COES Provincial Centre Mount Hagen

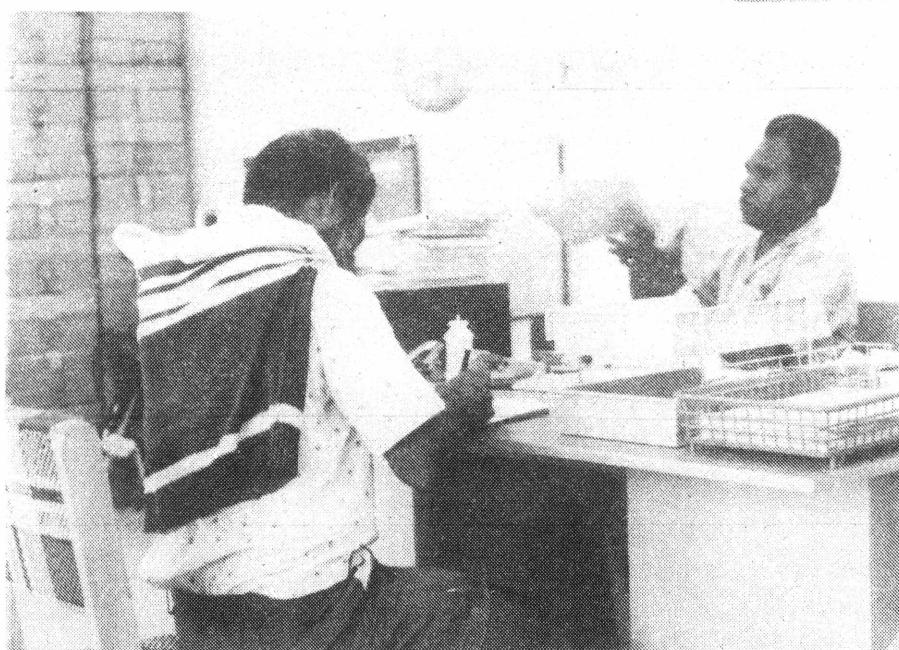

My name is Piri Dagam and I am the COES Co-ordinator for the Western Highlands Province.

At present there are between 400 and 500 COES students in the Province. They can bring or send me their workbooks for marking. I arrange for this to be done so they soon have their corrected workbooks back.

New students can do their Entrance Exam here or in a large room. Students can enrol and collect their lessons immediately.

Piri Dagam

Student doing Entrance Exam.

At present my office is in the Mount Hagen Local Government Council office building. Students may return workbooks for marking at any time by placing them into the box outside the office. In the office I have a small library of books that students may borrow for extra reading about their course.

Next month this COES Provincial Centre will move to its own new office next to the Public Library.

Please call in and see me or contact me:

COES Co-ordinator,
P.O. Box 418,
Mt. Hagen, WHP.
Tel. 52 1194

More and more students are now enrolling for COES course. Last year about 10 students came each week to ask about courses and to enrol. This year there have been about 15 new students each week.

This centre was started last year. I have visited districts of the Western Highlands Province to see about Study Centres and Exam Centres. More Study Centres are to open this year. This year I hope to visit remote areas like Jimi River and Baiyer-Lumusa to see what can be done for COE students.

