

Boulder Snow On

This report includes the quality of pre-processed Lidar data given by NCALM. Areas of quality covered by this document include completeness of the Lidar data compared to the proposed study area (Area), the average points per square meter for each tile (Point Density) and detailed point density of the entire site (Detailed Point Density), overall point return intensity of the site (Intensity), visual inspection of the hillshade digital elevation model (Hillshade) and the attributes included in the Lidar data.

Area

Proposed area given by the CZO team is displayed in green in the image below. Actual area that the Lidar flight covered is displayed in blue. Percentage of proposed area falling in actual area is given below image.

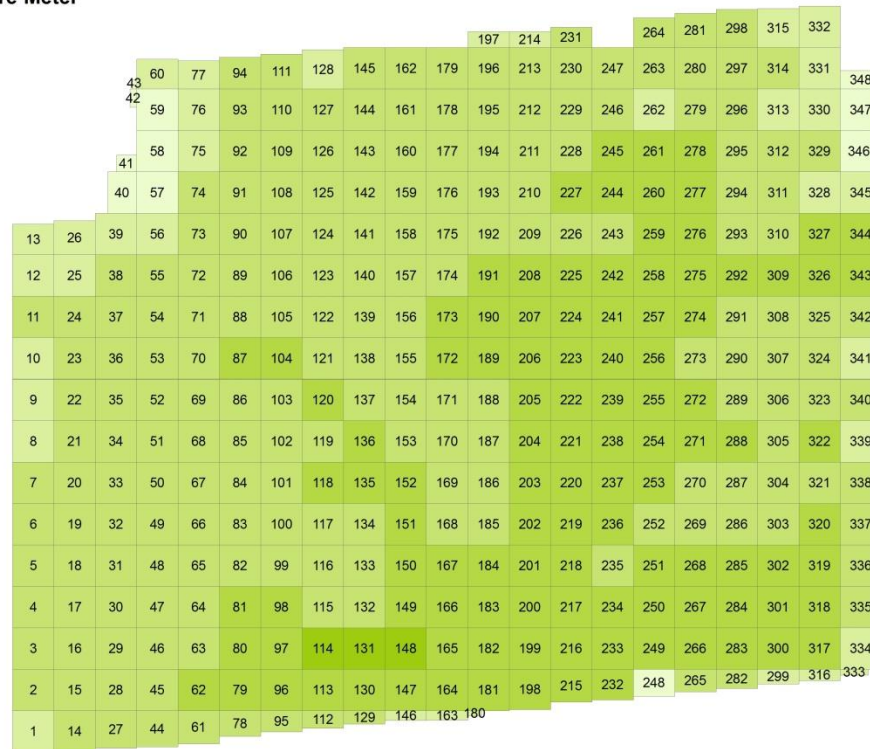

99.09% of proposed area falls in Lidar Flight

Tile point density

Individual LAS tiles for CZO site are displayed in the image below. The Gradient color for each tile represents the average number of points per square meter (see legend for color explanation). The tile ID

