Students must have satisfied the UC Entry Level Writing requirement before registering for any part of the humanities sequence. Humanities 1 and 2 must be taken before Humanities 3-4-5.

For detailed description of the Revelle College humanities requirement, see "[Revelle College, General-Education Requirements, Humanities](#)."

## THE HUMANITIES MINOR

The humanities minor consists of at least seven courses chosen from the listings of the Departments of History, Philosophy, Literature, Visual Arts, Music, and Theatre. All seven courses may be selected from the upper-division offerings, but at least five upper-division courses must be included. Students for whom Humanities 1-5 fulfill general-education requirements may use two of these courses towards fulfillment of requirements for the humanities minor.

For students who entered UC San Diego before January 1, 1998, the required number of courses for the minor is six courses, at least three of which must be upper-division.

Courses selected for the minor must be selected from the offerings of more than one department. They must concern themselves with more than one historical, national, or ethnic culture; and they must offer broad treatment of centrally important topics in the humanities. Thus, a course on the history of the United States since the Civil War would be appropriate for the humanities minor, while a course in the history of California would not.

Here are some examples of study lists appropriate for the present humanities minor:

### Example 1

**History HILD 2AB. United States**

**History HILD 11. East Asia and the West 1279-1911**

**History HIEU 143. European Intellectual History, 1870-1945**

**Literature LTEA. 110B: Modern Chinese Fiction in Translation**

**Philosophy 160. Ethical Theory**

**Philosophy 177. Philosophy and Literature**

**Theatre and Dance TDHT 116. Old Myths in New Films**

### Example 2

**Theatre and Dance TDGE 11. Great Performance on Film**

**History HILA 102. Latin America in the Twentieth Century**

**History HIAF 111. Modern Africa since 1880**

**Literature LTAM 110. Latin American Literature in Translation**

**Literature LTEN 184. African American Poetry**

**Music 114. Music of the Twentieth Century**

**Visual Arts 126J. African and Afro-American Art**

### Example 3

**Humanities HUM 1. The Foundations of Western Civilization: Israel and Greece**

**Humanities HUM 2. Rome, Christianity and the Middle Ages**

**Literature LTEN 145. The English Novel in the Twentieth Century**

**Literature LTEN 146. Women and English/American Literature**

**Literature LTNE 101. The Bible: The Narrative Books**

**Philosophy 175. Aesthetics**

**Philosophy 177. Philosophy and Literature**

Students should review their plans for the minor with the humanities advisor as well as with the advisors in their college. Before undertaking the minor, students must submit a study list for approval to the humanities office.

## THE HUMANITIES MAJORS

Normally, students interested in majoring in humanities must choose a specific major in the humanities departments, i.e., history, literature, or philosophy. But students from Revelle and Muir Colleges may request to graduate with an approved individual/special project major in the humanities.

## COURSES

---

*For course descriptions not found in the UC San Diego General Catalog, 2010-11, please contact the department for more information.*

### LOWER-DIVISION

**1. The Foundations of Western Civilization: Israel and Greece (6)**

Texts from the Hebrew Bible and from Greek epic, history, drama, and philosophy in their cultural context. Revelle students must take course for letter grade. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. (W)

**2. Rome, Christianity, and the Middle Ages (6)**

The Roman Empire, the Christian transformation of the classical world in late antiquity, and the rise of a European culture during the Middle Ages. Representative texts from Latin authors, early Christian literature, the Germanic tradition, and the high Middle Ages. Revelle students must take course for letter grade. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. (S)

**3. Renaissance, Reformation, and Early Modern Europe (4)**

The revival of classical culture and values and the reaction against medieval ideas concerning the place of human beings in the world. The Protestant Reformation and its intellectual and political consequences. The philosophical background to the scientific revolution. Revelle students must take course for letter grade. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. (F)

**4. Enlightenment, Romanticism, Revolution (1660-1848) (4)**

The enlightenment's revisions of traditional thought; the rise of classical liberalism; the era of the first modern political revolutions; romantic ideas of nature and human life. Revelle students must take course for letter grade. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. (W)

**5. Modern Culture (1848-present) (4)**

Challenges to liberalism posed by such movements as socialism, imperialism, and nationalism; the growth of new forms of self-expression and new conceptions of individual psychology. Revelle students must take course for letter grade. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. (S)

**195. Methods of Teaching Humanities (4)**

An introduction to teaching humanities. Students are required to attend weekly discussions on methods of teaching humanities, and will teach discussion sections of one of the humanities courses. Attendance at lecture of the course in which the student is participating is required. (P/NP grades only.) **Prerequisite:** consent of instructor. (W, S)

**199. Special Studies (2-4)**

Individually guided readings or projects in area of humanities not normally covered in standard curriculum. **Prerequisite:** upper-division standing or consent of instructor.

**200. Seminar in the Humanities (4)**

Selected topics in the history, literature, and thought of Mediterranean antiquity and its successor-cultures. Emphasis on identifying both common themes and cultural distinctiveness. Discussion of pedagogical approaches to this material. Required of all graduate instructional assistants in the humanities sequence. **Prerequisite:** graduate standing. (F)

<http://roosevelt.ucsd.edu/int-migrat-studies/index.html>

## THE MINOR

The minor in International Migration Studies is administered by Eleanor Roosevelt College (ERC). It is designed to provide students with an in-depth understanding of the causes, politics, and social consequences of international migration from a broad comparative perspective. This program of study helps to prepare students for a career in research and teaching, immigrant service-providing organizations, government agencies, or law. The unique research and writing opportunities offered by this minor also make it an excellent preparation for graduate school.

This interdisciplinary minor covers a wide range of topics, including the economic, cultural, demographic, and political impacts of immigration; laws and government policies for controlling immigration and refugee flows; ethnic, gender, citizenship, and transnational dimensions of immigration; the integration of immigrant minorities in receiving societies; and immigrant history and literature. Students learn about other countries of immigration (especially in Western Europe and East Asia) in order to place the U.S. experience in comparative perspective.

## REQUIREMENTS

The minor consists of a total of seven courses (twenty-eight units). The requirements can be fulfilled by courses at the lower- and upper-division levels or a combination of course work and either field research in immigrant communities or internships with local immigrant service organizations.

For more information about minor requirements, visit <http://roosevelt.ucsd.edu/int-migrat-studies/index.html>.

1. All students in the minor are required to take one lower-division U.S. ethnic diversity course from the following list:

ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4)

DOC 2. Dimensions of Culture: Justice (6)

ETHN 1A. Introduction to Ethnic Studies: Population Histories of the United States (4)

ETHN 1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4)

HILD 7A. Race and Ethnicity in the United States (4)

HILD 7B. Race and Ethnicity in the United States (4)

HILD 7C. Race and Ethnicity in the United States (4)

POLI 40. Introduction to Law and Society (4)

USP 3. The City and Social Theory (4)

2. Students must also take one of the following upper-division overview courses on comparative immigration:

POLI 150A. The Politics of Immigration: The U.S. in Comparative Perspective (4)

SOC B 125. Sociology of Immigration (4)

3. Students complete the minor (twenty more required units) by pursuing one of two separate tracks.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### Track A: Additional Course Work

Students choosing this track will take five additional courses from the following list, four of which must be upper-division. Students in the course work track may not take more than a total of four courses from any one department for this minor.

**ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4)**  
(if not taken as a required course above)

**COHI 114. Bilingual Communication (4)**

**COHI 175. Advanced Topics: Communication and the Borderlands (4)**

**COCU 164. Representing Race, Nation, and Violence in Multicultural California (4)**

**COCU 168. Latino Space, Place, and Culture (4)**

**COCU 175. Advanced Topics in Communication, Culture: A Discussion of Migrant's Survival Strategies in the Southwest (4)**

**COCU 175 E00. Advanced Topics in Built Environment: Space, Place, and Culture: The Politics and Poetics of the Latino Barrio (4)**

**CO 175. Special Topics: Transnationalism and Globalization (4) (proposed course)**

**ECON 114. Economics of Immigration (4)**

**ETHN 1A. Introduction to Ethnic Studies: Population Histories of the United States (4)**  
(if not taken as a required course above)

**ETHN 1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4)**  
(if not taken as a required course above)

**ETHN 116. The United States-Mexico Border in Comparative Perspective (4)**

**ETHN 118. Contemporary Immigration Issues (4)**

**ETHN 121. Contemporary Asian-American History (4)**

**ETHN 122. Asian-American Culture and Identity (4)**

**ETHN 123. Asian-American Politics (4)**

**ETHN 144. Bilingual Communities in the U.S.A. (4)**

**ETHN 151. Ethnic Politics in America (4)**

**ETHN 189. Special Topics: Chicana/Latina Identities (4)**

**ETHN 189. Special Topics: Comparative Vietnamese and Filipino American Identities and Communities (4)**

**ETHN 189. Special Topics: Work and Family in Immigrant Communities (4)**

**HIEU 181. Immigration, Ethnicity, and Identity in Contemporary European Society (4)**

**HIEU 182. The Muslim Experience in Contemporary European Society (4)**

**HILA 162. Topics in Latin American History: The United States and El Salvador (4)**

**HILD 7A. Race and Ethnicity in the United States (4)**  
(if not taken as a required course above)

**HILD 7B. Race and Ethnicity in the United States (4)**  
(if not taken as a required course above)

**HILD 7C. Race and Ethnicity in the United States (4)**  
(if not taken as a required course above)

**HIUS 124. Asian-American History (4)**

**HIUS 140. Economic History of the United States I (4)**

**HIUS 141. Economic History of the United States II (4)**

**HIUS 167. Topics in Mexican-American History (4)**

**HIUS 180. Immigration and Ethnicity in Modern American Society (4)**

**LTAM 100. Latino/a Cultures in the United States (4)**

**LTAM 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)**

**LTAM 105. Gender and Sexuality in Latino/a Cultural Production (4)**

**LTAM 106. Modern Chicana and Mexican Women Writings (4)**

**LTAM 107. Comparative Latino/a and U.S. Ethnic Cultures (4)**

**LTAM 109. Cultural Production of the Latino/a Diasporas (4)**

**LTSP 150A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)**

**LTSP 150B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present (4)**

**LTSP 151. Topics in Chicano/a-Latino/a Cultures (4)**

**LTSP 177. Literary and Historical Migrations (4)**

**LLEN 178. Comparative Ethnic Literature (4)**

**LLEN 181. Asian-American Literature (4)**

**POLI 100H. Race and Ethnicity in American Politics (4)**

**POLI 150A. Politics of Immigration (4)**  
(if not taken as a required course above)

**SOC B 114. Culture and Ethnicity (4)**

**SOC B 125. Sociology of Immigration (4)**  
(if not taken as a required course above)

**SOC B 127. Immigration, Race, and Ethnicity (4)**

**SOC B 133. Immigration in Comparative Perspective (4)**

**SOC C 139. Social Inequality: Class, Race, and Gender (4)**

**SOC C 140F. Law and Workplace (4)**

**SOC C 163. Migration and the Law (4)**

**SOC D 151. Comparative Race and Ethnic Relations (4)**

**SOC D 169. Citizenship, Community, and Culture (4)**

**SOC D 175. Nationality and Citizenship (4)**

**SOC D 183. Minorities and Nations (4)**

**THHS 111. Hispanic-American Dramatic Literature (4)**

**USP 135. Asian and Latina Immigrant Workers in the Global Economy (4)**

### ***Track B: Field Research or Internship***

Students choosing this track will receive intensive training in field research methods appropriate for studying international migration and then conduct field research in immigrant communities or do an academic internship in a local immigrant/refugee service-providing organization.

#### ***(A) Field Research Methods, Practicum, and Data Analysis***

Students who choose this option will take the following three-course sequence:

**Sociology 122A. Field Research Methods for Migration Studies (Fall Quarter)**

**Sociology 122B. Field Research Practicum (Winter Quarter)**

**Sociology 122C. Data Analysis/Write-up (Spring Quarter)**

These courses provide students with field research methods training and allow them to go to Mexico for two weeks to conduct research in a rural community that sends migrant workers to the United States. They will also analyze and write up the data that is collected. Participants must be proficient in Spanish.

#### ***(B) Independent Field Research***

Students who choose this option are required to take one upper-division research-methods course from the following:

**ETHN 190. Studying Racial and Ethnic Communities**

**SOC 104. Field Research–Participant Observation**

**SOC 108A. Survey Research Design**

Students will complete the remaining sixteen units of the research track for this minor through a combination of courses from the list under Track A and by completing one or two 199, Independent Studies courses (four units each), in order to pursue a field research project with a faculty member. They will be required to conduct field research in a

local immigrant community and write a substantial research paper based on this research.

#### ***(C) Internship***

Students who choose this option are required to take one upper-division research-methods course from the following:

**ETHN 190. Studying Racial and Ethnic Communities**

**SOC 104. Field Research–Participant Observation**

**SOC 108A. Survey Research Design**

Students will then do an academic internship in a nongovernmental organization or government agency that serves immigrants or refugees in the San Diego/Tijuana area. Internships for up to eight units will be arranged by the UCSD Academic Internship Program (AIP). The remaining units needed to complete the minor will consist of courses from the list under Track A.

## THE MASTER OF PACIFIC INTERNATIONAL AFFAIRS (M.P.I.A.)

### REQUIREMENTS FOR ADMISSION

Students interested in pursuing the M.P.I.A. degree program at UCSD's Graduate School of International Relations and Pacific Studies (IR/PS) must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. A minimum grade-point average of 3.0 or better in undergraduate course work or prior graduate study is required for admission. Undergraduate preparation that includes one or more of the following areas is strongly encouraged: the social sciences (specifically economics and political science), quantitative methods (such as calculus and statistics), foreign language, and related area studies courses. The admissions committee looks for students with previous professional employment, a history of meaningful international experience, and demonstrated leadership ability.

Applicants are required to submit the following: an online UCSD application for graduate study (<http://graduateapp.ucsd.edu>); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a Graduate Record Examination (GRE) or Graduate Management Admission Test (GMAT) score report. Test of English as a Foreign Language (TOEFL) scores are also required of international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the TOEFL is required. For further details regarding the application process, procedures, and deadlines please visit the IR/PS Web site, <http://irps.ucsd.edu>, and click on "Programs."

Orientation tours are available for all prospective applicants who would like further information about the M.P.I.A. program. Tours assist prospective applicants in becoming better acquainted with IR/PS's M.P.I.A. program and in understanding how the program might relate to their long-term career goals. To sign up for a tour, please contact the IR/PS Office of Admissions at (858) 534-5914 or e-mail [irps-apply@ucsd.edu](mailto:irps-apply@ucsd.edu).

The M.P.I.A. is a two-year, full-time program.

### THE M.P.I.A. CURRICULUM

The M.P.I.A. curriculum (ninety-eight units) is made up of a set of core disciplinary and skill-oriented courses (thirty-eight units), a regional specialization (eight units), the foreign language requirement (up to twenty-four units), a professional career track (twenty-four units), and unstructured electives.

## Core Curriculum

The core curriculum is designed to integrate diverse subject areas such as international management, international relations, applied economics, and comparative public policy. It comprises the following courses:

Globalization, the World System and the Pacific (IRCO 412)  
Managerial Economics (IRCO 401)  
Policy Making Processes (IRCO 400)  
Quantitative Methods (IRCO 453 and IRCO 454)  
International Politics and Security (IRCO 410)  
International Economics (IRCO 403)  
Finance (IRCO 421)  
Accounting (IRCO 420)  
Capstone course—choices include Managerial Decision Making (IRCO 460), Business and Government in the Global Economy (IRCO 461), Public Policy Workshop (IRCO 462), Strategy and Negotiation (IRCO 463)  
The Corporation in the Global Economy (IRCO 464)

## The Regional Specialization

The regional specialization is made up of two designated courses on the economy and political system of a student's chosen country or region. All students must complete a regional specialization, and may choose from among the following five options: Latin America, Japan, Korea, China, and Southeast Asia.

## The Foreign Language Requirement

IR/PS considers foreign language competency to be an indispensable skill for international relations professionals. The foreign language requirement is designed to ensure that students achieve a level of competency to assist in their global interactions. The foreign language requirement may be satisfied in any one of three ways: (a) native speaker ability; (b) completing six quarters (four semesters) of college-level language instruction from UCSD or a comparable institution, with a grade of B or better in the final course; or (c) passing a special IR/PS-administered language exam, which is the equivalent of the final exam administered in the sixth-quarter course in the selected language. The foreign language requirement may be partially or wholly completed prior to matriculation at IR/PS. Please contact the IR/PS Student Affairs for additional information.

Students must fulfill the foreign language requirement in a language that corresponds to their elected region of specialization. Students may select either Brazilian Portuguese or Spanish when studying Latin America. Students specializing in China, Japan, or Korea, must study Mandarin Chinese, Japanese, or Korean, respectively. Students electing to specialize in Southeast Asia may study Bahasa Indonesia, Chinese, Thai, French, or other approved language. Please contact the IR/PS Student Affairs for further information.

Beyond the basic language requirement, IR/PS also offers the option of certification of more advanced language proficiency for students who choose to pursue further language study. Students pursuing advanced language skills are strongly

encouraged to undertake significant language study prior to coming to IR/PS.

Students on the Country and Regional Studies track are subject to a different foreign language requirement. These students must pass both the speaking and the reading proficiency examination in their selected language. The writing proficiency examination is optional. The minimum required level of proficiency is equivalent to a Foreign Service Institute (FSI) Scale 2+ for Spanish, 2 for Portuguese, and 2- for most other languages.

The proficiency examination is administered by appointment throughout the academic year. Students not following the Country and Regional Studies track may take the exam once free of charge in a language that IR/PS currently provides instructional support. Those students on the Country and Regional Studies track may take the exam twice free of charge, regardless of language selection. Please consult with the IR/PS Student Affairs for additional information.

A variety of language courses are offered by UCSD. IR/PS offers four-unit language courses for international relations professionals in Japanese, Mandarin Chinese, and Spanish at the intermediate or advanced levels. In addition, subject to demand, courses in Bahasa Indonesia or other Pacific Rim languages may be offered. Students electing to study a foreign language where IR/PS instructional support is not offered must secure their own language instruction and funding. Course credit for self-supported language learning may be given upon evaluation and approval of the IR/PS faculty. Please contact the IR/PS Student Affairs for additional information.

Students are placed in foreign language courses based on prior preparation and on the results of a placement test administered during orientation.

### **Career Tracks**

Beyond the core curriculum, the regional specialization, and the foreign language requirement, students are offered an array of career tracks from which to choose. The career tracks provide an opportunity to focus on a specialized professional career path and to work closely with other students and faculty who share similar interests. A career track consists of six courses (twenty-four units). Each track combines some designated requirements and a range of relevant electives from which to choose. All students must complete a career track. A student whose interests do not fall within the existing range of tracks may complete the Self-Design track, and create a tailor-made package of courses in consultation with their faculty advisor. Currently, IR/PS offers the following career tracks:

**International Management**

**International Politics**

**International Environmental Policy**

**Public Policy**

**International Economics**

**International Development and Non-Profit Management**

**Country and Regional Studies**

### **Electives**

Students may use remaining units to take electives across the range of IR/PS courses in management, political science, economics, regional studies, and language, as well as (with approval) courses offered elsewhere on campus. The number of elective units available to a student will vary, depending on factors such as prior language study. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

### **EDUCATION ABROAD PROGRAM**

Students are encouraged to participate in the Education Abroad Program (EAP) in their second year of study. Though this may necessitate a third year of study to meet M.P.I.A. requirements, the opportunity provides unparalleled experience in the selected regional study area and language. By petition, certain credits earned through EAP may be applied to the M.P.I.A. degree requirements.

### **CAREER SERVICES**

The IR/PS Career Services office provides students on-going guidance, expertise, and resources to successfully manage their careers. This personalized process begins before school starts with Career Management Orientation, and continues during the two-year program and throughout the students' careers as alumni.

The Career Services team offers IRPSCAREERS, an online system available twenty-four hours a day, seven days a week, which has a calendar of events, student profiles, online resumes, and a specialized database of employers with job/internship opportunities. Career consultants are available for daily scheduled appointments or quick consultations for resume writing, cover letters, effective job search strategies, interviewing skills (including videotaped mock interviews), labor market trends, job offer evaluation, and negotiation of total compensation packages. Alumni return to campus often for panels, information sessions, and employer interviews.

### **INTERNSHIPS**

Students are strongly encouraged to participate in a variety of internship programs aligned with their career goals in business and industry, federal and state government, and nonprofit and multilateral organizations. The Career Services office works closely with students and alumni to make connections with global employers in the nonprofit, public, and private sectors based on the students' interests.

To enhance students' professional skills, IR/PS strongly recommends each student participate in an internship during the summer between the first and second year. Students with unpaid summer internships may receive financial support from IR/PS donors. Internships offer opportunities to explore career options, apply theoretical knowledge to real work situations, and gain experience important to potential future employers.

## **MASTER OF ADVANCED STUDIES IN INTERNATIONAL AFFAIRS (M.A.S.-I.A.)**

### **REQUIREMENTS FOR ADMISSION**

Students interested in pursuing the M.A.S.-I.A. degree program at UCSD's Graduate School of International Relations and Pacific Studies must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California and have a minimum of five years of relevant work experience and/or graduate-level studies and relevant international experience including demonstrated proficiency in a regional language.

A minimum grade-point average of 3.0 or better in undergraduate course work or prior graduate study is required for admission. Undergraduate preparation that includes one or more of the following areas is strongly encouraged: the social sciences (specifically economics and political science), quantitative methods (such as calculus and statistics), foreign language, and related area studies courses.

Applicants are required to submit the following: an online UCSD application for graduate study (<http://graduateapp.ucsd.edu>); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement. Test of English as a Foreign Language (TOEFL) scores are also required of international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version, a minimum score of 80 for the Internet-based test, and a minimum score of 213 on the computer-based version of the TOEFL is required. For further details regarding the application process, procedures, and deadlines please visit the IR/PS Web site, <http://irps.ucsd.edu>, and click on "Programs."

Orientation tours are available for all prospective applicants who would like further information about the M.A.S.-I.A. program. Tours assist prospective applicants in becoming better acquainted with IR/PS's M.A.S.-I.A. program and in understanding how the program might relate to their long-term career goals. To sign up for a tour, please contact the IR/PS Office of Admissions at (858) 534-5914 or e-mail [irps-apply@ucsd.edu](mailto:irps-apply@ucsd.edu).

The M.A.S.-I.A. is a nine-month, full-time course of study.

### **THE M.A.S.-I.A. CURRICULUM**

The M.P.I.A. curriculum (forty-eight units) is made up of two core courses (eight units), a regional specialization (eight units), three M.A.S.-I.A. career track courses (twelve units), four elective courses from the IR/PS curriculum (sixteen units), and a four-unit capstone course.

#### **Core Curriculum**

The core curriculum is designed to provide a solid foundation in the study of international affairs and is devoted to the politics and economics of the region. It comprises the following courses:

**The Politics of International and National Policy Making (IRCO 481)**

## Comparative Economies of the Pacific Region (IRCO 482)

### The Regional Specialization

The regional specialization is made up of two designated courses on the economy and political system of a student's chosen country or region. All students must complete a regional specialization, and may choose from among the following five options: Latin America, Japan, Korea, China, and Southeast Asia.

### Foreign Language Proficiency

IR/PS considers foreign language competency to be an indispensable skill for international relations professionals. The M.A.S.-I.A. language proficiency requirement may be satisfied in any one of three ways: (a) native speaker ability; (b) completing six quarters (four semesters) of college-level language instruction from UCSD or a comparable institution, with a grade of B or better in the final course; or (c) passing a special IR/PS-administered language exam, which is the equivalent of the final exam administered in the sixth-quarter course in the selected language. The foreign language proficiency requirement may be completed prior to matriculation at IR/PS. Please contact IR/PS Student Affairs for additional information.

### Career Tracks

Beyond the core curriculum and the regional specialization, M.A.S.-I.A. students are offered three career tracks from which to choose. The career tracks provide an opportunity to focus on a specialized professional career path and to work closely with other students and faculty who share similar interests. A career track consists of three courses (twelve units). Currently, IR/PS offers the following career M.A.S.-I.A. tracks:

International Security  
International Political Economy  
International Public Policy

### Electives

Students may use remaining units to take electives across the range of IR/PS courses in management, political science, economics, regional studies, and language, as well as (with approval) courses offered elsewhere on campus. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

## THE PH.D. IN ECONOMICS AND INTERNATIONAL AFFAIRS

### REQUIREMENTS FOR ADMISSION

Applicants who seek admission to the highly competitive joint Ph.D. program must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program.

Applicants are required to submit the following: an online UCSD application for graduate

study (<http://graduateapp.ucsd.edu>); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. Test of English as a Foreign Language (TOEFL) scores are also required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the TOEFL is required.

The minimum criteria required for admission to the extremely selective joint Ph.D. program can be found on the following Web site: <http://irps.ucsd.edu/academics/phd-program.htm>. Admission is offered to a very small number of applicants.

### THE PH.D. CURRICULUM

#### Program of Study

The Ph.D. in economics and international affairs prepares students for research careers in economics, with an emphasis on international affairs and the Pacific region. The program combines the analytical skills of economics with political economy, institutional analysis, and region/empirical knowledge.

#### Program Advisory Committee

Each student is assigned a Program Advisory Committee of four economics and IR/PS faculty, at least one must be from economics, one from IR/PS and one outside member from another UCSD department. With this committee, the student works out a plan of study that the committee must approve. The student must make satisfactory progress in a coherent program of course work and reading courses, which meet the approval of the Program Advisory Committee.

#### Course Requirements

The Ph.D. curriculum in economics and international affairs is designed to provide students with basic training in the techniques of modern economics, as well as empirical and institutional knowledge of the Pacific region. The first year will consist of the three sequences of microeconomics, macroeconomics, and econometrics, taught in the Department of Economics. The second year will consist of continuation of the three series plus seven electives. Two of these electives will be an IR/PS sequence in political economy. In subsequent years, courses will consist of the regional sequence, an empirical project, and two third-year papers.

#### Regional Requirement

Students must take at least three courses, one of which may be a reading course on policy processes and issues in the Pacific region. These courses may consider the Pacific region as a whole, as a sub-region, or examine individual countries. The courses may be in both IR/PS and, with prior permission, related departments. Some students may choose to take more than the minimum three courses to deepen their knowledge of a particular country or

area. Comprehensive examination on regional areas is not required.

### Language Requirement

Students are expected to achieve a level appropriate to the student's dissertation topic of reading proficiency in at least one foreign language. Proficiency may be verified by examination or by certification by thesis supervisor.

### Comprehensive Examinations

Students must pass written comprehensive exams in microeconomics, macroeconomics, and econometrics, which will be administered and graded by the economics department.

### Dissertation

Candidates must present a dissertation prospectus no later than March of their third year in the doctoral program. They will be examined on their prospectus by their dissertation committee and must complete a dissertation, which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. degree.

### Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

### Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of five years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

## THE DOCTORATE OF PHILOSOPHY IN POLITICAL SCIENCE AND INTERNATIONAL AFFAIRS (PH.D.)

### REQUIREMENTS FOR ADMISSION

Applicants who seek admission to the highly competitive joint Ph.D. program must have earned a B.A., or its equivalent, from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program.

Applicants are required to submit the following: an online UCSD application for graduate study (<http://graduateapp.ucsd.edu>); two official transcripts from each college or university attended; three letters of recommendation; a résumé or curriculum vitae; a personal statement; a writing sample; a Graduate Record Examination (GRE) score report. A minimum score of 550 on the paper/pencil version and 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English.

The minimum criteria required for admission to the extremely selective joint Ph.D. program can be

found on the following Web site: <http://irps.ucsd.edu/programs/phd-program/apply.htm>. Admission is offered to zero to two applicants per year.

## THE PH.D. CURRICULUM

### Program of Study

The Ph.D. in political science and international affairs prepares students for research careers in political science, with an emphasis in either international policy analysis or comparative policy analysis. The program combines the analytical skills of political science with political economy, institutional analysis, policy analysis (especially economic policy) and regional training, with special attention to East Asia and/or Latin America.

### Course Requirements

The Ph.D. curriculum in political science and international affairs is designed to provide students with basic training in the techniques of modern political science, as well as applications to specific policy areas and countries or regions.

Seventeen courses are required prior to advancement to candidacy. There is a common core sequence, consisting of comparative public policy, two courses in comparative politics, two courses in international relations and research design. Each student must declare a primary field of either international policy analysis (I.P.A.) or comparative policy analysis (C.P.A.), consisting of three specialized courses. There is also a regional focus of five courses. Three additional courses must be taken from a set of electives.

### Regional Requirement

The regional focus consists of international relations of Asia Pacific or international relations of the Americas (depending on which region is the student's primary region), three additional courses in the student's primary region, and one course in another region offered by either IR/PS or the Department of Political Science are required. By petition, students may count a region other than one of the IR/PS offerings (currently China, East Asia, Japan, Latin America, or South-east Asia) as their primary region.

### Language Requirement

All students in the program are required to meet a high standard of proficiency in a foreign language before being advanced to candidacy. The language must be linked to the student's region.

### Seminar Papers

Each student must submit two seminar papers, one in each field. The penultimate draft of each seminar paper must be completed prior to taking the appropriate field exam, and the final draft must be completed by the end of the quarter in which the exam is taken. Both papers must demonstrate knowledge of the student's regional focus, as well as knowledge of relevant theory in the field. At least one of the papers must also demonstrate knowledge of a substantive policy area, related to the student's primary focus field.

## Comprehensive Examinations

Each student must pass two comprehensive examinations, one in international relations and one in comparative politics. Each exam will be graded by a joint committee consisting of three permanent faculty members, with at least one from political science and at least one from IR/PS.

The primary field exam contains a focus field, which may be either a substantive field of policy analysis (e.g. trade, environment, international finance) or the student's chosen primary region. Regardless of focus field, that part of the exam will test the student's knowledge of theoretical literature and ability to apply it to a policy issue of relevance to the region.

## Dissertation

Candidates must present a dissertation prospectus to be examined by their dissertation committee, and must complete a dissertation which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. Degree. The dissertation committee shall consist of four faculty members chosen from the Department of Political Science and IR/PS, with at least one from each unit. A fifth member must be from outside these two departments.

## Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

## Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of the fourth year. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

## BACHELOR OF ARTS IN INTERNATIONAL STUDIES AND MASTER OF INTERNATIONAL AFFAIRS B.A./M.I.A.

### REQUIREMENTS FOR ADMISSION

Students interested in pursuing the B.A./M.I.A. degree program at UCSD's School of International Relations and Pacific Studies (IR/PS) must be currently enrolled in UCSD's International Studies (IS) undergraduate major. Students who meet the admissions requirements listed below may apply for admission to the combined degree track of the International Studies major in the fourth quarter prior to receipt of the B.A. degree.

1. Completion of fall and winter quarters of junior year with a minimum overall GPA of 3.00 and a minimum 3.4 GPA in International Studies upper-division course work.
2. Satisfactory completion of the foreign language requirement for the undergraduate International Studies major. The foreign language must be one of the Pacific Rim languages required by IR/PS.
3. Satisfactory completion of the International Studies core courses, INTL 101 and 102.

4. Two letters of recommendation from individuals who can attest to the applicant's academic promise and depth of interest in professional training in international affairs.
5. Students will also be required to complete a noncredit, professional internship in the field of international affairs during the summer prior to matriculation in the M.I.A. degree program.

Applicants will be admitted to the combined degree program on the basis of demonstrated academic excellence in upper-division course work in the International Studies major, Pacific Rim language proficiency, strong support from UCSD faculty in letters of recommendation, international experience, leadership, and community involvement.

## THE B.A./M.I.A. CURRICULUM

International Studies (IS) students are required to declare a primary track (eight upper-division courses) and a secondary track (five upper-division courses). In addition, IS majors must successfully complete two upper-division gateway courses (INTL 101 and 102) and a senior research seminar (INTL 190). In addition to these required courses, IS majors admitted to the combined degree program must also complete two quantitative methodology courses (IRCO 453 and 454).

IS majors admitted to the combined degree program will complete all of these requirements for the International Studies degree in either Economics or Political Science in years one through four of their study at UCSD.

## B.A. in International Studies–Economics

### Economics Primary Track (eight courses)

The following courses are required:

**IRCO 401: Managerial Economics**  
**IRCO 403: International Economics**  
**IRCO 420: Accounting**  
**IRCO 421: Finance**

In addition, students are required to take four additional Economics courses chosen from the IS-Economics course list or from IR/PS Economics courses, for a total of eight courses.

### Political Science Secondary Track (five courses)

The following courses are required:

**IRCO 400: Policymaking Processes**  
**IRCO 410: International Politics and Security**  
**IRCO 412: Globalization, the World System, and the Pacific**

Two additional courses from the approved IS-Political Science course list or IR/PS electives in regional politics, comparative public policy, or international politics. Of the thirteen track courses, three must focus on one country or region.

## B.A. in International Studies–Political Science

### Political Science Primary Track (eight courses)

The following courses are required:

**IRCO 412: Globalization, the World System, and the Pacific**  
**IRCO 400: Policymaking Processes**  
**IRCO 410: International Politics and Security**

Five additional courses selected from the approved IS-Political Science course list or from IR/PS electives in regional politics, comparative public policy, or international politics.

#### Economics Secondary Track (five courses)

The following courses are required:

**IRCO 401: Managerial Economics**  
**IRCO 403: International Economics**  
**IRCO 420: Accounting**  
**IRCO 421: Finance**

In addition, students are required to take one additional Economics course chosen from the IS-Economics course list or from IR/PS Economics courses, for a total of five courses. Of the thirteen track courses, three must focus on one country or region.

#### Additional Requirements

In the fifth year of the combined degree program, students will complete the requirements for the one-year M.I.A. degree. The M.I.A. requires a minimum of forty-eight units of 400-level course work complete at IR/PS, including a regional specialization (two four-unit courses), a professional career track (six four-unit courses), a capstone requirement (one four-unit course), elective course work (three four-unit courses), and an internship requirement (noncredit).

The combined degree program includes the following additional requirements:

1. Language requirement: All International Studies majors must complete a language requirement equivalent to four quarters of undergraduate training in a Pacific Rim language (as defined by IR/PS prior to admission to the combined degree program. In order to receive the M.I.A. degree at the end of the fifth year, students must complete at least two additional quarters in the same Pacific Rim language, for a total of six quarters. As an alternative to the six-quarter language requirement, students may demonstrate proficiency at the level currently required by IR/PS.
2. All students in the combined degree program will declare a special primary and secondary track in their International Studies major. These combined degree tracks will be Economics (primary track)/ Political Science (secondary track) or Political Science (primary track)/Economics (secondary track). Students will complete the existing lower-division requirements for the Economics primary or secondary track (Mathematics 10A-8-C or Mathematics 20A-8-C, Economics 1-2-3).

## PROGRAMS AND RESEARCH CENTERS

### GLOBAL LEADERSHIP INSTITUTE PROGRAM

The Global Leadership Institute (GLI) is a graduate-level, executive education program. Since 1989, GLI has served as an executive training program for mid-career professionals seeking to expand their knowledge and experience in various aspects of international affairs including politics, public policy, management, and economics. Participants also have the opportunity to learn English or other languages of countries located in the Pacific region.

Professional tours are offered throughout the quarter, thereby allowing GLI Fellows the opportunity to see industry-related operations firsthand in a cross-section of public and private sector organizations. The duration of each participant's program may range from one quarter (eleven weeks) up to two years. For international applicants, in addition to participating under the Exchange Visitor (J) Visa program as a short-term Fellow enrolled in courses, GLI also hosts research scholars exclusively interested in gaining access to UCSD's extensive resources. Both working professionals and graduate students in study abroad programs may opt for either Exchange Visitor (J) Visa category. GLI also offers customized courses in a variety of disciplines for organizations sending a group of professionals in a specialized field; these courses can be integrated with regularly scheduled course work during the academic quarter. Custom group programs ranging in duration from one to thirty days are also available. A certificate of study is presented upon successful completion of a GLI program.

For more information, please contact the Global Leadership Institute via e-mail at [irps-gli@ucsd.edu](mailto:irps-gli@ucsd.edu) or call (858) 822-3875 or (858) 534-4019.

### THE KOREA-PACIFIC PROGRAM

The Korea-Pacific Program was formed in September 1989 in recognition of the growing importance of Korea in the world, of Korean-U.S. relationships, and of the Korean model of social and economic development.

Directed by IR/PS Professor Stephan Haggard, the program promotes the understanding of Korea in an international context and encourages the study of Korea by offering courses on the country's economics and politics. Research is supported on contemporary Korean political economy. Outreach to the community is offered through seminars, lectures, courses, and cultural events.

In comparison with other Korean studies programs in the United States, the IR/PS Korea-Pacific Program is distinctive in several respects: it concentrates on contemporary Korea, focuses on policy questions, stresses the foundations of Korean economic growth, explores Korea's international relations, and seeks to understand Korea in a broad regional context.

### THE ASEAN-PACIFIC PROJECT

The ASEAN-Pacific Project is one of several major regional and theme-based nodes of activity within the Graduate School of International Relations and Pacific Studies. Its mandate is to support students and to serve as a catalyst for the development of Southeast Asia-related teaching and research activities within the school.

The ASEAN-Pacific Project extends the success of the school's original Vietnam-Pacific Project, with scope being broadened to embrace the other countries of Southeast Asia.

The project is built upon private donations to the school, with this resource being supplemented by resources obtained from external grant agencies and the university. The project supports the activities of students at IR/PS with an interest in Southeast Asia through fellowships (for summer travel and internships) and visiting guests speakers.

The project also serves as a catalyst and facilitator for research projects within the school relating to Southeast Asia. It seeks to promote disciplinary-driven work on political and economic topics pertaining to Southeast Asia, as distinct from more traditional area studies scholarship. Examples of this include recent work on national political institutions and policy-making, the dynamics of regional cooperation, food and agricultural policies, and the relocation of the global magnetic disk-drive industry to Southeast Asia. Other recent research-related initiatives include a major international workshop for Ph.D. students in political science working on Southeast Asia, and a workshop for the U.S. Agency for International Development on political conflict in Indonesia.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010-11, please contact the department for more information.*

### IRPS 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15-20 students, with preference given to entering freshmen.

### IRGN 199. Independent Research/Study (2-4)

Independent research/study under the guidance of a faculty member of IR/PS. **Prerequisite:** consent of undergraduate advising office and instructor.

## M.P.I.A. CORE CURRICULUM

### IRCO 400. Policy-Making Processes (4)

This course is designed to teach students how to "read" a country's political and economic system. The course will examine how the evolution of different institutional frameworks in the countries of the Pacific region influences the way in which political choices are made. **Prerequisite:** IR/PS students only.

### IRCO 401. Managerial Economics (4)

Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occur, and basic topics concerning the aggregate economy.

### IRCO 403. International Economics (4)

The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

### IRCO 410. International Politics and Security (4)

Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

### IRCO 412. Globalization,

This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

### IRCO 420. Accounting (4)

An introduction to financial accounting designed to prepare students to understand their own organizations' international operations and interpret information from outside organizations. The emphasis will be on understanding the

potential uses and limitations of accounting information for various management purposes, and the procedural aspects of accounting will be introduced only to the extent necessary to explicate the basic concepts.

#### **IRCO 421. Finance (4)**

This course surveys the financial problems facing managers and analyzes financial institutions, financial instruments, and capital markets. Tools acquired will prepare students to analyze international financial topics such as exchange rate behavior, the management of international risk, and international financing. **Prerequisites:** IRCO 420, 453, and 454.

#### **IRCO 453. Quantitative Methods I (2)**

This course is designed to provide proficiency in quantitative methods that are used for optimization and decision making. The use of spreadsheets is applied to data analysis and problem solving. Statistical theory and regression analysis are introduced.

#### **IRCO 454. Quantitative Methods II (4)**

This course covers elements from statistics that are central to business decision-making under uncertainty. In particular, regression analysis and estimation will be applied to problems of forecasting and optimization.

#### **IRCO 460. Managerial Decision Making (4)**

This course develops practical decision-making skills useful in a management setting. It stresses identifying relevant information and presenting it effectively. Skills include strategic analysis, negotiation, and application of quantitative methods. **Prerequisites:** IRCO 400, 401, 410, 412, 420, 421, 453 and 454, or consent of instructor.

#### **IRCO 461. Business and Government in the Global Economy (4)**

Business and government interaction in the world economy are examined from both public policy and private sector management perspectives. Topics include competitive advantage, the challenging boundaries of private and public, and the influence of private interests on public sector regulation. **Prerequisites:** IRCO 400, 401, 410, 412, 420, 421, 453, and 454, or consent of instructor.

#### **IRCO 462. Public Policy Workshop (4)**

Presents tools for analysis of public policies. Students collaborate on term-long projects analyzing public policy formation, implementation, and outcomes. **Prerequisites:** IRCO 400, 401, 410, 412, 420, 421, 453, and 454, or consent of instructor.

#### **IRCO 463. Strategy and Negotiation (4)**

This class introduces the fundamentals of corporate strategy, based on case studies requiring corporate analysis; and the principles of negotiation, based on exercises and class learning. Both sections of this class are highly applied, and require intensive out-of-class preparation and teamwork that help students acquire skills in analytical thinking, strategic action planning, and hands-on negotiations. **Prerequisites:** IRCO 400, 401, 403, 410, 412, 420, 421, 453, and 454.

#### **IRCO 464. The Corporation in the Global Economy: The Interaction of Business and Government (4)**

What can countries, firms, and individuals do to position themselves effectively in the world economy? This course uses case studies to explore the global division of labor in the production value chain, government policy and the micro-organization of the firm. **Prerequisites:** IRCO 400, 401, 410, 412, 420, 421, 453, and 454, or consent of instructor.

## **GENERAL COURSES**

Not all general courses are offered each year.

#### **IRGN 400. International Relations of Asia-Pacific (4)**

International relations and developing international political economies of nations bordering the Pacific. Topics include: the "Pacific Basin" concept; the U.S. and "hegemonic-stability" theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan's foreign policy.

#### **IRGN 401. Ethnic Conflict (4)**

Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduce students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts. **Prerequisite:** admission to program or consent of instructor.

#### **IRGN 402. International Political Economy: Money and Finance (4)**

Examination of effects of national policies and international collaboration on public and private international financial institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort. **Prerequisite:** IRCO 411 or consent of instructor. Conjoined with Political Science 144D and 262.

#### **IRGN 404. Chinese Politics (4)**

This course will analyze post-1949 Chinese politics, including political institutions, the policy making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

#### **IRGN 405. U.S.–China Relations (4)**

Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

#### **IRGN 406. Financial Institutions (4)**

This course analyzes the roles of money and financial institutions in the economy. The first part of the course focuses on microeconomics and the financial system. The topics include money, financial markets, financial intermediaries, banking regulations, and bank runs. The second part of the course focuses on the microeconomics aspects of financial institutions. The topics include financial development, financial liberalization, and their effects on the economy, especially economic growth and development. **Prerequisite:** IRCO 403 and IRCO 421 or consent of instructor.

#### **IRGN 407. Policy Implementation Process (4)**

Course builds on Policy-Making Processes class by focusing on nonelected officials' role in setting and implementing policy. Ideally, elected officials make policies that unbiased, technically proficient bureaucrats carry out. Course provides insight into why the real world departs from this. **Prerequisite:** IRCO 400.

#### **IRGN 408. Internal Conflict after the Cold War (4)**

Will examine the causes of civil wars and the problems with resolution and state reconstruction. Theoretical approaches discussed will then be applied to three recent case studies: Cambodia, Rwanda, and Bosnia. Policy implications for the international community will be discussed. **Prerequisite:** IRCO 410.

#### **IRGN 409. Economic Policy in Latin America (4)**

This course seeks to enhance the students' understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decisionmaking. **Prerequisites:** IRCO 401, IRCO 403.

#### **IRGN 410. Corporate Governance (4)**

Why do corporate governance systems—the way firms are run, the relationships among managers, stockholders, and workers—differ widely around the world? This course examines the various explanations for these striking differences and the consequences. **Prerequisite:** graduate level or consent of instructor.

#### **IRGN 411. Business and Management in Japan (4)**

This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

#### **IRGN 412. International Competitiveness and the Globalized Value Chain (4)**

This course explores the strategies countries pursue in the highly competitive world economy. It examines the global value chain and public policy toward education, labor, corporate social responsibility, free markets and global trade, finance and shareholding, and the political process.

#### **IRGN 413. Corporate Strategy and the Environment (4)**

This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics include product differentiation, strategic use of regulations, the "Porter hypothesis," and environmental management systems. Readings include case studies and research articles. **Prerequisites:** IRCO 401, 421, 453, and 454.

#### **IRGN 416. Post-War Politics in Japan (4)**

Overview of post-war politics in Japan, including American Occupation reforms, political institutions, major political factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan's changing democracy.

#### **IRGN 417. Microfinance (4)**

This course will begin by examining financial markets in poor countries. Investigates how microfinance contracts overcome problems which had previously barred the extension of business credit in many environments. **Prerequisite:** admission to program or consent of instructor.

#### **IRGN 419. Risk Management (4)**

This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main emphasis is on their valuation, use in hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. **Prerequisite:** IRCO 421.

#### **IRGN 420. Strategic Marketing Planning (4)**

This course develops the microeconomic foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

#### **IRGN 422. Investments (4)**

An analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification. **Prerequisites:** IRCO 421, 453, and 454.

#### **IRGN 424. Corporate Finance (4)**

The topics covered are dividend policy and capital structure, options, debt financing, and short and long-term in financial planning. Course format will be mostly lectures, with occasional cases. Some international aspects of corporate finance will also be discussed. **Prerequisites:** IRCO 401, 403, 420, 421, 453, and 454.

#### **IRGN 429. The Globalization of Production (4)**

This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

#### **IRGN 431. Fiscal and Monetary Policy (4)**

Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/ unemployment trade-off, budget deficit, and economic growth.

**IRGN 432. Immigration and Immigration Policy (4)**

This course examines the role of immigration in the globalization of Pacific Rim economies. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in sending and receiving countries; and the nature, scope, and political economy of immigration policy. **Prerequisite:** IRCO 401 or consent of instructor.

**IRGN 434. Strategic Analysis (4)**

This course analyzes competitive interactions, surveying the modern economic analysis of relationships between and within organizations. The foundations of the course are game theory and the economics of information. Topics include bargaining and contracting, principal agent models, and bidding models. **Prerequisite:** graduate standing or consent of instructor.

**IRGN 435. Topics in International Trade (4)**

This course develops new analytical models of international trade and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

**IRGN 436. Information and Management (4)**

This is a seminar course on the use of information by organizations in strategic and tactical decision-making. Actual content varies, and currently includes doing business on the Internet and supply chain management. **Prerequisite:** IRGN 438 or consent of instructor.

**IRGN 437. Policy Design (4)**

Course teaches how to make strong, reasoned cases for new policy initiatives. Covers cost-benefit analysis, cost-effectiveness evaluation, multigoal analysis, and how these are used in policymaking. Covers tools to predict policy impact, like drawing on "best practice" and related experiences.

**IRGN 438. Management: Analysis and Control (4)**

This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm's operations function. It analyzes production processes, quality control, inventory and materials planning, kanban and just-in-time principles. **Prerequisites:** IRCO 453 and 454, or consent of instructor.

**IRGN 439. Policy Evaluation (4)**

Research-design class focusing on strategies for evaluating policies' effectiveness with data in small quantities. Skills taught: understanding limits of what data say, and using information optimally. The emphasis is on qualitative analysis. The concepts taught are similar to those presented in QM3. **Prerequisites:** IRCO 453 and IRCO 454.

**IRGN 440. Managerial Accounting and Control (4)**

Focus on planning, managing, controlling and evaluating costs for competitive advantage in global markets. Key topics will include cost structure, cost-based managerial decision making, strategic cost management, JIT/TQC cost management, and accounting control systems. **Prerequisite:** IRCO 420 or consent of instructor.

**IRGN 443. Economics of Telecommunications (4)**

This course will focus on the underlying economics of the telecommunications and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunication marketplace and the nature of competition between service providers in the industry. **Prerequisite:** IRCO 401 or consent of instructor.

**IRGN 444. Product Development (4)**

This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including marketing, finance, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

**IRGN 446. Applied Data Analysis and Statistical Decision Making (4)**

The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the problems and the course work will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. **Prerequisites:** IRCO 453 and 454, or consent of instructor.

**IRGN 447. Organizations (4)**

A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are structured. **Prerequisites:** IRCO 401 and 403 or consent of instructor.

**IRGN 448. Civil Society and Development (4)**

To explore the roles that civil society/NGOs/the third sector can play in advancing political, social, and economic progress in developing countries. To consider the strengths and weaknesses, capacities, and limitations of NGOs in developing countries. To provide students with experience in evaluating NGOs and in making professional recommendations to enhance their ability to make a difference. To prepare students to take leadership roles—whether in government, the private sector, or NGOs—in promoting civil-society participation in development.

**IRGN 449. Making U.S. Foreign Policy (4)**

Analysis of the interests, structure and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies and "daily briefings" to prepare students to perform professionally in the foreign policy arena. **Prerequisite:** IRCO 410 or consent of instructor.

**IRGN 451. Economic Development (4)**

This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences, of different countries. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

**IRGN 452. Quantitative Methods for Advanced Analysts (4)**

This course caters to the needs of those who routinely face a variety of advanced data-analysis challenges, such as international marketing and sales managers, consulting analysts, or international business development and intelligence specialists. Knowledge of introductory optimization and statistics, including linear regression, is assumed. The course is entirely practical in that it is organized around in-depth case studies, requiring students to work extensively with data. Methods covered include cluster, factor, and discriminate analysis, and modeling and simulation.

**IRGN 453. Sustainable Development (4)**

The course will cover the concept of sustainable development, ways in which sustainable development can be measured, evaluation of environmental damages and benefits, and the role of discounting, and will analyze cases demonstrating failure of the market.

**IRGN 454. Current Issues in U.S.-Latin American Relations (4)**

Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counter-narcotics, anti-corruption, international finance, trade, and U.S.-Mexican and U.S.-Brazilian relations. In each case, students analyze the strengths and weaknesses of current U.S. policy and advocate alternative options. **Prerequisite:** IRCO 410 or consent of instructor.

**IRGN 455. Economic Theories of Regional Integration (4)**

The first part of the course covers the basic economics of trading blocs and proceeds to more complicated topics in the theory of preferential trading arrangements, customs unions, and currency unions. In the second part we use the formal theory to compare economic integration in different parts of the world. **Prerequisites:** IRCO 401 and 403 or consent of instructor.

**IRGN 456. Program Design and Evaluation (4)**

Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program and evaluating its success or failure. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

**IRGN 457. Cost Benefit Analysis (4)**

Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

**IRGN 458. International Environmental Policy and Politics (4)**

This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

**IRGN 459. Conflict Resolution of Environmental Issues (4)**

Use of bilateral negotiations (U.S.-Canada), regional organizations (ECE and acid rain in Europe), and United Nations' specialized agencies (UNEP and WMO on ozone depletion and climate change) to mediate environmental disputes. Consideration of nontraditional approaches resolving international environmental problems. **Prerequisite:** graduate standing.

**IRGN 460. The Politics of U.S.-Japan Economic Relations (4)**

This course will analyze how the domestic politics of each country, their international negotiations, and their interaction concerning economic issues have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

**IRGN 461. Doing Business in China (4)**

This course describes the Chinese commercial, organizational, and cultural environment. Case studies of foreign businesses in China are examined, and the opportunities and pitfalls of operation in China are considered. Negotiation with Chinese counterparts is covered through a negotiation exercise. The focus is on mainland China, but some attention is given to business in Hong Kong and Taiwan as well. Students are required to prepare business plans for proposed Chinese ventures.

**IRGN 462. Economies in Southeast Asia (4)**

This course focuses on the long-run and current economic issues of Southeast Asia. The topics are economic growth, human capital, inequality and poverty, social institutions, the business sector, the financial sector, government, the external sector, and regional and interregional economic relations. For each topic, we will discuss the issues from selected countries in the region in more detail. **Prerequisites:** IRCO 401 and IRCO 403 or consent of instructor.

**IRGN 463. Politics of Southeast Asia (4)**

This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level of political and economic issues in these countries. In addition, a number of region-wide issues will also be examined such as: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for future economic development. **Prerequisite:** Graduate standing or consent of instructor.

**IRGN 464. Strategies and Skills for Effective Consulting (4)**

This course will provide an introduction to the field of consulting. It will focus both on effective consulting strategies and on skills and tools that are helpful in the process. Technical, cultural, economic, and political issues will be considered, as the various aspects of consultant work are examined

**IRGN 465. Management of Non-profit Organizations (4)**

Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

**IRGN 466. Public Finance (4)**

Describes principles of taxation and expenditure analysis; public budgeting; and assessment of budget priorities.

**IRGN 467. Policymaking and Political Economy in Japan (4)**

Examines the policymaking process in Japan, the interaction and role of state and non-state actors in shaping Japan's economy. Analysis and comparison, through case studies of industrial policies (toward high-tech and declining industries), and non-industrial policies and their consequences.

**IRGN 470. International Business Strategy (4)**

This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

**IRGN 471. Japanese Economy (4)**

A broad survey of the Japanese economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, industrial organization, and labor markets. **Prerequisites:** IRCO 401 and 403, or consent of instructor.

**IRGN 472. Japanese Corporate Culture (4)**

This course examines Japanese culture values and social relations in the context of business organizations. The central focus will be on the integration of individuals into their organizations and on the human relations characteristic of their work environments.

**IRGN 475. International Negotiation (4)**

This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and-take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Antibalistic Missile Treaty.

**IRGN 478. Japanese Foreign Policy (4)**

Examines the domestic and strategic sources of Japan's foreign policy in the postwar era. Unlike IRGN 460, this course emphasizes Japan's foreign economic policy in regional and global multilateral organizations, and the major security issues it confronts with its Asian neighbors.

**IRGN 479. Politics and Institutions in Latin America (4)**

Overview of Latin American politics and the "rules of the game," both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico. **Prerequisite:** IRCO 400 or consent of instructor.

**IRGN 481. Managing Country Risk in the Modern Multinational Corporation (4)**

Examines ways to analyze, assess, and reduce country risk.

**IRGN 483. Business and Policy in Southeast Asia (4)**

Surveys various dimensions of business in Southeast Asia, with particular attention to the policy context. Special focus on technological capabilities of business organizations in Southeast Asia.

**IRGN 484. Korean Politics (4)**

This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects. **Prerequisite:** consent of instructor.

**IRGN 485. The Korean Economy (4)**

Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export promotion, heavy and chemical industries

promotion); Korea's industrial structure including the role of large enterprises (chaebol); role of government; links between Korea and other countries.

**IRGN 486. Economic and Social Development of China (4)**

This course examines China's development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy; geography and resource constraints, impact of the West and Japan; development since 1949 and contemporary problems and options.

**IRGN 487. Applied Environmental Economics (4)**

This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. **Prerequisites:** IRCO 401, 453, 454, or consent of instructor.

**IRGN 490. Special Topics in Pacific International Affairs (4)**

A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

**IRGN 492. Special Topics in Pacific Studies (2)**

A seminar course at an advanced level on a special topic in Pacific Studies.

**IRGN 497. Internship (2)**

Independent research that draws on an internship with an organization relevant to career track and/or regional specialization. Nature of the required product to be determined by professor supervising the course. May be repeated for credit.

**IRGN 498. Directed Group Study (2)**

Directed reading in a selected area. The content of each course is to be decided by the professor directing the course with the approval of the student's faculty advisor. May be repeated for credit.

**IRGN 499. Independent Research (2-12)**

Independent research under the guidance of a faculty member of IR/PS. May be repeated for credit.

**LANGUAGE COURSES****IRLA 400A-B-C. Chinese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 401A-B-C. Chinese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 402A-B-C. Chinese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 403A-C. Chinese Language for Professional Proficiency (4-4)**

This course is designed to enable students at an advanced level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 410A-B-C. Japanese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only or by consent of instructor.

**IRLA 411A-B-C. Japanese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 412A-B-C. Japanese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 413A-B-C. Japanese Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an advanced level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 417. Introduction to Kanji (2)**

Introduction to the characteristics and usage of Chinese characters (Kanji) used in Japanese language: history, structure, cognitive aspects, their relationship with hiragana and katakana, policy issues, learning strategies, and technology. **Prerequisite:** basic knowledge of Japanese grammar and consent of instructor, IR/PS majors.

**IRLA 430A-B-C. Portuguese Language for Spanish Speakers (4-4-4)**

This course is designed to enable Spanish-speaking students to acquire proficiency in the Portuguese language through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only or by consent of instructor.

**IRLA 431A-B-C. Second Year Portuguese Language for Spanish Speakers (4-4-4)**

A continuation of first-year Portuguese for Spanish speakers. This course is designed to enable Spanish speaking students to be introduced to an intermediate level of Portuguese language through a combination of classes, language, laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only or by consent of instructor.

**IRLA 440A-B-C. Spanish Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at a low-intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only or by consent of instructor.

**IRLA 441A-B-C. Spanish Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 442A-B-C. Spanish Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an advanced-intermediate level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 443A-B-C. Spanish Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at an advanced level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 444A-B-C. Spanish Language for Professional Proficiency (4-4-4)**

This course is designed to enable students at a superior level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor. **Prerequisite:** IR/PS majors only, or by consent of instructor.

**IRLA 445A-B-C. Spanish Language for Professional Proficiency (4-4-4)**

This course is designed to enable student at a superior level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor.

**IRLA 460A-B-C. Bahasa Indonesia for Professional Proficiency (4-4-4)**

This course is designed to enable students with basic knowledge and skills of Bahasa Indonesia to further develop communicative skills through a combination of classes, exercises, and other language experiences. **Prerequisite:** IR/PS majors only or consent of instructor.

**IRLA 500. Apprentice Teaching of Language (1-4)**

This course, designed for graduate students serving as teaching assistants, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. **Prerequisite:** graduate standing.

## PH.D. LEVEL COURSES

**IRGN 200. Theory of International Relations: International System (4)**

This course examines the concepts of international structure and system in the field of international relations. It covers the literature on realism, neorealism, world systems theory, and other system-level explanations of patterns of international conflict and cooperation, continuity, and change.

**IRGN 201. Ethnic Conflict (4)**

Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduce students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts. **Prerequisite:** admission to program or consent of instructor.

**IRGN 202. International Political Economy: Money and Finance (4)**

Examination of effects of national policies and international collaboration on public and private international financial institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort.

**IRGN 204. International Relations of the Pacific (4)**

International relations and developing international political economies of nations bordering the Pacific. Topics include: the "Pacific Basin" concept; the U.S. and "hegemonic-stability" theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan's foreign policy.

**IRGN 205. U.S.–China Relations (4)**

Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

**IRGN 206. Corporate Strategy and the Environment (4)**

This seminar examines the ability of firms to increase shareholder value through improved environmental

performance. Topics include product differentiation, strategic use of regulations, the "Porter hypothesis," and environmental management systems. Readings include case studies and research articles. **Prerequisites:** IRCO 401, 421, 453, 454, or consent of instructor.

**IRGN 207. Policy Implementation Process (4)**

This course builds on the core Policy-Making Processes class by focusing on nonelected officials' role in setting and implementing policy. Ideally, elected officials make policies that unbiased, technically proficient bureaucrats carry out. This course provides some insights into why the real world departs from this. **Prerequisite:** IRCO 400.

**IRGN 209. Strategic Marketing Planning (4)**

This course develops the microeconomics foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. **Prerequisites:** IRGN 221 and 243, or consent of instructor.

**IRGN 210. International Politics and Security (4)**

Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

**IRGN 211. Financial Institutions (4)**

This course analyzes the roles of money and financial institutions in the economy. The first part of the course focuses on microeconomics and the financial system. The topics include money, financial markets, financial intermediaries, banking regulations, and bank runs. The second part of the course focuses on the microeconomics aspects of financial institutions. The topics include financial development and financial liberalization, and their effects on the economy, especially economic growth and development. **Prerequisite:** graduate level or consent of instructor.

**IRGN 212. International Competitiveness and the Globalized Value Chain (4)**

This course explores the strategies countries pursue in the highly competitive world economy. It examines the global value chain and public policy toward education, labor, corporate social responsibility, free markets and global trade, finance and shareholding, and the political process.

**IRGN 212. The Politics of International Competitiveness (4)**

Examination of policy debates concerning international economic relations: what policies promote or encourage effective participation in the international economy, and what political factors support or oppose such policies. Examples drawn from the experiences of the U.S., Japan, Europe, Latin America, and East Asia.

**IRGN 213. Risk Management (4)**

This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main emphases is on their valuation, use in the hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. **Prerequisite:** IRCO 421.

**IRGN 214. Corporate Governance (4)**

Why do corporate governance systems—the way firms are run, the relationship among managers, stockholders, and workers—differ widely around the world? This course examines the various explanations for these striking differences and the consequences. **Prerequisite:** graduate level or consent of instructor.

**IRGN 216. Post War Politics in Japan (4)**

Overview of postwar politics in Japan, including American Occupation reforms, political institutions, major political factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan's changing democracy.

**IRGN 217. Microfinance (4)**

This course will begin by examining financial markets in poor countries. Investigates how microfinance contracts

overcome problems that had previously barred the extension of business credit in many environments. **Prerequisite:** admission to program or consent of instructor.

**IRGN 218. Globalization, the World System, and the Pacific (4)**

This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

**IRGN 221. Managerial Economics (4)**

Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occur, and basic topics concerning the aggregate economy.

**IRGN 222. Investments (4)**

An analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification. **Prerequisites:** IRCO 421, 453, and 454.

**IRGN 223. The Globalization of Production (4)**

This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. **Prerequisites:** IRGN 221 and IRGN 243, or consent of instructor.

**IRGN 224. Corporate Finance (4)**

The topics covered are dividend policy and capital structure, options, debt financing, and short and long-term in financial planning. Course format will be mostly lectures with occasional cases. Some international aspects of corporate finance will also be discussed. **Prerequisites:** IRGN 221, 243, IRCO 420, 421, 453 and 454, or consent of instructor.

**IRGN 225. Managing Service Operations (4)**

This course covers (1) strategic issues such as service vision, market positioning, growth, and globalization; (2) process design, facility design, and capacity planning; (3) system control and performance measurement; and (4) human resources, information technology, and other service media. **Prerequisites:** IRCO 460 and either IRGN 438 or consent of instructor.

**IRGN 226. Management of Technology (4)**

How companies choose and develop new technology. Case studies, lectures by executives. National technology policy, including the roles of intellectual property. This course emphasizes technology strategy at corporate/national level; the Product Development course emphasizes tactics for development teams.

**IRGN 227. Organizations (4)**

A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are structured. **Prerequisites:** IRGN 221 and 243 or consent of instructor.

**IRGN 229. Business and Management in Japan (4)**

This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

**IRGN 231. Fiscal and Monetary Policy (4)**

Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/unemployment trade-off, budget deficit, and economic growth.

**IRGN 232. Immigration and Immigration Policy (4)**

This course examines the role of immigration in the globalization of Pacific Rim economics. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in

sending and receiving countries; and the nature, scope, and political economy of immigration policy. **Prerequisites:** IRCO 401 or consent of instructor.

#### **IRGN 235. Topics in International Trade (4)**

This course develops new analytical models of international trade and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income.

#### **IRGN 237. Policy Design (4)**

Course teaches how to make strong, reasoned cases for new policy initiatives. Covers cost-benefit analysis, cost-effectiveness evaluation, multigoal analysis, and how these are used in policymaking. Covers tools to predict policy impact, like drawing on "best practice" and related experiences.

#### **IRGN 238. Production and Operations Management: Analysis and Control (4)**

This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm's operations function. It analyzes production processes, quality control, inventory and materials planning, kanban, and just-in-time principles. **Prerequisites:** IRCO 453 and 454, or consent of instructor.

#### **IRGN 239. Policy Evaluation (4)**

Research-design class focusing on strategies for evaluating policies' effectiveness with data in small quantities. Skills taught: understanding limits of what data say, and using information optimally. The emphasis is on qualitative analysis. The concepts taught are similar to those presented in QM3. **Prerequisites:** IRCO 453 and 454.

#### **IRGN 240. Applied Data Analysis and Statistical Decision Making (4)**

The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the problems and the course work will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. **Prerequisites:** IRCO 453 and 454, or consent of instructor.

#### **IRGN 242. Economics of Telecommunications (4)**

This course will focus on the underlying economics of the telecommunications and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunication marketplace and the nature of competition between service providers in the industry. **Prerequisite:** IRGN 221 or consent of instructor.

#### **IRGN 243. International Economics (4)**

The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

#### **IRGN 244. Product Development (4)**

This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including marketing, finance, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

#### **IRGN 248. Civil Society and Development (4)**

To explore the roles that civil society/NGOs/the third sector can play in advancing political, social, and economic progress in developing countries. To consider the strengths and weaknesses, capacities, and limitations of NGOs in developing countries. To provide students with experience in evaluating NGOs and in making professional recommendations to enhance their ability to make a difference. To prepare students to take leadership roles—whether in government, the private sector, or NGOs—in promoting civil-society participation in development.

#### **IRGN 249. Making U.S. Foreign Policy (4)**

Analysis of the interests, structure, and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies and "daily briefings" to prepare students to perform professionally in the foreign policy arena. **Prerequisite:** IRGN 210 or consent of instructor. Suggested: IRGN 211.

#### **IRGN 250. The Politics of U.S.-Japan Economic Relations (4)**

This course will analyze how the domestic politics of each country, their international negotiations, and their interaction concerning economic issues have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

#### **IRGN 251. Economic Development (4)**

This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences of different countries. **Prerequisites:** IRGN 221 and 243, or consent of instructor.

#### **IRGN 252. Quantitative Methods for Advanced Analysts (4)**

This course caters to the needs of those who routinely face a variety of advanced data analysis challenges such as international marketing and sales managers, consulting analysts, or international business development and intelligence specialists. Knowledge of introductory optimization and statistics including linear regression, is assumed. The course is entirely practical in that it is organized around in-depth case studies, requiring students to work extensively with data. Methods covered include cluster, factor, and discriminate analysis, and modeling and simulation.

#### **IRGN 256. Program Design and Evaluation (4)**

Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program and evaluating its success or failure. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

#### **IRGN 257. Cost Benefit Analysis (4)**

Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

#### **IRGN 258. International Environmental Policy and Politics (4)**

This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

#### **IRGN 259. Conflict Resolution of Environmental Issues (4)**

Use of bilateral negotiations (U.S.-Canada), regional organization (ECE and acid rain in Europe), and United Nations' specialized agencies (UNEP and WMO on ozone depletion and climate change) to mediate environmental disputes. Consideration of nontraditional approaches resolving international environmental problems.

#### **IRGN 260. Economic and Social Development of China (4)**

This course examines China's development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy; geography and resource constraints, impact of the West and Japan; development since 1949, and contemporary problems and options.

#### **IRGN 261. Chinese Politics (4)**

This course will analyze post-1949 Chinese politics, including political institutions, the policy-making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

#### **IRGN 263. Political Economy of Southeast Asia (4)**

This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level political and economic issues in these countries. In addition, we will also be examining a number of region-wide issues: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for future economic development. **Prerequisite:** graduate standing or consent of instructor.

#### **IRGN 264. Economies in Southeast Asia (4)**

This course focuses on the long-run and current economic issues of Southeast Asia. The topics are economic growth, human capital, inequality and poverty, social institutions, the business sector, the financial sector, government, the external sector, and regional and interregional economic relations. For each topic, we will discuss the issues from selected countries in the region in more detail.

#### **IRGN 265. Management of Non-profit Organizations (4)**

Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

#### **IRGN 266. Public Finance (4)**

Describes principles of taxation and expenditure analysis; public budgeting; and assessment of budget priorities.

#### **IRGN 270. International Business Strategy (4)**

This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

#### **IRGN 271. Japanese Economy (4)**

A broad survey of the Japanese Economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, industrial organization, and labor markets. **Prerequisites:** IRGN 221 and 243, or consent of instructor.

#### **IRGN 273. Current Issues in U.S.-Latin American Relations (4)**

Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counter-narcotics, anti-corruption, international finance, trade, and U.S.-Mexican and U.S.-Brazilian relations. In each case, students analyze the strengths and weaknesses of current U.S. policy and advocate alternative options. **Prerequisite:** IRCO 210 or consent of instructor.

#### **IRGN 274. Economic Policy in Latin America (4)**

This course seeks to enhance the students' understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decision making. **Prerequisites:** IRGN 221 and 243.

#### **IRGN 276. International Negotiation (4)**

This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and-take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Antiballistic Missile Treaty.

#### **IRGN 278. Japanese Foreign Policy (4)**

Examines the domestic and strategic sources of Japan's foreign policy in the postwar era. Unlike IRGN 460, this course emphasizes Japan's foreign economic policy in regional and global multilateral organizations, and the major security issues it confronts with its Asian neighbors.

#### **IRGN 281. Managing Country Risk in the Modern Multinational Corporation (4)**

Examines ways to analyze, assess, and reduce country risk.

**IRGN 284. Korean Politics (4)**

This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects. **Prerequisite:** consent of instructor.

**IRGN 285. The Korean Economy (4)**

Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export-promotion, heavy and chemical industrial promotion), Korea's industrial structure including the role of large enterprise (chaebol); role of government; links between Korea and other countries.

**IRGN 287. Politics and Institutions in Latin America (4)**

Overview of Latin American politics and the "rules of the game," both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico.

**IRGN 289. Applied Environmental Economics (4)**

This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. **Prerequisites:** IRCO 453, 454, IRGN 221, or consent of instructor.

**IRGN 290. Special Topics in Pacific International Affairs (4)**

A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

**IRGN 292. Special Topics in Pacific Studies (2)**

A seminar course at an advanced level on a special topic in Pacific Studies.

**IRGN 298. Directed Group Study (2)**

Directed reading in selected area. The content of each course is to be decided by the professor directing the course with the approval of the student's faculty advisor. May be repeated for credit. **Prerequisites:** graduate standing and consent of faculty advisor.

**IRGN 299. Independent Research (2-12)**

Independent research under the guidance of a faculty member in IR/PS. May be repeated for credit. **Prerequisites:** graduate standing and consent of faculty advisor.

# International Studies

## PROGRAM FACULTY

Eric J. Bakovic, Ph.D., *Associate Professor, Linguistics*  
Prashant Bharadwaj, Ph.D., *Assistant Professor, Economics*  
Suzanne Brenner, Ph.D., *Associate Professor, Anthropology*  
J. Lawrence Broz, Ph.D., *Associate Professor, Political Science*  
Robert Cancel, Ph.D., *Associate Professor, Literature*  
Marsha A. Chandler, Ph.D., *Professor, International Relations and Pacific Studies*  
William Chandler, Ph.D., *Professor, Political Science*  
Ellen T. Comisso, Ph.D., *Professor, Political Science*  
Ann L. Craig, Ph.D., *Associate Professor, Political Science*  
Joseph W. Esherick, Ph.D., *Professor, History*  
Karen E. Ferree, Ph.D., *Assistant Professor, Political Science*  
James H. Fowler, Ph.D., *Associate Professor, Political Science*  
Clark Gibson, Ph.D., *Professor, Political Science; Director, International Studies Program*  
Peter A. Gourevitch, Ph.D., *Professor, International Relations and Pacific Studies*  
Theodore Groves, Ph.D., *Professor, Economics*  
Stephen M. Haggard, Ph.D., *Professor, International Relations and Pacific Studies*  
Gordon H. Hanson, Ph.D., *Professor, International Relations and Pacific Studies*  
Takeo Hoshi, Ph.D., *Professor, International Relations and Pacific Studies*  
Alan C. Houston, Ph.D., *Professor, Political Science; Provost, Eleanor Roosevelt College*  
Christine Hunefeldt, Ph.D., *Professor, History; Director, CILAS*  
Stephanie H. Jed, Ph.D., *Associate Professor, Literature*  
Bennetta W. Jules-Rosette, Ph.D., *Professor, Sociology*  
Miles E. Kahler, Ph.D., *Professor, International Relations and Pacific Studies*  
Hasan Kayali, Ph.D., *Associate Professor, History*  
Todd Kontje, Ph.D., *Professor, Literature*  
Nancy H. Kwak, Ph.D., *Assistant Professor, History*  
David A. Lake, Ph.D., *Professor, Political Science*  
Lisa Lowe, Ph.D., *Professor, Literature*  
Victor V. Magagna, Ph.D., *Associate Professor, Political Science*  
Meguni Naoi, Ph.D., *Assistant Professor, Political Science*  
Nancy G. Postero, Ph.D., *Associate Professor, Anthropology*  
Michael T. Provence, Ph.D., *Associate Professor, History*  
Pamela Radcliff, Ph.D., *Associate Professor, History*  
James E. Rauch, Ph.D., *Professor, Economics*  
Roddey Reid, Ph.D., *Professor, Literature*  
Joel Robbins, Ph.D., *Professor, Anthropology*  
Akos Rona-Tas, Ph.D., *Associate Professor, Sociology*  
Sharon Rose, Ph.D., *Associate Professor, Linguistics*  
Christina J. Schneider, Ph.D., *Assistant Professor, Political Science*

Lisa R. Shaffer, Ph.D., *Adjunct Professor, International Relations and Pacific Studies/Director, Sustainability Solutions Institute*  
Peter H. Smith, Ph.D., *Professor, Political Science*  
Stefan A. Tanaka, Ph.D., *Professor, History*  
Christena L. Turner, Ph.D., *Associate Professor, Sociology*  
Carlos H. Waisman, Ph.D., *Professor, Sociology*  
Lisa Yoneyama, Ph.D., *Associate Professor, Literature*  
Leon Zamosc, Ph.D., *Associate Professor, Sociology*

## THE INTERNATIONAL STUDIES PROGRAM

Technology and the forces of cultural and economic integration appear to reduce the distances between societies, which now impinge on one another on many dimensions. At the same time, ethnic, religious, and economic conflicts erupt within and between societies, often in violent form. Both the proximity of other societies and the remaining divides within and between them demand a better understanding of their cultures and institutions. Societies cannot be understood in isolation or at a single point in time, however; they are shaped by global and regional environments—political, military, economic, cultural—and their pasts. Individuals and societies in turn shape those environments as they reinterpret their histories.

Using different disciplinary lenses, the international studies major explores the interaction between international and national, global and local, contemporary and historical. The program builds on the strengths of existing international specializations at UC San Diego. International relations and comparative politics are established and distinguished fields of political science. The comparative study of societies and cultures lies at the core of sociology and anthropology. Literature and linguistics offer a rich array of courses dealing with languages and traditions outside the English-speaking societies. Area studies programs provide comprehensive understanding of particular countries and regions.

The international studies major provides students with both a firm grounding in a discipline and the flexibility to permit exploration from alternative perspectives. The primary and secondary tracks chosen by each student contain the disciplinary foundations of the major. International studies majors also complete two core courses that serve as gateways to disciplinary approaches and to central international and comparative issues that cut across disciplines. Among these subjects are cultural boundaries and identities, economic and social development, international and regional integration and their effects, the evolution of political and social institutions, and forms of communication and language. A required capstone seminar permits the completion of a research paper in close association with a member of the faculty. International studies majors benefit throughout from the activities and programs of the Institute for International, Comparative, and Area Studies (IICAS), the home for international studies at UCSD.

## Education Abroad

Majors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP). Subject to approval by the faculty director of the major, up to six courses taken through EAP/OAP will be accepted for credit toward the major. Students are strongly encouraged to complete INTL 101 and INTL 102 before departure. Students interested in studying abroad should see an international studies program advisor to discuss appropriate courses and programs for their plan of study. Information on EAP/OAP is given in the Education Abroad Program section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at <http://programsabroad.ucsd.edu>. Financial aid can be used for EAP/OAP study, and special study abroad scholarships are also available.

For information on study abroad in the ISP, visit <http://isp.ucsd.edu> and <http://programsabroad.ucsd.edu/pao/pdffiles/newintlbroadmap.pdf>.

## Careers

International studies attracts students who are interested in a variety of careers, including government and international organizations, international business, non-governmental organizations, journalism, the arts, and the media. Because of its strong disciplinary core, the major also prepares students who wish to pursue graduate degree programs in international affairs or in one of the participating disciplines.

## Honors

The Honors Program in International Studies recognizes academic excellence in the major. The Honors Program allows qualified students to complete an honors thesis on a topic of their choice in close collaboration with a member of the UCSD faculty. Students who wish to participate in the Honors Program in International Studies should indicate their interest in the spring quarter of their junior year. Honors program applications are available on the ISP Web site. Applications are due by Monday of the ninth week, the quarter before you enroll in 190H.

Refer to [http://isp.ucsd.edu/content/is\\_major/honors.php](http://isp.ucsd.edu/content/is_major/honors.php) for additional requirements and information pertaining to the ISP Honors Program.

## Requirements for the Honors Program

Candidates for honors in any of the International Studies degrees must meet the following requirements:

- A GPA of 3.5 in courses in the International Studies Major (INTL 101, 102, primary track, and secondary track courses)
- Completion of INTL 190H: Senior Honors Seminar in International Studies.
- Completion of a senior honors thesis (INTL 196H). On the recommendation of the student's instructor in INTL 190H and with the approval of the director of the International Studies program, qualified students will enroll in INTL 196H:

Directed Thesis Research (4 units) and complete a senior honors thesis under the direction of a member of the International Studies faculty. The thesis must reflect a research project that is substantially broader in scope and that includes more original research than the research paper required of all International Studies students in INTL 190.

#### Criteria for "Distinction," "High Distinction," and "Highest Distinction"

- Students must maintain a 3.5 GPA in the major to graduate with distinction.
- Each student whose honor thesis also earns a grade of A– shall be entitled to the designation "with distinction."
- Each student whose honors thesis earns a grade of a A shall be entitled to the designation "with high distinction."
- Each student whose honors thesis earns a grade of a A+ shall be entitled to the designation "with highest distinction."

Please refer to the International Studies Program Web site for additional requirements.

## THE INTERNATIONAL STUDIES MAJOR

A student who satisfactorily completes the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the international studies requirements described below will be awarded one of the following bachelor of arts degrees based upon selection of the primary track:

**International Studies—Anthropology**

**International Studies—Economics**

**International Studies—History**

**International Studies—Linguistics**

**International Studies—Literature**

**International Studies—Political Science**

**International Studies—Sociology**

All upper-division courses applied to the requirements of the major must be taken for a letter grade. A 2.0 grade-point average is required in the major, and students must earn at least C– in each course counted for the major. Transfer students should see the international studies advisor to determine whether courses taken elsewhere satisfy international studies program requirements.

### LOWER-DIVISION REQUIREMENTS

Foreign language (four quarters of college-level language or equivalent proficiency).

Students majoring in international studies are required to demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent) with a passing grade. Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam.

College-level language study is a prerequisite for study abroad in most non-English speaking countries and enhances understanding of those

societies. Students who plan to study abroad in non-English speaking countries may need to take additional language classes, and they will need to take all language courses for letter grades.

Students should make substantial progress toward fulfilling college general-education requirements and the foreign language requirement of the international studies major before beginning the core sequence of the international studies major.

### UPPER-DIVISION REQUIREMENTS

The upper-division requirements for a major in international studies are

1. Two core courses (INTL 101 and INTL 102)
2. A capstone seminar (INTL 190)
3. Eight 4-unit, upper-division, non-language courses in a primary track
4. Five 4-unit, upper-division, non-language courses in a secondary track (different from primary track)

#### Core Courses

Two core courses (INTL 101 and INTL 102) provide an intellectual gateway to central issues and disciplinary approaches in international studies. Students may begin the sequence with either course. Sophomore status is a prerequisite for both courses.

**INTL 101. Culture and Society in International Perspective (4)**

**INTL 102. Economics, Politics, and International Change (4)**

#### Capstone Seminar

All majors will complete the capstone seminar during their senior year. Students are required to complete a research paper for this course.

**INTL 190. Seminar in International Studies (4)**

#### Regional Requirement

Of the thirteen track courses (eight primary and five secondary), three courses must concentrate on one country or region outside the United States to complete the International Studies Program regional requirement.

#### Departments Offering Both Primary and Secondary Tracks

##### Anthropology

*Primary Track:* Students are required to take at least one course from the following:

**ANTH 101. Foundations of Social Complexity**

**ANTH 102. Human Evolution**

**ANTH 103. Sociocultural Anthropology**

The remaining upper-division courses should be selected from the Anthropology: Sociocultural (ANSC) and Archaeology (ANAR) listings. Up to two approved courses from Anthropology: Biological Anthropology (ANBI) can also be counted toward the major with the approval of the international studies program advisor.

*Secondary Track:* Students are encouraged to take ANTH 101 and 103; all other courses should be

from the ANTH, ANSC, or ANAR series; one course from the ANBI series will be accepted for credit by petition.

##### Economics

*Primary and Secondary Tracks:* Both primary and secondary track IS majors must satisfy the following six lower-division department requirements with a C– or better:

**Calculus. Mathematics 10A-B-C or Mathematics 20A-B-20C and Economics 1, 2, 3**

Upper-division courses may be selected from **Economics 100A-B-C. Microeconomics**  
**Economics 110A-B. Macroeconomics**  
**Economics 120A-B-C. Econometrics**  
**Economics 101. International Trade**  
**Economics 103. International Monetary Relations**  
**Economics 114. Economics of Immigration**  
**Economics 116. Economic Development**  
**Economics 117. Economic Growth**  
**Economics 125. Demographic Analysis and Forecasting**  
**Economics 131. Economics of the Environment**  
**Economics 132. Energy Economics**  
**Economics 133. International Environmental Agreements**  
**Economics 144. Economics of Conservation**  
**Economics 145. Economics of Ocean Resources**  
**Economics 161. Global Integration of Latin America**  
**Economics 162. Economics of Mexico**  
**Economics 163. Japanese Economy**  
**Economics 165. Middle East Economics**

Both primary and secondary track majors must take at least two of the following courses:

**Economics 101. International Trade**  
**Economics 103. International Monetary Relations**  
**Economics 114. Economics of Immigration**  
**Economics 116. Economic Development**  
**Economics 117. Economic Growth**  
**Economics 125. Demographic Analysis and Forecasting**  
**Economics 131. Economics of the Environment**  
**Economics 132. Energy Economics**  
**Economics 133. International Environmental Agreements**  
**Economics 144. Economics of Conservation**  
**Economics 145. Economics of Ocean Resources**  
**Economics 161. Global Integration of Latin America**  
**Economics 162. Economics of Mexico**  
**Economics 163. Japanese Economy**  
**Economics 165. Middle East Economics**

At least one of the above must be Economics 101, 103, or 116.

##### History

*Primary Track:* At least six of eight courses must be taken in any of the following categories:

**History of Africa (HIAF)**

**History of Europe (HIEU)**

**History of East Asia (HIEA)**

**History of the Near East (HINE), with the exception of HINE 151, 152, 153**

**History of Latin America (HILA)**

**History of Science (HISC)**

## History of Religion (HIRE) and/or History Topics (HITO), except HITO 194–199

Up to two courses may be taken in History of the United States (HIUS).

*Secondary Track:* All courses must be taken in non-U.S. history.

## Linguistics

*Primary Track:* Eight upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least three courses from the following list:

LIGN 105. Law and Language  
LIGN 108. Languages of Africa  
LIGN 141. Language Structures  
LIGN 142. Language of Typology  
LIGN 143. Structure of Spanish  
LIGN 145. Pidgins and Creoles  
LIGN 174. Gender and Language in Society  
LIGN 175. Sociolinguistics  
LIGN 176. Language of Politics and Advertising  
LIGN 177. Multilingualism

At most, one of the eight courses can be LIGN 199 (Independent Study in Linguistics) by petition.

*Secondary Track:* Five upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least two courses from the list above. At most, one of the five courses can be LIGN 199 (Independent Study in Linguistics) by petition.

## Literature

*Primary Track:* Eight upper-division courses may be selected from the following:

### Literatures in English (LTEN)

LTEN 188. Contemporary Caribbean Literature  
LTEN 189. Twentieth-Century Postcolonial Literatures

### Literatures of the World (LTWL)

LTWL 140. Novel and History in the Third World  
LTWL 141. Islam and Modernity  
LTWL 149. The Last Turn of the Century in the West  
LTWL 150. Modernity and Literature  
LTWL 152. Introduction to Islam

### Literature/Cultural Studies (LTCS)

LTCS 133. Globalization and Culture  
LTCS 140. Subaltern Studies in Context  
LTCS 141. Race and Empire  
LTCS 145. National Cultures in Colonial and Postcolonial Contexts

And all courses listed under

African Literatures (LTAF)  
Literatures in Chinese (LTCH)  
East Asian Literatures (LTEA)  
European and Eurasian Literature (LTEU) with exception of LTEU 100, 102, 105  
Literatures in French (LTFR) with exception of LTFR 160  
Literatures in German (LTGM)  
Literatures in Italian (LTIT) with exception of LTIT 161  
Korean Literature (LTKO)

### Literatures in Portuguese (LTPR)

Russian Literature (LTRU) with exception of LTRU 104 A, B, C

### Literatures in Spanish (LTSP) with exception of LTSP 150, 151, 152, 153, 154, 160, 162, 166

With approval of the undergraduate advisor, students may take up to two theory or methods courses selected from Literature/Theory (LTTH) courses LTTH 110, LTTH 115, or LTTH 150, and from among the Literature/Cultural Studies (LTCS) courses LTCS 100, LTCS 102, or LTCS 120.

