Academic and Administrative Calendar, 2004–2005

Fall Quarter, 2004

Fall quarter begins	Monday, September 20
Instruction begins	Thursday, September 23
Veteran's Day	Thursday, November 11
Thanksgiving holiday	Thursday–Friday, November 25–26
Instruction ends	Friday, December 3
Final exams	Monday–Saturday, December 6–11
Fall quarter ends	Saturday, December 11
Christmas holidays	Thursday–Friday, December 23–24
New Year holidays	Thursday–Friday, December 30–31

Winter Quarter, 2005

Winter quarter begins	Monday, January 3
Instruction begins	Monday, January 3
Martin Luther King, Jr. holiday	Monday, January 17
Presidents' Day holiday	Monday, February 21
Instruction ends	Friday, March 11
Final exams	Monday–Saturday, March 14–19
Winter quarter ends	Saturday, March 19

Spring Quarter, 2005

Spring quarter begins	Thursday, March 24
Cesar Chavez holiday	Friday, March 25
Instruction begins	Monday, March 28
Memorial Day holiday observance	Monday, May 30
Instruction ends	Friday, June 3
Final exams	Monday–Friday, June 6–10
Spring quarter ends	Friday, June 10
Commencement	Saturday/Sunday, June 11/12

Summer Sessions, 2005

Summer Session I begins	Monday, June 27
Independence Day holiday	Monday, July 4
Summer Session I ends	Saturday, July 30
Summer Session II begins	Monday, August 1
Summer Session II ends	Saturday, September 3
Labor Day holiday	Monday, September 5

Undergraduate Admission Information and Enrollment Deadlines

	Fall Quarter 2004	Winter Quarter 2005	Spring Quarter 2005
ADMISSION	**Nov. 1–30, '03**	***July 1–31, '04**	***Oct. 1–31, '04**
Filing period for application materials			
PRIORITY DEADLINE FOR APPLICATIONS FOR FINANCIAL AID	March 2, '04	March 2, '04	March 2, '04
ENROLLMENT	May 5–Sept. 20	Nov. 3–Dec. 17	Feb. 9–Mar. 18
Students may enroll by telephone, via StudentLink, or in person after their appointment begins.			
Students may use add cards to enroll in restricted courses.			
Students may pay fees by e-check on StudentLink or in person at Cashier's Office after enrolling.			
STUDENT HEALTH INSURANCE WAIVER PERIOD BEGINS (ALL STUDENTS)	Aug. 1	Nov. 22	Feb. 18
BILLING STATEMENTS MAILED TO ENROLLED STUDENTS	Aug. 23	Nov. 30	March 7
NEW STUDENT ENROLLMENT	June 14–Sept. 20	Dec. 6–10	March 14–18
DEADLINE DAY TO ENROLL WITHOUT LATE FEES			
Students who have not enrolled will be assessed $100 in late fees. ($50 late enrollment fee and $50 late payment fee)			
Continuing Undergraduates	Sept. 17	Dec. 17	March 18
New Undergraduates	Sept. 17	Dec. 17	March 18
QUARTER BEGINS	**Sept. 20**	**Jan. 3**	**March 24**
LAST DAY FOR STUDENTS WHO MET ENROLLMENT DEADLINE TO PAY REGISTRATION FEES WITHOUT $50 LATE PAYMENT FEE			
Continuing Undergraduates	Sept. 17	Dec. 17	March 18
New Undergraduates	Oct. 1	Jan. 7	April 1
LAST DAY FOR STUDENTS ON FINANCIAL AID, SCHOLARSHIPS, AND FULL FEE WAIVERS TO NOTIFY THE CAMPUS IF NOT ATTENDING	**Oct. 1**	**Jan. 7**	**April 1**
LATE REGISTRATION PERIOD	Sept. 11–Oct. 8	Dec. 23–Jan. 14	Mar. 19–Apr. 8
INSTRUCTION BEGINS	**Sept. 23**	**Jan. 3**	**March 28**
ADD/CHANGE/DROP PERIOD	Sept. 23–Oct. 8	Jan. 3–14	March 28–Apr. 8
DEADLINE TO REQUEST WAIVER OF MANDATORY HEALTH INSURANCE FEE	Oct. 8	Jan. 14	April 8
Undergraduates	Sept. 20	Jan. 5	March 24
Graduates (end of first week of instruction)	Oct. 1	Jan. 7	April 1
DEADLINE DAY TO PAY REGISTRATION FEES TO AVOID CANCELLATION OF CLASSES	Oct. 8	Jan. 14	April 8
FINAL DAY TO ADD COURSES	Oct. 8	Jan. 14	April 8
LAST DAY TO APPLY FOR PART-TIME STATUS	Oct. 8	Jan. 14	April 8
CHANGE/DROP PERIOD CONTINUES	Oct. 9–Nov. 29	Jan. 15–Mar. 4	Apr. 9–May 27
Last day to drop without "W."	Oct. 22	Jan. 28	April 22
Last day to change grading option, change variable units.	Oct. 22	Jan. 28	April 22
Last day to drop with "W" or final grade must be assigned.	Nov. 29	March 4	May 27
INSTRUCTION ENDS	**Dec. 3**	**March 11**	**June 3**
FINAL EXAMINATIONS	Dec. 6–11	March 14–19	June 6–10
FINAL DAY TO FILE "REQUEST TO RECEIVE GRADE INCOMPLETE"	Dec. 13	March 21	June 13
QUARTER ENDS	**Dec. 11**	**March 19**	**June 10**
COMMENCEMENT			June 11/12