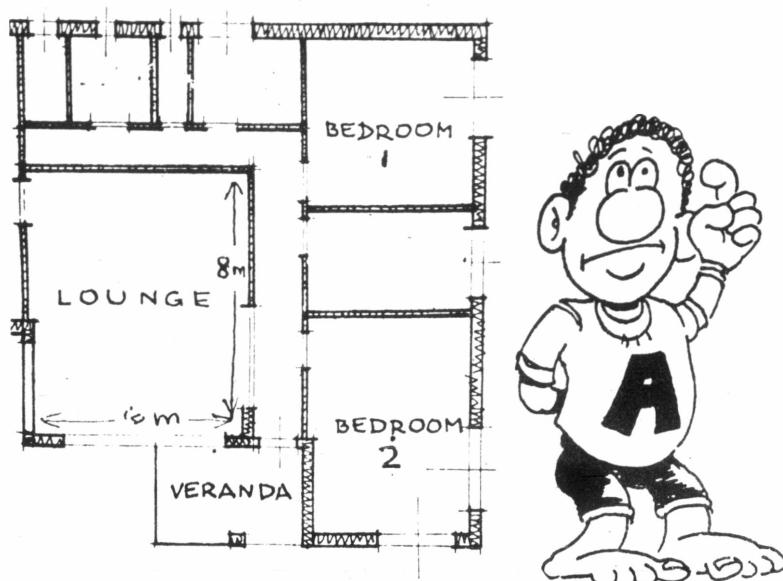

Living and Learning

Measuring Area

Here is the plan of a house.

Which takes up the most space: bedroom 1, bedroom 2, lounge, or verandah?

We find the area

Area is the amount of surface.

We find the AREA to see which takes up the most amount of space.

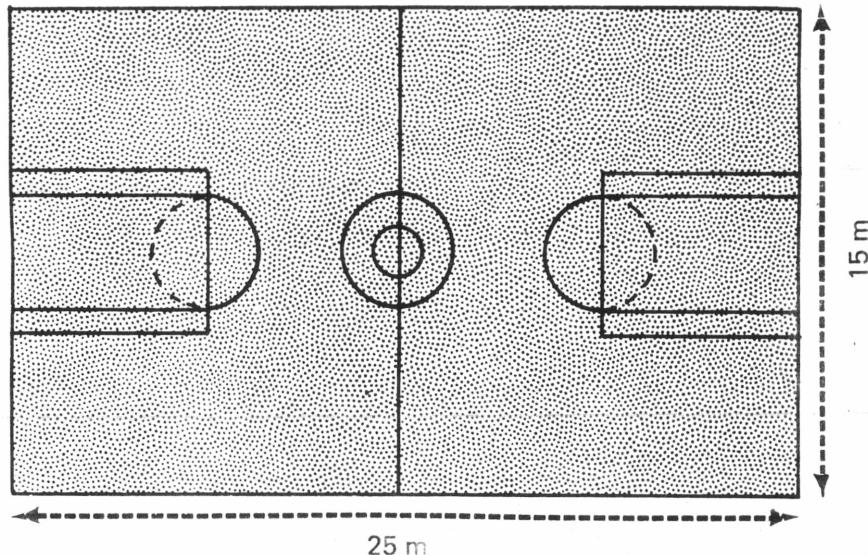

AREA is the AMOUNT OF SURFACE.

To find the AREA of a room, we multiply the length by the width.

$$\text{AREA OF LOUNGE} = 8 \times 6 \text{ m}^2 = 48 \text{ m}^2$$

So the AREA is 48 square metres.

What is the area of this basketball court?

Length = 25 metres
Width = 15 metres
Area = $25 \times 15 \text{ m}^2$
= 375 m²

Therefore the area is 375 sq metres.

When measuring the area of land, we use a bigger unit of measure called a HECTARE.

How big is a HECTARE?

A HECTARE IS 10,000 square metres.

It's the area of a square

100 metre long and

100 metres wide.

Square metre and hectare are Metric Units. We use these now. Earlier, we used the Imperial Units to measure area.

In the Imperial (British) Units we used square feet to measure areas of rooms, etc. We used ACRE to measure land.

SOME USEFUL CONVERSIONS

Imperial to Metric

1 acre = 0.405 hectare
1 sq foot = 0.093 m ²

Metric to Imperial

1 hectare = 2.47 acres
1 square metre = 10.764 sq.ft.

How does a square foot compare with a square metre?
Or an acre with a hectare?

The conversion table helps us to decide this.

Subtract 38 from 56: This means you take away 30 & 8.

STEPS:

1. Put your finger on 56. Take 30 by moving your finger 3 spaces up (or back) from 56. That is taking away 3 tens. Your finger is now on 26.

2. Now take away 8 units. Count 8 spaces backwards. Your finger is now on 18.
So $56 - 38 = 18$.

You can do more exercise using HUNDREDS SQUARE BOARD.