*Secondary Track:* Five courses selected from the above.

## Political Science

*Primary Track:* Eight courses selected from the following. All courses numbered POLI 120 through POLI 159:

Comparative Politics: POLI 120A through POLI 139A  
International Relations: POLI 140A through POLI 159

Up to three courses may be from the following subfields:

American Politics: POLI 100A through POLI 108  
Political Theory: POLI 110A through 119A  
Policy Analysis: POLI 160AA through 168  
Research Methods: POLI 170A and POLI 181

*Secondary Track:* Five upper-division courses selected from courses numbered POLI 120 through POLI 159 (see above); one of the five courses may be selected from the following subfields:

American Politics: POLI 100A through POLI 108  
Political Theory: POLI 110A through 119A  
Policy Analysis: POLI 160AA through 168  
Research Methods: POLI 170A and POLI 181

## Sociology

*Primary Track:* Eight upper-division courses selected from the following list:

SOCI 111E. Human Rights—Principles and Problems

SOCI 111F. Human Rights—Practices and Cases

SOCI 125. Sociology of Immigration

SOCI 133. Immigration in Comparative Perspective

SOCI 134. The Making of Modern Medicine

SOCI 136E. Sociology of Mental Illness: An Historical Approach

SOCI 136F. Sociology of Mental Illness in Contemporary Society

SOCI 148. Political Sociology

SOCI 156. Sociology of Religion

SOCI 157. Religion in Contemporary Society

SOCI 158. Islam in the Modern World

SOCI 162R. Religion and Popular Culture in East Asia

SOCI 163. Migration and the Law

SOCI 169. Citizenship, Community, and Culture

SOCI 175. Nationality and Citizenship

SOCI 176. War and Society

SOCI 177. International Terrorism

SOCI 178. The Holocaust

SOCI 179. Social Change

SOCI 180. Social Movements and Social Protest

### SOCI 181. Modern Western Society

SOCI 182. Ethnicity and Indigenous Peoples in Latin America

SOCI 183. Minorities and Nations

SOCI 185. Globalization and Social Development

SOCI 187. African Societies through Films SOCI 188D. Latin America: Society and Politics

SOCI 188E. Community and Social Change in Africa

SOCI 188F. Modern Jewish Societies and Israeli Society

SOCI 188G. Chinese Society

SOCI 188J. Change in Modern South Africa

SOCI 189. Special Topics in Comparative-Historical Sociology

**Note:** SOCI 189 must be preapproved by program advisor.

*Secondary Track:* Five upper-division courses selected from the above lists.

## DEPARTMENTS AND PROGRAMS OFFERING ONLY SECONDARY TRACKS

### Communication

*Course Prerequisites:* Must take COGN 20 for a letter grade to enroll in upper-division courses.

*Secondary Track:* Five courses selected from the following lists:

#### Communication as a Social Force (COSF)

COSF 100. Introduction to Communication as a Social Force  
COSF 123. Communication, Dissent, and Social Movements  
COSF 124. Black Women, Feminism, and the Media  
COSF 140A. Comparative Media Systems: Asia  
COSF 140B. Comparative Media Systems: Europe  
COSF 140C. Comparative Media Systems: Latin America and the Caribbean  
COSF 159. Work and Industry in the New Information Economy  
COSF 160. Political Economy/ Global Consumer Culture  
COSF 161. Global Economy and National Identity  
COSF 181. Political Economy of International Communications  
COSF 183. The Politics of World Music  
COSF 184. The Mass Media and Politics in Africa  
COSF 185. Gender, Labor, and Culture in the Global Economy

#### Communication and Culture (COCU)

COCU 110. Cinema in Latin America  
COCU 126. African Cinema  
COCU 130. Tourism: Global Industry and Cultural Form  
COCU 131. Cinema of the Cuban Revolution  
COCU 162. Popular Culture  
COCU 179. Colonialism and Culture

#### Communication and Human Information Processing (COHI)

COHI 114. Bilingual Communication  
COHI 115. Education and Global Citizenship  
COHI 121. Literacy, Social Organization, and the Individual  
COHI 135. Language and Globalization

## Area Studies Secondary Tracks

Five upper-division courses in a single area studies program selected from the following list of programs:

**African Studies**  
**Chinese Studies**  
**German Studies**  
**Italian Studies**  
**Japanese Studies**  
**Latin American Studies**  
**Middle East Studies**  
**Russian and Soviet Studies**  
**Third World Studies**

Course lists can be found in the *UC San Diego General Catalog*. All courses must be four-unit, upper-division, non-language courses, taken for a letter grade C– or better. Please contact ISP academic advisor with questions.

Students seeking a broader regional focus (e.g., European or East Asian Studies) may elect to combine courses from area studies programs dealing with that region. Courses must be preapproved prior to enrolling.

## INTEGRATED BACHELOR OF ARTS/ MASTER IN INTERNATIONAL AFFAIRS

The International Studies Program and the School of International Relations and Pacific Studies have collaborated to create a combined five-year Bachelor of Arts/Master of International Affairs program (B.A./M.I.A.). The combined program is designed specifically for selected UCSD undergraduate majors in international studies who seek advanced training for leadership positions in the Pacific Rim community. In addition to serving the needs of UCSD undergraduate students, the program provides a societal benefit by providing students with advanced training that is suitable for a wide array of careers in government, industry, nonprofit institutions, and other organizations involved in the international affairs of the Pacific Rim.

The B.A./M.I.A. program retains and builds on the interdisciplinary core of the existing international studies degree and adds to it the professional training of a new one-year Master of International Affairs professional degree (year five of the combined program). This streamlined program will permit undergraduates to incorporate graduate-level courses into their final year of the international studies major. The combined degree program will provide an interdisciplinary program of study in the International Studies Program during the first four years. It is expected that up to ten undergraduate students will be accepted into this program each year.

The structure of the program is as follows:

### Years 1–3

Undergraduate lower- and upper-division course work; general-education, language courses, INTL courses, major prerequisites, and half the undergraduate track courses.

### Year 4

Students are still undergraduates, but the majority of course work is completed at IR/PS at the

graduate level; at end of year 4, students graduate with a B.A. in International Studies.

### Summer

Required summer internship between years 4 and 5.

### Year 5

Students enter IR/PS and complete remaining graduate course work; upon successful completion, they graduate with a Master of International Affairs (M.I.A.) at end of year 5.

**Please note:** This program is only open to students whose two tracks are economics and political science, in either order.

Students apply to the program at the end of winter quarter in year 3. Acceptance is tentative until successful completion of year 4 and the required summer internship; student is then officially accepted into the M.I.A. program and begins to pay professional fees.

The B.A./M.I.A. Program is *much* more rigidly structured than the regular IS major. Students will need to meet frequently with the International Studies Program academic advisor from their first year onward to ensure proper course selection each quarter.

The approved course list for the B.A./M.I.A. Program is slightly different than the list for the regular IS major. Please be sure to consult the appropriate list to find approved courses.

Students must study a Pacific Rim foreign language for this program because the language must match the IR/PS region of specialization during the fifth year. Consult the ISP Web site for a complete list of approved B.A./M.I.A. languages and their corresponding IR/PS regions.

Students must complete a minimum of *four* quarters of a Pacific Rim foreign language in order to meet the B.A. requirement. *Two additional* quarters are required for the M.I.A. It is recommended (but not required) that students complete all six quarters at the undergraduate level.

Students choosing to satisfy their language requirement by taking six quarters of course work must earn a grade of C– or better in the fifth quarter and a grade of B or better in the sixth quarter.

For additional information about the B.A./M.I.A. program, please visit our Web site at <http://isp.ucsd.edu>. For application information and admissions criteria, please visit <https://graduateapp.ucsd.edu/>.

## THE INTERNATIONAL STUDIES MINOR

The international studies minor is designed to offer students an introduction to the interdisciplinary investigation of other societies and the forces of global integration and conflict. To receive a minor in international studies, a student must complete seven four-unit courses (twenty-eight units).

### (A) LANGUAGE REQUIREMENT

ALL minors must demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent). Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam. Students completing the language

requirement through waiver (700 or better on SAT II language exam or if you attended high school outside the U.S.) or proficiency will fulfill the language component of the minor by completing one of these requirements but no course credit will be applied toward the seven courses required for the minor.

Up to two courses in foreign language can be included in the seven courses required for the minor. These may be lower-division courses but must be taken for a C– or better to apply. The remaining five courses must be upper-division courses in the humanities and social sciences. (See below.)

### (B) ADDITIONAL COURSE REQUIREMENTS

1. All minors must take INTL 101 and INTL 102. INTL 101 and 102 may be taken in any order and are offered during different quarters throughout the academic year. You can enroll in INTL 101 and INTL 102 on WebReg if you have sophomore standing and are declared in the IS major or minor program. If you do not meet these requirements and wish to add INTL 101 or 102, contact the International Studies Advising Office. INTL 101 and 102 are gateway courses and should be taken in the sophomore or junior year.
2. The remaining three to five courses (depending on the number of language courses applied to the minor) must be distributed in two broad areas (tracks). Specifically, students must take at least one course in each of two tracks:  
  
Track 1. Economics, Politics, and International Change  
  
Track 2. Culture and Society in International Perspective  
  
(See course listings for each track.)
3. The minor must include courses from at least two departments.
4. All courses applied to the minor (including applicable language courses) must receive a letter grade of C– or better.
5. Minors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP). Subject to approval by the IS faculty director, up to three courses taken through EAP/OAP or at another university will be accepted for credit toward the minor.

## TRACKS IN THE INTERNATIONAL STUDIES MINOR

### \*Track 1: Economics, Politics, and International Change

#### Communication

COSF 123. Communication, Dissent, and Social Movements

COSF 159. Work and Industry in the New Information Economy

COSF 160. Political Economy/ Global Consumer Culture

COSF 161. Global Economy and National Identity

COSF 181. Political Economy of International Communications

COSF 184. The Mass Media and Politics in Africa  
COSF 185. Gender, Labor, and Culture in the Global Economy

#### Economics

Econ 101. International Trade  
Econ 103. International Monetary Relations  
Econ 114. Economics of Immigration  
Econ 116. Economic Development  
Econ 117. Economic Growth  
Econ 125. Demographic Analysis and Forecasting  
Econ 131. Economics of the Environment  
Econ 132. Energy Economics  
Econ 133. International Environmental Agreements  
Econ 144. Economics of Conservation  
  
Econ 145. Economics of Ocean Resources  
Econ 161. Global Integration of Latin America  
Econ 162. Economics of Mexico  
Econ 163. Japanese Economy  
Econ 165. Middle East Economics

#### History

HIAF 111. Modern Africa Since 1880

**Note:** SOCI 189 must be preapproved by program advisor.

**COURSES**

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

**UPPER-DIVISION**

**INTL 101. Culture and Society in International Perspective (4)**  
 Analysis of the cultural and social developments of the modern era from the perspective of interaction among societies. Particular attention is paid to the definition, representation, and negotiation of social and cultural boundaries over time. **Prerequisites:** International Studies major or minor with sophomore, junior, or senior standing.

**INTL 102. Economics, Politics, and International Change (4)**  
 Examination of the domestic and international sources of economic and political change. Topics include the rise of the nation-state, comparative economic development, authoritarian and democratic regimes, international and civil conflict, globalization and its domestic and international implications. **Prerequisites:** International Studies major or minor with sophomore, junior, or senior standing.

**INTL 190. Seminar in International Studies (4)**  
 Required seminar for International Studies seniors. Readings and discussion of topics in international and comparative studies from an interdisciplinary perspective. Emphasis on independent work and completion of a research paper. **Prerequisites:** International Studies major; successful completion of INTL 101 and 102; senior standing.

**INTL 190H. Honors Seminar in International Studies (4)**  
 Required of all honors students in International Studies. Reading and discussion of international topics and cooperative studies from an interdisciplinary perspective. Emphasis on research design and completion of research paper in preparation for INTL 196H. **Prerequisites:** International Studies major with 3.5 major GPA; department stamp; INTL 101; INTL 102; consent of instructor.

**INTL 196H. International Studies Honors Program (4)**

Open only to seniors who have completed INTL 190H. Completion of an honors thesis under the supervision of a member of the International Studies faculty. **Prerequisites:** International Studies major with 3.5 GPA; department stamp; senior standing; INTL 190H; consent of instructor.

Muir College

<http://history.ucsd.edu/programs/caesar-programs/italian-stud/index.html>

Italian studies is an interdisciplinary program in the language, literature, history, theater, music, and art of Italy. Italian studies coordinates the resources of the Departments of History, Literature, Music, Theatre and Dance, and Visual Arts, and offers students the opportunity to design a major, leading to a B.A., around the course offerings of these five departments. Students in Italian studies are encouraged to participate in the University of California Education Abroad Program (EAP), which is affiliated with the Universities of Padua, Trento, and Bologna: this provides the possibility of a junior year abroad, including both language courses and courses dealing with various aspects of Italian studies. EAP credits may be transferred back to UC San Diego to coordinate with on-campus offerings.

---

## THE MAJOR PROGRAM

A major in Italian studies consists of a choice of twelve upper-division courses in literature, history, music, theatre, and visual arts approved for the program and listed below. Courses in other areas of Italian studies taken abroad or on our campus may also apply. At least three areas must be represented in the student's program of study. The particular courses making up each student's major will be selected in consultation with the program advisor. The study of Dante (LTIT 115) is considered central for all Italian studies majors.

---

## THE MINOR PROGRAM

A minor in Italian studies consists of seven upper-division courses from among those listed below (at least three areas must be represented). Credit from the EAP program may be applied toward the minor.

## UPPER-DIVISION/ITALIAN STUDIES COURSES

For description of courses listed below, see appropriate departmental listing.

## LITERATURE

LTIT 1A-B-C. The Language of Italian Culture  
LTIT 100. Introduction to Literatures in Italian

LTIT 110. Selected Topics in Italian Literature  
(may be repeated for credit as topics vary)

LTIT 115. Medieval Studies

LTIT 122. Studies in Modern Italian Culture

LTIT 137. Studies in Modern Italian Prose

LTIT 143. Major Italian Authors

LTIT 161. Advanced Stylistics and Conversation

LTIT 192. Senior Seminar in Literatures in Italian

LTIT 196. Honors Thesis

LTIT 198. Directed Group Study

LTIT 199. Special Studies

**Note:** Students must complete the following prerequisites for all upper-division work in Italian literature:

1. Linguistics/Italian 1A-B-C, or LTIT 1A-B-C
2. Literature/Italian 2A-B, 50

## VISUAL ARTS

122CN. Defining High Renaissance Art

122D. Michelangelo

128B. Topics in Early Modern Art History (when on Italian topic)

129B. Seminar in Early Modern Art History (when on Italian topic)

## HISTORY (HIEU)

113. Rule, Conflict, and Dissent in the Middle Ages

122. Politics, Italian Renaissance Style

199. Independent Study in European History

The following courses may be applied to the major or minor, when 50 percent or more of the course focus is on Italian topics:

Music 113

THHS 101

Additional courses counting toward a major in Italian studies are offered on a year-to-year basis. As these often cannot be listed in the catalog in advance, interested students should consult the program faculty for an up-to-date list.

# Japanese Studies

## Faculty

Yumiko Blanford, *Lecturer, History (Japanese Language)*

Takashi Fujitani, *Professor, History*

Hisae Fujiwara, *Lecturer, History (Japanese Language)*

Takeo Hoshi, *Professor, International Relations and Pacific Studies*

Joseph Hankins, *Assistant Professor, Anthropology*

Germaine A. Hoston, *Professor, Political Science*

Hifumi Ito, *Lecturer, History (Japanese Language)*

Noriko Kameda, *Lecturer, History (Japanese Language)*

Ellis Krauss, *Professor, International Relations and Pacific Studies*

Mayumi Mochizuki McKee, *Lecturer, History (Japanese Language)*

Megumi Naoi, *Assistant Professor, Political Science*

Masato Nishimura, *Lecturer, History (Japanese Language)*

Kyoko Sato, *Lecturer, History (Japanese Language)*

Ulrike Schaeede, *Professor, International Relations and Pacific Studies*

Stefan Tanaka, *Professor, History*

Yasu-Hiko Tohsaku, *Professor, International Relations and Pacific Studies*

Christena Turner, *Associate Professor, Sociology*

Lisa Yoneyama, *Associate Professor, Cultural Studies and U.S.–Japan Studies*

Joji Yuasa, *Professor Emeritus, Music*

OFFICE: 3024 Humanities and Social Sciences Building, Muir College  
<http://japan.ucsd.edu>

The Program in Japanese Studies coordinates a variety of campus offerings dealing with the language, history, culture, and political economy of Japan. The program is especially strong in the area of modern and contemporary Japan. In addition to courses available in the Departments of Anthropology, Economics, History, Linguistics, Literature, Music, Political Science and Sociology, qualified undergraduates also may enroll in Japan-related courses in the Graduate School of International Relations and Pacific Studies with consent of instructors.

## THE MAJOR

### A. LOWER-DIVISION REQUIREMENT (9 COURSES)

1. Japanese language: two years lower-division or the transferred equivalent:  
Japanese Studies 10A-B-C  
Japanese Studies 20A-B-C
2. The remaining three courses must be chosen from among the following:
  - a. East Asian History: HILD 10-11-12
  - b. Eleanor Roosevelt College students may petition to use MMW Courses 2 and 5.

- c. Thurgood Marshall College students may petition to use DOC course 1.
3. The language requirement may be waived by demonstrating the equivalent proficiency through exam.

### B. UPPER-DIVISION REQUIREMENT (12 COURSES)

1. Japanese language: six upper-division language courses or the transferred equivalent from Japanese Studies 100A-B-C  
Japanese Studies 130A-B-C  
Japanese Studies 140A-B-C  
Japanese Studies 150A-B-C  
Students may petition to include three upper-division language courses taken abroad under EAP or OAP.
2. Japanese Studies 190 (JAPN 190): Selected Topics in Contemporary Japanese Studies. This is a seminar-style course focusing on selected topics in contemporary interdisciplinary studies of Japan. **Prerequisite:** upper-division standing; student must complete a minimum of one upper-division Japanese studies approved course, or consent of instructor.
3. The remaining five courses must be taken from two or more different disciplines.
  - a. Students may petition to include two non-language upper-division courses taken abroad under EAP or OAP.
  - b. Students may include one 199.
4. All upper-division courses must be taken for a letter grade, with the exception of JAPN 199. Beginning in fall 2010, students who declare for the Japanese Studies major and minor will be allowed no more than one course with a D grade to count toward the program requirements. This new requirement will not apply to students who declared their major or minor prior to fall 2010.
5. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language upper-division courses.

### C. HONORS PROGRAM

1. Junior standing or higher.
2. A GPA of 3.5 or better in the major.
3. Overall GPA of 3.2 or better.
4. Completion of at least four upper-division non-language courses approved by the Program in Japanese Studies.
5. Recommendation of a faculty sponsor familiar with the student's work.

Students who qualify for honors take a two-quarter sequence Japanese Studies 196A-B (fall and winter quarters preferred) of directed study during which they define a research project, carry out the research, and complete an honors thesis.

The completed honors thesis will be evaluated by a committee consisting of the student's thesis

advisor and one other faculty member appointed by the Program in Japanese Studies director.

## THE MINOR

A minor in Japanese studies consists of at least fifteen units of Japanese language (lower- or upper-division) and at least sixteen units of upper-division non-language course work taken from two or more departments. Students may use one non-language course taken abroad. All courses to be used for the minor must be approved by the Program in Japanese Studies and must be taken for a letter grade. Beginning in fall 2010, students who declare for the Japanese studies major and minor will be allowed no more than one course with a D grade to count towards the program requirement. This new requirement will not apply to students who declared their major or minor prior to fall 2010. Students who are already beyond first- and second-year language levels will be placed in one of our upper-division Japanese language courses, Written Japanese (100A-B-C), Third-Year Japanese (130A-B-C), Fourth-Year Japanese (140A-B-C), or Advanced Japanese (150A-B-C), and will be required to take four upper-division language courses and three upper-division non-language courses. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language, upper-division courses.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

All graduate-level courses require permission of the instructor for undergraduate students. Course titles may vary from year to year.

Courses with asterisk can be approved as Japanese Studies courses when more than 33 percent of the course content concerns Japan.

### HISTORY

**HIEA 111. Japan: Twelfth through Mid-Nineteenth Century**

**HIEA 112. Japan: from Mid-Nineteenth Century through U.S. Occupation**

**HIEA 113. The Fifteen-Year War in Asia and the Pacific**

**HIEA 114. Postwar Japan**

**HIEA 115. Social and Cultural History of Twentieth-Century Japan**

**HIEA 116. Japan-U.S. Relations**

**HIEA 117. Ghosts in Japan**

**HIEA 119 Religion and Pop Culture in East Asia (Same as SOC/B 162R)**

**HIEA 160. Colloquium on Modern Japanese History**

### JAPANESE STUDIES

**JAPN 190. Selected Topics in Contemporary Japanese Studies**

## LANGUAGE

(Students who have prior preparation of Japanese language are placed in language courses based on the results of a placement exam or an oral interview with an instructor. Students who have lived in Japan, or use Japanese at home are required to take a placement exam administered prior to the beginning of the fall quarter. Contact the Japanese Studies office for more information.)

### **10A-B-C. First-Year Japanese**

(No prior study of Japanese language is required for 10A.)

**Prerequisite for B and C:** previous course or consent of instructor.

### **20A-B-C. Second-Year Japanese**

**Prerequisite:** previous course or consent of instructor.

### **100A-B-C. Japanese for Bilingual Speakers I**

(These courses are for those students who have a high level of speaking proficiency in Japanese but no or little reading and writing abilities.) **Prerequisite for A:** consent of instructor. **Prerequisite for B and C:** previous course or consent of instructor.

### **130A-B-C. Third-Year Japanese**

**Prerequisite:** previous course or consent of instructor.

### **140A-B-C. Fourth-Year Japanese**

**Prerequisite:** previous course or consent of instructor.

### **150A-B-C. Advanced Japanese**

**Prerequisite:** previous course or consent of instructor.

## ECONOMICS

**ECON 163. Japanese Economy**

## LITERATURE

### **LTEA 130. Earlier Japanese Literature in Translation**

(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama; and E. Essays, travelogues, diaries, etc.)

### **LTEA 132. Later Japanese Literature in Translation**

(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama and Film; and E. Essays, criticism, etc.)

### **LTEA 134. A Single Japanese Author (in translation)**

### **LTEA 136. Special Topics in Japanese Literature**

**\*LTWL 155. Gender Studies**

**\*LTCS 110. Popular Culture**

**\*LTCS 115. Performance Culture**

**\*LTCS 118. Comedy**

**\*LTCS 120. Historical Perspectives on Culture**

**\*LTCS 125. Cultural Perspectives on Immigration and Citizenship**

**\*LTCS 130. Gender, Race, Ethnicity/Class, and Culture**

**\*LTCS 131. Topics in Queer Cultures/ Queer Subcultures**

**\*LTCS 132. Special Topics in Social Identities and the Media**

**\*LTCS 133. Globalization and Culture**

**\*LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgender Studies**

**\*LTCS 141. Special Topics in Race and Empire**

**\*LTCS 145. National Cultures in Colonial and Postcolonial Contexts**

**\*LTCS 150. Topics in Cultural Studies**

**\*LTCS 160. Cultural Studies Approaches to Popular Music**

**\*LTCS 170. Visual Culture**

## MUSIC

(Check with program office as to whether these courses may be used toward a Japanese studies minor.)

**MUS 111. World Music**

**\*MUS 116. Popular Music Studies Seminar**

**MUS 211. Seminar in World Music**

## POLITICAL SCIENCE

**POLI 113B. Chinese and Japanese Political Thought I**

**POLI 113C. Chinese and Japanese Political Thought II**

**POLI 132B. Modernity and Identity in East Asia**

**POLI 133A. Japanese Politics: A Developmental Perspective**

**POLI 133D. Japanese Foreign Policy**

**POLI 133G. Postwar U.S.-Japan Relations**

## SOCIOLOGY

**SOC/D 158J. Religion and Ethics in China and Japan**

**SOC/B 162R. Religion and Popular Culture in East Asia (same as HIEA 119)**

## THEATRE AND DANCE

**TDGE 126. Storytelling and Design in Animation**

## VISUAL ARTS

**VIS 127N. Twentieth-Century Art in China and Japan**

**VIS 127P. Arts of Japan**

**VIS 128D. Topics/Non-Western Art History Japanese Painting and Prints**

## GRADUATE SCHOOL OF INTERNATIONAL RELATIONS AND PACIFIC STUDIES

**IRGN 400. International Relations of Asia—Pacific**

**IRGN 411. Business and Management in Japan**

**IRGN 416. Postwar Politics in Japan**

**IRGN 471. Japanese Economy**

# Judaic Studies

## FACULTY

David M. Goodblatt, Ph.D., *Professor, History; Endowed Chair in Judaic Studies*  
Deborah Hertz, Ph.D., *Professor, History; Herman Wouk Chair in Modern Jewish Studies*  
Thomas E. Levy, Ph.D., *Professor, Anthropology; Director, Judaic Studies*  
William H.C. Propp, Ph.D., *Professor, History*

## OTHER FACULTY OFFERING COURSES IN JUDAIC STUDIES

Robert McC. Adams, *Adjunct Professor, Anthropology*  
Guillermo Algaze, *Professor, Anthropology*  
Steven Cassedy, Ph.D., *Professor, Literature*  
Adriana De Marchi Gherini, Ph.D., *Lecturer, Literature*  
Tal Golan, Ph.D., *Associate Professor, History*  
Sanford Lakoff, Ph.D., *Professor Emeritus, Political Science*  
Lisa Lampert, Ph.D., *Associate Professor, Literature*  
Jonathan Saville, Ph.D., *Associate Professor Emeritus, Theatre and Dance*  
Gershon Shafir, Ph.D., *Professor, Sociology*  
Melford E. Spiro, Ph.D., *Professor Emeritus, Anthropology*  
Alana Shuster, *Lecturer, Hebrew*

OFFICE: 4008 Humanities and Social Sciences Building, Muir College  
(858) 534-4551  
Fax: (858) 534-7283  
<http://history.ucsd.edu/programs/judaic-studies/index.html>

Judaic studies is an interdisciplinary program offering courses, majors, minors, concentrations, and masters degrees that draw upon a variety of perspectives. For doctoral programs see below—the Ph.D. in ancient history and the Ph.D. in anthropology. Courses are offered in the Departments of Anthropology, Communication, History, Literature, Music, Political Science, Philosophy, and Sociology. Students also have the option within the Literatures of the World major, in the Department of Literature, of concentrating on Judaic literature; or on a combined program of the Literatures of the World major (concentration in Judaic literature) and classical studies.

In addition, Revelle and Muir Colleges have noncontiguous minors in Judaic studies and in Hebrew language and literature; Warren College has Judaic studies and Hebrew literature concentrations; and various general requirements in all colleges can be met by courses in the Judaic area. For details students should inquire at their provost's office or at the Judaic Studies Program office.

The Judaic Studies Program offers scholarships and fellowships for study abroad.

Students are encouraged to participate in the UC Education Abroad Program (EAP) in Jerusalem or Beersheva, and to investigate other options through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UC San Diego degree, major, and minor requirements.

Interested students should contact the Programs Abroad Office in the International Center for more information. Please visit the Web site at <http://orpheus.ucsd.edu/icenter/pao>.

In addition, the Judaic Studies Program and UC San Diego Department of Anthropology offer credit and hands-on experience in Near Eastern archaeology at their archaeological field school in Israel or Jordan. Up to twelve units of academic credit may be earned through the UCSD Summer Session Program. Some scholarships are available through the Judaic Studies Program. For more information call the UCSD Summer Session Office, or visit our Web site at <http://anthro.ucsd.edu/~tlevy> for our archaeological field schools in Israel and Jordan. For a general overview of the Judaic Studies Program see <http://history.ucsd.edu/programs/judaic-studies/index.html>.

## MAJOR

- Requirements for the major in Judaic studies are
1. Judaic Studies 100 or equivalent; HITO 104, HITO 105
  2. Twelve upper-division courses in Judaic studies, to be selected in consultation with a faculty advisor
  3. Upper-division competence in Hebrew, normally to be fulfilled by completion of first- and second-year Hebrew language courses, or the equivalent

## MINORS

1. Requirements for the minor in Judaic studies:
  - a. Judaic Studies 100, HITO 104, HITO 105
  - b. Four upper-division courses in Judaic studies, to be selected in consultation with a faculty advisor
2. Requirements for the minor in Hebrew language and literature:

Seven quarter courses in Hebrew language and literature, ordinarily Judaic Studies 1, 2, 3, 101, 102, and 103 plus one elective course

**Note:** Other course combinations for the major and minor may be approved by the student's faculty advisor.

**Note:** A majority of the courses for the major or minor must be taken at UCSD.

## THE PH.D. IN ANCIENT HISTORY

The Department of History offers a Ph.D. program in ancient history. Relevant major fields are the history of Israel in the biblical period and the history of the Jewish people in antiquity. One of the two minor fields may be outside the history department. Students must acquire competence in the relevant ancient and modern languages.

## THE PH.D. IN ANTHROPOLOGY (ARCHAEOLOGY)

The Department of Anthropology offers graduate training in social, cultural, and psychological anthropology, as well as in anthropological archaeology and biological anthropology. In conjunction with the Judaic Studies Program, students may concentrate in Near Eastern archaeology with a focus on Israel and Jordan. Students pursuing anthropological

archaeology are expected to take required courses in anthropology and engage in field research.

## Archaeology

Since 1993, the Judaic Studies Program has sponsored major archaeological excavations in Israel's northern Negev desert. Shortly after the peace treaty was formalized between Israel and Jordan, the program began a long-term archaeological field program in the Jabal Hamrat Fidan Region (JHF) of southern Jordan. The project aims at studying the influence of early ore procurement and metallurgy on social change from the Neolithic period through the Iron Age. UC San Diego graduate students play an active role in the fieldwork and laboratory studies of material from these excavations. Qualified students are encouraged to use these data as part of their doctoral studies. In 2006, the UCSD Judaic Studies Program will join in several excavations along the Wadi al-Guwayb and Wadi al-Jariyeh in southern Jordan. This is part of the UCSD Fall Session Middle East Field School.

The Judaic Studies Program supports a state-of-the-art archaeological laboratory in the Social Sciences Building. A wide range of digital-based technologies is used for archaeological data and image processing that are linked through the Internet. Labs for processing pottery, stone tools, and other materials are available for student use.

## THE M.A. IN JUDAIC STUDIES

The M.A. in Judaic studies, offered under the auspices of the Department of History, is an interdisciplinary program permitting the student to select courses primarily in history and literature, but also in anthropology, political science, sociology, and philosophy.

## FELLOWSHIPS

Four fellowships are available for Ph.D. students. These include

### The Dita and Erwin Gumpel Judaic Studies Endowed Fellowship

### The University Fellowship

### The Wexler Family Judaic Studies Fellowship Fund in honor of David Noel Freedman Judaic Studies Fellowships

Teaching assistantships are available in the Revelle College Humanities/Writing Program and in other writing programs and departments. Dissertation fellowships may be awarded to doctoral students at the dissertation stage of their studies. Funds are also available for support of travel to archaeological excavations. Students are also eligible for research-travel funds to other campus libraries of the University of California, as well as for grants that permit research in archives and libraries elsewhere. Students who deliver papers at scholarly conferences may also receive financial support for their participation.

## Publications

The program produces a series of volumes: *Biblical and Judaic Studies* from the University of California, San Diego (published by Eisenbrauns Winona Lake, USA). *The Anchor Bible* (Commentary, Reference Library, and Dictionary) is edited by David Noel Freedman at UCSD. The series *Approaches to*

*Anthropological Archaeology* is edited by Thomas E. Levy for Equinox Publishing Ltd. (London) at UCSD.

## Lectures and Conferences

The program regularly hosts international conferences and an annual series of lectures and seminars by distinguished scholars in Hebrew Bible, Archaeology, and Judaica. "The Yigal Shiloh Memorial Lecture in Archaeology" is given by an archaeologist each year in memory of Professor Yigal Shiloh.

## Application Procedures

The deadline for applications is January 9. For further information contact

University of California, San Diego  
GRADUATE PROGRAM, JUDAIC STUDIES 0104

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

Following are course offerings in this area.

For descriptions of the courses listed below, refer to the appropriate department's section of the catalog.

### Judaic Studies 1. Beginning Hebrew (4)

Acquisition of basic vocabulary, fundamentals of Hebrew grammar, conversation, and reading.

### Judaic Studies 2. Intermediate Hebrew (4)

Continued study of vocabulary and grammar, emphasis on fluency in conversation, and reading.

### Judaic Studies 3. Intermediate Hebrew, Continued (4)

Vocabulary, grammar, conversation, introduction to literary and nonliterary texts.

**Judaic Studies 100. Introduction to Hebrew Bible (4)**  
An introduction to the Hebrew Bible focusing on the first five books, the Torah.

**Judaic Studies 101. Introduction to Hebrew Texts (4)**  
Reading and analysis of texts from Biblical through modern authors, study of advanced vocabulary and grammar. Course taught in Hebrew and in English.

**Judaic Studies 102. Intermediate Hebrew Texts (4)**  
Further reading and analysis of Hebrew literature from a range of periods. Advanced grammar and vocabulary. Course taught in Hebrew and in English.

**Judaic Studies 103. Advanced Hebrew Texts (4)**  
Synthesis of fluency, reading, and grammatical skills. Reading of texts from a range of periods.

**Judaic Studies 110. Introduction to Judaism (4)**  
An introductory survey of Jewish history, literature, and culture from antiquity to contemporary times. Topics include sacred texts, the variety of groups and views of Judaism, the historical and geographical movements of the Jewish people, and the intersection of religion, ethnicity, and culture.

**Judaic Studies 111. Topics in Judaic Studies (4)**  
Study of a particular period, theme, or literature in Jewish civilization.

**Judaic Studies 120. Topics in Zionism: Israelis and Palestinians: Two Cultures in Conflict (4)**  
This course examines Israeli culture, Palestinian culture, and the conflict between them. We will discuss what is

distinct about each culture, how they are different, how they are similar, their histories, and what influences the relationship/conflict between them. **Prerequisite:** upper-division standing or consent of instructor.

### Judaic Studies 196A. Judaic Studies Honors Course (4)

First quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. **Prerequisites:** admission to Judaic Studies Honors Program; JUDA 100, JUDA 103, HITO 104, HITO 105; upper-division electives in Judaic Studies; at least junior standing; overall 3.3 GPA; 3.5 in Judaic Studies.

### Judaic Studies 196B. Judaic Studies Honors Course (4)

Second quarter of honors thesis research for students accepted into honors program. Research is conducted under the supervision of a faculty member selected with the approval of the director of the Judaic Studies Program. **Prerequisites:** admission to Judaic Studies Honors Program; previous enrollment in JUDA 196A; JUDA 100, JUDA 103, HITO 104, HITO 105; upper-division electives in Judaic Studies; at least junior standing; overall 3.3 GPA; 3.5 in Judaic Studies.

### Judaic Studies 198. Directed Group Study in Judaic Studies (1-4)

Directed group study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

### Judaic Studies 199. Independent Study in Judaic Studies (1-4)

Independent study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

### ANLD 3. World Prehistory (4)

**ANGN 100. Special Topics in Socio-Cultural Anthropology: Law, Religion, and Politics in Israel (4)**

**ANGN 142. Pastoralism in Archaeological Ethnographic Perspective (4)**

**ANGN 181. Foundations of Archaeology (4)**

**ANGN 183. Chiefdoms, States, and the Emergence of Civilizations (4)**

**ANPR 194. Archaeological Field School (4)**

**ANRG 116. Archaeology of the Holy Land: Prehistory (4)**

**ANRG 150. The Rise and Fall of Ancient Israel (4)**

**ANRG 162. Peoples of the Middle East (4)**

**ANRG 286. Archaeology, Anthropology and the Bible—Foundations, Data, and Debate**

**HIGR 260A-B-C. Seminar in the Judaic Studies (4-4-4)**

**HIGR 264. Topics in Pre-Islamic Jewish History (4)**

**HIGR 295. Thesis Seminar (4)**

**HIGR 298. Directed Reading (1-12)**

**HIGR 299. Ph.D. Thesis Direction (1-12)**

**HIGR 500. Apprentice Teaching (1-40)**

**HINE 100. The Ancient Near East and Israel (4)**

**HINE 102. The Jews in Their Homeland in Antiquity (4)**

**HINE 103. The Jewish Diaspora in Antiquity (4)**

**HINE 104. The Bible and the Ancient Near East: The Primary History (4)**

**HINE 105. The Bible and the Near East: The Prophets (4)**

**HINE 106. The Bible and the Near East: The Writings (4)**

**HINE 108. The Middle East before Islam (4)**

**HINE 109. Learning to Read Biblical Hebrew (4)**

**HINE 114. History of the Islamic Middle East (4)**

**HINE 116. The Middle East in the Age of European Empires (1798 to 1914) (4)**

**HINE 118. The Middle East in the Twentieth Century (4)**

**HINE 151A/251A. Introduction to Aramaic Language (4)**

**HINE 151B/251B. Introduction to Aramaic Dialects (4)**  
**Prerequisite:** previous course.

**HINE 151C/251C. Introduction to Aramaic Dialects (4)**  
**Prerequisite:** previous course.

**HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)**

**Prerequisite:** knowledge of at least one Semitic language; a course in general linguistics also desirable.

**HINE 152B/252B. Introduction to Ugaritic (4)**  
**Prerequisite:** previous course.

**HINE 152C/252C. Advanced Ugaritic (4)**  
**Prerequisite:** previous course.

**HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)**

**HINE 153B/253B. Continued Akkadian Language (4)**  
**Prerequisite:** previous course.

**HINE 153C/253C. Advanced Akkadian Language (4)**  
**Prerequisite:** previous course.

**HINE 161/261. Seminar in the Hebrew Bible (4)**

**HINE 166/266. Nationalism in the Middle East (4)**

**HINE 170/270. Special Topics in Jewish History (4)**

**HINE 181/281. Problems in Hebrew Manuscripts (4)**

**HINE 186/286. Topics in Middle Eastern History (4)**

**HINE 199. Independent Study in Near Eastern History (4)**

**HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)**

**HITO 105. The Jews and Judaism in the Modern World (4)**

**HITO 106. How Jewish Women Lived in Modern Times (4)**

**Humanities 1. The Foundations of Western Civilization: Israel and Greece (6)**

**LTCO 212. Studies in the Hebrew Bible (4)**

**LTEU 105. Medieval Studies: Crusade, Conquest, Conversion in Medieval Literature (4)**

**LTNE 101. Bible: The Narrative Books (4)**

**LTNE 102. Bible: The Prophetic Books (4)**

**LTNE 103. Bible: The Poetic Books (4)**

**LTWL 115. Contemporary Literature/Italy and Holocaust: Jewish Experience in Literature (4)**

**LTWL 134. A Cultural History of American Jewry (4)**

**LTWL 138. Critical Religion Studies (4)**

**LTWL 148. Yiddish Literature in Translation (4)**

**LTWL 198. Directed Group Study (4)**

**LTWL 199. Special Studies (4)**

Courses cross-listed as LTNE and LTWL may be taken as Hebrew literature by students proficient in the language or as general literature by students without knowledge of Hebrew.

**Music II. Folk Music: Klezmer Music (4)**

**Philosophy 185. Philosophy of Religion (4-4)**

**Political Science 121. Government and Politics of the Middle East (4)**

**Political Science 121B. Politics in Israel (4)**

**Political Science 138D. The Arab-Israeli Conflict (4)**

**Sociology/C 156. Sociology of Religion (4)**

**Sociology/C 157. Religion in Contemporary Society (4)**

**Sociology/D 178. The Holocaust (4)**

**Sociology/D 188F. Modern Jewish Societies and Israeli Society (4)**

# Language and Communicative Disorders

## PROFESSORS

Farrell Ackerman, Ph.D., *Linguistics*  
Ursula Bellugi, Ed.D., *Adjunct/Psychology*  
Jeff Elman, Ph.D., *Cognitive Science*  
Eric Halgren, Ph.D., *Radiology*  
Mark Kritchevsky, M.D., *Clinical Neurosciences*  
Marta Kutas, Ph.D., *Cognitive Science*  
Rachel Mayberry, Ph.D., *Linguistics*  
John Moore, Ph.D., *Linguistics*  
Carol Padden, Ph.D., *Communication*  
Keith Rayner, Ph.D., *Psychology*  
Doris Trauner, M.D., *Neurosciences/Pediatrics*

## ASSOCIATE PROFESSORS

Leslie Carver, Ph.D., *Psychology*  
Seana Coulson, Ph.D., *Cognitive Science*  
Gedeon Deak, Ph.D., *Cognitive Science*  
Victor Ferreira, Ph.D., *Psychology*

## ASSOCIATE RESEARCH SCIENTIST

Jeanne Townsend, Ph.D., *Neurosciences*

## THE JOINT DOCTORAL PROGRAM

San Diego State University (SDSU) and the University of California, San Diego (UCSD), offer jointly a doctoral program in Language and Communicative Disorders. The program's focus is the interdisciplinary study of language and communicative disorders. A major emphasis of the program is to apply techniques developed in cognitive science and neuroscience to the study of language and language disorders. The program involves study and research in normal language (including sign languages of the deaf and language impairments), and in the neural bases of language use and language loss. Participating faculty have research interests in a wide range of issues in processes of language development, language and aging, multilingualism, language disorders, assessment, and intervention. Graduates of the program will be qualified to serve as faculty in university programs in a variety of disciplines, and to provide leadership in research and health services. The doctoral program faculty at UCSD are an interdisciplinary group from the Departments of Cognitive Science, Communication, Linguistics, Neurosciences, and Psychology. The doctoral program faculty at SDSU are members of the School of Speech, Language and Hearing Sciences and the Departments of Linguistics and Psychology. The program is coordinated by the doctoral program

coordinators at each campus, in conjunction with an Executive Committee comprising three faculty from each campus appointed by the Graduate Deans from each campus.

The program is innovative in that many of the requirements are designed to function as a model of professional preparation specifically incorporating activities in which a successful teacher and researcher must engage after obtaining the Ph.D: students will be required to participate in interdisciplinary research throughout the program, learn about the nature and ethics of research, prepare grant proposals, write manuscripts, and will gain experience in oral presentations and teaching. Graduates from the program will be well prepared for the rigors of an academic/research career. The doctoral program in Language and Communicative Disorders, being interdisciplinary, draws from a variety of undergraduate disciplines including communicative disorders, psychology, cognitive science, linguistics, engineering, and other related sciences. Students should have adequate preparation in mathematics, statistics, and biological sciences. Background in neurosciences and/or language sciences, or language disorders is helpful, but not required for admission.

By the end of the first year, all students will select a major field of emphasis by choosing one of three concentrations. The *Adult Language* concentration is intended to provide intensive education in communicative disorders in adults. Students in this concentration will also develop expertise in the study of language processing in normal adults. The *Child Language* concentration is intended to provide specialized education in childhood (birth to adolescence) communicative disorders. Students in this concentration will also achieve competence in developmental psycholinguistics emphasizing language acquisition in normally developing children. The *Multilingualism* concentration is intended to provide education in cross-linguistic, ethnographic, and other comparative studies of communicative disorders in children and/or adults, including those associated with bilingualism and second-language acquisition (including acquisition of sign language in deaf individuals). All students will be required to take some courses in each of the three concentrations. In addition, each student will elect a *methods minor*, applying one of the new technologies of cognitive neuroscience to research on language and communicative disorders. These may include computer-controlled studies of language processing in real-time functional brain imaging (including event-related brain potentials and/or functional magnetic resonance imaging), or neural-network simulations of communicative disorders.

The program is designed as a five-year curriculum, based on a twelve-month academic year. Students will be admitted to the doctoral program only in the fall semester/quarter. Information regarding admission is found in the current edition of the *Bulletin of the Graduate Division* of San Diego State University. To receive an application for admission, contact: SDSU/UCSD Joint Doctoral Program in Language and Communicative Disorders, San Diego State University, 5500 Campanile Drive, San Diego, CA 92182-1518, (619) 594-6775, or <http://slhs.sdsu.edu/phdmain.php>.

Required courses include the *Tools* requirement (two courses in statistics/research design, a course in neuroanatomy and physiology, a course in language structure and theory and a professional survival skills course), the *Foundations* requirement (three courses on normal language and three courses on disorders of language) and the *Electives* requirement (at least five courses, with a minimum of three courses related to the chosen concentration, chosen from a broad list of approved options from Cognitive Science, Communication, Computer Science, Linguistics, Neurosciences, and Psychology). Consult with advisor for approved list of elective courses. The five required electives must be approved by the student's advisor and the Doctoral Program Coordinators. In addition to their course requirements, students are required to complete three laboratory rotations in different research methodologies (each lasting a minimum of one quarter), two research projects (first year and second year), a qualifying examination for advancement to candidacy, and a dissertation proposal in the form of grant proposal to one of the public agencies that funds research in communicative disorders.

## PH.D. TIME LIMIT POLICIES

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

## COURSES

For course descriptions not found in the UC San Diego General Catalog, 2010-11, please contact the department for more information.

(See individual departments for details; for courses available at SDSU, see SDSU Graduate Catalogue.)

## TOOLS REQUIREMENT

Quantitative Methods in Psychology 201A-B-C  
Ethics and Survival Skills in Academia  
Cognitive Science 241

Systems Neuroscience  
Cognitive Science 201 or  
Basic Neurology SOMC 205

Foundations: Theories and Methods in the Study of Cognitive Phenomena  
Cognitive Science 203 or  
Introduction to Grammatical Theory (Linguistics 221A) and  
Introductory Phonology (Linguistics 211A)

## FOUNDATIONS REQUIREMENT

Special Topics in Psycholinguistics  
Psychology 244

## ELECTIVES

### COGNITIVE SCIENCE

200: Cognitive Science Seminar

202: Foundations: Computational Modeling of Cognition

211A-B-C: Research Methods in Cognitive Science  
213: Issues in Cognitive Development

260: Seminar on Special Topics  
272: Topics in Theoretical Neurobiology  
273: Biological Basis of Attention

#### **COMMUNICATION**

200A: Communication as Social Force  
200B: Communication and Culture  
200C: Communication and the Individual  
201B: Ethnographic Methods for Communication  
Research  
201C: Discourse Analysis

#### **LINGUISTICS**

211A: Introductory Phonology<sup>1</sup>  
221A: Introduction to Grammatical Theory<sup>1</sup>  
225: Topics in Syntax  
270: Psycholinguistics  
272: Topics in Neurolinguistics  
278: Research in Second Language Acquisition

#### **PSYCHOLOGY**

218A-B: Cognitive Psychology  
222: Biological Psychology  
236: Substance Abuse  
244: Special Topics in Psycholinguistics  
252: Seminar on Cognitive Neuroscience

#### **COMPUTER SCIENCE AND ENGINEERING**

250A-B: Artificial Intelligence  
253: Neural Networks  
256: Statistical Natural Language Processing  
258A: Cognitive Modeling

#### **NEUROSCIENCES**

243: Physiological Basis of Human Information  
263: Developmental Neuroscience

#### **PHILOSOPHY**

234: Philosophy of Language

<sup>1</sup>Students who use this course to fulfill the Tools requirement may not use this as an elective.

# Languages

---

Students wishing to major or minor in a foreign language or enroll in language courses should go to the following sections of this catalog:

- Departments of History, Linguistics, and Literature
- Programs in Chinese Studies, Japanese Studies, Judaic Studies, and Latin American Studies
- School of International Relations and Pacific Studies (IR/PS)

For additional information and a chart listing languages offered at UC San Diego, go to the Language Web site at <http://www.ucsd.edu/current-students/academics/languages/index.html> on TritonLink.

# Latin American Studies

## PROFESSORS

Guillermo D. Algaze, Ph.D., *Professor, Anthropology*  
Robert R. Alvarez, Ph.D., *Professor, Ethnic Studies*  
Eric J. Bakovic, Ph.D., *Associate Professor, Linguistics*  
John D. Blanco, Ph.D., *Associate Professor, Literature*  
Geoffrey Braswell, Ph.D., *Associate Professor, Anthropology*  
Kimberley C. Brouwer, Ph.D., *Assistant Adjunct Professor, Family and Preventative Medicine*  
Robert Cancel, Ph.D., *Associate Professor, Literature*  
Jaime Concha, Ph.D., *Professor, Literature*  
Wayne A. Cornelius, Ph.D., *Professor, Political Science*  
Peter Cowhey, Ph.D., *Professor, International Relations and Pacific Studies*  
Ann Craig, Ph.D., *Associate Professor, Political Science*

Teddy Cruz, Ph.D., *Associate Professor, Visual Arts*  
Scott Desposato, Ph.D., *Assistant Professor, Political Science*  
Ricardo Dominguez, M.F.A., *Assistant Professor, Visual Arts and Calit2*  
Paul W. Drake, Ph.D., *Professor, Political Science*  
Richard Feinberg, Ph.D., *Professor, International Relations and Pacific Studies*  
David Fitzgerald, Ph.D., *Assistant Professor, Sociology*  
Ross H. Frank, Ph.D., *Associate Professor, Ethnic Studies*  
Richard Garfein, Ph.D., *Associate Adjunct Professor, Family and Preventive Medicine*  
Rosemary George, Ph.D., *Associate Professor, Literature*  
Brian Goldfarb, Ph.D., *Associate Professor, Communication*  
Paul S. Goldstein, Ph.D., *Associate Professor, Anthropology*  
Grant Goodall, Ph.D., *Professor, Linguistics*  
David Gutierrez, Ph.D., *Professor, History*  
Stephan Haggard, Ph.D., *Professor, International Relations and Pacific Studies*  
Daniel Hallin, Ph.D., *Professor, Communication*  
Gordon Hanson, Ph.D., *Professor, International Relations and Pacific Studies*  
John Haviland, Ph.D., *Professor, Anthropology*  
Ariana Hernandez-Reguant, Ph.D., *Assistant Professor, Communication*  
Louis Hock, M.F.A., *Professor, Visual Arts*  
Jorge Huerta, Ph.D., *Professor, Theatre and Dance*  
Christine Hunefeldt, Ph.D., *Professor, History, Director*  
Stephanie Jed, Ph.D., *Associate Professor, Literature*  
Sara Johnson, Ph.D., *Assistant Professor, Literature*  
Milos Kokotovic, Ph.D., *Associate Professor, Literature*  
Andrew Lakoff, Ph.D., *Associate Professor, Sociology*  
April Linton, Ph.D., *Assistant Professor, Sociology*  
David Mares, Ph.D., *Professor, Political Science*  
Jorge Mariscal, Ph.D., *Professor, Literature*  
Luis Martin-Cabrera, Ph.D., *Assistant Professor, Literature*  
Keith McNeal, Ph.D., *Assistant Professor, Anthropology*  
Everard Meade, Ph.D., *Assistant Professor, History*  
Hugh Mehan, Ph.D., *Professor, Sociology*

Mario Molina, Ph.D., *Professor, Chemistry and Biochemistry*  
Natalia M. Molina, Ph.D., *Associate Professor, Ethnic Studies*  
Michael Monteón, Ph.D., *Professor, History*  
John C. Moore, Ph.D., *Professor, Linguistics*  
Marc-Andreas Muendler, Ph.D., *Assistant Professor, Economics*  
Elizabeth Newsome, Ph.D., *Associate Professor, Visual Arts*  
Rafael Nunez, Ph.D., *Associate Professor, Cognitive Science*  
Ruben Ortiz-Torres, M.F.A., *Professor, Visual Arts*  
Max Parra, Ph.D., *Associate Professor, Literature*  
David Pedersen, Ph.D., *Assistant Professor, Anthropology*  
Sandra Pedregal, M.A., *Lecturer, International Relations and Pacific Studies*  
Nolan E. Penn, Ph.D., *Professor Emeritus, Psychiatry*  
Keith Pezzoli, Ph.D., *Lecturer, Urban Studies Program*  
Beatrice Pita, Ph.D., *Lecturer, Literature*  
Nancy Grey Postero, Ph.D., *Associate Professor, Anthropology*  
Mirle Bussel Rabinowitz, Ph.D., *Lecturer, Urban Studies Program*  
Pamela Radcliff, Ph.D., *Associate Professor, History*  
James E. Rauch, Ph.D., *Professor, Economics*  
Vivian Reznik, M.D., *Professor, Pediatrics*  
David Ringrose, Ph.D., *Professor Emeritus, History*  
Sebastian Saiegh, Ph.D., *Assistant Professor, Political Science*  
Lisa Sánchez, Ph.D., *Assistant Professor, Ethnic Studies*  
Marta Sánchez, Ph.D., *Professor Emeritus, Literature*  
Rosaura Sánchez, Ph.D., *Professor, Literature*  
Matthew Shugart, Ph.D., *Professor, International Relations and Pacific Studies*  
Dean Sidelinger, M.D., *Assistant Adjunct Professor, Pediatrics*  
Denise Ferreira da Silva, Ph.D., *Associate Professor, Ethnic Studies, Program Director*  
Harold Simon, M.D., *Professor Emeritus, Family and Preventive Medicine*  
Peter H. Smith, Ph.D., *Professor, Political Science*  
Steffanie Strathdee, Ph.D., *Professor, Family and Preventive Medicine*  
Roberto Tejada, Ph.D., *Associate Professor, Visual Arts*  
Eric Van Young, Ph.D., *Professor, History*  
Olga A. Vásquez, Ph.D., *Associate Professor, Communication*  
Carlos Waisman, Ph.D., *Professor, Sociology*  
Daniel Widener, Ph.D., *Assistant Professor, History*  
Winifred Woodhull, Ph.D., *Associate Professor, Literature*  
Christopher Woodruff, Ph.D., *Associate Professor, International Relations and Pacific Studies*  
Kathryn Woolard, Ph.D., *Professor, Anthropology*  
León Zamosc, Ph.D., *Associate Professor, Sociology*  
Ana Celia Zentella, Ph.D., *Professor Emerita, Ethnic Studies*  
Elana Zilberg, Ph.D., *Assistant Professor, Communication*  
Maria Zuniga, Ph.D., *Assistant Adjunct Professor, Pediatrics*

## AFFILIATED ACADEMIC STAFF

Harold Colson, M.L.S., *Librarian, International Relations and Pacific Studies*  
Karen Lindvall-Larson, M.L.S., *Librarian, Geisel Library*

## THE LATIN AMERICAN STUDIES PROGRAM

UC San Diego's program in Latin American studies has attained national and international distinction for its excellence in teaching, research, and public service. Each year its faculty offers approximately 100 Latin America-related courses in fourteen academic departments, and the Latin American Studies Program offers three interdisciplinary degrees:

- Bachelor of arts in Latin American Studies
- Minor in Latin American Studies
- Master of arts in Latin American Studies
- Latin American studies at UCSD offers distinct advantages:
  - At the undergraduate level, students may take elective courses on Latin American topics or pursue a minor or a B.A. degree in Latin American Studies. At the graduate level, students can obtain a M.A. degree in Latin American studies. In addition, various doctoral programs in academic departments across the social sciences and humanities offer a regional focus on Latin America.
  - Latin American studies integrates teaching, research, and policy analysis, encouraging students to develop interdisciplinary perspectives and to work actively with faculty on research projects and conferences.
  - Students participate in the activities of an outstanding array of research and teaching organizations, including the Center for Iberian and Latin American Studies, the Center for U.S.-Mexican Studies, the Graduate School of International Relations and Pacific Studies, the Center for Comparative Immigration Studies, and the Institute of the Americas. The Center for Iberian and Latin American Studies (CILAS) sponsors multidisciplinary colloquia, conferences, projects, and publications. CILAS also awards fellowships and grants each year to promising graduate students.
  - Students are encouraged to interact with visiting Latin American scholars and to participate in Latin America-related internships, seminars, clubs, foreign exchange programs, and other extracurricular activities.
  - Students at UCSD have access to one of the largest and fastest-growing library collections on Latin America in the United States.

Degree programs in Latin American studies are supervised by an interdisciplinary faculty group under the direction of the director and program director of the Center for Iberian and Latin American Studies.

## THE CURRICULAR PROGRAM

### UNDERGRADUATE MAJOR IN LATIN AMERICAN STUDIES

The bachelor of arts in Latin American studies blends coverage of methodological and theoretical approaches to the study of Latin America with a broad foundation in the humanities and social sciences. Students receiving this degree will be prepared for private and government employment or for graduate training; the major also provides a valuable supplement for those who subsequently pursue professional degrees in business, law, engineering, medicine, or other fields.

To satisfactorily complete the B.A. degree, students must take a broad range of courses from at least three of UCSD's humanities and social science departments. The collection of courses should be structured so as to provide both depth in a special area of study and breadth across the broader field. Students must also demonstrate proficiency in Spanish.

All students entering the major must enroll in LATI 50 "Introduction to Latin America," an interdisciplinary course that prepares majors to build a coherent curriculum on Latin America. During the senior year, all B.A. candidates are required to successfully complete LATI 190, a writing seminar. This course will culminate in the preparation of an interpretive paper based on the secondary analysis of existing scholarly research (approximately twenty to forty pages in length). As part of the overall requirements, students are strongly encouraged to enroll in four credits of Individual Study (LATI 199) with a member of the Latin Americanist faculty, who will serve as the student's principal advisor.

All upper-division courses applied to the requirements of the major must be taken for a letter grade (with the sole exception of LATI 199). A 2.0 grade-point average is required in the major, and students must earn at least a C- in each course counted for the major.

Students majoring in Latin American studies are also urged to minor in a core discipline such as anthropology, economics, history, literature, political science, or sociology. In summary, the requirements for the bachelor of arts in Latin American studies are:

#### Lower-Division Requirements

1. The equivalent of at least two years of college-level language instruction in Spanish, comparable to satisfactory completion of Literature/Spanish 2C; students who satisfy this requirement are strongly encouraged to study Portuguese.
2. LATI 50: Introduction to Latin America

#### Upper-Division Requirements

1. Eleven upper-division courses selected from the approved interdisciplinary course list for Latin American studies as follows:
  - a. Course work must be in at least three departments.
  - b. At least three courses must be from one department.

- c. No more than five courses from one department will count for credit.
  - d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.
2. Enrollment in the four-credit Senior Seminar (LATI 190), usually to be taken in the winter quarter of the senior year; satisfactory completion of a substantial paper is required of all graduating majors.
  3. Maintain a 2.0 grade-point average, earning at least a C- in each course counting for the major. With the sole exception of LATI 199, all courses must be taken for a letter grade.

### HONORS IN LATIN AMERICAN STUDIES

The Latin American Studies Program offers an Honors Program for students who demonstrate excellence in the major. In order to receive Honors in Latin American Studies a student must

1. Satisfy all lower-division requirements of the major program;
2. Complete nine upper-division courses selected from the Approved Interdisciplinary Course List for Latin American Studies as follows:
  - a. Course work must be in at least three departments.
  - b. At least three courses must be from one department.
  - c. No more than five courses from one department will count for credit.
  - d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.
3. Complete a three-course sequence in the senior year consisting of Individual Study, the Senior Seminar, and the Honors Seminar (LATI 199, 190, and 191, respectively);
4. Produce an original thesis based on primary research under the direction of a mentor selected from the Latin Americanist faculty, and defend this thesis during the spring quarter before an interdisciplinary faculty committee; and
5. Maintain a minimum GPA of 3.5 in the major.

### UNDERGRADUATE MINOR IN LATIN AMERICAN STUDIES

The Latin American studies minor allows students to explore interdisciplinary approaches to a significant world region while pursuing a major in an academic discipline. To complete the program, students take at least seven classes (twenty-eight units) in Latin American studies, five (twenty units) of which must be upper-division. These courses need to be approved Latin American studies classes from the humanities and social sciences. All classes need to be taken for a letter grade and satisfactorily completed.

- Five courses (twenty units) need to be upper-division.
- One course needs to be LATI 50, which is offered once per year.
- One course needs to fulfill the language requirement, which should be the culmination of at least

two years of college-level language instruction in Spanish or Portuguese. This course can be fulfilled in the following ways:

- LTSP 2C for non-native speakers
- LTSP 2D for native speakers
- LTSP 50 or above
- A UCSD-approved Spanish/Portuguese education-abroad course

### EDUCATION ABROAD

Students in Latin American studies are encouraged to participate in the Education Abroad Program (EAP) in Brazil, Chile, Costa Rica, or Mexico, or in other study abroad programs offered by the Opportunities Abroad Program (OAP). Subject to approval by petition after courses have been completed (based on syllabi and course work), courses taken through EAP/OAP will be accepted for credit toward the major or minor. The equivalent of six UCSD upper-division courses can be petitioned for credit toward the major, and a maximum of two UCSD upper-division courses can be petitioned for credit toward the minor.

Students interested in studying abroad should see the Latin American studies student affairs coordinator to discuss appropriate courses and programs for their plan of study before they leave. They should also visit the following Web site: <http://pao.ucsd.edu/acadint/CILASabroad.htm>. Information on EAP/OAP is given in the "Education Abroad Program" section of the *UC San Diego General Catalog*. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at <http://pao.ucsd.edu>. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

### MASTER OF ARTS IN LATIN AMERICAN STUDIES

The master of arts in Latin American studies is designed for students who seek to integrate a broad range of disciplinary approaches to a world region of growing international significance. Upon graduation, most students pursue additional advanced degrees in academic or professional fields; others proceed to careers in the private sector, in international organizations, or in government.

To qualify for admission, students must have a B.A. with a grade-point average of at least 3.5 on a 4.0 scale for the final two years of undergraduate study plus satisfactory scores on the Graduate Record Examination.

To receive the master of arts in Latin American studies, a student must

1. Demonstrate foreign language competence in Spanish or Portuguese.
2. Maintain a 3.0 GPA in forty units of course work (about ten courses) to be completed as follows:
  - a. Complete the Latin American Studies Basic Seminar Sequence: twelve units must be taken in the required Core Seminar in Latin American Studies (LATI 200, four units), four units in approved theory seminar, and four units in approved methodology seminar.
  - b. Courses must be completed in at least three fields, with no more than sixteen units in any

one department. Students are encouraged to include four units of independent research (LATI 299) for work on the master's thesis.

- c. At least sixteen units must be taken in graduate-level courses, and up to sixteen units may be taken in upper-division, undergraduate-level courses.
3. Successfully complete either a comprehensive exam or master's thesis.

M.A. students have the option to upgrade upper-division, undergraduate-level courses to graduate-level courses (contact the Latin American studies student affairs coordinator for information on requirements and procedures). To convert an undergraduate-level course (100 level) into a 298 graduate-level course, a student must attend all of the course meetings and incorporate a component of additional, graduate-level research work, upon arrangement with the faculty member teaching the course (a special form describing the supplementary work must be filled by the student and approved by the instructor and CILAS' academic coordinator). In all such cases, the supplementary work should (a) increase the amount of reading to match the regular reading expectations of a graduate seminar, (b) include additional meeting time with the professor for a graduate-level discussion of the material, and (c) require the student to write a research paper (which would generally be on the order of fifteen to twenty pages).

#### **DISCIPLINARY AND THEMATIC CONCENTRATIONS**

M.A. students in Latin American studies who are interested in specific disciplines or research topics may apply for a disciplinary or thematic concentration. Currently students may choose from concentrations in cultural studies, gender studies, international migration, history, and sociology.

In addition to the general requirements for all candidates applying for admission to the Master of Arts in Latin American studies, applicants to a concentration must submit a statement explaining their intellectual and career interests in that specific area of study. Applications from new students will be considered for the fall quarter. Current students in the Latin American studies master's program may apply in the spring quarter of their first year.

M.A. students who were previously enrolled as undergraduates at UCSD will not be allowed to repeat courses for credit toward the concentration. In all cases there are alternatives, and those students will be expected to take other classes to fulfill the requirements.

#### **GENERAL CONCENTRATION REQUIREMENTS**

To receive the master of arts in Latin American studies with a concentration, a student must

1. Demonstrate foreign language competence in Spanish or Portuguese.
2. Maintain a 3.0 GPA in forty units of course work (about ten courses) to be completed as follows:
  - a. Complete the Latin American Studies Basic Seminar Sequence: twelve units must be taken in the required Core Seminar in Latin American Studies (LATI 200, four units), four

units in approved theory seminar, and four units in approved methodology seminar.

- b. Complete sixteen units within the specifications of the concentration (as specified below). All of the concentration units must be taken at the graduate level (200 level), and a maximum of two undergraduate-level courses (100 level) may be upgraded to graduate-level 298 courses.
  - c. Complete twelve units of general electives within the specification of the concentration (as specified below). At least 50 percent of the general elective units must be taken at the graduate level (200 level).
3. Successfully complete a master's thesis on a topic relevant to the area of concentration.

#### **CONCENTRATION IN CULTURAL STUDIES**

To receive the master of arts degree in Latin American studies (cultural studies), a student must complete the following units as concentration course work and general electives:

1. Two seminars (eight units) from the approved list of core seminars. These may be used to satisfy the theory and methodology requirements of the LAS M.A. program (ETHN 259, ETHN 260, HIGR 200, HIGR 205, HIGR 207, HIGR 247A-B, HIGR 248A-B, HIGR 252, LTCS 201, LTCS 210, LTCS 225, LTCS 250, LTCS 255, LTSP 272, LTSP 275, VIS 259).
2. Two courses (eight units) from the approved list of elective courses within the thematic specialization (ANAR 100, ANAR 153, ANSC 131, ANRG 131, ANAR 154, ANSC 132, ANSC 135, ANTH 269, COCU 110, COCU 130, COCU 131, COCU 165, COCU 168, COCU 179, COHI 114, COHI 115, COSF 140C, COSF/COCU/COHI 175, COSF 183, COSF 185, HIGR 245, LTAM 100, LTAM 101, LTAM 102, LTAM 105, LTAM 106, LTAM 107, LTAM 108, LTAM 109, LTAM 110, LTAM 111, LTAM 120, LTAM 130, LTAM 132, LTEN 180, LTEN 188, LTSP 130A/B, LTSP 133, LTSP 134, LTSP 135A, LTSP 135B, LTSP 136, LTSP 137, LTSP 138, LTSP 140, LTSP 141, LTSP 142, LTSP 150A, LTSP 150B, LTSP 151, LTSP 153, LTSP 154, LTSP 170, LTSP 172, LTSP 173, LTSP 174, LTSP 175, LTSP 176, LTSP 177, LTSP 190, LTSP 252, LTSP 258, MUS 107, MUS 111, MUS 126, MUS 150, MUS 151, TDHT 108, TDHT 110, TDHT 111, TDHT 112, VIS 126AN, VIS 126BN, VIS 126G, VIS 126H, VIS 128DN, VIS 152)
3. The selection of these seminars and courses must be formally approved by the student's personal advisor (by signing the student's graduate student general petition form). With approval from his/her advisor, however, students in the cultural studies concentration may take other seminars and courses that do not appear in the approved list, provided that the content of the work that they do is directly related to Latin American issues, topics, or themes.
4. General Electives: The remaining twelve units must be taken as follows: two courses from the Approved List of Courses on Latin America (eight units), and one course of Directed Reading or Independent Research (298 or 299, four units).

#### **CONCENTRATION IN GENDER STUDIES**

To receive the master of arts degree in Latin American studies (gender studies), a student must complete the following units as concentration course work and general electives:

1. One general theoretical course in gender studies (four units in any of the following: ANGR 244, CGS 100, CGS 101, CGS 104, CGS 112, COCU 132, COCU 139, ETNH 256, LTCS 250, SOCB 118, SOCC 132, SOCC 267).
2. One course in feminist theory (four units in any of the following: CGS 103, COCU 138, HIGR 205, POLI 116A, POLI 217).
3. One course focused on gender studies in Latin America (four units in any of the following: ETHN 129, ETHN 148, HILA 261, LTAM 105, LTAM 106, LTSP 175, POLI 134P, USP 135).
4. One course of directed reading (298, four units), taken with a faculty member affiliated with the CGS Program, focused on a topic relevant to Latin American gender studies.
5. General Electives: The remaining twelve units must be taken as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

#### **CONCENTRATION IN HISTORY**

To receive the master of arts degree in Latin American studies (history), a student must complete the following units as concentration course work and general electives:

1. A required research seminar sequence in Latin American history (eight units in any of the following: HIGR 245A-B-C, HIGR 247A-B, or HIGR 248A-B).
2. Two elective courses or seminars in Latin American history (eight units in any two of the following: ETHN 130, ETHN 131, ETHN 180, ETHN 259, HILA 100, HILA 101, HILA 102, HILA 107, HILA 108, HILA 112, HILA 113, HILA 115, HILA 120, HILA 121, HILA 122, HILA 123, HILA 125, HILA 131, HILA 132, HILA 160/260, HILA 161/261, HILA 162/262, HILA 166/266, HILA 170/270, HILA 171/271, HIGR 245A-B-C, HIGR 247A-B, HIGR 248A-B, HIGR 249, HIGR 250, HIGR 251, HIGR 252, HIUS 158, HIUS 159, HIUS 167/267, LTSP 116, LTSP 135A).
3. General Electives: The remaining twelve units must be taken in departments other than the Department of History as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

#### **CONCENTRATION IN INTERNATIONAL MIGRATION**

To receive the master of arts degree in Latin American studies (international migration), a student must complete the following units as concentration course work and general electives:

1. One course focused on economic and social factors in international migration (four units in any of the following: ECON 114, ETHN 118, ETHN 131,

ETHN 134, HIUS 159, IRGN 490, POLI 248, SOCG 282).

2. One course focused on Immigration Policy (4 units in any of the following: POLI 150, POLI 236, IRGN 490).
3. One course focused on Latin American international migration (four units in any of the following: COHI 175, ETHN 189, HIUS 180, HIUS 186, IRGN 490, LTAM 109, LTSP 177).
4. One course of directed reading (four units in a 298 course, focused on a topic relevant to Latin American migratory movements).
5. General Electives: The remaining twelve units must be taken as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of Independent Research (299).

### CONCENTRATION IN SOCIOLOGY

To receive the master of arts degree in Latin American studies (sociology), a student must complete the following units as concentration course work and general electives:

1. One seminar in classical sociological theory (four units in SOC 201A or SOC 201B).
2. One seminar in sociological research methods (four units in any of the following: SOC 203, SOC 204, SOC 205, SOC 206, SOC 207, SOC 227).
3. One core sociological field seminar (four units in any of the following: SOC 212, SOC 216, SOC 222, SOC 226, SOC 234, SOC 244, SOC 264, SOC 267).
4. One sociology course or seminar focused on Latin America (four units in any of the following: SOCD 182, SOCD 188D, SOCG 258).
5. General Electives: The remaining twelve units must be taken in departments other than the Department of Sociology as follows: one course from the approved list of courses on Latin America (four units), four units of directed reading (298), and four units of independent research (299).

### COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

#### LATI 1A. Zapotec Conversation and Analysis I (4)

Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course focus on listening, speaking, and writing. Students gain basic knowledge of grammatical principles in order to understand the structure and rules of the language.

#### LATI 1B. Zapotec Conversation and Analysis II (4)

Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course teaches comprehensive vocabulary through listening, speaking, reading, and writing activities. Course also focuses on oral proficiency/grammar, including verb conjugation and other grammatical structures. **Prerequisite:** LATI 1A.

#### LATI 1C. Zapotec Conversation and Analysis III (4)

Presentation and practice of the grammatical structures of Valley Zapotec, an indigenous language from Mexico. Course gives students an advanced understanding of

written and spoken Valley Zapotec through reading, conversation, group presentations, and composition. **Prerequisite:** LATI 1B.

#### LATI 50. Introduction to Latin America (4)

Interdisciplinary overview of society and culture in Latin America—including Mexico, the Caribbean, and South America: legacies of conquest, patterns of economic development, changing roles of women, expressions of popular culture, cycles of political change, and U.S.–Latin American relations.

#### LATI 50XL. Foreign Language Discussion—Introduction to Latin America (1)

Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered Latin American Studies foreign area course. This section is taught by the course instructor, has no final exam, and does not affect the grade in the core course, LATI 50.

#### LATI 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

#### LATI 120/220. Special Topics in Latin American Studies (1-4)

A course designed to cover various aspects and various disciplines of Latin American Studies.

#### LATI 190. Senior Seminar (4)

Research seminar on selected topics in the study of Latin America; all students will be required to prepare and present independent research papers. (Honors students will present drafts of senior research theses, of no less than fifty pages in length; non-honors students will present final versions of analytical papers of approximately twenty-five to forty pages in length.) **Prerequisites:** satisfactory completion of LATI 50 and a working knowledge of Spanish.

#### LATI 191. Honors Seminar (4)

Independent reading and research under direction of a member of the faculty group in Latin American Studies; goal is to provide honors students with an opportunity to complete senior research thesis (to be defended before three-person interdisciplinary faculty committee). **Prerequisites:** successful completion of LATI 50, working knowledge of Spanish; minimum GPA of 3.5 in the major.

#### LATI 199. Individual Study (4)

Guided and supervised reading of the literature on Latin America in the interdisciplinary areas of anthropology, communications, economics, history, literature, political science, and sociology. For students majoring in Latin American Studies, reading will focus around potential topics for senior papers; for honors students in Latin American Studies, reading will culminate in formulation of a prospectus for the research thesis. **Prerequisites:** LATI 50 and working knowledge of Spanish.

#### LATI 200. Core Seminar on Interdisciplinary Research and Methodology in Latin American Studies (4)

A team-taught course wherein members of the faculty group in Latin American Studies present diverse disciplinary and thematic approaches to the region. Topics vary from year to year. Grades are based on discussions and on a series of analytical papers. **Prerequisite:** enrollment in the master's degree program in Latin American Studies or permission of instructor.

#### LATI 210A-B. Latin American Library Resources and Research Methodology (2-2)

A detailed survey of major research methods and resources for the study of Latin America. Both conventional library materials and those available electronically will be explored. Skills will transfer to any major research library. Various methodologies will also be explored in relation to the students' individual projects. A critical review, annotated bibliography, and a statement of research methodology, related to their proposed topics, will be required. Not offered in 2009–10.

#### LATI 298. Directed Reading (1-12)

Guided and supervised reading of the literature of the several areas included in the interdisciplinary fields of anthropology, communications, economics, history, literature, political science, and sociology. **Prerequisite:** graduate standing in Latin American Studies.

#### LATI 299. Independent Research (1-12)

Independent work by graduate students engaged in thesis research and writing under the direct supervision of a faculty advisor.

#### LATI 500. Teaching Apprenticeship (1-4)

The course is designed for teaching assistants to learn effective teaching methods through supervision and mentorship by the faculty. Student will learn handling of discussions; preparation and grading of examinations and other written exercises; and student relations.

### COURSES THAT SATISFY UNDERGRADUATE/GRADUATE DEGREE REQUIREMENTS IN LATIN AMERICAN STUDIES

Approved Interdisciplinary Courses: The following is a list of courses available in UCSD departments that are approved to satisfy the requirements of the major, minor, and master's in Latin American studies. Please note that these courses may not be offered every quarter or year and new courses may be added. Check the current Schedule of Classes or the Latin American studies Web site (<http://orpheus.ucsd.edu/las>) for updated information.

The Departments of Linguistics and Literature and the Graduate School of International Relations and Pacific Studies offer language courses in Spanish and Portuguese. Language courses do not count toward the course requirements for Latin American studies degrees.

### ANTHROPOLOGY

#### ANAR 100. Special Topics in Anthropological Archaeology (when Latin American content)

#### ANAR 153. The Mysterious Maya

#### ANAR 154. Aztecs and Their Ancestors

#### ANAR 155. Study Abroad: Ancient Mesoamerica

#### ANAR 156. The Archaeology of South America

#### ANAR 156-XL. The Archaeology of South America (FLD)

#### ANAR 157. Early Empires of the Andes: The Middle Horizon

#### ANAR 157-XL. The Andean Middle Horizon (FLD)

#### ANAR 158. The Inca: Empire of the Andes

#### ANSC 100. Special Topics in Socio-Cultural Anthropology

#### ANSC 125. Gender, Sexuality, and Society

#### ANSC 131. Urban Cultures in Latin America

#### ANSC 131-XL. Foreign Language Discussion—Urban Cultures in Latin America

#### ANSC 132. Modernity in Brazil

#### ANSC 135. Indigenous Peoples of Latin America

#### ANTH 269. Current Readings in Latin America

### COMMUNICATION

#### COCU 110. Cinema in Latin America: Visions of a Continent in Transition

#### COCU 131. Cinema of the Cuban Revolution

COHI 114. Bilingual Communication

COHI 114. Bilingual Communication

# Law and Society

OFFICE: Interdisciplinary Programs, EBU 3B,  
Computer Science and Engineering Building, Room  
1114, Warren College  
<http://provost.ucsd.edu/warren/law/>

Law and Society is an interdisciplinary minor that emphasizes the complexity and interrelationship of legal, social, and ethical issues in their historical context. Although it is administered by Warren College, it is available to all UC San Diego undergraduate students considering law-related careers or those with a general interest in law as a social institution. The purpose of the program is to enhance students' critical analysis of social and ethical issues related to law and of the legal implications and ramifications of policy and decision-making in their major fields of study. Students examine the role of the legal system and specific legal issues from the perspectives of the social sciences and humanities. Social forces, historical questions, and issues of values will be considered in the context of the legal system. The focus of the minor is on the process of law—how the law both reflects and defines basic social values—and its relation to the political, economic, and social conflicts within society.

The interdisciplinary content of the Law and Society minor offers students the opportunity to examine law-related issues from the perspectives of a broad range of disciplines, including anthropology, communication, critical gender studies, economics, environmental studies, ethnic studies, history, linguistics, philosophy, political science, psychology, sociology, and urban studies and planning.

Students should consult an academic advisor at their college to determine how the Law and Society minor can best meet their college graduation requirements. Minor declarations must be made online using the [TritonLink](#) major and minor application.

Students are urged to supplement the Law and Society minor with a law-related internship. The Academic Internship Program offers local placements with lawyers, judges, elected officials, government offices, and public interest groups. In addition, placements are available in Washington, D.C. with senators, representatives, legislative committees, and political action committees.

A number of extracurricular events and programs are also available to students interested in law. Information on these programs and activities is available in the Warren College Interdisciplinary Programs Office, EBU 3B, Computer Science and Engineering Building, Room 1114, Warren College, or call (858) 534-3068. Web site: <http://provost.ucsd.edu/warren/law/>.

## LAW AND SOCIETY MINOR REQUIREMENTS

The minor consists of four required courses and three elective courses. At least five courses must be taken at the upper-division level. To assure an interdisciplinary learning experience, students must include at least one course from each of the following academic departments: history, philosophy,

political science, and sociology. Law and Society 101, Contemporary Legal Issues, will count as a history, philosophy, political science, or sociology course according to the departmental affiliation of the instructor. Law and Society 101 may be repeated for credit once (separate topic required), for a maximum total of eight units.

### REQUIRED COURSES

1. One of the following two courses:  
Political Science 40. Introduction to Law and Society  
Sociology 50. Introduction to Law and Society
2. Law and Society 101. Contemporary Legal Issues
3. One of the following four courses:  
History US 150. American Legal History to 1865  
History US 151. American Legal History since 1865  
Political Science 104A. The Supreme Court and the Constitution  
Political Science 104B. Civil Liberties—Fundamental Rights
4. One of the following two courses:  
Philosophy 168. Philosophy of Law  
Sociology 140. Sociology of Law

### ELECTIVES CHOSEN FROM THE FOLLOWING

#### Anthropology

100. Topics in Socio-Cultural Anthropology (topic approval required)

#### Communication

139A–B. Law, Communication, and Freedom of Expression

#### Critical Gender Studies

106. Gender, Equality, and the Law  
107. Gender and Reproductive Rights

#### Dimensions of Culture

2. Justice (open to Thurgood Marshall College students only)

#### Economics

118. Law and Economics: Torts, Property, Crime  
119. Law and Economics: Contracts and Corporations

#### Environmental Studies

110. Environmental Law

#### Ethnic Studies

152. Law and Civil Rights

#### History of Science

131. Science, Technology, and Law

#### History Topics

134. International Law: War Crimes and Genocide  
History of the United States

128. African-American Legal History

150. American Legal History to 1865

151. American Legal History since 1865

152A. A Constitutional History of the U.S. to 1865

152B. A Constitutional History of the U.S. since 1865

153. American Political Trials

155A. Religion and Law in American History: Foundations to the Civil War

155B. Religion and Law in American History: Civil War to the Present

169. Topics in American Legal and Constitutional History

#### Law and Society

101. Contemporary Legal Issues (may be repeated for credit once; separate topic required)

102S. Crimes, Civil Wrongs, and Constitution

#### Linguistics

105. Law and Language

176. Language of Politics and Advertising

#### Philosophy

10. Introduction to Logic

12. Logic and Decision Making

162. Contemporary Moral Issues

163. Biomedical Ethics

167. Contemporary Political Philosophy

168. Philosophy of Law

#### Political Science

13. Power and Justice

40. Introduction to Law and Society

104A. The Supreme Court and the Constitution

104B. Civil Liberties—Fundamental Rights

104C. Civil Liberties—The Rights of Criminals and Minorities

104D. Judicial Politics

104F. Seminar in Constitutional Law

104I. Law and Politics—Courts and Political Controversy

104L. Positive Political Theory of Law

104M. Law and Sex

140A. International Law and Organizations

145A. International Politics and Drugs

150A. Politics of Immigration

#### Psychology

162. Psychology and the Law

#### Sociology

50. Introduction to Law and Society

120T. Special Topics in Culture, Language, and Social Interaction (topic approval required)

140. Sociology of Law

140F. Law and the Workplace

141. Crime and Society

142. Social Deviance

144. Forms of Social Control

145. Violence and Society

146. Law Enforcement in America

152. Social Inequality and Public Policy

159. Special Topics in Social Organizations and Institutions (topic approval required)

160E. Law and Culture

163. Migration and the Law

173. Elite Crime

#### Urban Studies and Planning

124. Land Use Planning

Students may petition to substitute courses in the minor that have substantial legal content. Petitions should be submitted to the Warren College Interdisciplinary Programs Office.

## RECOMMENDED INTERNSHIP EXPERIENCE

A law-related internship (AIP 197) is recommended and should be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor, <http://aip.ucsd.edu/>.

## FACULTY ADVISORY COMMITTEE

Farrell Ackerman, *Professor, Linguistics*  
Steven Adler, *Provost, Earl Warren College; Program Director*  
Richard Arneson, *Professor, Philosophy*  
Thomas Barton, *Professor, California Western School of Law*  
Michal Belknap, *Professor, California Western School of Law; Adjunct Professor, History*  
Laurence Benner, *Professor, California Western School of Law; Visiting Professor, Political Science*  
Gerald Doppelt, *Professor, Philosophy*  
Richard Finkmoore, *Professor, California Western School of Law; Visiting Professor, Environmental Studies*  
Tal Golan, *Associate Professor, History*  
Robert Horwitz, *Professor, Communication*  
Alan Houston, *Professor, Political Science; Provost, Eleanor Roosevelt College*  
Kwai Ng, *Assistant Professor, Sociology*  
Michael Parrish, *Professor, History*  
Patrick Patterson, *Assistant Professor, History*  
Samuel Rickless, *Professor, Philosophy*  
Sanford Schane, *Professor Emeritus, Linguistics*  
John Skrentny, *Professor, Sociology*  
Glenn Smith, *Professor, California Western School of Law; Visiting Professor, Political Science*

---

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

Most course work for the Law and Society minor is listed under the academic department providing instruction. Law and Society 101, described below, is an interdisciplinary course. It may be counted toward minor requirements as either History, Philosophy, Political Science, or Sociology. Further information on Law and Society 101 is available in the Interdisciplinary Programs Office.

## UPPER-DIVISION

### **101. Contemporary Legal Issues (4)**

This course will deal in depth each year with a different legal issue of contemporary significance, viewed from the perspectives of political science, history, sociology, and philosophy. Required for students completing the Law and Society minor. May be repeated for credit once, for a maximum total of eight units. **Prerequisite:** upper-division standing or consent of instructor.

### **102S. Crimes, Civil Wrongs, and Constitution (4)**

Through lectures and discussions on several controversial topics, students are introduced to the subjects taught in the first year of law school. They learn briefing, case analysis, and the Socratic method of instruction, engage in role-playing exercises, and take law-school examinations. **Prerequisite:** upper-division standing or consent of instructor.

Leonard D. Newmark, Ph.D.  
David M. Perlmutter, Ph.D.  
Sanford A. Schane, Ph.D.

## OFFICE:

3016 Applied Physics and Mathematics Building  
Muir College  
<http://ling.ucsd.edu>

In what ways do languages differ, and in what ways are all human languages alike? These are the basic questions that the science of linguistics seeks to answer.

In formulating hypotheses about language it has been found that languages have intricate structure at a number of different levels. Phonetics studies the sounds of speech and how they are produced and perceived. Phonology studies the principles by which the sounds of a language are organized into a system and combined into syllables and larger units. Morphology studies the principles by which smaller units of meaning are combined into words. Syntax is the study of the principles by which words are combined into larger units such as phrases and sentences. Semantics studies meaning—the meanings of words and the ways the meanings of words are related to the meanings of larger units such as the phrase, the sentence, and the discourse. Linguists attempt to discover to what extent the principles at each level vary across languages, and to what extent they are universal.