LAS Tiles

0 - 4
4 - 8
8 - 12
12 - 16
16 - 20+

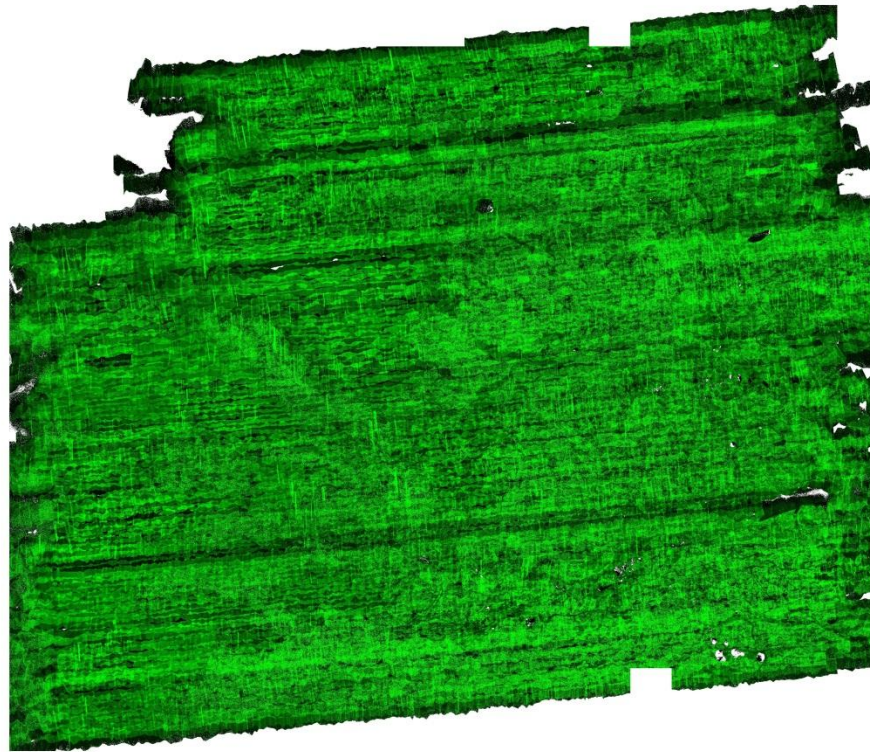

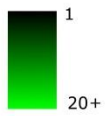

The average points per square meter for the entire CZO site are displayed below. Refer to the LAS Tile Index at the end of this document for individual tile average points per square meter.

CZO site average point density = 10.68983 points per square meter.

A detailed point density image is displayed below based on a one meter resolution. A pixel's color saturation corresponds to how many return points are contained in the area a pixel represents. The gradient color ranging from near black (the absence of green) represents 1 point contained in a pixel to absolute green representing 20 points in a pixel. Please note that the color white represent 0 points in a given pixel.

