

## Architects for Second College named

**June 22, 1965**

Three San Diego architectural firms have been appointed by the University of California Board of Regents to develop the plans for three academic buildings of The Second College at the San Diego campus of the University. The action was taken Friday, June 18, at The Regents monthly meeting held on the San Francisco campus.

The architectural firms and the buildings they will design are: Frank L. Hope & Associates, 1475 6th Street, Unit 2-B (psychology-anthropology) \$3 million total project cost; Liebhardt & Weston, 407 Via Del Norte, La Jolla, Unit 2-C (biological sciences) \$2,750,000 total project cost; and Richard George Wheeler & Associates, 3276 Rosecrans Street, Unit 2-D (arts, social sciences and college administration) \$2,800,000 total project cost.

A fourth building, Unit 2-A housing engineering, mathematics, and the campus computer laboratory, is already in working drawings with the architectural firm of Mosher and Drew, 1255 Coast, La Jolla. Total project cost of Unit 2-A is \$4,350,000. A fifth building, for which a matching federal grant is being sought, is planned.

These buildings will complete the academic portion of The Second College but do not include student housing and eating facilities.

The Second College will be located directly north of Revelle College, now nearing completion on the UCSD Torrey Pines Mesa campus. It is planned that The Second College will open in 1967 with 750 students, operating in converted buildings at Camp Matthews. Building 2-A will be completed in 1968, shifting part of the College's activities to permanent quarters. The other academic buildings of The Second College are scheduled for completion a year later permitting the College to move completely into permanent buildings in 1969 and expand to its planned enrollment of 2,300 students.

The converted buildings at Camp Matthews will then be available as staging facilities for The Third College. Both The Second College and Revelle College will use the planned Central University Library, to be completed in 1969 and the Physical Education Building and playing fields, the latter which will eventually serve the first cluster of four colleges.