Because language provides a window into the human mind, linguistics plays a central role in the study of human cognition and figures prominently in the field of cognitive science. We know, for example, that all normal children succeed in learning language relatively quickly at a time when their other cognitive abilities are still developing. The universal properties of human language that linguists discover can be used to provide models of this process, to explain why it occurs so rapidly, and to

make specific predictions about the way it unfolds. The results of linguistic research can also be tested directly in experimental studies of how language is represented and processed in the mind (psycholinguistics) and brain (neurolinguistics). Language can also be studied in terms of its function as a cognitive system shared by an entire society; sociolinguistics investigate the ways in which the language we use is affected by our social environment.

The Department of Linguistics offers a series of lower-division courses designed to introduce non-majors to the scientific study of language in the broader perspective of a liberal arts education. These are LIGN 3 (Language as a Social and Cultural Phenomenon), LIGN 4 (Language as a Cognitive System), LIGN 7 (Sign Language and Its Culture), LIGN 8 (Languages and Cultures in America), and LIGN 17 (Making and Breaking Codes). These courses may be used to satisfy the Marshall College disciplinary breadth requirement. Lower-division linguistics courses may be used to satisfy the social sciences requirement at Muir College and Revelle College, and they partially fulfill the requirements for a program of concentration in Warren College. In addition, certain linguistics courses satisfy the American Cultures requirement in Revelle College and the cultural diversity requirement in Muir College and Warren College. LIGN 17 (Making and Breaking Codes) satisfies the Thurgood Marshall Computational Skills requirement in addition to the formal skills requirement in Warren College and in the Human Development Program. This course also satisfies the Structured Reasoning requirement in Sixth College. Students should consult their college advising offices to determine which linguistics courses satisfy these other requirements.

Linguistics courses are relevant to a wide range of fields of study at UC San Diego, including anthropology, cognitive science, communication, computer science, human development, law and society, psychology, and sociology, as well as areas such as African studies, Chinese studies, ethnic studies, Judaic studies, Latin American studies, and others. In some cases certain linguistics courses count toward a major or minor in one of these departments or programs. Students should consult with a faculty advisor in linguistics and the other department or program when deciding on their course of study.

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress toward the major. Students considering this option should discuss their plans with the department undergraduate advisor before going abroad. Detailed information on EAP/OAP is found in this catalog under the heading "[Education Abroad Program](#)."

The Department of Linguistics oversees the Linguistics Language Program, which offers basic language instruction in Arabic, ASL, French, German, Italian, Portuguese, and Spanish. Courses from the Language Program satisfy general-education requirements, as well as the Department of Linguistics language requirement. Graduate students who require a reading knowledge of French or German may enroll in LIFR 11 or LIGM 11, respectively.

The department also offers language instruction for individuals who grew up in an English-speaking

environment while speaking a different language at home (Arabic, Armenian, Cantonese, Hindi, Korean, Persian, Tagalog, and Vietnamese; other languages may be added to this list if student demand is sufficient). Instruction in these languages is designed to raise students' linguistic and cultural competence to professional levels. Finally, directed self-instruction is available for a wide variety of languages through LIDS 19.

Note: Please check with the department office for updates concerning programs and course offerings.

---

## THE MAJOR PROGRAM

---

### GENERAL REQUIREMENTS

Every linguistics major (except the language studies major) must satisfy the undergraduate language requirement and must successfully complete a minimum of twelve upper-division courses. In addition to the general major, the department offers a set of enriched major programs in various specializations.

Except for LIGN 199, no course taken on a Pass/Not Pass basis may be counted toward a linguistics major. No more than one quarter of LIGN 199 may be counted toward a linguistics major. For the general linguistics, language and society, and cognition and language majors, at least six out of the twelve upper-division linguistics courses counted toward the major must be linguistics courses taken in residence at UCSD. For the language studies major, at least six out of the twelve upper division courses counted toward the major must be taken at UCSD, and at least four of these must be linguistics courses that satisfy Part A of the language studies course requirements. A letter grade of C– or better is required for every course counted toward a linguistics major, including courses taken to satisfy the department's undergraduate language requirement.

### REQUIRED LINGUISTICS COURSES

Linguistics 101 is required as an introduction to the field and serves as the prerequisite to certain other courses. Students who choose a linguistics major should enroll in it as early as possible.

Every major program in linguistics (except the language studies major) must include the following required courses covering basic areas of the field:

**LIGN 101. Introduction to the Study of Language**  
**LIGN 110. Phonetics**  
**LIGN 111. Phonology I**  
**LIGN 120. Morphology**  
**LIGN 121. Syntax I**  
**LIGN 130. Semantics**

**Students are advised to take these required courses as early as possible, since the background they provide may be needed for other upper-division linguistics courses. Check individual course listings for prerequisite information.**

### LINGUISTICS ELECTIVES

**LIGN 105. Law and Language**  
**LIGN 108. Languages of Africa**  
**LIGN 119. First and Second Language Learning: From Childhood Through Adolescence**

LIGN 140. The Structure of American Sign Language  
 LIGN 141. Language Structures  
 LIGN 142. Language Typology  
 LIGN 143. The Structure of Spanish  
 LIGN 144. Discourse Analysis: American Sign Language and Performing Arts  
 LIGN 145. Pidgins and Creoles  
 LIGN 146. Sociolinguistics in Deaf Communities  
 LIGN 150. Historical Linguistics  
 LIGN 160. Pragmatics  
 LIGN 165. Computational Linguistics  
 LIGN 170. Psycholinguistics  
 LIGN 171. Child Language Acquisition  
 LIGN 172. Language and the Brain  
 LIGN 173. Heritage Languages  
 LIGN 174. Gender and Language in Society  
 LIGN 175. Sociolinguistics  
 LIGN 176. Language of Politics and Advertising  
 LIGN 177. Multilingualism  
 LIGN 179. Second Language Acquisition Research

### Restricted Courses

LIGN 87. Freshman Seminar (does not count as a linguistics elective)  
 LIGN 192. Senior Seminar in Linguistics (does not count as a linguistics elective)  
 LIGN 195. Apprentice Teaching (does not count as a linguistics elective)  
 LIGN 197. Linguistics Internship  
 LIGN 199. Independent Study in Linguistics  
 LIGN 199H. Honors Independent Study in Linguistics

### Note to Revelle and Warren students

*Revelle:* For Revelle College only, the classification of the linguistics major as humanities, natural science, or social science must be determined on the basis of each student's specific program. The classification of the major program will in turn determine what areas will be acceptable for the noncontiguous minor.

*Warren:* For Warren College only, any courses taken in departments other than linguistics may not overlap with the student's outside area(s) of concentration.

## UNDERGRADUATE LANGUAGE REQUIREMENT

Linguistics majors must demonstrate proficiency in one foreign language.

Proficiency in a foreign language may be demonstrated in three ways:

1. By passing the reading proficiency examination and the oral interview administered by the Department of Linguistics in French, German, Italian, or Spanish; or
2. By successfully completing a course given at UCSD representing the fourth quarter (or beyond) of instruction in any single foreign language with a grade of C- or better; or
3. By scoring four or greater on the Advanced Placement (AP) exam.

Students are encouraged to satisfy this requirement as early as possible in order to be able to use the language for reference in linguistics courses.

Students with native language competence in a language other than English may petition to have English count as satisfying the proficiency requirement.

## GENERAL MAJOR (12 COURSES)

The general major in linguistics requires satisfaction of the undergraduate language requirement and successful completion of twelve upper-division courses:

6 required linguistics courses

LIGN 101  
 LIGN 110  
 LIGN 111  
 LIGN 120  
 LIGN 121  
 LIGN 130

5 linguistics electives

1 additional linguistics elective or upper-division course in another department pertaining to the study of language. Courses currently approved to satisfy this requirement include the electives for the cognition and language major (except PSYC 105) and the electives for the language and society major (Note: some of these courses may have prerequisites) or a Heritage Language course offered in the Linguistics Language Program (for example, LIHL 112/LIHL 112X).

## SPECIALIZED MAJORS

Every student with a specialized major must consult the faculty advisor in the Department of Linguistics to have approved an individual curricular plan to satisfy the major requirements for the option chosen. Each specialized major requires satisfaction of the undergraduate language requirement and successful completion of upper-division requirements as specified below. The specialization will be reflected in the wording of a degree, e.g., "B.A. in Linguistics (with Specialization in Language and Society)."

### Cognition and Language (12 courses)

6 required linguistics courses

LIGN 101  
 LIGN 110  
 LIGN 111  
 LIGN 120  
 LIGN 121  
 LIGN 130

4 linguistics electives chosen from

LIGN 145  
 LIGN 165  
 LIGN 170  
 LIGN 171  
 LIGN 172  
 LIGN 176  
 LIGN 179

2 additional courses from linguistics or other departments subject to advisor approval.

Courses currently approved to satisfy this requirement include the following. **Note:** Some of these courses may have prerequisites.

## Linguistics

Any upper-division courses (except those used to fulfill requirements A and B).

## Anthropology

ANBI 140. The Evolution of the Human Brain  
 ANBI 159. Biological and Cultural Perspectives on Intelligence  
 ANBI 173. Cognition in Animals and Humans

## Cognitive Science

COGS 101C. Language  
 COGS 102A. Distributed Cognition  
 COGS 102B. Cognitive Ethnography  
 COGS 107C. Cognitive Neuroscience  
 COGS 108D. Programming Methods for Cognitive Science  
 COGS 108E. Neural Network Models of Cognition I  
 COGS 108F. Advanced Programming Methods for Cognitive Science  
 COGS 151. Analogy and Conceptual Systems  
 COGS 154. Communication Disorders in Children and Adults  
 COGS 156. Language Development  
 COGS 170. Natural and Artificial Symbolic Representational Systems  
 COGS 184. Modeling the Evolution of Cognition  
 COGS 191. Laboratory Research

## Computer Science and Engineering

CSE 133. Information Retrieval

## Philosophy

PHIL 120. Symbolic Logic I  
 PHIL 134. Philosophy of Language  
 PHIL 136. Philosophy of Mind  
 PHIL 150. Philosophy of the Cognitive Sciences

## Psychology

PSYC 105. Introduction to Cognitive Psychology  
 PSYC 118A. Real-Time Examination of Language Processing  
 PSYC 118B. Real-time Examination of Language Processing  
 PSYC 119. Psycholinguistics/Cognition Laboratory  
 PSYC 145. Psychology of Language

## Language and Society (12 courses)

6 required linguistics courses

2 appropriate upper-division courses in other departments (especially the Departments of Anthropology, Communication, Cognitive Science, or Sociology), selected in consultation with the faculty advisor for language and society. Courses currently approved to satisfy this requirement include the following. **Note:** Some of these courses may have prerequisites.  
 ANSC 162 [formerly known as ANGN 112]. Language, Identity, and Community  
 ANSC 122 [formerly known as ANGN 149]. Language in Society  
 COCU 100. Introduction to Communication and Culture  
 COHI 114. Bilingual Communication

COHI 117. Language, Thought, and the Media  
 COHI 124. Voice. Deaf People in America  
 COHI 134. Language and Human Communication  
 COHI 13. Language and Globalization  
 ETHN 140. Language and American Ethnicity  
 ETHN 141. Language, Culture, and Inequality  
 ETHN 144. Bilingual Communities in the USA  
 SOCI 117/EDS 117. Language, Culture, and Education  
 SOCI 118E. Sociology of Language  
 SOCI 120T. Special Topics in Culture, Language, and Social Interaction  
 EDS 125. History, Politics, and Theory of Bilingual Education

1 course in sociolinguistics (by approval of the faculty advisor, may be taken in another department). Courses currently approved to satisfy this requirement include the following. **Note:** some of these courses may have prerequisites:

LIGN 174. Gender and Language in Society  
 LIGN 175. Sociolinguistics  
 LIGN 177. Multilingualism

3 linguistics electives. Courses particularly relevant to this specialization are

LIGN 105. Law and Language  
 LIGN 174. Gender and Language in Society  
 LIGN 175. Sociolinguistics  
 LIGN 176. Language of Politics and Advertising  
 LIGN 177. Multilingualism

## LANGUAGE STUDIES MAJOR

**Students majoring in language studies must consult with the language studies faculty advisor to approve an individual curricular plan.**

The language studies major is designed for students who wish to pursue the study of a particular language from a variety of perspectives. To this end, students will take courses in linguistics and literature, as well as electives in linguistics, literature, culture, and area studies. This major provides preparation for a variety of careers that make use of second language skills. Depending on the elective emphasis, these include international business/law, teaching, translation, interpreting, linguistics, and foreign service. Each language studies major will specialize in one **language of concentration**. In principle, this could be any language other than English. However, some languages may require that some course work be completed outside UCSD. **Hence, it is recommended that language studies majors consider a year abroad.** Students whose language of concentration is **American Sign Language** will need to consult the faculty advisor for individualized requirements; these students may also consider an exchange year at Gallaudet University.

## REQUIREMENTS

### Lower-division preparation:

- Two years of language instruction in the language of concentration, or equivalent proficiency
- Lower-division prerequisites for upper-division courses in the literature of the language of concentration

### Upper-division requirements:

**Note:** At least two of the upper-division courses must be conducted in the language of concentration. Students are encouraged to increase their academic exposure to their language of concentration by taking one-unit seminars in the language and by participating in the EAP program.

1. 6 upper-division linguistics courses, as follows:

LIGN 101. Introduction to Linguistics

3 courses chosen from

LIGN 110. Phonetics  
 LIGN 111. Phonology I  
 LIGN 120. Morphology  
 LIGN 121. Syntax I  
 LIGN 130. Semantics  
 LIGN 145. Pidgins and Creoles  
 LIGN 150. Historical Linguistics

“Structure of” language of concentration course (e.g., LIGN 143 Structure of Spanish). If no such course is available, the student must consult with the undergraduate advisor regarding a possible substitution.

One additional upper-division LIGN course.

2. 2 upper-division courses in the literature of the language of concentration
3. 4 additional upper-division courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture/area studies (e.g., anthropology, economics, history, political science, sociology), subject to approval of the faculty advisor.

Approved courses for this requirement include the following. **Note:** Some of these courses may have prerequisites.

*Linguistics:* Any upper-division courses (except those used to fulfill requirement A).

*Literature:* Any upper-division courses related to the language of concentration (except those used to fulfill requirement B).

*Area Studies:* Approved courses are listed by language of concentration; other languages of concentration are possible in principle, but probably require course work outside of UCSD.

### HONORS PROGRAM

The department offers an honors program for outstanding students. Those students who have a 3.75 GPA in linguistics (3.25 overall) at the end of their junior year are eligible to participate. Students interested in participating in the honors program should consult with their department advisor:

admission to the program requires nomination by the advisor and approval of the department faculty.

The honors program requires that two graduate linguistics courses be taken as part of the twelve required courses for the major, and further requires one quarter of LIGN 199H. During one of the two graduate courses, the student, in consultation with the instructor and a faculty advisor, will begin a substantial research project which will be continued during the quarter of 199H and will culminate in an honors paper. Responsibility for proposing possible projects and completing necessary paperwork rests with the student. Upon successful completion of the requirements the designation "with distinction," "with high distinction," or "with highest distinction" will appear on the student's diploma.

## INDEPENDENT STUDY AND DIRECTED GROUP STUDY IN LINGUISTICS FOR MAJORS

Upon presentation of a written study proposal or project, and with the consent of the instructor and the advisor, linguistics majors with at least a 3.5 GPA in the major courses may request permission to undertake independent study in linguistics (LIGN 199). No more than one such course (to be taken Pass/Not Pass) may count toward the major.

---

## THE MINOR PROGRAM

---

The *Linguistics* minor consists of LIGN 101, plus six additional courses in linguistics, at least four of which must be upper-division.

For all courses counted toward the linguistics minor, the student must receive letter grades of C– or better. Courses counted toward the minor may not be taken on a Pass/Not Pass basis, except LIGN 199. Only one quarter of LIGN 199 may be counted toward the minor.

The *Language Studies* minor consists of seven courses, at least five of which must be upper-division:

*Literature:* One upper-division literature course is required in the language of concentration. This will require proficiency as well as lower-division prerequisites. Therefore, the lower-division courses of the minor may consist of prerequisites for the upper-division literature requirement. American Sign Language students may substitute a non-literature upper-division elective with approval of the faculty advisor.

*Linguistics:* LIGN 101 is required. In addition students must take a "Structure of" language of concentration course (e.g., LIGN 143 Structure of Spanish). If no such course is available, the student must consult with the undergraduate advisor regarding a possible substitution.

*Other:* Two additional courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture, subject to approval of the faculty advisor are required.

---

## THE PH.D. PROGRAM

---

The UC San Diego Ph.D. program in linguistics offers rigorous training in multiple areas of theoretical

linguistics, including syntax, semantics, phonetics, phonology, and morphology. The department is particularly strong in the study of interface areas, including syntax/semantics, phonetics/phonology, and phonology/syntax. Research conducted in a variety of theoretical frameworks is integrated into the graduate curriculum. Students receive a firm foundation in both formal and cognitive/functionalist approaches to syntax and semantics. In phonology, basic training includes segmental and autosegmental phonology, constraint-based phonology, syllable theory, metrical theory, and theories of the phonology-morphology interface. The first two years of graduate study are devoted primarily to gaining a strong background in these core theoretical areas.

This theoretical strength of the department is matched by strength in both language study and experimental science. The range of languages represented in faculty research encompasses American Sign Language (ASL), Caucasian, Chinese, Finno-Ugric, Germanic, Greek, Persian, Romance, Semitic, Slavic, and Uto-Aztecan. The departmental concern with the empirical facts of language is reflected in a field methods requirement for graduate students as well as in the graduate student language requirement (conversational ability in one language other than English and reading ability in one language other than English). The department has a tradition of working with native speakers of a wide variety of languages. The department's language laboratory maintains a library of written and recorded materials permitting independent study of dozens of languages; it also includes computers for self-instruction in French, German, Italian, and Spanish. The Linguistics Language Program (LLP) provides basic foreign language instruction for the entire campus, and many linguistics graduate students are employed as TAs in the program. Aside from providing a source of funding, the LLP provides graduate students with valuable teaching experience.

The department houses laboratories devoted to experimental studies of language with emphasis on phonetics, event related brain potentials (ERPs) computational linguistics, and signed languages. The focus of experimental research in the department is the mutual dependence between mechanisms of language processing and theories of phonology, and syntax. Linguistics graduate students may supplement their theoretical studies with experimental research; in addition to departmental laboratories, graduate students have access to experimental laboratories concerned with language issues in other departments.

The department has a strong commitment to, and is an active and integral part of, the cognitive science and neuroscience communities at UCSD. Most linguistics faculty have joint appointments in the Department of Linguistics and the Cognitive Science Interdisciplinary Ph.D. Program, and participate in the Department of Cognitive Science graduate core course in language (Cognitive Science 201D) as well as in the all-campus Interdisciplinary Program seminar (Cognitive Science 200) on a regular basis. Graduate students in the Cognitive Science Department frequently participate in Linguistics graduate courses, and Linguistics graduate students regularly attend courses in the Cognitive Science

Department on neuroscience, child language acquisition, aphasia, neural networks, and semantics and cognition. Linguistics graduate students are eligible to pursue a joint degree in Cognitive Science and Linguistics within the Interdisciplinary Program. Areas of secondary specialization that are especially well represented in the cognitive science community at UCSD and related institutes include child development, connectionist modeling, distributed cognition, language disorders, neuroscience, philosophy, and psycholinguistics.

The department has access to rich informational resources; in addition to the extensive linguistics holdings in the main library, the department maintains a collection of research reports, dissertations, and unpublished papers. Access to the libraries of other universities exists through interlibrary loan.

## PREPARATION

Since linguistics is a highly technical and analytic field, linguistics students will find their undergraduate training in mathematics and the natural sciences especially valuable. Undergraduate work in certain of the social sciences and humanities, particularly psychology, anthropology, philosophy and literature, is also good preparation for linguistics. The ideal candidate for admission will have both experience with foreign languages and some knowledge of the fundamentals of contemporary linguistic theory. Students who, upon admission, are deficient either in their formal linguistics preparation or languages will be advised by the department on how to make up the deficiency. New graduate students will be admitted only in the fall of any academic year.

## LANGUAGE REQUIREMENTS

A candidate for the Ph.D. degree must demonstrate: (1) Conversational ability in one language other than English. (2) A reading knowledge of any one language other than his or her native language, subject to faculty approval.

## REQUIRED COURSES

Candidates for the Ph.D. must pass certain linguistics graduate courses prior to taking the qualifying examination. All graduate students must take a common core of ten courses. These are

- Three courses in Syntax and Semantics: 221A, 221B, 230
- Three courses in Phonology and Phonetics: 210, 211A, 211B
- One course in Field Methods: 240
- Two courses in Research Methods, selected from 241, 245, and 251 (Note: Although 241 is repeatable, only one instance may count toward this requirement.)
- One course in Research Paper Writing: 293

All required courses (except 293) must be taken for a letter grade.

## EVALUATIONS

A graduate student is formally evaluated by the entire faculty at particular stages during the first three years of graduate study. The first evaluation

(at the end of the third quarter of graduate study) pertains chiefly to performance in courses. The second (or comprehensive) evaluation (at the end of the sixth quarter) determines the student's fitness to continue in the Ph.D. Program. It takes into account performance in course work and ability to engage in original research in one area of linguistics as demonstrated in a research paper. The third evaluation (at the end of the ninth quarter) focuses primarily on a second research paper (which must be in a different area of linguistics from the first).

### QUALIFYING EXAMINATION

Candidates for the Ph.D. degree must pass an oral qualifying examination which tests the student's knowledge in the area of specialization. Prior to taking this examination, the student must pass the comprehensive evaluation, satisfy all language requirements, successfully complete all required courses, and demonstrate—through research papers—the ability to carry out independent, dissertation-level research. Students must take the qualifying examination by the end of the fourth year of graduate work.

### COLLOQUIUM PRESENTATION

Sometime prior to the thesis defense, a student must present a paper orally at a professional gathering. The colloquium requirement is intended to enable a student to develop the skills necessary for organizing research results for oral presentation. The requirement is generally met by presenting a department colloquium or by presenting a paper at a professional meeting. In either case, a faculty member must certify the acceptability of the presentation.

### DISSERTATION

The candidate for the Ph.D. will write a substantial dissertation incorporating the results of original and independent research carried out under the supervision of the doctoral committee. The candidate will be recommended for the doctor of philosophy degree after having made a successful oral defense of the dissertation before the doctoral committee in a public meeting and after having the final version of the dissertation accepted by Geisel Library.

### APPRENTICE TEACHING

As part of their preparation for a future academic career, graduate students in linguistics at UCSD are given special opportunities to participate in teaching programs under the supervision of a professor. Depending on qualifications, students may conduct conversation or analysis classes in lower-division language courses (LLP and HLP), or may assist a professor in the teaching of an undergraduate linguistics course.

### OTHER DEGREES

Candidates for the Ph.D. who have not previously earned a master's degree may be granted the M.A. in linguistics after: 1) satisfactorily completing twelve required courses (all but LIGN 293 must be taken for a letter grade); 2) passing the comprehensive evaluation at the end of the sixth quarter; and

3) demonstrating a reading knowledge of any language except English, subject to faculty approval.

Candidates for the Ph.D. may also be granted the C.Phil. upon completion of all degree requirements other than the dissertation.

### DEPARTMENTAL PH.D. TIME LIMIT POLICIES

The time a student takes to complete the Ph.D. depends on a number of factors, including previous preparation and the amount of time spent in teaching or other job commitments. Several policies set an upper limit to the length of the program. All degree requirements other than the dissertation must be completed by the end of the fourth year of graduate work. Total instructional support (TAs, ships, etc.) cannot exceed six years; total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

## SPECIALIZATION IN ANTHROPOGENY

This is a transdisciplinary graduate specialization in anthropogeny with the aim of providing graduate students the opportunity to specialize in research and education on explaining the origins of the human phenomenon. The aim is to rectify the absence of existing training programs that provide such a broad and explicitly transdisciplinary approach—spanning the social and natural sciences—and focusing on one of the oldest questions known to humankind, namely, the origins of humans and humanity. This specialization is not a stand-alone program, but aims at providing graduate students who have just embarked on their graduate careers with the opportunity to interact and communicate with peers in radically different disciplines throughout the duration of their Ph.D. projects. Such communication across disciplines from the outset is key to fostering a capacity for interdisciplinary “language” skills and conceptual flexibility.

### ADMISSION TO THE SPECIALIZATION

The Linguistics Graduate Program will advertise the specialization to those students in our programs who have an interest in human origins. Qualifying applicants will have the opportunity to enroll for the specialization.

### SPECIALIZATION REQUIREMENTS

Students pursuing this specialization will be required to take a series of courses in addition to research rounds over four years of study. It is advised that students begin their course work in their second year.

1. Course work: Introduction to Anthropogeny (BIOM 225) and Advanced Anthropogeny (BIOM 229) are each taken once, in the winter and spring of the student's second year. Current Topics in Anthropogeny (BIOM 218) is to be taken every quarter for four years.
2. Research Rounds: Monthly seminars during which all participating students talk about their respective research.

### QUALIFYING EXAMINATION

Linguistics students in the anthropogeny specialization must meet the departmental requirement for advancement to candidacy. In addition, students must meet internal deadlines, mentoring provisions, and proposal standards of the anthropogeny specialization track.

### DISSERTATION

Ph.D. students must complete a dissertation, which meets all requirements of the home program. In addition, it is expected that the Ph.D. dissertation is broadly related to human origins and will be interdisciplinary in nature.

### TIME LIMITS

It is expected that students will retain the same time to degree as students not pursuing this specialization. Additional course load consists only of two regular courses (two quarters twenty lectures each). The third proposed course takes place only three times a year from Friday noon to Saturday evening.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

**Note:** Not all courses are offered every year. It is essential that students consult the linguistics advisor when planning their degree programs.

### LINGUISTICS

#### LOWER DIVISION

**3. Language as a Social and Cultural Phenomenon (4)**  
The role of language in thought, myth, ritual, advertising, politics, and the law. Language variation, change, and loss; multilingualism, pidginization and creolization; language planning, standardization, and prescriptivism; writing systems. **Prerequisite:** none.

**4. Language as a Cognitive System (4)**  
Fundamental issues in language and cognition. Differences between animal communication, sign systems, and human language; origins and evolution of language; neural basis of language; language acquisition in children and adults. **Prerequisite:** none.

**5. The Linguistics of Invented Languages (4)**  
Introduction to the study of language through the investigation of invented languages, whether conscious (Elvish, Klingon, Esperanto) or unconscious (creoles, twin/sibling languages). Students will participate in the invention of a language fragment. Topics discussed include language structure, history, culture, and writing systems. **Prerequisite:** none.

**7. Sign Language and Its Culture (4)**  
Deaf history since the eighteenth century. The structure of American Sign Language and comparison with oral languages. ASL poetry and narrative and Deaf people's system of cultural knowledge. Basic questions concerning the nature of language and its relation to culture. **Prerequisite:** none.

**8. Languages and Cultures in America (4)**  
Language in American culture and society. Standard and non-standard English in school, media, pop-culture, politics; bilingualism and education; cultural perception of language issues over time; languages and cultures in the “melting pot,” including Native American, Hispanic, African-American, Deaf. **Prerequisite:** none.

## 17. Making and Breaking Codes (4)

A rigorous analysis of symbolic systems and their interpretations. Students will learn to encode and decode information using progressively more sophisticated methods; topics covered include ancient and modern phonetic writing systems, hieroglyphics, computer languages, and ciphers (secret codes). **Prerequisite:** none.

## 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

## 90. Undergraduate Seminar (1)

A seminar intended for exposing undergraduate students, especially freshman and sophomores, to exciting research programs and conducted by the faculty.

## UPPER DIVISION

### 101. Introduction to the Study of Language (4)

Language is what makes us human, but how does it work? This course focuses on speech sounds and sound patterns, how words are formed, organized into sentences, and understood, how language changes, and how it is learned. **Prerequisite:** none.

### 105. Law and Language (4)

The interpretation of language in understanding the law: 1) the language of courtroom interaction (hearsay, jury instructions); 2) written legal language (contracts, ambiguity, legal fictions); 3) language-based issues in the law (First Amendment, libel and slander). **Prerequisite:** none.

### 108. Languages of Africa (4)

Africa is home to an astonishing variety of languages. This course investigates the characteristics of the major language families as well as population movements and language contact, and how governments attempt to regulate language use. **Prerequisite:** none.

### 110. Phonetics (4)

The study of the sounds which make up human language. How sounds are physically produced; acoustics of speech perception; practical training in translating speech signals into written form and in interpreting computerized speech signals. **Prerequisite:** LIGN 101, concurrent enrollment in LIGN 101, or consent of instructor.

### 111. Phonology I (4)

Why does one language sound different from another? This course analyzes how languages organize sounds into different patterns, how those sounds interact, and how they fit into larger units, such as syllables. Focus on a wide variety of languages and problem-solving. **Prerequisite:** LIGN 110.

### 119. First and Second Language Learning: From Childhood through Adolescence (4)

(Same as EDS 119) An examination of how human language learning ability develops and changes over the first two decades of life, including discussion of factors that may affect this ability. **Prerequisite:** upper-division standing or consent of instructor.

### 120. Morphology (4)

How do some languages express with one word complex meanings that English needs several words to express? Discovery of underlying principles of word formation through problem-solving and analysis of data from a wide variety of languages. **Prerequisite:** LIGN 101 or consent of instructor.

### 121. Syntax I (4)

What universal principles determine how words combine into phrases and sentences? Introduction to research methods and results. Emphasis on how argumentation in problem-solving can be used in the development of theories of language. **Prerequisite:** LIGN 101 or consent of instructor.

### 130. Semantics (4)

Introduction to the formal study of meaning. What is the meaning of a word? What is the meaning of a sentence?

Which role does the context play in determining linguistic meaning? **Prerequisite:** LIGN 101 or consent of instructor.

### 140. The Structure of American Sign Language (4)

Examination of ASL phonetics, phonology, morphology, syntax, semantics. Including linguistic facial expressions and uses of physical space in verb agreement, aspectual morphology, and classifier constructions. Discussion of discourse, acquisition, psycholinguistics, and historical change. **Prerequisite:** LIGN 101; in its absence LISL 1CX or consent of instructor.

### 141. Language Structures (4)

Detailed investigation of the structure of one or more languages. May be repeated for credit as topics vary. **Prerequisite:** LIGN 101 or consent of instructor.

### 142. Language Typology (4)

The systematic ways languages differ. Cross-linguistics studies of specified topics (e.g., word order, agreement, case, switch reference, phonological systems, and rule types, etc.) in an effort to develop models of language variation. **Prerequisite:** LIGN 101 or consent of instructor.

### 143. The Structure of Spanish (4)

Surveys aspects of Spanish phonetics, phonology, morphology, and syntax. Topics include dialect differences between Latin American and Peninsular Spanish (both from a historical and contemporary viewpoint), gender classes, verbal morphology, and clause structure. **Prerequisite:** LIGN 101 or consent of instructor.

### 144. Discourse Analysis: American Sign Language and Performing Arts (4)

A discourse-centered examination of ASL verbal arts: rhyme, meter, rhythm, handedness, non-manual signals, and spatial mapping; creation of scene and mood; properties of character, dialogue, narration, and voice; cultural tropes; poetic constructions in everyday genres; transcription, body memory and performance. **Prerequisites:** LISL 1C/1CX or consent of instructor.

### 146. Sociolinguistics in Deaf Communities (4)

An examination of sociolinguistic research on Deaf communities throughout the world, including: sociohistorical contexts for phonological, lexical and syntactic variation, contact between languages, multilingualism, language policies and planning, second language learning, language attitudes, and discourse analysis of specific social contexts. Course will be conducted in ASL. **Prerequisite:** LISL 1C/1CX or consent of instructor.

### 150. Historical Linguistics (4)

Language is constantly changing. This course investigates the nature of language change, how to determine a language's history, its relationship to other languages, and the search for common ancestors or "proto-language." **Prerequisite:** LIGN 101 or consent of instructor.

### 155. Evolution of Language (4)

History of thought on language origins, genetic, neural, anatomical, and gestural theories of language evolution in relation to prior hominid and other species, the role of generational differences in language acquisition, and computational models. **Prerequisite:** upper-division standing or consent of instructor.

### 160. Pragmatics (4)

An introduction to the context-dependent aspects of language meaning. Topics include given versus new information, Gricean maxims and rules of conversation, presupposition, implicature, reference and cognitive status, discourse coherence and structure, and speech acts. **Prerequisite:** LIGN 101 or consent of instructor.

### 165. Computational Linguistics (4)

An introduction to the fundamental concepts of computational linguistics, in which we study natural language syntax and semantics from an interpretation perspective, describe methods for programming computer systems to perform such interpretation, and survey applications of computational linguistics technology. **Prerequisite:** none.

### 170. Psycholinguistics (4)

The study of how humans learn, represent, comprehend, and produce language. Topics include visual and auditory recognition of words, sentence comprehension, reading,

sentence production, language acquisition, neural representation of language, bilingualism, and language disorders. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 171. Child Language Acquisition (4)

A central cognitive, developmental mystery is how children learn their first language. Overview of research in the learning of sound systems, word forms and word meanings, and word combinations. Exploration of the relation between cognitive and language development. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 172. Language and the Brain (4)

The mind/body problem, basic neuroanatomy and neurophysiology, cerebral lateralization, origins and evolution of language, aphasia, magnetic resonance imaging (MRI), and event-related potentials (ERPs). **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 173. Heritage Languages (4)

A heritage language (HL) is a language that an individual has some knowledge of due to childhood exposure. Topics: HL imperfect language competence, bilinguals vs. HL speakers, language loss, re-learning of HLs, parallels across HLs, teaching of HLs, language planning. **Prerequisite:** upper-division standing or consent of instructor.

### 174. Gender and Language in Society (4)

(Same as SOCI 116.) This course examines how language contributes to the social construction of gender identities, and how gender impacts language use and ideologies. Topics include the ways language and gender interact across the life span (especially childhood and adolescence); within ethnolinguistic minority communities; and across cultures. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 175. Sociolinguistics (4)

The study of language in its social context, with emphasis on the different types of linguistic variation and the principles underlying them. Dialects; registers; sex-based linguistic differences; factors influencing linguistic choice; formal models of variation; variation and change. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 176. Language of Politics and Advertising (4)

How can we explain the difference between what is literally said versus what is actually conveyed in the language of law, politics, and advertising? How people's ordinary command of language and their reasoning skills are used to manipulate them. **Prerequisite:** none.

### 177. Multilingualism (4)

Official and minority languages, pidgins and Creoles, language planning, bilingual education and literacy, code switching, and language attrition. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 179. Second Language Acquisition Research (4)

This course will investigate topics in second language acquisition including the critical period, the processing and neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 180. Language Representation in the Brain (4)

The mind/body problem, modularity, basic neuroanatomy, cerebral lateralization, re-evaluation of classical language areas, aphasia, dyslexia, the KE family and FOXP2 gene, mirror neurons, sign language, brain development, cortical plasticity, and localization studies of language processing (electrical stimulation, MEG, fMRI, and PET). Students may not receive credit for both LIGN 172 and LIGN 180. **Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 181. Language Processing in the Brain (4)

Modularity and models of language processing, basic neurophysiology, EEG/MEG, linguistic event-related brain potentials (ERPs), cross-linguistic functional significance of ERP components and their MEG correlates: N400, N400-700, lexical processing negativity, slow anterior negative potentials, (early) left anterior negativity, and late positive

**Prerequisite:** LIGN 101, or upper-division standing, or consent of instructor.

### 192. Senior Seminar in Linguistics (1)

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in linguistics (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

### 195. Apprentice Teaching (0-4)

Students lead a class section of a lower-division linguistics course. They also attend a weekly meeting on teaching methods. (This course does not count toward minor or major.) May be repeated for credit, up to a maximum of four units. (P/NP grades only.) **Prerequisites:** consent of instructor, advanced standing.

### 197. Linguistics Internship (2 or 4)

The student will undertake a program of practical research in a supervised work environment. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies. **Prerequisite:** consent of instructor.

### 199. Independent Study in Linguistics (2 or 4)

The student undertakes a program of research or advanced reading in linguistics under the supervision of a faculty member of the Department of Linguistics. (P/NP grades only.) **Prerequisite:** consent of instructor. May be repeated for credit.

### 199H. Honors Independent Study in Linguistics (4)

The student undertakes a program of research and advanced reading in linguistics under the supervision of a faculty member in the Department of Linguistics. (P/NP grades only.) **Prerequisite:** admission to Honors Program.

## GRADUATE

### 200. Research Forum (2)

A forum for discussion of current issues. (S/U grades only.) May be repeated for credit.

### 210. Phonetics (4)

This is an introduction to articulatory, acoustic, and auditory phonetics. Major phonetic theories in these areas, and the relationship between phonetics and phonology are discussed. The course also covers experimental design and methodology and provides hands-on experience with laboratory equipment. **Prerequisite:** none

### 211A. Introductory Phonology (4)

Introduction to the study of the sound patterns of language. Rules and representations, lexical phonology, segmental processes, autosegmental phonology. **Prerequisite:** LIGN 110 or consent of instructor.

### 211B. Nonlinear Phonology (4)

This course will introduce topics in prosodic phonology and morphology, (including syllable structure, stress, and reduplication). These topics will be investigated within constraint-based phonology. **Prerequisite:** LIGN 211A or equivalent.

### 214. Topics in Phonetics (4)

This course examines recent developments in controversial areas of phonetics. Topics will vary, and will address issues in speech production (articulation; acoustics), speech perception, phonetic theory, and the relationship between phonetics and phonology. **Prerequisite:** LIGN 210, 211A, 211B, or consent of instructor.

### 215. Topics in Phonology (4)

Descriptive and theoretical problems in phonology. Discussion of work in progress and/or theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

### 221A. Introduction to Grammatical Theory (4)

This course introduces basic syntactic phenomena and argumentation via the Government and Binding Theory

of the 1980s. The phenomena, including NP-Movement, Binding, and Wh-Movement, have been important in the development of Generative Grammar and remain central to current generative frameworks.

### 221B. Introduction to Grammatical Theory (4)

This course continues to develop Principles and Parameters Theory, as introduced in 221A. It concentrates on A-bar dependencies and the Binding Theory. Focus will be on testing theoretical proposals and understanding the role of theoretical alternatives, underlying assumptions, and the empirical results upon which these theoretical proposals are based.

### 223. Current Issues in Principles and Parameters Theory (4)

This course examines recent developments in Principles and Parameters Theory. Topics include fundamental work that led to the Minimalist Program and more recent developments in this tradition. May be repeated for credit when topics vary.

### 224. Lexicalist Theories of Grammar (4)

Introduction to conceptual issues and representational apparatus of lexicalist theories of grammar. Focus on empirical argumentation from numerous languages for lexicalist assumptions. Particular attention to lexical semantics, morphology, and syntax.

### 225. Topics in Syntax (4)

Descriptive and theoretical problems in syntactic analysis. Theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

### 230. Semantics (4)

Theories of semantic structure. The relation of meaning to grammar, and how it is to be accommodated in an overall model of linguistic organization. The application of formal semantics to the description of natural language.

### 235. Topics in Semantics (4)

Advanced material in special areas of the study of meaning and its relation to formal aspects of human language. As subject matter varies, the course may be repeated for credit.

### 236. Language Universals and Linguistic Typology (4)

Introduction to the typological study of language, contrasting alternative approaches to research in language universals. Main topics covered: cross-linguistic approach to language study (sampling: universal generalizations, hierarchies); explanations for language universals; the role of cross-linguistic analyses in linguistic theory.

### 238. Topics in Cognitive Linguistics (0-4)

(Same as Cognitive Science 238) Basic concepts, empirical findings, and recent developments in cognitive and functional linguistics. Language viewed dynamically in relation to conceptualization, discourse, meaning construction, and cognitive processing. As topics vary, may be repeated for credit.

### 240. Field Methods (4)

Techniques of discovering the structure of a language through elicitation of data from native speaker consultants. Phonemic, morphemic, and syntactic analysis. **Prerequisite:** LIGN 110 or equivalent.

### 241. Fieldwork (4)

Fieldwork continuing the research of the previous quarter; student-directed elicitations on topics of interest. **Prerequisite:** LIGN 240.

### 242. Discourse Interpretation (4)

A graduate course examining discourse interpretation from a computational perspective. Theoretically principled algorithms for resolving pronominal and other types of reference. The interpretation of ellipsis. Methods for recovering the structure of a discourse and determining its coherence.

### 245. Computational Corpus Linguistics (4)

Introduction to computational corpus tools for performing empirically-grounded linguistic investigations. Annotated and unannotated corpora; annotation schemes. Searching using regular expressions. UNIX tools. The PERL programming language. Publically-available language processing systems.

### 247. Topics in Pragmatics (4)

Advance material covering particular topics relating to the theoretical analysis of the pragmatics of natural languages. May be repeated for credit when topics vary. **Prerequisite:** consent of instructor.

### 248. Morphology (4)

Theories of word structure are examined and confronted with data from a variety of languages. Topics may include: the distinction between derivational and inflectional morphology, the morphology/phonology interface, and the morphology/syntax interface. May be repeated for credit as topics vary.

### 251. Probabilistic Methods in Linguistics (4)

Probabilistic approaches to language knowledge, acquisition, and use. Quantitative analysis of linguistic data. Quantitative models in linguistic theory. Covers basic probability theory and tools of statistical analysis for language, including linear regression, ANOVA, generalized linear models (e.g., logistic regression), data visualization. Familiarity with probability theory highly encouraged.

### 256. Statistical Natural Language Processing (4)

(Same as CSE 256) Introduction to modern statistical approaches to natural language processing: part-of-speech tagging, word-sense disambiguation and parsing, using Markov models, hidden Markov models, and probabilistic context-free grammars. Recommended **Prerequisite:** one of LIGN 165, LIGN 245, CSE 151, CSE 250A, CSE 254. **Prerequisite:** graduate standing or consent of instructor.

### 265. Topics in Computational Linguistics (4)

Advanced topics in computational linguistics of current interest. Subjects will vary, and may include computational morphology, syntax, semantics, discourse, psycholinguistics, or language change. May be repeated for credit. **Prerequisites:** none.

### 270. Psycholinguistics (4)

Issues of natural language processing in relation to one or more of the following levels of linguistic analysis: phonetics, phonology, the lexicon, morphology, syntax, semantics, information structure, or discourse. May be repeated for credit when topics vary.

### 272. Topics in Neurolinguistics (4)

Issues of language representation and neural instantiation that arise in studies of neural imaging, language disorders, multilingualism and second language acquisition, animal communication, and the origins and evolution of language. May be repeated for credit when topics vary.

### 274. Computational Psycholinguistics (4)

Investigation of problems in psycholinguistics—the study of how humans learn, represent, comprehend, and produce language—from a computational perspective. Research article readings covering word-level, sentence-level, and discourse-level processing. Prior background in psycholinguistics and/or computational linguistics highly recommended.

### 278. Research in Second Language Acquisition (4)

This course will investigate topics in second language acquisition including the critical period, the processing and neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition.

### 279. Topics in Language Acquisition (4)

Language acquisition is central to theories about human development, cognition, brain organization, and language origins and change. Topics include the role of input and critical periods on language outcome and processing, neural organization, and sign language creation. **Prerequisite:** none.

### 280. Sign Language Research (4)

An overview of sign language research in terms of how it informs language theory. Topics include the structure of ASL, acquisition, psycholinguistic and neurolinguistic processing of sign language in comparison to spoken language, critical period effects, and language evolution. **Prerequisite:** Graduate standing or consent of instructor.

### 293. Research Practicum (0–4)

Gathering and interpreting data, formulating research questions and hypotheses, making the predictions of hypotheses explicit, finding relevant evidence, and organizing research results into suitable form for presentation in abstracts, talks, and research papers. (S/U grades only.) May be repeated for credit.

### 296. Directed Research (1–8)

Individual research. May be repeated for credit.

### 299. Doctoral Research (1–12)

Directed research on dissertation topic for students who have been admitted to candidacy for the Ph.D. degree. May be repeated for credit. **Prerequisite:** advancement to candidacy.

### 502. Apprentice Teaching of Linguistics (1–4)

The course, designed for graduate students serving as teaching assistants in the department's linguistics courses, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. The student must be serving as a teaching assistant in a LIGN course to receive credit.

### 503. Apprentice Teaching of American Sign Language (1–4)

The course, designed for graduate students serving as teaching assistants in American Sign Language, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 504. Apprentice Teaching of French (1–4)

The course, designed for graduate students serving as teaching assistants in French, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 505. Apprentice Teaching of German (1–4)

The course, designed for graduate students serving as teaching assistants in German, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 506. Apprentice Teaching of Italian (1–4)

The course, designed for graduate students serving as teaching assistants in Italian, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 507. Apprentice Teaching of Spanish (1–4)

The course, designed for graduate students serving as teaching assistants in Spanish, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 508. Apprentice Teaching of Language/ Directed Study (1–4)

The course, designed for graduate students serving as teaching assistants in language directed study, includes discussion of teaching theories, techniques and materials, directing study of various uncommonly taught languages, sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 509. Apprentice Teaching, Head Teaching Assistant (1–4)

This course, designed for a graduate student serving as Head Teaching Assistant in the Linguistics Language Program, includes discussion of teaching methods and materials, and classroom observation, directing study of various uncommonly taught languages, sessions, and participation in examinations, under the supervision of the instructor in charge of the course.

### 510. Apprentice Teaching of Arabic (1–4)

The course, designed for graduate students serving as teaching assistants in Arabic, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 511. Apprentice Teaching of Portuguese (1–4)

The course, designed for graduate students serving as teaching assistants in Portuguese, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 512. Apprentice Teaching of Heritage Korean (1–4)

The course, designed for graduate students serving as teaching assistants in Heritage Korean, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U only.) May be repeated for credit.

### 513. Apprentice Teaching of Heritage Vietnamese (1–4)

The course, designed for graduate students serving as teaching assistants in Heritage Vietnamese, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U only.) May be repeated for credit.

### 514. Apprentice Teaching of Heritage Persian (1–4)

The course, designed for graduate students serving as teaching assistants in Heritage Persian, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

### 515. Apprentice Teaching of Heritage Filipino (1–4)

The course, designed for graduate students serving as teaching assistants in Heritage Filipino, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

## COURSES

### LANGUAGE

OFFICE: Linguistics Language Program Office, 3016 Applied Physics and Mathematics Building, Muir College

Students are placed in foreign language courses based on prior preparation and, for French, German, Italian, and Spanish, on the results of a placement test. Information on taking the placement exam is available at <http://ling.ucsd.edu/language/placement-test.html> or at the Linguistics Language Program Office (3016 Applied Physics and Mathematics Building). For placement in Arabic, American Sign Language, or Portuguese contact the Linguistics Language Program Office (3016 Applied Physics and Mathematics Building).

Conversation sections (Linguistics 1A-1B-1C-1D) consist of small tutorial meetings, plus reading and assigned laboratory work. Analysis sections (Linguistics 1AX-1BX-1CX-1DX) consist of presentation and practice of grammatical structures, discussion sections, assigned laboratory work, and outside reading. Each course in the 1A-1B-1C-1D series must be taken concurrently with the corresponding course in the 1AX-1BX-1CX-1DX series.

Heritage Language courses are offered in Arabic, Armenian, Cantonese, Filipino, Hindi, Korean, Persian, and Vietnamese. These courses are designed for students with a background in the language who want to improve their oral and written expression.

Linguistics 11 courses are self-instructional: intended for reading the language for scholarly purposes. They are particularly aimed at graduate students preparing to fulfill French or German reading requirements.

Linguistics 19 courses, offered in more than sixty languages, are designed for self-instructional study at an introductory level. Students may enroll for two or four units of credit. For some languages, depending on the availability of suitable materials, the course may be repeated for credit.

### AMERICAN SIGN LANGUAGE

#### Linguistics/American Sign Language (LISL)

##### 1A. American Sign Language Conversation (2.5)

Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1AX. **Prerequisite:** no prior study of ASL.

#### Linguistics/American Sign Language (LISL)

##### 1AX. Analysis of American Sign Language (2.5)

Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1A. **Prerequisite:** no prior study of ASL.

#### Linguistics/American Sign Language (LISL)

##### 1B. American Sign Language Conversation (2.5)

Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1BX. **Prerequisites:** LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

#### Linguistics/American Sign Language (LISL)

##### 1BX. Analysis of American Sign Language (2.5)

Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1B. **Prerequisites:** LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.

#### Linguistics/American Sign Language (LISL)

##### 1C. American Sign Language Conversation (2.5)

Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1CX. **Prerequisites:** LISL 1B with a grade of C– or better, or equivalent and LISL 1BX with a grade of D or better, or equivalent.

#### Linguistics/American Sign Language (LISL)

##### 1CX. Analysis of American Sign Language (2.5)

Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1C. **Prerequisites:** LISL 1B with a grade of C– or better, or equivalent and LISL 1BX with a grade of D or better, or equivalent.

#### Linguistics/American Sign Language (LISL)

##### 1D. American Sign Language Conversation (2.5)

Small conversation sections taught entirely in American Sign Language. Emphasis on developing signing fluency and greater cultural awareness. Practice of the principal language functions needed for successful communication. Must be taken in conjunction with LISL 1DX. Successful completion of LISL 1D and LISL 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisites:** LISL 1C with a grade of

C– or better, or equivalent and LISL 1CX with a grade of D or better, or equivalent.

### **Linguistics/American Sign Language (LISL)**

**1DX. Analysis of American Sign Language (2.5)**  
Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in American Sign Language. Must be taken in conjunction with LISL 1D. Successful completion of LISL 1D and LISL 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisites:** LISL 1C with a grade of C– or better, or equivalent and LISL 1CX with a grade of D or better, or equivalent.

### **Linguistics/American Sign Language (LISL) 1E. Intermediate American Sign Language Conversation (4)**

Course aims to improve language skills through discussion of topics relevant to the Deaf community. Central topics will include education and American Sign Language (ASL) literature. Conducted entirely in American Sign Language. **Prerequisites:** LISL 1D and LISL 1DX with a grade of C– or better, or equivalent.

### **Linguistics/American Sign Language (LISL)**

**10. French Sign Language for ASL Signers (4)**  
Small tutorial meetings with a signer of French Sign Language (Langue des signes française), the historical antecedent and a close relative of American Sign Language. **Prerequisites:** LISL 1C/1CX. (Not offered in 2010–11.)

### **Linguistics/American Sign Language (LISL) 5A, 5B, 5C. Fundamentals of American Sign Language (5)**

This course concentrates on those language skills essential for communication: signing, comprehension, grammar analysis, and deaf culture. UCSD students: LISL 5A is equivalent to LISL 1A/1AX, LISL 5B to LISL 1B/BX, and LISL 5C to LISL 1C/1CX. Enrollment is limited. **Prerequisites:** none for 5A; for 5B two or more years of ASL in high school or the first semester of college-level ASL. (Offered in Summer Session only. Not offered summer 2011.)

## **ARABIC**

See also Linguistics/“[Heritage Language Program](#).”

### **Linguistics/Arabic (LIAB) 1A.**

**Arabic Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1AX. **Prerequisite:** no prior study of Arabic.

### **Linguistics/Arabic (LIAB) 1AX.**

**Analysis of Arabic (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1A. **Prerequisite:** no prior study of Arabic.

### **Linguistics/Arabic (LIAB) 1B.**

**Arabic Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1BX. **Prerequisite:** LIAB 1A with a grade of C– or better, or equivalent and LIAB 1AX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1BX.**

**Analysis of Arabic (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1B. **Prerequisite:** LIAB 1A with a grade of C– or better, or equivalent and LIAB 1AX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1C.**

**Arabic Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken

in conjunction with LIAB 1CX. **Prerequisite:** LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1CX.**

**Analysis of Arabic (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1C. **Prerequisites:** LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1D.**

**Arabic Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1DX. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. **Prerequisites:** LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1DX.**

**Analysis of Arabic (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1D. Successful completion of LIAB 1D and 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. **Prerequisites:** LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1E.**

**Arabic Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1EX. **Prerequisites:** LIAB 1D with a grade of C– or better, or equivalent, and LIAB 1DX with a grade of D or better, or equivalent.

### **Linguistics/Arabic (LIAB) 1EX.**

**Arabic Conversation (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1E. **Prerequisites:** LIAB 1D with a grade of C– or better, or equivalent, and LIAB 1DX with a grade of D or better, or equivalent.

## **CHINESE**

See “[Chinese Studies](#).”

See also Linguistics “[Directed Study](#).”

See also “[Linguistics/Cantonese](#).”

## **ESPERANTO**

See also Linguistics “[Directed Study](#).”

### **Linguistics/Esperanto (LIEO) 5AS.**

**Fundamentals of Esperanto I (5)**  
A communicative introduction to Esperanto for students with no prior exposure, with attention to listening comprehension, conversation, reading, writing, and grammar analysis. (Offered in Summer Session only.)

### **Linguistics/Esperanto (LIEO) 5BS.**

**Fundamentals of Esperanto II (5)**  
A course to increase the proficiency level of students who have completed LIEO 5AS or who are at an equivalent level. Attention to listening comprehension, conversation, reading, writing, and grammar analysis. **Prerequisite:** LIEO 5AS or consent of instructor. (Offered in Summer Session only.)

### **Linguistics/Esperanto (LIEO) 5CS.**

**Fundamentals of Esperanto III (5)**  
A course to increase the proficiency level of students who have completed LIEO 5BS or who are at an equivalent level.

Attention to listening comprehension, conversation, reading, writing, and grammar analysis. **Prerequisite:** LIEO 5BS or consent of instructor. (Offered in Summer Session only.)

### **Linguistics/Esperanto (LIEO) 5DS.**

**Fundamentals of Esperanto IV (5)**  
A course to increase the proficiency level of students who have completed LIEO 5CS or who are at an equivalent level. Attention to listening comprehension, conversation, reading, writing, and grammar analysis. **Prerequisite:** LIEO 5CS or consent of instructor. (Offered in Summer Session only.)

### **Linguistics/Esperanto (LIEO) 12S. Esperanto for the Humanities and Social Sciences (5)**

Readings and discussion on topics in humanities and social sciences. Conducted entirely in Esperanto. **Prerequisite:** consent of instructor. (Offered in Summer Session only.)

## **FRENCH**

### **Linguistics/French (LIFR) 1A.**

**French Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1AX. **Prerequisite:** no prior study of French.

### **Linguistics/French (LIFR) 1AX.**

**Analysis of French (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1A. **Prerequisite:** no prior study of French.

### **Linguistics/French (LIFR) 1B.**

**French Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1BX. **Prerequisites:** LIFR 1A with a grade of C– or better, or equivalent and LIFR 1AX with a grade of D or better, or equivalent.

### **Linguistics/French (LIFR) 1BX.**

**Analysis of French (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1B. **Prerequisite:** LIFR 1A with a grade of C– or better, or equivalent and LIFR 1AX with a grade of D or better, or equivalent.

### **Linguistics/French (LIFR) 1C.**

**French Conversation (2.5)**  
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1CX. **Prerequisite:** LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

### **Linguistics/French (LIFR) 1CX.**

**Analysis of French (2.5)**  
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1C. **Prerequisite:** LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.

### **Linguistics/French (LIFR) 1D.**

**French Conversation (2.5)**  
Small conversation sections taught entirely in French. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LIFR 1DX. Successful completion of LIFR 1D and LIFR 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisite:** LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a grade of D or better, or equivalent.

## **Linguistics/French (LIFR) 1DX.**

### **Analysis of French (2.5)**

Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in French. Must be taken in conjunction with LIFR 1D. Successful completion of LIFR 1D and LIFR 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisite:** LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a grade of D or better, or equivalent.

## **Linguistics/French (LIFR) 11.**

### **Elementary French Reading (2–4)**

A self-instructional program designed to prepare graduate students to meet reading requirements in French. After a one-week introduction to French orthography/ sound correspondence, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

## **Linguistics/French (LIFR) 5A, 5B, 5C,**

### **5D. Fundamentals of French (5)**

This course concentrates on those language skills essential for communication: listening comprehension, conversation, reading, writing, and grammar analysis. UCSD students: LIFR 5A is equivalent to LIFR 1A/1AX, LIFR 5B to LIFR 1B/1BX, LIFR 5C to LIFR 1C/1CX, and LIFR 5D to LIFR 1D/1DX. Enrollment is limited. **Prerequisite:** None for 5A; for 5B, two or more years of French in high school or the first semester of college-level French. (Offered in Summer Session only.)

See also [“Department of Literature.”](#)

## **GERMAN**

### **Linguistics/German (LIGM) 1A.**

#### **German Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1AX. **Prerequisite:** no prior study of German.

### **Linguistics/German (LIGM) 1AX.**

#### **Analysis of German (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1A. **Prerequisite:** no prior study of German.

### **Linguistics/German (LIGM) 1B.**

#### **German Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1BX. **Prerequisites:** LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.

### **Linguistics/German (LIGM) 1BX.**

#### **Analysis of German (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1B. **Prerequisites:** LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.

### **Linguistics/German (LIGM) 1C.**

#### **German Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1CX. **Prerequisites:** LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.

### **Linguistics/German (LIGM) 1CX.**

#### **Analysis of German (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1C. **Prerequisites:** LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.

## **Linguistics/German (LIGM) 1D.**

### **German Conversation (2.5)**

Small conversation sections taught entirely in German. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LIGM 1DX. Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisites:** LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.

## **Linguistics/German (LIGM) 1DX.**

### **Analysis of German (2.5)**

Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in German. Must be taken in conjunction with LIGM 1D. Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisites:** LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.

## **Linguistics/German (LIGM) 11.**

### **Elementary German Reading (2–4)**

A self-instructional program designed to prepare graduate students to meet reading requirements in German. After a one-week introduction to German orthography/sound correspondences, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

## **Linguistics/German (LIGM) 5A, 5B, 5C,**

### **5D. Fundamentals of German (5)**

This course concentrates on those language skills essential for communication: listening comprehension, reading, writing, and grammar analysis. UCSD students: LIGM 5A is equivalent to LIGM 1A/1AX, LIGM 5B to LIGM 1B/1BX, and LIGM 5C to LIGM 1C/1CX. Enrollment is limited. **Prerequisites:** none for 5A; for 5B, two or more years of German in high school or the first semester of college-level German. (Offered in Summer Session only.)

## **HERITAGE LANGUAGE PROGRAM**

“Heritage” or “incomplete” language acquisition refers to the situation of individuals who are exposed to a language used in their environment during childhood that they may learn to understand or even speak to some degree, but never fully acquire. The idea behind the department’s innovative Heritage Language Program is that such individuals have a set of skills, competencies, and needs that are distinct from those of both native speakers learning to read and write the language for the first time, and also non-native learners who may study it as a foreign language during adulthood. These individuals therefore require a different type of language instruction, one that builds on and enhances the linguistic skills they already possess, and amplifies their cultural competence and literacy. The Heritage Language Program allows students to work towards developing higher levels of proficiency in order to pursue personal and professional goals.

## **Linguistics/Filipino for Filipino**

### **Speakers (LIHL) 112 (4)**

For students who already comprehend informal spoken Filipino but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Filipino. Some speaking ability in Filipino recommended. **Prerequisite:** upper-division standing or consent of instructor.

## **Linguistics/Advanced Filipino for**

### **Filipino Speakers (LIHL) 132 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Filipino. **Prerequisite:** upper-division standing or consent of instructor.

## **Linguistics/Armenian for Armenian**

### **Speakers (LIHL) 113 (4)**

For students who already comprehend informal spoken Armenian but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Armenian. Some speaking ability in Armenian recommended. **Prerequisite:** upper-division standing or consent of instructor. (Not offered in 2010–11.)

## **Linguistics/Advanced Armenian for**

### **Armenian Speakers (LIHL) 133 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Armenian. **Prerequisite:** upper-division standing or consent of instructor. (Not offered in 2010–11.)

## **Linguistics/Vietnamese for Vietnamese**

### **Speakers (LIHL) 114 (4)**

For students who already comprehend informal spoken Vietnamese but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Vietnamese. Some speaking ability in Vietnamese recommended. **Prerequisite:** upper-division standing or consent of instructor.

## **Linguistics/Advanced Vietnamese for**

### **Vietnamese Speakers (LIHL) 134 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Vietnamese. **Prerequisite:** upper-division standing or consent of instructor.

## **Linguistics/Korean for Korean**

### **Speakers (LIHL) 115 (4)**

For students who already comprehend informal spoken Korean but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Korean. Some speaking ability in Korean recommended. **Prerequisite:** upper-division standing or consent of instructor.

## **Linguistics/Advanced Korean for**

### **Korean Speakers (LIHL) 135 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Korean. **Prerequisite:** upper-division standing or consent of instructor.

### **Linguistics/Arabic for Arabic Speakers (LIHL) 116 (4)**

For students who already comprehend informal spoken Arabic but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Arabic. Some speaking ability in Arabic recommended. **Prerequisite:** upper-division standing or consent of instructor.

### **Linguistics/Advanced Arabic for Arabic Speakers (LIHL) 136 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Arabic. **Prerequisite:** upper-division standing or consent of instructor.

### **Linguistics/Persian for Persian Speakers (LIHL) 117 (4)**

For students who already comprehend informal spoken Persian but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Persian. Some speaking ability in Persian recommended. **Prerequisite:** upper-division standing or consent of instructor.

### **Linguistics/Advanced Persian for Persian Speakers (LIHL) 137 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Persian. **Prerequisite:** upper-division standing or consent of instructor.

### **Linguistics/Cantonese for Cantonese Speakers (LIHL) 118 (4)**

For students who already comprehend informal spoken Cantonese but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Cantonese. Some speaking ability in Cantonese recommended. **Prerequisite:** upper-division standing or consent of instructor. (Not offered in 2010–11.)

### **Linguistics/Advanced Cantonese for Cantonese Speakers (LIHL) 138 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Cantonese. **Prerequisite:** upper-division standing or consent of instructor. (Not offered in 2010–11.)

### **Linguistics/Hindi for Hindi Speakers (LIHL) 119 (4)**

For students who already comprehend informal spoken Hindi but wish to improve their communicative and sociocultural competence and their analytic understanding. Language functions for oral communication, reading, writing, and culture; dialect and language style differences; structure and history of Hindi. Some speaking ability in Hindi recommended. **Prerequisite:** upper-division standing or consent of instructor. (Not offered in 2010–11.)

### **Linguistics/Advanced Hindi for Hindi Speakers (LIHL) 139 (4)**

Instruction stresses language functions required for advanced oral communication, reading, writing, and cultural understanding in professional contexts. High-level vocabulary and texts; dialect differences and formal language styles (registers). Advanced structural analysis and history of Hindi. **Prerequisite:** upper-division standing or consent of instructor. (Not offered in 2010–11.)

## **HINDI**

See also Linguistics/"[Heritage Language Program](#)."

### **Linguistics/Hindi (LIHI) 1A. Hindi Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1AX. **Prerequisite:** no prior study of Hindi. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1AX. Analysis of Hindi (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1A. **Prerequisite:** no prior study of Hindi. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1B. Hindi Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1BX. **Prerequisites:** LIHI 1A with a grade of C– or better, or equivalent and LIHI 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1BX. Analysis of Hindi (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1B. **Prerequisites:** LIHI 1A with a grade of C– or better, or equivalent and LIHI 1AX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1C. Hindi Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1CX. **Prerequisites:** LIHI 1B with a grade of C– or better, or equivalent and LIHI 1BX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1CX. Analysis of Hindi (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1C. **Prerequisites:** LIHI 1B with a grade of C– or better, or equivalent and LIHI 1BX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1D. Hindi Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1DX. **Prerequisites:** LIHI 1C with a grade of C– or better, or equivalent and LIHI 1CX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

### **Linguistics/Hindi (LIHI) 1DX. Analysis of Hindi (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1D. **Prerequisites:** LIHI 1C with a grade of C– or better, or equivalent and LIHI 1CX with a grade of D or better, or equivalent. (Not offered in 2010–11.)

## **ITALIAN**

### **Linguistics/Italian (LIIT) 1A. Italian Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1AX. **Prerequisite:** no prior study of Italian.

### **Linguistics/Italian (LIIT) 1AX. Analysis of Italian (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1A. **Prerequisite:** no prior study of Italian.

### **Linguistics/Italian (LIIT) 1B. Italian Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken

in conjunction with LIIT 1BX. **Prerequisites:** LIIT 1A with a grade of C– or better, or equivalent and LIIT 1AX with a grade of D or better, or equivalent.

### **Linguistics/Italian (LIIT) 1BX. Analysis of Italian (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1B. **Prerequisites:** LIIT 1A with a grade of C– or better, or equivalent and LIIT 1AX with a grade of D or better, or equivalent.

### **Linguistics/Italian (LIIT) 1C. Italian Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1CX. **Prerequisites:** LIIT 1B with a grade of C– or better, or equivalent and LIIT 1BX with a grade of D or better, or equivalent.

### **Linguistics/Italian (LIIT) 1CX. Analysis of Italian (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1C. **Prerequisites:** LIIT 1B with a grade of C– or better, or equivalent and LIIT 1BX with a grade of D or better, or equivalent.

### **Linguistics/Italian (LIIT) 1D. Italian Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1DX. *Successful completion of LIIT 1D and LIIT 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges.* **Prerequisites:** LIIT 1C and LIIT 1CX, or equivalent.

### **Linguistics/Italian (LIIT) 1DX. Analysis of Italian (2.5)**

Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in Italian. Must be taken in conjunction with LIIT 1D. *Successful completion of LIIT 1D and LIIT 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges.* **Prerequisites:** LIIT 1C and LIIT 1CX, or equivalent.

## **PORTUGUESE**

### **Linguistics/Portuguese (LIPO) 1A. Portuguese Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary-building, reading, and culture. Emphasis on the language and culture of Brazil. Must be taken in conjunction with LIPO 1AX. **Prerequisite:** no prior study of Portuguese.

### **Linguistics/Portuguese (LIPO) 1AX. Analysis of Portuguese (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1A. **Prerequisite:** no prior study of Portuguese.

### **Linguistics/Portuguese (LIPO) 1B. Portuguese Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking,

vocabulary-building, reading, and culture. Emphasis on the language and culture of Brazil. Must be taken in conjunction with LIPO 1BX. **Prerequisites:** LIPO 1A with a grade of C– or better or equivalent and LIPO 1AX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 1BX.**  
**Analysis of Portuguese (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1B. **Prerequisites:** LIPO 1A with a grade of C– or better or equivalent and LIPO 1AX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 1C.**  
**Portuguese Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary-building, reading, and culture. Emphasis on the language and culture of Brazil. Must be taken in conjunction with LIPO 1CX. **Prerequisites:** LIPO 1B with a grade of C– or better or equivalent and LIPO 1BX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 1CX.**  
**Analysis of Portuguese (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and reading. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1C. **Prerequisites:** LIPO 1B with a grade of C– or better or equivalent and LIPO 1BX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 1D.**  
**Portuguese Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIPO 1DX. Successful completion of LIPO 1D and LIPO 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. **Prerequisites:** LIPO 1C with a grade of C– or better, or equivalent and LIPO 1CX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 1DX.**  
**Analysis of Portuguese (2.5)**

Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in Portuguese. Must be taken in conjunction with LIPO 1D. Successful completion of LIPO 1D and LIPO 1DX satisfies the requirement for language proficiency in Revelle and Eleanor Roosevelt Colleges. **Prerequisites:** LIPO 1C with a grade of C– or better or equivalent and LIPO 1CX with a grade of D or better, or equivalent.

**Linguistics/Portuguese (LIPO) 15.**  
**Intermediate Brazilian Portuguese for the Social Sciences: Social Movements (2.0)**

Conducted entirely in Portuguese. Course aims to improve oral language skills through discussions of social science topics, with emphasis on social and political movements in contemporary Brazil. Course materials may encompass televised news broadcasts, newspapers, and periodicals. **Prerequisites:** LIPO 1D and 1DX or equivalent or by consent of the instructor.

**Linguistics/Portuguese (LIPO) 16.**  
**Intermediate Brazilian Portuguese for the Social Sciences: Cultural Movements (2.0)**

Conducted entirely in Portuguese. Course aims to improve oral language skills through discussions of social science topics, with emphasis on culture and the arts in contemporary Brazil. Course materials may encompass televised news broadcasts, newspapers, and periodicals. **Prerequisites:** LIPO 1D and 1DX or equivalent or by consent of instructor.

**Linguistics/Portuguese (LIPO) 17.**  
**Intermediate Brazilian Portuguese for the Social Sciences: Ethnicity (2.0)**

Conducted entirely in Portuguese. Course aims to improve oral language skills through discussions of social science topics, with emphasis on the role of ethnicity in contemporary Brazil. Course materials may encompass televised news

broadcasts, newspapers and periodicals. **Prerequisites:** LIPO 1D and 1DX or equivalent or by consent of instructor.

**SPANISH**

**Linguistics/Spanish (LISP) 1A.**  
**Spanish Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1AX. **Prerequisite:** no prior study of Spanish.

**Linguistics/Spanish (LISP) 1AX.**  
**Analysis of Spanish (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Spanish. Must be taken with LISP 1A. **Prerequisite:** no prior study of Spanish.

**Linguistics/Spanish (LISP) 1B.**  
**Spanish Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1BX. **Prerequisites:** LISP 1A with a grade of C– or better, or equivalent and LISP 1AX with a grade of D or better, or equivalent.

**Linguistics/Spanish (LISP) 1BX.**  
**Analysis of Spanish (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Spanish. Must be taken with LISP 1B. **Prerequisites:** LISP 1A with a grade of C– or better, or equivalent and LISP 1AX with a grade of D or better, or equivalent.

**Linguistics/Spanish (LISP) 1C.**  
**Spanish Conversation (2.5)**

Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1CX. **Prerequisites:** LISP 1B with a grade of C– or better, or equivalent and LISP 1BX with a grade of D or better, or equivalent.

**Linguistics/Spanish (LISP) 1CX.**  
**Analysis of Spanish (2.5)**

Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Spanish. Must be taken with LISP 1C. **Prerequisites:** LISP 1B with a grade of C– or better, or equivalent and LISP 1BX with a grade of D or better, or equivalent.

**Linguistics/Spanish (LISP) 1D.**  
**Spanish Conversation (2.5)**

Small conversation sections taught entirely in Spanish. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LISP 1DX. Successful completion of LISP 1D and LISP 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges. **Prerequisites:** LISP 1C with a grade of C– or better, or equivalent and LISP 1CX with a grade of D or better, or equivalent.

**Linguistics/Spanish (LISP) 1DX.**

**Linguistics/Spanish (LISP) 5A, 5B, 5C, 5D. Fundamentals of Spanish (5)**

This course concentrates on those language skills essential for communication: listening comprehension, conversation, reading, writing, and grammar analysis. UCSD students: LISP 5A is equivalent to LISP 1A/1AX, LISP 5B to LISP 5B/5BX, LISP 5C to LISP 1C/1CX and LISP 5D to LISP 1D/1DX. Enrollment is limited. **Prerequisites:** none for 5A; for 5B, two or more years of Spanish in high school or the first semester or the first quarter of college-level Spanish. (Offered in Summer Session only.)

**Linguistics/Spanish (LISP) 15, 16, 17.**  
**Intermediate Spanish for the Social Sciences (2)**

Conducted entirely in Spanish. Course aims to improve oral language skills through discussions of social science topics, with emphasis on political events and current affairs. Course materials encompass televised news broadcasts, newspapers and periodicals. LISP 15 is offered fall quarter only, LISP 16 is offered winter quarter only, and LISP 17 is offered spring quarter only. Each course may be taken one time and need not be taken in sequence. **Prerequisites:** LISP 1D/DX or at least three semesters/four quarters of college Spanish or by permission of the instructor.

See also “[Department of Literature](#).”

**DIRECTED STUDY**

**Linguistics (LIDS) 19. Directed Study–Language (2–4)**

Introductory-level study of a language in the language laboratory on a self-instructional basis. Depending on the availability of appropriate study materials, the course may be taken in blocks of two or four units of credit and may be repeated up to the total number of units available for that language.

## UNDERGRADUATE OFFICE:

110 Literature Building, (858) 534-3210

The Department of Literature at UC San Diego is unique both conceptually and structurally in that it combines all literary study in a single department, enabling students to concentrate on single-language or national literatures, while at the same time facilitating student engagement in dialogue across literatures and languages. The department also houses undergraduate and graduate study in the craft and theory of creative writing. The department brings together writers, teachers, scholars, and students of several different languages and literatures, uniting them by the nature of the studies they pursue. This lends a comparative aspect to both undergraduate and graduate programs, which lead to the bachelor of arts, master of fine arts, the candidate in philosophy, and doctor of philosophy degrees. All students must show knowledge of a foreign literature by doing upper-division or graduate work in that literature in the original language. Courses are offered not only in the literatures themselves but in the theoretical aspects of literature and—often in cooperation with other departments—in the relationship of literary study to other disciplines such as philosophy, visual arts, music, sociology, history, psychology, linguistics, and communication. With special permission, undergraduates may take graduate courses for credit, and graduate students may also take undergraduate courses for credit.

The UCSD Library's Mandeville Department of Special Collections offers the undergraduate and graduate literature student an excellent range of resources, including single-author collections, rare and out-of-print books, tapes, maps, and historical archives. Of special interest are the Southworth Collection of Spanish Civil War materials, the Hill Collection of South Pacific Voyages, the Don Cameron Allen Renaissance collection, and the Archive for New Poetry. Within the latter collection are an extensive series of single-author archives, including the papers of Paul Blackburn, Donald Allen, Lew Welch, Charles Reznikoff, Joanne Kyger, Jerome Rothenberg, and others. The Archive for New Poetry is one of the largest collections of contemporary poetry in the United States. Graduate students also have access, facilitated by travel grants, to all other University of California research collections.

## Literature majors in languages are trained

- To write effectively, marshalling textual evidence in their engagement with complex and diverse

ideas.

- To read texts and other cultural productions in a nuanced manner, sensitive to factors of historical context and aesthetic form.
- To develop a critical vocabulary and framework that will promote and facilitate their engagement with texts.
- To work at an advanced level in a second language/literature.
- To lead, evaluate, and apply secondary sources to their analyses of primary texts.
- To develop a lifelong appreciation of the subtleties of cultural texts and the ongoing need to engage with and evaluate their meanings.

### Literature majors in writing are trained

- To write clear expository prose.
- To work at an advanced level in a second language/literature, including the ability to complete at least one upper division course in literature, film, etc. taught exclusively in that language.
- To produce original works of fiction, poetry, or nonfiction.
- To demonstrate in-depth familiarity with the literary history of their chosen genre, including canonical and alternative texts across some breadth of time.
- To develop a critical vocabulary for understanding, discussing, and evaluating literary techniques and aesthetic arguments while honing editorial skills.
- To become active, sophisticated, articulate consumers and producers of a variety of texts.

### CAREERS FOR LITERATURE MAJORS

Literature majors develop skills and perspectives that prepare them for careers in education and numerous other professions. The writing, analytical, and cultural breadth of majors makes them attractive as preparation for professional schools as well as advanced graduate studies. A degree in literature provides a strong background for the LSAT and law school. Medical schools seek out students who are prepared not only in the sciences, but also in the humanities and writing. The business world seeks college-trained English majors, and international corporations actively recruit students with a specialty in French, German, Italian, Russian, or Spanish. Literature majors' skills also prepare them for work in advertising, editing, publishing, journalism, communications, mass media, and other professions where writers and editors are in demand. The knowledge of a second language and culture provides literature majors with a decided career advantage.

### SECONDARY SCHOOL ENGLISH TEACHING

The literature department offers an excellent preparation for teaching English/ESL in secondary schools. Suggested majors include Literatures of the

World, Literatures in English, and Literature/Writing. If you are interested in receiving a California teaching credential from UC San Diego, contact [Education Studies](#) (EDS) for information about prerequisites and professional preparation requirements. Please consult EDS and the literature department early in your academic career to plan an appropriate literature curriculum.

---

## THE UNDERGRADUATE PROGRAM

---

### THE MAJOR IN LITERATURE

There are ten majors available to students within the Department of Literature: Literatures in Cultural Studies, English, French, German, Italian, Russian, Spanish, Literatures of the World, Writing, and the composite major in two literatures. Requirements vary from major to major as described below. Once a student has decided upon a major in literature, he or she is required to meet regularly with an advisor in the Department of Literature. Worksheets defining major requirements are available in the literature undergraduate office to help students organize their course work.

All departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C- is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature, must be taken at UCSD.

### Lower-Division Preparation

Lower-division requirements vary, depending on the literature major in which the student elects to concentrate. However, the department strongly recommends that, as part of the freshman/sophomore course work, students who have chosen or are considering a major in literature begin an appropriate lower-division language sequence in the Departments of Linguistics or Literature as preparation for upper-division course work in a foreign language and literature. All literature majors require knowledge of a second language.

### Secondary Literature

*All students majoring in literature must study a secondary literature, that is, a literature in a language different from that of their primary literature.* The range of secondary literatures includes ASL, Classical Greek, Hebrew, and Latin, as well as the previously mentioned French, German, Italian, Russian, Spanish, and for those concentrating in a foreign literature, English is also an option. Students will satisfy this requirement by taking three courses in the secondary literature, given substantially in the native language. At least one of these courses must be upper-division. Students should see an advisor to confirm the selection of the specific courses that will be taken to satisfy both the lower-division and the upper-division components of the secondary literature requirement.

The lower-division component within the secondary literatures may be satisfied by: American Sign Language 1D/1DX and 1E; French (LTFR) 2B and either 2C or 50; German (LTGM) 2B and 2C; Hebrew (JUDA) 2 and 3 (see "[Judaic Studies](#)"); Italian (LTIT) 2B and 50; Greek (LTGK) 2 and 3; Latin (LTLA) 2 and 3; Russian (LTRU) 2B and 2C; two courses from Spanish (LTSP) 50A-50B-50C. For majors other than literatures in English, two courses from English (LTEN) 21-22-23-25-26-27-28-29-60 are applicable. Literatures of the World and writing courses may not be applied toward the English secondary literature requirement.

**Note:** World Literature (LTWL) courses taught in English do not apply unless there is a foreign-language discussion section and materials are available in the foreign language. World Literature courses whose primary focus is U.S. Literature may apply toward requirements in literatures in English. Alternative secondary literatures are subject to approval and petition.

Upper-division courses in the secondary literature are counted as part of the total number of upper-division courses required for the major when possible. Students are free to choose from any of the upper-division offerings in their secondary foreign literature. Special studies courses (198s and 199s) cannot be used to satisfy upper-division secondary literature requirements.

All departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C- is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature, must be taken at UCSD.

### Writing Component in Literature Courses

It is the departmental expectation that students in lower-division courses will write a minimum of 2,500 words per course. In upper-division courses the minimum requirement is 4,000 words per course.

### Honors Program

The department offers a special program of advanced study for outstanding undergraduates majoring in literature. Admission to this program requires an overall GPA of 3.5 and a literature major GPA of 3.7 at the beginning of the senior year. Students meeting these requirements will be sent, during the middle of fall quarter, an invitation to participate in the program. Interested students who anticipate that they will not meet the established criteria may petition to participate in the program by submitting a personal statement and a five-page example of their writing by the end of the third week of fall quarter. During the winter quarter of their senior year, all honors students enroll in the honors seminar (LTWL 191), which aims to deepen their understanding of the issues of theory and method implied in the study of literature. This seminar lays the groundwork for an honors thesis, written in spring quarter (LT\_\_ 196), each under the supervision of a faculty member who specializes in the literature of the student's primary concentration. The Honors Program concludes with an oral examination of each honors candidate by a faculty committee,

which is charged with recommending whether departmental honors are warranted and, if so, which degree of honors will appear on the student's transcript and diploma. Students from this program will also be recommended for the Burckhardt and Williams Prizes, which are awarded at graduation for outstanding achievement in the literature major. The honors seminar and thesis course may be applied toward the primary concentration in the literature major, if applicable. For Literature/Writing majors, the honors seminar is considered to be equivalent to a writing workshop.

## Special Studies

These upper-division independent study opportunities are intended for advanced students, able to work on their own, and interested in a topic not normally covered by departmental offerings.

Students with upper-division standing, a departmental GPA of at least 3.0, an overall GPA of at least 2.5, and completion of lower-division prerequisites in the subject, are eligible to take special studies courses (198s and 199s). Those not satisfying these criteria may, with justification supported by the proposed special studies instructor, petition for an exception to the regulation. 198s and 199s require at least 4,000 words of writing or an equivalent project as determined by the instructor. Information and Special Studies Enrollment forms are available in the literature undergraduate office. Enrollment requires departmental approval. Special studies courses may not be taken for a grade. These courses may not be used to satisfy upper-division requirements for majors or minors.

## Study Abroad

Study abroad can significantly enhance a student's major, particularly in ways in which it relates to international issues. Literature students are encouraged to study abroad before their senior year. Students who take Education Abroad Program or Opportunities Abroad Program (EAP/OAP) courses in a country appropriate to their major may use up to five upper-division courses to satisfy major requirements and up to three toward a minor. For composite majors in literature, six courses from abroad may apply, with no more than four toward either one of the two concentrations. These must be approved by the department after they have been entered on the student's official record at UCSD. The approval process is described in a handout on receiving transfer credit, available in the Literature Undergraduate Office. Before leaving to study abroad, students should meet with an advisor to identify which EAP courses are appropriate to fulfill the major or minor requirements.

Information on EAP/OAP is given in the "[Education Abroad Program](#)" section of the UC San Diego General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at <http://programsabroad.ucsd.edu/>. Financial aid can be used for EAP/OAP study, and special study-abroad scholarships are also available.

## INDIVIDUAL PROGRAMS

### Literature/Cultural Studies

Literatures in English  
Literatures in French  
Literatures in German  
Literatures in Italian  
Literatures in Russian  
Literatures in Spanish  
Literatures of the World  
Literature/Writing  
Composite Major

## INDIVIDUAL PROGRAM REQUIREMENTS

### Primary Concentration in Cultural Studies

The Literature/Cultural Studies major aims to provide students with broad cultural literacy and critical thinking skills—in language, visual media, social practices, and theories of interpretation—which are basic, necessary cornerstones of a humanities education. With four focus areas—visual culture, popular cultures, culture and globalization, and social identities—the undergraduate major in Literature/Cultural Studies, on the one hand, offers literacy in a range of traditional and modern cultural forms (from literature and texts, to film, art, and visual culture) and methods for interpreting these cultural forms, and on the other hand, prepares students to engage with a society whose "culture" is, and will become increasingly, diverse, international, and multilingual.

- Three lower-division courses:
  - LTCS 50 and 52
  - Third course may be selected from: LTEN 25, 26, 27, 28, 29, 60; LTWL 4A-B-C-D-F-M; TWS 21-22-23-24-25-26; or LTWL 19A-B-C.
- Six upper-division LTCS courses (one of each from the four a–d focus areas):
  - Reading Visual Culture: LTCS 170, 171, 172, 173
  - Popular Cultures: LTCS 110, 111, 114, 118
  - Culture and Globalization: LTCS 125, 133, 140, 141, 145
  - Social Identities: LTCS 130, 131, 132, 135

**Note:** At least one upper-division LTCS methods course is recommended and will fulfill the upper-division requirement: LTCS 100, 102, 120, 155.
- Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses. Special studies courses (198s and 199s) and courses in foreign literatures taught in translation do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above.
- The remaining upper-division electives, to total twelve upper-division courses, can be drawn from these existing Department of Literature courses:
  - Literatures in English: LTEN 150, 160, 178, 180, 181, 183, 184, 185, 186, 187, 188, 189
  - Literatures in French: LTFR 145, 164, 170
  - Literatures in Italian: LTIT 122, 140, 150
  - Literatures in Korean: LTKO 100
  - Literatures in Spanish: LTSP 123, 137, 150A, 150B, 154, 170, 174, 175, 176, 177

- Literature/Theory: LTTH 110, 115, 150
- Literatures of the World: LTAF 110, 120, LTAM 100, 101, 102, 108, 109, 111, 130, 132, LTEA 120A, 120B, 120C, 120D, 138, 142, 143, 144, 145, LTWL 110B, 114, 116, 120, 124, 141, 155, 160, 180, 181, 183, 184, 185
- Literature/Writing: LTWR 110, 113, 115, 119, 121

### Primary Concentration in Literatures in English

- Six lower-division courses:
  - LTEN 21, 22, 23, 25, and 26
  - One of the following: LTEN 27, 28, or 29
- Nine upper-division courses from literatures in English offerings, including a course from each of the following four a–d categories:
  - British Literature before 1660
  - British Literature after 1660
  - U.S. Literature before 1860
  - U.S. Literature after 1860
- One course in world Anglophone literature(s) with focus other than British or U.S. literatures.
- One upper-division course in the history of criticism or in literary/cultural theory and methods from among the following: LTTH 110; LTTH 115; or LTCS 100.
- Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses. Special studies courses (198s and 199s) do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above.
- Upper-division elective chosen from Department of Literature offerings to make a total of twelve upper-division courses.