Detailed Point Density

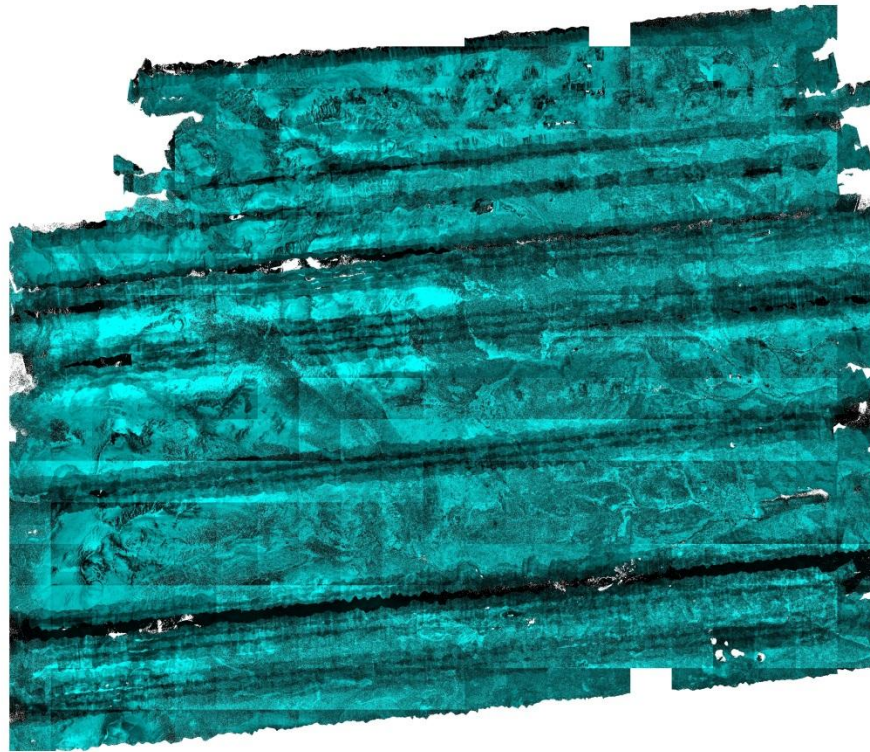

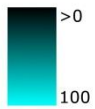

Points Per Square Meter

**Intensity**

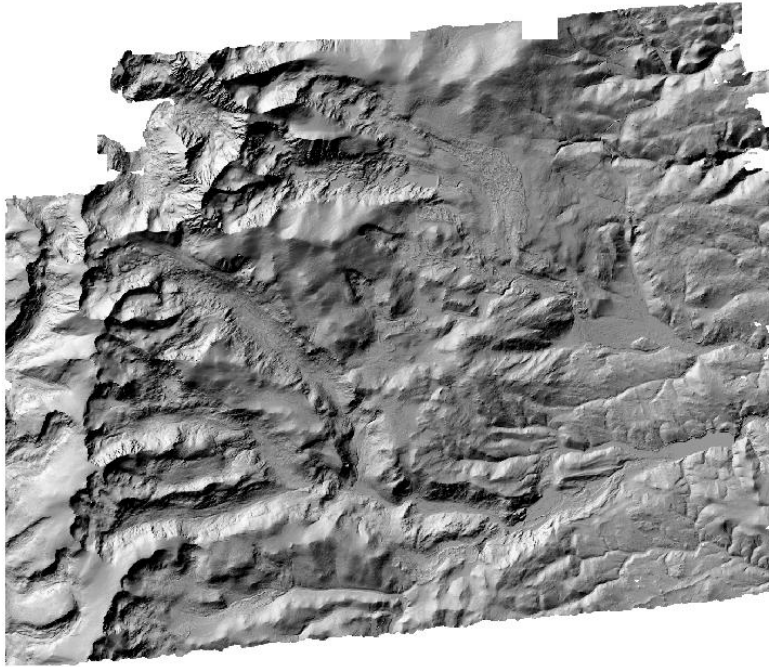

A point return intensity image is displayed below based on a one meter resolution. A pixel's color saturation corresponds to the average intensity given by the points contained in that pixel. The gradient color ranging from near black (the absence of cyan) represents almost 0 percent intensity value of a pixel to cyan representing 100 percent.

Return Point Intensity

Percentage

**Hillshade**

The Digital elevation model is displayed in the image below using hillshading. Overall visual inspection quality is given below image being classified as good or poor.

Visual Inspection: Good

Included Attributes

Below is a list of the attributes given by LAS file format and whether they have been found to be included in the flight of this CZO site.

- X positions: Yes
- Y positions: Yes
- Z positions: Yes
- Intensity: Yes
- Return Number: Yes
- Number of Returns: Yes
- Scan Direction Flag: Yes
- Edge of Flight Line: Yes
- Classification: Yes
- Scan Angle Rank: Yes
- User Data: Yes

- Point Source ID: Yes
- GPS Time: Yes

Processing Errors

Below is the list of tiles that experienced an error while processing, the reason for the error and if it was still included in this report.

Tile	Reason	Included
Boulder1_454000_4419000.las	Contained points that were indicated to be located outside of the boundaries given by the tile. These points were excluded from the processing of this tile.	Yes

LAS tile Index

LAS tile index list includes tile ID (ID), filename (tile), total points (totpts), maximum x (xmax), minimum x (xmin), maximum y (ymax), minimum y (ymin), maximum elevation (zmax), minimum elevation (zmin), average elevation (zavg) and points per square meter (pt/m²) for each tile. The last entry of the index gives the overall tile summary where total points represents all points for entire site, maximum x, y and z represents the maximum x, y, and z for entire site respectively, minimum x, y, elevation represents the minimum x, y, elevation for entire site respectively, average elevation represents overall average elevation for site and points per square meter represents the average points per square meter of entire site.

Table 1

ID	tile	totpts	xmax	xmin	ymax	ymin	zmax	zmin	zavg	pt/m ²
