TEENS, PARENTS NEEDED FOR SOCIAL RESEARCH AT UCSD

UCSD researchers are studying psychological and social risk factors for adolescents -- age 13 through 17, who do not themselves abuse alcohol or drugs -- and their parents.

Participants, who will be paid, will be asked to come to the Veterans Administration Medical Center in La Jolla to be interviewed and fill out questionnaires. Study participants do not need to be veterans or be eligible for veterans benefits.

All information will be kept confidential.

For further information, call Dr. Sandra Brown's office at (619) 552-7542.