### Primary Concentration in a Foreign Literature

#### Literatures in French

- Nine upper-division courses as follows:
  - LTFR 115-116, Themes in French Intellectual and Literary History.
  - Seven additional upper-division courses in French literature, including at least one course in each of the following periods: seventeenth or eighteenth century; nineteenth century; and twentieth century.
- Three courses in a secondary literature, that is, a literature taught in a language other than French. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in French do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above.
- Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

### Literatures in German

1. Nine upper-division courses in German literature. Two of these should be in literature written before the year 1850.
  2. Three courses in a secondary literature, that is, a literature taught in a language other than German. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in German do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above.
- Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

### Literatures in Italian

1. Nine upper-division courses in Italian literature as follows:
  - a. LTIT 100, Introduction to Italian Literature
  - b. LTIT 115, Medieval Studies
  - c. LTIT 161, Advanced Stylistics and Conversation
  - d. One course in Italian North American Culture
  - e. Five additional upper-division courses in Italian literature taught in Italian
2. Three courses in a secondary literature, that is, a literature taught in a language other than Italian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Italian do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

### Literatures in Russian

1. LTRU 1A-B-C and 2A-B-C or their equivalent.
2. Twelve upper-division courses in Russian:
  - a. LTRU 104A-B-C
  - b. LTRU 110A-B-C
  - c. Six additional upper-division courses in Russian literature
3. Three courses in a secondary literature, that is, a literature taught in a language other than Russian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Russian do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above.

Students in the Russian literature major are encouraged to participate in the Education Abroad Program (EAP) in Moscow and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements.

### Literatures in Spanish

1. Two lower-division Spanish literature courses, as indicated:
  - a. LTSP 50A, Peninsular Literature

- b. Either LTSP 50B or LTSP 50C, Latin American Literature
2. Nine upper-division courses as follows:
    - a. One course in Spanish Peninsular literature before 1900: LTSP 100, 107, 115, 119AB, 119C, 122, or the following topics course when the topic is pre-twentieth-century literature: LTSP 123
    - b. One course in Latin American literature before 1900: LTSP 116, 135A, or any of the following regional, genre, or topics courses when the topic is pre-twentieth-century literature: LTSP 134, 136, 137, 138, 140, 141, 142, 171, 173, 174, 175, 176, 177, 178
    - c. Seven additional upper-division courses in Spanish, Latin American, and/or Chicano literature (taught in Spanish)
  3. Three courses in a secondary literature, that is, a literature taught in a language other than Spanish. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Spanish do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above, for applicable lower-division courses.
  4. Upper-division electives from Department of Literature offerings, whether in Spanish or in another literature, to make a total of twelve upper-division courses.

Students majoring in Spanish can choose to concentrate on either Spanish or Latin American literature. All students, however, are encouraged to take courses in the various national literatures as well as in Chicano literature for a broad background in Spanish language literatures.

Students not having a solid linguistic base in Spanish are advised to take intermediate language courses from the LTSP 2 and 50 sequences for additional review of Spanish grammar, development of writing skills, and introduction to literary analysis. Only LTSP 50A and either 50B or 50C, however, can count towards the major.

### Primary Concentration in Literatures of the World

The major in Literatures of the World allows students to expand the focus of their work beyond a single-language literature. They plan an individual program with options in regional studies (for example, Europe, the Americas, East Asia, Africa, Near East) and topical studies (for example, genre, period, gender, ethnic literature, literature and the visual arts, cultural studies, writing, Third World studies) as well as the single-language literatures.

1. Lower-division (three courses):

A three-course sequence in literature chosen from any section in literature.

Students can combine courses in an original national language/literature with courses in translation to satisfy this requirement, such as LTRF 2A and 2B plus LTWL 4A (Film and Fiction in Twentieth-Century Societies: French). Students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt College's Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL major.

2. Upper-division (twelve courses):
  - a. Six courses in a regional or single-language literature, to be taken in the original language(s) or in translation
  - b. Four courses focused on a topic or another regional or single-language literature
  - c. Two courses in non-European and non-U.S. Literature; if satisfied under group (a) or group (b), any other two literature courses may be substituted.
3. Three courses in a secondary literature, that is, a literature taught in a language different from that of the primary literature. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses for the major and may, where appropriate, be applied to requirements in Group B or C. Students should see an advisor when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures taught in translation do not apply to the secondary literature requirement. See "[Secondary Literature](#)," above, for applicable lower-division courses.

At least two of the required twelve upper-division courses must be in literature written before 1850. No more than four courses in literature/writing (LTWR) may be taken as part of the world literatures major, and these will generally apply to Group 2.b.

### Primary Concentration in Writing

The writing major is designed to provide direct experience in writing fiction, nonfiction, and poetry as well as engage the student writer in both the world of "writing culture"—public readings, publication, and the media—and literary theory and practical critique. An indispensable feature of this program is that it engages students with one another's work, both critically and communally. Writing majors will move through a sequence of courses within (and between) genres in order to develop their own style and confidence in the work of writing and critique. Students who are interested in teaching writing will find this major an opportunity both for writing extensively and dealing critically with the act of written composition. The major requirements are as follows:

1. LTWR 8A, 8B, and 8C.
2. Three lower-division courses:
  - a. LTEN 26
  - b. Any two of the following: LTEN 21, 22, 23, 25, 27, 28, 29; TWS 21, 22, 23, 25, 26
  - c. Twelve upper-division courses:
3. Six upper-division courses in Literature/Writing from the writing workshop sequence (LTWR 100–129). These workshops may be repeated for credit (see course listing for number of times workshops may be repeated), but the requirement should show a range of writing experience in at least two major writing types. No other courses may be substituted for this basic requirement of six upper-division workshops.

- a. One course from the group numbered LTWR 140–148.
  - b. Five upper-division electives chosen from Department of Literature offerings, excluding LTWR 100–148 courses.
4. Three courses in a secondary literature, that is, a literature taught in a language other than English. At least one of these courses must be upper-division. Students should see an advisor when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in English translation do not apply to the secondary literature requirement. See “[Secondary Literature](#),” above.

### Composite Major in Literature

The composite major in literature permits a student to develop a solid foundation in two literatures while remaining within one department. Because the UCSD Department of Literature houses literatures that are divided among different departments at most universities, our composite major allows students to coordinate their studies with a single, closely-knit group of faculty, and to arrange their program without repeating two different sets of major requirements. (For example, since a composite major necessarily combines literatures written in two different languages, it automatically fulfills the secondary language requirement for the literature major.)

Students pursuing a composite major work closely with an advisor to plan a program of study that meets the following requirements:

1. Students will select two literatures of concentration (Literature 1 and Literature 2).
  - a. One of the literatures must be in a language other than English.
  - b. Both concentrations, however, can be in non-English literatures; thus a student can choose English and French, for example, or Russian and Spanish, French and Italian, German and Latin, Spanish and English, etc., but not Literatures of the World or Literature/Writing.
2. Students will meet all lower-division major requirements for each of the two literatures of concentration. See specific “Primary Concentration” listings above; [English](#), [Spanish](#), and [Russian](#), for example, all have lower-division requirements for the major.
3. Students will take eight upper-division courses in each of the two selected literatures of concentration for a total of sixteen upper-division courses.
  - a. These must satisfy the upper-division course requirements for each of the two majors. Thus, for example, if one of the concentrations is English, the student must include courses from each of the four stipulated categories; if one of the concentrations is Spanish, upper-division courses must include LTSP 130A and 130B.
  - b. Beyond the upper-division requirements for each literature of concentration (Literature 1 and Literature 2), students will take a sufficient number of elective courses in each of the two literatures of concentration to make a total of

eight upper-division courses in each chosen concentration.

### Double Major within the Department of Literature in Literature/Writing and Another Literature

Students who wish to major both in Literature/Writing and in literature (any section) should see the department for information regarding appropriate double major requirements. Generally, all requirements for each major must be completed, though the secondary literature and two upper-division courses, where appropriate, may overlap from one major to the other.

Students must submit a double major petition for approval by the department and the student’s provost office.

### THE MINOR IN LITERATURE

The department offers a wide range of possibilities for noncontiguous minors. The options include courses in a single regional or national literature, courses in more than one literature, and a combination of language and literature courses. The minors require seven courses. *All courses taken to complete a literature minor must be taken for a letter grade.* No grade below C– is acceptable. Advanced Placement (AP) credit will not satisfy minor requirements.

Please see the department undergraduate office for specific minor requirements.

- A minor in literature will consist of seven courses as described below.
- French, German, Greek, Italian, Latin, Russian, or Spanish literature: seven courses, at least four of which must be upper-division in the same literature.
- Literatures in English, Literatures of the World, and Literature/Writing: seven courses, at least five of which must be upper-division.
- Lower-division courses applicable toward minors:

English—LTEN 21, 22, 23, 25, 26, 27, 28, 29, 60

French—LTFR 2A-B-C, 50

German—LTGM 2A-B-C

Greek—LTGK 1, 2, 3

Hebrew—JUDA 1, 2, 3 (see “[Judaic Studies](#)”)

Italian—LTIT 2A-B, 50

Latin—LTLA 1, 2, 3

Russian—LTRU 2A-B-C

Spanish—LTSP 2A-B-C-D-E, 50A-B-C

Writing—LTWR 8A-B-C

Literatures of the World—seven literature courses, at least five of which must be upper-division—usually 1) a two- or three-course lower-division sequence and 2) five upper-division courses with a single unifying theme. Students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt College’s Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL minor.

Writing minor—seven courses, at least five of which must be upper-division. The minimum of five upper-division courses must cover at least two major writing genres, with course work chosen from writing courses (LTWR) numbered 100 through 148.

Please see the department for further information and specifics regarding minors in literature.

---

## THE GRADUATE PROGRAM

---

### DOCTORAL DEGREE PROGRAM

The department offers a single Ph.D. in literature with concentrations in any of the fields in which members of the department do research. The C.Phil. (Candidate in Philosophy) is conferred upon all students who pass the qualifying examination and are advanced to candidacy. Ph.D. students in the doctoral program may also qualify for the M.A. upon completion of their qualifying examinations. Applicants seeking only an M.A. degree are not accepted.

### Admission

The following are requirements for admission to graduate study in literature:

1. A baccalaureate or a master’s degree with a major in literature or a related field. Official transcripts required.
2. Satisfactory scores on the Graduate Record Examination (GRE) achieved within the past three calendar years. The Subject Test is not required.
3. Satisfactory score on the Test of English as a Foreign Language (TOEFL) achieved with the past two calendar years is required for international applicants.
4. Competence in reading, understanding and interpreting both literary and critical texts as well as the ability to follow seminar discussions in a second language and, for comparative literature students, in a third language as well.
5. Writing sample (twenty-five page minimum) required for all applicants.
6. Minimum of three letters of reference.

Completed applications and supporting materials must be received by the deadline posted on the department Web site (<http://literature.ucsd.edu>) for admission to the following fall quarter. Those planning to apply should take the GRE/TOEFL far enough in advance so that the scores will be available to the admissions committee in December.

Please refer to the department Web site (<http://literature.ucsd.edu>) for specific guidelines.

### Course of Study

Formal study begins with coursework including a three-quarter introductory sequence (Literature/Theory 200A-B-C) which has an interdisciplinary and theoretical emphasis. During the first three years, the course of study will include at least four seminars in one literature and two in another (students in comparative literature must take at least one seminar in a third literature); at least four seminars drawn from offerings in literary theory, the second or a third literature, cultural studies, comparative literature, or composition studies; and five additional seminars open entirely to the student’s choice (four for students in comparative literature). Such “open”

seminars should generally be related to the intended dissertation field. At most, two seminars offered in other campus departments may be substituted for any of the latter group, with the advisor's permission. Students must also fulfill a historical breadth requirement by completing two seminars dealing with texts or cultural practices prior to 1800. For students with M.A. degrees the initial three-year sequence may be reduced, depending on previous course work and on the students' plans for doctoral study.

Students in comparative literature must take four of the above-described seminars in comparative literature or in other sections, provided that they be clearly comparative in nature. Comparative literature seminars taken for the first, second, or third literature requirement must be substantially focused upon the relevant language and deal with materials in the original.

Students wishing to take these courses in a literature for which seminars are not regularly offered may substitute independent study courses (298) or undergraduate courses enhanced by additional assignments. To do so, students must demonstrate through prior course work that they have already attained graduate-level competency in the literature and language in question. Approval from the comparative literature graduate advisor and the director of Graduate Studies must be obtained.

The third year is spent taking seminars and preparing for the qualifying examinations. During this year, students will register for two four-unit independent study courses (298). The first will be used to prepare reading lists for the subject-area qualifying examinations and the second will focus on the long paper required for the qualifying examinations.

The qualifying examination is usually taken during the ninth quarter of enrollment. It must be completed by the end of the tenth quarter. The fourth, fifth, and sixth years will be devoted to preparation of the dissertation

Students may write dissertations in any of the fields in which members of the department do research. These fields may include English, American, French, German, Italian, Greek, Latin, Spanish, Chinese, Japanese, Russian, Chicano, Asian-American, and African-American literature, comparative literature, literary theory, women's studies, cultural studies, early modern studies, and composition studies.

## Language Requirements

Graduate students are expected to read literary and secondary texts and to follow seminar discussions or lectures in a second language (a language other than the one in which the literature of their intended specialization is written). Students in comparative literature should have in-depth knowledge of a second and third language.

To satisfy the language requirements, students must demonstrate language proficiency via completion of two graduate seminars in the literature of the second language. In addition, comparative literature students must complete one seminar in the literature of the third language. With the approval of the director of Graduate Studies, students may satisfy the language requirement by substituting an upper-division undergraduate course enhanced by additional assignments (grade of A must be

received). If upper-division courses are not available, students may take independent study courses (298) in the language. These options are only allowed when there is no graduate seminar offered in the chosen language.

Students must pass an examination in reading, interpretation, and translation in each of the two (or three in the case of comparative literature) courses taken to satisfy the second language requirement. The language requirements must be satisfied prior to the qualifying examination.

## Advancement to Candidacy

Students should choose a Ph.D. advisor no later than the first quarter of the third year. The advisor, in consultation with the student, will form a qualifying examination committee. The student and the qualifying examination committee will jointly determine the nature of the long research paper, (approximately thirty pages) and the two areas of specialization on which the student will be examined in writing. After satisfactory completion of the paper and the written examinations, the student will take a two-hour oral examination. On passing the oral examination, the student is declared eligible for advancement to candidacy for the Ph.D. The C. Phil. degree is conferred upon successful advancement. Students may also be eligible for the M.A. degree upon advancement, if no previous graduate degrees have been awarded.

Students whose preparation for the qualifying examinations or whose performance during the course of the qualifying examinations is deemed unsatisfactory, will not be permitted to continue in the graduate program.

## Teaching

The department requires that each Ph.D. student participate in apprentice teaching before the completion of the degree; the minimum amount required is equivalent to the duties expected of a half-time teaching assistant for three academic quarters. This teaching involves conducting, with the guidance and support of a supervising professor, discussion sections and related activities in a variety of freshman and sophomore courses. Academic credit is granted for the training given under the apprentice teaching program.

## Grading

The only grading option for literature graduate courses is Satisfactory/Unsatisfactory (S/U). Students receive written evaluations of their performance in seminars. Upper-division undergraduate courses must be taken for a letter grade; students must receive a grade of A to maintain acceptable graduate status and continuation of funding.

## DEPARTMENTAL PH.D. TIME LIMIT POLICIES

Students must be advanced to candidacy by the tenth quarter of study. Departmental normative time is six years. Total registered time at UC San Diego cannot exceed eight years.

## FINANCIAL SUPPORT

Ph.D. students entering the program with a B.A. may be supported (either by employment or fellowships) for six years. Students who have an M.A. and have been given transfer credit may be supported for five years. Such support depends upon the funds available, the number of students eligible, and the rate of progress.

## MASTER'S DEGREE PROGRAM

The requirement for the M.A. degree is completion of forty-eight total units distributed as follows:

1. LTHH 200A, 200B, 200C (twelve units). A required introductory theory sequence generally taken during the first year in the Ph.D. program.
2. Twenty-eight units of graduate seminars. Students may take a maximum of twelve units of enhanced upper-division course work, when graduate seminars are not available in student's specialization. A maximum of eight units may be taken outside of the Department of Literature.
  - Sixteen units of course work in primary literature of concentration.
  - Eight units of course work in secondary literature (in a language other than that of the student's principal concentration).
  - Four units of course work open to the student's choice.
3. Eight units of guided research (LTX 298), culminating in an acceptable written and oral comprehensive examination.

Although Ph.D. students sometimes elect to terminate their studies in our department with a master's degree, we do not admit students to a master's degree program in literature.

## Master of Fine Arts Program

The Master of Fine Arts (M.F.A.) in Writing is a two-year residency program that offers a degree in the areas of fiction and poetry, and is designed for students who are interested in innovative and interdisciplinary approaches to narrative and poetics. The program is also distinguished by its commitment to community building, alternative forms of literary distribution, and transborder exchange.

The M.F.A. Program is small, with typically eight new students admitted each year. The intimate nature of the program allows students to work very closely with the writing faculty, as well as to receive support in the form of research assistantships and/or teaching assistantships.

The M.F.A. in Writing is part of the Department of Literature, which also offers a doctoral program in literature that emphasizes cultural studies, gender studies, postcoloniality, and critical theory. The M.F.A. Program co-exists with a thriving undergraduate writing major, and benefits from a long-established reading series and the university's Archive for New Poetry, which holds the papers of George Oppen, Lyn Hejinian, Susan Howe, Alice Notley, James Schuyler, Ron Silliman, and many other important figures. With strong ties to the Departments of Visual Arts, Theatre and Dance, Communication, and Music, and situated at one of the top-rated science campuses in the country, the program encourages

its students to generate writing informed by other disciplines and media. In recognition of the diverse community we serve, our location on the border with Mexico, and the resources offered by our faculty, we look forward to offering bilingual workshops in Spanish and English as the program develops.

The M.F.A. Program in Writing offers students a unique opportunity to develop as writers in a community that integrates a multiplicity of collaborative, interdisciplinary, and theoretical approaches by which to complete a literary project.

## Program

The Graduate Program in Writing is a two-year program. The M.F.A. degree is awarded upon the satisfactory completion of at least six quarters of registration, seventy-two units of required course work, a preliminary reading or presentation after the first year, a completed manuscript or project, and a final reading or presentation.

1. Four-unit course in Writing and Theory.
2. Four-unit course in Modern Art Movements and Aesthetics.
3. Twelve units of graduate seminars (or upper-division course in literature or guided independent study) in literature.
4. Twenty units of writing workshops within a specific genre or in a combination of genres.
5. Four to twelve units of graduate-level courses in either an art practice or theory outside of the writing program. This could be in visual arts, music, or theatre, or in graduate seminars offered by the Department of Literature in a language other than English.
6. Eight to twelve units of guided research culminating in an acceptable manuscript of poetry, fiction, or creative nonfiction (which may include collaboration with other genres or media). A discussion of no more than one hour follows submission of the manuscript.
7. Twelve units of apprentice teaching and/or research assistantship at UCSD.

Additional program information available on the department Web site (<http://literature.ucsd.edu/grad/mfawriting/>).

## Admission

The following are requirements for admission to the M.F.A. program:

1. A baccalaureate degree from an accredited institution of higher education, with training comparable in standard and content to that provided by the University of California. Official transcripts are required.
2. Satisfactory score on the Test of English as a Foreign Language (international applicants only).
3. Writing sample.
4. Three letters of recommendation.

Additional information is available on the department Web site (<http://literature.ucsd.edu/grad/mfawriting/>). Completed applications and support-

ing materials must be received by the application deadline for admission the following fall quarter.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## CHINESE LITERATURE

### UPPER-DIVISION

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

#### LTCB 101. Readings in Contemporary Chinese Literature (4)

Intended for students who have the competence to read contemporary Chinese texts, poetry, short stories, and criticism in vernacular Chinese. May be repeated for credit as topics vary.

## COMPARATIVE LITERATURE

### GRADUATE

**PREREQUISITE:** graduate standing or consent of instructor.

#### LTCO 202C. History of European Criticism and Aesthetics (4)

A core course for comparative literature, strongly recommended for all graduate students in the comparative literature program. A historical survey of criticism and aesthetics divided as follows: 202C, Romanticism to late nineteenth century.

#### LTCO 210. Classical Studies (4)

Analysis of significant works of the Greek and Roman traditions, with attention to their interest for later European literature. May be repeated for credit as topics vary.

#### LTCO 214. The Bible and Critical Theory (4)

Reading biblical texts (Hebrew Bible and New Testament) from the perspective of different theoretical methods in literary criticism and cultural studies. Theoretical coverage will vary but may include, for example, postmodernist, postcolonialist, psychoanalytic, gender, and ideological readings of biblical texts.

#### LTCO 252. Modernism (4)

A sample investigation into the concept of period. Will deal with the question of the existence of modernism, the description of the phenomenon, and the causes to which it is to be attributed. May be repeated for credit as topics vary.

#### LTCO 274. Genre Studies (4)

A consideration of a representative selection of works relating to a theme, form, or literary genre. May be repeated for credit as topics vary.

#### LTCO 281. Literature and Film (4)

A study of literature and film in relation to one another, to critical and aesthetic theories, and to historical context. May be repeated for credit when topics vary.

#### LTCO 282. Literature and Philosophy (4)

Questions and problems from the history of philosophy or from the various fields of philosophy (e.g., epistemology, ethics, logic) in their interaction with intellectual issues and questions addressed by literary criticism and theory. Repeatable for credit when topics vary.

#### LTCO 283. Literature and Political Philosophy (4)

An inquiry into philosophical texts viewed as influential in comparative literature and political science (Plato, Aristotle, Augustine, Aquinas, Machiavelli, More, Hobbes, Locke, Hume, Kant, Herder, Hegel, Nietzsche, Kojeve, Foucault, Rawls, et al.). May be repeated for credit as topics vary.

#### LTCO 284. Literature and Ethics (4)

The longstanding relationship of literary studies and ethics or the arts of life. From Plato, Aristotle, Renaissance treatises, Kant to Foucault and others. May be repeated for credit as topics vary.

#### LTCO 285. Literature and Aesthetics (4)

Research in literary theory and aesthetic philosophies. Single and multiple authors and topics; Plato and Aristotle, Renaissance treatises, Winckleman, Kant and Hegel in the Enlightenment, Warburg, Heidegger and Panofsky, contemporary art theory, et al. May be repeated for credit as topics vary.

#### LTCO 286. Topics in Islam and Modernity (4)

A survey of developments in the Islamic world during the period of European colonial domination and its aftermath, with special attention to the works of leading Muslim thinkers (e.g., Sayid Ahmed Khan, Muhammad Abduh, Hasan al Banna, Ruhallah Khomeini, among others). May be repeated for credit as topics vary.

#### LTCO 287. Culture and Political Theory (4)

A comparative approach of political theory based on historical periods (with the tools of new historicism), various cultures (inspired by anthropological research), and referring to the most important philosophical thinkers from Western and non-Western traditions. May be repeated for credit as topics vary.

#### LTCO 289. History of the Book (4)

Questions and problems from the history of the book, the history of libraries, materialist bibliography, epistemology, as they relate to literary scholarship and theory. May be repeated for credit as topics vary.

#### LTCO 295. M.A. Thesis (1–8)

Research for the master's thesis. Opened for repeated registration up to eight units. (Satisfactory/Unsatisfactory grades only.) **Prerequisite:** enrolled in M.A. program.

#### LTCO 296. Research Practicum (1–12)

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

#### LTCO 297. Directed Studies: Reading Course (1–12)

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

#### LTCO 298. Special Projects: Writing Course (1–12)

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

#### LTCO 299. Dissertation (1–12)

Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

## LITERATURE/CULTURAL STUDIES

### LOWER-DIVISION

#### LTCS 50. Introduction to Cultural Studies (4)

An introduction to cultural studies with a focus on the following areas: literary and historical studies, popular culture, women's studies, ethnic studies, science studies, and gay/lesbian studies. Particular emphasis on the question of "cultural practices" and their social and political conditions and effects.

#### LTCS 52. Topics in Cultural Studies (4)

This course is designed to complement LTCS 50, Introduction to Cultural Studies. In this course, cultural studies methods are further introduced and applied to various concrete topics in order to illustrate the practical analysis of culture and cultural forms.

**LTCS 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. **Prerequisites:** none.

**LTCS 98. Directed Group Studies (4)**

Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. (P/NP only.) **Prerequisites:** lower-division standing, completion of at least thirty units of undergraduate study at UCSD, minimum 3.0 GPA at UCSD, consent of instructor, and completed and approved Special Studies form.

**UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTCS 100. Theories and Methods in Cultural Studies (4)**

Reading in some of the major theoretical texts that have framed work in cultural studies, with particular emphasis on those drawn from critical theory, studies in colonialism, cultural anthropology, feminism, semiotics, gay/lesbian studies, historicism, and psychoanalytic theory.

**LTCS 102. Practicing Cultural Studies (4)**

Survey and application of methods central to cultural studies as a critical social practice, examining the relationship between cultural studies and social transformation. Students will study varieties of material culture, and experiment with techniques of reading, interpretation, and intervention.

**LTCS 110. Popular Culture (4)**

A reading of recent theory on popular culture and a study of particular texts dealing with popular cultural practices, both contemporary and noncontemporary, as sites of conflict and struggle. Repeatable for credit when topics vary.

**LTCS 111. Special Topics in Popular Culture in Historical Context (4)**

Exploration of forms of popular culture in different historical and geographical contexts. Topics may include: folklore, dime novels and other types of popular literature, racial performances, popular religions, theatrical melodrama, photojournalism, and early film. Repeatable for credit when readings and focus vary.

**LTCS 115. Performance Culture (4)**

An investigation of different types of performances such as theatrical genres ranging from melodrama and minstrelsy to various cultural rituals and speech acts. From the perspective of literary studies, performance studies, postcolonial theory, ethnography and theatre history, the course explores race, gender, sexuality, and nation through performance.

**LTCS 118. Comedy (4)**

Comedy in fiction and film from ancient times to contemporary, including the Bible, Aristophanes, Shakespeare, and modern writers and film makers.

**LTCS 120. Historical Perspectives on Culture (4)**

The course will explore the relation among cultural production, institutions, history, and ideology during selected historical periods. In considering different kinds of texts, relations of power and knowledge at different historical moments will be discussed. Repeatable for credit when topics vary.

**LTCS 125. Cultural Perspectives on Immigration and Citizenship (4)**

Introduction to the studies of cultural dimensions of immigration and citizenship. Examines the diverse cultural texts—literature, law, film, music, the televisual images, etc., that both shape and are shaped by immigration and the idea of citizenship in different national and historical contexts.

**LTCS 130. Gender, Race/Ethnicity, Class, and Culture (4)**

The course will focus on the representation of gender, ethnicity, and class in cultural production in view of various contemporary theories of race, sex, and class. Repeatable for credit when topics vary.

**LTCS 131. Topics in Queer Cultures/ Queer Subcultures (4)**

This course examines the intersection of sex, sexuality, and popular culture by looking at the history of popular representations of queer sexuality and their relation to political movements for gay and lesbian rights. Repeatable for credit when readings and focus vary.

**LTCS 132. Special Topics in Social Identities and the Media (4)**

A study of media representation and various aspects of identity, such as gender, sexuality, race, ethnicity, social class, culture, and geopolitical location. Students will consider the various media of film, television, alternative video, advertising, music, and the Internet. Repeatable for credit when readings and focus vary.

**LTCS 133. Globalization and Culture (4)**

Studies of cultural dimensions of immigration and citizenship. This course examines the diverse cultural texts—literature, law, film, music, the televisual images, etc., that both shape and are shaped by immigration and the idea of citizenship in different national and historical contexts.

**LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgender Studies (4)**

Introduction to interdisciplinary examination of human sexuality and, especially, lesbian, gay, bisexual, and transgender identities and desires. Juxtaposes perspectives from humanities, social sciences, and natural sciences. Introduces queer theory to understand sexuality in relation to phenomena such as government, family, culture, medicine, race, gender, and class.

**LTCS 141. Special Topics in Race and Empire (4)**

The role of race and culture within the history of empires; may select a single empire for consideration, such as France, Britain, U.S., or Japan, or choose to examine the role of race and culture in comparative histories of colonialism. Repeatable for credit when readings and focus vary.

**LTCS 145. National Cultures in Colonial and Postcolonial Contexts (4)**

Studies of emergence of national cultures under colonial rule and their transformations in the process of decolonization. Investigation of ideological constructions of such cultural institutions as modern national language, national history and historiography, national literary canon, and folk literature and culture.

**LTCS 150. Topics in Cultural Studies (4)**

The course will examine one or more forms of cultural production or cultural practice from a variety of theoretical and historical perspectives. Topics may include: contemporary debates on culture, genres of popular music/fiction/film, AIDS and culture, the history of sexuality, subcultural styles, etc. Repeatable for credit when topics vary.

**LTCS 160. Cultural Studies Approaches to Popular Music (4)**

An investigation of different types of popular music genres, cultures, and practices such as hip hop, punk rock, R&B, jazz, country, and dance music cultures. From the perspective of ethnography and cultural and performance studies, the course explores race, gender, sexuality, and the negotiations of local, as well as national communities and subcultures via popular music.

**LTCS 165. Special Topics: The Politics of Food**

This course will examine the representation and politics of food in literary and other cultural texts. Topics may include: food and poverty, the fast food industry, controversies about seed, sustainable food production, myths about hunger, eating and epistemology, aesthetics, etc. Repeatable for credit up to three times when topics vary.

**LTCS 170. Visual Culture (4)**

The course will focus on visual practices and discourses in their intersection and overlap, from traditional media, print,

and photography to film, video, TV, computers, medical scanners, and the Internet.

**LTCS 171. Topics in Television and Popular Media (4)**

Examining the relationship between television and national culture, students will study the emergence of TV as a domestic technology, the history of race and gender in television programming, and the global politics of television distribution. Repeatable for credit when readings and focus vary.

**LTCS 172. Special Topics in Screening Race/ Ethnicity, Gender and Sexuality (4)**

Exploring both Hollywood and international filmmaking, an exploration of screen representations with attention to race/ethnicity, gender, and sexuality in different historical and linguistic contexts. Historical periods may extend from silent, through wartime and cold war, to contemporary era of globalization. Repeatable for credit when readings and focus vary.

**LTCS 173. Topics in Violence and Visual Culture (4)**

This course focuses on the critical study of representations of violence, such as war, genocide, sexual violence, and crime, across a range of media, including literature, film, photography, and other forms of visual culture. Repeatable for credit when readings and focus vary.

**LTCS 192. Senior Seminar in Literatures in Cultural Studies (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LTCS 198. Directed Group Study (4)**

Directed group research, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department. (P/NP only.) **Prerequisite:** permission of the department.

**LTCS 199. Special Studies (2 or 4)**

Individual reading in an area not covered in courses currently offered by the department. (P/NP only.) **Prerequisite:** permission of the department.

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTCS 201. Theories and Methods of Analysis in Cultural Studies (4)**

Contemporary theories of cultural studies. The seminar will concentrate on major interpretive approaches drawn from several areas of cultural and political analysis, including historicism, Marxist theory, feminism, structuralism, psychoanalytic theory, semiotics, postmodernist studies, gay and lesbian studies, and others. The particular focus and approach may vary. Repeatable for credit.

**LTCS 210. History and Culture (4)**

This seminar will focus on the cultural practices of a particular historical period as a means of analyzing the relation between culture/ideology and economic and political modes of production and domination. Topic, historical period, and theoretical approach may vary. Repeatable for credit.

**LTCS 220. Film/TV/Video Studies (4)**

The seminar will concentrate on genres or subgenres within film/TV/video studies or on a stand of film/TV/video theory. Possible topics may include: horror film, melodrama, sitcoms/soaps/talk shows, music videos, black or queer cinema, etc. Repeatable for credit.

**LTCS 222. Topics in Theory and History of Film (4)**

This course will consider various theoretical approaches to film texts (historical-materialist, feminist, psychoanalytic, semiotic) as well as the history of film, the political economy of film production and distribution, exhibition practices,

and spectatorship in national and transnational contexts. Repeatable for credit when topics vary.

**LTCS 225. Interdisciplinary and Historical Analysis of Cultural Texts (4)**

The seminar will focus on a particular historical period and examine a variety of cultural texts vis-a-vis related historical, economic, political, and sociological discourses. The conjunction and disjunction of approaches will be explored in relation to specific texts. Repeatable for credit.

**LTCS 250. Topics in Cultural Studies (4)**

This seminar will be organized around any of various topic areas relating to cultural studies. These might include studies in colonialism, historicism, gender, sexuality, social institutions, popular culture, subaltern practices, etc. May be repeated for credit as topics vary.

**LTCS 255. Cultural Studies, Colonialism, and Decolonialism (4)**

This course considers different approaches to the study of colonialism in a variety of national contexts. Educational, legal, religious, military, and cultural apparatuses of colonialism, theories of decolonization, the "postcolonial" and feminist critiques of "modernity"/modernization will also be studied. May be repeated for credit when topics vary.

**LTCS 256. Cultural Studies of Technoscience (4)**

The course will explore work in cultural studies, feminist studies, and queer theory of scientific practices altering social relations, cultural identities, and conceptions of "nature." Issues may include the AIDS pandemic, genetic research, electronic communities, reproductive technologies, and other topics. May be repeated for credit when topics vary.

**LTCS 260. National Cultures (4)**

Selected topics on the construction of national cultural identities. Investigation of the dynamics of canon formation and nation building in specific historical contexts. May be repeated for credit when topics vary.

**LTCS 296. Research Practicum (1-12)**

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

**LTCS 297. Directed Studies: Reading Course (1-12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

**LTCS 298. Special Projects: Writing Course (1-12)**

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral proResearch toward the dissertation. Open only to Ph.D. students who have advanced to candidacy. Repeatable for credit.

## LITERATURES IN ENGLISH

### LOWER-DIVISION

**LTEN 21. Introduction to the Literature of the British Isles: Pre-1660 (4)**

An introduction to the literatures written in English in Britain before 1660, with a focus on the interaction of text and history.

**LTEN 22. Introduction to the Literature of the British Isles: 1660-1832 (4)**

An introduction to the literatures written in English in Britain and Ireland between 1660 and 1832, with a focus on the interaction of text and history.

**LTEN 23. Introduction to the Literature of the British Isles: 1832-Present (4)**

An introduction to the literatures written in English in Britain, Ireland, and the British Empire (and the former British Empire) from 1832 to the present, with a focus on the interaction of text and history.

**LTEN 25. Introduction to the Literature of the United States, Beginnings to 1865 (4)**

An introduction to the literatures written in English in the United States from the beginnings to 1865, with a focus on the interaction of text and history.

**LTEN 26. Introduction to the Literature of the United States, 1865 to the Present (4)**

An introduction to the literatures written in English in the United States from 1865 to the present, with a focus on the interaction of text and history.

**LTEN 27. Introduction to African American Literature (4)**

A lecture discussion course that examines a major topic or theme in African American literature as it is developed over time and across the literary genres of fiction, poetry, and belles lettres. A particular emphasis of the course is how African American writers have adhered to or departed from conventional definitions of genre.

**LTEN 28. Introduction to Asian-American Literature (4)**

This course provides an introduction to the study of the history, communities, and cultures of different Asian-American people in the United States. Students will examine different articulations, genres, conflicts, narrative forms, and characterizations of the varied Asian experience.

**LTEN 29. Introduction to Chicano Literature (4)**

This course provides an introduction to the literary production of the population of Mexican origin in the United States. Students will examine a variety of texts dealing with the historical (social, economic, and political) experiences of this heterogeneous population.

**LTEN 60. Topics in Ethnic American Literature (4)**

A lecture and discussion course that critically examines the literary and cultural production emerging out of racialized, ethnic, and immigrant communities in the United States. Course may include fiction, poetry, novels, plays, popular culture, and film.

**LTEN 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. **Prerequisites:** none.

### UPPER-DIVISION

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTEN 104. Literatures of Medieval England (4)**

Lecture/discussion course focusing on literature written in England before 1500. Topics may include themes (e.g., gender, social critique) or focus on specific genre (drama, romance, religious literature). May be repeated for credit when topics vary.

**LTEN 107. Chaucer (4)**

A study of Chaucer's poetic development, beginning with *The Book of the Duchess* and *The Parliament of Fowls*, including *Troilus and Criseyde*, and concluding with substantial selections from *The Canterbury Tales*.

**LTEN 110. The Renaissance: Themes and Issues (4)**

Major literary works of the Renaissance, an exciting period of social and cultural transformation in England as elsewhere in Europe. Topics may include a central theme (e.g., humanism, reformation, revolution), a genre (e.g., pastoral), or comparison with other arts and sciences.

**LTEN 112. Shakespeare I: The Elizabethan Period (4)**

A lecture/discussion course exploring the development of Shakespeare's dramatic powers in comedy, history, and tragedy, from the early plays to the middle of his career. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare's theatre and his society.

**LTEN 113. Shakespeare II: The Jacobean Period (4)**

A lecture/discussion course exploring the rich and varied achievements of Shakespeare's later plays, including the major tragedies and late romances. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare's theatre and his society.

**LTEN 114. Shakespeare III: Stage, Film, and Television (4)**

A lecture/discussion/laboratory course involving the close study of six to eight plays representative of Shakespeare's artistic career with particular emphasis upon the interrelation of Elizabethan plays and the stage and the critical implications of transposing plays to film and television. (Generally offered in summer session only.)

**LTEN 115A. The Sixteenth Century: Themes and Issues (4)**

Selected topics concerned with sixteenth-century English literature as a whole.

**LTEN 117A. The Seventeenth Century: Themes and Issues (4)**

Selected topics in English literature during a period of social change, religious controversy, emergence of the "New Science", and the English Civil War. Readings chosen from writers including Jonson, Donne, Bacon, Milton, Marvell, and Dryden, among others. Repeatable for credit.

**LTEN 118. Milton (4)**

A critical examination of the major works, including *Paradise Lost*, by an author who was both a central figure in English political life in a revolutionary age and, in the view of most critics, the greatest non-dramatic poet in the English language. The course will study his poetic development in a variety of historical contexts.

**LTEN 119. Restoration Literature (4)**

The literature of a period following twenty years of civil war and revolution which saw the reopening of theatres and the rise of the professional writer. Topics may include Restoration comedy and tragedy; satire; neoclassical literary theory.

**LTEN 120A. The Eighteenth Century: Themes and Issues (4)**

Selected topics in English literature during an age of satiric writing, the shift from neoclassicism to romanticism, the emergence of the novel, and the expansion of the reading and writing public among the middle class and women. Writers such as Defoe, Pope, Swift, Richardson, Johnson, Burney, Wollstonecraft. May be repeated for credit when topics vary.

**LTEN 124. The Nineteenth Century: Themes and Issues (4)**

Selected topics in nineteenth-century British literature and culture, drawing on both romantic and Victorian periods: e.g., relationships between literature and imperialism, social and political debate, gender issues, religion, or science; or continuities between romantic and Victorian authors.

**LTEN 125A. Romanticism: Themes and Issues (4)**

Selected topics concerned with the romantic period as a whole.

**LTEN 125B. First Generation Romantic Poets (4)**

The poets who came of age during the French Revolution and who inaugurated literary modes that continue in our own time: Wordsworth, Coleridge, Blake, and their contemporaries.

**LTEN 125C. Second Generation Romantic Poets (4)**

Byron, Keats, Shelley, and their contemporaries.

**LTEN 127A. The Victorian Period: Themes and Issues (4)**

Selected topics concerned with Victorian literature as a whole.

**LTEN 127B. Victorian Poetry (4)**

Tennyson, Browning, Arnold, Clough, Hopkins, and their contemporaries.

**LTEN 130. Modern British Literature (4)**

Selected topics concerned with modern British literature; study of various authors, issues, and trends in literatures of the British Isles from the mid-1850s through the end of

the twentieth century. Repeatable for credit when topics vary. (Replaces the former LTEN 130A and 130B)

**LTEN 132. Modern Irish Literature (4)**

The Irish Revival and its aftermath: Yeats, Synge, O'Casey, Joyce, Beckett, and their contemporaries. Repeatable for credit when topics vary.

**LTEN 134. Twentieth-Century British Poetry (4)**

Survey of many poets of the United Kingdom including Scotland and Ireland. Included: War poems (1914–18, 1940–45), '30s poems of social commitment, the Movement (1950s), recent postmodern figures (Hughes, Prynne).

**LTEN 140. The Early Nineteenth-Century British Novel (4)**

Includes the work of Jane Austen, Charlotte Bronte, Emily Bronte, Mary Shelly, and Charles Dickens.

**LTEN 141. The High Victorian Novel (4)**

Dickens, Thackeray, Trollope, Charlotte Bronte, Emily Bronte.

**LTEN 142. The End of Victorianism (4)**

The work of Robert Louis Stevenson, H.G. Wells, Thomas Hardy, Rudyard Kipling, and Joseph Conrad.

**LTEN 143. The English Novel in the Eighteenth Century (4)**

This course studies the writing of the novel in the eighteenth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

**LTEN 144. The English Novel in the Nineteenth Century (4)**

This course studies the writing of the novel in English during the nineteenth century. The focus of the course may be a survey of the nineteenth century (an introduction to selected major writers and texts), or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

**LTEN 145. The English Novel in the Twentieth Century (4)**

This course studies the writing of the novel in English during the twentieth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

**LTEN 146. Women and English/American Literature (4)**

Selected topics concerning women and anglophone literature. Topics include women writers, the literary representation of women, and women as readers. May be repeated for credit when topics vary.

**LTEN 148. Genres in English and American Literature (4)**

An examination of one or more genres in English and/or American literature, for example, satire, utopian fiction, autobiography, landscape poetry, the familiar essay. May be repeated for credit as topics vary.

**LTEN 149. Themes in English and American Literature (4)**

A consideration of one of the themes that recur in many periods of English or American literature, for instance, love, politics, the role of women in society. May be repeated for credit as topics vary.

**LTEN 150. Gender, Text, and Culture (4)**

This course studies representations of the sexes and of their interrelationship in various forms of writing produced during different phases of English history. Emphasis will be placed upon connections of gender and of literature to other modes of social belief, experience, and practice. Repeatable for credit when topics vary.

**LTEN 151. Topics: Literature and the Environment (4)**

This course will explore the vital relationship between literature and the environment, investigating how literary representations of the land and/or its nonhuman inhabitants at different historical periods have influenced attitudes toward the natural world. May be taken for credit three times as topics vary.

**LTEN 152. The Origins of American Literature (4)**

Studies in American writing from the Puritans to the early national period (1620–1830), with emphasis on the thrust and continuity of American culture, social and intellectual, through the beginnings of major American writing in the first quarter of the nineteenth century.

**LTEN 153. The Revolutionary War and the Early National Period in U.S. Literature (4)**

A critical examination of how writing of various kinds—political, philosophical, and literary—functioned in the construction of the political body of the new American republic and the self-conception of its citizens.

**LTEN 154. The American Renaissance (4)**

A study of some of the chief works, and the linguistic, philosophical, and historical attitudes informing them, produced by such authors as Emerson, Hawthorne, Melville, Dickinson, and Whitman during the period 1836–1865, when the role of American writing in the national culture becomes an overriding concern.

**LTEN 155. Interactions Between American Literature and the Visual Arts (4)**

An exploration of the parallels between the work of individual writers, or movements, in American literature and the style and content of the work of certain visual artists. The writers studied are always American; the artists or art movements may represent non-American influences on these American writers. May be repeated for credit as topics vary.

**LTEN 156. American Literature from the Civil War to World War I (4)**

A critical examination of works by such authors as Mark Twain, Henry James, Kate Chopin and Edith Wharton, who were writing in an age when the frontier was conquered and American society began to experience massive industrialization and urbanization.

**LTEN 158. Modern American Literature (4)**

A critical examination of American literature in several genres produced between the turn of the century and World War II. Attention will be given to historical and cultural contexts for defining American modernism. Repeatable for credit when topics vary.

**LTEN 159. Contemporary American Literature (4)**

A critical examination of American literature in several genres produced since World War II. Attention will be given to historical and cultural contexts for defining American postmodernism. Repeatable for credit when topics vary.

**LTEN 160. Ideas and Photographic Images in American Culture (4)**

Relate the history of photography in America to the history of ideas in American culture. It assumes that photographers think in images and through their images participate in cultural discourse. Repeatable for credit when topics vary.

**LTEN 172. American Poetry II—Whitman through the Modernists (4)**

Reading and interpretation of American poets from Whitman through the principal modernists—Pound, H.D., Eliot, Moore, Stevens, and others. Lectures will set the appropriate context in sociocultural and literary history.

**LTEN 174. American Fiction II—Since Middle James (4)**

Reading and interpretation of American fiction from Henry James through the principal modernists—Fitzgerald, Stein, Welty, Faulkner, and others. Lectures will set the appropriate context.

**LTEN 175A. New American Fiction—Post-World War II to the Present (4)**

Reading and interpretation of American fiction from the mid-1940s to the present. Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit when topics vary.

**LTEN 175B. New American Poetry—Post-World War II to the Present (4)**

Reading and interpretation of American poets whose work has made its major impact since the last war, for instance Charles Olson, Robert Creeley, Denise Levertov, Adrienne Rich, Allen Ginsberg, Frank O'Hara, and John Ashbery.

Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit as topics vary.

**LTEN 176. Major American Writers (4)**

A study in depth of the works of major American writers. May be repeated for credit as topics vary.

**LTEN 177. California Literature (4)**

Reading and interpretation of such novelists as London, Norris, Steinbeck, West, and Didion and such poets as Jeffers, Rexroth, Everson, Duncan, and Snyder. May be repeated for credit as topics vary.

**LTEN 178. Comparative Ethnic Literature (4)**

A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary.

**LTEN 180. Chicano Literature in English (4)**

Introduction to the literature in English by the Chicano population, the men and women of Mexican descent who live and write in the United States. Primary focus on the contemporary period.

**LTEN 181. Asian American Literature (4)**

Selected topics in the literature by men and women of Asian descent who live and write in the United States. Repeatable for credit when topics vary.

**LTEN 182. African-American Humor (4)**

African-American humor has historically been divided, consisting of that created by and for a black audience, and that performed for a white audience. We will investigate the origins of this division, and the ways in which African-American humor has shaped American culture, from ca. eighteenth century to today.

**LTEN 183. African American Prose (4)**

Analysis and discussion of the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characteristics of African American narrative and the cultural and social circumstances that influence their development.

**LTEN 184. African American Poetry (4)**

Close reading and analysis of selected works of African American poetry as they reflect styles and themes that recur in the literature.

**LTEN 185. Themes in African American Literature (4)**

An intensive examination of a characteristic theme, special issue, or period in African American literature. May be repeated for credit when topics vary.

**LTEN 186. Literature of the Harlem Renaissance (4)**

The Harlem Renaissance (1917–39) focuses on the emergence of the "New Negro" and the impact of this concept on black literature, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms.

**LTEN 187. Black Music/Black Texts: Communication and Cultural Expression (4)**

Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West-Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes.

**LTEN 188. Contemporary Caribbean Literature (4)**

This course will focus on contemporary literature of the English-speaking Caribbean. The parallels and contrasts of this Third World literature with those of the Spanish- and French-speaking Caribbean will also be explored.

**LTEN 189. Twentieth-Century Postcolonial Literatures (4)**

The impact of British colonialism, national independence movements, postcolonial cultural trends, and women's movements on the global production of literary texts in English. Course is organized by topic or geographical/historical location. May be repeated for credit when topics vary.

#### **LTEN 190. Seminars (4)**

These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. The student may enroll in more than one section in a single quarter.

#### **LTEN 192. Senior Seminar in Literatures in English (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

#### **LTEN 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. **Prerequisites:** department approval.

#### **LTEN 198. Directed Group Study (4)**

Research seminars and research, under the direction of a member of the faculty. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

#### **LTEN 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in an area not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

### **GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

#### **LTEN 214. Topics in Middle English Literature (4)**

Consideration of one or more major figures, texts, or trends in Middle English literature. May be repeated for credit as topics vary.

#### **LTEN 222. Elizabethan Studies (4)**

Selected topics in the study of literary, dramatic, and other Elizabethan cultural texts. Emphasis will be upon articulations among a range of discourses, practices, and institutions. May be repeated for credit when topics vary.

#### **LTEN 231. Restoration and Eighteenth-Century English Literature (4)**

Consideration of one or more figures, texts, or trends in Restoration and eighteenth-century English literature, including Dryden, Pope, Swift, the early novel, satire. May be repeated for credit as topics vary.

#### **LTEN 243. Early American Literature and Culture (4)**

Consideration of one or more major figures, texts, or trends in Colonial and/or Revolutionary period American Literature, in particular, the relationship between literature and culture.

#### **LTEN 245. Nineteenth-Century American Studies (4)**

Consideration of some of the principal writers and movements in nineteenth-century American literature. May be repeated for credit as topics vary.

#### **LTEN 246. Victorian Literature (4)**

Consideration of one or more major figures, texts, or trends in the Victorian period. May be repeated for credit as topics vary.

#### **LTEN 252. Studies in Modern American Literature and Culture (4)**

Consideration of one or more major figures, texts, or trends in American literature, in particular the relationship between literature and culture. May be repeated for credit as topics vary.

#### **LTEN 254. Topics in U.S. Minority Literatures and Cultures (4)**

Consideration of one or more topics in "minority" traditions of cultural production in the United States, with an

emphasis on the relationship among history, politics, and culture. May be repeated for credit as topics vary.

#### **LTEN 255. Studies in Anglo-American Modernism (4)**

A seminar on general topics relating to the study of modernism, utilizing cross-cultural, transnational approaches. Although individual literary texts may provide the focus, this seminar will investigate theoretical and methodological issues relating to modernist cultural studies in general.

#### **LTEN 256. Postcolonial Discourses (4)**

A survey of selected responses to imperialism and colonialism as presented in cultural texts produced by colonized or once-colonized peoples. Related issues to be examined: gender dynamics, class, representing others, mimicry, language, cultural theory, and the politics of literary genres. May be repeated for credit when topics vary.

#### **LTEN 258. Studies in Anglophone African and/or African Diaspora Literature and Culture (4)**

Consideration of one or more major figures, texts, performance or trends in literature and culture of Africa and/or the African Diaspora. Various theories and methodologies may be applied to the representations being studied. Repeatable for credit as topics vary.

#### **LTEN 259. Transnational Literary Studies (4)**

New developments in the study of literature in diverse frameworks, including but not limited to: globalization, queer theory, diaspora studies, environmentalism, world literary systems, international literary awards, transnational feminism, literary markets, human rights discourse, and translation studies.

#### **LTEN 271. Genres in English (4)**

Consideration of one or more genres present in English and/or American literature; for instance, the ballad, landscape poetry, comedy, satire, the familiar essay. May be repeated for credit when topics vary.

#### **LTEN 272. Cultural Traditions in English (4)**

The study of writing produced over an extended period of time by members of an identifiable cultural formation as defined, e.g., by political/social ideology, class, religion, ethnicity, or sexual preference. May be repeated for credit when topics vary.

#### **LTEN 281. Practicum in Literary Research and Criticism (4)**

This course will focus on strategies for framing, organizing, and drafting projects in literary research. Students will study and apply various forms of literary methodology and will learn about recent developments in bibliography, textual editing, and research. May be repeated twice for credit as topics vary.

#### **LTEN 295. M.A. Thesis (1-8)**

Research for the master's thesis. Opened for repeated registration. **Prerequisite:** must be enrolled in M.A. program.

#### **LTEN 296. Research Practicum (1-12)**

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

#### **LTEN 297. Directed Studies: Reading Course (1-12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

#### **LTEN 298. Special Projects: Writing Course (1-12)**

Similar to a 297, but a paper is required. Papers are usually on subject not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

#### **LTEN 299. Dissertation (1-12)**

Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

## **LITERATURES IN FRENCH**

### **LOWER-DIVISION**

#### **Language and Literature Courses**

Ordinarily, students entering the French literature program elect one of the following sequences: LTFR 2A, 2B, and 2C; or 2A, 2B, and 50.

#### **LTFR 2A. Intermediate French I (5)**

First course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. Basic techniques of literary analysis. **Prerequisites:** LIFR 1C/CX or its equivalent, score of 3 on French language AP exam or consent of instructor.

#### **LTFR 2B. Intermediate French II (5)**

Second course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. Basic techniques of literary analysis. **Prerequisites:** LTFR 2A or its equivalent, score of 4 on French language or score of 3 on French literature AP exams or consent of instructor.

#### **LTFR 2C. Intermediate French III: Composition and Cultural Contexts (4)**

Designed to improve writing and conversational skills. Develop written expression in terms of organization or ideas, structure, vocabulary. Grammar review. Discussions of contemporary novel and film. May be taken in lieu of LTFR 50 as a prerequisite for upper-division courses. **Prerequisites:** LTFR 2B or its equivalent, score of 5 on French language or score of 4 on French literature AP exams or consent of instructor.

#### **LTFR 21. Conversation Workshop I (1)**

Designed to allow students to practice and develop their oral skills by expanding the vocabulary necessary to discuss abstract ideas and by building up the confidence necessary to participate in literature classes. **Prerequisite:** LIFR 1C/1CX or 1D/1DX or LTFR 2A or LTFR 2B or LTFR 2C or LTFR 50 or consent of instructor.

#### **LTFR 31. Conversation Workshop II (1)**

A one-credit, one class-a-week course to develop and maintain oral skills at an advanced level by discussing current cultural issues of the francophone world. **Prerequisite:** LTFR 2B or consent of instructor.

#### **LTFR 50. Intermediate French III: Textual Analysis (4)**

Third course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. It also introduces the student to basic techniques of literary analysis. **Prerequisites:** LTFR 2B or its equivalent, score of 5 on French language AP exam, or consent of instructor.

#### **LTFR 60A. French for Reading Knowledge I (2)**

A course designed for undergraduate and graduate students interested in developing reading skills only. No previous knowledge of French required. Texts are taken primarily from the humanities and social sciences.

#### **LTFR 60B. French for Reading Knowledge II (2)**

A continuation of the course for undergraduate and graduate students interested in developing reading skills only. No previous course work in French required, though recommended. Texts are taken primarily from the humanities and social sciences.

### **UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. All upper-division courses are taught in French. Additional prerequisites may be specified below.

Students are strongly encouraged to take LTFR 115 and 116 before enrolling in other upper-division French literature courses.

**LTFR 115. Themes in Intellectual and Literary History (4)**

Course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. **Prerequisite:** LTFR 50 or LTFR 2C.

**LTFR 116. Themes in Intellectual and Literary History (4)**

Course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. **Prerequisite:** LTFR 50 or LTFR 2C.

**LTFR 121. The Middle Ages and the Renaissance (4)**

Major literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of the period. Medieval texts in modern French translation. May be repeated for credit as topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 123. Eighteenth Century (4)**

Major literary works and problems of the eighteenth century. May be repeated for credit as topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 124. Nineteenth Century (4)**

Major literary works of the nineteenth century. May be repeated for credit as topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 125. Twentieth Century (4)**

Major literary works and problems of the twentieth century. May be repeated for credit as topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 141. Topics in Literatures in French (4)**

Examines one or more periods, themes, authors, and approaches in French literature. Topics will vary with instructor. May be repeated for credit. **Prerequisite:** LTFR 115 or 116.

**LTFR 142. Topics in Literary Genres in French (4)**

An examination of one or more major or minor genres of French literature: for example, drama, novel, poetry, satire, prose poem, essay. **Prerequisite:** LTFR 115 or 116.

**LTFR 143. Topics in Major Authors in French (4)**

A study in depth of the works of a major French writer. Recommended for students whose primary literature is French. May be repeated for credit as topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 144. Topics in Literature and Ideas in French (4)**

This course will center on writers or movements of international literary, cultural, or ideological significance. May be repeated for credit when topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 145. Contemporary Thought in French (4)**

Presentation of major currents and debates in contemporary philosophy, linguistics, psychoanalysis, anthropology, and social and feminist theory that have led to major changes in French culture and literary studies. **Prerequisite:** LTFR 115 or 116.

**LTFR 164. Topics in Modern French Culture (4)**

A course on changing topics such as France during the 60s, contemporary social and cultural structures (the school system, economy, political parties), myths of America in France, etc. May be repeated for credit as topics vary. **Prerequisite:** LTFR 115 or 116.

**LTFR 170. Topics in French Film (4)**

May include close analysis of films made in the French-speaking world from 1895 to the present; study of film theory, history, criticism; social contexts of films' emergence and changing contexts of reception; particular movements, styles, or individual directors' work. **Prerequisite:** LTFR 115 or 116.

**LTFR 192. Senior Seminar in Literatures in French (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LTFR 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. **Prerequisite:** department approval.

**LTFR 198. Directed Group Study (4)**

Research seminars and research, under the direction of a member of the faculty. (P/NP grades only.) **Prerequisite:** department approval.

**LTFR 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of French literature not normally covered in courses. (P/NP grades only.) **Prerequisite:** departmental approval.

## GRADUATE

**PREREQUISITE:** graduate standing or consent of instructor.

**LTFR 240. Topics in French Literature (4)**

An examination of one or more major topics in French literature. May be repeated for credit when topics vary.

**LTFR 295. M.A. Thesis (1-8)**

Research for the master's thesis. Opened for repeated registration up to eight units. **Prerequisite:** must be enrolled in M.A. program.

**LTFR 296. Research Practicum (1-12)**

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

**LTFR 297. Directed Studies: Reading Course (1-12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

**LTFR 298. Special Projects: Writing Course (1-12)**

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

**LTFR 299. Dissertation (1-12)**

Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

## LITERATURES IN GERMAN

### LOWER-DIVISION

#### Language and Literature Courses

**LTGM 2A. Intermediate German I (5)**

LTGM 2A follows the basic language sequence of the Department of Linguistics and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. The course includes grammar review and class discussion of reading and audio-visual materials. Specifically, the course prepares students for LTGM 2B and 2C. **Prerequisite:** LTGM 1C/1CX or its equivalent or score of 3 on AP German language exam or consent of instructor.

**LTGM 2B. Intermediate German II (5)**

LTGM 2B is a continuation of LTGM 2A for those students who intend to practice their skills in reading, listening comprehension, and writing on a more advanced level. The literary texts are supplemented by readings from other disciplines as well as audio-visual materials. **Prerequisite:** LTGM 2A or score of 4 on AP German language exam or consent of instructor.

**LTGM 2C. Intermediate German III (4)**

A course designed for students who wish to improve their ability to speak and write German. Students will read and discuss a variety of texts and films, and complete the grammar review begun in 2A. 2C emphasizes speaking, writing, and critical thinking, and prepares students for upper-division course work in German. **Prerequisite:** LTGM 2B or equivalent or score of 5 on AP German language exam or consent of instructor.

**LTGM 60A. German for Reading Knowledge I (2)**

A program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required. Texts are taken primarily from the humanities and social sciences, and include selections from publishers' catalogs, scholarly articles, and books.

**LTGM 60B. German for Reading Knowledge II (2)**

A continuation of the program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required, though recommended. Texts are taken primarily from the humanities and social sciences and include selections from publishers' catalogs, scholarly articles, and books.

### UPPER-DIVISION

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTGM 100. German Studies I: Aesthetic Cultures (4)**

This course offers an overview of German aesthetic culture in its various forms (literature, film, art, music, and architecture) and methods of analysis. Materials will explore the diversity of aesthetic production from the eighteenth century to the present.

**LTGM 101. German Studies II: National Identities (4)**

This course offers an overview of issues in contemporary and historical German cultures. How has national identity been constructed in the past? What does it mean to be a German in the new Europe? Materials include fiction, historical documents, films, and the Internet.

**LTGM 123. Eighteenth-Century German Literature (4)**

Major literary works as seen against the historical and intellectual background of the period. May be repeated for credit when topics vary.

**LTGM 126. Twentieth-Century German Literature (4)**

Major literary works, authors, or movements of the twentieth century. May be repeated for credit as topics vary.

**LTGM 130. German Literary Prose (4)**

The development of major forms and modes of German literary prose. May be repeated for credit as topics vary.

**LTGM 131. German Dramatic Literature (4)**

The development of the drama in German. May be repeated for credit as topics vary.

**LTGM 132. German Poetry (4)**

The development of major forms and modes of German verse. May be repeated for credit as topics vary.

**LTGM 190. Seminars in German Culture (4)**

These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. May be repeated for credit as topics vary.

**LTGM 192. Senior Seminar in Literatures in German (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small

group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

#### **LTGM 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. **Prerequisite:** department approval.

#### **LTGM 198. Directed Group Study (4)**

Research seminars and research, under the direction of a member of the faculty. May be repeated for credit. (P/NP grades only.) **Prerequisite:** department approval.

#### **LTGM 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of German literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

### **GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

#### **LTGM 242. Nineteenth-Century German Literature (4)**

Consideration of one or more major figures, texts, or trends in nineteenth-century German literature. Topic varies. May be repeated for credit.

#### **LTGM 272. Genres, Trends, and Forms (4)**

Seminars on literary genres, trends, movements, schools, and on aspects of literary forms and structures in any given era or over a certain period of time. May be repeated for credit as topics vary.

#### **LTGM 295. M.A. Thesis (1)**

Research for the master's thesis. Opened for repeated registration up to eight units. **Prerequisite:** must be enrolled in M.A. program.

#### **LTGM 296. Research Practicum (1–12)**

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

#### **LTGM 297. Directed Studies: Reading Course (1–12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

#### **LTGM 298. Special Projects: Writing Course (1–12)**

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

#### **LTGM 299. Dissertation (1–12)**

Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

### **GREEK LITERATURE**

(See also listings under "[Classical Studies](#).")

#### **LOWER-DIVISION**

##### **LTGK 1. Beginning Greek (4)**

Study of ancient Greek, including grammar and reading.

##### **LTGK 2. Intermediate Greek (I) (4)**

Continuation of study of ancient Greek, including grammar and reading. **Prerequisite:** LTGK 1 or equivalent.

##### **LTGK 3. Intermediate Greek (II) (4)**

Continuation of study of ancient Greek, including grammar and reading of texts. **Prerequisites:** LTGK 1 and 2 or equivalent.

#### **UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

##### **LTGK 101. Greek Composition (4)**

Greek prose composition. Corequisites: student must be concurrently enrolled in upper-division Literature/Greek course numbered 110 or above.

##### **LTGK 110. Archaic Period (4)**

Readings, in Greek, of texts from the archaic period. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 112. Homer (4)**

Readings from the works of Homer. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 113. Classical Period (4)**

Readings, in Greek, of texts from the fifth and fourth centuries B.C. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 118. Hellenistic Period (4)**

Reading, in Greek, of texts from Hellenistic period. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 120. Topics in New Testament Greek (4)**

Readings, in Greek, in the Greek New Testament. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 130. Tragedy (4)**

Readings, in Greek, of one or more of the works of the classical tragedians Aeschylus, Sophocles, and Euripides. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 131. Comedy (4)**

Readings, in Greek, of one or more of the works of Aristophanes. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 132. History (4)**

Readings, in Greek, in the works of the ancient historians, including Herodotus, Thucydides, Xenophon, and others. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 133. Prose (4)**

Readings, in Greek, in the works of ancient prose writers. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 135. Lyric Poetry (4)**

Readings, in Greek, of the works of the ancient lyric poets. May be repeated for credit as topics vary. **Prerequisites:** LTGK 1, 2, 3 or equivalent.

##### **LTGK 192. Senior Seminar in Literatures in Greek (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in Literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

##### **LTGK 198. Directed Group Study (4)**

Directed group study in areas of Greek literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

##### **LTGK 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of Greek literature not normally covered in courses. May be repeated

for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

### **GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

#### **LTGK 297. Directed Studies (1–12)**

Guided and supervised reading in a broad area of Greek literature. Offered for repeated registration.

#### **LTGK 298. Special Projects (4)**

Treatment of a special topic in Greek literature. Offered for repeated registration.

### **HEBREW LITERATURE**

Please see "[Near Eastern Literatures](#)" under "[Literatures of the World](#)."

### **LITERATURES IN ITALIAN**

#### **LOWER-DIVISION**

(See "[Department of Linguistics](#)" for other course offerings in first-year Italian.)

##### **LTIT 1A. The Language of Italian Culture I (4)**

A beginning course in Italian language based on cultural texts: a short mystery, short movies, and pop music lyrics. An integrated cultural approach to the study of language that emphasizes conversation, grammar, and dramatic flair. No prior study of Italian required.

##### **LTIT 1B. The Language of Italian Culture II (4)**

A continued study of the elements of Italian conversation and grammar based on cultural texts: an opera libretto, a short mystery, short movies. **Prerequisite:** LTIT 1A or consent of instructor.

##### **LTIT 1C. The Language of Italian Culture III (4)**

Further study of Italian conversation and grammar based on cultural texts: a short novel, folk music lyrics. Preparation for the second-year Italian literature/language sequence. **Prerequisite:** LTIT 1B or consent of instructor.

##### **LTIT 2A. Intermediate Italian I (5)**

A second-year course in Italian language and literature. Conversation, composition, grammar review, and an introduction to literary and nonliterary texts. **Prerequisite:** LTIT 1C or LIIT 1C/1CX or its equivalent or a score of 3 on AP Italian Language and Culture Exam or placement result of 3 or 4 on the Language Placement Exam–Italian or consent of instructor.

##### **LTIT 2B. Intermediate Italian II (5)**

Continuation of second-year Italian language and literature. Reading, writing, conversation, grammar review, and an introduction to literary genres and contemporary Italian culture and society. **Prerequisite:** LTIT 2A or its equivalent, or consent of instructor, or a score of 4 on the AP Italian Language and Culture exam.

##### **LTIT 50. Advanced Italian (4)**

This course constitutes the sixth and final quarter of the Italian language sequence. It offers an intensive study of Italian grammar, drills in conversation and composition, and readings in modern Italian literature. **Prerequisite:** LTIT 2A and 2B, or consent of instructor.

#### **UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

##### **LTIT 100. Introduction to Literatures in Italian (4)**

Reading and discussion of selections from representative authors. Review of grammar as needed. May be repeated for credit three times when topics vary. **Prerequisite:** LTIT 50 or its equivalent, or consent of instructor, or a score of 5 on the AP Italian Language and Culture exam.

**LTIT 110. Italian Literature (4)**

Topics in Italian literature: regional, historic, thematic. Texts will be read in Italian. May be repeated for credit when topics vary. **Prerequisite:** LTIT 100.

**LTIT 113. Love, War, and Conquest in the Italian Renaissance (4)**

A critical reading of Italian Renaissance texts with special attention to those themes, forms, and ideological conflicts still operative in today's culture. May be repeated for credit when topics vary.

**LTIT 115. Medieval Studies (4)**

Studies in medieval culture and thought with focus on one of the "three crowns" of Italian literature: Dante, Boccaccio, or Petrarca. May be repeated for credit when course content varies.

**LTIT 122. Studies in Modern Italian Culture (4)**

Politics, literature, and cultural issues of twentieth-century Italy. May be repeated for credit when topics vary. **Prerequisite:** LTIT 50.

**LTIT 137. Studies in Modern Italian Prose (4)**

A study of the chief modern Italian prosatori, including D'Annunzio, Calvino, Pavese, Pasolini, etc.

**LTIT 143. Major Italian Authors (4)**

A study in depth of the works of a major Italian author. May be repeated for credit when topics vary. **Prerequisite:** LTIT 100 or permission of instructor.

**LTIT 161. Advanced Stylistics and Conversation (4)**

Analysis of Italian essays, journalism, literature. Intensive practice in writing and Italian conversation. **Prerequisite:** LTIT 100 or consent of instructor.

**LTIT 192. Senior Seminar in Literatures in Italian (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

**LTIT 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the literature honors program and who have completed LTWL 191. Oral examination. **Prerequisite:** department approval.

**LTIT 198. Directed Group Study (4)**

Directed group study in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

**LTIT 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

**KOREAN LITERATURE****LOWER-DIVISION****LTKO 1A. Beginning Korean: First Year I (5)**

Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. **Prerequisite:** placement test required.

**LTKO 1B. Beginning Korean: First Year II (5)**

Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. **Prerequisite:** LTKO 1A.

**LTKO 1C. Beginning Korean: First Year III (5)**

Students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system. The remainder of the course will focus on basic sentence structures and expressions. **Prerequisite:** LTKO 1B.

**LTKO 2A-B-C. Intermediate Korean: Second Year I-II-III (5-5-5)**

This course will help students develop intermediate-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various daily conversational situations. **Prerequisites:** LTKO 1C or placement test for 2A; 2A is prerequisite for 2B; 2B for 2C.

**LTKO 3. Advanced Korean: Third Year (5)**

This course will help students develop advanced-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various formal settings and to understand daily news broadcasts/newspapers. **Prerequisites:** LTKO 2C or placement test and consent of instructor.

**LTKO 50. Intermediate Readings and Composition (4)**

Designed to enhance reading and writing skills. We will read and discuss a variety of materials, including newspaper and magazine articles, short essays, and prose fiction. Writing exercises will stress improving students' ability to express themselves as well as their critical responses to reading. **Prerequisites:** LTKO 2C and/or recommendation of instructor.

**UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTKO 100. Readings in Korean Literature and Culture (4)**

Majors issues in modern Korean history from colonial period to present, such as Japanese colonization, division, U.S./Soviet occupation, the Korean War, and authoritarian rule, industrialization, labor/agrarian movement and cultural/social issues, emerging within the globalized economy in South Korea. **Prerequisite:** reading knowledge of Korean (two years college-level Korean or equivalent).

**LTKO 192. Senior Seminar in Literatures in Korean (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LATIN LITERATURE**

(See also listings under "[Classical Studies](#).")

**LOWER-DIVISION****LTLA 1. Beginning Latin (4)**

Study of Latin, including grammar and reading.

**LTLA 2. Intermediate Latin (I) (4)**

Study of Latin, including grammar and reading. **Prerequisite:** LTLA 1 or equivalent.

**LTLA 3. Intermediate Latin (II) (4)**

Study of Latin, including grammar and reading. **Prerequisite:** LTLA 2 or equivalent.

**LTLA 4. Intensive Elementary Latin (12)**

Equivalent of LTLA 1, 2, and 3. Given in summer session only.

**UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTLA 100. Introduction to Latin Literature (4)**

Reading and discussion of selections from representative authors of one or more periods. Review of grammar as needed. **Prerequisite:** LTLA 3 or equivalent.

**LTLA 111. Pre-Augustan (4)**

Readings, in Latin, in the works of Roman writers of the pre-Augustan period. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 114. Vergil (4)**

Readings from the works of Vergil. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 116. Silver Latin (4)**

Readings, in Latin, in the works of Roman writers of the Silver Age. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 131. Prose (4)**

Readings, in Latin, of the work of Roman prose writers. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 132. Lyric and Elegiac Poetry (4)**

Readings, in Latin, in the works of lyric and elegiac poets. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 133. Epic (4)**

Readings in Latin in the works of the Roman epic poets. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 134. History (4)**

Readings, in Latin, in the works of Roman historians. May be repeated for credit as topics vary. **Prerequisites:** LTLA 1, 2, 3 or equivalent.

**LTLA 135. Drama (4)**

Readings, in Latin, in the works of Roman dramatists. Repeatable for credit when topics vary. **Prerequisite:** LTLA 3 or equivalent; LTLA 100 recommended.

**LTLA 192. Senior Seminar in Literatures in Latin (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LTLA 198. Directed Group Study (4)**

Directed group study in areas of Latin literature not normally covered in courses. May be repeated three times. (P/NP grades only.) **Prerequisite:** department approval.

**LTLA 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of Latin literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisite:** department approval.

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTLA 297. Directed Studies (1-12)**

Guided and supervised reading in a broad area of Latin literature. Offered for repeated registration.

**LTLA 298. Special Projects (4)**

Treatment of a special topic in Latin literature. Offered for repeated registration.

## PORTUGUESE LITERATURE

### LOWER-DIVISION

#### **LTSP 2A. Intermediate Portuguese I: Foundations (5)**

Intermediate course in Portuguese language, emphasizing the development of verbal communication, listening comprehension, and reading and writing skills. Conducted in Portuguese, it includes reviews of grammar and vocabulary, weekly compositions, and class discussions. **Prerequisite:** LIPO 1C/CX or 1D/DX or the equivalent or consent of instructor.

#### **LTSP 2B. Intermediate Portuguese II: Readings and Composition (5)**

Continuation of LTSP 2A. Conducted in Portuguese, this course reviews major grammatical points with an emphasis on critical reading and the interpretation of Portuguese-language texts through class discussions, vocabulary development, and written compositions. **Prerequisite:** LTSP 2A or equivalent or consent of instructor.

#### **LTSP 2C. Intermediate Portuguese III: Cultural Topics and Composition (4)**

Continuation of LTSP 2B. This course emphasizes writing and verbal communication skills. It includes discussions of cultural topics, grammatical reviews, and composition writing, further developing students' abilities to comprehend and interpret articles, essays, and longer pieces of fictional/nonfictional texts. **Prerequisite:** LTSP 2B or equivalent or consent of instructor.

#### **LTSP 50. Topics in Brazilian Literature in Portuguese for Spanish Speakers (4)**

Introductory Portuguese language and literature course designed especially for speakers of Spanish. Will build on students' knowledge of Spanish, enabling them to acquire competence in language structures of Portuguese and introducing them to Brazilian texts in Portuguese.

## RUSSIAN LITERATURE

### LOWER-DIVISION

#### **LTRU 1A-B-C. First-Year Russian (5-5-5)**

First-year Russian, with attention to reading, writing, and speaking.

#### **LTRU 2A-B-C. Second-Year Russian (5-5-5)**

Second-year Russian grammar, with attention to reading, writing, and speaking. **Prerequisites:** LTRU 1A-B-C or equivalent.

### UPPER-DIVISION

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Note: Many Russian literature courses are cross-listed as courses in European and Eurasian Literatures (LTEU). Lectures and discussions are conducted in English, and students may choose whether to do the reading and writing assignments in translation, in which case they should enroll for the course under its LTEU rubric, or in Russian, in which case they should enroll under the LTRU rubric. Other courses are offered in English translation with one-unit Foreign Language Discussion Sections (XL course number suffix) for students who wish to read and discuss some or all of assignments in Russian.

#### **LTRU 104A-B-C. Advanced Practicum in Russian (4-4-4)**

Development of advanced skills in reading, writing, and conversation. Course based on written and oral texts of various genres and styles. Individualized program to meet specific student needs. Prerequisite for 104A: LTRU 2C or equivalent.

#### **LTRU 110A-B-C. Survey of Russian and Soviet Literature in Translation, 1800–Present (4-4-4)**

A study of literary works from Pushkin to the present. LTRU 110A is not a prerequisite for LTRU 110B, and LTRU 110B is not a prerequisite for LTRU 110C.

110A. 1800–1860

110B. 1860–1917

110C. 1917–present

#### **LTRU 123. Single Author in Russian Literature in Translation (4)**

Study of the works of a single Russian author. May be repeated for credit as topics vary.

#### **LTRU 150. Russian Culture (4)**

An introduction to Russia's past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present. **Prerequisite:** upper-division standing.

#### **LTRU 150XL. Russian Culture: The Modern Period—Foreign Language Discussion Section (1)**

Students will exercise advanced Russian language skills to read and discuss materials in LTRU 150. This section is taught by the course professor, has no final examination, and does not affect the student's grade in the parent course. **Prerequisites:** co-registration in LTRU 150; four quarters of Russian language study or the equivalent.

#### **LTRU 192. Senior Seminar in Literatures in Russian (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

#### **LTRU 198. Directed Group Study (4)**

Directed group study in areas of Russian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisites:** upper-division standing and permission of department.

#### **LTRU 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of Russian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisites:** upper-division standing and permission of department.

## LITERATURES IN SPANISH

### LOWER-DIVISION

#### **Language and Literature Courses**

Students entering the Spanish language/literature program must have completed one year of college-level Spanish (Linguistics/Spanish 1C/1CX) or its equivalent at another institution or have the consent of the instructor. Ordinarily, students take LTSP 2A, 2B, 2C, and one or more courses from the 50 sequence. Native speakers are encouraged to take LTSP 2D, 2E.

#### **LTSP 2A. Intermediate Spanish I: Foundations (5)**

Course is taught in Spanish, emphasizing the development of reading ability, listening comprehension, and writing skills. It includes grammar review, weekly compositions, and class discussions. Successful completion of LTSP 2A satisfies the requirement for language proficiency in Revelle College. **Prerequisite:** completion of LISP 1C/1CX or LISP 1D/DX, or the equivalent or score of 3 on AP Spanish Language Exam, or placement result of 3 or 4 the Language Placement Exam—Spanish, or consent of instructor.

#### **LTSP 2B. Intermediate Spanish II: Readings and Composition (5)**

Review of major points of grammar with emphasis on critical reading and interpretation of Spanish texts through class discussions, vocabulary development, and written compositions. It is a continuation of LTSP 2A. **Prerequisites:** LTSP 2A or score of 4 on AP Spanish language or 3 on AP Spanish literature exams or consent of instructor.

#### **LTSP 2C. Intermediate Spanish III: Cultural Topics and Composition (4)**

Continuation of LTSP 2B, with special emphasis in writing and translation. It includes discussion of cultural topics as well as grammar review and composition, further developing the ability to read articles, essays, and longer pieces of fiction/nonfictional texts. **Prerequisites:** LTSP 2B or equivalent or score of 5 on AP Spanish language or 4 on AP Spanish literature exams or consent of instructor.

#### **LTSP 2D. Intermediate/Advanced Spanish: Spanish for Bilingual Speakers (4)**

Spanish for native speakers. Designed for bilingual students seeking to become biliterate. Reading and writing skills stressed with special emphasis on improvement of written expression and problems of grammar and orthography. Prepares native speakers with little or no formal training in Spanish for more advanced courses. **Prerequisite:** native speaking ability and/or recommendation of instructor.

#### **LTSP 2E. Advanced Readings and Composition for Bilingual Speakers (4)**

Second course in a sequence designed for bilingual students seeking to become biliterate. Special emphasis given to improvement of written expression, grammar, and orthography. Prepares bilingual students with little or no formal training in Spanish for more advanced course work. **Prerequisites:** LTSP 2D and/or recommendation of instructor.

#### **LTSP 21. Conversation Workshop I (1)**

Allows students with a basic grounding in Spanish to discuss a variety of topics related to literary and cultural issues. Vocabulary development, use of idiomatic expression, and advancement of oral proficiency in Spanish. May be taken as an adjunct to lower-division LTSP courses. Recommended for students planning to study abroad. **Prerequisite:** LISP 1C/1CX or LISP 1D/1DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

#### **LTSP 31. Conversation Workshop II (1)**

Enhances intermediate/advanced students' command of spoken Spanish through debates on literary and cultural issues and the formulation and expression of thoughts in Spanish. May be taken as an adjunct to lower- and upper-division LTSP courses. Recommended for students planning to study abroad. **Prerequisite:** LISP 1C/1CX or LISP 1D/1DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

#### **LTSP 41. Conversation and Orthography Workshop (1)**

The workshop format of this course allows students to attain a stronger command of skills in matters of Spanish orthography, spelling, punctuation, and accent rules. May be taken as an adjunct to lower- or upper-division LTSP courses. Recommended for students planning to study abroad. **Prerequisite:** LISP 1C/1CX or LISP 1D/1DX or LTSP 2A or 2B or 2C or 2D or 2E or 50A or 50B or 50C.

#### **LTSP 50A. Readings in Peninsular Literature (4)**

An introduction to Peninsular literature, this course offers a selection of authors and genres, introducing students to literary analysis through reading extensive texts in Spanish. Two or more quarters of LTSP 50 are suggested before proceeding to upper-division courses. **Prerequisite:** LTSP 2C or 2D or 2E or the equivalent.

#### **LTSP 50B. Readings in Latin American Literature (4)**

An introduction to Latin American literature, this course offers a selection of authors and genres, introducing students to literary analysis through reading extensive texts in Spanish. Two or more quarters of LTSP 50 are suggested before proceeding to upper-division courses. **Prerequisite:** LTSP 2C or 2D or 2E or the equivalent.

#### **LTSP 50C. Readings in Latin American Topics (4)**

An introduction to major topics in Latin American literature, this course focuses on the literature of a particular

region, period, or movement. Introduces students to literary analysis through reading extensive texts in Spanish. **Prerequisite:** LTSP 2C or 2D or 2E or consent of instructor.

#### **LTSP 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

### **UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Note: As of fall 1992, students must have taken at least one (but preferably two) course(s) in the LTSP 50A-B-C sequence with a grade of C- or better before enrolling in upper-division courses. Without fulfillment of this prerequisite, students must obtain the consent of the instructor of the requested course.

#### **LTSP 100. Major Works of the Middle Ages (4)**

Major Spanish literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of this period. **Prerequisite:** LTSP 50A, 50B, or 50C, or consent of instructor.

#### **LTSP 107. Literature of the Fifteenth Century (4)**

Survey of cultural texts including courtly romances, political poetry, Columbus's letters, and the tragicomedia La Celestina. Issues of gender, blood purity, social estates, and colonialism will be discussed. Repeatable for credit when topics vary. **Prerequisite:** LTSP 130A or consent of instructor.

#### **LTSP 115. Early Modern Spanish Cultural Production (4)**

Study of writing and/or spectacle in Spain in the sixteenth and seventeenth centuries. Close reading of texts and analysis of ideological and historical context. Topics may include the comedia (public theatre), religious drama, poetry, or early narrative forms such as the picaresque novel. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

#### **LTSP 116. Representations of Spanish Colonialism (4)**

Analysis of selected materials that represent the cultural and political relationship between Spain and its colonies. Close reading of literary texts and historical documents. Specific periods covered will fall between the origins of empire in the early sixteenth century to the demise of imperial Spain in 1898; topics may include cultural exchanges between Spain and Latin America, the Philippines, or the U.S. Southwest. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

#### **LTSP 119AB. Cervantes: Teatro y Novelas (4)**

Study of Cervantes's innovations in the short narrative form and theatrical production during the late sixteenth and early seventeenth centuries. Special attention to textual structures and ideological elements such as gender, religion, and early modern conceptions of ethnicity, "race," and nation. This course fulfills the Cervantes requirement for Spanish literature majors. **Prerequisites:** LTSP 50A and 50B or 50C or consent of instructor.

#### **LTSP 119C. Cervantes: Don Quixote (4)**

Close reading of the 1605 and 1615 texts with special attention to the social and cultural background of the early seventeenth century in Spain. **Prerequisites:** LTSP 50A and either 50B or 50C.

#### **LTSP 122. The Romantic Movement in Spain (4)**

This course will explore the historical context of the emergence of a Romantic movement in Spain, particularly the links between Romanticism and liberalism. Major Romantic works in several genres will be studied in depth. **Prerequisite:** upper-division standing or consent of instructor.

#### **LTSP 123. Topics in Modern Spanish Culture (4)**

Investigation of selected topics concerning Spanish cultural production after 1800. Topics might focus on a genre (film, popular novel, theater) or on the transformations of a theme or metaphor (nation, femininity, the uncanny). Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

#### **LTSP 125. Spanish Modernisms (4)**

Analysis and discussion of forms, movements, and issues arising in Spanish culture between 1898 and 1936 in relation to the loss of empire, accelerating modernization and new social movements. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

#### **LTSP 129. Spanish Writing after 1939 (4)**

Analysis and discussion of literary production during and after the Franco dictatorship. May focus on specific genres, sub-period, or issues. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A.

#### **LTSP 130A. Development of Spanish Literature (4)**

An introduction to the major movements and periods of Spanish literary history, centered on close reading of representative texts, but aimed at providing a sense of the scope of Spanish literature and its relation to the course of Spain's cultural and social history. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Spanish (peninsular) literature course. **Prerequisites:** LTSP 50A and either 50B or 50C.

#### **LTSP 130B. Development of Latin American Literature (4)**

An introduction to major movements and periods in Latin American literature, centered on a study of key works from pre-Columbian to the present time. Texts will be seen within their sociohistorical context and in relation to main artistic trends of the period. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Latin American literature course. **Prerequisites:** LTSP 50A and either 50B or 50C.

#### **LTSP 133. Contemporary Latin American Literature (4)**

A study of the major literary works and problems in Latin America from 1900 to the present as seen against the historical context of the period. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 134. Literature of the Southern Cone (4)**

Study of movements, traditions, key authors, or major trends in Argentine, Paraguayan, Uruguayan, and Chilean literatures, such as gaucho poetry, the realist novel, modern urban narratives, and the Borges School, etc. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 135A. Mexican Literature before 1910 (4)**

Explores the relationships among cultural production, politics, and societal changes in Mexico before the 1910 Revolution, specifically the roles of intellectuals and popular culture in nation-building and modernization. Readings may include didactic literature and historiographic writings, forms of popular discourse, as well as novels and poetry. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 135B. Modern Mexican Literature (4)**

Study of popular novels, movements, traditions, key authors, or major trends in modern Mexican literature. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 136. Andean Literatures (4)**

Study of movements, traditions, key authors, or major trends in Peruvian, Ecuadorian, and Bolivian literatures, such as indigenismo, urban narrative, and the works of authors such as Vallejo, Icaza, Arguedas, Vargas Llosa. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 137. Caribbean Literature (4)**

Study of movements, traditions, key authors, or major trends in Caribbean literature in Spanish, such as the romantic movement, the literature of independence, the essay tradition, Afro-Antillean literature, the historical novel. May be repeated for credit as topics vary.