* If open—contact Undergraduate Admissions for details, (858) 534-4831. Students applying for winter or spring quarter admission and also applying for financial aid are urged to apply early as mid year funds for winter and spring applicants may be limited to only bank loans, Federal Pell Grant, and/or Renewal Cal Grant.

Graduate Admission Information and Enrollment Deadlines

ADMISSION

Applicants should check with their prospective departments for deadline dates, although most have January 15, 2005, deadlines.

	FALL QUARTER 2005
GENERAL ADMISSIONS WITH FELLOWSHIP APPLICATIONS	
Deadline date for filing application materials	Jan. 15, 2005
Notice of awards	April 1, 2005
Acceptance of awards	April 15, 2005
DEADLINE FOR APPLICATIONS FOR FINANCIAL AID	March 2, 2005

GRADUATE ENROLLMENT DEADLINES	FALL QUARTER 2004	WINTER QUARTER 2005	SPRING QUARTER 2005
OPEN ENROLLMENT: CONTINUING STUDENTS	May 5–Sept. 20	Nov. 3–Dec. 22	Feb. 9–Mar. 18
NEW STUDENT ENROLLMENT	June 14–Sept. 17	Dec. 6–10	Mar. 13–17
APPLICATION FOR INTERCAMPUS EXCHANGE PROGRAM	Aug. 20	Dec. 3	Feb. 25
FILING APPROVED LEAVE OF ABSENCE	Oct. 8	Jan. 14	April 8
DEADLINE DAY TO ENROLL WITHOUT LATE FEES	Sept. 10	Dec. 17	March 18
QUARTER BEGINS	**Sept. 20**	**Jan. 3**	**March 24**
INSTRUCTION BEGINS	**Sept. 23**	**Jan. 3**	**March 28**
New and Readmitted Graduate Deadline to enroll and pay registration fees without payment of late fees	Oct. 1	Jan. 14	April 8
LATE REGISTRATION			
Last day for continuing students who met enrollment deadline to pay registration fees without $50 late payment fee. Enrollment and payment of fees after this date requires payment of $50 for late enrollment and $50 for late payment of fees, totaling $100.	Sept. 10	Dec. 17	March 18
FINAL DAY TO ADD OR DROP	Oct. 8	Jan. 14	April 8
DEADLINE TO CHANGE GRADING OPTION	Oct. 22	Jan. 28	April 22
DEADLINE FOR DROPPING CLASSES WITHOUT "W" APPEARING ON THE TRANSCRIPT	Oct. 22	Jan. 28	April 22
MASTER'S DEGREE			
Filing for advancement to candidacy with completion in same quarter	Oct. 8	Jan. 14	April 8
Filing approved thesis	Dec. 11	March 19	June 10
DOCTOR OF PHILOSOPHY DEGREE			
Filing draft dissertation with doctoral committee for current quarter completion	Nov. 5	Feb. 11	May 6
Filing approved dissertation and related materials	Dec. 11	March 19	June 10
DROPPING CLASSES WITHOUT PENALTY OF "F" GRADE	Nov. 29	March 4	May 27
INSTRUCTION ENDS	**Dec. 3**	**March 11**	**June 3**
FINAL EXAMINATIONS	Dec. 6–11	March 14–19	June 6–10
REMOVING INCOMPLETE GRADES (I) ASSIGNED IN PRIOR QUARTER	Dec. 3	March 11	June 3
QUARTER ENDS	**Dec. 11**	**March 19**	**June 10**
COMMENCEMENT			June 11/12
COMPLETION OF REQUIREMENTS			
Final date for completion of all requirements for degrees to be awarded at end of quarter	Dec. 11	March 19	June 10