#### **LTSP 138. Central American Literature (4)**

Study of movements, traditions, key authors, or major trends in the literatures of Guatemala, El Salvador, Nicaragua, Honduras, Costa Rica, and Panama, such as the anti-imperialist novel, indigenismo, guerrilla poetry, and testimonio. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 140. Latin American Novel (4)**

A study in depth of selected novelists of Latin America. May be organized around a specific theme or idea which is traced in its development through the narratives. Course may be repeated for credit when topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 141. Latin American Poetry (4)**

A critical study of some of the major poets of Latin America, focusing on the poet's central themes, the evolution of poetic style, and the significance of the poetry to the historical context. May be repeated as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 142. Latin American Short Story (4)**

Readings and interpretation of the Latin American short story. Focus is primarily nineteenth and/or twentieth century. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 150A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)**

Cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a literature, folklore, music, testimonio, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 150B. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)**

Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of "Hispanic" or Latino identities. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 151. Topics in Chicano/a-Latino/a Cultures (4)**

Cross-disciplinary study of late twentieth-century Chicano/a-Latino/a literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender and sexuality, cultures of the U.S.-Mexico border, and Chicano/a-Mexicano/a literary relations. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 153. Chicano/a and Latino/a Poetry (4)**

A study of themes and issues in the poetic production of Latino communities in the U.S. Every effort will be made to select texts in Spanish but some may be bilingual. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 154. Latino/a and Chicano/a Literature (4)**

This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicano/a writers. Repeatable for credit as topics, texts, and historical periods vary. **Prerequisite:** LTSP 50B or 50C.

#### **LTSP 160. Spanish Phonetics (4)**

A comparative study of the English and Spanish phonetic systems. Includes a study of the organs of articulation, manner of articulation stress and intonation patterns, as well as dialectal variations of Spanish. **Prerequisites:** upper-division standing, LTSP 50A or 50B or 50C, or consent of instructor.

#### **LTSP 162. Spanish Language in the United States (4)**

A sociolinguistic study of the popular dialects in the U.S.A. and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects.

**LTSP 166. Creative Writing (4)**

A workshop designed to foster and encourage writing in Spanish of students working on short forms of fiction. The workshop will include discussions of techniques and intensive writing. **Prerequisites:** completion of LTSP 50A-B-C or consent of instructor.

**LTSP 170. Contemporary Theories of Cultural Production (4)**

Selected readings in recent cultural and literary theory. Students will be exposed to a variety of methodologies drawn from the Latin American, European, and U.S. traditions. Final project consists of a practical "application" of a method or methods to a specific cultural object. This course is recommended for students who plan to pursue graduate work in literature. **Prerequisite:** LTSP 50A or 50B or 50C.

**LTSP 171. Studies in Peninsular and/or Latin American Literature and Society (4)**

Focus on the interaction between literary expression and the study of society, covering issues such as the sociology of literature, the historical novel, literature and social change, the writer as the intellectual. May be repeated for credit as topics vary.

**LTSP 172. Indigenista Themes in Latin American Literature (4)**

Study of the literary modes by which nineteenth- and twentieth-century authors have interpreted the themes of indigenous survival and resistance in Latin America, primarily in Mexico and the Andean region. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50B or 50C.

**LTSP 173. Problems in Spanish and Latin American Literary History (4)**

Study of the issues involved in understanding the development process of literary expression; the problem of genre; the relation of literature to social institutions; the function of literary influence and tradition; the relation of popular and print cultures. May be repeated for credit as topics vary. **Prerequisite:** LTSP 50A or 50B or 50C.

**LTSP 174. Topics in Culture and Politics (4)**

Study of the relationships between cultural production (literature, film, popular cultures), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, revolution. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A or 50B or 50C.

**LTSP 175. Gender, Sexuality, and Culture (4)**

This course will examine issues of gender, sexuality, and culture in Spanish, Latin American, and/or Chicana/o literatures. Repeatable for credit as topics, texts, and historical periods vary. **Prerequisite:** LTSP 50A or 50B or 50C.

**LTSP 176. Literature and Nation (4)**

Study of literature as a means through which the nation has been imagined and as a site of debates over national identity and citizenship. Course materials may focus on Spain and/or Latin America. Repeatable for credit as topics vary. **Prerequisite:** LTSP 50A or 50B or 50C.

**LTSP 177. Literary and Historical Migrations (4)**

This course will focus on a variety of Latin American and/or Spanish intra- and inter-national migrations throughout the world and on the literature produced by these exiles or immigrants. Repeatable for credit as topics, texts, and historical periods vary. **Prerequisite:** LTSP 50A or 50B or 50C.

**LTSP 178. Latin American Social Movements (4)**

Course will examine the historical context and cultural production associated with social movements in Latin America. Repeatable for credit as regions, constituencies, and historical periods vary. **Prerequisite:** LTSP 50A or 50B or 50C, or consent of instructor.

**LTSP 192. Senior Seminar in Literatures in Spanish (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with

preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LTSP 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral Exam. **Prerequisite:** department approval.

**LTSP 198. Directed Group Study in Spanish Literature (4)**

Research seminars and research, under the direction of a member of the faculty. May be repeated for credit three times. (P/NP grades only.) **Prerequisites:** upper-division standing and department approval.

**LTSP 199. Special Studies (2 or 4)**

Tutorial: individual guided reading in areas of Spanish literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisites:** upper-division standing and department approval.

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTSP 224. Golden Age Studies (4)**

Consideration of one or more major figures, texts, trends, or problems in Spanish Golden Age studies. May be repeated for credit as topics vary.

**LTSP 252. Topics in Modern Spanish Literature and Culture (4)**

Major trends and figures considered in the context of late nineteenth- and twentieth-century Spanish culture. May be repeated for credit as topics vary.

**LTSP 258. Spanish American Prose (4)**

Consideration of one or more major figures, texts, trends, or problems in Spanish American prose. May be repeated for credit as topics vary.

**LTSP 272. Literature and Society Studies (4)**

Special topics in practical criticism involving social and economic historical perspectives. May be repeated for credit as topics vary.

**LTSP 275. Latin American(ist) Literary and Cultural Theories Since the 1960s (4)**

A historical survey of late twentieth-century literary and cultural criticism in and about Latin America, focusing on questions of political economy and periodization, cultural heterogeneity and transculturation, gender and sexuality, and the relationships between literary, popular, and mass cultures.

**LTSP 295. M.A. Thesis (1-8)**

Research for the master's thesis. Open for repeated registration up to eight units. (S/U grades only.)

**LTSP 296. Research Practicum (1-12)**

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

**LTSP 297. Directed Studies: Reading Course (1-12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

**LTSP 298. Special Projects: Writing Course (1-12)**

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

**LTSP 299. Dissertation (1-12)**

Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

**LITERATURE/THEORY**

Courses in theory may apply to various literature majors. Please consult your advisor.

Additional theory courses are offered in the various department sections. See quarterly course descriptions in the Department of Literature office, first floor LIT building.

**UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTTH 110. History of Criticism (4)**

A critical and interpretive review of some of the major documents in criticism from the classical period to the present time.

**LTTH 115. Introduction to Critical Theory (4)**

A critical review of major contemporary theories of the nature of literature, its sociocultural function, and appropriate modes of evaluation.

**LTTH 150. Topics in Critical Theory (4)**

Selected topics in critical theory such as: a particular mode of literary theory; comparative study of theories of text and image; a problem or theme in the history of theory; issues involved in the relationship between fiction and other discourses (science, law, history, philosophy, music). Repeatable for credit when topics vary.

**LTTH 198. Directed Group Study (4)**

Directed group study, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department (P/NP only)

**LTTH 199. Special Studies (2 or 4)**

Individual reading in an area not covered in courses currently offered by the department. (P/NP only).

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTTH 200A. Text/Culture/Critical Practice (4)**

An introduction to theories and practices of literary and cultural criticism. Topics may vary, but emphasis will be on terminology, methods of readings, modes of interdisciplinary analysis and argumentation, recent debates on questions of theory, history, textual scholarships, etc. **Prerequisites:** registered doctoral student in literature and department stamp.

**LTTH 200B. Problems in Contemporary Literary Theory (4)**

The focus is feminist literary/cultural theories and their relations with major contemporary theoretical discourses (e.g., psychoanalysis, poststructuralism, and various forms of historicism). **Prerequisites:** LTTH 200A, registered doctoral student in literature, and department stamp.

**LTTH 200C. Cultural Perspectives and Cultural Criticism (4)**

Literary and cultural relations between the First and Third Worlds, colonialism and neo-colonialism, orality and literacy, construction of ethnicity, formation of canon, and popular culture and the market. **Prerequisites:** LTTH 200B, department stamp, and registered doctoral student in literature.

**LTTH 201. Contemporary Theoretical Debates and Critical Discourses (4)**

An introduction to a wide range of theoretical and methodological issues, schools of thought, and interpretative styles in contemporary literary studies. Required of all M.A. students in the Department of Literature, normally in their first quarter in the program. **Prerequisite:** admission to the M.A. program in the Department of Literature or consent of instructor.

**LTTT 220. Theories of Literary Criticism (4)**

Close study of any of the several bodies of literary theory currently applied to literary criticism: psychoanalytic, Marxist, historicist, semiotic, feminist, hermeneutic, reader-response, among others. May be repeated for credit when topics vary.

**LTTT 250. Writing and Theory (4)**

An overview of issues in modern critical theory as they pertain to writers. Will focus on issues of textuality, cultural forms, and aesthetics as they impact the process and meaning of writing. **Prerequisite:** department approval.

**LTTT 255. Modern Art Movements and Aesthetics (4)**

An introduction to modernist aesthetics with a focus on art and literary movements. Particular attention to be placed on relationships between modern literary movements (realism, imagism, surrealism) and their counterparts in visual arts, music, dance, and theater, and the ways in which literary movements are components of or responses to issues of political and social identity. **Prerequisite:** department approval.

**LTTT 296. Research Practicum (1–12)**

Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

**LTTT 297. Directed Studies: Reading Course (1–12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

**LTTT 298. Special Projects: Writing Course (1–12)**

Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

**LTTT 299. Dissertation (1–12)**

Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

**LITERATURES OF THE WORLD****AFRICAN LITERATURES**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

**LTAf 110. African Oral Literature (4)**

Survey of various genres of African and oral literary traditions. Oral narrative genres, investigation of proverb, riddle, praise poetry, and epic. Development and use of a methodology to analyze aspects of performance, composition, and education in oral traditional systems.

**LTAf 120. Literature and Film of Modern Africa (4)**

This course traces the rise of modern literature in traditional African societies disrupted by the colonial and neocolonial experience. Contemporary films by African and Western artists will provide an additional insight into the complex social self-images of the continent.

**LITERATURES OF THE AMERICAS**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

**LTAM 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

**LTAM 100. Latino/a Cultures in the United States (4)**

An introductory historical and cultural overview of the various Latino/a populations in the U.S. with a study of representative cultural texts.

**LTAM 101. Early Latino/a-Chicano/a Cultures: 1848–1960 (4)**

A cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

**LTAM 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)**

A cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

**LTAM 105. Gender and Sexuality in Latino/a Cultural Production (4)**

A study of the construction of differences in gender and sexual orientation in Latino/a-Chicano/a literature and other cultural production with an emphasis on examining various theoretical/ideological perspectives on these issues. May be repeated for credit as topics vary.

**LTAM 106. Modern Chicana and Mexican Women Writings (4)**

A study of themes and issues in the writings of Chicana and Mexican women with a view toward establishing connections while recognizing national and cultural differences between the two. May be repeated for credit as topics vary.

**LTAM 107. Comparative Latino/a and U.S. Ethnic Cultures (4)**

A comparative and intersecting study of Latino/a and other U.S. ethnic cultures. Literary texts will be viewed as "windows" into real time and spaces where cultures meet and mix. May be repeated for credit as topics vary.

**LTAM 108. Chicano/a and Latino/a Cultures: Intellectual and Political Traditions (4)**

The course will center on Chicano/a-Latino/a writers and movements of literary, intellectual, cultural, or political significance. Texts may be read in the original language or in English. May be repeated for credit as topics vary.

**LTAM 109. Cultural Production of the Latino/a Diasporas (4)**

A study of the cultural production of Latino/a immigrant groups with a focus on the literary representation of homeland, national culture, and the forces that led to migration. May be repeated for credit as topics vary.

**LTAM 110. Latin American Literature in Translation (4)**

Reading of representative works in Latin American literature with a view to literary analysis (form, theme, meaning), the developmental processes of the literature, and the many contexts: historical, social, cultural. Texts may be read in English. May be repeated for credit as topics vary.

**LTAM 111. Comparative Caribbean Discourse (4)**

Comparative survey of Caribbean literatures from the Spanish, French, English, and Dutch Caribbean. Literary texts trace historical paradigms including the development of plantation slavery, emancipation, the quest for nationhood, migration, and transnational identities. Films and music may complement discussion.

**LTAM 130. Reading North by South (4)**

An analysis of the readings and appropriations of European and U.S. traditions by Latin American, Caribbean, and Filipino writers. The course addresses philosophies, ideologies, and cultural movements and explores the specific literary strategies used by authors in constructing their particular "cosmovisión."

**LTAM 132. The Dark Side of Enlightenment in Spain, the Americas, and the Philippines (4)**

This course deals with the cultural production of Spain, the Philippines, Latin America, and the U.S. to examine views (both optimistic and pessimistic) on the Enlightenment as a mode of conducting scientific investigation of nature, constituting forms of government, and imagining the future. May be repeated for credit as topics vary.

**LTAM 140. Topics in Culture and Politics (4)**

Study of the relationships between cultural production (literature, film, popular culture), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, and revolution. Repeatable for credit when topics vary.

**LTAM 192. Senior Seminar in Literatures of the Americas (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**EAST ASIAN LITERATURES**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

**LTEA 100A. Classical Chinese Poetry in Translation (4)**  
A survey of different genres of traditional Chinese poetry from various periods.

**LTEA 100B. Modern Chinese Poetry in Translation (4)**  
A survey of Chinese poetry written in the vernacular from 1918 to 1949.

**LTEA 100C. Contemporary Chinese Poetry in Translation (4)**  
A survey of Chinese poetic development from 1949 to the present.

**LTEA 110A. Classical Chinese Fiction in Translation (4)**  
The course will focus on a few representative masterpieces of Chinese literature in its classical age, with emphasis on the formal conventions and the social or intellectual presuppositions that are indispensable to their understanding. May be repeated for credit when topics vary.

**LTEA 110B. Modern Chinese Fiction in Translation (4)**  
A survey of representative works of the modern period from 1919 to 1949. May be repeated for credit when topics vary.

**LTEA 110C. Contemporary Chinese Fiction in Translation (4)**  
An introductory survey of representative texts produced after 1949, with particular emphasis on the social, cultural, and political changes. May be repeated for credit when topics vary.

**LTEA 120A. Chinese Films (4)**  
A survey of representative films from different periods of Chinese cinematic development. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

**LTEA 120B. Taiwan Films (4)**  
A survey of "New Taiwan Cinema" of the Eighties and Nineties. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

**LTEA 120C. Hong Kong Films (4)**

An examination of representative works of different film genres from Hong Kong. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

**LTEA 132. Later Japanese Literature in Translation (4)**

An introduction to later Japanese (kogo) literature in translation. Will focus on several "modern" works, placing their form in the historical context. No knowledge of Japanese required. Repeatable for credit when topics vary.

**LTEA 136. Special Topics in Japanese Literature (4)**

The course will focus on important problematics of literary studies as they relate to Japan (e.g., "feminism," "modernity," "literary mode of production," "Orientalism and nativism"). No knowledge of Japanese required. May be repeated for credit as topics vary.

**LTEA 138. Japanese Films (4)**

An introduction to Japanese films. Attention given to representative Japanese directors (e.g., Ozu), form (e.g., anime), genre (e.g. feminist revenge horror), or historical context in which films are produced. Priority may be given to Japanese studies majors and literature majors.

**LTEA 140. Modern Korean Literature in Translation from Colonial Period (4)**

A survey of modern Korean prose fiction and poetry from the colonial period. Exploration of major issues such as Japanese colonization, rise of left-wing and right-wing nationalisms, construction of national culture, and relations between tradition and modernity.

**LTEA 141. Modern Korean Literature in Translation from 1945 to Present (4)**

A survey of modern Korean prose fiction and poetry from 1945 to the 1990s. Examination of literary representations of national division, the Korean War, accelerated industrialization, authoritarian rule, and the labor/agrarian movements.

**LTEA 142. Korean Film, Literature, and Popular Culture (4)**

A study of modern Korean society and its major historical issues as represented in film, literature, and other popular cultural media such as TV and music video. We will explore additional issues such as cinematic adaptations of prose fiction, fluid distinctions between popular literature and "serious" literature, and the role of mass media under authoritarian rule.

**LTEA 143. Gender and Sexuality in Korean Literature and Culture (4)**

A study of constructions of gender and sexuality in pre-modern and modern Korean societies. We will discuss literary works as well as historical and ethnographic works on gender relations, representations of masculinity and femininity, and changing roles of men and women in work and family.

**LTEA 144. Korean American Literature and Other Literatures of Korean Diaspora (4)**

An examination of the experiences of the Korean diaspora linked to the historical contexts of modern Korea, Japan, the United States, and other countries. We will focus on literature both about Korea and the Korean immigrant experience written in the United States but will also read from and about other Korean diasporic contexts.

**LTEA 145. Literature, History, and Colonial and Postcolonial Modernity in Korea (4)**

Comparative examination of historiographical and literary representations of major issues such as nationalism, industrialization, class division, gender, and sexuality. Literary re-writings of modern Korean history and recent revisionist historiographical works and trends.

**LTEA 151. Readings in Tagalog Literature and Culture I (4)**

Course will concentrate on selections of literature, history, and cultural texts (painting, drama, religious artifacts) of the 1896 Philippine revolution and the succeeding U.S. takeover of the Philippines. Intermediate fluency in speaking, reading, and writing Tagalog. Repeatable for credit when topics vary.

**LTEA 152A. Topics in Filipino Literature and Culture (Nineteenth Century–World War II) (4)**

Surveys the authors, intellectual currents, and cultural politics of Filipino culture from the 1850s to World War II. Topics may include the legacy of Spanish colonialism, European enlightenment, and the emergence of nationalism and socialism, and Filipino literature in English. May be repeated for credit as topics vary.

**LTEA 152B. Topics in Filipino Literature and Culture (World War II–Present) (4)**

Surveys the authors, intellectual currents, and cultural politics of Filipino culture from World War II to the present. Topics may include the dual lingua franca, the birth of "Filipino-American" literature, the culture of dictatorship, and new approaches to narrative. May be repeated for credit as topics vary.

**LTEA 198. Directed Group Study (4)**

Research seminars and research, under the direction of a faculty member.

**LTEA 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas not normally covered in courses. (P/NP grades only.)

**EUROPEAN AND EURASIAN LITERATURES****LOWER-DIVISION****LTEU 87. Freshman Seminar (1)**

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

**UPPER-DIVISION**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

**LTEU 105. Medieval Studies (4)**

Studies in medieval culture and thought with focus on one of the "three crowns" of Italian literature: Dante, Boccaccio, or Petrarca. May be repeated for credit when course content varies.

**LTEU 109. Studies in Eighteenth-Century European Literature (4)**

Topics to be considered include the age of sensibility, enlightenment, neoclassicism. Attention given to historical and cultural contexts.

**LTEU 110. European Romanticism (4)**

Attention given to historical and cultural contexts. Topics to be considered include the concept of nature, the reaction to science, the role of the imagination.

**LTEU 130. German Literature in Translation (4)**

One or more aspects of German literature, such as major authors, the contemporary novel, nineteenth-century poetry, German expressionism. Texts may be read in English or the original language. May be repeated for credit as topics vary.

**LTEU 137. Seminars in German Culture (4)**

These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like.

**LTEU 139. Marx/Nietzsche/Freud (4)**

Intensive examination of the major ideas of all three writers, with special attention to the literary styles and problematic aspects of their work.

**LTEU 140. Italian Literature in Translation (4)**

One or more periods and authors in Italian literature. Texts will be read in English. May be repeated for credit as topics vary.

**LTEU 145. Studies in Modern Italian Poetry (4)**

Study of the chief modern Italian poets, including Montale, Ungaretti, and Quasimodo, with attention to long, poetic form and contemporary Italian culture. May be repeated for credit as topics vary.

**LTEU 146. Studies in Modern Italian Prose (4)**

A study of the chief modern Italian prosatori including D'Annunzio, Calvino, Pavese, Pasolini, etc. Repeatable for credit.

**LTEU 147. Women in Italy (4)**

A study of historical, political, and literary texts regarding women and feminism in Italian society.

**LTEU 150A-B-C. Survey of Russian and Soviet Literature in Translation, 1800 to the Present (4-4-4)**

A study of literary works from Pushkin to the present.

150A. 1800–1860

150B. 1860–1917

150C. 1917–present

**LTEU 154. Russian Culture (4)**

An introduction to Russia's past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present.

**LTEU 158. Single Author in Russian Literature in Translation (4)**

A study of literary works by a single Russian author. All readings will be in English. May be repeated for credit when authors vary.

**LTEU 192. Senior Seminar in European and Eurasian Literatures (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisite:** department stamp and/or consent of instructor.

**NEAR EASTERN LITERATURES**

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

**LTNE 101. The Bible: The Narrative Books (4)**

Examination of the Biblical accounts in their ancient Near Eastern context. Emphasis will be placed on literary- and form-criticism and textual analysis. Attention to related literature and to archaeological data; consideration of theological issues. Repeatable for credit as topics vary.

**LITERATURES OF THE WORLD**

In both lower- and upper-division world literature courses, texts may be read in English translation

when necessary, and lectures and discussions are conducted in English.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

## LOWER-DIVISION

### LTWL 4A-B-C-D-F-M. Film and Fiction in Twentieth-Century Societies (4)

A study of modern culture and of the way it is expressed and understood in novels, stories, and films. The sequence aims at an understanding of relationship between the narrative arts and society in the twentieth century, with the individual quarters treating fiction and film of the following language groups. 4A French, 4B German, 4C Asian, 4D Italian, 4M multiple national literatures and film, 4F Spanish.

### LTWL 19A-B-C. Introduction to the Ancient Greeks and Romans (4-4-4)

An introductory study of ancient Greece and Rome, their literature, myth, philosophy, history, and art.

### LTWL 50. Introduction to Literary and Cultural Studies (4)

A preliminary survey of issues and problems raised by literary and cultural studies. Discussion will focus on basic terms in literary analysis (narrative, genre, character, poetics) and on rhetorical techniques for writing advanced expository papers in literary and cultural topics. It is designed for both non-majors and students who anticipate becoming majors in literature who would like a broad-based introduction to the field.

### LTWL 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

### LTWL 99. Lower-Division Independent Study (4)

Independent study at the lower-division level, in an area not covered by the department's regular course offerings, under the direction of a member of the Literature Department faculty. **Prerequisites:** lower-division standing; cumulative 3.0 GPA.

### TWS 21-22-23-24-25-26. Third World Literatures (4-4-4-4-4)

(See entry under "Third World Studies" heading.)

The courses in this sequence are equivalent to world literature courses. The sequence satisfies Marshall College general-education requirements.

## UPPER-DIVISION

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

### LTWL 100. Mythology (4)

A study of various bodies of myth: their content, form, and meaning. May be repeated for credit as topics vary.

### LTWL 102. Women in Antiquity (4)

Selected topics in classical culture, including women and myth, women in Greek and Roman society, and the representation of women in classical literature. May be repeated for credit when topics vary.

### LTWL 106. The Classical Tradition (4)

Greek and Roman literature in translation. May be repeated for credit as topics vary.

### LTWL 107. Prose Fiction (4)

Aspects of prose fiction. Not confined to a single national literature. Texts may be read in English. May be repeated for credit as topics vary.

### LTWL 108. Words and Their Vicissitudes (4)

The history of English and its forebears, focusing on the quirky nature of semantic change in order to equip students with a basis for evaluating metaphor, metonymy, and other forms of verbal deviance.

### LTWL 110B. Folk and Fairy Tales (4)

A study of folk and fairy tales from various cultures, from the point of view of literary form, psychological meaning, and cultural function. May be repeated for credit as topics vary.

### LTWL 111. Medieval Studies (4)

A lecture/discussion course designed to explore a variety of topics in medieval literatures and cultures. Topics may include a genre or combination of genres (e.g., drama, romance, lyric, allegory), or a central theme (e.g., the Crusades or courtly love).

### LTWL 114. Children's Literature (4)

A study of literature written for children in various cultures and periods. May be repeated for credit as topics vary.

### LTWL 115. Contemporary Literature (4)

A study of novels and authors of the present and recent times. May be repeated for credit as topics vary.

### LTWL 116. Adolescent Literature (4)

A study of fiction written for the young adult in various cultures and periods. Consideration will be given to the young adult hero in fiction. May be repeated for credit as topics vary.

### LTWL 120. Popular Literature and Culture (4)

A study of various popular forms—such as pop music, cult books, film, fashion, magazines, graphic arts—within a broader cultural context. Focus may be on a particular genre (e.g., best sellers) or era (e.g., the sixties). May be repeated for credit when topics vary.

### LTWL 122. Fantasy (4)

Reading and analysis of various works that fall into several categories of the fantastic—e.g., heroic, gothic, irrealist, postmodern—with particular attention to the cultural uses of myth, folklore, and fantasy, and to the psychological and structuralist theories of same. May be repeated for credit when topics vary.

### LTWL 123. Vampires in Literature (4)

A study of representations of the vampire through a variety of methodological perspectives with an emphasis on historical context and cultural symbolism.

### LTWL 124. Science Fiction (4)

An exploration of the genre—past and present, in literature and the visual media—as a cultural response to scientific and technological change, as modern mythmaking, and as an enterprise serving a substantial fan subculture. May be repeated for credit when topics vary.

### LTWL 128. Introduction to Semiotics and Applications (4)

Semiotics, basically a theory of signification, describes the models and conceptual constructs through which meaning is grasped and produced. Background in the history of semiotics and its dominant models.

### LTWL 129. Wisdom: The Literature of Authority (4)

What is wisdom? Does wisdom refer to a specific type of discourse; a literary genre; a specific content that holds true transculturally and transtemporally? This class will consider these questions by reading literature from diverse times and places.

### LTWL 135. The Buddhist Imaginary (4)

An introduction to the imaginative universe of Indian Buddhism, with a focus on the connection between cosmological models and liberative practices. In this class we read Buddhist narrative and doctrinal literatures, supplemented by archaeological and art historical artifacts.

### LTWL 137. Sanskrit (4)

Study of classical Sanskrit, including grammar and reading.

### LTWL 138. Critical Religion Studies (4)

Selected topics, texts, and problems in the study of religion. May be repeated for credit when content varies.

### LTWL 139. Gnosticism: The Religious Underground from Late Antiquity to the New Age (4)

A survey of Gnostic currents in religious thought which influenced the Abrahamic traditions of Judaism, Christianity, and Islam, and which resurfaced periodically as heretical challenges to these mainstream traditions and their doctrinal orthodoxies.

### LTWL 140. Novel and History in the Third World (4)

This course sets out to explore the relation between the novel and the "dependent" history of the Third World, contrasting and comparing the uses of history in the European novel as defined in the theoretical analysis of Lukacs with uses of history in the Third World novel. An analysis of major themes and movements common to selected ethnic literature in the United States and national literatures in the Third World.

### LTWL 141. Islam and Modernity (4)

A survey of developments in the Islamic world during the period of European colonial domination and its aftermath, with special attention to the works of leading Muslim thinkers (e.g., Sayid Ahmed Khan, Muhammad Abdou, Hasan al Banna, Ruhallah Khomeini, among others).

### LTWL 142. Islam: The Origins and Spread of a World Religion (4)

An investigation of the historical and textual beginnings of Islam; the development of the religion in the early Middle Ages; and an examination of the formalization of schools of Islamic law and the confrontation between Suuni and Shii versions of praxis. Concludes with the rise of Islamic modernism and the roots of Islamic fundamentalism.

### LTWL 145. South Asian Religious Literatures: Selected Topics (4)

One or two topics in the religious literature of South Asia will be examined in depth. Repeatable for credit when topics vary.

### LTWL 147. Readings in Mahayana Buddhism (4)

Students read and discuss Mahayana Buddhist literature, including sutra and narrative literatures, confessional works, doctrinal treatises, and tantric verse. Recommended: completion of LTWL 129 or LTWL 135.

### LTWL 149. The Last Turn of the Century in the West (4)

A multi-media examination of the momentous cultural and intellectual changes that accompanied the last turn of the century (nineteenth–twentieth) in the West. Areas covered include literature, philosophy, visual arts, music, religion, social movements, and scientific thought.

### LTWL 150. Modernity and Literature (4)

Explores the various cross-cultural historical, philosophical, and aesthetic ideas which formed the basis of most twentieth-century literature. Literature from the Americas, Europe, Asia, and Africa will be studied through lectures and the reading of texts in English translation. Repeatable for credit when topics vary.

### LTWL 151. Religion and Politics (4)

Course surveys the historical and theoretical relationships between religion and politics in contemporary South West Asia, focusing on the interplay of religious movements and politics by looking at countries such as Egypt, Iraq, Israel, Lebanon, Saudi Arabia, Syria, and Turkey.

### LTWL 152. Introduction to Islam (4)

An exploration of the history and religion of Islam, with focus on theological debates, mystical traditions, and ritual life of Islamic societies from the seventh century to the modern period. The rise of Islamist movements in contemporary history will also be discussed.

### LTWL 153. Literature, Religion, and Culture in Iran (4)

This interdisciplinary course will explore the relationship between culture and religion in the Persian literature from the Abbasid to postrevolutionary Iranian history.

### LTWL 154. Literature: Public Sphere (4)

Course focuses on the contentious notion of "public sphere," surveying its historical rise and various theoretical

debates in defining the term, ranging from political, social, feminist theories to postcolonial studies.

#### **LTWL 155. Gender Studies (4)**

The study of the construction of sexual differences in literature and culture. May be repeated for credit when topics vary.

#### **LTWL 157. Iranian Film (4)**

Course sets out to explore the history and theory of Iranian films in the context of the country's political, cultural, and religious settings since 1945. Students are expected to watch and discuss Iranian films, particularly the postrevolutionary films of Kiarostami and Mokhbabaf.

#### **LTWL 158A. Topics in the New Testament (4)**

Literary and socio-historical considerations of the diverse writings that developed into the New Testament. Topics include Jewish origins of the "Jesus movement" within Greco-Roman culture; varying patterns of belief/practice among earliest communities; oral tradition and development of canon.

#### **LTWL 158B. Topics in Early Christian Texts and Cultures (4)**

This course investigates the manner in which texts shape religious identities on the individual and communal level in sociohistorical and cultural contexts: various topics include portraits of Jesus, saints lives, death and afterlife, martyrdom, demonology, apocalypticism, Christianity, and empire.

#### **LTWL 158C. Topics in Other Christianities (4)**

A survey of the Christian texts that comprise the fatalities of the battles defining Christian canon: e.g., apocryphal acts, non-canonical gospels, and "Gnostic" texts. Considers the social communities, theological views, religious identities, and practices reflected in largely forgotten texts.

#### **LTWL 160. Women and Literature (4)**

This course will explore the relationship between women and literature, i.e., women as producers of literature, as objects of literary discourse, and as readers. Foreign language texts will be read in translation. May be repeated for credit as topics vary.

#### **LTWL 165. Literature and the Environment (4)**

With primarily American (and a couple of English) readings, the course inquires into the relation of human and nonhuman nature. Topics include wilderness, animals, Native American thought, women in nature, description as a kind of writing, the spirituality of place.

#### **LTWL 166. The Yiddish Novel (4)**

Yiddish literature is much more than folksongs and jokes. We will read major American and European works by Nobel laureate I.B. Singer, his brother I.J. Singer and sister Esther Krejtzman, Sholem Aleichem, Mendele, Chava Rozenfarb, and others. (In English translation.)

#### **LTWL 167. Russia and the Jewish Imagination from the Enlightenment to the Present (4)**

Course explores Russian Jewish literature, from Hassidic tales to Gary Shteyngart's *Absurdistan*. We will read works translated from Hebrew, Yiddish, and Russian. Written before, during, and since the Soviet period, including literature produced in Russia, Israel, and the U.S.

#### **LTWL 168. Death and Desire in India (4)**

This class investigates the link between desire and death in classical and modern Hindu thought. It considers the stories of Hindu deities, as well as the lives of contemporary South Asian men and women, in literature and film.

#### **LTWL 172. Special Topics in Literature (4)**

Studies in specialized literary, philosophic, and artistic movements, approaches to literature, literary ideas, historical moments, etc.

#### **LTWL 176. Literature and Ideas (4)**

The course will center on writers or movements of international literary, cultural, or ideological significance. The texts studied, if foreign, may be read either in the original language or in English. May be repeated for credit as topics vary.

#### **LTWL 180. Film Studies and Literature: Film History (4)**

The study of film history and its effects upon methods of styles in literary history. Repeatable for credit when topics vary.

#### **LTWL 181. Film Studies and Literature: Film Movement (4)**

Study of analogies between literary movements and film movements. Repeatable for credit when topics vary.

#### **LTWL 183. Film Studies and Literature: Director's Work (4)**

Methods of criticism of author's work applied to the study and analysis of film director's style and work. Repeatable for credit when topics vary.

#### **LTWL 184. Film Studies and Literature: Close Analysis of Filmic Text (4)**

Methods of literary analysis applied to the study of shots, sequences, poetics, and deep structure in filmic discourse. Repeatable for credit when topics vary.

#### **LTWL 191. Honors Seminar (4)**

Explorations in critical theory and method. This course, designed to prepare students to write an honors thesis, is open only to literature majors invited into the department's Honors Program.

#### **LTWL 192. Senior Seminar in Literatures of the World (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

#### **LTWL 195. Apprentice Teaching (0 or 4)**

Undergraduate instructional assistance. Student must (1) prepare reading materials assigned by the professor; (2) lead student discussions; (3) assist professor in grading; and (4) prepare report to professor at conclusion of quarter concerning his/her work.

#### **LTWL 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWL 191. Oral exam. **Prerequisite:** department approval.

#### **LTWL 198. Directed Group Study (4)**

Research seminars and research, under the direction of faculty member. **Prerequisite:** department approval.

#### **LTWL 199. Special Studies (2 or 4)**

Tutorial; individual guided reading in areas of literature (in translation) not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) **Prerequisites:** upper-division standing and department approval.

### **GRADUATE**

#### **LTWL 500. Apprentice Teaching in Literature (2 or 4)**

Consideration of pedagogical methods appropriate to undergraduate teaching in literature courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

#### **LTWL 501. Apprentice Teaching in Humanities (2 or 4)**

Consideration of pedagogical methods appropriate to undergraduate teaching in humanities sequences under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

#### **LTWL 503. Apprentice Teaching in Marshall College (2 or 4)**

Consideration of pedagogical methods appropriate to undergraduate teaching in Marshall College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

#### **LTWL 504. Apprentice Teaching in Warren College (2 or 4)**

Consideration of pedagogical methods appropriate to undergraduate teaching in Warren College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

#### **LTWL 506. Apprentice Teaching in Roosevelt College (2 or 4)**

Consideration of pedagogical methods appropriate to undergraduate teaching in Eleanor Roosevelt College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

## **WRITING/LITERATURE**

### **LOWER-DIVISION**

#### **LTWR 8A. Writing Fiction (4)**

Study of fiction in both theory and practice. Narrative technique studied in terms of subjectivity and atmosphere, description, dialogue, and the editing process will be introduced through readings from the history of the novel and short story. Writing exercises accompany reading assignments. **Prerequisite:** completion of college writing requirement.

#### **LTWR 8B. Writing Poetry (4)**

Study and practice of poetry as artistic and communal expression. Techniques of composition (traditional forms, avant garde techniques, dramatic monologue, performance poetry, and new genre) studied through written and spoken examples of poetry. Writing exercises accompany reading assignments. **Prerequisite:** completion of college writing requirement.

#### **LTWR 8C. Writing Nonfiction (4)**

Study of nonfictional prose in terms of genre and craft. Techniques of composition (journalism, essay, letters, reviews) will be studied through written examples of the genre. Practical imitations and exercises accompany the reading assignments. Prerequisite to upper-division non-fiction prose workshops. **Prerequisite:** completion of college writing requirement.

### **UPPER-DIVISION**

Departmental approval is required for enrollment in all upper-division literature/writing courses.

**PREREQUISITE:** upper-division standing or consent of instructor. Additional prerequisites may be specified below.

(See "[Department of Theatre and Dance](#)" for course offerings in dramatic writing.)

#### **Prose Fiction, Poetry, Media Workshops**

#### **LTWR 100. Short Fiction Workshop (4)**

A workshop for students with some experience and special interest in writing fiction. This workshop is designed to encourage regular writing in the short forms of prose fiction and to permit students to experiment with various forms. There will be discussion of student work, together with analysis and discussion of representative examples of short fiction from the present and previous ages. May be taken for credit three times. **Prerequisites:** LTWR 8A; department approval.

**LTWR 101. Writing Fiction in Spanish (4)**

A workshop for students with interest in writing fiction in Spanish. Includes discussion of student work, together with analysis and discussion of representative examples of short fiction from the present and previous ages. A working knowledge of Spanish is required. May be taken for credit three times. **Prerequisites:** LTWR 8A; LTSP 50A or 50B or 50C; department approval.

**LTWR 102. Poetry Workshop (4)**

A workshop for students with some experience and special interest in writing poetry. This workshop is designed to encourage regular writing of poetry. There will be discussion of student work, together with analysis and discussion of representative examples of poetry from the present and previous ages. May be taken for credit three times. **Prerequisites:** LTWR 8B; department approval.

**LTWR 104A. The Novella I (4)**

A two-quarter workshop for fiction writers ready to explore a longer form, and committed to developing a single piece over the course of two consecutive quarters. In addition to analyzing student work, we will read and discuss a wide range of published novellas. Two-quarter sequence; students must complete LTWR 104A and LTWR 104B in order to receive final grade in both courses. **Prerequisites:** LTWR 100; department approval.

**LTWR 104B. The Novella II (4)**

A continuation of LTWR 104A in which fiction writers complete the novella manuscripts they began during the previous quarter. Each student will produce a novella of at least fifty revised pages by the end of the quarter. We will continue to read and discuss published novellas with a particular emphasis on narrative strategy, structure, and revision. Two-quarter sequence; students must complete LTWR 104A and LTWR 104B in order to receive final grade in both courses. **Prerequisites:** LTWR 104A; department approval.

**LTWR 106. Science Fiction, Fantasy, and Irrealism Workshop (4)**

In this workshop, students will practice skills of narration, characterization, and style with particular attention to the demands of non-realistic genres, especially the challenge of suspending disbelief in fictional environments that defy conventional logic. Readings and lectures will accompany writing exercises. May be taken for credit three times. **Prerequisites:** LTWR 8A; department approval.

**LTWR 113. Intercultural Writing Workshop (4)**

This course is an introduction to modes of writing from other cultural systems vastly different from the cultural-aesthetic assumptions of Anglo-American writing. While disclosing the limitations of the English language, this course attempts to provide new language strategies for students. May be taken for credit three times. **Prerequisites:** LTWR 8A, 8B, or 8C; department approval.

**LTWR 114. Graphic Texts Workshop (4)**

From illuminated manuscripts to digital literature, from alphabets to concrete poems, from artists' books to comics, this course explores the histories and techniques of combinatory image/word literary arts. The course may emphasize specific movements or genres. May be taken for credit three times. **Prerequisites:** LTWR 8A or 8B or 8C; department approval.

**LTWR 115. Experimental Writing Workshop (4)**

This workshop explores writing for which the traditional generic distinctions of prose/poetry, fiction/ documentary, narrative/discourse do not apply. Students taking this course will be asked to challenge the boundaries of literature to discover new forms and modes of expression. May be taken for credit three times. **Prerequisites:** LTWR 8A, 8B, or 8C; department approval.

**LTWR 119. Writing for Performance (4)**

A workshop and survey of experimental approaches to the writing and production of performance works in a range of literary genres. Emphasis will be placed on the integration of written texts with non-verbal elements from the visual arts, theater, and music. **Prerequisite:** LTWR 8A or 8B, to be determined by quarterly offerings of LTWR 119; department approval.

**Nonfiction Prose Workshops****LTWR 120. Personal Narrative Workshop (4)**

A workshop designed to encourage regular writing of all forms of personal experience narrative, including journals, autobiography, firsthand biography, and firsthand chronicle. Instructor and students will discuss student work as well as published personal narratives. May be taken for credit three times. **Prerequisites:** LTWR 8A, 8B, or 8C; department approval.

**LTWR 121. Media Writing Workshop (4)**

Workshop focusing on the review, the op-ed piece, the column, the blurb, the profile, the interview, and "content-providing" for Web sites. We'll examine current examples of media writing; students will produce a body of work and critique one another's productions. May be taken for credit three times. **Prerequisites:** LTWR 8C; department approval.

**LTWR 122. Writing for the Sciences Workshop (4)**

A workshop in writing about science for the public. Students will study and then construct metaphors or analogues which introduce readers to scientific perplexities. Completion of LTWR 8A, 8B, or 8C highly recommended. May be repeated for credit three times. **Prerequisite:** department approval.

**LTWR 124. Translation of Literary Texts Workshop (4)**

A writing workshop on the theory and practice of literary translation. Students will translate literary texts and workshop with the instructor and other course members. Selected readings in translation theory. May be taken for credit three times. **Prerequisites:** LTWR 8A, 8B, or 8C; department approval.

**LTWR 126. Creative Nonfiction Workshop (4)**

A writing, reading, and critical-thinking workshop designed to produce nonfiction pieces that fall outside the limits of the essay form. Included are travel narratives, memoir, and information-based writing that transform their own materials into compelling literature. May be repeated for credit three times. **Prerequisites:** LTWR 8C; department approval.

**LTWR 129. Distributing Literature Workshop (4)**

Workshop designed to critique and engage the means of distributing literature within culture. Publishing from "zine" through mainstream publication; Web publishings; readings and "slams"; publicity and funding; colloquia with writers; politics and literature; and the uses of performance and media. May be taken for credit three times. **Prerequisites:** LTWR 100, LTWR 102, or LTWR 120; department approval.

**Writing Process, Written Discourse, and Writing Pedagogy**

These courses are not writing workshop courses like those listed above. Rather, they examine various aspects of writing as a field of study and writing pedagogy. Writing majors who plan to teach writing may be particularly interested in these courses. See the department for applicability of these courses to the writing major requirements.

Note: As of fall 1991, all writing majors are required to take one course chosen from offerings numbered LTWR 140–148 to fulfill one of their upper-division requirements.

**LTWR 143. Stylistics and Grammar (4)**

A close look at sentence-level features of written discourse—stylistics and sentence grammars. Students will review recent research on these topics and experiment in their own writing with various stylistic and syntactic options. **Prerequisite:** department approval.

**LTWR 144. The Teaching of Writing (4)**

Wide reading in current theory and practice of teaching writing in schools and colleges. Careful attention to various models of classroom writing instruction and to different approaches in the individual conference. Students in this course may observe instruction in the UCSD college writing programs or tutor freshman students in those programs. **Prerequisite:** department approval.

**LTWR 148. Theory for Writers/Writing for Theory (4)**

Hybrid workshop offering writing students a working knowledge of literary theory while exposing literature students to practical techniques from poetry, fiction, and nonfiction to refresh their writing of theoretical nonfiction texts. Discussion of student work and published work. **Prerequisite:** department approval.

**Directed Study and Special Study****LTWR 192. Senior Seminar in Literatures in Writing (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in literature (at the upper-division level). Senior seminars may be offered in all campus departments. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**LTWR 195. Apprentice Teaching (4)**

Undergraduate instruction assistance. Students will 1) assist TA in editing students' writing for LTWR 8A and 8C during class and outside of class; and 2) prepare a paper and report for the professor at the end of the quarter. **Prerequisite:** LTWR 144

**LTWR 196. Honors Thesis (4)**

Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTWR 191. Oral exam. **Prerequisite:** department approval.

**LTWR 198. Directed Group Study (2 or 4)**

Directed group study in areas of writing not normally covered in courses. (P/NP grades only.) Repeatable for credit when areas of study vary.

**LTWR 199. Special Studies (2 or 4)**

Tutorial; individual guidance in areas of writing not normally covered in courses. (P/NP grades only.) May be taken for credit three times. **Prerequisites:** upper-division standing and department approval.

**GRADUATE**

**PREREQUISITE:** graduate standing or consent of instructor.

**LTWR 200. Fiction Workshop (4)**

A weekly meeting between a faculty member, guest fiction writers, and a small group of M.F.A. students for focused discussion of new student writing produced during the time of the workshop. The workshop guides students toward beginning the full-length manuscript that will constitute their M.F.A. project. **Prerequisite:** department approval.

**LTWR 202. Poetry Workshop (4)**

A weekly meeting between a single faculty member, occasional guest poets, and a small group of M.F.A. students engaged in a discussion of new student work produced during the time of the workshop. There will be assigned readings and some writing exercises to give the course focus. **Prerequisite:** department approval.

**LTWR 215. Cross-Genre Workshop (4)**

In the generative workshop, writers create intergenre works and practice unconventional workshoping techniques that function less as editorial roundtables and more as discussions of the relationships between aesthetics and culture. **Prerequisite:** department approval.

**LTWR 260. Autoethnographies of Literacy (4)**

Designed for public school teachers, this writing seminar concerns ethnographic and autoethnographic studies of "literate" and "illiterate" in the United States.

**LTWR 271. Theory and Practice of College Writing Instruction (4)**

In this course we will explore the implications for writing instruction of current discourse theory and of linguistics (sentence-level and text-level). We will also review research on writing instruction and look carefully at several models of classroom instruction and individual conferencing.

**LTWR 272. Research in Composing and Writing Discourse (4)**

This course will survey current research on composing and written discourse. It will also explore various problems and issues in designing research studies.

**LTWR 282. Writing States (4)**

This course will be a cross-genre writing workshop where graduate students in literature with some experience in creative writing can work with other writers and broaden their own practices. The seminar will read selected texts that spur specific writing assignments. Students who already have a new or ongoing writing project can workshop that as an alternative to doing assignments. The group will critique one another's efforts, each participant creating a twenty-page manuscript. Also at the end of the quarter the students will collectively agree on a project—a reading, performance, video, or publishing project that will document the workshop.

**LTWR 295. M.F.A. Thesis (1-12)**

Research for master's thesis. Offered for repeated registration. Open only to M.F.A. students. **Prerequisite:** department approval.

**LTWR 298. Directed Studies: Writing Course (1-12)**

This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. May be applied toward the guided research or graduate seminar in literature requirement of the M.F.A. program. Repeatable for credit. **Prerequisite:** department approval.

# The Making of the Modern World

OFFICE: Eleanor Roosevelt College, Administration Building  
<http://roosevelt.ucsd.edu/mmw/>

The Making of the Modern World (MMW) is an interdisciplinary, six-course program that provides a broad, global overview of the past from the dawn of human history and early societies (MMW 1) to social, environmental, economic, and political challenges facing the contemporary world (MMW 6). It is designed to encourage students to think historically, comparatively, and in an interdisciplinary manner about both the past and the present. MMW also provides instruction in university-level writing and analysis as students examine and interpret both primary and secondary source material. ERC students entering UC San Diego as freshmen are required to complete the full MMW sequence (six quarters), while transfer students, entering UCSD as upper classmen, are only required to take any three quarters, usually including the transfer specific course MMW 4T. Each course includes lectures, discussion sections, and writing assignments. Courses in the sequence may be taken for a letter grade only.

Students in the Making of the Modern World 2 and 3 (offered in winter and spring quarters respectively) fulfill their University of California composition requirement by receiving intensive instruction in university-level writing. Subject matter for writing instruction is drawn from or related to course material. Instruction in writing is provided in discussion sessions, which meet twice each week. Each of these two writing-intensive quarters carries six units of credit. Students must have satisfied the university's Entry Level Writing requirement in English composition before enrolling in the Making of the Modern World 2 or 3.

For further details on Eleanor Roosevelt College requirements, see "Eleanor Roosevelt College, General-Education Requirements."

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## TRADITIONS

### 1. Prehistory and the Birth of Civilization (4)

This quarter introduces students to what is known about early humans, including the evolution of the human body and the reconstruction of Paleolithic and Neolithic cultures. It examines contemporary hunting-and-gathering and tribal societies and illuminates the complexity of such cultures with respect to mythology and oral tradition, interpersonal relations, and ecological practices. The course will conclude with an analysis of the emergence of large agrarian societies and the earliest great settled communities and civilizations. Three hours of lecture, one hour of

discussion. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

### 2. The Great Classical Traditions (6)

An introduction to five major classical civilizations of the ancient world. Equal attention will be given to the ancient Near East, Greece, India, China, and the Roman Republic, all of which have left legacies to the present. The course covers the great early systems of religious and social thought, using an approach that combines history and social science. This course includes intensive instruction in writing expository prose. Three hours of lecture, two hours of writing and discussion sections. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

### 3. The Medieval Heritage (6)

A survey of the period from about 29 BCE to 1200 CE, this quarter concentrates on the development of China from the Han to the Sung dynasties, the growth and eventual dissolution of the Roman Empire, the development of Christianity, and the rise of Islam. This course includes intensive instruction in university-level writing. Three hours of lecture, two hours of writing and discussion sections. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)

## TRANSFORMATIONS

### 4. New Ideas and the Clash of Cultures (4)

An examination of the world from 1200 to 1750, the course focuses on the transition from medieval to modern by addressing philosophical, social, political, economic, and technological changes in Asia, Europe, and Islamic territories. Topics may include the Mongol invasions and their impact; the European Renaissance, Reformation, and Scientific Revolution; Islamic and Chinese empires; exploration and trade; and European expansion into the Americas. Three hours of lecture, one hour of discussion. **Prerequisites:** satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2 and/or MMW 3. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

### 4T. Understanding the Premodern World (Transfer Students Only) (4)

This course is designed specifically for transfer students and provides a background to major trends and issues addressed in previous MMW courses. MMW 4T also reviews and strengthens students' analytical, research, and writing skills. This course helps students adjust to the UCSD environment by preparing them for writing and research for other MMW courses and beyond. A research paper is due at the end of this term. Three hours of lecture, one hour of discussion. **Prerequisites:** transfer student and satisfaction of the UC Entry Level Writing Requirement. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

### 5. Revolution, Industry, and Empire (4)

A consideration of the great changes in European society from the late eighteenth century to the Russian Revolution, and their impact on the non-Western world. Topics include industrialization, the rise of nationalism and the nation-state, Western imperialism, and the colonial experience. Developments in non-Western countries during this period will be examined from their own internal perspective. Three hours of lecture, one hour of discussion. **Prerequisites:** satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2, MMW 3, and/or MMW 4. Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

### 6. Twentieth Century and Beyond (4)

The course begins with a consideration of the causes and consequences of World War I, and then looks at the post-war crisis of liberal values and institutions. It addresses the deepening of crisis in the thirties, especially evident in the emergence of ideological politics and extreme nationalism in the context of worldwide depression. This period of crisis provides the background for understanding World War II. Attention is then devoted to the cold war, the competition

between capitalism and communism, and the process of decolonization. The course ends with a discussion of the collapse of communism and the emerging world order (or disorder). Three hours of lecture, one hour of discussion. **Prerequisites:** satisfaction of the UC Entry Level Writing requirement; successful completion of MMW 2, MMW 3, MMW 4, and/or MMW 5. Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)

## THE MASTER OF BUSINESS ADMINISTRATION (M.B.A.)

### REQUIREMENTS FOR ADMISSION

Students interested in pursuing the M.B.A. degree program at UC San Diego's Rady School of Management (RSM) must have earned a B.A., or its equivalent, with training comparable to that provided by the University of California. A minimum scholastic average of 3.0 or better is required for course work completed in upper-division or prior graduate study. No specific undergraduate major or course work is required for admission, though preparation in quantitative methods (such as calculus and statistics) is strongly encouraged. Prior business course work is not necessary. Students who do not have adequate quantitative preparation at the time of admission will need to complete preparatory course work before matriculation.

The admissions committee assesses professional and organizational experience in terms of scope or level of responsibility, evidence of contribution or success, and evidence of career progression or of

growth in responsibility. The full-time M.B.A. does not require professional work experience; however, the school believes that some prior experience in organizations and teams is critical to effective learning in the M.B.A. program. Most students in the full-time M.B.A. class will have some post-graduate professional experience. FlexWeekend and FlexEvening M.B.A. students are working professionals; no specific number of years of work experience is required.

Applicants must submit two letters of recommendation from individuals who can attest to their professional and leadership skills and to their potential for business leadership.

Applicants are required to submit the Graduate Management Admission Test (GMAT) scores (verbal, quantitative, and analytical writing). (Indicate code #4836.) A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the paper/pencil or 250 on the computer-based TOEFL examination are strongly encouraged to enroll in an English-as-a-second-language program before beginning graduate work. The International English Language Testing System (IELTS) is also accepted with a minimum score of 7.

Interviews are required for admission to the M.B.A. program. Interviews are by invitation after review of the completed application.

The full-time M.B.A. is a two-year, full-time program. The FlexWeekend M.B.A. is twenty-four months, including two summers, and is scheduled on alternate weekends to accommodate the needs of working professionals. The FlexEvening M.B.A. is thirty months, including summers, and is scheduled two nights per week to accommodate the needs of working professionals.

The school's M.B.A. application is available online at the school's Web site.

### THE M.B.A. CURRICULUM (NINETY-TWO UNITS)

The M.B.A. curriculum (ninety-two units) is made up of a set of core disciplinary and skill-oriented courses with an emphasis on industry sectors, unstructured electives, and the Professional Seminar. The basic curriculum is the same for the full-time and Flex students.

#### Industry Sector Emphasis

The Rady School's M.B.A. is designed to allow students to develop depth in industry sectors of particular interest. Selection of an industry is not required. The program combines a solid core, an integrative course sequence focused on innovation, a strong elective curriculum, a commitment to leadership development, and an emphasis on cutting-edge industry sectors.

#### Core Curriculum

The core curriculum provides a comprehensive education in the fundamentals of business and

management and lays a strong foundation for further study.

#### Electives

Students may choose from electives in the full range of business and management disciplines, including accounting, finance, management, marketing, operations and information technology, and strategy. In addition, students may, with approval, take graduate courses offered elsewhere on campus. Prospective students are advised to consult the RSM Office of Admissions for a list of planned elective courses.

#### Professional Seminar

The Professional Seminar is a one-credit course offered each quarter. The seminar brings business leaders and experts to campus to speak to students and provides workshops focused on professional and leadership development and on personal and career effectiveness. The seminar may be taken multiple times for credit.

#### Internships

Full-time M.B.A. students are strongly encouraged to participate in internships during the summer between the two years of the academic program. Part-time internships are also available during the academic year. Internships are coordinated through M.B.A. Career Connections, the school's career center.

#### Executive Mentor Program

The Rady School's Executive Mentor program matches small groups of M.B.A. students with senior business executives. Mentors work directly with their groups, offering perspective, guidance, and expertise based on their deep experience in business. Mentors help guide M.B.A. students as they map out areas for personal and professional development, gain understanding of career progression and the skills and abilities required for successful leadership, and seek feedback about opportunities and areas of concern.

#### Career Services

M.B.A. Career Connections, the Rady School's career center, provides students with expertise, guidance, and resources to successfully manage their careers. Services and resources of M.B.A. Career Connections are available to all M.B.A. students, with some limitations for those sponsored by their employers. For full-time M.B.A. students, the center's personalized approach to career management begins before the student's first quarter and continues throughout the program. M.B.A. Career Connections actively works to identify opportunities for students and to enable students to build strong professional networks.

Career services include career assessment, individual career coaching, career fairs, workshops, employer presentations and panels, internship and career employment listings, and on-campus interviews. Specialized M.B.A. career workshops focus on resume writing, interviewing skills (including videotaped mock interviews), effective job search strategies, and job offer evaluation and negotiation.

## THE PH.D. IN MANAGEMENT

The Rady School offers a Ph.D. in management designed to prepare graduates for careers in academic research. Only students who intend to pursue a doctorate should apply; the department does not enroll students who seek a master's degree as a terminal degree.

Students with undergraduate preparation in various areas of the social and physical sciences may apply to the program. Students who elect to specialize in management science and finance are required to have additional mathematical knowledge, such as advanced calculus and statistics.

To be considered for admission candidates must

- Hold an undergraduate degree from an accredited college or university.

- Complete the UCSD Application for Admission with application fee.
- Submit test scores from the Graduate Management Admissions Test (GMAT) or Graduate Record Examination (GRE) taken within five years of the date of application. Official Test of English as a Foreign Language (TOEFL) exam scores are required of applicants whose primary language is not English or who graduate from a university at which the language of instruction was not English.
- Submit two copies of official transcripts from all colleges and universities attended.
- Submit three letters of recommendations that speak to the candidate's potential as a researcher.
- Submit a statement of purpose.
- Take "Mathematics for Economists" from the UCSD economics department prior to the start of the first fall quarter.

Note: At the discretion of the Admissions Committee, personal interviews may be required.

Program instruction includes formal core and domain/methodology course work, directed study in close consultation with faculty in preparation for a research career, and individual research required for the student's dissertation. The core curriculum consists of a mathematics review and two course sequences designed to ensure that students are educated in the fundamentals of economic and social sciences. Individual students may be required to take additional courses depending upon educational background. The domain/methodology course requirement helps the student acquire the deep domain knowledge and methodological skills required to conduct research in his or her areas of interest.

The main Ph.D. requirements are that a student completes the core and elective course work, qualifying examinations, original research papers and presentations, a dissertation acceptable to the doctoral committee, and a final oral examination on the dissertation. Rather than a separate qualifying exam on each topic, students will be required to pass graduate course exams with a cumulative GPA of 3.6. If a student does not have the 3.6 (A-) average, the topic qualifying exams will be required.

Ph.D. students must be in residence a total of six quarters, three of which must be spent in continuous

residence at the Rady School on the San Diego campus. A minimum of three quarters of residency must pass between the date of formal advancement to candidacy and the date of the final examination.

Nonresident students who have failed to establish California residency after the first year will be responsible for their own tuition.

Normative time (defined as that period of time in which students under normal circumstances are expected to complete their doctoral program) is four to five years, based on the student's background and progress. The maximum length of time that a student may remain a pre-candidate for the Ph.D. degree is three years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

A detailed description of the Ph.D. program is available on the Internet at <http://management.ucsd.edu/phd/> or by contacting the Ph.D. program coordinator at [radyphd@ucsd.edu](mailto:radyphd@ucsd.edu). Residence and other campuswide regulations are described in the graduate studies section of this catalog.

## THE ACCOUNTING MINOR

The Rady School of Management's accounting minor is designed to provide students a breadth of understanding of accounting theory, practices, and applications. The minor will appeal to students who envision careers in the accounting profession. Because of accounting's broad application, these careers would span across public accounting firms, corporate accounting departments, and governmental, nonprofit, and nongovernmental organizations. For many students, this will be their first step in achieving a Certificate in Public Accounting, C.P.A.

### ACCOUNTING MINOR REQUIREMENTS

The accounting minor will consist of seven courses that cover the key accounting principles, processes, and applications. Required courses include two lower-division courses and five upper-division courses:

#### Lower-Division Courses

**MGT 4. Financial Accounting or Econ. 4: Financial Accounting**

**MGT 5. Managerial Accounting**

#### Upper-Division Courses

**MGT 131A. Intermediate Accounting A**

**MGT 131B. Intermediate Accounting B**

**MGT 132. Auditing**

**MGT 135. Federal Taxation—Companies**

**MGT 136. Advanced Accounting**

In order to count toward the minor, all courses must be taken for a letter grade and students must earn a C- or better in each course. Lower-division transfer credits for courses that are clearly equivalent in scope and content to lower-division courses required for the accounting minor will be accepted from regionally accredited United States institutions and from foreign institutions recognized by the Rady School of Management.

## C.P.A. Accounting Requirements

A student who completes nine Rady accounting courses (the seven courses required for the minor plus two electives for a total of thirty-six quarter units) will have met the accounting portion of the educational requirement for their C.P.A.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### LOWER-DIVISION UNDERGRADUATE COURSES

#### **MGT 4. Financial Accounting (4)**

Recording, organizing and communicating financial information to business entities. Cross-listed with Econ. 4.

#### **MGT 5. Managerial Accounting (4)**

Internal accounting fundamentals, including cost behavior, cost application methods, overhead allocation methods, break-even analysis, budgeting, cost variance analysis, inventory management, and capital budgeting.

### UPPER-DIVISION UNDERGRADUATE COURSES

#### **MGT 103. Product Marketing and Management (4)**

Defining markets for products and services, segmenting these markets, and targeting critical customers within segments. Strategies to position products and services within segments. The critical role of pricing as well as market research, product management, promotion, selling, and customer support. **Prerequisite:** upper-division standing.

#### **MGT 110. Business: Innovative Enterprise Creation and Management (4)**

Introductory course covering new innovative venture fundamentals and life cycles. Emphasis on theory, history, and current paradigms in: business models, financial and marketing basics, growth strategies, communications, and establishing and working in teams. Offered in summer only. **Prerequisite:** upper-division standing or consent of instructor.

#### **MGT 111. Business: Introduction to Technology Business Start-up Process (4)**

Students learn to: recognize, screen, and test the feasibility of technology-based business opportunities; determine market demand and financial and other resource requirements, make mini-business plans for start-up, growth, and harvesting. Offered in summer only. **Prerequisite:** upper-division standing or consent of instructor.

#### **MGT 112. Global Business Strategy (4)**

Will examine the advantages and complications of the multinational organization with emphasis on translating marketing, financing, and operating plans in light of geographical, cultural, and legal differences across the globe. Will also cover organizational considerations for transglobal management. **Prerequisites:** MGT 103 and MGT 181.

#### **MGT 121A. Innovation to Market A (4)**

Consider new project concepts. Discern market needs, competitive environment, and determine "go to market" strategy. Research potential markets, customers, partners, and competitors. Consider price versus attributes, alternative distribution channels, gaining unfair advantage. Examine the need and structure of a start-up team. **Prerequisite:** upper-division standing.

#### **MGT 121B. Innovation to Market B (4)**

Build a business plan. Establish intellectual property rights. Provide financial projections and determine financing needs. Explore investment sourcing, business valuation, and harvesting opportunities. Determine operational plans and key employee requirements. **Prerequisite:** upper-division standing.

**MGT 131A. Intermediate Accounting A (4)**

Preparation and interpretation of accounting information under both FASB and IASB guidelines pertaining to revenue and expense recognition, receivables, and inventories. **Prerequisites:** upper-division standing and MGT 5 and either MGT 4 or Econ. 4.

**MGT 131B. Intermediate Accounting B (4)**

Preparation and interpretation of accounting information under both FASB and IASB guidelines pertaining to property plant and equipment, leases, intangible assets, investments, long-term debt, and stockholders' equity. **Prerequisite:** MGT 131A.

**MGT 132 Auditing (4)**

Theory and practice of the attest process; planning and implementing the audit of the financial statements and internal control over financial reporting to ensure compliance with applicable requirements. **Prerequisite:** MGT 131B.

**MGT 133. Advanced Cost Accounting (4)**

Covers cost accumulation and analysis, for both manufacturing cost components and service activities, budgeting and cost projections, cost variance analysis, relevant costs, and capital investment analysis. **Prerequisite:** MGT 131B.

**MGT 134. Federal Taxation—Individuals (4)**

Covers theory and practical application of federal income tax regulations for individuals pertaining to gross income, adjusted gross income, itemized deductions, business operations, passive activities, property transactions, deferred income recognition, and reporting standards. **Prerequisite:** MGT 132.

**MGT 135 Federal Taxation—Companies (4)**

Covers the theory and practical application of federal income tax regulations for corporations and other enterprises pertaining to formulations, annual operations, distributions, liquidations, reorganizations, affiliations, and reporting standards. **Prerequisite:** MGT 132.

**MGT 136. Advanced Accounting (4)**

Covers accounting topics related to consolidated financial statements, variable interest entities, foreign currency translation, segment reporting, and business combinations. **Prerequisite:** MGT 135.

**MGT 164. Organizational Leadership (4)**

Will study alternative organizational structures, their stakeholders and cultures and use in meeting strategic enterprise priorities. Insights into motivational factors, communications networks, alternative leadership styles, and change management. Attention given to what the organization measures, controls, and rewards. **Prerequisite:** upper-division standing.

**MGT 166. Business Ethics and Corporate Responsibility (4)**

Will cover ethical conduct issues for leaders from a wide array of organizations and industries including consideration of differences among global trading partners. The issues impacting corporate responsibility will be examined as will full-cycle cost analysis of products and services. **Prerequisite:** upper-division standing.

**MGT 172. Business Project Management (4)**

Addresses effective practices for management of business projects. Includes both project management processes—scheduling, milestone setting, resource allocation, budgeting, risk mitigation—and human capital management—communication, teamwork, leadership. Also considers requirements for effectively working across functional and organizational boundaries. **Prerequisite:** upper-division standing.

**MGT 174. Supply Chain and Operations Management (4)**

Will cover process design and optimization, inventory control and forecasting, vendor selection and management, operations, planning and management, global distribution techniques, material, labor, and overhead costing, and work-in-process tracking and valuation, quality control along with organizational issues. **Prerequisite:** upper-division standing.

**MGT 181. Enterprise Finance (4)**

Will cover debt and equity financing of the enterprise, the role of commercial banks, venture firms, and investment banks; along with enterprise valuation, cash flow management, capital expenditure decisions, return on investment, economic value add, and foreign currency translation. **Prerequisite:** upper-division standing.

**MGT 199. Directed Independent Study (4)**

Directed individual study or research by special arrangement and under supervision of a faculty member. **Prerequisites:** consent of instructor and departmental approval; approved Special Studies form.

**M.B.A. APPROVED COURSE LIST****MGT 201. Marketing Strategy (4)**

Addresses formulation and implementation of marketing strategy, based on an integrative view of competitive brand strategy over the product life cycle. Provides a framework for developing marketing strategies yielding sustainable competitive advantage based on customer, competitor, industry, and environmental analysis. **Prerequisite:** admission to degree program or consent of instructor.

**MGT 202. Research for Marketing Decisions (4)**

Methods and applications of qualitative and quantitative marketing research to solve substantive marketing problems. Emphasis on integrating problem formulation, research design, questionnaire construction, and sampling to yield the most valuable information, and on the proper use of statistical methods. **Prerequisite:** admission to degree program or consent of instructor.

**MGT 203. Consumer Behavior (4)**

The course identifies the factors that influence the selection and usage of products and services. Students will be introduced to problems/decisions that include evaluating behavior; understanding the consumers' decision process, and strategies to create desirable consumer behavior. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 204. Marketing Communications (4)**

This course differentiates decisions/principles considered when developing an overall communications and promotions strategy. Key decisions include the promotional mix, the design, implementation and evaluation of communications strategies, and the thinking required to develop a creative strategy. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 209. Topics in Marketing (2 or 4)**

Introduces advanced topics of special interest in marketing. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to the M.B.A. program or consent of faculty.

**MGT 210. Regulation and Innovation (4)**

Addresses the complex role of regulation in business innovation. Includes legal issues such as how to structure a business, whether to seek intellectual property protection, when and how to raise capital or formulate exit strategies, how to make employment decisions. **Prerequisite:** core finance course or consent of instructor.

**MGT 211. CEO, the Board of Directors and Corporate Governance (4)**

Provides an understanding of relationships among shareholders, managers, and boards. Focuses on the office of the chief executive officer and on the board of directors, including the roles and responsibilities of directors, and the legal, economic, managerial, and psychological issues they confront. **Prerequisite:** admission to M.B.A. program or consent of instructor.

**MGT 219. Topics in Corporate Governance (2 or 4)**

Introduces advanced topics of special interest in corporate governance. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 220. Opportunity and Business Model Analysis (4)**

Builds on core management courses and deals with identifying and assessing new technological and product opportunities. Assessment methods and frameworks will be introduced for technologies and opportunities. Various business models to profitably address market opportunities will also be discussed. **Prerequisite:** core finance course (MGT 408) or consent of instructor.

**MGT 221. Topics in Innovation (2 or 4)**

Advanced topics in business innovation, delivered by lecture, case discussion, and online instruction. **Prerequisite:** admission to M.B.A. program or consent of instructor.

**MGT 222. Creativity and Innovation (4)**

Focuses on fostering and maintaining creativity in entrepreneurial ventures and, more broadly, in general management. Reading materials, cases, classroom, and home exercises will help students understand and be able to use creativity in their own working lives. **Prerequisite:** admission to M.B.A. program or consent of instructor.

**MGT 229. Topics in International Business (2 or 4)**

Introduces advanced topics of special interest in international business (e.g., global supply chain and the rise of Mexican maquiladoras; entrepreneurship in Russia). May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 230. Strategic Cost Management (4)**

The course details the knowledge and analytical skills necessary to use accounting cost information as a basis for formulating and evaluating corporate strategies. Sessions focus on the principles of strategic positioning analysis, value chain analysis, and cost driver analysis. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 239. Topics in Accounting (2 or 4)**

Introduces advanced topics of special interest in accounting. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 240. Decision Analysis (4)**

Provides practical techniques to help structure decision problems and analyze them quantitatively. Techniques help thinking clearly about objectives, alternatives, consequences, and uncertainties, and enable logical judgments with other types of information. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 249. Topics in Decision Sciences (2 or 4)**

Introduces advanced topics of special interest in management and decision sciences. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to M.B.A. program or consent of faculty.

**MGT 250. Biotechnology Industry, Structure, and Strategy (4)**

Provides a business overview of the life-science industry, its major market segments, financial structure, and financing strategies. Develops an understanding of major industry issues and strategies, including business development, financing, partnering and alliances, emerging trends, ethical and policy issues. **Prerequisite:** completion of M.B.A. core curriculum or consent of instructor.

**MGT 251. Topics in Business Strategy (2 or 4)**

Advanced topics in business strategy. Instructional methods include face-to-face lecture sessions and case discussion. **Prerequisite:** admission to M.B.A. program or consent of instructor.

**MGT 259. Global Business Intensive (2)**

Introduces advanced topics in global business, with a regional emphasis. Instructional methods include lectures, case presentations, readings, and discussions. A substantial portion of learning outcomes will be met by visiting

businesses in another world region, observing operations, and interviewing executives. The visit to the foreign region will typically be one to two weeks and may occur outside the normal academic year. **Prerequisites:** admission to M.B.A. program (RS 76, RS 77) or consent of faculty.

#### **MGT 260. Negotiation (4)**

Examines methods of conflict resolution needed for effective management in a constantly changing business environment. Applies these tools to the broad spectrum of negotiation problems faced by the manager and professional. Includes simulations, role playing, and cases. **Prerequisite:** admission to M.B.A. program or consent of instructor.

#### **MGT 269. Topics in Organizational Behavior (2 or 4)**

Introduces advanced topics of special interest in management and organizational behavior. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to M.B.A. program or consent of faculty.

#### **MGT 270. Project Management (4)**

Provides management concepts and tools to enable the more effective design, planning, and control of projects. Includes both the qualitative and quantitative aspects of project management. **Prerequisite:** admission to M.B.A. program or consent of instructor.

#### **MGT 271. Technology Strategy (4)**

Outlines tools for formulating and evaluating technology strategy. Includes an introduction to the economics of technical change, models of technological evolution, and models of organizational dynamics and innovation. Provides an understanding of how technology firms gain and sustain competitive advantage. **Prerequisite:** admission to M.B.A. program or consent of instructor.

#### **MGT 272. New Product Development (4)**

Provides comprehensive analytical coverage of the new-product development process, focusing on the basic tools, methods, and organizational structures used in new-product development and management. **Prerequisite:** admission to M.B.A. program or consent of instructor.

#### **MGT 273. Supply Chain Management (4)**

Describes the systems approach to managing the entire flow of information, materials, and services from raw materials suppliers through factories and warehouses to the end customer, which is the key to productivity and competitiveness of manufacturing and service enterprises. **Prerequisite:** admission to M.B.A. program or consent of faculty.

#### **MGT 279. Topics in Operations and Technology (2 or 4)**

Introduces advanced topics of special interest in management and operations. May be repeated for a maximum of eight credits if the topics are substantially different. Instructional methods include face-to-face lecture, case presentations, assigned readings, and online group discussions. **Prerequisite:** admission to M.B.A. program or consent of faculty.

#### **MGT 280. New Venture Finance (4)**

Focuses on the financing of new ventures and technological innovation. Includes perspectives of both the entrepreneur and the investor, investigating the venture-capital process and methods of financial valuation useful in the venture-capital industry and for other technology investments. **Prerequisite:** core finance course or consent of instructor.

#### **MGT 281. Investments (4)**

Examines financial theory and empirical evidence useful for making investment decisions. Topics include: portfolio theory, equilibrium models of security prices, the empirical behavior of security prices, market efficiency, and fixed-income markets and behavioral finance. **Prerequisite:** completion of M.B.A. core curriculum or consent of instructor.

#### **MGT 282. Topics in Finance (2 or 4)**

Advanced topics in finance. Instructional methods include face-to-face lecture and case discussion, as well as online

instruction. **Prerequisite:** admission to M.B.A. program or consent of instructor.

#### **MGT 283. Financial Risk Management (4)**

Explains how to identify, measure, and analyze investment risks associated with interest rates, currency exchange, and equity markets, and acquire techniques to manage and control risk through the use of over-the-counter and exchange-traded derivatives. **Prerequisite:** admission to M.B.A. program or consent of the faculty.

#### **MGT 284. Mergers, Acquisitions, and Corporate Restructuring**

Explains the mergers and acquisitions process. Topics include: history, motivation, valuation, legal framework and tax issues of M&A, anti-takeover strategies, takeover tactics, leveraged buyouts, joint venture, and strategic alliances. **Prerequisites:** Enrollment in M.B.A. program and completion of MGT 408 Finance or with consent of faculty.

#### **MGT 291. Essentials for Business Practice (4)**

Introduction to the basic functional areas of business—marketing, accounting, finance, operations/supply chain, strategy—and how they overlap and intersect in the business environment. Techniques of business planning and the role of the business manager are also examined. **Prerequisite:** non-M.B.A. graduate students only; no prerequisite courses.

#### **MGT 292. Business Project Management (4)**

Addresses effective practices for management of business projects. Includes both project management—scheduling, milestone setting, resource allocation, budgeting, risk mitigation—and human capital management—communication, teamwork, leadership. Also considers requirements for effectively working across functional and organizational boundaries. **Prerequisite:** non-M.B.A. graduate students only; no prerequisite courses.

#### **MGT 297. Advanced Management Research Practicum (1)**

Internship with approved business or governmental agency, allowing student to pursue topics raised in the management core and elective courses. Internship credit may not be applied to fulfill specific course requirements or to credits required for graduation. May be repeated with instructor consent. **Prerequisites:** consent of instructor and department stamp required.

#### **MGT 299. Individual Directed Study (1–4)**

Individual study or research under the direction of a selected faculty member. **Prerequisite:** admission to M.B.A. program or consent of instructor.

#### **MGT 401. Professional Seminar (1)**

The Professional Seminar presents up-to-date research, professional skills development, and experts and business leaders as speakers. Topics may vary by term. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 403. Quantitative Analysis (4)**

Through lecture and online delivery, students will be introduced to key techniques for using data to make informed management decisions. Covers probability, statistics, decision analysis, and optimization techniques. Emphasizes managerial applications in such areas as operations management, marketing, and finance. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 404. Accounting (4)**

Through lecture and online delivery, students will be introduced to the basic concepts and methods used in financial statements. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 405. Managerial Economics (4)**

Through lecture and online delivery, this course will introduce students to the tools and concepts of microeconomics to analyze decision problems within technology driven firms through the coverage of microeconomic concepts relevant to managerial decision-making. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 406. Leadership Skills, Values, and Teamwork in Technology Firms (4)**

Through lecture and online delivery, introduces principles of effective teamwork and leadership and of strategic

managerial communication. Provides an introduction to case study and to ethical issues confronting managers in technology or science-driven firms. Develops managerial communication skills. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 407. Marketing (4)**

By taking an analytical approach to the study of marketing problems, this course provides an understanding of customers and competitors as a basis for developing, pricing, promoting, and distributing goods and services that satisfy customer and organizational objectives. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 408. Finance (4)**

Through lecture and online delivery, this course will focus on basic business financial concepts with particular attention to challenges of finance in start-up and small- and medium-sized enterprises. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 409. Organizational Strategy and Human Resource Management (4)**

After identifying characteristics common to technology driven firms, the implications of living in, managing, and leading such an organization are explored. Covers skills such as leadership of project teams and negotiations. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 410. Strategy (4)**

Through lecture and online delivery, this course explores the strategic management of technology-driven firms focusing on the analytical tools and techniques that support strategy formulation and the related managerial skills and decision processes that foster strategy implementation. **Prerequisite:** M.B.A. "stamp" or departmental stamp.

#### **MGT 412. Lab to Market: Opportunity and Business Model Analysis (4)**

An integrated examination of competencies needed to transform innovations into profitable market opportunities. Focus on processes to generate ideas, assess which are viable business opportunities, and evolve them into products and businesses. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 413. Operations, Information Systems, and Data Analysis (4)**

Through lecture and online delivery, students will be familiarized with the problems and issues confronting operations managers, and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 414A. Lab to Market Workshop I (4)**

Through lecture and online delivery, provides broad coverage of leading edge developments in technical and scientific research, with an eye to their potential applicability and value in business. Provides basis for project-based Lab to Market Workshop II. An IP grade will be awarded at the end of the quarter. Final grade will not be given until the completion of MGT 414B. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 414B. Lab to Market Workshop II (4)**

Project-based course, requiring identification and completion of major project assessing potential business value of emerging or potential technology or science. Students work individually or in teams. Periodic class meetings include presentation of interim and final reports. **Prerequisite:** M.B.A. "stamp" or departmental stamp.

#### **MGT 490A. Special Topics in Marketing (4)**

Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Communication and Information Technology Services (CITS) Management track. **Prerequisite:** M.B.A. student or departmental stamp.

#### **MGT 490B. Special Topics in Marketing (4)**

Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Management and the Life Sciences and Health Industries track. **Prerequisite:** M.B.A. student or departmental stamp.

**MGT 490C. Special Topics in Marketing (4)**

Through lecture and online delivery, a course at an advanced level on marketing topics. Will fulfill the required elective for students in Global Management and Policy track. **Prerequisite:** M.B.A. student or departmental stamp.

**PH.D. APPROVED COURSE LIST****MGT 208A. Introduction to Management Research A (4)**

This is the first course in a three-course sequence that introduces students to the various methodologies and research paradigms employed in management research. This course covers fundamentals of empirical research methods, including research design, reliability and validity of measurements, theory building and hypothesis testing, and some history of science. **Prerequisites:** admission to Management Ph.D. program; others consent of instructor.

**MGT 208B. Introduction to Management Research B (4)**

Sequence introduces students to various management research and methodological paradigms, and discusses theory development, building, and validation approaches. Students with additional need for mathematical/analytical training may be asked to take additional courses that prepare for the rigors of the program. **Prerequisite:** MGT 208A.

**MGT 208C. Introduction to Management Research C (4)**

Sequence introduces students to various management research and methodological paradigms, and discusses theory development, building, and validation approaches. Students with additional need for mathematical/analytical training may be asked to take additional courses that prepare for the rigors of the program. **Prerequisite:** MGT 208B.

**MGT 225. Behavioral Economics (4)**

Introduction to formal and predictive approaches to incorporating behavioral regularities into economic theory. Covers developments in generalizing conventional economic models to allow patterns of behavior that appear to be common but are paradoxical for conventional models based on assumptions of rationality. **Prerequisites:** MGT 208A-B-C, Econ. 200A-B-C.

**MGT 226. Theory of Industrial Organization and Business Strategy (4)**

This course provides the theoretical underpinnings of business strategy drawing from the body of literature in industrial organization. It will complement Economics department courses on industrial organization to provide depth in business strategy. **Prerequisites:** Econ. 200A-B-C.

**MGT 245. Theory of Technology and Operations Management (4)**

This course addresses classical operations management models in inventory and capacity planning and control leading up to models of supply chain and supplier relationship management. **Prerequisites:** MGT 208A-B-C, Econ. 200A-B-C.

**MGT 246. Research in Management and Technology Strategy (4)**

This course covers the management of technology and innovation emphasizing product family design, market segmentation, technology selection, and product management. **Prerequisites:** MGT 208A-B-C, Econ. 200A-B-C, MGT 245.

**MGT 247. Management and Marketing Science Models (4)**

Fundamentals of analytical models in operations and marketing including product positioning models, choice models, pricing models, and distribution models. Interactions between the supply and demand issues is stressed for managerial decision making about operations and marketing variables. **Prerequisite:** MGT 208C.

**MGT 255. Psychology and Decision Making (4)**

This course introduces students to theories and research in the field of individual judgment and decision making. Topics include judgment under uncertainty, the psychology of risk, choice, decision framing, prospect theory, mental accounting, context effects, task effects, and regret.

**Prerequisites:** admission to management Ph.D. program; others consent of instructor.

**MGT 256. Consumer Behavior Research (4)**

This course covers concepts and theories useful in understanding and researching the behaviors of consumers. Sample topics include attitude formation and change, social influence and persuasion, communication, consumer decision making and judgment, and consumer knowledge.

**Prerequisites:** admission to management Ph.D. program; others consent of instructor.

**MGT 257. Behavior in Organizations (4)**

Theories/research about behavior of employees/managers in organizations, as individuals and in groups. Topics include motivation, design of incentive/compensation systems, impact of goals/objectives, managerial judgment/decision making, evaluation judgments, managing reactions to change, and group decision making. **Prerequisites:** admission to management Ph.D. program; others consent of instructor.

**MGT 285. Financial Economics (4)**

This course covers the basic concepts and important models used in finance research. The subjects include expected utility theories, stochastic dominance, portfolio math, mean-variance theory, CAPM, aggregation theorems, arbitrages, and arbitrage pricing. **Prerequisites:** Econ. 220; admission to management Ph.D. program.

**MGT 286. Continuous-time Finance (4)**

This course covers most powerful tools in finance, i.e., which are finance models in continuous-time setting. The subjects include dynamic portfolio selection, derivative pricing, dynamic term structure, and dynamic equilibrium models. **Prerequisite:** MGT 285.

**MGT 287. Empirical Finance (4)**

This course covers econometric methods including the linear regression model, serial correlation, hypothesis testing, time series analysis, and estimation of discrete choice and simultaneous equation models. **Prerequisite:** MGT 285.

**MGT 288. Topics in Finance (4)**

This course will cover a range of areas that could include international asset pricing models, market microstructure, investment flows, topics in corporate finance, capital structure, and some recent advances in asset pricing such as consumption-based asset pricing, and habit models. **Prerequisite:** MGT 285.

**MGT 293A. Literature Review and Critique Paper (4)**

This course will require the student to identify and critique the research literature in a particular area identified during the summer of first year. The student will write a review paper that identifies opportunities for further research. **Prerequisites:** none.

**MGT 293B. Literature Review and Critique Presentation (4)**

In this course, the student will continue work on the literature review and prepare a presentation of the gaps and opportunities identified in the literature. **Prerequisite:** MGT 293A.

**MGT 293C. Original Research Paper (4)**

In this course, the student will work on identifying and developing an original research problem based on the gaps identified in the literature review courses. **Prerequisites:** MGT 291, MGT 292, MGT 293B.

**MGT 293D. Original Research Presentation (4)**

In this course, the student will continue work on the original research problem and prepare a presentation that will prepare for candidacy. **Prerequisites:** MGT 292; MGT 293C.

**MGT 294. Advanced Field Advising (4)**

Each student who has not advanced to candidacy by June of the third year must enroll in and complete MGT 294 during the fall, winter, and spring quarters of the fourth year. **Prerequisite:** admission to management Ph.D. program.

**MGT 295. Dissertation (4-12)**

This course is taken by students actively working on their dissertation after advancing to candidacy.

# Marine Biodiversity and Conservation

## PROGRAM DIRECTOR

Richard Norris, Ph.D., *Professor, Geosciences, SIO*

## ASSOCIATE DIRECTORS

Josh Graff Zivin, Ph.D., *Associate Professor of Economics, IRPS*

Theodore Groves, Ph.D., *Professor, Department of Economics*

Kathryn Mengerink, J.D., Ph.D., *Director, Ocean Program, Environmental Law Institute, Lecturer, SIO*

Stuart Sandin, Ph.D., *Assistant Researcher Marine Ecology, SIO*

Jennifer Smith, Ph.D., *Assistant Professor, SIO*

Dale Squires, Ph.D., *Adjunct Professor, Department of Economics, Senior Scientist, NOAA SWFSC*

OFFICE: La Jolla Village Professional Center  
8950 Villa La Jolla Drive, Suite A212  
(858) 534-9161

E-mail: [mbc@ucsd.edu](mailto:mbc@ucsd.edu)  
<http://mbc.ucsd.edu>

The master of advanced studies (M.A.S.) in Marine Biodiversity and Conservation is a unique program of study equipping its graduates with the knowledge they need to improve conservation of marine biodiversity in the world's most diverse and threatened eco-regions through development of local capacity and science-based management tools. Led by faculty of Scripps Institution of Oceanography (SIO), the program is designed to teach current and future professionals about marine ecosystems from the scientific, economic and policy perspectives, as well as provide important cultural and communications skills. The degree is most appropriate for marine resource managers in all regions of the world, practicing marine science professionals who wish to broaden their understanding and influence in this arena, science policy analysts and advocates, and natural scientists interested in obtaining a more firm grounding in the public policy and economics of marine conservation.

The M.A.S. in Marine Biodiversity and Conservation is a full-time, self-supporting degree program that most students complete in a twelve-month period, mid-June through mid-June each year. The UC San Diego graduate division confers the M.A.S. degree and the Center for Marine Biodiversity and Conservation at SIO is responsible for the academic management of the curriculum. UC San Diego Extension administers the program and provides student advising and career counseling services.

## ADMISSION

New students are admitted in the summer (June) of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of recommendation, and a current résumé or c.v. The GRE/GMAT is not required. Candidates must normally have a minimum of three years of relevant work experience. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadline is January 31 for the summer through spring academic program.

## PROGRAM OF STUDY

The full-time degree program is designed to be completed in one year. In the summer session, classes are scheduled five days a week, eight hours a day. In the fall, summer, and spring, students take courses that are held during regularly scheduled university class hours. Students are required to complete forty-eight units of courses, comprising forty core units, including a six-unit capstone project, and eight elective units.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### CORE CURRICULUM

#### **SIO 2955. Introduction to Marine Biodiversity and Conservation—Seminar (8)**

Lectures on ecological, economic, social, and legal issues related to marine biodiversity and case studies on socio-economic and legal issues. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the corequisite course. Students who have taken SIO 295 may not receive credit for SIO 2955. **Prerequisite:** consent of instructors. Corequisite: SIO 295LS and M.A.S. students only.

#### **SIO 295LS. Introduction to Marine Biodiversity and Conservation—Lab (8)**

Laboratory work on major biological taxa, field trips on biodiversity in situ, computer labs for informatic tools. Students are expected to attend field trips at sea and to various sites around San Diego County as part of the course. Students who have taken SIO 295L may not receive credit for SIO 295LS. **Prerequisite:** consent of instructor. Corequisite: SIO 2955 and M.A.S. students only.

#### **SIO 286. Marine Science, Economics, and Policy (4)**

This course investigates global issues in marine conservation and potential policy solutions. The approach is interdisciplinary, fast paced, and discussion oriented. Students will become acquainted with sufficient background in marine biology, ecology, marine and conservation economics, international law and policy as preparation for participation in discussion on real-world issues in marine conservation. Topics and instructors change each quarter. **Prerequisite:** graduate standing or consent of instructor.

MAS MBC students are required to take a minimum of four units of economics, and a minimum four units of a policy/communications course as approved by the MAS MBC program chair.

#### **MBC 296. Capstone Independent Study Project (6)**

Building on the knowledge and experience gained from the entire curriculum of the Master's in Marine Biodiversity and Conservation (M.A.S.-MBC) program, students will design

and present a specific marine conservation project. Limited to registered students in MAS-MBC program. **Prerequisite:** SIO 286. (F,W)

#### **MBC 258. Special Topics/Marine Biology—MBC M.A.S. Forum (1)**

Required course for M.A.S.-MBC students will focus on development of M.A.S. Capstone Projects and discussions covering marine conservation issues, including informal student presentations on political, economic, historical, educational, and natural science issues related to conservation and analysis of marine biodiversity. **Prerequisites:** SIO 2955 and SIO 295LS summer courses. Limited to registered students in M.A.S. Marine Biodiversity and Conservation program. (S/U grades only.) Jackson, R. Norris (F,W,S)

#### **Electives. Varies (8)**

Students enroll in eight elective units of course work relating to marine biodiversity and conservation issues that are approved by the MAS MBC program chair.

Shyni Varghese, Ph.D., Bioengineering  
Deli Wang, Ph.D., ECE

## ADJUNCT PROFESSOR

Martin Haas, Ph.D., Biology

Student Affairs: Engineering Building 2, Room 170  
Warren College

<http://matsci.ucsd.edu>

Materials science and engineering is concerned with the structure, properties, and applications of materials. The university-wide Materials Science and Engineering Program (MSE) at UC San Diego aims to provide fundamental knowledge for understanding of materials with the objective of predicting, modifying, and tailoring the properties of materials to yield enhanced material performance.

The foundations of materials science are the basic sciences of physics, chemistry, mathematics, and engineering principles. The interdisciplinary nature of the program at UCSD is ideally suited to address this requirement. The graduate students in the Materials Science and Engineering Program benefit from the unique and broad combination of faculty members and research facilities existing at UCSD, in the Departments of Mechanical and Aerospace Engineering, Electrical and Computer Engineering, NanoEngineering, Physics, Chemistry and Biochemistry, Bioengineering, Structural Engineering, Scripps Institution of Oceanography, as well as the School of Medicine and the Division of Biological Sciences. Students pursuing their M.S. or Ph.D. degree in the MSE Program can have any faculty member from these participating departments and schools in UCSD as their thesis advisor or co-advisor, based on matching of the interests and/or financial support arrangements.

Of particular emphasis within the program are: a study of microstructure-property relationships; design of electronic, superconducting, magnetic, and nano materials for electronic and high-tech device and energy applications; optical and chemical materials for telecom and display applications; biomaterials and medical device materials for biotech applications; experimental investigation and theoretical modeling of the mechanical behavior of materials; and advanced composite materials for civil structures.

## THE GRADUATE PROGRAM

The Materials Science and Engineering Program at UC San Diego is interdisciplinary, with participation of faculty members from several departments.

Faculty from the following departments participate in the Materials Science and Engineering Program: Mechanical and Aerospace Engineering, Physics, Scripps Institution of Oceanography, Structural Engineering, Electrical and Computer Engineering, NanoEngineering, Chemistry and Biochemistry, Bioengineering, the Division of Biological Sciences, the School of Medicine, and the School of Pharmacy. The director of the program, in consultation with the executive committee, carries out the governance of the program. The executive committee coordinates all affairs of the Materials Science and Engineering Program, including student admissions, degree requirements, graduate courses in materials science given by various participating departments, maintenance of laboratory instructional facilities, seminars, special courses, part-time instructors, and related matters.

Undergraduate preparation for pursuing the M.S. and Ph.D. in materials science and engineering at UCSD would normally include a degree in materials sciences, or in engineering or physical sciences, such as physics, chemistry, biology, geology, and related disciplines. Students are expected to have an adequate mathematics, physics, chemistry, and related basic sciences background, as well as acceptable GPA and GRE scores.

## MASTER'S DEGREE PROGRAM

The program offers the M.S. degree in materials science and engineering under both the Thesis Plan I and the Comprehensive Examination Plan II; see "Graduate Studies: Master's Degree." The requirements for the M.S. degree are as follows:

1. All students must complete a total of thirty-six units.
2. All students must complete four Mandatory Core Courses and at least two of the six Elective Core Courses:  
**Mandatory Core Courses**  
MS 201A-B-C, MS 227  
**Elective Core Courses** (required to select at least two to fulfill requirements)  
MS 205A, MS 251A-B, MS 252, MS 253, PHYS 152A (Physics 211A can replace 152A with advisor's permission.) See "Courses" for description.
3. Students may include up to twelve units of undergraduate courses. These include the one undergraduate core course, Physics 152A.
4. Enroll in MATS200, as required. See "Courses" for descriptions.
5. Remaining courses to complete the thirty-six unit requirement for the MS degree may be selected from an approved list of graduate courses with the consent of a faculty advisor.
6. Students either complete a thesis (Plan I) or pass a comprehensive examination (Plan II) as described in the "Graduate Studies" section of this catalog.
7. Students must meet all other requirements established by the university.

Students who transfer with some graduate credit or an M.S. from another institution will have their records reviewed by a faculty advisor, and an appropriate individual course of study may be approved.

## THE PH.D. PROGRAM

After completing the M.S. degree (or meeting equivalent requirements) and meeting the minimum standard on the comprehensive examination to be admitted to or continue in the Ph.D. program, a student must:

1. Meet all the university's residency and other requirements.
2. Successfully complete three advanced graduate courses (in addition to those required for the M.S. degree) which have been approved by the student's potential dissertation advisor.
3. Enroll in MATS200, as required. See "Courses" for descriptions.
4. Pass the Literature Review Examination. This requirement must be successfully completed within one year after passing the Comprehensive Examination.
5. Pass the Ph.D. Qualifying Examination (Senate Exam) to be advanced to Ph.D. candidacy.
6. Successfully complete and defend a dissertation which, in the opinion of the dissertation committee, contains original work that should lead to publication of at least one significant article in an appropriate refereed journal.

In principle, it should be possible to finish the M.S. degree in three quarters, and a Ph.D. in an additional three years. Ph.D. time limits are as follows: Pre-candidacy—four years; Support limit—six years; Total time limit—seven years; Normative time limit for a properly prepared B.S. student—five years. (See "Graduate Studies—Ph.D. Time Limits" for further explanation.)

## DEPARTMENTAL EXAMINATION

### THE COMPREHENSIVE EXAMINATION

The examination will consist of twelve questions, two from each of the six core courses. A passing grade is 60 percent for the Master's degree, and 70 percent for the Ph.D. The examination will not exceed six hours in duration. The examination is usually administered the second week in January, and a week after spring quarter finals week in June. Typically, students take the exam after one year of full-time enrollment. This exam may only be retaken once before the end of the second year of study.

### THE LITERATURE REVIEW EXAMINATION

The Literature Review Examination tests the student's ability to prepare and present a comprehensive overview of a topic based on existing journal literature. It should be a comprehensive discussion of the literature, scientific theory, problems or theoretical deficiencies, and possible areas of research in some area of materials science and engineering. The topic may be in the general area in which the student plans to pursue his or her thesis research, or it may be in an unrelated field. The topic must be approved by the three faculty member committee in advance of the seminar. The Literature Review Examination is not to be a discussion of the student's research project or their research proposal. A presentation which includes the student's own

work which has not been published will constitute a no pass grade. This exam must occur within one year of the student having passed the Comprehensive Examination.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## GRADUATE

### 200. Graduate Seminar (0)

Each graduate student in the Materials Science and Engineering Program is expected to attend a weekly seminar in materials science or related areas. M.S. students must enroll for three quarters, Ph.D. students for six quarters, as of fall 1995. (S/U grades only.) (F,W,S)

### 201A. Thermodynamics of Solids (4)

The thermodynamics and statistical mechanics of solids. Basic concepts; equilibrium properties of alloy systems; thermodynamic information from phase diagrams, surfaces, and interfaces; crystalline defects. **Prerequisite:** consent of instructor.

### 201B. Solid State Diffusion and Reaction Kinetics (4)

Thermally activated processes, Boltzmann factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick's laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. **Prerequisite:** consent of instructor.

### 201C. Phase Transformations (4)

Classification of phase transformations: displacive and reconstructive transformations: classical and nonclassical theories of nucleation: Becker-Doering, Volmer-Weber, lattice instabilities, spinodal decomposition. Growth theories: interface migration, stress effects, terrace-edge mechanisms, epitaxial growth, kinetics, and mechanics. Precipitation. Order-disorder transformations. Solidification. Amorphization. **Prerequisite:** consent of instructor. (Cross-listed with MAE 271C.)

### 205A. Imperfections in Solids (4)

Point, line, and planar defects in crystalline solids, including vacancies, self-interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements. **Prerequisite:** consent of instructor.

### 207. Surface Reactions, Corrosion, and Oxidation (4)

The nature of surfaces; nucleation and growth of surface films. Techniques for studies of surface structures and of surface films. Types of corrosion phenomena and mechanisms of corrosion. Methods of corrosion control and prevention. Mechanisms of oxidation. Control of oxidation by alloying and surface coatings. **Prerequisite:** MS 201A or consent of instructor.

### 211A. Mechanical Properties (4)

Review of basic concepts in mechanics of deformation; elasticity, plasticity, viscoelasticity, and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. **Prerequisite:** consent of instructor. (Cross-listed with MAE 229.)

### 213A. Dynamic Behavior of Materials I (4)

Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves; Rankine-Hugoniot relations. Method of characteristics, differential and difference form of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. **Prerequisite:** consent of instructor. (F) (Cross-listed with MAE 273A.)

### 225. Materials for Magnetic Recording (4)

Properties of magnetic materials utilized as magnetic recording media and heads: magnetic structure of oxides

and metals; fine particle magnetism; micromagnetic analysis; hysteresis and reversal mechanisms of hard materials; dynamic processes and domain patterns of soft materials; thermal fluctuations; multilayer phenomena; giant magnetoresistance. **Prerequisites:** undergraduate electromagnetism and solid state physics or consent of instructor. (Cross-listed with ECE 246A.)

### 227. Structure and Analysis of Solids (4)

Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/property comparisons, structure determination with X-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orbitals, bands versus bonds, free electron theory. **Prerequisite:** graduate student or consent of instructor.

### 236. Advanced Ceramic (4)

Topics include phase equilibria and crystallography, defects and thermodynamics (Kröger-Vink Notation), glass science, electrical and ionic transport behavior, Brouwer diagrams, powder synthesis and compaction, sintering theory and grain growth, mechanical, optical, magnetic, electrical properties, fuel cells. **Prerequisite:** consent of instructor.

### 240A. Scanning Electron Microscopy and X-Ray Microanalysis (4)

Electron optics, electron-beam-specimen interactions. Image formation in the SEM. The role of specimen and detector in contrast formation. Imaging strategies. X-ray spectral measurements. Qualitative and quantitative X-ray microanalysis. Materials specimen preparation. **Prerequisite:** consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via SEM.

### 240B. Transmission Electron Microscopy (4)

Operation and calibration of the TEM, lens defects and resolution, formation of images and diffraction patterns, electron diffraction theory (kinematic dynamical), indexing diffraction patterns, diffraction contrast. Quantitative analysis of crystal defects, phase contrast, and specimen preparation. **Prerequisite:** MS 240A or consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via TEM.

### 243. Modern Materials Analysis (4)

Analysis of the near surface of materials via ion, electron, and x-ray spectroscopies. Topics to be covered include particle solid interactions. Rutherford Backscattering, secondary ion mass spectroscopy, electron energy loss spectroscopy, particle induced x-ray emission, Auger electron spectroscopy, extended x-ray absorption fine structure and channeling. **Prerequisite:** consent of instructor. (Cross-listed with ECE 237.)

### 251A. Electronic and Photonic Properties of Materials (4)

The electronic and optical properties of metals, semiconductors, and insulators. The concept of the band structure. Electronic and lattice conductivity. Type I and Type II superconductivity. Optical engineering using photonic band gap crystals in one-, two-, and three-dimensions. Current research frontiers. **Prerequisites:** consent of the instructor. (Cross-listed with MAE 265A.)

### 251B. Magnetic Materials: Principles and Applications (4)

The basis of magnetism: classical and quantum mechanical points of view. Different kinds of magnetic materials. Magnetic phenomena including anisotropy, magnetostriction, domains, and magnetization dynamics. Current frontiers of nano-magnetics research including thin films and particles. Optical, data storage, and biomedical engineering applications of soft and hard magnetic materials. **Prerequisites:** consent of instructor. (Cross-listed with MAE 265B.)

### 252. Biomaterials (4)

This class will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility/degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic

materials will also be discussed. **Prerequisite:** consent of instructor. (Cross-listed with MAE 266.)

#### **253. Nanomaterials and Properties (4)**

This course discusses synthesis techniques, processing, microstructural control, and unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. **Prerequisite:** consent of instructor. (Cross-listed with MAE 267.)

#### **254. Frontier Micro-Electro-Mechanical Systems (MEMS) Materials and Devices (4)**

Fabrication of Micro-Electro Mechanical Systems (MEMS) by bulk and surface micromachining of single crystal, polycrystal, and amorphous silicon and other materials. Performance issues including electrostatic, magnetic, piezoelectric actuations, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. **Prerequisite:** consent of instructor. (Cross-listed with MAE 268.)

#### **255. Presentations, Inventions, and Patents (4)**

This course covers methodology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. **Prerequisite:** consent of instructor. (Cross-listed with MAE 269.)

#### **256. Energy Materials and Applications (4)**

This class will cover the fundamentals/engineering aspects of various energy materials based on metallic, ceramic, semiconductor; and chemical structures and their applications related to solar cells, fuel cells, batteries, fusion energy, and hydrogen storage will be discussed. (Cross-listed with MAE 278.) **Prerequisite:** consent of instructor/department stamp.

#### **257. Polymer Science and Engineering (4)**

Quantitative basic understanding of different branches of polymer science varying from polymer chemistry, characterization, thermodynamics, rheological properties, smart materials, self-assembly in biopolymers (natural) and synthetic polymers, and applications of polymers ranging from medicine to structure. (Cross-listed with BENG 242.) **Prerequisites:** graduate standing in bioengineering (BE 75) or materials science (MS 76) or consent of instructor.

#### **258. Medical Device Materials (4)**

In this interdisciplinary course, the nature, properties, and applications of various medical device materials will be discussed. The devices include coronary stents, catheters, drug delivery vehicles, and other implant, surgery, or therapeutics related devices. (Cross-listed with MAE 250.)

#### **295. Research Conference (2)**

Group discussion of research activities and progress of group members. **Prerequisite:** consent of instructor.

#### **296. Independent Study (4)**

**Prerequisite:** consent of instructor.

#### **299. Graduate Research (1-12)**

(S/U grades only.)

Subject to the approval of a faculty advisor, students may also choose from the following courses offered by departments participating in the Materials Science and Engineering Program (see the relevant pages of this catalog for descriptions):

### **MECHANICAL AND AEROSPACE ENGINEERING (MAE)**

#### **MAE 229A. Mechanical Properties (4)**

#### **MAE 231A. Foundations of Solid Mechanics (4)**

#### **MAE 231B. Elasticity (4)**

#### **MAE 232A-B-C. Finite Element Methods in Solid Mechanics (4-4-4)**

#### **MAE 233A. Fracture Mechanics (4)**

#### **MAE 233B. Micromechanics (4)**

#### **MAE 238. Stress Waves in Solids (4)**

#### **MAE 251. Structure and Analysis of Solids (4)**

### **ELECTRICAL AND COMPUTER ENGINEERING (ECE)**

#### **ECE 230A. Solid-State Electronics (4)**

#### **ECE 230B. Solid-State Electronics (4)**

#### **ECE 230C. Solid-State Electronics (4)**

#### **ECE 237. Modern Materials Analysis (4)**

#### **ECE 246A. Materials for Magnetic Recording (4)**

### **PHYSICS**

#### **Phys. 133/219. Condensed Matter/ Materials Science Laboratory (2)**

#### **Phys. 152B/232. Electronic Materials (4)**

#### **Phys. 211A. Solid-State Physics (5)**

#### **Phys. 211B. Solid-State Physics (4)**

## PROFESSORS

Ian S. Abramson, Ph.D., *Vice Chair*  
Jim Agler, Ph.D.  
Randolph E. Bank, Ph.D.  
M. Salah Baouendi, Ph.D.  
Edward A. Bender, Ph.D., *Emeritus*  
James R. Bunch, Ph.D., *Emeritus*  
Samuel R. Buss, Ph.D.  
Bennett Chow, Ph.D.  
Bruce K. Driver, Ph.D.  
Peter F. Ebenfelt, Ph.D., *Chair*  
Thomas J. Enright, Ph.D.  
John W. Evans, M.D., Ph.D., *Emeritus*  
Ronald J. Evans, Ph.D., *Vice Chair*  
Jay P. Fillmore, Ph.D., *Emeritus*  
Carl H. FitzGerald, Ph.D., *Emeritus*  
Patrick J. Fitzsimmons, Ph.D.  
Theodore T. Frankel, Ph.D., *Emeritus*  
Michael Freedman, Ph.D., *Emeritus*  
Wee Teck Gan, Ph.D.  
Adriano M. Garsia, Ph.D.  
Ronald K. Getoor, Ph.D., *Emeritus*  
Philip E. Gill, Ph.D.  
Fan Chung Graham, Ph.D., *Akamai Professor of Internet Mathematics*  
Mark W. Gross, Ph.D.  
Leonard R. Haff, Ph.D., *Emeritus*  
Hubert Halkin, Ph.D., *Emeritus*  
Guershon Harel, Ph.D.  
J. William Helton, Ph.D.  
Michael J. Holst, Ph.D.  
James P. Lin, Ph.D.  
Hans Lindblad, Ph.D.  
Alfred B. Manaster, Ph.D., *Emeritus*  
David A. Meyer, Ph.D.  
Lei Ni, Ph.D.  
Kate Okikiolu, Ph.D.  
John O'Quigley, Ph.D., *Emeritus*  
Dimitris Politis, Ph.D.  
Jeffrey M. Rabin, Ph.D., *Academic Senate Distinguished Teaching Award*  
Jeffrey B. Remmel, Ph.D., *Associate Dean, Division of Physical Sciences*  
Yosef Rinott, Ph.D., *Emeritus*  
Burton Rodin, Ph.D., *Emeritus*  
Helmut Rohrl, Ph.D., *Emeritus*  
Murray Rosenblatt, Ph.D., *Emeritus*  
Linda P. Rothschild, Ph.D.  
Michael J. Sharpe, Ph.D., *Emeritus*  
Lance W. Small, Ph.D., *Emeritus*  
Donald R. Smith, Ph.D., *Emeritus*  
Harold M. Stark, Ph.D.  
Audrey A. Terras, Ph.D.  
Adrian R. Wadsworth, Ph.D., *Emeritus*  
Nolan R. Wallach, Ph.D.  
Hans G. Wenzl, Ph.D.  
Ruth J. Williams, Ph.D.  
Daniel E. Wulbert, Ph.D.  
Efim Zelmanov, Ph.D., *Rita L. Atkinson Professor of Mathematics*

## ASSOCIATE PROFESSORS

Jozsef Balog, Ph.D.  
Li-Tien Cheng, Ph.D.  
Kiran Kedlaya, Ph.D.  
Nitya Kitchloo, Ph.D.  
Melvin Leok, Ph.D.  
Bo Li, Ph.D.  
Cristian Popescu, Ph.D.  
Justin D. Roberts, Ph.D.  
Daniel S. Rogalski, Ph.D.  
Jason Schweinsberg, Ph.D.  
Jacob K. Sterbenz, Ph.D.  
Glenn Tesler, Ph.D.  
Jacques Verstraete, Ph.D.  
John J. Wavrik, Ph.D., *Emeritus*  
Ben Weinkove, Ph.D.  
Ronghui Xu, Ph.D.

## ASSISTANT PROFESSORS

Ery Arias-Castro, Ph.D.  
Alina Bucur, Ph.D.  
Todd Kemp, Ph.D.  
Jiawang Nie, Ph.D.  
Dragos Oprea, Ph.D.

## SENIOR LECTURERS WITH SECURITY OF EMPLOYMENT

John D. Eggers, Ph.D., *Academic Senate Distinguished Teaching Award*  
Frank B. Thiess, Ph.D., *Emeritus*

## LECTURERS WITH SECURITY OF EMPLOYMENT

Norman A. Shenk, Ph.D., *Emeritus*  
Laura J. Stevens, Ph.D.

---

## THE UNDERGRADUATE PROGRAM

---

The mathematics department offers a wide range of courses in pure and applied mathematics for its majors and for students in other disciplines. The department offers six majors leading to the B.S. degree: mathematics, applied mathematics, mathematics-computer science, joint major in mathematics and economics, mathematics-scientific computation, and probability and statistics, and two leading to the B.A. degree: mathematics-applied science, and mathematics-secondary education. In addition, students can minor in mathematics or mathematics education. The department also has an Honors Program for exceptional students in any of the eight majors. See the sections on major programs and the other areas mentioned above as well as the course descriptions at the end of this section for more specific information about program requirements and the courses offered by the department. You may visit our Web site, <http://math.ucsd.edu>, for more information, including course Web pages, career advising, and research interests of our faculty.

## FIRST-YEAR COURSES

Entering students must take the Mathematics Placement Exam (MPE) prior to orientation unless they have an appropriate score on an AP calculus

exam, an appropriate score (600 for Math. 10A; 650 for Math. 20A) on the SAT II Math Level 2 exam, an appropriate score on the International Baccalaureate Higher Level Mathematics Exam, credit by means of a foreign exam (e.g. GCE), or transferable college credit in calculus. The purpose of the MPE is to recommend placement for entering students in Math. 3C, 4C, 10A, or 20A. For more information about the MPE (test dates, test description, sample exams, online practice tests), see the Mathematics Testing and Placement Web site, <http://mathtesting.ucsd.edu>.

Prerequisites for Math. 3C, 4C, 10A-B-C, 20A-B-C-D-E-F, and 31AH-BH-CH are enforced through [TritonLink](#). Students need to ensure that test scores and transferable college credit are submitted to the Registrar prior to enrollment through WebReg.

Math. 3C is the department's preparatory course for the Math. 10 sequence, providing a review of algebraic skills, facility in graphing, and working with exponential and logarithmic functions.

Math. 4C is the department's preparatory course for the Math. 20 sequence, providing a brief review of college algebra followed by an introduction to trigonometry and a more advanced treatment of graphing and functions.

Math. 10A-B-C is one of three calculus sequences. The students in this sequence have completed a minimum of two years of high school mathematics. This sequence is intended for majors in liberal arts and the social and life sciences. It fulfills the mathematics requirements of Revelle College and the option of the general-education requirements of Muir College. Completion of two quarters fulfills the requirement of Marshall College and the option of Warren College and Eleanor Roosevelt College.

The second first-year calculus sequence, Math. 20A-B-C, is taken mainly by students who have completed four years of high school mathematics or have taken a college level precalculus course such as Math. 4C. This sequence fulfills all college level requirements met by Math. 10A-B-C and is required of many majors, including chemistry and biochemistry, bioengineering, cognitive science, economics, mathematics, molecular biology, psychology, MAE, CSE, ECE, and physics. Students with adequate backgrounds in mathematics are strongly encouraged to take Math. 20 since it provides the foundation for Math. 20D-E-F which is required for some science and engineering majors. **Note:** As of summer 2003, Math. 21C and 21D have been renumbered to Math. 20C and 20D.

Certain transfers between the Math. 10 and Math. 20 sequences are possible, but such transfers should be carefully discussed with an advisor. Able students who begin the Math. 10 sequence and who wish to transfer to the Math. 20 sequence, may follow one of three paths:

1. Follow Math. 10A with Math. 20A, with two units of credit given for Math. 20A. This option is not available if the student has credit for Math. 10B or Math. 10C.
2. Follow Math. 10B with Math. 20B, receiving two units of credit for Math. 20B.
3. Follow Math. 10C with Math. 20B, receiving two units of credit for Math. 20B and two units of credit for Math. 20C.

Credit will not be given for courses taken simultaneously from the Math. 10 and the Math. 20 sequence.

The department also offers a three-quarter Honors Calculus sequence in Multivariable and Vector Calculus and Linear Algebra. This sequence, Math. 31AH-BH-CH, is designed for well-prepared students who have both a strong aptitude and a deep interest in mathematics and who wish to undertake a challenging series of courses. The sequence has a prerequisite of a score of 5 on the AP Calculus BC exam. These demanding, proof-based courses cover the material in Math. 20F, 20C, and 20E respectively—and entering students with a 5 on the Calculus BC exam should consider starting in the Honors sequence if their major (or minor) program requires them to take, at least, Math. 20A-B-C and 20F. Math. majors who complete the entire three-quarter honors sequence will have also satisfied the requirement of Math. 109 for their major program. They would be able to replace Math. 109 with any four-unit upper-division mathematics elective course.

## MAJOR PROGRAMS

The department offers six different majors leading to the B.S. degree: (1) mathematics, (2) applied mathematics, (3) mathematics-computer science, (4) joint major in mathematics and economics, (5) mathematics-scientific computation, and (6) probability and statistics, and two leading to the B.A. degree: (1) mathematics-applied science, and (2) mathematics-secondary education. The specific emphases and course requirements for these majors are described in the following sections. All majors must obtain a minimum 2.0 grade-point average in the upper-division courses used to satisfy the major requirements. Further, the student must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. Any mathematics course numbered 100–194 may be used as an upper-division elective. (**Note:** 195, 196, 197, 198, 199, and 199H cannot be used towards any mathematics major.) All courses used to fulfill the major must be taken for a letter grade. No more than three upper-division courses taken externally from UCSD can be counted towards any major. Special exceptions may be considered via petition.

It is strongly recommended that all mathematics majors review their programs at least annually with a departmental advisor, and that they consult with the Advising Office in AP&M 6016 before making any changes to their programs. Current course offering information for the entire academic year is maintained on the department's Web page at <http://www.math.ucsd.edu>. Special announcements are also e-mailed to all majors.

Students who plan to go on to complete a Ph.D. in mathematics should be advised that only the best and most motivated students are admitted. Many graduate schools expect that students will have completed a full sequence of abstract algebra (Math. 100A-B-C) as well as a full sequence of analysis (Math. 140A-B-C). The advanced Graduate Record Exam (GRE) often has questions that pertain to material covered in the last quarter of analysis or algebra. In addition, it is advisable that students consider Summer Research Experiences for Undergraduates.

This is a program funded by the National Science Foundation to introduce students to math research while they are still undergraduates. In their senior year or earlier, students should consider taking some graduate courses so that they are exposed to material taught at a higher level. In their junior year, students should begin to think of obtaining letters of recommendation from professors who are familiar with their abilities.

**Note:** Math. 20D, E, and F do not need to be taken in order. Math majors are strongly advised to take 20F as early as possible after successfully completing 20C.

## EDUCATION ABROAD

Students may be able to participate in the UC Education Abroad Program (EAP) and UC San Diego's Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in this option should contact the Programs Abroad Office in the International Center and discuss their plans with the mathematics advising officer before going abroad.

The department must approve courses taken abroad. Information on EAP/OAP can be found in the "[Education Abroad Program](#)" section of the *UC San Diego General Catalog* and the Web site <http://pao.ucsd.edu>.

## MAJOR IN MATHEMATICS

The upper-division curriculum provides programs for mathematics majors as well as courses for students who will use mathematics as a tool in the biological, physical and behavioral sciences, and the humanities.

### Required Courses

#### Lower-Division

1. One of the following sequences:
  - a. Calculus: Math. 20A-B-C-D-E-F
  - b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D

#### Upper-Division

2. Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
3. One of the following sequences:
  - a. Foundations of Analysis: Math. 140A-B
  - b. Advanced Calculus: Math. 142A-B and Math. 120A (Math. 140A-B-C recommended for graduate school)
4. One of the following sequences:
  - a. Modern Algebra: Math. 100A-B
  - b. Modern Applied Algebra: Math. 103A-B and Math. 102 (Math. 100A-B-C recommended for graduate school)
5. Upper-division electives to complete thirteen four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above.)

As with all departmental requirements, more advanced courses on the same material may be substituted with written approval from the departmental advisor.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year. Either Math. 140A-B or 100A-B should be taken during the junior year.

## MAJOR IN APPLIED MATHEMATICS

A major in applied mathematics is also offered. The program is intended for students planning to work on the interface between mathematics and other fields.

### Required Courses

#### Lower-Division

1. One of the following sequences:
  - a. Calculus: Math. 20A-B-C-D-E-F
  - b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Programming (one of the following):
  - a. SE 8A-AL-B (Intro to Computer Sci: Java)
  - b. CSE 11 (Intro to Computer Sci: Java, Accelerated Pace)
  - c. MAE 9 (C/C++ Programming)

#### Upper-Division

3. Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
4. Linear Algebra: Math. 102 or Math. 170A
5. Advanced Calculus: Math. 140A-B or Math. 142A-B
6. One of the following sequences:
  - a. Math. 180A-B-C-181A
  - b. Math. 180A-181A and any two from Math. 181B-C-E
  - c. (Math. 183 or Math. 180A-181A) and any three from Math. 170A-B-C-175-179
7. One additional sequence which may be chosen from the list (#6) above or the following list: Math. 110A-120A-130A, 110A-B, 120A-B, 152-184A, 154-184A, 155A-B, 171A-B, 193A-B.
8. Upper-division electives to complete at least thirteen four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above) except
  - a. Up to twelve units may be taken from outside the department in an approved applied mathematical area. A petition specifying the courses to be used must be approved by an applied mathematics advisor. No such units may also be used for a minor or program of concentration.
  - b. MAE 107, Econ. 120A-B-C, cannot be counted toward the thirteen required courses.

To be prepared for a strong major curriculum, students should complete the last three quarters of

the 20 sequence and Math. 109 before the end of their sophomore year.

## MAJOR IN MATHEMATICS–SCIENTIFIC COMPUTATION

This major is designed for students with a substantial interest in scientific computation. The program is a specialized applied mathematics program with a concentration in computer solutions of scientific problems.

### Required Courses

#### Lower-Division

1. One of the following sequences:
  - a. Calculus: Math. 20A-B-C-D-E-F
  - b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Computer Programming: MAE 9 and [CSE 8A-AL-B or CSE 11]
3. Basic Computation: Math. 15A (or CSE 20) and Math. 15B (or CSE 21) and CSE 12

#### Upper-Division

4. Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
5. Linear Algebra: Math. 102
6. Probability and Statistics: Math. 183 or 180A-181A (Note: No credit for Math. 183 if Math. 180A or 181A taken prior or concurrently.)
7. Analysis: Math. 140A-B or 142A-B
8. Numerical Analysis: Math. 170A-B-C or Math. 170A-B/Math. 175
9. Optimization: Math. 171A-B
10. Scientific Computing: Math. 179
11. Additional elective upper-division courses to total 15 chosen from the following: Math. 107A-B, 110A-B, 120A-B, 130A-B, 131, 152, 155A-B, 170C, or 175.

At least 15 upper-division mathematics courses are required for the major, except

- a. Up to 3 upper-division courses may be taken outside the department in an approved scientific computation area in the sciences or engineering. A petition specifying the courses to be used must be approved by a mathematics-scientific computation advisor.
- b. MAE 107, Econ. 120A-B-C, Math. 195, 196, 197, 199, and 199H cannot be counted toward the 13 four-unit upper-division courses.

## MAJOR IN MATHEMATICS–PROBABILITY AND STATISTICS

### Effective Winter 2007

This major is designed for students with a substantial interest in probability theory and statistics. It

is useful preparation for many fields of employment as well as graduate school.

### Required Courses

#### Lower-Division

1. One of the following sequences:
  - a. Calculus: Math. 20A-B-C-D-E-F
  - b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Programming (one of the following):
  1. CSE 8A-AL-B (Java)
  2. CSE 11 (Java: Accelerated Pace)
  3. MAE 9 (C/C++)

#### Upper-Division

3. Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
4. Linear Algebra: Math. 102 or Math. 170A
5. Analysis/Advanced Calculus: Math. 140A-B or Math. 142A-B
6. Numerical Methods: Math. 174 or Math. 170A-B
7. Probability: Math. 180A-B-C
8. Mathematical Statistics: Math. 181A-B
9. One of the following: Math. 181C, 181E, 193A, 193B, 194
10. Computational Statistics: Math. 185
11. Upper-division electives to complete 15 upper-division courses from the following list: Math. 100A-B-C, 103A-B, 110A-B, 120A-B, 130A, 131, 140C, 152, 155A-B, 170A-B-C, 171A-B, 175, 176, 179, 181C, 181E, 184A, 187, 188, 193A-B, 194.

At least 15 four-unit upper-division mathematics courses are required, except

- a. Two upper-division electives may be outside the department in an approved applied mathematical area. A petition approved by a math advisor is required.
- b. MAE 107, Econ. 120A-B-C, Math. 195-199 cannot be counted toward the upper-division requirements.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year.

## MAJOR IN MATHEMATICS–APPLIED SCIENCE

This major is designed for students with a substantial interest in mathematics and its applications to a particular field such as physics, biology, chemistry, biochemistry, cognitive science, computer science, economics, management science, or engineering.

## Required Courses

### Lower-Division

1. One of the following sequences:
  - a. Calculus: Math. 20A-B-C-D-E-F
  - b. Honors Calculus: Math. 31AH-BH-CH, Math. 20D
2. Programming (one of the following is required):
  - a. CSE 8A-AL-B (Intro to Computer Sci: Java)
  - b. CSE 11 (Intro to Computer Sci: Java, Accelerated Pace)
  - c. MAE 9 (C/C++ Programming)

### Upper-Division Mathematics Requirements

3. Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
4. Linear Algebra: Math. 102 or Math. 170A
5. Analysis: Math. 140A-B or 142A-B
6. Any two-quarter, upper-division math sequence
7. Upper-division electives to complete at least seven four-unit courses, chosen from any mathematics course numbered between 100 and 194 (including those taken from the requirements listed above.)

### Upper-Division Applied Science Requirements

8. Seven upper-division courses selected from one or two other departments (these cannot be from mathematics). At least three of these seven upper-division courses must require calculus as a prerequisite.

Students must submit an individual plan for approval in advance by a mathematics department advisor, and all subsequent changes to the plan must be approved by a mathematics department advisor.

## MAJOR IN MATHEMATICS–COMPUTER SCIENCE

Graduates of this program will be mathematically oriented computer scientists who have specialized in the mathematical aspects and foundations of computer science or in the computer applications of mathematics.

As of fall 2000, a mathematics–computer science major is not allowed to also minor in computer science in the Computer Science and Engineering department.

The detailed curriculum is given in the list below:

## MATHEMATICS–COMPUTER SCIENCE PRE-MAJOR

In October 2001, the Academic Senate approved a minimum GPA requirement of 2.5 in the lower-division mathematics courses required for the mathematics–computer science major. The 2.5 minimum GPA in the lower-division math courses

reflects minimal preparation for the upper-division courses required for the major.

Therefore, students entering UCSD as first-year students for the fall 2002 quarter and later and students entering as transfer students for the fall 2003 quarter and later will be held to this requirement. Applications from students entering UCSD on or after the effective dates above will be held until all lower-division math courses for the major are completed and the minimum GPA in those courses of 2.5 can be verified. Students meeting the 2.5 minimum GPA requirement will be accepted into the mathematics-computer science major.

## Required Courses

### Lower-Division

- One of the following sequences:
  - Calculus: Math. 20A-B-C-D-E-F
  - Honors Calculus: Math. 31AH-BH-CH, Math. 20D
- Intro to Computer Science—CSE 8A-AL-B  
Introduction to Computer Science: Java, or  
CSE 11 Introduction to Computer Science: Java (Accelerated)
- Basic Data Structures and Object-oriented Programming: CSE 12
- Computer Organization and Systems Programming: CSE 30 (Note: CSE 30 requires CSE 20 or Math. 15A as a prerequisite.)

### Upper-Division:

- Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
- Modern Applied Algebra: Math. 103A-B or  
Modern Algebra: Math. 100A-B
- Theory of Computability: Math. 166 (or CSE 105)
- Intro to Probability: Math. 180A or 183
- Combinatorics: Math. 184A
- Computer Implementations of Data Structures: Math. 176 (or CSE 100)
- Design & Analysis of Algorithms: Math. 188 (or CSE 101)
- Eight units from: Math. 170A-B-C, 174, 175, 179 (Note duplication of credit between Math. 174 and 170A-B-C)
- Eight units from: Math. 107A-B, 152, 154, 155A-B, 168A-B, 187, CSE 120-121, 130, 131A-B, 140-140L, 141-141L, 167
- Eight additional units from: any course in list #12 or #13 above or Math. 102, 110A-B, 111A-B, 120A-B, 130A-B, 131, 140A-B, 142A-B, 150A-B, 181A-B-C

## JOINT MAJOR IN MATHEMATICS AND ECONOMICS

Majors in mathematics and the natural sciences often feel the need for a more formal introduction to

issues involving business applications of science and mathematics. Extending their studies into economics provides this application and can provide a bridge to successful careers or advanced study. Majors in economics generally recognize the importance of mathematics to their discipline. Undergraduate students who plan to pursue doctoral study in economics or business need the more advanced mathematics training prescribed in this major.

This major is considered to be excellent preparation for Ph.D. study in economics and business administration, as well as for graduate studies for professional management degrees, including the MBA. The major provides a formal framework making it easier to combine study in the two fields.

Course requirements of the Joint Major in Mathematics and Economics consist principally of the required courses of the pure mathematics major and the economics/management science major.

## Required Courses

### Lower-Division

- One of the following sequences:
  - Calculus: Math. 20A-B-C-D-F
  - Honors Calculus: Math. 31AH-BH, Math. 20D
- Intro. to Economics: Econ. 1 and 3

### Upper-Division

Fifteen upper-division courses in mathematics and economics, with a minimum of seven courses in each department, chosen from the courses listed below (prerequisites are strictly enforced):

- Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109.)
- One of the following: Applied Linear Algebra: Math. 102 Numerical Linear Algebra: Math. 170A Modern Algebra: Math. 100A-B
- One of the following: Foundations of Analysis: Math. 140A Advanced Calculus: Math. 142A
- One of the following: Ordinary Differential Equations: Math. 130A, Foundations of Analysis: Math. 140B Advanced Calculus: Math. 142B
- Microeconomics: Econ. 100A-B-C
- Econometrics: Econ. 120A-B-C or Math. 180A and Econ. 120B-C or Probability: Math. 180A, 181A and Econ. 120C
- One of the following:
  - Macroeconomics: Econ. 110A-B
  - Mathematical Programming: Numerical Optimization: Math. 171A-Bor two courses from the following:
  - Decisions Under Uncertainty: Econ. 171
  - Introduction to Operations Research: Econ. 172A-B, (Note: 172A is a prerequisite for 172B-C.)

Other courses which are strongly recommended are Math. 130B, 131, 181B, 193A-B and 194 and Econ. 109, 113, 175, and 178.

## MAJOR IN MATHEMATICS—SECONDARY EDUCATION

This major offers excellent preparation for teaching mathematics in secondary schools. Students interested in earning a California teaching credential from UCSD should contact the Education Studies Program (EDS) for information regarding prerequisites and requirements. It is recommended you contact EDS as early as possible.

### Lower-Division Requirements

- One of the following sequences:
  - Calculus: Math. 20A-B-C-D-E-F
  - Honors Calculus: Math. 31AH-BH-CH, Math. 20DRecommended:
- One of the following: Introduction to Computer Science: Java: CSE 8A-AL-B, C/C++ Programming: MAE 9

### Upper-Division Requirements

- Mathematical Reasoning: Math. 109 (**Note:** Students completing Math. 31CH may substitute a four-unit upper-division mathematics elective for Math. 109)
- Number Theory: Math. 104A
- History of Mathematics: Math. 163
- Practicum in Learning: EDS 129A-B-C (can use EDS 136 and EDS 138 instead of EDS 129A)
- One of the following: Computer Algebra: Math. 107A, Computer Graphics: Math. 155A, Numerical Linear Algebra: Math. 170A, Intro. to Cryptography: Math. 187
- One of the following: Intro. to Probability: Math. 180A, Statistical Methods: Math. 183
- One of the following: Differential Geometry: Math. 150A, Topics in Geometry: Math 151, Geometry for Secondary Teachers: Math. 153, Intro. to Topology: Math. 190
- One of the Following: Modern Algebra: Math. 100A, Applied Linear Algebra: Math. 102, Modern Applied Algebra: Math. 103A
- One of the following: Foundations of Analysis: Math. 140A, Advanced Calculus: Math. 142A
- Upper-division courses must total thirteen courses. Upper-division courses must include at least one two-quarter sequence from the following list:  
100A-B; 103A-B, 103A-102; 104A-B; 110A-B; 110A-120A; 110A-130A; 110A-131; 120A-B; 140A-B; 142A-B; 150A-B; 152-184A; 154-184A; 155A-B; 160A-B; 170A-B; 170A-175; 170A-171A; 170A-179; 171A-B; 180A-B; 180A-181A; 193A-B.

## MINOR IN MATHEMATICS

The minor in mathematics consists of seven or more courses. At least four of these courses must be upper-division courses taken from the UCSD Department of Mathematics. Acceptable lower-

division courses are Math. 20D, 20E (or 31CH), and 20F (or 31AH).

Math. 195, 196, 197, 198, 199, and 199H are not acceptable courses for the mathematics minor. A grade of C– or better (or P if the Pass/Not Pass option is used) is required for all courses used to satisfy the requirements for a minor. There is no restriction on the number of classes taken with the P/NP option. Upper-division courses cannot overlap between major and minor programs.

## MINOR IN MATHEMATIC EDUCATION

The education studies mathematics education minor is intended for students interested in understanding how people learn mathematics, including: students considering K-12 teaching as a career; students interested in teaching at the college level; and students who are interested in becoming better, more reflective learners. All majors are welcome, but the Calculus 10 or 20 sequence is a prerequisite for two of the upper-division courses required for the minor. For more information contact Education Studies: <http://eds.ucsd.edu/undergraduate/minors.shtml>.

## MATHEMATICS HONORS PROGRAM

The Department of Mathematics offers an honors program for those students who have demonstrated excellence in the major. Successful completion of the honors program entitles the student to graduate with departmental honors (see Department Honors in the Academic Regulations section).

### For Mathematics, Applied Mathematics, Mathematics–Scientific Computation, Mathematics–Applied Science, Mathematics–Secondary Education, Mathematics–Computer Science, and Probability and Statistics Majors:

#### Requirements for admission to the program are

1. Junior standing
2. An overall GPA of 3.0 or higher
3. A GPA in the major of 3.5 or higher
4. Completion of Math. 109 (Mathematical Reasoning) or Math. 31CH (Honors Vector Calculus) and at least one of Math. 100A, 103A, 140A, or 142A. (Completion of additional major courses is strongly recommended.)

Applications to the program should be made the spring quarter before the student is at senior standing.

Completion of the honors program requires the following:

1. At least one quarter of the student colloquium, Math. 196 (Note: Math. 196 is only offered in the fall quarter.)
2. The minimum 3.5 GPA in the major must be maintained
3. An Honors Thesis. The research and writing of the thesis will be conducted over at least two quarters of the junior/senior years under the

supervision of a faculty advisor. This research will be credited as eight to twelve units of Math. 199H. The completed thesis must be approved by the department's Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.

The department's Honors Committee will determine the level of honors to be awarded, based on the student's GPA in the major and the quality of the honors work. Applications for the mathematics department's Honors Program can be obtained at the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016). Completed applications can be returned to the Mathematics Advising Office.

### For Joint Mathematics and Economics Majors:

#### To graduate with honors requires the following:

1. At least one quarter of the Student Colloquium, Math. 196 (Note: Math. 196 is only offered in the fall quarter.)
2. At least one Economics honors course: Econ. 100AH, 100BH, 110AH, 110BH, 120AH, 120BH, 120CH. Note: enrollment in these honors classes is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).
3. An Honors Thesis. The research and writing of the thesis will be conducted over two quarters of the senior year under the supervision of a faculty advisor. The completed thesis must be approved by the Joint Mathematics and Economics Honors Committee, which comprises the Mathematics Honors Committee and the Economics Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.
  - a. If the student is a declared major in the mathematics department (MA33), this thesis will be credited as eight units of Math. 199H. Enrollment in Math. 199H is by special permission; check with the advisors in the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016).
  - b. If the student is a declared major in the economics department (EN28), the student must enroll in Econ. 191A-B. Enrollment in Econ. 191 is by special permission; check with the undergraduate advisors in the Economics Student Services Office (SH 245).
4. A minimum GPA of 3.0 overall, 3.5 in the upper-division courses required for the major and a 3.5 in the following four classes: Math. 196, Economics Honors class and either Econ. 191A-B or two quarters of Math. 199H.

The Joint Mathematics and Economics Honors Committee will determine the level of honors to be awarded, based on the student's GPA in the major and the quality of the honors work.

## DUPLICATION OF CREDIT

Information on duplication of credit (both full and partial) can be found in the course descriptions. It is the student's responsibility to be aware of the credit restrictions listed.

## Faculty Advisors

Advisors change yearly. Contact the undergraduate office at (858) 534-3590 for current information.

## THE GRADUATE PROGRAM

The Department of Mathematics offers graduate programs leading to the M.A. (pure or applied mathematics), M.S. (statistics), and Ph.D. degrees.

The application deadline for fall admission is January 7 for Ph.D. candidates, and February 7 for M.A./M.S. candidates. Candidates should have a bachelor's or master's degree in mathematics or a related field from an accredited institution of higher education or the equivalent. A minimum scholastic average of B or better is required for course work completed in upper-division or prior graduate study. In addition, the department requires all applicants to submit scores no older than twelve months from both the GRE General Test and Advanced Subject Test in Mathematics. Completed files are judged on the candidate's mathematical background, qualifications, and goals.

Departmental support is typically in the form of teaching assistantships, research assistantships, and fellowships. These are currently only awarded to students in the Ph.D. program.

## GENERAL REQUIREMENTS

All student course programs must be approved by a faculty advisor prior to registering for classes each quarter, as well as any changes throughout the quarter.

Full-time students are required to register for a minimum of twelve (12) units every quarter, eight (8) of which must be graduate-level mathematics courses taken for a letter grade only. The remaining four (4) units can be approved upper-division or graduate-level courses in mathematics-related subjects (Math. 500 may not be used to satisfy any part of this requirement). After advancing to candidacy, Ph.D. candidates may take all course work on a Satisfactory/Unsatisfactory basis. Typically, students should not enroll in Math. 299 until they have satisfactorily passed both qualifying examinations (see "[Ph.D. in Mathematics](#)") or obtained approval of their faculty advisor.

## MASTER OF ARTS IN PURE MATHEMATICS

[Offered only under the Comprehensive Examination Plan.] The degree may be terminal or obtained on the way to the Ph.D. A total of forty-eight units of credit is required. Twenty-four of these units must be graduate-level mathematics courses approved in consultation with a faculty advisor.

In the selection of course work to fulfill the remaining twenty-four units, the following restrictions must be followed:

1. No more than eight units of upper-division mathematics courses.
2. No more than twelve units of graduate courses in a related field outside the department (approved by the Department of Mathematics).
3. No more than four units of Math. 295 (Special Topics) or Math. 500 (Apprentice Teaching).
4. No units of Math. 299 (Reading and Research) may be used in satisfying the requirements for the master's degree.

### Comprehensive Examinations

Seven written departmental examinations are offered in three areas (refer to "[Ph.D. In Mathematics](#)," Areas 1, 2, and 3, for list of exams). A student must complete two examinations, one from Area 1 and one from Area 2, both with an M.A. pass or better.

### Foreign Language Requirement

A reading knowledge of one foreign language (French, German, or Russian) is required. In exceptional cases other languages may be substituted. Testing is administered by faculty in the department who select published mathematical material in one of these languages for a student to translate.

### Time Limits

Full-time students are permitted seven quarters in which to complete all degree requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

## MASTER OF ARTS IN APPLIED MATHEMATICS

[Offered only under the Comprehensive Examination Plan] The degree may be terminal or obtained on the way to the Ph.D. Out of the total forty-eight units of required credit, two applied mathematics sequences comprising twenty-four units must be chosen from the following list (not every course is offered each year):

- 202A-B-C. (Applied Algebra)
- 210A-B-C. (Mathematical Methods in Physics and Engineering)
- 261A-B-C. (Probabilistic Combinatorics and Algorithms)
- 264A-B-C. (Combinatorics)
- 270A-B-C. (Numerical Mathematics)
- 271A-B-C. (Numerical Optimization)
- 272A-B-C. (Numerical Partial Differential Equations)
- 273A-B-C. (Advanced Techniques in Computational Math)

In certain cases, a petition may be approved to substitute one of these requirements from the following list of sequences:

- 220A-B-C. (Complex Analysis)
- 231A-B-C. (Partial Differential Equations)
- 240A-B-C. (Real Analysis)
- 280A-B-C. (Probability Theory)
- 281A-B-C. (Mathematical Statistics)
- 282A-B. (Applied Statistics)

In choosing course work to fulfill the remaining twenty-four units, the following restrictions must be followed:

1. At least eight units must be approved graduate courses in mathematics or other departments [a one-year sequence in a related area outside the department such as computer science, engineering, physics, or economics is strongly recommended];
2. A maximum of eight units can be approved upper-division courses in mathematics; and
3. A maximum of eight units can be approved upper-division courses in other departments.
4. A maximum of four units of Math. 500 (Apprentice Teaching).
5. NO UNITS of Math. 295 (Special Topics) or Math. 299 (Reading and Research) may be used.

Students are strongly encouraged to consult with a faculty advisor in their first quarter to prepare their course of study.

### Comprehensive Examinations

Two written comprehensive examinations must be passed at the master's level in any of the required applied mathematics sequences listed above. The instructors of each course should be contacted for exam details.

### Foreign Language Requirement

There is no foreign language requirement for the M.A. in applied mathematics.

### Time Limits

Full-time M.A. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

## MASTER OF SCIENCE IN STATISTICS

[Offered only under the Comprehensive Examination Plan.] The M.S. in statistics is designed to provide recipients with a strong mathematical background and experience in statistical computing with various applications. Out of the forty-eight units of credit needed, required core courses comprise twenty-eight units, including

- Math. 281A-B-C. (Mathematical Statistics)
- Math. 282A-B. (Applied Statistics)

and any two topics comprising eight units chosen freely from Math. 287A-B-C and 289A-B (see course descriptions for topics).

The following guidelines should be followed when selecting courses to complete the remaining twenty units:

1. For a theoretical emphasis, Math. 280A-B-C (Probability Theory) is required.
2. For an applied orientation, Math. 270A-B-C (Numerical Mathematics) is recommended.

3. A maximum of eight units of approved upper-division applied mathematics courses (see faculty advisor) and Math. 500 (Apprentice Teaching).

Upon the approval of the faculty advisor, the rule above, limiting graduate units from other departments to eight may be relaxed in making up these twenty non-core units.

### Comprehensive Examinations

Two written comprehensive examinations must be passed at the master's level in related course work (approved by a faculty advisor). Instructors of the relevant courses should be consulted for exam dates as they vary on a yearly basis.

### Foreign Language Requirement

There is no foreign language requirement for the M.S. in statistics.

### Time Limits

Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

## PH.D. IN MATHEMATICS

### Written Qualifying Examinations

The department offers written qualifying examinations in seven subjects. These are grouped into three areas as follows:

#### Area #1

Complex Analysis (Math. 220A-B-C) Real Analysis (Math. 240A-B-C)

#### Area #2

Algebra (Math. 200A-B-C) Applied Algebra (Math. 202A-B-C) Topology (Math. 290A-B-C)

#### Area #3

Numerical Analysis (Math. 270A-B-C) Statistics (Math. 281A-B-C)

1. Three qualifying exams must be passed. At least one must be passed at the Ph.D. level, and a second must be passed at either the Ph.D. or Provisional Ph.D. Level The third exam must be passed at least at the master's level.
2. Of the three qualifying exams, there must be at least one from each of Areas #1 and #2. Algebra and Applied Algebra do not count as distinct exams in Area #2.
3. Students must pass a least two exams from distinct areas with a minimum grade of Provisional Ph.D. (For example, a Ph.D. pass in Real Analysis, Provisional Ph.D. Pass in Complex Analysis, M.A. pass in Algebra would NOT satisfy this requirement, but a Ph.D. Pass in Real Analysis, M.A. pass in Complex Analysis, Provisional Ph.D. Pass in Algebra would, as would a Ph.D. Pass in Numerical Analysis, Provisional Ph.D. Pass in Applied Algebra, and M.A. pass in Real Analysis.)

- All exams must be passed by the September exam session prior to the beginning of the third year of graduate studies. (Thus, there would be no limit on the number of attempts, encouraging new students to take exams when they arrive, without penalty.)

Department policy stipulates that at least one of the exams must be completed with a Provisional Ph.D. Pass or better by September following the end of the first year. Anyone unable to comply with this schedule will lose their funding as a Ph.D. student. They will be terminated from the doctoral program and transferred to one of our master's programs.

Any master's student can submit for consideration a written request to transfer into the Ph.D. Program when the qualifying exam requirements for the Ph.D. Program have been met and a dissertation advisor is found. Approval by the Qualifying Exam and Appeals Committee (QEAC) is not automatic, however.

Exams are typically offered twice a year, one scheduled in the spring quarter and again in early September (prior to the start of fall quarter). Copies of past exams are made available for purchase in the Graduate Office.

In choosing a program with an eye to future employment, students should seek the assistance of a faculty advisor and take a broad selection of courses including applied mathematics, such as those in Area #3.

### Foreign Language Requirement

A reading knowledge of one foreign language (French, German, or Russian) is required prior to advancing to candidacy. In exceptional cases other languages may be substituted. Testing is administered within the department by faculty who select published mathematical material in one of these languages for a student to translate.

### Advancement to Candidacy

It is expected that by the end of the third year (nine quarters), students should have a field of research chosen and a faculty member willing to direct and guide them. A student will advance to candidacy after successfully passing the oral qualifying examination, which deals primarily with the area of research proposed but may include the project itself. This examination is conducted by the student's appointed doctoral committee. Based on their recommendation, a student advances to candidacy and is awarded the C.Phil. degree.

### Dissertation and Final Defense

Submission of a written dissertation and a final examination in which the thesis is publicly defended are the last steps before the Ph.D. degree is awarded. When the dissertation is substantially completed, copies must be provided to all committee members at least four weeks in advance of the proposed defense date. Two weeks before the scheduled final defense, a copy of the dissertation must be made available in the department for public inspection.

### Time Limits

The normative time for the Ph.D. in mathematics is five years. Students must have a dissertation advisor by the end of nine quarters. Students must be advanced to candidacy by the end of eleven quarters. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

A student making normal progress must meet the time limits described below. Ph.D. students who fail to meet these time limits may lose their TA funding.

- Pass Qualifying Exams requirement by the fall quarter of the beginning of the third year.
- Find Thesis advisor by the end of nine quarters.
- Advance to Candidacy by the end of eleven quarters.
- Final Defense by the end of the fifth year.

### PH.D. IN MATHEMATICS WITH SPECIALIZATION IN COMPUTATIONAL SCIENCE

The Ph.D. in mathematics, with a Specialization in Computational Science is designed to allow a student to obtain standard basic training in his or her chosen field of science, mathematics, or engineering with training in computational science integrated into those graduate studies. The Specialization in Computational Science recognizes the nation's growing and continuing need for broadly trained advanced computational scientists in academic, industry, and government laboratories. Its graduates will be well-positioned to compete effectively for the best jobs in these areas.

Computational science refers to the use of computer simulation and visualization for basic scientific research, product development, and forecasting. It is an interdisciplinary field that combines mathematics (mathematical modeling, numerical analysis) and computer science (architecture, programming, networks, graphics) with one of the scientific or engineering disciplines.

The specialization draws upon the expertise of faculty from bioengineering, biological sciences, chemistry and biochemistry, computers and engineering, electrical and computer engineering, mathematics, mechanical and aerospace engineering, physics, Scripps Institution of Oceanography, structural engineering as well as research staff from the San Diego Supercomputer Center.

### Admission

Prospective students must apply to the Ph.D. program of a participating home department, be admitted to that department and then be admitted to the specialization. The five participating academic departments that have a Specialization in Computational Science are chemistry and biochemistry, computer science and engineering, mathematics, mechanical and aerospace engineering, and physics. Requirements consist of those of the admitting home department (one of the five participating departments) as well as the proficiency, qualifying, and elective course requirements as outlined below. Requirements and policies relating

to the home department can be found in the *UC San Diego General Catalog* under that department's name. In the case of the mathematics department, the admission requirements for the mathematics doctoral program are those outlined above.

### Specialization in Computational Science Policies

- The specialization requires that students complete all home department requirements for the Ph.D. along with satisfying the CSME proficiency, qualifying, and elective requirements. In the case of the mathematics department, the requirements and timelines for the normal mathematics Ph.D. program are as described above.
- CSME Proficiency (see below) must be satisfied by the end of the first year.
- The CSME qualifying exams must be passed by the end of the second year or, on petition, by the end of the third year.
- The CSME qualifying exams can be attempted repeatedly but no more than once per quarter per subject.
- The regular qualifying exams in the home department and the CSME qualifying exams must all be passed before the student is permitted to take the candidacy (Senate) exam.
- Two CSME electives outside the home department must be taken.
- The two CSME electives can be taken at any time before defending the thesis.
- One of the CSME electives may be taken Pass/Fail; the other must be taken for a letter grade.
- No CSME field examination requirements will be imposed beyond those of the admitting home department.
- No CSME foreign language requirements will be imposed beyond those of the admitting home department.

*Proficiency Requirements:* All Ph.D. students participating in the CSME doctoral program must demonstrate advanced undergraduate level proficiency in numerical analysis and in computer algorithms and data structures. Proficiency may be demonstrated by taking UCSD's courses in both subjects while enrolled in the graduate program (four units per course):

- Numerical Methods (Math. 174/274 or MAE 290A)
- Data Structures and Algorithms (CSE 100/101)

Alternatively, proficiency in the material contained in these courses may be satisfied by having previously taken these or equivalent courses at other institutions, or through other evidence of sufficient knowledge of this material. Demonstrating proficiency without taking these courses at UCSD is subject to approval by the CSME Executive Committee on an individual basis.

*Qualifying Requirements:* In addition to the home department qualifying exam requirements, Ph.D. students participating in the CSME doctoral program must pass the final exams in all three qualifying exam courses listed below. The three qualifying

exam courses have been selected to provide a general broad set of tools in computational science. It is expected that most students will register for and take these courses (four units per course), but the CSME Qualifying Exam Committee may allow an exceptionally well-prepared student to take the final exams without taking the courses. Students must pass the qualifying examinations by the end of the second year or, on petition, by the end of the third year.

1. Math. 275 or MAE 290B (Numerical PDEs)
2. Phys. 244 or CSE 260 (Parallel Computing)
3. Course to be selected from List A

### LIST A: CSME Qualifying Exam Courses

Courses taken to satisfy the qualifying requirements cannot count toward the elective requirements.

1. Phys. 243 (Stochastic Methods)
2. Math. 270A, B, or C (Numerical Analysis; not permitted for math. students, who typically take Math. 270A-B-C as a normal mathematics qualifying course.)
3. Math. 272A, B, or C (Advanced Numerical PDEs)
4. MAE 223 (Computational Fluid Dynamics)
5. MAE 232A or B (Computational Solid Mechanics)
6. MAE 280A or B (Linear Systems Theory)
7. (To be determined by Executive Committee)

*Elective Requirements:* To encourage Ph.D. students specializing in computational science to both broaden themselves in an area of science or engineering as well as to obtain more specialized training in specific areas of computational science, students will be required to take and pass two elective courses from the following approved List B (four units per course), both of which must be outside of their home department, the first of which must be taken for a letter grade, and the second of which may be taken pass/fail. The CSME Executive Committee may approve the use of courses not appearing on the following list on a case-by-case basis. Courses taken to satisfy the elective requirements cannot count toward the qualifying requirements.

### LIST B: Elective Graduate Courses in Mathematics, Science, and Engineering

1. Math. 270A-B-C (Numerical Analysis; not permitted for math. students, who typically take Math. 270A-B-C as a normal mathematics qualifying course.)
2. Math. 271A-B-C (Optimization)
3. Math. 272A-B-C (Advanced Numerical PDEs)
4. Math. 273A-B-C (Computational Mathematics Project)
5. Phys. 141/241 (Computational Physics I)
6. Phys. 142/242 (Computational Physics II)
7. Phys. 221 AB (Nonlinear dynamics)
8. Chem. 215 (Modeling Biological Macromolecules)

9. BGGN 260 (Neurodynamics)
10. (To be determined by Executive Committee)

*Thesis/Dissertation:* Students participating in the Ph.D. in mathematics with a Specialization in Computational Science must complete a dissertation that meets all requirements for the regular Ph.D. in the home department. In addition, it is expected that the Ph.D. dissertation will be interdisciplinary in nature and involve some aspect of computational science.

*Final Examination:* Students participating in the Ph.D. in mathematics with a Specialization in Computational Science must meet the regular final examination requirements of the home department.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

All prerequisites listed below may be replaced by an equivalent or higher-level course. The listings of quarters in which courses will be offered are only tentative. Please consult the Department of Mathematics to determine the actual course offerings each year.

### LOWER-DIVISION

#### 3C. Pre-Calculus (4)

Functions and their graphs. Linear and polynomial functions, zeroes, inverse functions, exponential and logarithmic, trigonometric functions and their inverses. Emphasis on understanding algebraic, numerical and graphical approaches making use of graphing calculators. (No credit given if taken after Math. 4C, 1A/10A, or 2A/20A.) Three or more years of high school mathematics or equivalent recommended. **Prerequisite:** Math Placement Exam qualifying score.

#### 4C. Pre-Calculus for Science and Engineering (4)

Review of polynomials. Graphing functions and relations: graphing rational functions, effects of linear changes of coordinates. Circular functions and right triangle trigonometry. Reinforcement of function concept: exponential, logarithmic, and trigonometric functions. Vectors. Conic sections. Polar coordinates. Three lectures, one recitation. (No credit given if taken after Math. 1A/10A or 2A/20A. Two units of credit given if taken after Math. 3C.) **Prerequisite:** Math Placement Exam qualifying score or Math. 3C with a grade of C– or better.

#### 10A. Calculus (4)

Differentiation and integration of algebraic functions. Fundamental theorem of calculus. Applications. (No credit given if taken after Math. 20A.) **Prerequisite:** Math Placement Exam qualifying score, or AP Calculus AB score of 2, or SAT II Math. Level 2 score of 600 or higher, or Math. 3C with a grade of C or better, or Math. 4C with a grade of C– or better.

#### 10B. Calculus (4)

Further applications of the definite integral. Calculus of trigonometric, logarithmic, and exponential functions. Complex numbers. (No credit given if taken after Math. 2B/20B. Formerly numbered Math. 1B.) **Prerequisite:** AP Calculus AB score of 3, 4, or 5 (or equivalent AB subscore on BC exam), or Math. 10A with a grade of C– or better, or Math. 20A with a grade of C– or better.

#### 10C. Calculus (4)

Vector geometry, velocity, and acceleration vectors. (No credit given if taken after Math. 2C/20C. Formerly numbered Math. 1C.) **Prerequisite:** AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better.

#### 11. Elementary Probability and Statistics (4)

Events and probabilities, conditional probability, Bayes' formula. Discrete random variables: mean, variance; binomial, Poisson distributions. Continuous random variables: densities, mean, variance; normal, uniform, exponential distributions. Sample statistics, confidence intervals, hypothesis testing, regression. Applications. Intended for biology and social science majors. **Prerequisites:** AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better, and concurrent enrollment in Math. 11L.

#### 11L. Elementary Probability and Statistics Laboratory (1)

Introduction to the use of software in probabilistic and statistical analysis. Emphasis on understanding connections between the theory of probability and statistics, numerical results of real data, and learning techniques of data analysis and interpretation useful for solving scientific problems. **Prerequisites:** AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better, and concurrent enrollment in Math. 11.

#### 15A. Discrete Mathematics (4)

Basic discrete mathematical structures: sets, relations, functions, sequences, equivalence relations, partial orders, number systems. Methods of reasoning and proofs: propositional logic, predicate logic, induction, recursion, pigeonhole principle. Infinite sets and diagonalization. Basic counting techniques; permutations and combinations. Applications will be given to digital logic design, elementary number theory, design of programs, and proofs of program correctness. Equivalent to CSE 20. Credit not offered for both Math. 15A and CSE 20. **Prerequisites:** CSE 8A or CSE 8B or CSE 11. CSE 8B or CSE 11 may be taken concurrently with Math. 15A/CSE 20. (Not offered in 2010–11.)

#### 15B. Mathematics for Algorithm and Systems (4)

This course introduces mathematical tools for the qualitative and quantitative analysis of algorithms and computer systems. Topics to be covered include basic enumeration and counting techniques; recurrence relations; graph theory; asymptotic notation; elementary applied discrete probability. Equivalent to CSE 21. Credit not offered for both Math. 15B and CSE 21. **Prerequisite:** Math. 15A or CSE 20 or 160A; CSE 12 is strongly recommended for CSE 21. (Not offered in 2010–11.)

#### 20A. Calculus for Science and Engineering (4)

Foundations of differential and integral calculus of one variable. Functions, graphs, continuity, limits, derivative, tangent line. Applications with algebraic, exponential, logarithmic, and trigonometric functions. Introduction to the integral. (Two credits given if taken after Math. 1A/10A and no credit given if taken after Math. 1B/10B or Math. 1C/10C. Formerly numbered Math. 2A.) **Prerequisite:** Math Placement Exam qualifying score, or AP Calculus AB score of 2 or 3 (or equivalent AB subscore on BC exam), or SAT II Math. 2C score of 650 or higher, or Math. 4C with a grade of C– or better, or Math. 10A with a grade of C– or better.

#### 20B. Calculus for Science and Engineering (4)

Integral calculus of one variable and its applications, with exponential, logarithmic, hyperbolic, and trigonometric functions. Methods of integration. Infinite series. Polar coordinates in the plane and complex exponentials. (Two units of credits given if taken after Math. 1B/10B or Math. 1C/10C.) **Prerequisite:** AP Calculus AB score of 4 or 5, or AP Calculus BC score of 3, or Math. 20A with a grade of C– or better, or Math. 10B with a grade of C– or better, or Math. 10C with a grade of C– or better.

#### 20C. Calculus and Analytic Geometry for Science and Engineering (4)

Vector geometry, vector functions and their derivatives. Partial differentiation. Maxima and minima. Double integration. Two units of credit given if taken after Math. 10C. Credit not offered for both Math. 20C and 31BH. Formerly numbered Math. 21C. **Prerequisite:** AP Calculus BC score of 4 or 5, or Math. 20B with a grade of C– or better.

#### 20D. Introduction to Differential Equations (4)

Ordinary differential equations: exact, separable, and linear; constant coefficients, undetermined coefficients, variations of parameters. Systems. Series solutions. Laplace transforms. Techniques for engineering sciences. Computing

symbolic and graphical solutions using Matlab. Formerly numbered Math. 21D. May be taken as repeat credit for Math. 21D. **Prerequisite:** Math. 20C (or Math. 21C) or Math. 31BH with a grade of C– or better.

#### 20E. Vector Calculus (4)

Change of variable in multiple integrals, Jacobian, Line integrals, Green's theorem. Vector fields, gradient fields, divergence, curl. Spherical/cylindrical coordinates. Taylor series in several variables. Surface integrals, Stoke's theorem. Gauss' theorem. Conservative fields. Credit not offered for both Math. 20E and 31CH. **Prerequisite:** Math. 20C (or Math. 21C) or Math. 31BH with a grade of C– or better.

#### 20F. Linear Algebra (4)

Matrix algebra, Gaussian elimination, determinants. Linear and affine subspaces, bases of Euclidean spaces. Eigenvalues and eigenvectors, quadratic forms, orthogonal matrices, diagonalization of symmetric matrices. Applications. Computing symbolic and graphical solutions using Matlab. Credit not offered for both Math. 20F and 31AH. **Prerequisite:** Math. 20C (or Math. 21C) with a grade of C– or better.

#### 31AH. Honors Linear Algebra (4)

First quarter of three-quarter honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: real/complex number systems, vector spaces, linear transformations, bases and dimension, change of basis, eigenvalues, eigenvectors, diagonalization. Credit not offered for both Math. 31AH and 20F. **Prerequisite:** AP Calculus BC score of 5 or consent of instructor.

#### 31BH. Honors Multivariable Calculus (4)

Second quarter of three-quarter honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: derivative in several variables, Jacobian matrices, extrema and constrained extrema, integration in several variables. Credit not offered for both Math. 31BH and 20C. **Prerequisite:** Math. 31AH with a grade of B– or better, or consent of instructor.

#### 31CH. Honors Vector Calculus (4)

Third quarter of honors integrated linear algebra/multivariable calculus sequence for well-prepared students. Topics include: change of variables formula, integration of differential forms, exterior derivative, generalized Stoke's theorem, conservative vector fields, potentials. Credit not offered for both Math. 31CH and 20E. **Prerequisite:** Math. 31BH with a grade of B– or better, or consent of instructor.

#### 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshman. **Prerequisites:** none.

#### 95. Introduction to Teaching Math (2)

(Cross-listed with EDS 30.) Revisit students' learning difficulties in mathematics in more depth to prepare students to make meaningful observations of how K–12 teachers deal with these difficulties. Explore how instruction can use students' knowledge to pose problems that stimulate students' intellectual curiosity. **Prerequisites:** none.

#### 99R. Independent Study (1)

Independent study or research under direction of a member of the faculty. **Prerequisites:** Must be of first-year standing and a Regent's Scholar.

## UPPER-DIVISION

#### 100A. Abstract Algebra I (4)

First course in a rigorous three-quarter introduction to the methods and basic structures of higher algebra. Topics include: groups, subgroups and factor groups, homomorphisms, rings, fields. Students may not receive credit for both Math. 100A and Math. 103A. **Prerequisite:** Math. 31CH or Math. 109 or consent of instructor.

#### 100B. Abstract Algebra II (4)

Second course in a rigorous three-quarter introduction to the methods and basic structures of higher algebra. Topics include: rings (especially polynomial rings) and ideals, unique factorization, fields; linear algebra from perspective of linear transformations on vector spaces, including inner product spaces, determinants, diagonalization. Students may not receive credit for both Math. 100B and Math. 103B. **Prerequisite:** Math. 100A or consent of instructor.

#### 100C. Abstract Algebra III (4)

Third course in a rigorous three-quarter introduction to the methods and basic structures of higher algebra. Topics include: linear transformations, including Jordan canonical form and rational canonical form; Galois theory, including the insolubility of the quintic. **Prerequisite:** Math. 100B or consent of instructor. (F,W,S)

#### 102. Applied Linear Algebra (4)

Second course in linear algebra from a computational yet geometric point of view. Elementary Hermitian matrices, Schur's theorem, normal matrices, and quadratic forms. Moore-Penrose generalized inverse and least square problems. Vector and matrix norms. Characteristic and singular values. Canonical forms. Determinants and multilinear algebra. **Prerequisite:** Math. 20F or Math. 31AH. (W)

#### 103A. Modern Algebra I (4)

First course in a two-quarter introduction to abstract algebra with some applications. Emphasis on group theory. Topics include: definitions and basic properties of groups, properties of isomorphisms, subgroups. Students may not receive credit for both Math. 100A and Math. 103A. **Prerequisite:** Math. 31CH or Math. 109 or consent of instructor.

#### 103B. Modern Algebra II (4)

Second course in a two-quarter introduction to abstract algebra with some applications. Emphasis on rings and fields. Topics include: definitions and basic properties of rings, fields, and ideals, homomorphisms, irreducibility of polynomials. Students may not receive credit for both Math. 100B and Math. 103B. **Prerequisite:** Math. 103A or Math. 100A or consent of instructor.

#### 104A. Number Theory I (4)

Elementary number theory with applications. Topics include unique factorization, irrational numbers, residue systems, congruences, primitive roots, reciprocity laws, quadratic forms, arithmetic functions, partitions, Diophantine equations, distribution of primes. Applications include fast Fourier transform, signal processing, codes, cryptography. **Prerequisite:** Math. 109 or Math. 31CH, or consent of instructor.

#### 104B. Number Theory II (4)

Topics in number theory such as finite fields, continued fractions, Diophantine equations, character sums, zeta and theta functions, prime number theorem, algebraic integers, quadratic and cyclotomic fields, prime ideal theory, class number, quadratic forms, units, Diophantine approximation,  $p$ -adic numbers, elliptic curves. **Prerequisite:** Math. 104A or consent of instructor.

#### 104C. Number Theory III (4)

Topics in algebraic and analytic number theory, with an advanced treatment of material listed for Math. 104B. **Prerequisite:** Math. 104B or consent of instructor.

#### 107A-B. Computer Algebra (4-4)

An introduction to algebraic computation. Computational aspects of groups, rings, fields, etc. Data representation and algorithms for symbolic computation. Polynomials and their arithmetic. The use of a computer algebra system as an experimental tool in mathematics. Programming using algebra systems. **Prerequisite:** prior or concurrent enrollment in the Math. 100 or 103 sequence. (Not offered in 2010–11.)

#### 109. Mathematical Reasoning (4)

This course uses a variety of topics in mathematics to introduce the students to rigorous mathematical proof, emphasizing quantifiers, induction, negation, proof by contradiction, naive set theory, equivalence relations and epsilon-delta proofs. Required of all departmental majors. **Prerequisite:** Math. 20F or Math 31AH or consent of instructor.

#### 110A. Introduction to Partial Differential Equations (4)

Fourier series, orthogonal expansions, and eigenvalue problems. Sturm-Liouville theory. Separation of variables for partial differential equations of mathematical physics, including topics on Bessel functions and Legendre polynomials. Formerly Math. 110. Students may not receive credit for Math. 110A and Math. 110. **Prerequisites:** Math. 20D and either 20F or Math. 31AH, or consent of instructor. (F,S)

#### 110B. Elements of Partial Differential Equations and Integral Equations (4)

Basic concepts and classification of partial differential equations. First order equations, characteristics. Hamilton-Jacobi theory, Laplace's equation, wave equation, heat equation. Separation of variables, eigenfunction expansions, existence and uniqueness of solutions. Formerly Math. 132A. Students may not receive credit for Math. 110B and Math. 132A. **Prerequisite:** Math. 110A or consent of instructor. (W)

#### 111A. Mathematical Modeling I (4)

An introduction to mathematical modeling in the physical and social sciences. Topics vary, but have included mathematical models for epidemics, chemical reactions, political organizations, magnets, economic mobility, and geographical distributions of species. May be repeated for credit when topics change. **Prerequisites:** Math. 20D and either Math. 20F or Math. 31AH, or consent of instructor.

#### 111B. Mathematical Modeling II (4)

Continued study on mathematical modeling in the physical and social sciences, using advanced techniques that will expand upon the topics selected and further the mathematical theory presented in Math. 111A. May be repeated for credit when topics change. **Prerequisite:** Math. 111A or consent of instructor.

#### 120A. Elements of Complex Analysis (4)

Complex numbers and functions. Analytic functions, harmonic functions, elementary conformal mappings. Complex integration. Power series. Cauchy's theorem. Cauchy's formula. Residue theorem. **Prerequisite:** Math. 20E or Math. 31CH, or consent of instructor. (F,W)

#### 120B. Applied Complex Analysis (4)

Applications of the residue theorem. Conformal mapping and applications to potential theory, flows, and temperature distributions. Fourier transformations. Laplace transformations, and applications to integral and differential equations. Selected topics such as Poisson's formula, Dirichlet's problem, Neumann's problem, or special functions. **Prerequisite:** Math. 120A. (W,S)

#### 121A. Foundations of Teaching and Learning Mathematics I (4)

(Cross-listed with EDS 121A.) Develop teachers' knowledge base (knowledge of mathematics content, pedagogy, and student learning) in the context of advanced mathematics. This course builds on the previous courses where these components of knowledge were addressed exclusively in the context of high-school mathematics. **Prerequisites:** EDS 30/Math. 95, Calculus 10C or 20C.

#### 121B. Foundations of Teaching and Learning Math II (4)

(Cross-listed with EDS 121B.) Examine how learning theories can consolidate observations about conceptual development with the individual student as well as the development of knowledge in the history of mathematics. Examine how teaching theories explain the effect of teaching approaches addressed in the previous courses. **Prerequisite:** EDS 121A/Math. 121A.

#### 130A. Ordinary Differential Equations I (4)

Linear and nonlinear systems of differential equations. Stability theory, perturbation theory. Applications and introduction to numerical solutions. Three lectures. **Prerequisites:** Math. 20D and either Math. 20F or Math. 31AH or consent of instructor. (F)

#### 130B. Ordinary Differential Equations II (4)

Existence and uniqueness of solutions to differential equations. Local and global theorems of continuity and differentiability. Three lectures. **Prerequisite:** Math. 130A or consent of instructor. (W)

**131. Variational Methods in Optimization (4)**

Maximum–minimum problems. Normed vector spaces, functionals, Gateaux variations. Euler-Lagrange multiplier theorem for an extremum with constraint. Calculus of variations via the multiplier theorem. Applications taken from a variety of areas: applied mechanics, economics, astronautics physics, geometry, control theory. **Prerequisite:** Math. 20F or Math. 31AH, or consent of instructor. (S)

**140A. Foundations of Real Analysis I (4)**

First course in a rigorous three-quarter sequence on real analysis. Topics include: the real number system, basic topology, numerical sequences and series, continuity. Students may not receive credit for both Math. 140A and Math. 142A. **Prerequisite:** Math. 31CH or Math. 109, or consent of instructor.

**140B. Foundations of Real Analysis II (4)**

Second course in a rigorous three-quarter sequence on real analysis. Topics include: differentiation, the Riemann-Stieltjes integral, sequences and series of functions, power series, Fourier series, and special functions. Students may not receive credit for both Math. 140B and Math. 142B. **Prerequisite:** Math. 140A or consent of instructor.

**140C. Foundations of Real Analysis III (4)**

Third course in a rigorous three-quarter sequence on real analysis. Topics include: differentiation of functions of several real variables, the implicit and inverse function theorems, the Lebesgue integral, infinite-dimensional normed spaces. **Prerequisite:** Math. 140B or consent of instructor.

**142A. Introduction to Analysis I (4)**

First course in an introductory two-quarter sequence on analysis. Topics include: the real number system, numerical sequences and series, limits of functions, continuity. Students may not receive credit for both Math. 140 and Math. 142A. **Prerequisite:** Math. 31CH or Math. 109, or consent of instructor.

**142B. Introduction to Analysis II (4)**

Second course in an introductory two-quarter sequence on analysis. Topics include: differentiation, the Riemann integral, sequences and series of functions, uniform convergence, Taylor and Fourier series, special functions. Students may not receive credit for both Math. 140B and Math. 142B. **Prerequisites:** Math. 142A or Math. 140A, or consent of instructor.

**150A. Differential Geometry (4)**

Differential geometry of curves and surfaces. Gauss and mean curvatures, geodesics, parallel displacement, Gauss-Bonnet theorem. Three lectures. **Prerequisites:** Math. 20E with a grade of C– or better and Math. 20F with a grade of C– or better, or consent of instructor. (F)

**150B. Calculus on Manifolds (4)**

Calculus of functions of several variables, inverse function theorem. Further topics may include exterior differential forms, Stokes' theorem, manifolds, Sard's theorem, elements of differential topology, singularities of maps, catastrophes, further topics in differential geometry, topics in geometry of physics. **Prerequisite:** Math. 150A or consent of instructor. (W)

**152. Applicable Mathematics and Computing (4)**

This course will give students experience in applying theory to real world applications such as Internet and wireless communication problems. The course will incorporate talks by experts from industry and students will be helped to carry out independent projects. Topics include graph visualization, labelling, and embeddings, random graphs and randomized algorithms. May be taken 3 times for credit. **Prerequisites:** Math. 20D and either 20F or Math. 31AH, or consent of instructor.

**153. Geometry for Secondary Teachers (4)**

Two- and three-dimensional Euclidean geometry is developed from one set of axioms. Pedagogical issues will emerge from the mathematics and be addressed using current research in teaching and learning geometry. This course is designed for prospective secondary school mathematics teachers. **Prerequisite:** Math. 109 or Math. 31CH, or consent of instructor.

**154. Discrete Mathematics and Graph Theory (4)**

Basic concepts in graph theory. Combinatorial tools, structures in graphs (Hamiltonian cycles, perfect matching). Properties of graphics and applications in basic algorithmic problems (planarity, k-colorability, traveling salesman problem). **Prerequisites:** Math. 109 or Math. 31CH, or consent of instructor.

**155A. Computer Graphics (4)**

Bezier curves and control lines, de Casteljau construction for subdivision, elevation of degree, control points of Hermite curves, barycentric coordinates, rational curves. Programming knowledge recommended. Students may not receive credit for both Math. 155A and CSE 167. **Prerequisite:** Math. 20F or Math. 31AH, or consent of instructor. (F)

**155B. Topics in Computer Graphics (4)**

Spline curves, spline interpolation, affine and affine cross ratios, polar forms (blossoming), the Oslo algorithm for knot insertion, NURBS and geometric continuity. **Prerequisite:** Math. 155A or consent of instructor. (W)

**163. History of Mathematics (4)**

Topics will vary from year to year in areas of mathematics and their development. Topics may include the evolution of mathematics from the Babylonian period to the eighteenth century using original sources, a history of the foundations of mathematics and the development of modern mathematics. **Prerequisite:** Math. 20B or consent of instructor. (S)

**166. Intro to the Theory of Computation (4)**

Introduction to formal languages; regular languages; regular expressions, finite automata, minimization, closure properties, decision algorithms, and non-regular languages; context-free languages, context-free grammars, push-down automata, parsing theory, closure properties, and noncontext-free languages; computable languages; turing machines, recursive functions, Church's thesis, undecidability and the halting problem. Equivalent to CSE 105. **Prerequisites:** CSE 8B or 9B or 10 or 65 or 62B AND CSE 20 or 160A or Math. 15A or 109 or 100A or 103A. (Not offered in 2010–11.)