Dates are subject to change; see quarterly schedule of classes for changes.

Introduction

History

UCSD is one of the ten campuses which make up the University of California system. The other campuses are located in Berkeley, Davis, San Francisco, Santa Cruz, Santa Barbara, Riverside, Los Angeles, Irvine, and Merced. Each has its own distinct academic and social character, and each offers programs and facilities which set it off from the others.

As a member of the ten-campus family of the University of California, UCSD is a university in scale and scope. Graduate and undergraduate programs, offered in a wide range of disciplines, lead to the bachelor's, master's, M.D., Ph.D., and PharmD. degrees. UCSD's Scripps Institution of Oceanography is internationally renowned, and UCSD's School of Medicine has won national acclaim for excellence. UCSD's Graduate School of International Relations and Pacific Studies is the only school of international affairs in the UC system. The UCSD School of Pharmacy and Pharmaceutical Sciences enrolled its charter class in 2002, and the Rady School of Management will enroll Executive MBA students in 2004 and full-time students in fall 2005. At both the undergraduate and graduate levels, UCSD's curricula and programs have been highly ranked in recent surveys of American higher education.

UCSD enrolled its first undergraduates in 1964. Nevertheless, the campus can trace its origins in this area as far back as the late 1800s. At that time, zoologists on the Berkeley campus, seeking a suitable location for a marine field station, found La Jolla a very desirable site. The facility they established became a part of the University of California in 1912 and was eventually named the Scripps Institution of Oceanography. In the late 1950s, when the Regents of the University of California decided to situate a general campus in the San Diego region, the Scripps Institution formed the nucleus of the new campus.

Today UCSD is recognized throughout the academic world for its faculty and for its graduate and undergraduate programs. The faculty now includes nine Nobel laureates (four of whom hold joint appointments with the nearby Salk Institute); six recipients of the National Medal of Science; one winner of the Pulitzer Prize; sixty-eight members of the National Academy of Sciences; eighty-one Fellows of the American Academy of Arts and Sciences; fourteen Fellows of the American Philosophical Society; eight fellows of the Econometric Society; fifteen members of the National Academy of Engineering; six members of the International Academy of Astronautics; twenty-two members of the Institute of Medicine; and two members of the National Academy of Education.

UCSD houses a chapter of Phi Beta Kappa, the best-known honor society for the liberal arts and sciences in America. The campus is one of 265 four-year institutions selected for this distinction since the society was founded in 1776, and more than 200 current faculty and staff are members.

UCSD is a member of the Western Association of Schools and Colleges (WASC) and is fully accredited by the Senior College Commission of WASC. WASC is located at 985 Atlantic Avenue, Suite 100, Alameda, CA 94501, and may be reached at (510) 748-9001 or by fax at (510) 748-9797.