**168A. Topics in Applied Mathematics–Computer Science (4)**

Topics to be chosen in areas of applied mathematics and mathematical aspects of computer science. May be repeated once for credit with different topics. **Prerequisite:** Math. 20F or Math. 31AH, or consent of instructor. (W,S)

**170A. Introduction to Numerical Analysis: Linear Algebra (4)**

Analysis of numerical methods for linear algebraic systems and least squares problems. Orthogonalization methods. Ill conditioned problems. Eigenvalue and singular value computations. Three lectures, one recitation. Knowledge of programming recommended. **Prerequisite:** Math. 20F. (F,S)

**170B. Introduction to Numerical Analysis: Approximation and Nonlinear Equations (4)**

Rounding and discretization errors. Calculation of roots of polynomials and nonlinear equations. Interpolation. Approximation of functions. Three lectures, one recitation. Knowledge of programming recommended. **Prerequisite:** Math. 170A. (W)

**170C. Numerical Ordinary Differential Equations (4)**

Numerical differentiation and integration. Ordinary differential equations and their numerical solution. Basic existence and stability theory. Difference equations. Boundary value problems. Three lectures, one recitation. **Prerequisite:** Math. 170B or consent of instructor. (S)

**171A. Introduction to Numerical Optimization: Linear Problems (4)**

Linear optimization and applications. Linear programming, the simplex method, duality. Selected topics from integer programming, network flows, transportation problems, inventory problems, and other applications. Three lectures, one recitation. Knowledge of programming recommended. Credit not allowed for both Math. 171A and Econ. 172A. **Prerequisite:** Math. 20F.

**171B. Introduction to Numerical Optimization: Nonlinear Problems (4)**

Convergence of sequences in  $\mathbb{R}^n$ , multivariate Taylor series. Bisection and related methods for nonlinear equations in one variable. Newton's methods for nonlinear equations in one and many variables. Unconstrained optimization and Newton's method. Equality-constrained optimization, Kuhn-Tucker theorem. Inequality-constrained optimization. Three lectures, one recitation. Knowledge of programming recommended. Credit not allowed for both Math. 171B and Econ. 172B. **Prerequisite:** Math. 171A.

**174. Numerical Methods for Physical Modeling (4)**

(Conjoined with Math. 274) Floating point arithmetic, direct and iterative solution of linear equations, iterative solution of nonlinear equations, optimization, approximation theory, interpolation, quadrature, numerical methods for initial and boundary value problems in ordinary differential equations. Students may not receive credit for both Math. 174 and PHYS 105, AMES 153 or 154. Students may not receive credit for Math. 174 if Math. 170A, B, or C has already been taken. Graduate students will do an extra assignment/exam. **Prerequisites:** Math. 20D or Math. 21D, and either Math. 20F or Math 31AH, or consent of instructor.

**175. Numerical Methods for Partial Differential Equations (4)**

(Conjoined with Math. 275.) Mathematical background for working with partial differential equations. Survey of finite difference, finite element, and other numerical methods for the solution of elliptic, parabolic, and hyperbolic partial differential equations. Formerly Math. 172; students may not receive credit for Math. 175/275 and Math. 172. Graduate students do an extra paper, project, or presentation, per instructor. **Prerequisite:** Math. 174 or Math. 274, or consent of instructor.

**176. Advanced Data Structures (4)**

Descriptive and analytical presentation of data structures and algorithms. Lists, tables, priority queues, disjoint subsets, and dictionaries data types. Data structuring techniques include linked lists, arrays, hashing, and trees. Performance evaluation involving worst case, average and expected case, and amortized analysis. Credit not offered for both Math. 176 and CSE 100. Equivalent to CSE 100. **Prerequisites:** CSE 12, CSE 21, or Math. 15B, and CSE 30, or consent of instructor. Not offered in 2010–11.

**179. Projects in Computational and Applied Mathematics (4)**

(Conjoined with Math. 279.) Mathematical models of physical systems arising in science and engineering, good models and well-posedness, numerical and other approximation techniques, solution algorithms for linear and nonlinear approximation problems, scientific visualizations, scientific software design and engineering, project-oriented. Graduate students will do an extra paper, project, or presentation per instructor. **Prerequisite:** Math. 174 or Math. 274 or consent of instructor.

**180A. Introduction to Probability (4)**

Probability spaces, random variables, independence, conditional probability, distribution, expectation, variance, joint distributions, central limit theorem. (Two units of credit offered for Math. 180A if Econ. 120A previously, no credit offered if Econ. 120A concurrently.) **Prerequisite:** Math. 20C or Math. 31BH, or consent of instructor. (F)

**180B. Introduction to Stochastic Processes I (4)**

Random vectors, multivariate densities, covariance matrix, multivariate normal distribution. Random walk, Poisson process. Other topics if time permits. Three lectures. **Prerequisites:** Math. 20D and either Math. 20F or Math 31AH, and Math. 180A, or consent of instructor. (W)

**180C. Introduction to Stochastic Processes II (4)**

Markov chains in discrete and continuous time, random walk, recurrent events. If time permits, topics chosen from stationary normal processes, branching processes, queuing theory. Three lectures. **Prerequisite:** Math. 180B or consent of instructor. (S)

**181A. Introduction to Mathematical Statistics I (4)**

Multivariate distribution, functions of random variables, distributions related to normal. Parameter estimation, method of moments, maximum likelihood. Estimator

accuracy and confidence intervals. (Two units of credit offered for Math. 181A if Econ. 120B previously, no credit offered if Econ. 120B concurrently.) **Prerequisites:** Math. 180A or Econ. 120A, and Math. 20F or Math. 31AH, or consent of instructor. (W)

**181B. Introduction to Mathematical Statistics II (4)**  
Hypothesis testing. Linear models, regression, and analysis of variance. Goodness of fit tests. Nonparametric statistics. **Prerequisite:** Math. 181A or consent of instructor. (S)

**181C. Mathematical Statistics—Nonparametric Statistics (4)**  
Topics covered may include the following: classical rank test, rank correlations, permutation tests, distribution free testing, efficiency, confidence intervals, nonparametric regression and density estimation, resampling techniques (bootstrap, jackknife, etc.) and cross validations. **Prerequisite:** Math. 181B or consent of instructor.

**181E. Mathematical Statistics—Time Series (4)**  
Analysis of trends and seasonal effects, autoregressive and moving averages models, forecasting, informal introduction to spectral analysis. **Prerequisite:** Math. 181B or consent of instructor.

**183. Statistical Methods (4)**  
Introduction to probability. Discrete and continuous random variables—binomial, Poisson and Gaussian distributions. Central limit theorem. Data analysis and inferential statistics: graphical techniques, confidence intervals, hypothesis tests, curve fitting. (Credit not offered for Math. 183 if Econ. 120A, ECE 109, Math. 180A, Math. 181A, or Math. 186 previously or concurrently taken.) **Prerequisite:** Math. 20C (21C) with a grade of C– or better, or consent of instructor. (F,S)

**184A. Combinatorics (4)**  
Introduction to the theory and applications of combinatorics. Enumeration of combinatorial structures. Ranking and unranking. Graph theory with applications and algorithms. Recursive algorithms. Inclusion-exclusion. Generating functions. Polya theory. **Prerequisite:** Math. 109 with a grade of C– or better, or consent of instructor. (W,S)

**185. Introduction to Computational Statistics (4)**  
Statistical analysis of data by means of package programs. Regression, analysis of variance, discriminant analysis, principal components, Monte Carlo simulation, and graphical methods. Emphasis will be on understanding the connections between statistical theory, numerical results, and analysis of real data. **Prerequisites:** Math. 181B with a grade of C– or better, or concurrent enrollment.

**186. Probability Statistics for Bioinformatics (4)**  
This course will cover discrete and random variables, data analysis and inferential statistics, likelihood estimators and scoring matrices with applications to biological problems. Introduction to Binomial, Poisson, and Gaussian distributions, central limit theorem, applications to sequence and functional analysis of genomes and genetic epidemiology. (Credit not offered for Math. 186 if Econ. 120A, ECE 109, Math. 180A, Math. 181A, or Math. 183 previously or concurrently.) **Prerequisites:** Math. 20C (21C) with a grade of C– or better, or consent of instructor.

**187. Introduction to Cryptography (4)**  
An introduction to the basic concepts and techniques of modern cryptography. Classical cryptanalysis. Probabilistic models of plaintext. Monalphabetic and polyalphabetic substitution. The one-time system. Caesar-Vigenere-Playfair-Hill substitutions. The Enigma. Modern-day developments. The Data Encryption Standard. Public key systems. Security aspects of computer networks. Data protection. Electronic mail. Three lectures, one recitation. **Prerequisite:** programming experience. (S)

**188. Design and Analysis of Algorithms (4)**  
Introduction to the design and analysis of efficient algorithms. Basic techniques for analyzing the time requirements of algorithms. Algorithms for sorting, searching, and pattern matching, algorithms for graphs and networks. NP-complete problems. Equivalent to CSE 101. **Prerequisites:** CSE 100 or Math. 176A for Math. 188; CSE 12, CSE 21, and CSE 100 for CSE 101. (Not offered in 2010–11.)

**190. Introduction to Topology (4)**  
Topological spaces, subspaces, products, sums and quotient spaces. Compactness, connectedness, separation axioms. Selected further topics such as fundamental group, classification of surfaces, Morse theory, topological groups. May be repeated for credit once when topics vary, with consent of instructor. Three lectures. **Prerequisite:** Math. 109 or Math 31CH, or consent of instructor. (W)

**191. Topics in Topology (4)**  
Topics to be chosen by the instructor from the fields of differential algebraic, geometric, and general topology. Three lectures. **Prerequisite:** Math. 190 or consent of instructor. (S)

**192. Senior Seminar in Mathematics (1)**  
The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in mathematics at the upper-division level. Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** department stamp and/or consent of instructor.

**193A. Actuarial Mathematics I (4)**  
Probabilistic Foundations of Insurance. Short-term risk models. Survival distributions and life tables. Introduction to life insurance. **Prerequisite:** Math. 180A or Math. 183, or consent of instructor.

**193B. Actuarial Mathematics II (4)**  
Life Insurance and Annuities. Analysis of premiums and premium reserves. Introduction to multiple life functions and decrement models as time permits. **Prerequisite:** Math. 193A or consent of instructor.

**194. The Mathematics of Finance (4)**  
Introduction to the mathematics of financial models. Basic probabilistic models and associated mathematical machinery will be discussed, with emphasis on discrete time models. Concepts covered will include conditional expectation, martingales, optimal stopping, arbitrage pricing, hedging, European and American options. **Prerequisites:** Math. 20D, and either Math. 20F or Math. 31AH, and either Math. 180A or Math. 183, or consent of instructor.

**195. Introduction to Teaching in Mathematics (4)**  
Students will be responsible for and teach a class section of a lower-division mathematics course. They will also attend a weekly meeting on teaching methods. (Does not count towards a minor or major.) Five lectures, one recitation. **Prerequisite:** consent of instructor. (F,W,S)

**196. Student Colloquium (1)**  
A variety of topics and current research results in mathematics will be presented by guest lecturers and students under faculty direction. May be taken for P/NP grade only. **Prerequisite:** upper-division status.

**197. Mathematics Internship (2 or 4)**  
An enrichment program which provides work experience with public/private sector employers. Subject to the availability of positions, students will work in a local company under the supervision of a faculty member and site supervisor. Units may not be applied towards major graduation requirements. **Prerequisites:** completion of 90 units, 2 upper-division mathematics courses, an overall 2.5 UCSD G.P.A., consent of mathematics faculty coordinator, and submission of written contract. Department stamp required.

**199. Independent Study for Undergraduates (2 or 4)**  
Independent reading in advanced mathematics by individual students. Three periods. (P/NP grades only.) **Prerequisite:** permission of department. (F,W,S)

**199H. Honors Thesis Research for Undergraduates (2–4)**  
Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a mathematics faculty member. **Prerequisites:** admission to the Honors Program in mathematics, department stamp.

## GRADUATE

**200A-B-C. Algebra (4-4-4)**  
Group actions, factor groups, polynomial rings, linear algebra, rational and Jordan canonical forms, unitary and Hermitian matrices, Sylow theorems, finitely generated abelian groups, unique factorization, Galois theory, solvability by radicals, Hilbert Basis Theorem, Hilbert Nullstellensatz, Jacobson radical, semisimple Artinian rings. **Prerequisite:** consent of instructor.

**201A-B. Basic Topics in Algebra (4-4)**  
Recommended for all students specializing in algebra. Basic topics include categorical algebra, commutative algebra, group representations, homological algebra, nonassociative algebra, ring theory. **Prerequisites:** Math. 200A-B-C or consent of instructor. (F,W,S)

**202A. Applied Algebra I (4)**  
Introduction to algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. **Prerequisite:** graduate standing or consent of instructor.

**202B. Applied Algebra II (4)**  
Second course in algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. **Prerequisite:** Math. 202A or consent of instructor.

**202C. Applied Algebra III (4)**  
Third course in algebra from a computational perspective. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. **Prerequisite:** Math. 202B or consent of instructor.

**203A-B-C. Algebraic Geometry (4-4-4)**  
Places, Hilbert Nullstellensatz, varieties, product of varieties: correspondences, normal varieties. Divisors and linear systems; Riemann-Roch theorem; resolution of singularities of curves. Grothendieck schemes; cohomology, Hilbert schemes; Picard schemes. **Prerequisites:** Math. 200A-B-C. (F,W,S)

**204. Topics in Number Theory (4)**  
Topics in analytic number theory, such as zeta functions and L-functions and the distribution of prime numbers, zeros of zeta functions and Siegel's theorem, transcendence theory, modular forms, finite and infinite symmetric spaces. **Prerequisite:** consent of instructor.

**205. Topics in Algebraic Number Theory (4)**  
Topics in algebraic number theory, such as cyclotomic and Kummer extensions, class number, units, splitting of primes in extensions, zeta functions of number fields and the Brauer-Siegel Theorem, class field theory, elliptic curves and curves of higher genus, complex multiplication. **Prerequisite:** consent of instructor.

**207A-B-C. Topics in Algebra (4-4-4)**  
In recent years, topics have included number theory, commutative algebra, noncommutative rings, homological algebra, and Lie groups. May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

**208. Seminar in Algebra (1)**  
Various topics in algebra. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

**209. Seminar in Number Theory (1)**  
Various topics in number theory. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

**210A. Mathematical Methods in Physics and Engineering (4)**  
Complex variables with applications. Analytic functions, Cauchy's theorem, Taylor and Laurent series, residue theorem and contour integration techniques, analytic continuation, argument principle, conformal mapping,

potential theory, asymptotic expansions, method of steepest descent. **Prerequisites:** Math. 20DEF, 140A/142A or consent of instructor.

#### **210B. Mathematical Methods in Physics and Engineering (4)**

Linear algebra and functional analysis. Vector spaces, orthonormal bases, linear operators and matrices, eigenvalues and diagonalization, least squares approximation, infinite-dimensional spaces, completeness, integral equations, spectral theory, Green's functions, distributions, Fourier transform. **Prerequisite:** Math. 210A or consent of instructor. (W)

#### **210C. Mathematical Methods in Physics and Engineering (4)**

Calculus of variations: Euler-Lagrange equations, Noether's theorem. Fourier analysis of functions and distributions in several variables. Partial differential equations: Laplace, wave, and heat equations; fundamental solutions (Green's functions); well-posed problems. **Prerequisite:** Math. 210B or consent of instructor. (S)

#### **212A. Introduction to the Mathematics of Systems and Control (4)**

Linear and nonlinear systems, and their input-output behavior, linear continuous time and discrete-time systems, reachability and controllability for linear systems, feedback and stabilization, eigenvalue placement, nonlinear controllability, feedback linearization, disturbance rejection, nonlinear stabilization, Lyapunov and control-Lyapunov functions, linearization principle for stability. **Prerequisites:** Math. 102 or equivalent, Math. 120A or equivalent, Math. 142A or equivalent.

#### **212B. Introduction to the Mathematics of Systems and Control (4)**

Observability notions, linearization principle for observability. Realization theory for linear systems, observers and dynamic feedback, detectability, external stability for linear systems, frequency-domain considerations, dynamic programming, quadratic cost, state estimation and Kalman filtering, nonlinear stabilizing optimal controls, calculus of variations, and the Maximum Principle. **Prerequisite:** Math. 212A.

#### **212C. Introduction to the Mathematics of Systems and Control (4)**

Topics of current interest on systems theory, control, and estimation to be chosen by instructor. **Prerequisite:** Math. 212B.

#### **216. Topics in Pure Mathematics (4)**

This course brings together graduate students, postdocs, and faculty to examine a current research topic of broad interest. Previously covered topics include: noncommutative geometry, Loop groups, geometric quantization. **Prerequisite:** consent of instructor.

#### **217A. Topics in Applied Mathematics (4)**

In recent years, topics have included applied complex analysis, special functions, and asymptotic methods. May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

#### **220A-B-C. Complex Analysis (4-4-4)**

Complex numbers and functions. Cauchy theorem and its applications, calculus of residues, expansions of analytic functions, analytic continuation, conformal mapping and Riemann mapping theorem, harmonic functions. Dirichlet principle, Riemann surfaces. **Prerequisites:** Math. 140A-B or consent of instructor. (F,W,S)

#### **221A-B. Topics in Several Complex Variables (4-4)**

Formal and convergent power series, Weierstrass preparation theorem; Cartan-Ruckert theorem, analytic sets; mapping theorems; domains of holomorphy; proper holomorphic mappings; complex manifolds; modifications. **Prerequisites:** Math. 200A and 220A-B-C or consent of instructor.

#### **231A-B-C. Partial Differential Equations (4-4-4)**

Existence and uniqueness theorems. Cauchy-Kowalewski theorem, first order systems. Hamilton-Jacobi theory, initial value problems for hyperbolic and parabolic systems, boundary value problems for elliptic systems. Green's function, eigenvalue problems, perturbation theory.

**Prerequisites:** Math. 210A-B or 240A-B-C or consent of instructor.

#### **237A-B. Topics in Differential Equations (4-4)**

May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

#### **240A-B-C. Real Analysis (4-4-4)**

Lebesgue integral and Lebesgue measure, Fubini theorems, functions of bounded variations, Stieltjes integral, derivatives and indefinite integrals, the spaces L and C, equi-continuous families, continuous linear functionals general measures and integrations. **Prerequisites:** Math. 140A-B-C. (F,W,S)

#### **241A-B. Functional Analysis (4-4)**

Metric spaces and contraction mapping theorem; closed graph theorem; uniform boundedness principle; Hahn-Banach theorem; representation of continuous linear functionals; conjugate space, weak topologies; extreme points; Krein-Milman theorem; fixed-point theorems; Riesz convexity theorem; Banach algebras. **Prerequisites:** Math. 240A-B-C or consent of instructor.

#### **242. Topics in Fourier Analysis (4)**

A course on Fourier analysis in Euclidean spaces, groups, symmetric spaces. **Prerequisites:** Math. 240A-B-C or consent of instructor.

#### **245A. Convex Analysis and Optimization I (4)**

Convex sets and functions, convex and affine hulls, relative interior, closure, and continuity, recession and existence of optimal solutions, saddle point and min-max theory, subgradients and subdifferentials. **Prerequisites:** Math. 20F and Math. 142A, or graduate standing, or consent of instructor.

#### **245B. Convex Analysis and Optimization II (4)**

Optimality conditions, strong duality and the primal function, conjugate functions, Fenchel duality theorems, dual derivatives and subgradients, subgradient methods, cutting plane methods. **Prerequisite:** Math. 245A or consent of instructor.

#### **245C. Convex Analysis and Optimization III (4)**

Convex optimization problems, linear matrix inequalities, second-order cone programming, semidefinite programming, sum of squares of polynomials, positive polynomials, distance geometry. **Prerequisite:** Math. 245B or consent of instructor.

#### **247A-B-C. Topics in Real Analysis (4-4-4)**

In recent years, topics have included Fourier analysis, distribution theory, martingale theory, operator theory. May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

#### **248. Seminar in Real Analysis (1)**

Various topics in real analysis. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

#### **250A-B-C. Differential Geometry (4-4-4)**

Differential manifolds, Sard theorem, tensor bundles, Lie derivatives, DeRham theorem, connections, geodesics, Riemannian metrics, curvature tensor and sectional curvature, completeness, characteristic classes. Differential manifolds immersed in Euclidean space. **Prerequisite:** consent of instructor. (F,W,S)

#### **251A-B-C. Lie Groups (4-4-4)**

Lie groups, Lie algebras, exponential map, subgroup subalgebra correspondence, adjoint group, universal enveloping algebra. Structure theory of semi-simple Lie groups, global decompositions, Weyl group. Geometry and analysis on symmetric spaces. **Prerequisites:** Math. 200 and 250 or consent of instructor. (F,W,S)

#### **256. Seminar in Lie Groups and Lie Algebras (1)**

Various topics in Lie groups and Lie algebras, including structure theory, representation theory, and applications. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.) (F,W,S)

#### **257A. Topics in Differential Geometry (4)**

In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

#### **257B. Topics in Differential Geometry (4)**

In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Math. 257A must be taken before Math. 257B. **Prerequisite:** consent of instructor.

#### **257C. Topics in Differential Geometry (4)**

In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of advisor. Math. 257B must be taken before Math. 257C. **Prerequisite:** consent of instructor.

#### **258. Seminar in Differential Geometry (1)**

Various topics in differential geometry. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

#### **259A-B-C. Geometrical Physics (4-4-4)**

Manifolds, differential forms, homology, deRham's theorem. Riemannian geometry, harmonic forms. Lie groups and algebras, connections in bundles, homotopy sequence of a bundle, Chern classes. Applications selected from Hamiltonian and continuum mechanics, electromagnetism, thermodynamics, special and general relativity, Yang-Mills fields. **Prerequisite:** graduate standing in mathematics, physics, or engineering, or consent of instructor.

#### **260A. Mathematical Logic I (4)**

Propositional calculus and first-order logic. Theorem proving, Model theory, soundness, completeness, and compactness, Herbrand's theorem, Skolem-Lowenheim theorems, Craig interpolation. **Prerequisite:** graduate standing or consent of instructor.

#### **260B. Mathematical Logic II (4)**

Theory of computation and recursive function theory, Church's thesis, computability and undecidability. Feasible computability and complexity. Peano arithmetic and the incompleteness theorems, nonstandard models. **Prerequisite:** Math. 260A or consent of instructor.

#### **261A. Probabilistic Combinatorics and Algorithms (4)**

Introduction to the probabilistic method. Combinatorial applications of the linearity of expectation, second moment method, Markov, Chebyshev, and Azuma inequalities, and the local limit lemma. Introduction to the theory of random graphs. **Prerequisite:** graduate standing or consent of instructor.

#### **261B. Probabilistic Combinatorics and Algorithms II (4)**

Introduction to probabilistic algorithms. Game theoretic techniques. Applications of the probabilistic method to algorithm analysis. Markov Chains and Random walks. Applications to approximation algorithms, distributed algorithms, online and parallel algorithms. Math. 261A must be taken before Math. 261B. **Prerequisite:** Math. 261A.

#### **261C. Probabilistic Combinatorics and Algorithms III (4)**

Advanced topics in the probabilistic combinatorics and probabilistic algorithms. Random graphs. Spectral Methods. Network algorithms and optimization. Statistical learning. Math. 261B must be taken before Math. 261C. **Prerequisite:** Math. 261B.

#### **262A-B-C. Topics in Combinatorial Mathematics (4-4-4)**

Development of a topic in combinatorial mathematics starting from basic principles. Problems of enumeration, existence, construction, and optimization with regard to finite sets. Some familiarity with computer programming desirable but not required. **Prerequisites:** Math. 100A-B-C.

#### **264A-B-C. Combinatorics (4-4-4)**

Topics from partially ordered sets, Möbius functions, simplicial complexes and shell ability. Enumeration, formal power series and formal languages, generating functions, partitions. Lagrange inversion, exponential structures, combinatorial species. Finite operator methods, q-analogues, Polya theory, Ramsey theory. Representation theory of the symmetric group, symmetric functions and operations with Schur functions. (F,W,S)

#### **269. Seminar in Combinatorics (1)**

Various topics in combinatorics. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

#### 270A. Numerical Linear Algebra (4)

Error analysis of the numerical solution of linear equations and least squares problems for the full rank and rank deficient cases. Error analysis of numerical methods for eigenvalue problems and singular value problems. Iterative methods for large sparse systems of linear equations. **Prerequisites:** graduate standing or consent of instructor.

#### 270B. Numerical Approximation and Nonlinear Equations (4)

Iterative methods for nonlinear systems of equations, Newton's method. Unconstrained and constrained optimization. The Weierstrass theorem, best uniform approximation, least-squares approximation, orthogonal polynomials. Polynomial interpolation, piecewise polynomial interpolation, piecewise uniform approximation. Numerical differentiation: divided differences, degree of precision. Numerical quadrature: interpolatory quadrature, Richardson extrapolation, Romberg Integration, Gaussian quadrature, singular integrals, adaptive quadrature. **Prerequisites:** Math. 270A or consent of instructor.

#### 270C. Numerical Ordinary Differential Equations (4)

Initial value problems (IVP) and boundary value problems (BVP) in ordinary differential equations. Linear methods for IVP: one and multistep methods, local truncation error, stability, convergence, global error accumulation. Runge-Kutta (RK) Methods for IVP: RK methods, predictor-corrector methods, stiff systems, error indicators, adaptive time-stepping. Finite difference, finite volume, collocation, spectral, and finite element methods for BVP; a priori and a posteriori error analysis, stability, convergence, adaptivity. **Prerequisites:** Math. 270B or consent of instructor.

#### 271A-B-C. Numerical Optimization (4-4-4)

Formulation and analysis of algorithms for constrained optimization. Optimality conditions; linear and quadratic programming; interior methods; penalty and barrier function methods; sequential quadratic programming methods. **Prerequisite:** consent of instructor. (F,W,S)

#### 272A. Numerical Partial Differential Equations I (4)

Survey of discretization techniques for elliptic partial differential equations, including finite difference, finite element and finite volume methods. Lax-Milgram Theorem and LBB stability. A priori error estimates. Mixed methods. Convection-diffusion equations. Systems of elliptic PDEs. **Prerequisites:** graduate standing or consent of instructor.

#### 272B. Numerical Partial Differential Equations II (4)

Survey of solution techniques for partial differential equations. Basic iterative methods. Preconditioned conjugate gradients. Multigrid methods. Hierarchical basis methods. Domain decomposition. Nonlinear PDEs. Sparse direct methods. **Prerequisites:** Math. 272A or consent of instructor.

#### 272C. Numerical Partial Differential Equations III (4)

Time dependent (parabolic and hyperbolic) PDEs. Method of lines. Stiff systems of ODEs. Space-time finite element methods. Adaptive meshing algorithms. A posteriori error estimates. **Prerequisites:** Math. 272B or consent of instructor.

#### 273A. Advanced Techniques in Computational Mathematics I (4)

Models of physical systems, calculus of variations, principle of least action. Discretization techniques for variational problems, geometric integrators, advanced techniques in numerical discretization. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. **Prerequisite:** graduate standing or consent of instructor.

#### 273B. Advanced Techniques in Computational Mathematics II (4)

Nonlinear functional analysis for numerical treatment of nonlinear PDE. Numerical continuation methods, pseudo-arclength continuation, gradient flow techniques, and other advanced techniques in computational nonlinear PDE. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. **Prerequisite:** Math. 273A or consent of instructor.

#### 273C. Advanced Techniques in Computational Mathematics III (4)

Adaptive numerical methods for capturing all scales in one model, multiscale and multiphysics modeling frameworks, and other advanced techniques in computational multiscale/multiphysics modeling. Project-oriented; projects designed around problems of current interest in science, mathematics, and engineering. **Prerequisite:** Math. 273B or consent of instructor.

#### 274. Numerical Methods for Physical Modeling (4)

(Conjoined with Math. 174.) Floating point arithmetic, direct and iterative solution of linear equations, iterative solution of nonlinear equations, optimization, approximation theory, interpolation, quadrature, numerical methods for initial and boundary value problems in ordinary differential equations. Students may not receive credit for both Math. 174 and PHYS 105, AMES 153 or 154. Students may not receive credit for Math. 174 if Math. 170A, B, or C has already been taken. Graduate students will complete an additional assignment/exam. **Prerequisites:** Math. 20D or 21D, and either Math. 20F or Math. 31AH, or consent of instructor.

#### 275. Numerical Methods for Partial Differential Equations (4)

(Conjoined with Math. 175.) Mathematical background for working with partial differential equations. Survey of finite difference, finite element, and other numerical methods for the solution of elliptic, parabolic, and hyperbolic partial differential equations. Formerly Math. 172; students may not receive credit for Math. 175/275 and Math. 172. Graduate students will do an extra paper, project, or presentation, per instructor. **Prerequisite:** Math. 174 or Math. 274 or consent of instructor.

#### 276. Numerical Analysis in Multi-Scale Biology (4)

(Cross-listed with BENG 276/CHEM 276.) Introduces mathematical tools to simulate biological processes at multiple scales. Numerical methods for ordinary and partial differential equations (deterministic and stochastic), and methods for parallel computing and visualization. Hands-on use of computers emphasized, students will apply numerical methods in individual projects. **Prerequisite:** consent of instructor.

#### 277A. Topics in Computational and Applied Mathematics (4)

Topics vary from year to year. May be repeated for credit with consent of advisor. **Prerequisite:** graduate standing or consent of instructor.

#### 277B. Topics in Numerical Mathematics (4)

Topics vary from year to year. May be repeated for credit with consent of advisor. **Prerequisite:** consent of instructor.

#### 278A. Seminar in Computational Mathematics (1)

Various topics in computational mathematics. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

#### 278B. Seminar in Mathematical Physics/PDE (1)

Various topics in mathematical physics and partial differential equations. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

#### 279. Projects in Computational and Applied Mathematics (4)

(Conjoined with Math. 179.) Mathematical models of physical systems arising in science and engineering, good models and well-posedness, numerical and other approximation techniques, solution algorithms for linear and nonlinear approximation problems, scientific visualizations, scientific software design and engineering, project-oriented. Graduate students will do an extra paper, project, or presentation per instructor. **Prerequisite:** Math. 174 or Math. 274, or consent of instructor.

#### 280A-B-C. Probability Theory (4-4-4)

Probability measures; Borel fields; conditional probabilities, sums of independent random variables; limit theorems; zero-one laws; stochastic processes. **Prerequisites:** advanced calculus and consent of instructor. (F,W,S)

#### 281A. Mathematical Statistics (4)

Statistical models, sufficiency, efficiency, optimal estimation, least squares and maximum likelihood, large

sample theory. **Prerequisites:** advanced calculus and basic probability theory or consent of instructor.

#### 281B. Mathematical Statistics (4)

Hypothesis testing and confidence intervals, one-sample and two-sample problems. Bayes theory, statistical decision theory, linear models and regression. **Prerequisites:** advanced calculus and basic probability theory or consent of instructor.

#### 281C. Mathematical Statistics (4)

Nonparametrics: tests, regression, density estimation, bootstrap and jackknife. Introduction to statistical computing using S plus. **Prerequisites:** advanced calculus and basic probability theory or consent of instructor.

#### 282A-B. Applied Statistics (4-4)

Sequence in applied statistics. First quarter: general theory of linear models with applications to regression analysis. Second quarter: analysis of variance and covariance and experimental design. Third quarter: further topics to be selected by instructor. Emphasis throughout is on the analysis of actual data. **Prerequisite:** Math. 181B or equivalent or consent of instructor. (S/U grades permitted.)

#### 283. Statistical Methods in Bioinformatics (4)

This course will cover material related to the analysis of modern genomic data; sequence analysis, gene expression/functional genomics analysis, and gene mapping/applied population genetics. The course will focus on statistical modeling and inference issues and not on database mining techniques. **Prerequisites:** one year of calculus, one statistics course or consent of instructor.

#### 285. Stochastic Processes (4)

Elements of stochastic processes, Markov chains, hidden Markov models, martingales, Brownian motion, Gaussian processes. **Prerequisite:** Math. 180A (or equivalent) or consent of instructor.

#### 286. Stochastic Differential Equations (4)

Review of continuous martingale theory. Stochastic integration for continuous semimartingales. Existence and uniqueness theory for stochastic differential equations. Strong Markov property. Selected applications. **Prerequisite:** Math. 280A-B or consent of instructor.

#### 287A. Time Series Analysis (4)

Discussion of finite parameter schemes in the Gaussian and non-Gaussian context. Estimation for finite parameter schemes. Stationary processes and their spectral representation. Spectral estimation. **Prerequisite:** Math. 181B or equivalent or consent of instructor.

#### 287B. Multivariate Analysis (4)

Bivariate and more general multivariate normal distribution. Study of tests based on Hotelling's  $T^2$ . Principal components, canonical correlations, and factor analysis will be discussed as well as some competing nonparametric methods, such as cluster analysis. **Prerequisite:** Math. 181B (or equivalent) or consent of instructor.

#### 287C. Advanced Time Series Analysis (4)

Nonparametric function (spectrum, density, regression) estimation from time series data. Nonlinear time series models (threshold AR, ARCH, GARCH, etc.). Nonparametric forms of ARMA and GARCH. Multivariate time series. **Prerequisite:** Math. 287B or consent of instructor.

#### 287D. Statistical Learning (4)

Topics include regression methods: (penalized) linear regression and kernel smoothing; classification methods: logistic regression and support vector machines; model selection; and mathematical tools and concepts useful for theoretical results such as VC dimension, concentration of measure, and empirical processes. **Prerequisite:** Math. 287C or consent of instructor.

#### 288. Seminar in Probability and Statistics (1)

Various topics in probability and statistics. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

#### 289A-B. Topics in Probability and Statistics (4-4)

In recent years, topics have included Markov processes, martingale theory, stochastic processes, stationary and Gaussian processes, ergodic theory. May be repeated for credit with consent of advisor.

**290A-B-C. Topology (4-4-4)**

Point set topology, including separation axioms, compactness, connectedness. Algebraic topology, including the fundamental group, covering spaces, homology and cohomology. Homotopy or applications to manifolds as time permits. **Prerequisites:** Math. 100A-B-C and Math. 140A-B-C. (F,W,S)

**291A-B-C. Topics in Topology (4-4-4)**

In recent years, topics have included generalized cohomology theory, spectral sequences, K-theory, homotopy theory. **Prerequisite:** consent of instructor.

**292. Seminar in Topology (1)**

Various topics in topology. **Prerequisite:** graduate standing or consent of instructor. (S/U grade only.)

**294. The Mathematics of Finance (4)**

Introduction to the mathematics of financial models. Hedging, pricing by arbitrage. Discrete and continuous stochastic models. Martingales. Brownian motion, stochastic calculus. Black-Scholes model, adaptations to dividend paying equities, currencies and coupon-paying bonds, interest rate market, foreign exchange models. **Prerequisite:** Math. 180A (or equivalent probability course) or consent of instructor.

**295. Special Topics in Mathematics (1 to 4)**

A variety of topics and current research results in mathematics will be presented by staff members and students under faculty direction.

**296. Student Colloquium (1 to 2)**

A variety of topics and current research in mathematics will be presented by guest lecturers and students under faculty direction. **Prerequisites:** for one unit—upper-division status or consent of instructor (may only be taken P/NP), or graduate status (may only be taken S/U); for two units—consent of instructor, standard grading option allowed.

**297. Mathematics Graduate Research Internship (2-4)**

An enrichment program which provides work experience with public/private sector employers and researchers. Under supervision of a faculty advisor, students provide mathematical consultation services. **Prerequisites:** consent of instructor.

**299. Reading and Research (1 to 12)**

Independent study and research for the doctoral dissertation. One to three credits will be given for independent study (reading) and one to nine for research. **Prerequisite:** consent of instructor. (S/U grades permitted.)

**TEACHING OF MATHEMATICS****500. Apprentice Teaching (1 to 4)**

Supervised teaching as part of the mathematics instructional program on campus (or, in special cases such as the CTF program, off campus). **Prerequisite:** consent of advisor. (S/U grades only.)

**501. Seminar in Teaching Development (1)**

A seminar designed for graduate students serving as teaching assistants in mathematics. Includes discussion of teaching theories, techniques, and materials with a focus on career development. **Prerequisite:** graduate standing or consent of instructor. (S/U grades only.)

## THE JOINT DOCTORAL PROGRAM

UC San Diego and San Diego State University have created this innovative program for students who already have a master's degree in biology, chemistry, mathematics, or physics. In this program, students will complement their discipline knowledge with studies of how people learn mathematics and science. The UCSD Joint Doctoral Group in Mathematics and Science Education currently consists of faculty from the Division of Biological Sciences and the Departments of Chemistry and Biochemistry, Cognitive Science, Communication, Mathematics, Philosophy, Physics, Psychology, and Sociology. The SDSU Program faculty is drawn from the Departments of Biology, Mathematical Sciences, Natural Sciences, Physics, Psychology, and the School of Education.

The program includes research, practical applications, and formal course work. Students must commit to at least four years to the program, and most students will complete the program in four to five years. An individualized course of study will be designed for each student, depending on the student's background and interests.

The graduates of this program will be able to contribute to the developing body of knowledge about human cognitive processes in mathematics and science. They will be expected to maintain a strong connection to educational practice through

teaching and application of research results on learning to instructional situations.

Information regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University.

## PH.D. TIME LIMIT POLICIES

All time limits for this program start when a student first registers in this program. Students must be advanced to candidacy by the end of four years. Total university support to students in this program cannot exceed five years. Total registered time in this program cannot exceed six years. The normative time in this program is five years.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

**MSED 290. Issues in Science Education Research (4)**  
Survey of recent literature highlighting critical issues in science education research. Specific focus on research in biology education, chemistry education, and physics education. Theoretical perspectives and research methodology (both qualitative and quantitative) used to understand learning will be discussed. **Prerequisites:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master's degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor.

**MSED 295. Orientation Practicum (2-6)**  
This course should be taken the first year. Each practicum lasts five weeks and is designed to inform students about a faculty member's research program. Assignment as a research assistant may be used as one practicum. **Prerequisite:** admission to MSED Joint Doctoral Program.

**MSED 296A. Theories and Applications of Mathematics and Science Education (4)**  
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. **Prerequisites:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master's degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor.

**MSED 296B. Theories and Applications of Mathematics and Science Education (4)**  
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three-quarter sequence. **Prerequisites:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master's degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor. MSED 296A must be taken before MSED 296B.

**MSED 296C. Theories and Applications of Mathematics and Science Education (4)**  
The course is designed to cover several major themes in mathematics and science education. It will address theories and applications of cognition, teaching and learning, and curriculum, with particular emphasis on international perspectives. This is a three quarter sequence. **Prerequisites:** admission to the Joint Doctoral Program in Mathematics and Science Education or a master's degree in biology, chemistry/biochemistry, mathematics, or physics with consent of instructor. MSED 296B must be taken before MSED 296C.

**MSED 297. Special Topics in Math and Science Education (1-4)**  
Study of special topics in mathematics or science education under direction of a faculty member. **Prerequisite:** consent of instructor.

**MSED 298. Research Project (2-12)**  
Students will work on an independent research project under the supervision of MSED faculty.

**MSED 299. Reading and Research (1-12)**  
Students will do independent study and research in preparation of their doctoral dissertation under the supervision of MSED faculty.

## THE MINOR

The minor in Middle East studies is an interdisciplinary program aimed at a comparative study of the Middle East (including North Africa).

The program consists of seven courses, of which at least five must be upper-division courses. Three courses have to deal with the Middle East since the emergence of Islam, as listed here under "[Core Courses](#)." The remaining courses may be chosen from either the Core Courses or the Supporting Courses; and they may be courses dealing with the ancient, medieval, or modern Middle East or a three-quarter sequence of a Middle Eastern language (in which case only four of the seven courses need to be upper-division). Ordinarily, all seven courses must be taken for a letter grade.

The courses that make up the minor must be approved by the student's college and by the Middle East Studies Program.

Approved courses taken at other universities or through participation in the Education Abroad Program can be included as part of the minor by petition.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### CORE COURSES

**ANTH 199. Independent Study (Middle East Anthropology)**  
**ANSC 133. Peoples and Culture of the Middle East**  
**HINE 108. The Middle East before Islam**  
**HINE 114. History of the Islamic Middle East**  
**HINE 116. The Middle East in the Age of European Empires**  
**HINE 118. The Middle East in the Twentieth Century**  
**HINE 166. Nationalism in the Middle East**  
**HINE 186. Special Topics in Middle Eastern History**  
**HINE 199. Independent Study in Near Eastern History**  
**HITO 105. Jews and Judaism in the Modern World**  
**LTWL 141. Islam and Modernity**  
**LTWL 160. Women in Literature: Arabic Women in Literature & Society**  
**POLI. 121. Government and Politics of the Middle East**  
**POLI. 138D. Special Topics/Comparative Politics: The Arab-Israeli Conflict**  
**Soc./D 122. Jerusalem: Sacred and Profane**  
**SOCI 158. Islam in the Modern World**  
**SOCI 188F. Modern Jewish Societies and Israeli Society**  
**SOCI 199. Independent Study (Middle East Sociology)**  
**TWS 25. Third-World Literatures**

### SUPPORTING COURSES

**ANAR 140. Foundations/Social Complex/Near East**  
**ANAR 141. Prehistory of the Holy Land**  
**ANTH 3. World Prehistory**  
**JUDA 1. Beginning Hebrew**  
**JUDA 2. Intermediate Hebrew**  
**JUDA 3. Intermediate Hebrew Continued**  
**JUDA 101. Introduction to Hebrew Texts**  
**JUDA 102. Intermediate Hebrew Texts**  
**JUDA 103. Advanced Hebrew Texts**  
**HINE 102. The Jews in Their Homeland in Antiquity**  
**HINE 104. The Bible and the Ancient Near East**  
**HINE 106. The Bible and the Near East: The Writings**  
**HINE 160. Special Topics in the Bible and the Ancient Near East**  
**HINE 170. Special Topics in Jewish History**  
**LIAB 1A. Beginning Arabic**  
**LIAB 1B. Beginning Arabic**  
**LIAB 1C. Elementary Arabic**  
**LIAB 1D. Elementary Arabic**  
**LIHL 116. Arabic for Arabic Speakers**

## THE GRADUATE PROGRAM

**The Molecular Pathology Program is closed for entrance of new students as of the 2008 academic year. The program has been integrated into the Biomedical Sciences Program as a track in the Biomedical Sciences Program.**

The goal of the molecular pathology program is to produce outstanding researchers focused on the molecular basis of human disease who also understand disease at levels of histology and pathology. The molecular pathology graduate program is an interdepartmental and interinstitutional program administered by the UC San Diego Department of Pathology in affiliation with the Burnham Institute. The program provides a comprehensive knowledge of normal and abnormal biological processes, with a particular emphasis on the molecular mechanisms of human diseases. Faculty research focuses on determining how normal cellular processes are altered in human disease. Research falls within six areas: cancer

cell biology; stem cell and developmental biology; neurobiology and neurologic disease; structural biology and signal transduction; microbiology and immunology; and cardiovascular, muscle, and organ development/disease. Most program faculty reside in the Departments of Pathology, Medicine, and Pediatrics at the UCSD School of Medicine, in the Burnham Institute, and in The Scripps Research Institute.

## COURSE WORK

The core science curriculum includes classes in Molecular Biology of the Cell, Methods in Cellular and Molecular Pathology, The Molecular Pathology of Cancer, and Neurologic and Muscle Disease. Learning is focused on reading and evaluating current scientific literature, with special attention to identifying the major open questions within a field and designing an effective experimental plan to answer these questions. Two elective classes (6 units total) are required. Electives taught by program faculty are offered in Microbial Pathogenesis (4 units) and Mouse Models for Human Disease (2 units). Electives may also be selected from graduate-level courses offered by other medical school programs or by other campus departments (e.g., Division of Biological Sciences, Department of Chemistry and Biochemistry, and Department of Bioengineering). This option allows students the opportunity to acquire advanced training in areas they have selected for graduate research. Popular electives are Molecular Modeling, Macromolecular Recognition, Molecular Biology of the Cardiovascular System, and graduate-level courses in Signal Transduction, Immunology, Animal Virology, Developmental Biology, Genetics, and Neurobiology. An education in histology and pathology is acquired by taking the School of Medicine course in Histology and an overview course in human pathology developed by pathology faculty for molecular pathology and pharmacy students. Students may elect to take in-depth pathology training in their particular disease(s) of interest by attending a set of comprehensive lectures (eight to twelve) taught as part of the comprehensive medical school pathology curriculum. Concurrent with their thesis research, third-year students can acquire a practical consideration of the clinical treatment of disease by attending pathology conferences: Breast Pathology Conference, Tumor Board, Pediatric Autopsy, Neuropathology "Brain-Cutting" Conference, Infectious Disease Rounds, or Hematology Conference. In such conferences, students learn how disease presents and progresses, how physicians currently treat disease, what the practical obstacles are in disease treatment, and where opportunities are for development of molecular therapeutics.

## EXAMINATIONS

### **First Qualifying Examination (Minor Proposition)**

The purpose of this examination is to test the student's ability to choose a research problem in molecular pathology and to propose an experimental approach to its solution. The problem should be unrelated to the student's thesis project. The student is expected to demonstrate knowledge in molecular

biology and basic pathology. The first qualifying examination will be taken by the end of the fall quarter of the second year.

### **Second Qualifying Examination (Major Proposition)**

The second qualifying examination, a university requirement, consists of an oral report by the student about research accomplished and the goals to be achieved for completion of the examination, the student will advance to candidacy. The second qualifying examination should be complete by the end of the third year and must be completed by the end of the fourth year.

### **DEPARTMENTAL PH.D. TIME LIMIT POLICIES**

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

## **COURSES**

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

### **SPPS 215. Human Disease (3)**

This introduction to human disease includes etiology and mechanisms of common disease states and integrates pathology with previous core curriculum. Students will focus on an understanding of disease processes and the dynamics of changes related to drug therapy. **Prerequisites:** admission to the School of Pharmacy and Pharmaceutical Sciences, or admission to the Molecular Pathology Graduate Program, or consent of instructor.

### **PATH 220. Drugs and Disease: Nervous System Disease and Therapy (4)**

This course will explore the molecular pathology associated with various diseases other than cancer. Emphasis will be placed on understanding the aberrant cellular processes, caused by mutation or environmental factors, that are associated with the disease state. Cardiovascular, neurological, immunological, and other diseases will be investigated.

### **PATH 221. Molecular Pathology of Cancer (4)**

The purpose of this course is to present exciting new developments in molecular carcinogenesis, with particular emphasis on oncogene expression and functions of oncogenic proteins. The relevance of molecular mechanisms for understanding human cancer will be discussed.

### **PATH 222. Microbial Pathogenesis (4)**

Topics covered in this course include molecular and cellular mechanisms of viral, bacterial, and protozoan pathogenesis. Host response and microbial mechanisms of host defense will also be discussed. Sessions will consist of faculty and student presentations of current literature.

### **PATH 223. Mouse Models of Human Disease (2)**

This course provides an overview of the use of mouse models in biomedical research. Sessions will cover general mouse biology, genetics, and technologies for generating mutant mice; and will focus on model selection, methodological approaches, data interpretation, experimental design, and ethics of animal research. Student participation and discussion will be encouraged. **Prerequisite:** graduate standing or consent of instructor.

### **PATH 225. Molecular Pathology Research Seminars (2)**

This course presents developments in cellular and molecular pathology research. Both faculty and students actively participate in the individual sessions. All students are required to give one to two formal presentations (under

faculty supervision) during the year. The relevance of molecular mechanisms for understanding human disease will be discussed. **Prerequisite:** consent of instructor.

### **PATH 228/PHAR 228/BIOM 228. Modern Drug Discovery Technologies (2)**

Drug discovery is an emerging science available to academic investigators. This course provides an overview of these drug discovery techniques, including high throughput screening, cell-based screening, computational methods of lead compound discovery, and chemical methods of optimization. **Prerequisite:** graduate student status or consent of graduate program director.

### **PATH 230G. Molecular Biology of the Cell (6)**

This course offers a concise overview of the biochemical basis of gene expression and of diverse signal transduction pathways, and integrates this background in the context of cellular processes such as cell division, development, cell-cell interactions, and inflammation. This course will highlight recent discoveries in cellular and molecular biology and will highlight human diseases that result from inappropriate regulation of cellular processes.

### **PATH 231. Modern Methods in Molecular and Cell Biology (4)**

This course presents key concepts and methodologies used in cellular and molecular pathology research. Topics include protein purification, biochemical characterization, identification of post-translational modifications, DNA/protein microinjection, immunofluorescence, digital imaging, electron microscopy, stem cell culture, gene/promoter analysis, protein-protein interaction analysis using the yeast 2-hybrid system, transgenic and knockout mouse construction, analysis of bacterial virulence factors, and genomic/proteomic approaches to disease analysis.

### **PATH 232. Statistical Methods and Experimental Design (2)**

This course will emphasize the relationships between experimental design, statistical methods, and biomedical research. The content of the course will include basic issues in experimental design and commonly used statistical methods. The assumptions behind the statistical tests, their appropriate use, and examples of misuse will be discussed.

### **PATH 296. Directed Reading (1–4)**

Reading and laboratory study of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases.

### **PATH 299. Independent Study or Research (1–12)**

Independent study or research.

### **SOM 213. Histology (2)**

This course teaches the structural basis of normal and abnormal function at the cellular and tissue levels. Emphasis is based on microscopic study conducted in small laboratory groups under close faculty supervision.

### **SPPS 215. Human Disease (3)**

This introduction to human disease includes etiology and mechanisms of common disease states and integrates pathology with previous core curriculum. The focus will be to understand disease processes and the dynamics of changes related to drug therapy. Our goal is to give the student an overview of the illnesses and disorders of human organs, systems and functions, in other words, human disease, with the hope that this background will lead the students to clinical understanding of patients and future insight into the pathogenesis of disease and new treatments. This course will include general pathology and system based pathology, taught in lecture, case discussion, and lab format.

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

OFFICE: Provost, Muir College  
2126 Humanities and Social Sciences Building

### THE WRITING PROGRAM

OFFICE: 2346 Humanities and Social Sciences Building, Muir College  
(858) 534-2522

<http://muir.ucsd.edu/muir-writing>

The Muir College Writing Program is a sequence of courses in critical thinking and writing during which students must advance beyond the basic competency expected at entrance to understand and write discourse acceptable at the university level. Even when faced with challenging topics, students must demonstrate the ability to comprehend textual arguments at more than a superficial level; their writing must exhibit an understanding of academic arguments including focused theses, systematic methods of analysis and argumentation, awareness of audience, strong organization and development, clear presentation of ideas, appropriate syntax and diction, and—needless to say—correct grammar and usage.

To achieve these ends, the courses focus on principles of analysis and reasoned argumentation. Students will learn to identify underlying assumptions and values in arguments from such fields as the sciences, social and behavioral sciences, and the humanities. They will then write reasoned arguments of their own. Students will also write annotated bibliographies, paper proposals, and research papers as appropriate. In addition, students learn to monitor and adapt their own writing processes. Since the ability to evaluate one's own writing and carry out appropriate revision strategies is crucial to effective writing and argument, all students are required to revise their papers several times. Attention is devoted to developing skill in evaluation and revision in classes and in individual conferences with instructors. Sections of MCWP 50 vary in theme and content, giving students the opportunity to write in areas that interest them or that may be relevant to their major fields. (Descriptions of the MCWP 50 sections are available each quarter in the Muir Writing Program office during pre-enrollment.)

Students are required to take both MCWP 40 and MCWP 50 for a letter grade in their first year of residence at the college. All transfer students, upon satisfaction of Subject A, must take MCWP 40 and MCWP 50 in their first year of residence. In cases where more than one quarter of practice is needed to prepare a student for MCWP 50, an IP grade is given in MCWP 40, and the student takes MCWP 41. MCWP 41 is then followed by MCWP 50. Completion of the sequence allows students to meet the Muir College writing requirement.

IGETC and TAG certified transfer students: Please contact the Muir Writing Program Office.

#### 199. Muir Special Project (4-16)

A course of independent work on a research or creative project to satisfy a Muir graduation requirement. (Only Muir students who have had Muir Special Project proposals approved may enroll in this course.) Students wishing to enroll must submit a written request with a description of the project. (Muir students must submit the Muir Special Project 199 form to the major advisor and to the Office of the Provost by the seventh week of the quarter prior to the quarter in which the 199 is to be undertaken. For information on other requirements, consult the provost's office.) **Prerequisites:** upper-division status, approval by project advisor and by provost. (Letter grades only.)

#### MCWP 40. Critical Writing (4)

First course of sequence in university reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students who have not completed a comparable course elsewhere. MCWP 40 introduces students to the basic elements of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. Those who need additional work to prepare for MCWP 50 will be given a grade of IP and will be required to take MCWP 41. **Prerequisite:** satisfaction of the UC Entry Level Writing requirement.

#### MCWP 41. Special Study in Writing (4)

An individualized writing class including both class discussion and tutorials. Students confer individually with instructors on a regular weekly basis to talk about writing problems. The course is designed for students who have taken MCWP 40 or its equivalent but need additional writing practice to prepare for MCWP 50. MCWP 41 does not satisfy the first part of the Muir Writing requirement. MCWP 41 must be taken for a letter grade and must be taken within two quarters of MCWP 40. **Prerequisite:** MCWP 40 or its equivalent.

#### MCWP 50. Critical Writing (4)

Second course of sequence in reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students. MCWP 50 focuses on advanced skills of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. **Prerequisite:** satisfaction of MCWP 40 requirement or completion of TAG or IGETC agreement.

#### MCWP 125. Argument and Analysis (4)

An advanced course in argumentation and analysis, with particular attention both to constructing arguments and analyzing the logic and rhetoric of others' arguments. Students will engage in close reading of texts, weekly writing and revision, and individual conferences. A course specially designed for and required of transfer students who enter Muir College under the aegis of TAG or IGETC. **Prerequisite:** departmental approval.

# Music

## PROFESSORS

Charles R. Curtis, M.M.  
Anthony C. Davis, B.A.  
Mark Dresser, M.A.  
John W. Fonville, D.M.A.  
Aleck Karis, M.M.  
Philip C. Larson, M.M.  
Philippe Manoury, Dip. Mus.  
F. Richard Moore, Ph.D.  
Susan Narucki, B.A.  
János Négyesy, Dip. Mus.

Gerald J. Balzano, Ph.D.  
David Borgo, Ph.D.  
Shlomo Dubnov, Ph.D.  
Nancy Guy, Ph.D.  
Jane R. Stevens, Ph.D.

## ASSISTANT PROFESSORS

Anthony Burr, D.M.A.  
Lei Liang, Ph.D.  
Katharina Rosenberger, D.M.A.

## LECTURERS

Kenneth Anderson  
David Chase, D.M.A.  
Kamau Kenyatta, B.A.  
Colin McAllister, D.M.A.  
Kartik Seshadri, M.B.A.  
Robert Zelikman, M.F.A.

## MUSIC TECHNOLOGY DIRECTOR

Peter Otto, M.F.A., *Director (Lecturer)*  
Tom Erbe, B.S., *Studio Director (Lecturer)*

OFFICE: Conrad Prebys Music Center  
<http://music.ucsd.edu>

This department is dedicated to the development of musical intelligence and capacity, centering its quest on the music of our own time. The undergraduate programs intend to enhance the exercise and comprehension of the music-making process. The graduate programs aim to educate practitioners and

researchers who can nourish the entire domain of music as well as extend its boundaries.

## RESOURCES

### PERFORMANCE/PRODUCTION OPPORTUNITIES

Performing in front of an audience is an essential part of the performance program; composers too must hear their works performed. Both performance and non-performance students are encouraged to participate in ensembles, festivals, and collaborative events. Practice facilities include grand pianos, disclaviers and uprights, an electronic keyboard lab, several harpsichords, a wide array of percussion instruments, a percussion studio, and instruments for student checkout.

Each academic year, more than 150 public concerts are presented in well-equipped venues: Mandeville Center Auditorium (792 seats), Mandeville Recital Hall (150 seats), Erickson Hall (150 seats), and Studio A (100 seats). Substantial resources and staffing are dedicated to performances of faculty and student works by new music ensembles, experimental and improvisational ensembles, student performance collectives (New Music Forum, Performers' Forum, and IS Forum), and at an annual graduate Spring Festival.

Our concert calendar can be viewed at <http://music.ucsd.edu/events>.

### Ensembles in Residence

- Chamber Music Advanced
- Chamber Singers
- Concert Choir
- Gospel Choir
- Ensemble Realizations of Unconventionally Notated Scores
- Improvisation Ensemble
- Jazz Ensembles
- La Jolla Symphony and Chorus
- redfishbluefish
- Wind Ensemble
- World Music (Sitar & Tabla)
- Indian classical music

### Visiting Artists/Artist in Residence

Visiting artists and artists-in-residence play an integral part in research and collaborate with faculty and students in focus seminars, concerts, weeklong festivals, and colloquia, bringing an array of new creativity and ideas. Recent special events included Powering Up/Powering Down, an international festival of radical media arts, and the IS Intermedia Festival, featuring sound installation, performance, and critical theory.

### Music Technology Facilities

The Department of Music maintains highly sophisticated, continuously upgraded facilities for the

support of graduate and undergraduate instruction. <http://music.ucsd.edu/facilities/>

*Computer Music Instructional Laboratory (CMIL)*—Established in 1987 to support undergraduate and graduate studies in computer music, CMIL is a 900-square-foot facility with recessed storage and printing areas, machine isolation, acoustical treatments, a presentation console, ergonomic workstation components, a high-resolution data projection system, CD and DVD authoring, and integrated digital audio equipment for student access to audio processing, duplicating, high-definition digital mixing and high-quality (Dynaudio) multichannel audio monitoring. The facility provides adequate space for instrumental rehearsal and interfacing experimentation, and provides several FireWire interfaces for laptop computing. Mobile desktop systems optimized for live performance applications are also maintained in CMIL.

Our server has high-speed network and wireless connections, mass storage, and archiving systems. Intel and Macintosh computer workstations run unique music software packages developed at UC San Diego. Pd is a new, real-time, interactive musical and graphics programming environment written and under continuing development by Professor Miller Puckette. Other audio and graphics editing and processing software packages are also supported, including Pro Tools HD, development compilers, and several standard music-production packages. The facility is configured and optimized to support direct connection of musical instruments to computers for prototyping of real-time interactive performance and compositional projects using MAX/MSP/Jitter and Pd computer music software. The facility is also used for advanced seminars and classes in such topics as sound spatialization, music software programming, computer music techniques, repertoire analysis, and research.

*Digital Music Project Studio*—This is a 900-square-foot facility, including an isolation booth, absorption and diffusion treatments, data connections, and audio tie-lines to CMIL and Erickson Hall. The studio houses Macintosh and Linux systems and many dedicated devices for music production and recording, including a Pro Tools HD digital audio production package with sixteen channels of digital I/O for precise digital recording and editing. Recent upgrades include improved microphone preamps and an array of new software packages, including Waves plug-ins and convolution reverb. The studio features a Yamaha 02R96 digital mixing console with all upgrades, 5.1 and stereo monitoring, and sound-for-picture capabilities. The studio supports MIDI for synthesis, processing, and control in music composition and performance, and includes hardware and software for CD and DVD mastering.

*Open Computing Laboratory (OCL)*—This facility occupies 1,950 square feet, with audio and printer connections to CMIL and the Digital Music Project Studio. Most workstations are networked, and several stations are equipped with CD and DVD burning equipment. OCL was established in 1990 to support many facets of the department curriculum, and has been upgraded incrementally every year thereafter. It now comprises seventeen computer workstations (iMacs, desktop G4s and G5s, and several Intels), most with MIDI interfaces and

Yamaha SY22/33 synthesizers. Coda Finale, Max/MSP, Soundhack, Metasynth, DVD Studio Pro, Final Cut, Pd, Pro Tools, and IRCAM Forum are some of the packages supported in the lab. Large-format music and text printing are supported. For instructional presentation, the room features a high-quality data projection and surround sound system. The presentation station also features a PC workstation, a G5 Mac with Pro Tools editing, DAT, Bias Peak editor and SpectraFoo, signal display software, and DVD-authoring software burner.

**Media Networking**—All instructional labs and all of the Department of Music's performance spaces and classroom spaces have been upgraded for wireless and fast Ethernet and media networking. Media networking allows advanced students and researchers to "stream" digital video and audio among diverse on-campus facilities and onto the Internet. Additionally, there is wireless connectivity at most campus locations. All UCSD music production and research facilities are designed for ease of data portability and as complementary components of a powerful, well-designed, thoroughly integrated continuum of resources serving the needs of entering students through postdoctorate students and faculty researchers.

**Music Technology Equipment Checkout**—The music department maintains an inventory of technology equipment available to music majors and graduate students for overnight and weekend checkout. Equipment includes laptop computers with music software installed, FireWire audio interfaces, MIDI keyboards and interfaces, microphones, cables, and other recording and production sound equipment. This equipment is provided primarily to support class-related, dissertation, thesis and ICAM senior projects.

**Concert Recording and CD Releases**—All faculty and most student concerts are recorded by professional staff or their assistants, and qualified students can utilize the department's extensive high-tech resources for experimental projects resulting in public performance and recordings of new works. Regularly released CDs, under advisement by faculty mentors, feature advanced graduate students who perform, compose, edit, and collaborate to produce a snapshot of musical achievement that predicts distinguished careers and new avenues of musical thought and practice.

**Music Center Studios**—The Department of Music has a state-of-the-art recording and faculty research complex, completely refurbished in 2004-05, with studios designed to meet the following objectives:

- Serve as an unsurpassed facility for recording and mastering classical and contemporary music.
- Serve as a reference-critical listening space for the evaluation of audio production.
- Support faculty research in psychoacoustics, computer music, and digital signal processing (DSP) for audio.

The facility incorporates two large recording studios (50 x 60 feet) with variable wall and floor surfaces for diverse acoustical configurations, a control room (20 x 30 feet), an isolated machine room, and other support spaces. Music center studios host live performances as well as six-camera video shoots, and are well suited for high-tech presentations and

concert recording. A 120-dimmer grid with a digital lighting board supports theatrical lighting for performance, and for television and video production.

The control room features highly refined acoustical qualities and new all-digital mixing and editing systems including Pyramix and Pro Tools HD. ATC monitoring systems have been upgraded for surround sound. An excellent range of microphones supports an unusual array of recording possibilities; a fine selection of pianos, percussion, and electronic instruments is also part of the holdings of the complex. Grad students may apply for staff positions and recording-project support at music center studios, and ICAM majors may apply for engineering and production internship credits. The department's instructional labs are designed to serve as networked, media-compatible satellites to the music center studios. <http://music.ucsd.edu/facilities>

### **Center for Research in Computing and the Arts (CRCA), and California Institute for Telecommunications and Information Technology (Calit2)**

The Center for Research in Computing and the Arts (CRCA) is an organized research unit of UCSD. Historically rooted in the Center for Music Experiment (CME), CRCA now exists to foster collaborative working relationships among a wide array of artists, scientists, and technologists by identifying and promoting projects in which common research interests may be advanced through computing.

Music projects at CRCA cover a wide spectrum, from pure research to technically advanced creative endeavors. Current research includes, but is not limited to, interactive multimedia and performance, digital audio and synthesis techniques, video/image processing, spatial audio, computer music languages, virtual environments, robotics, computer composition, installation, artificial intelligence, and Web art.

CRCA offers a broad array of events in its facilities, reflecting the research and artistic expression of faculty, students, associates, and visiting scholars. Research residencies and fellowships are available for undergraduate and graduate students on an annual, competitive basis.

In fall 2005 CRCA moved into its new home in the Media Arts wing of UCSD's new Calit2 building. This impressive new structure houses offices, labs, and performance spaces on a world-class stage that places CRCA at the crossroads of artistic and technical innovation. CRCA affiliates work alongside leading researchers in the areas of wireless communications, computer imaging, signal processing, bioinformatics, chip design, immersive media, and a host of new and emerging disciplines. <http://www.crca.ucsd.edu>; <http://www.calit2.net/>

### **Music Library**

The Music Library (located in Geisel Library) maintains extensive collections of materials in all areas of music, and is known internationally for contemporary music holdings. Ethnic music collections are aggressively being expanded. The Music Library's Services Room has fifty-two stations for playback of the recordings collection, including CD, DVD, VHS, LP, or tape formats. Ten of the remote

control stations are equipped with video monitors. The Seminar Room is equipped with audio and video equipment for group presentations. Digital Audio Reserves (DAR) provides students with 24/7 access, including off-campus access, to course listening assignments, via the UCSD network. <http://orpheus.ucsd.edu/music>

## **THE UNDERGRADUATE PROGRAM**

Undergraduate courses offered in the Department of Music satisfy a wide range of interests for non-music majors as well as for students majoring in music.

Students wishing to acquire a musical background to support further study should take MUS 1A-B-C, which develops skills musicians use in the analysis and performance of music. Students interested in "music appreciation" should choose from the following courses, which introduce aspects of the rich heritage of music: MUS 4–15. None of the aforementioned courses have prerequisites. For students with prior musical background who wish to continue in upper-division theory courses, MUS 2A-B-C (in lieu of 1A-B-C) is essential.

## **MUSIC MAJOR PROGRAMS**

The undergraduate program at UCSD offers a bachelor of arts degree in music and in *music humanities*. The curriculum emphasizes the development of musical listening and performance skills as applied to both contemporary and traditional music. A third degree program, interdisciplinary computing in the arts (ICAM-music), is also offered.

The *music major* is intended for students who may choose to engage in music as a profession. This major thus requires extensive development of musical skills. A student without the appropriate level of those skills upon entrance to UCSD must devote considerable time to attaining them, either in lower-division courses or independent study. Students can concentrate in composition, performance, literature, technology, or jazz and the music of the African diaspora.

The Department of Music is committed to creative music making; thus all music majors are required to enroll in ensemble performance for at least three quarters (see #8 below).

The *music/humanities major* is intended for students who wish to pursue a broad liberal arts program that includes music as a central element. This program emphasizes music history and literature, and allows the individual student to select an area of interest for the major within the broad field of the humanities.

The interdisciplinary computing in the arts major is intended for students who wish to pursue the field of music specializing in the art and technology of our time. Below is a detailed description of this major.

## **MUSIC MAJOR REQUIREMENTS**

The lower-division prerequisites for the music major are MUS 2A-B-C, and MUS 2AK-BK-CK. Jazz emphasis students take MUS 2JK in lieu of 2CK. To continue within the major, all students must pass Music 2C or an equivalent proficiency exam. Composition emphasis students must take Music 33A-B-C, Introduction to Composition I, II, and III,

or take a proficiency exam for the three-quarter sequence course. All required music major courses must be taken for a letter grade, with the exception of MUS 143, which is taken on a Pass/Not Pass basis. All courses to be counted toward satisfying the major requirements must be passed with a grade of C or better.

To complete the music major the following courses are required. Courses that are specific to each area of emphasis are shown in parentheses.

1. One of the following sequences:
  - MUS 101A-B-C (performance, composition, literature, and technology)
  - MUS 101A-B and 104 (jazz)
2. One of the following sequences:
  - MUS 102A-B-C (performance, composition, literature, and technology)
  - MUS 137A-B-C (jazz)
3. MUS 120A-B-C
4. One quarter of MUS 133 (normally taken in the winter quarter of the junior or senior year)
5. One of the following:
  - MUS 107, 110, 116, or 150 (performance, composition, literature, and technology)
  - MUS 150 (jazz)
6. One of the following:
  - three quarters of MUS 132 or 132V (performance)
  - MUS 103A-B-C (composition)
  - three courses from the series MUS 107-116, 126, 127A-B, and 150, of which at least one must be 107, 110, 116, or 150 [in addition to #5 above] (literature)
  - Music 170/171/175 (technology)
  - two courses from MUS 105, 126, 127A, and 127B; plus one course from MUS 107, 110, 111, 114, 115, 116, or 150 [in addition to #5 above] (jazz)
7. One additional course to be selected from
  - MUS 107-116, 126, 127A-B, and 150 (performance, composition, literature, and technology)
  - MUS 151-154 (jazz)
8. One of the following sequences:
  - Two quarters chosen from MUS 95C, 95D, or 95K and one quarter from MUS 95B-W, 130, 131, and 134 (performance, composition, literature, and technology)
  - Two quarters of MUS 95JC or 131, and one quarter of MUS 95C, 95D, 95G, or 95K (jazz)
9. MUS 143 every quarter

## MUSIC/HUMANITIES MAJOR REQUIREMENTS

The prerequisite for the music/humanities major is Music 1A-B-C (or 2A-B-C, if qualified). To complete the major the following courses are required:

1. MUS 120A-B-C
2. Three courses chosen from MUS 107-116, 126, 127A-B, and 150, of which at least one must be 107, 110, 116, or 150
3. A coherent set of six upper-division courses selected from the humanities or fine arts (including

music) that focuses on a specific topic, chosen in consultation with the music/humanities academic advisor

4. Two quarters chosen from MUS 95C, 95D, or 95K, and one quarter from MUS 95B-W, 130, 131, and 134
5. MUS 143 every quarter

Students interested in this major should confer with the music/humanities faculty advisor to work out a course of study, which must be submitted at the beginning of the junior year for the advisor's written approval.

## INTERDISCIPLINARY COMPUTING AND THE ARTS (ICAM) MAJOR

The Interdisciplinary Computing and the Arts major in the Departments of Music and Visual Arts draws upon and aims to bring together ideas and paradigms from computer science, art, and cultural theory. It takes for granted that the computer has become a metamedium and that artists working with computers are expected to combine different media forms in their works. All of this makes the program unique among currently existing computer art or design programs which, on the one hand, usually focus on the use of computers for a particular media (for instance, specializing in computer animation, or computer music, or computer design for print) and, on the other hand, do not enter into a serious dialogue with current research in computer science, only teaching the students off-the-shelf software.

The goals of the program are to

- prepare the next generation of artists who will be functioning in a computer-mediated culture
- give students necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new aesthetics for computer media
- prepare students to mediate between the worlds of computer science and technology, the arts, and the culture at large by being equally proficient with computing and cultural concepts
- give students sufficient understanding of the trajectories of development in computing so they can anticipate and work with the emerging trends, rather than being locked in particular software currently available on the market.

## Major Course Requirements

Twenty courses are required in the computing and the arts major for the attainment of the Bachelor of Arts degree. A minimum of twelve of these courses must be upper division.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C- or better will be accepted in the major.

- MUS 4. Introduction to Western Music**  
**VIS 1. Introduction to Art-Making**  
**ICAM 40/VIS 40. Introduction to Computing in the Arts**  
**Math. 20A. Calculus for Science and Engineering\***  
**Math. 20B. Calculus for Science and Engineering\***

**VIS 157. Video History and Criticism**

**VIS 158. Histories of Photograph**

## VIS 194S. Fantasy in Film

### Senior Project (two courses required)

#### ICAM 160A. Senior Project in Computer Arts I ICAM 160B. Senior Projects in Computer Arts II

All Computing and the Arts (ICAM) course descriptions are listed at the end of the lower- and upper-division sections under “Courses.” Not all courses are offered each year.

### Recommendations for Transfer Students

Transfer students should attempt to complete the following lower-division courses before transferring to UCSD: CSE 11 (or CSE 8A/8AL/8B), Math. 20A-B (or Math. 10A-B-C), and MUS 4. Go to <http://www.assist.org>. ASSIST is an online student-transfer information system that shows how course credits earned at one public California college or university can be applied when transferred to another. ASSIST is the official repository of articulation for California's public colleges and universities and provides the most accurate and up-to-date information about student transfer in California.

Students should also be able to find courses equivalent to MUS 1A, 6, and 14 at some colleges. While some of these may be listed on ASSIST, transfers should be prepared to provide course descriptions, syllabi, and/or other materials that may be required to determine the content of the courses taken at other institutions.

Transfers entering with thirty-six or more quarter units by their third quarter of study at UCSD should complete their remaining lower-division courses for the major by the end of the third quarter.

### HONORS

1. To be admitted into the honors program a student must have the following:
  - Excellence in a specific subject matter (performance, composition, literature, technology, jazz and music of the African diaspora, or music/humanities) and faculty support.
  - Performers must have previously performed at Undergraduate Performers Forum and enrolled in Chamber Music, MUS 130. (Vocalists can seek an exception.) Other students must have completed all Music 95 requirements prior to entering the honors program. Jazz and music of the African diaspora students must have performed, or had their compositions performed, at the Undergraduate Performers Forum.
  - A GPA in the Department of Music of 3.6; an overall GPA of 3.0
  - All of the requirements below must be completed before the last day of instruction in the spring quarter prior to the academic year in which the student proposes to pursue an honors curriculum.
  - Performance students must present a piece before the performance faculty that demonstrates their technical and musical abilities. In addition, students must provide a proposed program for an honors recital.
  - Composition students must have a composition performed on the New Music Forum

series. Either the student's principal instructor must attend this performance or a tape of this performance must be provided for faculty review. In addition, students must provide a proposed portfolio of original scores for an honors recital.

- Literature students who have (1) presented historically or musicologically oriented research papers at campus venues featuring undergraduate research, or (2) been involved in the faculty mentor program, or (3) participated in the presentation of the winter opera with the accompanying symposium, may submit a portfolio of papers to the Integrative Studies faculty. In addition, students must propose a fifty minute lecture for the Department Seminar (MUS 143).
  - Music science and technology students must present a portfolio of projects to the music technology faculty and propose a fifty-minute lecture/demonstration for the Department Seminar (MUS 143).
  - Jazz and music of the African diaspora students must perform a piece before the faculty that demonstrates their compositional and improvisational abilities. In addition, students must provide for evaluation a portfolio of three original recordings and a proposed program for an honors recital.
2. Once admitted to the honors program
    - Students must be supervised by a faculty advisor throughout the honors program.
    - Composition students admitted to the honors program will enroll in twelve units of the Composition Honors course (MUS 103D-E-F). Performance students will enroll in twelve units of MUS 132R (after at least three quarters of MUS 132). Technology students will enroll in twelve units of MUS 176 or 199; Music literature and music humanities students will enroll in twelve units of MUS 199, 150, or 107. Jazz and music of the African diaspora students will enroll in twelve units of 137D, 137E, and 137F (Honors Seminar in Jazz Studies I, II, III).
  3. To receive honors
    - A student must publicly demonstrate an appropriate level of excellence, an acceptable GPA, and suitable participation in department presentations and seminars, as determined by the student's honors committee.
    - Jazz and music of the African diaspora students will have a recital in the spring quarter of their senior year. The recital will include a program of a minimum of 50 percent of original compositions.

**Please note:** Being admitted to the honors curriculum does not guarantee that a student will receive honors.

For further information on the Department of Music Honors Program and to obtain an application form, students should make an appointment with the undergraduate staff advisor.

### TRANSFER STUDENTS

Students who plan to transfer into the music major should have strong skills in basic musicianship. For those planning to emphasize performance, solid

proficiency on the instrument is required. A general course in the history of music is recommended. All transfer students must pass a proficiency examination in MUS 2C (Basic Musicianship) and MUS 2CK (Basic Keyboard) or take the two sequence courses. To verify the acceptability of transfer music courses, students must make an appointment with the undergraduate staff advisor.

### MINOR PROGRAMS

Please obtain a Department of Music brochure of approved minors from the undergraduate office. Students must seek advice and obtain approval from the undergraduate advisor prior to embarking upon a minor program.

The music minor for students entering UCSD in and after winter quarter 1998 consists of

- two lower-division music courses except performance ensembles (Music 95B– Music 95W) and lessons (Music 32)
- five upper-division music courses
- Students who entered UCSD before winter 1998 may select either the new minor or one of the music minors offered at the time of their entry into the university.

A minor with an emphasis in ICAM consists of seven specific courses, of which at least five must be upper division. Prospective minors should consult with the respective departmental advisor for a complete list of appropriate classes acceptable for the minor.

### ADVISING OFFICE

Undergraduate Staff advisor:  
Eileen Voreades  
Room 195, Conrad Prebys Music Center  
(858) 534-8226  
[evoreades@ucsd.edu](mailto:evoreades@ucsd.edu)

<http://music.ucsd.edu>

### THE GRADUATE PROGRAM

UC San Diego offers the master of arts and doctor of philosophy in music as well as a doctor of musical arts. Areas of emphasis for the M.A. include Composition, Computer Music, Integrative Studies, and Performance. For the Ph.D., areas of emphasis offered are Composition, Computer Music, and Integrative Studies. The doctor of musical arts has an emphasis in Contemporary Music Performance.

### COMPOSITION

<http://music.ucsd.edu/grad/composition.php>

The Composition Program is committed to nourishing the individual gifts and capacities of student composers in a diverse and active environment, with an emphasis on intensive personal interaction between faculty and student. The faculty mentor considers a student's particular goals and then attempts to strengthen his or her technical capacity to meet them. The diversity and liveliness of our program itself often challenges students to reevaluate their goals.

An incoming member in the M.A. or Ph.D. program begins with a year-long seminar (taught by a different faculty composer each quarter) and

continues with individual studies thereafter. At the close of the first year fall quarter and again after the following spring quarter, the entire composition community gathers for a day-long "jury." Each seminar member is allotted a block of time during which the composition that has just been completed is performed and recorded in a carefully rehearsed presentation. There is a detailed discussion of each work by the faculty composers, and the student has opportunity to comment, explain, and pose questions. Following the performance and discussions of this day, the composition faculty meets to assess the students' work collectively and to offer any guidance deemed necessary. This process is at the root of the uniqueness of the UC San Diego program, and manifests the range, seriousness, and vitality with which compositional issues are explored here.

After completing three quarters of seminar and two juries, students come to know something about the ideas and perspectives of each faculty composer; the faculty, in turn, is aware of each student's objectives and needs. At this point, an individual mentor is agreed upon and this relationship becomes the center of the student's continuing work as the degree is completed. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student's performance mentor and guide in interfacing with the performance community. There is also a biweekly Focus on Composition Seminar at which faculty, students and selected visitors present work of interest (compositional, analytical, technological, and even whimsical).

The seminars serve to foster mutual awareness within the student composer group. Collegial relationships develop which lead not only to friendships but also to further creative outlets in cooperative projects, including the student-run Composers' Forums, performance collectives, and recital projects. UCSD performers—faculty and student—are all committed to the playing of new music, and frequent composer/performer collaborations are a vital aspect of life in the Department of Music.

## COMPUTER MUSIC

[http://music.ucsd.edu/grad/comp\\_music.php](http://music.ucsd.edu/grad/comp_music.php)

The Computer Music Program emphasizes research in new techniques for electronic music composition and performance, catalyzed through an active concert program of new works by students, faculty, and visitors. Areas of research include

- new audio synthesis techniques
- audio signal processing
- music cognition
- live improvisation with and by computers
- integrating audio and video
- electronic spatialization of sounds
- techniques for live electronic music performance
- computer music software and HCL design

- audio analysis and feature detection

The Computer Music Program encourages work which overlaps with the other programs of study: Composition, Performance, and Integrative Studies. Analyzing and performing electronic music repertoire as well as writing new music involving electronics are encouraged.

The first-year computer music curriculum is centered on a yearlong "backbone" course covering the essentials of the computer music field. This material divides naturally into three portions (audio signal processing, compositional algorithms, and musical cognition).

In their second year, students work individually with faculty members to deepen their mastery of their subject areas of concentration. For example, a student wishing to focus on signal processing aspects might study techniques for digital audio analysis and resynthesis, drawing on the current research literature.

Also during these first two years, students take seminars on music analysis, composition, and performance practice. After having taken a critical mass of such subjects, Ph.D. students enter a qualifying examination preparation period, and, once successful, they start their dissertation research.

UCSD's Center for Research in Computing and the Arts (<http://crca.ucsd.edu>) offers an ideal research environment for graduate students in this area. The Department of Music also provides extensive laboratory and computing support for computer music.

## INTEGRATIVE STUDIES

*(formerly Critical Studies/Experimental Practices)*

<http://music.ucsd.edu/grad/is.php>

The graduate program in Integrative Studies (IS) promotes an engagement with contemporary music activity and discourse that integrates diverse methodologies, experiences, learning styles, and resources. IS respects multiple ways of knowing and seeks to explore connections among ideas and processes in the arts, humanities, and sciences. Students are encouraged to combine their artistic and academic pursuits; to think systematically, critically, and reflectively; and to focus on the articulations and points of overlap between specialized and generalized knowledge. Drawing on diverse fields, including cultural theory, new media studies, ethnomusicology, improvisation, cognitive science, and systems theory, among others, the IS program combines an exploration of contemporary Western and non-Western music making with an examination of ideas and concepts that are relevant to its nature, creation, production, and reception.

This integrative and interactive environment encourages cross-fertilization and hybridity between diverse musical forms and the theoretical and critical discourses that surround them, often drawing in those who may not fit categories of "composer" or "performer," or those whose work is not constrained by traditional disciplinary boundaries. Core seminars explore multiple ways of thinking about music—including critical, cognitive, and intercultural approaches—in tandem with creative practices that frequently incorporate new technologies and integrate diverse media and forms. Student-generated projects and collaborations are encouraged and

promoted with formal juries conducted by the faculty.

The program comprises four interconnected specialties: critical studies, ethnomusicology, systems inquiry, and creative practice. IS graduate students initially enroll in introductory courses taught by core faculty members designed to present an overview of each specialty and to generate possibilities for future independent and collaborative research. In subsequent quarters students choose between a variety of focused and revolving topic seminars in each of the four primary specialties. By the end of their first year in residency, students declare a primary and secondary specialty within the program. Seminars offered in other departments—for instance in visual arts, literature, theatre and dance, anthropology, communication, ethnic studies, cognitive science, psychology, or computer science—are encouraged and may fulfill degree requirements, if approved by a student's faculty advisor.

Exposure to a range of disciplines and interdisciplinary methods prepares students to pursue innovative artistic/academic projects and careers. The program teaches students to situate and contextualize knowledge and practices on a broad intellectual and artistic continuum and to recognize the responsibilities and opportunities associated with living in an increasingly interconnected and interdependent world.

## PERFORMANCE

<http://music.ucsd.edu/grad/performance.php>

Fostering the creative, intelligent, and passionate performance of contemporary music is the mission of the Performance Program of the Department of Music. As once stated by founding faculty composer Robert Erickson, we at UCSD are a "community of musicians."

Performers act and interact in a communal environment by means of collaboration with faculty and student composers, research in the areas of new performance modalities, music technology, and improvisation, among many other pursuits. The performance of contemporary music is viewed as a creative act that balances expertise and exploration.

Graduate performance students pursue either a master of arts or a doctor of musical arts degree in contemporary music performance. The course of study for both programs involves the completion of required graduate seminars and intensive study with a mentoring faculty member. Students are encouraged to adopt a vigorous, exploratory orientation in their private study. Final degree requirements include a recital, or in the case of the DMA, two recitals and the presentation of personal performance research.

The work of graduate performance students forms an integral component of a rich musical environment, which produces an astonishing quantity and variety of performances. Students may perform in collaborative performances with fellow students and faculty. Ensembles include groups specializing in the interpretation of unconventionally notated scores, the percussion group red fish blue fish and other ensembles. The Performance Forum, a student-initiated concert series, provides an opportunity for students to present a wide variety of repertoire which may include improvised music, world music,

and music with technology. A strong, collaborative spirit among the curricular areas of the department (Performance, Composition, Music Technology, and Integrative Studies) also yields many new projects each year. Works by graduate student composers are performed on the annual Spring Festival and other concert series. The sense of musical community engendered by diverse interactions permeates the atmosphere and makes the Department of Music at UCSD a uniquely rewarding place to create the newest of music. Graduate Admissions

Students are admitted to begin in fall quarter only. The deadline for submission of ALL application materials is January 10. Failure to meet this deadline jeopardizes admission and financial support.

### Step 1 Preliminary Application

The application process begins at the Department of Music Web site (<http://music.ucsd.edu>) with a preliminary online application. We encourage all applicants to apply as early as September.

### Step 2 Portfolio

Music applicants must submit a portfolio consisting of the following by January 10 to: UCSD, Department of Music, MC 0099, La Jolla, CA 92093. Please include your most recent works as well as twentieth-century pieces, when possible.

- For *all* applicants, a repertory list of works (solo and chamber) performed or composed during the past few years and a sample of printed concert programs in which you have participated, either as performer, composer, or collaborator.
- For *all* applicants, a minimum of two papers illustrating writing ability in any of the following areas: musical analysis, criticism, aesthetics, music theory, or music technology.
- In addition,
- For *composition* applicants only, a minimum of three scores of instrumental works with taped examples of the works being performed. (These may include, but should not be exclusively, electroacoustic works.)
- For *computer music* and *IS* applicants only, representative documentation (e.g., papers, performances, intermedia works, computer programs, etc.) of prior work.
- For *performance* applicants only, tapes or CD demonstrating the level of vocal and/or instrumental performance. In person auditions are desirable when possible, but not required.

### Step 3 UCSD Application for Graduate Admission

All sections of the official online UCSD Application for Graduate Admission with the \$70 nonrefundable fee, or \$90 for international students, must be submitted by January 10. Applications must include all supporting documents:

- statement of purpose
- three letters of recommendation
- official transcripts

- Graduate Record Examination (GRE) required for *all* applicants.
- TOEFL (Test of English as a Foreign Language) or International English Language Testing System (IELTS) required for all applicants whose country of citizenship does not have English as its primary language. Minimum TOEFL score is 550 for the paper-based test, 213 for the computer-based test, or 80 for the Internet-based test. The minimum IELTS score is 7.

### ADVISORY EXAMINATIONS

After completion of an advisory examination during Welcome Week, each new student will meet with the departmental M.A. or Ph.D. advisor. Students found to be deficient in any areas covered on the advisory examination (dictation, sight reading, keyboard proficiency, history, and literature) will be advised to remedy deficiencies during their first year.

### CORE GRADUATE CURRICULUM

All graduate students are required to take Music 201 (Projects in New Music Performance) as outlined under each area, Music 210 (Musical Analysis), Music 228 (Conducting), and Music 291 (Problems and Methods of Music Research and Performance). Students who completed Music 210, 228, and 291 during their master's degree program at UCSD, do not need to retake those courses for their doctoral curriculum.

To assure that all requirements are being adequately met, all graduate students must make an appointment with the graduate staff advisor for a degree check no later than the winter quarter of the second year.

### MASTER'S DEGREE PROGRAM

The master of arts in music degree includes areas of emphasis in *Composition*, *Computer Music*, *Integrative Studies*, and *Performance*. The degree requires completion of at least thirty-six quarter units of graduate courses (courses numbered 201–299), including six units of Music 500 (Apprentice Teaching in Music) and six units of Music 299 (Advanced Research Projects and Independent Study) bearing directly on completion of the master's thesis. Master's students are expected to complete all requirements for the degree in six quarters of residence.

### COURSE REQUIREMENTS

In addition to the core graduate curriculum, all master's degree students are required to complete requirements in their area of emphasis:

#### Composition

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 203A-B-C—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar.
- MUS 203D—after successful completion of 203C, students must enroll in Music 203D (with their committee chair) every quarter until graduation.
- MUS 204—every quarter until graduation.

- MUS 206 and/or 207—a combination of any two courses.

### Computer Music

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 270A-B-C—must take within the first year of the program.
- MUS 270D—required every quarter of the second year.
- MUS 206, 207, and/or 267—a combination of any two courses.
- Integrative Studies
- MUS 201 (A, B, C, D, E, or F)—must take at least one time.
- MUS 205—every quarter until graduation.
- MUS 206 or 207—at least three courses; two approved for a student's primary specialty and one approved for his or her secondary specialty.
- MUS 211, 212, 213, and 214—must complete the series of four courses within the first year of the program.
- MUS 251, 252, 253, or 254—at least once course corresponding to the student's primary specialty. Additional courses from this series may also be taken for corresponding 206 or 207 credit if approved by the student's faculty advisor.

It is the student's responsibility to check if a given course will count towards his or her primary or secondary specialty prior to enrolling.

### Performance

- MUS 201(A, B, C, D, E, or F)—every quarter until graduation.
- MUS 206 or 207—a combination of any two courses.
- MUS 232—every quarter until graduation.
- MUS 245—every quarter in residence.

### MASTER'S DEGREE COMPLETION REQUIREMENTS

A folio of *three research papers* in professional format (normally to be written in connection with the courses the student will be taking) must be accepted by the student's committee prior to approval of the thesis.

MA candidates will present a *thesis* consisting of the following under the supervision of the student's committee chair in MUS 299:

- Candidates emphasizing *Composition* will prepare a folio of three chamber compositions together with tape recordings of at least two of them.
- Candidates emphasizing *Computer Music* will write a research paper (thesis) and present a lecture-performance in which the scientific, technological, and musical aspects of an original computer music composition are documented, played, and discussed.

- Candidates emphasizing *Integrative Studies* with a primary specialty in critical studies, ethnomusicology, or systems inquiry must complete a master's thesis of roughly sixty pages.
- Candidates emphasizing *Performance* will present a recital supported by lecture-quality notes. The program must be approved by the student's committee chair.

All of the above master's requirements must have final approval from the student's individual committee upon completion.

## DOCTORAL DEGREE PROGRAM

Students of superior musical competence may pursue a program with emphasis in *Composition*, *Computer Music*, or *Integrative Studies* leading to the Ph.D. or doctor of musical arts (D.M.A.) degree in *Contemporary Music Performance*.

All doctoral students within the Department of Music must complete the Core Graduate Curriculum (outlined in the section above the Master's Degree Program) plus additional core requirements for the Ph.D. or D.M.A. program. These additional core requirements are

- Successful completion of an M.A. degree, including requirements equivalent to those described above for the M.A. in music. UCSD M.A. students who apply to the Ph.D./D.M.A. program must complete all departmental requirements, obtain OGS approval, and file the M.A. degree at Geisel Library *before* enrolling in any Ph.D./D.M.A. level courses.
- The Department of Music strongly recommends that entering students have acquired a reading ability in at least one of the standard reference foreign languages (French, German, Italian, or Spanish) in addition to their native language.
- All Ph.D./D.M.A. students are required to complete six units of credit in Music 500 (Apprentice Teaching) unless the student has completed this requirement in UCSD's master's degree program.
- After completing the qualifying examination, all students must remain in residence for at least three quarters, during which time they must enroll in twelve units of Music 299 (Advanced Research Projects and Independent Study) with their committee chair or members every quarter.

## COURSE REQUIREMENTS

In addition to the core graduate and Ph.D./D.M.A. curriculum, doctoral students (according to their area of emphasis) must complete the following courses prior to the qualifying examination:

### Composition

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 203A-B-C—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar. Continuing students from the UCSD Composition M.A. program may be excused from MUS 203B-C by successfully completing MUS 203A at the Ph.D. level.
- MUS 203D—after successful completion of 203C,

students must enroll in MUS 203D (with their committee chair) every quarter in residence.

- MUS 204—every quarter in residence.
- MUS 206 and/or 207—a combination of any three courses.
- MUS 209—must be taken at least three times.
- MUS 298—must complete at least six units.

### Computer Music

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 270A-B-C—must be taken within the first year of the program unless previously taken as a UCSD M.A. student.
- MUS 270D—after successful completion of 270C, students must enroll in MUS 270D (with their committee chair) every quarter in residence.
- MUS 206, 207, 209, and/or 267—a combination of any six courses.
- MUS 298—must complete at least six units.

### Integrative Studies

- MUS 201 (A, B, C, D, E, or F)—must take at least two times.
- MUS 205—every quarter until advanced to candidacy.
- MUS 206 or 207—at least five courses with three approved for a student's primary specialty and two approved for his or her secondary specialty.
- MUS 211, 212, 213, and 214—entire series must be taken within the first year of the program unless previously taken as a UCSD M.A. student.
- MUS 251, 252, 253, or 254—must take two courses, one to correspond with student's primary specialty and one to correspond with the student's secondary specialty; additional courses from this series may also be taken for corresponding 206 or 207 credit if approved by the student's faculty advisor.
- MUS 298—must complete at least six units.

Those students declaring creative practice as their primary specialty for the Ph.D. are required to pass a jury at the end of their first year of doctoral study. Each student is allotted a block of time to present and/or perform his or her work in front of a panel comprising area and affiliated faculty. Each presentation is followed by a detailed discussion of the student's work at which students have the opportunity to comment, explain, and pose further questions. After the completion of the jury process, the faculty meets in order to further assess each student's work and to offer additional guidance.

It is the student's responsibility to check if a given course will count towards his or her primary or secondary specialty prior to enrolling.

### Performance

- MUS 201 (A, B, C, D, E, or F)—every quarter until completion of qualifying examination.

- MUS 206/207/209—as approved by D.M.A. advisor, a combination of any six seminars related to the primary and secondary area of specialization. Music 296 may be substituted for up to four seminars with permission of D.M.A. advisor.
- MUS 232—every quarter until completion of qualifying examination.
- MUS 245—every quarter in residence.
- MUS 250—must be taken at least three times.
- MUS 298—must complete at least six units.

## QUALIFYING EXAMINATION/ ADVANCEMENT TO CANDIDACY

Requirements prior to taking the qualifying examination:

- Completion of all Ph.D./D.M.A. required course work.
- Formation of the Doctoral Committee. Students must choose the chair of their Doctoral Committee no later than their last quarter of course work. They must choose two more internal members of the Doctoral Committee by the end of the fall quarter of their third year. In consultation with the chair of the Doctoral Committee, two faculty members from outside the department should be added to the committee by the end of the spring quarter of the third year. All internal members of the committee must be faculty of the Department of Music. The final composition of the committee is approved by the Office of Graduate Studies.
- For Ph.D. students, one research paper judged to be of publishable quality must be completed prior to qualifying examinations. The subject of the publishable paper will be developed during the student's first two years and must be approved by the student's Ph.D. committee chair.
- For Composition students, in addition to the publishable paper, a folio of not fewer than three compositions (not previously accepted for an M.A. degree) must be completed prior to qualifying examinations. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student's performance mentor and guide in interfacing with the performance community.
- For D.M.A. students, one major recital; plus either (a) an abstract of the thesis or research project which will be given to the Doctoral Committee at the qualifying examination; or (b) a substantial portion of the works from the student's first two "major recitals" will be presented at the qualifying examination.
- For Integrative Studies students, a dissertation prospectus must be submitted to the student's committee no later than three weeks prior to the oral portion of the qualifying examination. The

dissertation prospectus is a document that presents the research topic of the dissertation, places it in the context of the relevant literature or in the context of recent artistic developments, discusses its significance, specifies and justifies the research methods, theoretical orientation, and/or artistic approach, and indicates the anticipated steps leading to completion.

The qualifying examination for all doctoral students will consist of the following:

A written and oral defense of three questions provided by the Doctoral Committee pertaining to appropriate areas of specialization. For Integrative Studies students, one question will involve a defense of the student's dissertation prospectus and the remaining two questions will pertain to the student's primary and secondary specialties.

Successful completion of the qualifying exam marks the student's advancement to doctoral candidacy, which must take place no later than the end of the spring quarter of the fourth year.

#### PH.D./D.M.A. DEGREE COMPLETION REQUIREMENTS

- For *Composition* students, completion of a major composition project.
- For *Computer Music* students, completion of an acceptable dissertation.
- For *Integrative Studies* students with a primary specialty in ethnomusicology, systems inquiry, or critical studies, completion of a book-length dissertation demonstrating original research and critical insight. For Integrative Studies students with a primary specialty in creative practice, a major creative work and a written defense of that work. Prior to the dissertation defense, the student's work must be reviewed by a faculty jury and performed publicly (see the description of the jury process given above for more details).
- For D.M.A. students, completion of a second major recital plus one of the following: (a) thesis or research project; (b) a concert that is innovative in design and/or content and which is supported by a document containing extensive stylistic or analytical discussion of the program; (c) a lecture/concert pertaining to innovative and/or original material, with appropriate documentation as determined by the committee; or (d) two approved chamber music concerts, with appropriate documentation as determined by the committee.
- For all doctoral students, a final public defense of the composition/dissertation/recitals.
- A full copy of the student's dissertation/research project must be in the hands of each of the student's Doctoral Committee members four weeks before the dissertation defense.
- It is understood that the edition of the dissertation given to committee members will not be the final form, and that the committee members may suggest changes in the text at the defense. Revisions may be indicated and, in extreme cases, may require this examination to be taken more than once.

- Acceptance of the dissertation by the university librarian represents the final step in completion of all requirements for the Ph.D.

Materials previously submitted for other degrees are not acceptable for submission for the Ph.D./D.M.A. degree.

#### TIME LIMIT POLICY FOR THE DOCTORAL DEGREE

##### *Normative Time Limits*

**4 years:** Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

**6 years:** Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program (i.e., two years for M.A. program plus four years normative time for Ph.D./D.M.A.).

##### *Support Time Limits*

**6 years:** Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

**7 years:** Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program.

##### *Total Registered Time Limits*

**6 years:** Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

**8 years:** Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program.

Students who have not completed all Ph.D. requirements within the maximum total registered time will no longer be permitted to register for classes.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

Note: The following course offerings outline the general scope of our program. Not all courses are offered every year. It is essential that students work closely with departmental advisors when planning their degree programs.

#### LOWER-DIVISION

##### **1A. Fundamentals of Music A (4)**

This course, first in a three-quarter sequence, is primarily intended for students without previous musical experience. It introduces music notation and basic music theory topics

such as intervals, scales, keys, and chords, as well as basic rhythm skills. **Prerequisites:** none.

##### **1B. Fundamentals of Music B (4)**

This course, second in a three-quarter sequence, focuses on understanding music theory and in developing musical ability through rhythm, ear training, and sight singing exercises. Topics include major and minor scales, seventh-chords, transportation, compound meter and rudiments of musical form. **Prerequisite:** Music 1A.

##### **1C. Fundamentals of Music C (4)**

This course, third in a three-quarter sequence, offers solid foundation in musical literacy through exercises such as harmonic and melodic dictation, sight singing exercises and rhythm in various meters. Topics include complex rhythm, harmony, and basic keyboard skills. **Prerequisite:** Music 1B.

##### **2A-B-C. Basic Musicianship (4-4-4)**

Primarily intended for music majors. Development of basic skills: perception and notation of pitch and temporal relationships. Introduction to functional harmony. Studies in melodic writing. Drills in sight singing, rhythmic reading, and dictation. **Prerequisites:** passing score on placement exam. Must be taken in sequence. Music majors must be concurrently enrolled in Music 2AK, 2BK, and 2CK (Basic Keyboard).

##### **2AK-BK-CK. Basic Keyboard (2-2-2)**

Scales, chords, harmonic progressions, transposition, and simple pieces. **Prerequisites:** concurrent enrollment in Music 2A, B, C.

##### **2JK. Jazz Keyboard (2)**

This course will introduce basic voicings and voice leading, stylistically appropriate accompaniment, and basic chord substitution. For majors with a Jazz and the Music of the African Diaspora emphasis to be taken concurrently with Music 2C. **Prerequisites:** Music 2AK and 2BK or passing proficiency exam, or consent of instructor. Concurrent enrollment in Music 2C. Majors only.

##### **4. Introduction to Western Music (4)**

A brief survey of the history of Western Music from the Middle Ages to the present. Much attention will be paid to the direct experience of listening to music and attendance of concerts. Class consists of lectures, listening labs, and live performances. **Prerequisite:** none.

##### **5. Sound in Time (4)**

An examination and exploration of the art and science of music making. Topics include acoustics, improvisation, composition, and electronic and popular forms. There will be required listening, reading, and creative assignments. No previous musical background required. **Prerequisite:** none.

##### **6. Electronic Music (4)**

Lectures and listening sessions devoted to the most significant works of music realized through the use of computers and other electronic devices from the middle of this century through the present. **Prerequisite:** none.

##### **7. Music, Science, and Computers (4)**

Exploration of the interactions among music, science, and technology, including the history and current development of science and technology from the perspective of music. **Prerequisite:** none.

##### **8. American Music (4)**

A course designed to study the development of music in America. The focus will be on both the vernacular traditions including hymn singing, country music, jazz, big band, rock, etc., as well as the cultivated traditions of various composers from William Billings to John Cage. **Prerequisite:** none. (Offered in selected years.)

##### **9. Symphony (4)**

The symphonic masterworks course will consist of lectures and listening sessions devoted to a detailed discussion of a small number of recognized masterworks (e.g., Mozart, Beethoven, Berlioz, Stravinsky, Ligeti, etc.). **Prerequisite:** none. (Offered in selected years.)

##### **10. Chamber Music (4)**

Chamber Music will consist of lectures and listening sessions devoted to a detailed discussion of recognized

chamber masterworks (e.g., Haydn, Mozart, Beethoven, Bartok, etc.). **Prerequisite:** none. (Offered in selected years.)

#### 11. Folk Music (4)

A course on folk musics of the world, covered through lectures, films, and listening sessions devoted to detailed discussion of music indigenous to varying countries/areas of the world. Topics vary from year to year. May be repeated once for credit. **Prerequisite:** none.

#### 12. Opera (4)

A study of opera masterworks that often coincide with operas presented in the San Diego Opera season. Class consists of lectures, listening labs, live performances, and opera on video. **Prerequisite:** none.

#### 13AF. World Music/Africa (4)

A course that focuses on the music of Africa and on African ways of music making in the Diaspora to the Caribbean and South America. No prior technical knowledge of music is necessary. **Prerequisite:** none.

#### 13AM. World Music/Multicultural America (4)

A study of music cultures in the United States, particularly Native American, Hispanic American, European American, Asian American, and Pacific Islanders from the perspective of ethnicity, origin, interaction, and the contribution of various ethnic groups to American musical life. No prior technical knowledge of music is necessary. **Prerequisite:** none.

#### 13AS. World Music/Asia and Oceania (4)

Introduction to selected performance traditions of Asia and Oceania with links to local and visiting musicians from these cultures. No prior technical knowledge of music is necessary. **Prerequisite:** none.

#### 14. Contemporary Music (4)

This course offers opportunities to prepare oneself for experiences with new music (through preview lectures), hear performances (by visiting or faculty artists), to discuss each event informally with a faculty panel: an effort to foster informed listening to the new in music. **Prerequisite:** none.

#### 15. Popular Music (4)

A course on popular music from different time periods, covered through lectures, films, and listening sessions. Topics vary from year to year. May be repeated once for credit. **Prerequisite:** none.

#### 32. Instrumental/Vocal Instruction (2)

Individual instruction on intermediate level in instrumental technique and repertory. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. May be taken six times for credit. **Prerequisites:** audition and department stamp.

#### 32G. Group Instrumental Instruction (2)

Group instruction in instrumental or vocal technique and repertory. Intermediate level. Intended for students who make an important contribution to Department of Music ensembles. **Prerequisites:** Written recommendation of ensemble director and audition for performance faculty on first day of classes required. Department stamp required. May be taken for credit six times. (Offered in selected years.)

#### 32V. Vocal Instruction (1)

Individual instruction on intermediate level in vocal technique and repertory. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course and in Music 32VM. May be taken six times for credit. **Prerequisites:** audition and department stamp.

#### 32VM. Vocal Masterclass (1)

All students enrolled in voice lessons (32V, 132V, or 132C) perform for one another and their instructors. Students critique in-class performances, with emphasis on presentation, diction, dramatic effect, vocal quality, and musicality. **Prerequisite:** concurrent enrollment in Music 32V, 132V, or 132C.

#### 33A. Introduction to Composition I (4)

First course in a sequence for music majors and non-majors pursuing an emphasis in composition. The course examines "sound" itself and various ways of building sounds into musical structures, and develops skills in music

notation. Students compose solo pieces in shorter forms. Students may not receive credit for both Music 33 and 33A. **Prerequisite:** Music 2C or consent of instructor.

#### 33B. Introduction to Composition II (4)

Second part of course sequence for students pursuing a composition emphasis. Course continues the building of skills with the organization of basic compositional elements: pitch, rhythm, and timbre. It explores issues of musical texture, expression, and structure in traditional and contemporary repertoire. Writing for two instruments in more extended forms. **Prerequisite:** Music 33A.

#### 33C. Introduction to Composition III (4)

Third part of course sequence for students pursuing a composition emphasis. Course continues the development of skills in instrumentation and analysis. It includes a survey of advanced techniques in contemporary composition, with additional focus on notation, part-preparation, and the art of writing for small groups of instruments. **Prerequisite:** Music 33B.

#### 87. Freshman Seminar (1)

The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

#### 95. Ensemble Performance (2)

Performance in an ensemble appropriate to student abilities and interests. Normally each section requires student participation for the whole academic year, with credit for participation each quarter. Sections of Music 95W have included: African drumming, Korean percussion, Indian sitar and tabla, koto, and Indonesian flute. Not all sections will be offered every year. May be repeated for credit. Grading on participation level, individual testing, comparative papers on repertoire covered, etc. **Prerequisites:** audition and consent of instructor for each section. Materials fee required.

**Note:** Students in the Music 95 series courses may enroll with a letter grade option a total of twelve units for registered music majors and a total of six units for all other students; after which students may continue to enroll in Music 95 courses, but only with a P/NP grade option. There is one exception to the above grading policy. Music 95G, Gospel Choir, can only be taken for a P/NP grading option.

*Section B. Instrument Choir*

*Section C. Concert Choir*

*Section D. Symphonic Chorus*

*Section E. Chamber Orchestra*

*Section G. Gospel Choir*

*Section H. Chamber Opera (Not offered every year.)*

*Section JC. Jazz Chamber Ensembles*

*Section JL. Large Jazz Ensemble*

*Section K. Chamber Singers*

*Section L. Wind Ensemble*

*Section W. World Music Ensembles*

#### ICAM 40. Introduction to Computing in the Arts (4)

(Cross-listed with VIS 40.) An introduction to conceptual uses and historical precedents for use of computers in art making. Introduces students to the program's computer facilities and teaches them basic computer skills. **Prerequisite:** Visual Arts and ICAM majors and minors only. **Note:** Materials fee required.

## UPPER-DIVISION

#### 101A. Music Theory and Practice I (4)

Study of modal counterpart in the style of the sixteenth century. Two-voice species counterpoint studies. Analysis of music of the period. Musicianship studies: sight-singing,

dictation, and keyboard skills. **Prerequisites:** Music 2C and 2CK.

#### 101B. Music Theory and Practice II (4)

Study of tonal harmony and counterpoint. Analysis of Bach chorales and other music from the Baroque period. Musicianship studies: sight-singing, dictation, and keyboard skills. **Prerequisite:** Music 101A.

#### 101C. Music Theory and Practice III (4)

Tonal harmony and counterpoint. Analysis of larger classical forms: Sonata, Variation, Minuet and Trio, Rondo. Musicianship studies: sight-singing, dictation, and keyboard skills. **Prerequisite:** Music 101B.

#### 102A. Music Theory and Practice IV (4)

Advanced study of the materials and structures of music (Beethoven to Wagner) emphasizing the evolution of music through chromatic harmony and voice leading. Development of aural discrimination and in-depth analysis. **Prerequisite:** Music 101C.

#### 102B. Music Theory and Practice V (4)

Advanced study of the materials and structures of music (Schoenberg, Stravinsky, Webern, etc.—1900–1940) emphasizing the evolution of music through extended harmony post tonality and neoclassicism. Development of aural discrimination and in-depth analysis. **Prerequisite:** Music 102A.

#### 102C. Music Theory and Practice VI (4)

Advanced study of the materials and structures of music (1945–2006) emphasizing the evolution of music through the many compositional trends of the late twentieth century. Development of aural discrimination and in-depth analysis. **Prerequisite:** Music 102B.

#### 103A. Seminar in Composition I (4)

First part in composition course sequence. Individual projects will be reviewed in seminar. Techniques of instrumentation will be developed through examination of scores and creative application. Assignments will include short exercises and analysis, and final project for standard ensemble. **Prerequisite:** Music 33C.

#### 103B. Seminar in Composition II (4)

Second part in composition course sequence. Intensive work in free composition by drafting a composition for presentation at the end of Music 103C. Written analysis of contemporary repertoire is introduced. Instruction about calligraphic conventions including computer engraving programs. **Prerequisite:** Music 103A.

#### 103C. Seminar in Composition III (4)

Third part in composition course sequence. A mixture of individual lessons as well as group meetings, with discussion of topics germane to the development of composers, including musical aesthetics and contemporary orchestration techniques. Final performance of students' works will take place at the end of the quarter. **Prerequisite:** Music 103B.

#### 103D-E-F. Honors Seminar in Composition (4-4-4)

Advanced individual projects for senior music majors pursuing honors in composition. Projects will be critically reviewed in seminar with fellow students and faculty composers. **Prerequisites:** Music 103A-B-C and admission into the Department of Music Honors Program in composition. Department stamp required.

#### 104. Jazz Transcription and Analysis (4)

An introduction to the practice of transcribing and analyzing improvised music. Discussion of music technique, style, aesthetics, and the ideology of transcription. **Prerequisites:** Music 101A and 101B.

#### 105. Jazz Composition (4)

This course will explore a range of compositional possibilities from song forms to modal and more extended forms. May be repeated once for credit. **Prerequisite:** Music 104 or consent of instructor.

#### 107. Critical Studies Seminar (4)

This seminar explores the history of music in relation to critical issues, such as race, gender, sexuality, the environment, and politics. Readings include recent literature in cultural studies, musicology, and sociology. Topics vary. May be taken three times for credit. **Prerequisite:** Music 120C.

**110. Introduction to Ethnomusicology Seminar (4)**

This seminar introduces the central theories, methods, and approaches used to study the musics of contemporary cultures, in their local contexts. In addition to surveying key writings, students will document music from their local environment. **Prerequisite:** upper-division standing or consent of instructor.

**111. Topics/World Music Traditions (4)**

A study of particular regional musics in their repertory, cultural context, and interaction with other traditions. Topics vary. **Prerequisite:** none.

**112. Topics in European Music Before 1750 (4)**

This course will address topics in medieval, Renaissance, and Baroque music; topics will vary from year to year. May be repeated five times for credit. **Prerequisites:** knowledge of music notation or consent of instructor; Music 4, 8–10, or 120 recommended.

**113. Topics in Classic, Romantic, and Modern Music (4)**

This course will focus on Western music between 1750 and the early 20th century; topics will vary from year to year. May be repeated five times for credit. **Prerequisites:** knowledge of music notation or consent of instructor; Music 4, 8–10, or 120 recommended.

**114. Music of the Twentieth Century (4)**

An exploration of materials and methods used in the music of our time. There will be an extra discussion group for music majors. May be repeated once for credit. **Prerequisites:** none.

**115. Women in Music (4)**

A survey of the biographical, historical, sociological, and political issues affecting woman musicians, their creativity, their opportunities, and their perception by others. It compares and contrasts the work of women composers, performers, patrons, teachers, and writers on music from the Middle Ages through the present. **Prerequisite:** consent of instructor.

**116. Popular Music Studies Seminar (4)**

This course examines special topics in popular music from various sociopolitical, aesthetic, and performance perspectives. Readings include recent literature in cultural studies, musicology, and/or performance practice. Topics vary. May be taken three times for credit. **Prerequisites:** upper-division standing or consent of instructor.

**120A. History of Music in Western Culture I (4)**

First part of intensive historical, analytical, and cultural-aesthetic examination of music in Western culture from the ninth through the twenty-first centuries. Considers both sacred and secular repertoires, from Gregorian chant through early opera, c. 800–1600. **Prerequisites:** Music 1C or 2C or passing grade on proficiency exam. Music majors should be enrolled concurrently in Music 101A. Department stamp required for non-majors.

**120B. History of Music in Western Culture II (4)**

Second part of intensive historical, analytical, and cultural-aesthetic examination of music in Western culture from the ninth through the twenty-first centuries. Considers both instrumental and vocal repertoires, from the Baroque to the Romantic, c. 1600–1830. **Prerequisites:** Music 120A. Music majors should be enrolled concurrently in Music 101B. Department stamp required for non-majors.

**120C. History of Music in Western Culture III (4)**

Third part of intensive historical, analytical, and cultural-aesthetic examination of music in Western culture from the ninth through the twenty-first centuries. Considers both established traditions and new trends, from Romanticism through Modernism and Post-Modernism, c. 1890–present. **Prerequisites:** Music 120B. Music majors should be enrolled concurrently in Music 101C. Department stamp required for non-majors.

**126. Blues: An Oral Tradition (4)**

This course will examine the development of the Blues from its roots in work-songs and the minstrel show to its flowering in the Mississippi Delta to the development of Urban Blues and the close relationship of the Blues with Jazz, Rhythm and Blues, and Rock and Roll. (Cross-listed with Ethnic Studies 178.) **Prerequisite:** none.

**127A. Jazz Roots and Early Development (1900–1943) (4)**

This course will trace the early development of Jazz and the diverse traditions which helped create this uniquely American art form. We will witness the emergence of Louis Armstrong in New Orleans and examine the composer's role in Jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with Ethnic Studies 179A.) **Prerequisite:** none.

**127B. Jazz Since 1946: Freedom and Form (4)**

This course will examine the evolution of Jazz from 1943 to the present. The course will survey the contrasting and competing styles in Jazz from BEBOP to COOL to the avant garde and fusion. (Cross-listed with Ethnic Studies 179B.) **Prerequisite:** none.

**128. Principles and Practice of Conducting (4)**

The theory and practice of instrumental and/or choral conducting as they have to do with basic baton techniques, score reading, interpretation, orchestration, program building, and functional analysis. Members of the class will be expected to demonstrate their knowledge in the conducting of a small ensemble performing literature from the eighteenth, nineteenth, and twentieth centuries. **Prerequisites:** Music 2A-B-C and 101A-B-C. Department stamp required.

**129. Orchestration (4)**

This course will give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of these various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. **Prerequisite:** Music 101B.

**130. Chamber Music Performance (2–4/0)**

Instruction in the preparation of small group performances of representative instrumental and vocal chamber music literature. May be taken for credit six times, after which students must enroll for zero units. **Prerequisite:** consent of instructor through audition.

**131. Advanced Improvisation Performance (4/0)**

Master class instruction in advanced improvisation performance for declared majors and minors only or consent of instructor. Audition required at first class meeting. May be repeated six times for credit. **Prerequisites:** consent of instructor through audition. Department stamp required.

**132. Pro-Seminar in Music Performance (4)**

Individual or master class instruction in advanced instrumental performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. May be taken six times for credit. **Prerequisites:** audition and department stamp.

**132C. Vocal Coaching (4)**

Individual instruction in advanced vocal coaching. Emphasis placed on diction and musical issues. For declared music majors and minors. Students must be simultaneously enrolled in the Vocal Masterclass, Music 32VM. May be taken six times for credit. **Prerequisites:** at least one quarter of Music 132V and consent of instructor. Department stamp required.

**132R. Recital Preparation (4)**

Advanced instrumental/vocal preparation for senior music majors pursuing honors in performance. Repertoire for a solo recital will be developed under the direction of the appropriate instrumental/vocal faculty member. Special audition required during Welcome Week preceding fall quarter. **Prerequisites:** by audition only; Music 132. Department stamp required.

**132V. Pro-Seminar in Vocal Instruction (3)**

Individual instruction in advanced vocal performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course and in the Vocal Masterclass, Music 32VM. May be taken six times for credit. **Prerequisites:** audition and department stamp.

**133. Projects in New Music Performance (4)**

Performance of new music of the twentieth century. Normally offered winter quarter only. Required a minimum of one time for all music majors. May be taken two times

for credit. **Prerequisite:** consent of instructor through audition.

**134. Symphonic Orchestra (4)**

Repertoire is drawn from the classic symphonic literature of the eighteenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. **Prerequisites:** audition and department stamp required.

**137A. Jazz Theory and Improvisation (4)**

Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. First course of a year-long sequence. **Prerequisites:** MUS 2A-B-C, proficiency exam, or consent on instructor.

**137B. Jazz Theory and Improvisation (4)**

Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. Second course of a year-long sequence; continuation of Music 137A. **Prerequisites:** MUS 2A-B-C and 137A, proficiency exam, or consent on instructor.

**137C. Jazz Theory and Improvisation (4)**

Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. Third course of a year-long sequence; continuation of MUS 137B. **Prerequisites:** MUS 2A-B-C and 137B, proficiency exam, or consent on instructor.

**137D. Seminar in Jazz Studies I (4)**

Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. First course of a year-long sequence. **Prerequisites:** MUS 137A-B-C and admission into the Music Department Honors Program in jazz. Department stamp required.

**137E. Seminar in Jazz Studies II (4)**

Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. Second course of a year-long sequence; continuation of 137D. **Prerequisites:** MUS 137D and department stamp.

**137F. Seminar in Jazz Studies III (4)**

Advanced individual projects for senior music majors pursuing honors in jazz and music of the African diaspora. Projects will be critically reviewed in seminar with fellow students and jazz faculty. Third course of a year-long sequence; continuation of 137E. **Prerequisites:** MUS 137E and department stamp.

**143. Department Seminar (1)**

The department seminar serves both as a general department meeting and as a forum for the presentation of research and performances by visitors, faculty, and students. Required of all undergraduate music majors every quarter.

**150. Jazz and the Music of the African Diaspora: Special Topics Seminar (4)**

An in-depth writing and listening intensive investigation into a jazz or diaspora-related music history topic. Topics vary from year to year. May be repeated once for credit. **Prerequisite:** Music 126, 127A or 127B, or consent of instructor.

**151. Race, Culture, and Social Change (4)**

Aggrieved groups generate distinctive cultural expressions by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course

examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with Ethnic Studies 108.) **Prerequisite:** upper-division standing or consent of instructor.

#### **152. Hip Hop: The Politics of Culture (4)**

Examination of hip-hop's music, technology, lyrics, and its influence in graffiti, film, music video, fiction, advertising, gender, corporate investment, government and censorship with a critical focus on race, gender, popular culture, and the politics of creative expression. (Cross-listed with Ethnic Studies 128.) **Prerequisite:** upper-division standing or consent of instructor.

#### **153. African Americans and the Mass Media (4)**

Examination of media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes, their relationship to changing social, political, and economic frameworks, and African Americans' responses to and interpretations of these mediated images. (Cross-listed with Ethnic Studies 164.) **Prerequisite:** upper-division standing or consent of instructor.

#### **154. Black Music/Black Texts: Communication and Cultural Expression (4)**

Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West Indians: Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. (Cross-listed with Ethnic Studies 176 and Literature in English 187.) **Prerequisite:** upper-division standing or consent of instructor.

#### **170. Musical Acoustics (4)**

(Formerly Music 160A.) An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. **Prerequisite:** Music 1A, 2A, or 4. Cross-listed with ICAM 103.

#### **171. Computer Music I (4)**

(Formerly Music 160C.) A practical introduction to computer techniques for desktop audio, including audio editing, MIDI control, and real-time music algorithms using the MAX programming environment. **Prerequisites:** Music 170; music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

#### **172. Computer Music II (4)**

(Formerly Music 161.) Computer synthesis techniques including wavetable and additive synthesis, waveshaping, and sampling. Transformation of musical sounds using filters, modulation, and delay effects. Fourier analysis of sounds. **Prerequisites:** Music 171 (formerly Music 160C); music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

#### **173. Audio Production: Mixing and Editing (4)**

(Formerly Music 162.) Theoretical and practical aspects of recording, mixing, and editing sound for both musical and multimedia applications. Covers audio montage, equalization, effects processing, spatialization, mastering, and diffusion. **Prerequisites:** Music 170 (formerly Music 160A); music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

#### **174A. Audio/MIDI Studio Techniques I (2)**

First of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include microphones, digital recording and editing, analog and digital interfaces, workflow, analytical listening. **Prerequisites:** Music 170, music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

#### **174B. Audio/MIDI Studio Techniques II (2)**

Second of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include electronic and acoustic mixing, signal processing, MIDI, synchronization and basic sound-for-picture. **Prerequisites:** Music 170, Music 174A; music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

#### **174C. Audio/MIDI Studio Techniques III (2)**

Third of three-part sequence, detailing digital studio resources and production techniques. Hardware and software techniques explored in project setting. Topics include audio quality, compression, mastering, surround sound, large scale production management. **Prerequisites:** Music 170, Music 174B; music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.

#### **175. Musical Psychoacoustics (4)**

(Formerly Music 160B.) Survey of psychoacoustical phenomena, theories of hearing, and their relation to musical perception and cognition. Techniques of psychoacoustical experimentation. **Prerequisite:** Music 170 (formerly Music 160A) recommended.

#### **176. Music Technology Seminar (4)**

(Formerly Music 163.) Selected topics in music technology and its application to composition and/or performance. Offerings vary according to faculty availability and interest. May be repeated for credit. **Prerequisites:** Music 172 (formerly Music 161) and consent of instructor.

#### **192. Senior Seminar in Music (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in music (at the upper-division level). Topics will vary from quarter to quarter. Senior seminars may be taken for credit up to four times, with a change in topic, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** upper-division standing; department stamp and/or consent of instructor required.

#### **195. Instructional Assistance (2)**

Assisting in the instruction of an undergraduate music class under the direct and constant supervision of a faculty member. May be taken for credit three times. **Prerequisites:** consent of instructor and departmental approval.

#### **198. Directed Group Study (1-4)**

Concentrated inquiry into various problems not covered in the usual undergraduate courses. **Prerequisites:** consent of instructor and department chair approval. Pass/Not Pass grade only.

#### **199. Independent Study (1-4)**

Independent reading, research, or creative work under the direction of a faculty member, provided no course covering the material to be studied already exists, and the study area derives from previous course work. **Prerequisites:** consent of instructor and department chair approval. Department stamp required. Pass/Not Pass grade only. May be taken for credit two times.

#### **ICAM 101. Digital Imaging: Image and Interactivity (4)**

(Cross-listed with VIS 140.) Introduction to digital image involving images, texts, and interactive display operating both within computer mediated space (i.e., Web site) and in physical space (i.e., artist book). Interactive narrative and computer programming are explored. Materials fee required. **Prerequisites:** VIS 40 or ICAM 40. Open to studio, media, and ICAM majors; computing and ICAM minors only. Two production course limitation.

#### **ICAM 102. Digital Media I: Time, Movement, Sound (4)**

(Cross-listed with VIS 145A.) Exploration of time dependent media components. Creation and manipulation of digital sound as well as moving images and their integration in multimedia work. Use of computer programming to control time is emphasized. Introduces time and process based digital media artmaking. Contemporary and historical works across time and process based media will be studied and projects produced. Topics may include software art, software and hardware interfacing, interaction, and installation in an art context. CSE 5A or equivalent program experience recommended. Materials fee required. **Prerequisites:** VIS 40 or ICAM 40 and VIS 140 or ICAM 101. Open to media, and ICAM majors; ICAM minors only. Two production course limitation.

#### **ICAM 103. Musical Acoustics (4)**

(Cross-listed with MUS 170.) An introduction to the acoustics of music with particular emphasis on contemporary

digital techniques for understanding and manipulating sound. **Prerequisites:** MUS 1A, 2A, or 4.

#### **ICAM 110. Computing in the Arts: Current Practice (4)**

Designed around the presentations by visiting artists, critics, and scientists involved with contemporary issues related to computer arts. Lectures by the instructor and contextual readings provide background material for the visitor presentations. **Prerequisites:** none. Note: Materials fee required.

#### **ICAM 120. Virtual Environments (4)**

Students create virtual reality artworks. Projects may be done individually or in groups. Exploration of theoretical issues involved will underlie acquisition of techniques utilized in the construction of virtual realities. Materials fee required. **Prerequisites:** VIS 145A or ICAM 102; CSE 11 recommended. Open to ICAM majors and minors only. Two production course limitation.

#### **ICAM 130. Seminar in Contemporary Computer Topics (4)**

(Cross-listed with VIS 149.) Topics relevant to computer-based art- and music-making, such as computer methods for making art/music, design of interactive systems, spatialization of visual/musical elements, critical studies. Topics will vary. May be repeated twice. Materials fee required. **Prerequisites:** VIS 140 or ICAM 101; VIS 145A or ICAM 102 and MUS 170 or ICAM 103 recommended. Open to media, and ICAM majors; ICAM minors only. Two production course limitation.

#### **ICAM 150. History of Art and Technology (4)**

(Cross-listed with VIS 159.) Aims to provide historical context for computer arts by examining the interaction between the arts, media technologies, and sciences in different historical periods. Topics vary(e.g., Renaissance perspective, futurism and technology, and computer art of the 1950s and 1960s. **Prerequisite:** none. Note: Materials fee required.

#### **ICAM 160A. Senior Projects in Computer Arts I (4)**

Students pursue projects of their own design over two quarters with support from faculty in a seminar environment. Project proposals are developed, informed by project development guidelines from real world examples. Collaborations are possible. Portfolio required for admissions. **Prerequisites:** VIS 141B or VIS 145B or VIS 147B or MUS 172. Open to ICAM majors only. Department stamp required. Two production course limitation.

#### **ICAM 160B. Senior Projects in Computer Arts II (4)**

Continuation of ICAM 160A. Completion and presentation of independent projects along with documentation. **Prerequisite:** ICAM 160A. Open to ICAM majors only. Department stamp required. Two production course limitation.

#### **192. Senior Seminar in Music (1)**

The Senior Seminar Program is designed to allow senior undergraduates to meet with faculty members in a small group setting to explore an intellectual topic in music (at the upper-division level). Topics will vary from quarter-to-quarter. Senior seminars may be taken for credit up to four times, with a change in topics, and permission of the department. Enrollment is limited to twenty students, with preference given to seniors. **Prerequisites:** upper-division standing; department stamp and/or consent of instructor.

#### **ICAM 199. Special Studies (2/4)**

Independent reading, research or creative work under direction of faculty member. **Prerequisites:** department stamp and upper-division standing required.

## **GRADUATE**

All courses numbered 200 and above are intended for students admitted to the graduate program in music.

#### **200. Contemporary Chamber Opera Performance (4)**

Students will collaborate with faculty and guest artists in the preparation and performance of a fully staged contemporary chamber opera. The opera will be presented

in multiple public performances. Prerequisites: graduate standing in music, MU75/MU76, or consent of instructor.

#### **201A-B-C-D-E-F. Projects in New Music**

##### **Performance (1-4, 1-4, 1-4, 1-4, 1-4)**

Performance of contemporary music. Different sections represent active performance ensembles. A core requirement for music graduate students as outlined in the curriculum.

#### **202. Advanced Projects in Performance (1-4)**

Advanced performance of new music with members of the performance faculty (SONOR). Students taking this course do not need to take Music 201 that quarter. Enrollment by consent of instructor/director of SONOR. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp.

#### **203A. Advanced Projects in Composition (6)**

Meetings and laboratory sessions devoted to the study of composition in small groups. Consent of instructor required.

#### **203B. Advanced Projects in Composition (6)**

Meetings and laboratory sessions devoted to the study of composition in small groups. Consent of instructor required.

#### **203C. Advanced Projects in Composition (6)**

Meetings and laboratory sessions devoted to the study of composition in small groups. Consent of instructor required.

#### **203D. Advanced Projects in Composition (1-4)**

Meetings on group basis with faculty composer in sessions devoted to the study of composition. **Prerequisites:** 203A-B-C and consent of instructor.

#### **204. Focus on Composition (2)**

The purpose of this seminar is to bring in the entire population of the graduate composition program (all students and faculty) for in-depth discussion of critical issues in music theory and composition. Each meeting will feature a formal presentation by either a student, faculty member, or visitor, followed by lively and challenging debate on relevant issues. **Prerequisite:** consent of instructor.

#### **205. Focus on Integrative Studies (2)**

Meets on a biweekly basis to facilitate presentations by advanced students and invited guests and to encourage in-depth discussion between students, faculty, and visitors about theoretical and artistic issues of interest. Participation is required of all enrolled IS students until advanced to candidacy. Others are welcome to participate. **Prerequisite:** graduate standing in music.

#### **206. Experimental Studies Seminar (4)**

Seminars growing out of current faculty interests. The approach tends to be speculative and includes individual projects or papers as well as assigned readings. In the past, such areas as new instrumental and vocal resources, mixed media, and compositional linguistics have been offered. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp.

#### **207. Theoretical Studies Seminar (4)**

Seminars on subject areas relating to the established dimensions of music and in which theoreticians have produced a substantial body of work. These include studies in analysis, timbre, rhythm, notation, and psychoacoustics. Offerings vary depending on faculty availability and interest. Analytical paper required. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp.

#### **209. Advanced Music Theory and Practice (4)**

Advanced integrated studies in music theory; composition and styles study through analysis and performance. This course is intended primarily for doctoral students and may be taken by M.A. students only with special approval of M.A. advisor and course instructor. A major research or analytical publishable paper required. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp.

#### **210. Musical Analysis (4)**

The analysis of complex music. The course will assume that the student has a background in traditional music analysis.

The goal of the course is to investigate and develop analytical procedures that yield significant information about specific works of music, old and new. Reading, projects, and analytical papers. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp.

#### **211. Introduction to Ethnomusicology (2)**

Introduces the field of ethnomusicology by highlighting important thinkers, concepts, and issues and by orienting students toward work of an anthropological, ethnographic, or comparative nature. Students who have taken and passed MUS 208A may not get credit for MUS 211. **Prerequisite:** graduate standing in music

#### **212. Introduction to System Inquiry (2)**

Introduces the network of concepts and approaches that comprise systems inquiry and explores the theoretical, philosophical, and methodological implications of systems thinking for musical research and practice. Students who have taken MUS 208B for credit may not take MUS 212 for credit. **Prerequisite:** graduate standing in music.

#### **213. Introduction to Critical Studies (2)**

Introduces important themes and thinkers from the fields of critical theory and cultural studies and explores how musical behaviors and phenomena relate to matters of ideology, nationality, ethnicity, social class, race, and gender. Students who have taken MUS 208C for credit may not take MUS 213 for credit. **Prerequisite:** graduate standing in music.

#### **214. Introduction to Creative Practices (2)**

Surveys the terrain of contemporary creative music and investigates the social, cultural, historical, and technological dimensions of its manifestations and practice. Students who have taken MUS 208D for credit may not take MUS 214 for credit. **Prerequisite:** graduate standing in music.

#### **228. Conducting (4)**

This course will give practical experience in conducting a variety of works from various eras of instrumental and/or vocal music. Students will study problems of instrumental or vocal techniques, formal and expressive analysis of the music, and manners of rehearsal. Required of all graduate students. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp. (Offered in selected years.)

#### **229. Seminar in Orchestration (4)**

A seminar to give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of these various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. **Prerequisite:** graduate standing. (Offered in selected years.)

#### **230. Chamber Music Performance (4)**

Performance of representative chamber music literature, instrumental and/or vocal, through coached rehearsal and seminar studies. Course may be repeated for credit since the literature studied varies from quarter to quarter. **Prerequisite:** consent of instructor.

#### **232. Pro-Seminar in Music Performance (1-4)**

Individual or master class instruction in advanced instrumental/vocal performance. **Prerequisite:** consent of instructor through audition.

#### **234. Symphonic Orchestra (4)**

Repertoire is drawn from the classic symphonic literature of the eighteenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. **Prerequisites:** audition required.

#### **245. Focus on Performance (2)**

The purpose of this seminar is to bring together performance students, faculty, and guests for discussion, presentation of student and faculty projects, performances by guest artists, and master classes with different members

of the performance faculty. **Prerequisite:** consent of instructor. (S/U grade option only.)

#### **250. Special Projects (1-12)**

An umbrella course offered to music graduate students in lieu of normal seminar offerings. Topics will be generated by faculty and graduate students and submitted in December each year for review by faculty. Students may register for up to four units of a specialized research topic with given faculty. May be taken for up to twelve units a quarter. (S/U grade option only.)

#### **251. Integrative Studies Seminar in Ethnomusicology (4)**

Provides an in-depth look at the shifting definitions, methods, and scope of ethnomusicology and explores contemporary writings and issues that are shaping the field today. **Prerequisite:** graduate standing in music.

#### **252. Integrative Studies Seminar in Systems Inquiry (4)**

Traces the development of systems thinking and encourages work of a transdisciplinary nature, integrating models, strategies, methods, and tools from natural, human, social, and technological realms. **Prerequisite:** graduate standing in music.

#### **253. Integrative Studies Seminar in Critical Studies (4)**

Develops critical thinking and self-reflexive inquiry through in-depth study of a diverse range of critical and scholarly traditions as they relate to music. Students are encouraged to investigate their own sense of identity and voice, as embodied in their creative and/or scholarly work. **Prerequisite:** graduate standing in music.

#### **254. Integrative Studies Seminar in Creative Practice (4)**

Students will explore a variety of approaches to collaborative work and will be challenged to develop a personal aesthetic in experimental art and new media and design original work for presentation at faculty juries. **Prerequisite:** graduate standing in music.

#### **267. Advanced Music Technology Seminar (4)**

Advanced topics in music technology and its application to composition and/or performance. Offerings vary according to faculty availability and interest. May be repeated for credit. **Prerequisites:** Music 173 or equivalent and consent of instructor.

#### **270A. Digital Audio Processing (4)**

Digital techniques for analysis, synthesis, and processing of musical sounds. Sampling theory. Software synthesis techniques. Digital filter design. The short-time Fourier transform. Numerical accuracy considerations. **Prerequisite:** consent of instructor.

#### **270B. Musical Cognitive Science (4)**

Theoretical bases for analyzing musical sound. Approaches to perception and cognition, including psychoacoustics and information processing, both ecological and computational. Models of audition including Helmholtz's consonance/dissonance theory and Bregman's streaming model. Musical cognition theories of Lerdahl and Narmour. Neural network models of music perception and cognition. Models of rhythm. The problem of timbre and timbre perception. **Prerequisite:** consent of instructor.

#### **270C. Compositional Algorithms (4)**

Transformations in musical composition; series and intervallic structures; serial approaches to rhythm and dynamic. The stochastic music of Xenakis and Cage. Hiller's automatic composition. Improvisational models. Computer analysis of musical style. Neurally inspired and other quasiparallel algorithms. **Prerequisite:** consent of instructor.

#### **270D. Advanced Projects in Computer Music (4)**

Meetings on group basis with computer music faculty in support of individual student research projects. **Prerequisites:** consent of instructor and completion of Music 270A-B-C.

#### **271A. Survey of Electronic Music Techniques I (4)**

A hands-on encounter with several important works from the classic electronic repertory, showing a representative subset of the electronic techniques available to musicians.

Students who have taken MUS 271 for credit may not take MUS 271A for credit. **Prerequisite:** graduate standing in music.

**271B. Survey of Electronic Music Techniques II (4)**

A continuation of 271A, with emphasis on live interactive techniques (e.g., audio processing; analysis/resynthesis; score following). **Prerequisites:** Music 271A and graduate standing in music.

**271C. Survey of Electronic Music Techniques III (4)**

A continuation of 271A and B, with emphasis on compositional techniques (e.g., computer-aided composition; production; spatialization). **Prerequisites:** Music 271B and graduate standing in music.

**272. Seminar in Live Computer Music (4)**

Group projects to create new pieces of live electronic music involving research in electronic music and/or instrumental techniques. May be repeated for credit. **Prerequisites:** Music 271A-B-C or consent of instructor and graduate standing in music.

**291. Problems and Methods of Music Research and Performance (2)**

The course will give practical experience in historical research, including use of important source materials, evaluation of editions, and examination of performance practice problems. (S/U grade option only.)

**296. Directed Group Research in Performance (4)**

This group research seminar involves the investigation and exploration of new and experimental performance concerns. Areas could include: improvisation, graphic notation, performance electronics, and working with combined media (such as dance, poetry, and theater). **Prerequisite:** graduate standing. (S/U grade option only.)

**298. Directed Research (1-4)**

Individual research. (S/U grades permitted.) May be repeated for credit. Enrollment by consent of instructor only.

**299. Advanced Research Projects and Independent Study (1-12)**

Individual research projects relevant to the student's selected area of graduate interest conducted in continuing relationship with a faculty advisor in preparation of the master's thesis or doctoral dissertation. **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp. (S/U grades permitted.)

**500. Apprentice Teaching (1-4)**

Participation in the undergraduate teaching program is required of all graduate students at the equivalent of 25 percent time for three quarters (six units is required for all graduate students). **Prerequisites:** graduate standing in music; others by written consent of instructor and department stamp. (S/U grade option only.)

**501. Apprentice Teaching—Nondepartmental (4)**

Consideration and development of pedagogical methods appropriate to undergraduate teaching. **Prerequisites:** graduate standing and consent of instructor. (S/U grade option only.)

# Neurosciences

## DIRECTOR, NEUROSCIENCES GRADUATE PROGRAM

Anirvan Ghosh, Ph.D., *Biology*

## PROFESSORS

Henry Abarbanel, Ph.D., *Physics*

Thomas Albright, Ph.D., *Adjunct/Psychology and Neurosciences*

Ursula Bellugi, Ed.D., *Adjunct/Psychology*

Darwin K. Berg, Ph.D., *Biology-Neurobiology Section*

Karen Britton, M.D., Ph.D., *In-Residence/Psychiatry*

Joan Heller Brown, Ph.D., *Pharmacology*

Nigel Calcutt, Ph.D., *Pathology*

Edward M. Callaway, Ph.D., *Adjunct/Neurosciences and Biology*

Gert Cauwenberghs, Ph.D., *Biology*

Andrew Chisolm, Ph.D., *Biology*

Senyon Choe, Ph.D., *Chemistry and Biochemistry/ Biological Sciences*

Jerold Chun, M.D., Ph.D., *Adjunct/Pharmacology*

Robert Clark, Ph.D., *In-Residence/Psychiatry*

Don Cleveland, Ph.D., *Medicine/Neurosciences*

Eric Courchesne, Ph.D., *Neurosciences*

Anders M. Dale, Ph.D., *Neurosciences*

Karen Dobkins, Ph.D., *Psychology*

Jeffrey L. Elman, Ph.D., *Cognitive Science*

Mark H. Ellisman, Ph.D., *Neurosciences*

Edmund J. Fantino, Ph.D., *Psychology*

Fred H. Gage, Ph.D., *Adjunct/Neurosciences and Biology*

Douglas R. Galasko, M.D., *In-Residence/Neurosciences*

Mark A. Geyer, Ph.D., *In-Residence/Psychiatry and Adjunct/Neurosciences*

Lawrence S.B. Goldstein, Ph.D., *Cellular and Molecular Medicine*

Michael Gorman, Ph.D., *Psychology*

Philip M. Groves, Ph.D., *Emeritus, Psychiatry and Neurosciences*

Richard H. Haas, M.D., *Neurosciences and Pediatrics*

Eric Halgren, Ph.D., *Radiology*

Shelley Halpain, Ph.D., *Biology*

Richard L. Hauger, M.D., *In-Residence/Psychiatry*

Stephen F. Heinemann, Ph.D., *Adjunct/Neurosciences*

Steven A. Hillyard, Ph.D., *Neurosciences and Adjunct/ Psychology*

Vivian Y.H. Hook, Ph.D., *Pharmacology*

Paul A. Insel, M.D., *Pharmacology and Medicine*

Vicente J. Iragui-Madoz, M.D., Ph.D., *Clinical Neurosciences*

## THE GRADUATE PROGRAM

The Neurosciences Graduate Program accepts candidates for the Ph.D. degree who have undergraduate majors in such disciplines as biology, chemistry, engineering, microbiology, mathematics, physics, psychology, and zoology. A desire

and competence to understand how the nervous system functions is more important than previous background and training.

## DOCTORAL DEGREE PROGRAM

Students in this program receive guidance and instruction from a campuswide group of faculty interested in nervous system mechanisms. Each student, in consultation with an advisory committee, selects courses relevant to his or her research interests and goals. The selection will include formal courses listed in this catalog and informal seminars offered by the department. A regular schedule of rotation through the laboratories of faculty members is a feature of the first year; the student is exposed in this way to the various approaches, techniques, and disciplines represented on the campus.

## SPECIALIZATION IN COMPUTATIONAL NEUROSCIENCE

The Neuroscience Graduate program offers a specialization in Computational Neuroscience. Students in the Computational Neuroscience specialization are trained in the broad range of scientific and technical skills essential to understand the computational resources of neural systems. Students in this specialization will be required to fulfill all of the academic requirements of students in the Neurosciences Graduate Program. In addition to these requirements, students in the Computational Neuroscience specialization must successfully complete a set of three core computational courses, an advanced laboratory, and computational neuroscience journal clubs.

Required courses include:

### Core Courses:

Neurosci. 200A-B-C  
Neurosci. 225  
Neurosci. 241  
Neurosci. 257  
Neurosci. 276

### Computational Neuroscience Specialization Courses:

BGGN 246A-B  
BGGN 260  
BGGN 266  
Cog. Sci. 260  
Physics 271

## COURSE WORK

By the time of the minor proposition (see below), students are expected to demonstrate competence in the basics of neuroscience by taking five quarters of mandatory course work—three quarters of Basic Neuroscience (Neurosci. 200 A-B-C), and one quarter each of Neuroanatomy Lab (Neurosci. 257) and Statistical Methods and Experimental Design (Neurosci. 225). In addition, students choose among various core elective courses, such as Molecular and Cellular Neuroendocrinology (Neurosci. 222), Neuropsychopharmacology (Neurosci. 277), Molecular and Cellular Neurobiology (Neurosci. 268), Developmental Neuroscience (Neurosci. 263) and approved courses from other graduate departments. Students are also permitted to substitute previous

courses that are similar to the Neurosciences core courses. Such a substitution would require approval of the chair of the Curriculum Committee or the director of the Graduate Program.

## MINOR PROPOSITION

The purpose of this examination is to test the student's ability to choose a problem in the neurosciences and propose an experimental approach to its solution. The problem should be broad, requiring experimental approaches from more than one discipline. The problem should be outside the area of the student's anticipated dissertation research. Students will be required to demonstrate a working knowledge of the disciplines involved in the minor proposition.

Oral defense of the minor proposition will be required at the end of the winter quarter of the second year of study.

## DISSERTATION

During the second year, students are expected to propose and initiate work on a dissertation problem under the guidance of a faculty preceptor. The neurosciences group at UCSD currently conducts animal research and clinical studies in the fields of neuroanatomy, neurochemistry, neuropharmacology, neurophysiology, comparative neurology, physiology of excitable membranes, synaptic transmission, neuronal integration and coding, nervous system tissue culture, neuroimmunology, brain function, sensory physiology, motor mechanism, and systems analysis as applied to neurological problems.

## QUALIFYING EXAMINATION

This examination, a university requirement, focuses on the proposed research that the student will undertake for his or her dissertation. This examination is conducted by the approved doctoral committee.

## DISSERTATION EXAMINATION

The required formalities listed in the Instruction for Preparation and Submission of Doctoral Dissertations issued by the Office of Graduate Studies and Research to students should be followed closely. The final examination includes both a public presentation followed by a closed defense of the dissertation with members of the Committee.

## TEACHING

All students are required to perform as a teaching assistant for at least one quarter during their graduate career. To this end, opportunities to lecture and assist in laboratory exercises and demonstrations are available through a number of departments, including neurosciences, biology, and cognitive science.

## PH.D. TIME LIMIT POLICIES

Students must advance to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

## COURSES

*For course descriptions not found in the UC San Diego General Catalog, 2010–11, please contact the department for more information.*

## UNDERGRADUATE

### 199. Independent Research (2 or 4)

Laboratory research under the supervision of individual members of the faculty of the neurosciences department in one or a combination of neurosciences disciplines, e.g., neuroanatomy, neurophysiology, neurochemistry, neuropharmacology. (P/NP grades only.) (F,W,S)

## GRADUATE

### 200A-B-C. Basic Neuroscience (4-4-4)

These courses are designed for graduate students in the neurosciences and other departments that are part of the interdisciplinary program (i.e., Biology, Cog. Sci.). These courses have been designed to cover as much basic neuroscience as possible in three quarters of study. It will combine two three-hour meetings each week with a 1.5 hour lecture and a 1.5 hour discussion of papers. These will be required courses for all first-year neurosciences graduate students. Biology will cross-list courses under Biology headings, making it a requirement of first year Biology graduate students. **Prerequisite:** graduate student or consent of instructor. (F,W,S)

### 210. Neurology Boot Camp (4)

For incoming doctoral students in Neurobiology, Computational Neurobiology, and Neurosciences. During the first two weeks in September, students commit to 10–15 hours per day in lectures and laboratories in electrophysiology, cellular anatomy, molecular biology, optical imaging, and computational neurobiology. Students also attend weekly seminars during fall quarter. **Prerequisites:** graduate standing only. For students in the following major codes: BI77, BI79, NE75.

### 221. Advanced Topics in Neurosciences (2)

Specialized advanced topic areas in neurosciences will be addressed in an interactive seminar course format. A different specific topic will be considered each quarter as announced in advance. Students will each present an aspect of the topic area and participate in discussions. **Prerequisite:** graduate student or consent of instructor. (F,W,S)

### 222. Molecular and Cellular Neuroendocrinology (4)

This course will examine the role of the CNS in controlling reproductive functions, stress, growth and behavior, with emphasis on the cellular and molecular mechanisms of neuroendocrine function. The lectures will be given by experts on each of the topic subjects. Lectures will include a basic introduction on the topic followed by a description of the current research in the area.

### 225. Statistical Methods and Experimental Design (2)

This is a practical course designed to emphasize the relationships between experimental design, statistical methods, and biomedical research. The assumptions behind the statistical tests, their appropriate use, and examples of misuse will be discussed. **Prerequisites:** registered student in SOM graduate program or approval of instructor.

### 232. Topics in Neurosciences at the Boundaries of Neurology and Psychiatry (4)

This course focuses on disorders affecting the nervous system, emphasizing phenomenological and mechanistic links and common biological themes across these disorders. Clinical presentations, pathology, and basic science of selected diseases will be covered in lecture and discussion format. **Prerequisite:** enrollment in UCSD graduate sciences or clinical fellowship program.

### 241. Ethics and Survival Skills in Academia (3)

This course will cover "ethical" issues in academia, including dishonesty, plagiarism, attribution, sexual misconduct, etc. We will also discuss "survival" issues, including job hunting, grant preparation, journal reviews, writing letters of recommendation, mentoring, etc. (W)

### 243. Physiological Basis of Human Information (2)

Psychological processes including attention, perception, and memory will be studied in connection with event-related potentials of the human brain. The interrelations among psychological and physiological events will be explored in order to arrive at unified concepts of human

information processing. **Prerequisites:** Neurosci. 238 or Psych. 231, and consent of instructor. (S/U grades only.) (F)

#### **259. Workshop in Electron Microscopy (4)**

This course is to introduce graduate students in the neurosciences to research methods used in electron microscopy (EM) through one hour of formal lecture, one hour of seminar, three hours of demonstration, and three hours of supervised laboratory work per week. Students will become familiar with sectioning EM, scanning EM, and freeze-fracture EM. **Prerequisites:** graduate-student standing in neurosciences doctoral program and consent of instructor. Enrollment limited. (S/U grades only.) (S)

#### **263. Developmental Neuroscience (3)**

A graduate reading course that highlights selected topics in the molecular study of neural development.

#### **266. Development of Neural Circuits (4)**

Course focuses on developmental processes during formation of neural circuits. Molecular, genetic, cellular mechanisms controlling neurogenesis, neuronal differentiation, positioning (migration), axon/dendrite patterning, and synapse formation will be discussed. Role of neural activity shaping circuit formation will be explored. **Prerequisites:** graduate standing only. For students in the following major codes: NE75, BI77, BI79, or consent of instructor.

#### **268. Molecular and Cellular Neurobiology (4)**

Molecular and cellular approaches to the study of the nervous system are advancing neurobiology at an increasingly rapid pace. This graduate-level course will address the latest molecular advances in the areas of: 1) synapse formation, neurotransmitter release, and neurotransmitter receptors; 2) nerve growth factors, their receptors, and neuronal apoptosis; 3) transcriptional regulation in the brain and peripheral nervous system; 4) cell culture, transgenic, and knock-out mouse model systems; 5) the molecular bases of genetic, psychiatric, and degenerative diseases of the nervous system; and 6) the current molecular knowledge of vision, sensory transduction, circadian rhythms, learning, memory, and behavior.

#### **276. Neuroscience Research Rounds (1)**

Neurosciences group faculty members and graduate students will present and discuss ongoing research. Attendance will be mandatory for first- and second-year graduate students. Faculty, advanced graduate students, medical students, postdoctoral trainees, and other interested parties are encouraged to attend. (F,W,S)

#### **277. Neuropsychopharmacology (4)**

An examination of the molecular and biochemical bases of drug and transmitter action. The course is devoted to receptor mechanisms, neuropharmacology, and drug action on excitable tissues. **Prerequisite:** graduate standing. (S)

#### **285. Clinical Trails: Issues and Dilemmas in Clinical Trials (3)**

This course provides a methodological perspective on clinical trials. Topics will include ethics, design of Phase I-IV trials, randomization/blinding, bias, and sample-size power. Lectures will also cover "application" with eminent UCSD trialists describing conduct, design, and statistical issues of specific studies. **Prerequisites:** medical or graduate student standing.

#### **296. Neurosciences Research Rotation (1-12)**

Independent study. (S/U grades only.) (F,W,S)

#### **298. Neurosciences Independent Study Project (ISP) (1-12)**

**Prerequisite:** approved ISP proposal. (F,W,S)

#### **299. Neurosciences Research (1-12)**

Independent study. (S/U grades only.) (F,W,S)

#### **401. Neurology General Clinical Selective Clerkship (7)**

Provides opportunities for practical application of neurological skills to the understanding and treatment of a variety of clinical disorders of the nervous system. **Prerequisite:** successful completion of first two years of medical school. (F,W,S)

#### **426. Subintern Pediatric Neurology (7)**

Subinterns are responsible for the primary care of hospitalized pediatric neurology patients under direct resident

and attending physician supervision. Students will perform procedures such as lumbar puncture and participate in night call, daily teaching round, neurology Grand Rounds, and Journal Clubs. **Prerequisite:** Neurology 401 or consent of instructor. (F,W,S)

#### **427. Neurology Outpatient (7)**

The student will rotate through the general and subspecialty (stroke, epilepsy, headache, nerve, and muscle) neurology clinics based at UCSD Medical Center, Perlman, VAMC, and Children's Hospital. There are lectures and clinical conferences. **Prerequisite:** Neurosciences 401 or equivalent. (F,W,S)

#### **496. Clinical Independent Study (1-21)**

Independent clinical study for medical students (S/U grades only.) (F,W,S)

#### **500. Apprenticeship Teaching (1-4)**

Participation in the department teaching program is required of all students working toward a Ph.D. degree. In general, students are not expected to teach in the first year, but are required to serve as teaching assistants or tutors for one quarter at any time during their subsequent years of training. The amount of teaching required is equivalent to the duties expected of a 50 percent assistant for one quarter. **Prerequisite:** neurosciences graduate students. (S/U grades only.) (F,W,S)

Students interested in going abroad should investigate possibilities through the Opportunities Abroad Program, which can assist with placement in a wide range of academic programs outside the UC system. These programs include study for an academic year, semester, quarter, or summer. They may be sponsored by other U.S. universities or include direct enrollment in foreign institutions. Academic credit may also be earned on a number of overseas internship programs that combine work experience and courses.

Students going abroad through the Opportunities Abroad Program earn transfer credit from the sponsoring institution. Courses taken abroad may satisfy general-education, major, or minor requirements, depending on department or college approval. Federal and state financial aid for approved plans of study abroad is available. Special study abroad scholarships are also available.

In addition to these academic programs, the Programs Abroad Office can assist students in selecting a wide range of volunteer, paid work, and educational travel programs.

## INTRODUCTION TO THE DEPARTMENT

Philosophy addresses some of the most basic questions humans ask about the world. Some questions are very broad, such as how can minds know about the external world, themselves, and other minds? How can we arrive at reasonable answers to ethical questions about right and wrong? What distinguishes science from other kinds of knowledge and are there limits to science? What is the role of moral choice and values in human life? Do standards of truth and logic apply in areas such as religion, art, politics, and law?

Philosophy also seeks answers to particular problems in specific areas of science, medicine, law, ethics, and technology. For example, it explores the ways that modern physics impacts our notions of space, time, causation, and nature itself. It considers the ways that neuroscience and genetics impact the

traditional ideas about free will and responsibility. It debates the limits of democratic governments in regulating individuals' conduct. It wrestles with problems about the right to die and the varied responsibilities of medical professionals. It inquires into the relation between science and religion. Related issues concern privacy, the limits of private property, and who should have access to what information.

## CAREER GUIDANCE

Philosophy is a broad field with diverse subfields. Some students may want to pursue a general course of study for the major, sampling courses across several of these distinct subfields. This strategy develops a solid foundation for graduate work in philosophy and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytic skills.

Other students may wish to pursue a more specialized program of studies. Below are descriptions of several areas of emphasis within philosophy. These illustrate the possibilities of developing your own coherent and focused set of courses that fulfill the requirements for the major in ways that are tailored to your specific intellectual and career interests. Philosophy is preparation for a wide range of careers—including science, law, medicine, teaching, business, and public policy.

Choosing a philosophy major is an excellent way to follow a disciplined and rigorous course of study that joins the breadth of a traditional college education with specialization in a chosen area.

## UNDERGRADUATE PROGRAM—MAJOR

The Department of Philosophy offers the degree of bachelor of arts (B.A.) in philosophy for the undergraduate major. A major in philosophy requires a total of fifteen philosophy courses, at least twelve of which must be upper-division (courses numbered 100 and above). Up to two upper-division courses outside of philosophy can count among the twelve required for the major if they are drawn from a related field and contribute to the major's philosophical program; such credit must be approved by the undergraduate advisor. Honors and directed study courses (Philosophy 191–199) may not be used to satisfy the major requirement of fifteen philosophy courses. Major requirements may be met by examination.

There is no required introduction to philosophy or the major. The department offers a variety of lower-division courses and sequences (numbered 1–99), any of which could be a suitable introduction to philosophy. The only required lower-division course for majors is Philosophy 10, Introduction to Logic.

At the upper-division level, majors are encouraged to take courses in the central areas of philosophical study:

- Metaphysics and Epistemology
- Law, Ethics, and Politics
- Philosophy of Science and Logic
- History of Philosophy

Though many upper-division courses have no prerequisite, any combination of three lower-division courses would provide a good foundation for taking most upper-division courses.

## CORE REQUIREMENTS FOR THE MAJOR

1. History of Philosophy. A history of philosophy core sequence 157, 158, and 159. It is strongly recommended that majors complete these courses in order.
2. Logic. Philosophy 10, and Philosophy 120 are required of all majors. Because Philosophy 120 is a prerequisite for a variety of upper-division courses, prospective majors are strongly encouraged to take Philosophy 10 and Philosophy 120 as early as possible.
3. Moral and Political Philosophy. Majors must take at least one upper-division course in moral or political philosophy from among Philosophy 160, 161, 166, or 167.
4. Metaphysics and Epistemology. Majors must take at least one upper-division course in traditional areas of analytic philosophy—metaphysics, epistemology, philosophy of language, and philosophy of mind—from among Philosophy 130, 132, 134, or 136.
5. Philosophy of Science. Majors must take at least one upper-division course in philosophy of science from among Philosophy 145, 146, 147, 149, 150, 151, or 152.

## OPTIONAL AREAS OF EMPHASIS IN THE MAJOR

The Department of Philosophy offers four optional areas of emphasis within the major, as described below. Students selecting an optional area of emphasis for the major must take and pass five of the courses listed under that area. Courses taken to complete an area of emphasis are counted toward the fifteen courses required for the major. Particular courses may be applied both to the completion of the area of emphasis and in fulfillment of a core requirement for the major. Students should be aware, as they plan their course of study, that only some of the courses listed for an area of emphasis will be taught in any given year.

The department encourages students considering a philosophy major to consult with the philosophy undergraduate coordinator and the philosophy faculty undergraduate advisor to plan a program of study that is suitable to their particular interests and needs. The department Web site <http://philosophy.ucsd.edu> provides additional information about courses falling within each area of emphasis. Areas of emphasis are not noted on transcripts or diplomas. The optional areas of emphasis are

### 1. Law, Ethics, and Society

This area targets the nature and source of our moral rights and obligations, the authority of the state and law, the basis of value and goodness. Several courses in this area target ethical issues in medicine, the environment, technological change, economic inequality, and matters concerning race, gender, class, ethnicity, and nationality. In this area, students will learn how moral and legal reasoning can reshape the political debates

over abortion, the death penalty, privacy on the Internet, genetic testing, religious tolerance, free speech, affirmative action, and other issues.

This area is excellent preparation for law school as well as for postgraduate study and careers in public policy.

- 125. Games and Decisions
- 148. Philosophy and the Environment
- 152. Philosophy of Social Science
- 160. Ethical Theory
- 161. Topics in the History of Ethics
- 162. Contemporary Moral Issues
- 163. Biomedical Ethics
- 164. Technology and Human Values
- 166. Classics in Political Philosophy
- 167. Contemporary Political Philosophy
- 168. Philosophy of Law
- 170. Philosophy and Race

## 2. Science, Technology, and Medicine

This emphasis focuses on the insights and challenges presented by science. Modern science and technologies affect our view of ourselves and of nature, introducing novel promises and problems. For instance, how do we balance technical, economic, environmental, and ethical values in making decisions concerning which technologies or drugs to develop? Modern science has also changed our understanding of nature. Quantum physics, the genetic revolution, and neuroscience (to name a few) present problems and have important implications for human life. Finally, there are questions about science itself. What are the methods of modern science? Do they vary from one science to another? Can the sciences be value free?

This area will appeal especially to those students interested in pursuing careers in philosophy, science, clinical medicine, medical research, the social sciences, science journalism, and public policy.

- 123. Philosophy of Logic
- 145. Philosophy of Science
- 146. Philosophy of Physics
- 147. Philosophy of Biology
- 148. Philosophy and the Environment
- 149. Philosophy of Psychology
- 150. Philosophy of Cognitive Sciences
- 151. Philosophy of Neuroscience
- 152. Philosophy of Social Science
- 153. Philosophy of History
- 163. Biomedical Ethics
- 164. Technology and Human Values

## 3. Mind, Brain, and Cognitive Sciences

Traditional epistemology (the theory of how and what we know) and philosophy of mind (the theory of that-which-perceives-and-thinks) have recently been joined by several scientific disciplines in a collective search for illuminating theories. Psychology, cognitive neurobiology, computer science, and sociology have all made explosive contributions to a tradition as old as Plato and Aristotle. For example, our growing understanding of the biological brain has given new life to our traditional attempts to understand the nature of the mind. New accounts of the various mechanisms of cognition—both at the cellular and the social levels—have provided entirely new

perspectives on the nature of consciousness, the self, knowledge and free will, and on the nature of science itself.

- This area is excellent preparation for careers in cognitive science, neuroscience, artificial intelligence, science journalism, and philosophy.
- 132. Epistemology
- 134. Philosophy of Language
- 136. Philosophy of Mind
- 145. Philosophy of Science
- 147. Philosophy of Biology
- 149. Philosophy of Psychology
- 150. Philosophy of Cognitive Sciences
- 151. Philosophy of Neuroscience
- 180. Phenomenology

## 4. Historical Perspectives on Philosophy, Science, and Religion

Throughout its history, philosophy has developed in a complex relationship with the natural sciences and religion. Philosophical ideas have both contributed to and challenged our understanding of nature and God, and developments in the sciences and religion have posed new challenges for philosophical thinking. The historical perspectives emphasis focuses on the fertile interplay between philosophy, science, and religion in several key periods: ancient Greece, the Scientific Revolution, and Enlightenment and post-Enlightenment Europe. The aim is not simply to document the history of philosophical ideas, but to use this history as a way of better understanding contemporary debates about the basic questions of human life.

This area prepares students for postgraduate work in philosophy, and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytical skills.

- 100. Plato
- 101. Aristotle
- 102. Hellenistic Philosophy
- 104. The Rationalists
- 105. The Empiricists
- 106. Kant
- 107. Hegel
- 108. Nineteenth-Century Philosophy
- 109. History of Analytic Philosophy
- 161. Topics in the History of Ethics
- 166. Classics in Political Philosophy
- 180. Phenomenology
- 181. Existentialism
- 183. Topics in Continental Philosophy

## GRADE RULES FOR MAJORS/MINORS

All courses applied toward the major or minor must be completed with a grade of C– or higher. Further, a GPA of 2.0 must be maintained in courses applied toward the major or minor. It should be noted that courses taken under the Pass/Not-Pass (P/NP) grading option cannot be applied toward the major or minor.

## HONORS PROGRAM

The philosophy department offers an honors program for outstanding students in the major. Majors who have a 3.7 GPA in philosophy (3.25 overall) at the end of their junior year and who have taken at

least four upper-division philosophy courses are eligible to apply. Interested students must consult with a faculty sponsor by the last day of classes during the spring term of their junior year. Admission to the honors program requires nomination by a faculty sponsor and approval of the undergraduate advisor. Nominating Petitions can be obtained from the philosophy department.

In addition to the usual major requirements, an honors student is required to complete a senior honors thesis by the end of winter quarter. During the fall and winter quarters, the student will be registered for Philosophy 191A and 191B and will be engaged in thesis research that will be supervised and evaluated by the student's faculty sponsor. A departmental committee will read and assess the completed thesis and determine if philosophy honors are to be awarded. Honors students are expected to maintain an average of 3.7 or better for all work taken in the program. (Qualified students wishing to participate in the honors program according to a different timetable than the one described above can apply to do so by petitioning the undergraduate advisor.)

## TRANSFER CREDIT

Courses taken at other institutions may be applied toward the major by petition only. Petitions should be submitted to the Department of Philosophy main office, and must be accompanied by supporting materials (transcripts, syllabi, course work, etc.). Students are required to submit one petition per transfer course.

For specific regulations regarding transfer credit for Philosophy 10 (Introduction to Logic), please see the information on the department Web site: <http://philosophy.ucsd.edu>.

It is important to note that seven of the twelve upper-division courses in the major must be taken in the Department of Philosophy at UC San Diego.

Note: All courses applied toward major must be taken for a letter grade.

## UNDERGRADUATE PROGRAM—MINOR

The Department of Philosophy offers a minor in philosophy. As with the major, the minor is an attractive option for a wide range of career paths, including medicine, law, research in the natural and social sciences, journalism, education, and government. A minor requires a total of seven philosophy courses, at least five of which must be upper division. If choosing an area of emphasis, at least four upper-division courses must be from the chosen area of emphasis. All courses must be taken for a letter grade, C– or better.

## ADVISING OFFICE

Students who desire additional information concerning our course offerings or program may contact individual faculty or the assistant director of the undergraduate program through the department main office at 7002 H&SS, (858) 534-3070.

OFFICE:  
7002 Humanities and Social Sciences Building  
Muir College  
<http://philosophy.ucsd.edu>

## GRADUATE PROGRAM REQUIREMENTS

The department offers programs leading to the M.A. and Ph.D. It is the intention of the graduate program to enable the student to obtain an understanding of diverse traditions and to develop as a philosopher in his or her own right. To this end, the department offers courses and seminars in the history of philosophy and in traditional and contemporary philosophical issues, from a variety of perspectives.

## DOCTORAL DEGREE PROGRAM

### COURSE WORK

Over the first two years, students will normally take at least three courses per quarter, of which at least two are philosophy seminars (numbered 200–285). The balance may be made up from additional graduate courses in philosophy, up to two independent studies in philosophy, upper-division courses in philosophy (those numbered 100–199), approved upper-division or graduate courses in related departments, and, if the student is a teaching assistant, Philosophy 500 Apprentice Teaching. In any case, before advancing to candidacy, students must have completed fourteen graduate seminars, twelve of which are graduate philosophy seminars.

### PROSEMINAR

In fall quarter of their first year of residence, graduate students will take a proseminar designed to introduce them to philosophical methods and improve their skills at writing and analysis. Enrollment in the proseminar is limited to first-year students. The proseminar may be team-taught. The topics to be covered will address some central area or areas of philosophy and will vary from year to year. The proseminar is a regular four-unit seminar.

### CORE COURSES

In the following areas, the department shall offer “core” or advanced introductory seminars: philosophy of mind, philosophy of language, philosophy of science, the history of philosophy, epistemology, metaphysics, ethics and political philosophy. The department shall offer at least three of these courses in each academic year. Students must take two of these core courses by the end of their second year of residence. Courses taken to satisfy this requirement may be applied toward the distribution requirement.

Core courses are not necessarily distinguished by the numbers under which they are offered, but by their content. A core course provides a point of entry into a field that is suitable for graduate students with no prior work in this area of philosophy as well as students with some background knowledge. A core course may be a general survey of a field, or alternatively may take up some central, relatively nonspecialized topic. (Though core courses are intended to provide students with an entry point into particular philosophical topics, students are welcome to supplement the graduate core courses with upper-division undergraduate philosophy courses (those numbered 100–199), which are often organized as surveys.) A core course may offer students the option of writing shorter papers rather

than one long seminar paper; in some cases a final examination may be offered. The decision whether to count a course as core will be made by the instructor in consultation with the graduate advisor.

### DISTRIBUTION REQUIREMENTS

Before advancing to candidacy students must have completed, nine graduate seminars in philosophy (in addition to the proseminar) distributed across the subfields of philosophy listed below. Students must take three seminars in the history of philosophy, including one in ancient philosophy and one in modern philosophy), two seminars in two other areas, and at least one seminar in every area

1. History of Philosophy

2. Philosophy of Science
3. Philosophy of Mind and Philosophy of Language
4. Ethics and Political Philosophy
5. Metaphysics and Epistemology

Courses used to satisfy a requirement in one category cannot be used to satisfy a requirement in another category. The determination as to what category or categories a particular seminar taught in a given quarter may count toward is normally made by the seminar instructor.

### LOGIC REQUIREMENT

In their first year of residence, all graduate students must demonstrate proficiency in basic formal logic (the predicate calculus, up to and including functions, relations, and identity) either by passing an examination in this material (normally offered each fall and often in spring) or by taking Philosophy 120 (Symbolic Logic) during their first year of study and achieving a grade of B+ or better. By the end of their second year of residence, all students must pass an advanced logic course (Philosophy 122, 123, 126, 222, or another logic class approved by the graduate advisor).

### THIRD YEAR ESSAY REQUIREMENT

During the third year each student shall write an original research essay of about 7,500–9,000 words under the supervision of the student’s third-year committee, which is responsible for determining that the research essay meets the necessary standards of philosophical sophistication. The intent of the requirement is to demonstrate that the student has acquired the skills necessary for exploring a philosophical problem and addressing it in a polished essay that is more substantial and sustained than is typical in the writing of papers for graduate seminars. It is intended that the student will complete this requirement during his or her third year of residence; in any case, the student must satisfy this requirement before advancing to candidacy.

### RESEARCH SKILLS REQUIREMENT

Before advancing to candidacy, students will normally be required to demonstrate competence in a skill outside philosophy but relevant to his or her dissertation research.

Which skill is appropriate will be decided by the student in consultation with his or her first- or second-year advisors and the graduate advisor.

Examples of ways in which students may satisfy the skills requirement include demonstrating competence in a foreign language relevant to their research (e.g., Classical Greek, Latin, French, or German, for students working in the history of philosophy); passing three upper-division undergraduate or graduate-level courses in biology, physics, mathematics, or linguistics (for students working in the philosophy of biology, physics, mathematics, or language); passing three upper-division undergraduate or graduate-level courses in political science, economics or sociology (for students working in political philosophy or ethics). Undergraduate courses taken must be passed with a grade of B+ or better.

Specific decisions about the satisfaction of this requirement will be made on a case-by-case basis by the graduate advisor and the student’s advisors, and will be made on grounds of the intellectual relevance of the proposed research skill and the needs of the student.

### INDEPENDENT STUDY COURSES

Philosophy 290 (Directed Independent Study) is appropriate for a graduate student still in the process of fulfilling course requirements for the degree. However, this course will not normally be approved for students in the first year of the program, and will not normally count toward the satisfaction of distribution requirements.

Philosophy 295 (Research Topics) is an appropriate course for a student in the process of working towards a dissertation prospectus.

Philosophy 299 (Thesis Research) is appropriate for a student working on his or her dissertation.

### TEACHING REQUIREMENTS

Participation in undergraduate teaching is one of the requirements for a Ph.D. in philosophy. Students are required to serve as a teaching assistant for (at a minimum) the equivalent of one-quarter time (ten hours per week) for three academic quarters. The duties of a teaching assistant normally entail grading papers and examinations, conducting discussion sections, and related activities, including attendance at lectures in the course for which he or she is assisting.

### DISSERTATION PROSPECTUS AND ORAL CANDIDACY EXAM

Sometime after completing the distribution requirements, the student must submit a dissertation prospectus to his or her doctoral committee. The committee will then orally examine the student on the intended subject and plan of research. The examination will seek to establish that the thesis proposed is a satisfactory subject of research and that the student has the preparation and the abilities necessary to complete that research. This oral qualifying exam must be passed before the end of the fourth year of study (twelfth quarter of residence). Students who are passed and have met the other requirements will be advanced to candidacy for the Ph.D.

### DOCTORAL DISSERTATION

Under the supervision of a doctoral committee, each candidate will write a dissertation demonstrating a capacity to engage in original and independent

research. The candidate will defend the thesis in an oral examination by the doctoral committee.

## ACADEMIC ADVISING

### First and Second Year Academic Advising

After consultation with the graduate advisor, each entering student will be assigned a faculty advisor. Students are encouraged to meet with their faculty advisors once a quarter during their first two years to plan their course of study and review their progress in the program. Students may change their faculty advisor after one has been assigned. Advising duties will shift to the third-year committee in the student's third year of study, and then to the dissertation committee once the student begins the dissertation.

### Third Year Academic Advising

At the end of the student's second year of study, the department will appoint a three-member faculty committee for that student. The composition of the committee will reflect the student's preferences and the area of philosophy in which the student is inclined to do dissertation work. One of the members of the committee will be designated as the committee chair, and will serve as the student's main advisor. The committee will meet, at a minimum, once in the spring of the student's second year of study, once in the fall of the student's third year, and once in the spring of the student's third year. The responsibilities of the committee include advising the student in developing a sound dissertation project, the acquisition of professional skills (possibly through the departmental professional skills workshop), and advancing to candidacy in a timely manner. The members of this third-year committee may but need not be members of the student's dissertation committee.

### Professional Skills Workshop

The department will offer each year a noncredit workshop on professional skills. Topics covered may include publication strategies, the mechanics of the job market, and how to write a cv. This workshop is open to any student in the department, and all students are encouraged to attend at least once before going on the job market.

### Academic Advising after Candidacy