University and Community

There are certain facts about UCSD to consider in making your choice. Among them are:

- UCSD, a four-year undergraduate campus, is also a full-fledged graduate and research institution. UCSD faculty and scholars are continually involved in research and developmental projects that put this campus on the cutting edge of science, technology, and the arts and humanities.
- San Diego has become one of America's major centers for high-technology electronics and biomedical industries. Students concentrating on sciences or engineering are actively sought by these industries to fill summer jobs and career positions. Off-campus internships also are available to UCSD students in all fields of study.
- UCSD is recognized nationally as a major center for the arts and humanities, including music and theater.
- Undergraduates are offered opportunities to participate in certain research projects conducted by UCSD faculty. A number of UCSD undergraduates have developed computer skills that have led to their employment by leading computer manufacturers, and still others have gone on to form their own software enterprises as a direct result of their UCSD training.
- UCSD's unique small-college structure encourages undergraduates to play a more active role in student government, social life, and athletics than is generally open to them in other major universities. Opportunities for involvement in student governance are especially strong as there are student governing bodies at the campus level as well as within the six individual colleges.
- Campus athletic facilities include the Recreational and Intramural Athletic Center (RIMAC), two gymnasiums, two swimming pools, and numerous tennis and handball courts. The university's recreational and intramural athletic programs are among the most varied and extensive in the nation today.

Major Fields of Study

UCSD offers a wide variety of nationally recognized majors in a broad array of fields, summarized on page 13. (For a listing of graduate programs, refer to the section of this catalog titled "Graduate Studies.")

The academic departments of UCSD are listed on page 12. Details and requirements of the various individual courses are found in the "Courses, Curricula, and Programs of Instruction" section.

UCSD has limited the number of its academic departments. For example, there is only one Department of Literature. This system has proved especially valuable to undergraduates who choose to avoid overspecialization early in their studies.

A number of special, individually oriented programs use the combined resources of two or more departments. Among these are Chinese Studies, Classical Studies, Computing and the Arts, Critical Gender Studies, Earth Sciences, Environmental Systems, Human Development, German Studies, International Studies, Italian Studies, Japanese Studies, Judaic Studies, Latin American Studies, Study of Religion, Russian and Soviet Studies, the Teacher Education

Program, Third World Studies, and Urban Studies and Planning.

Engineering students may choose from a number of majors in the Department of Bioengineering (BE), the Department of Computer Science and Engineering (CSE), the Department of Electrical and Computer Engineering (ECE), the Department of Mechanical and Aerospace Engineering (MAE) or the Department of Structural Engineering (SE). All five departments seek to educate the engineer of tomorrow.

Undergraduates interested in premedicine and prelaw majors should note that a variety of departments can serve their needs. For premed students, the common choices are biology, chemistry, psychology, and bioengineering. Some students are electing double majors or are combining nontraditional majors with science majors. For prelaw students, nearly any undergraduate major will qualify a student for admission to a law school.

Should you need help in deciding on a major, many UCSD professionals are available to aid you. Among them are the deans of academic advising in the provosts' offices of the six colleges, faculty members, and departmental advisers. Additional specialists in Career Services Center and in Psychological and Counseling Services are available to help you appraise your personal aptitudes.

Summer Session

UCSD offers a Summer Session consisting of courses selected from the regular undergraduate curriculum and taught by UCSD faculty. In addition, Summer Session provides special educational opportunities not easily available during other quarters.

The Summer Session Program is open to UCSD students, students of other colleges and universities, qualified high school seniors, and the general public. Credit courses for selected professionals, such as teachers and engineers, are also offered.

Summer Session catalogs and registration forms are available in mid-March of each year. UCSD students may enroll via WebReg, http://studentlink.ucsd.edu. For free copies write to UCSD Summer Session, 9500 Gilman Dr., Dept. 0179, La Jolla, CA 92093-0179; or call (858) 534-4364; or send email to: summer@ucsd.edu.

What UCSD Does NOT Offer

Although the range and variety of programs offered at UCSD are very wide, there are certain disciplines which are not available on this campus. In some instances, the absence of a particular program reflects the academic philosophy of the UCSD campus and its faculty. In others, the absence of a curriculum is temporary, awaiting the availability of funds, personnel, or facilities before a program can be offered. In still others, programs have not been included which would, in the university's judgment, unnecessarily duplicate comparable offerings on other UC campuses or at other institutions.

Among undergraduate majors currently not available at UCSD are:

1. Business.
2. Oceanography. Although UCSD does not offer an undergraduate major in oceanography, some marine science courses are offered in the Division of Biology. Students planning to pursue oceanography at the graduate level may select from a large number of undergraduate courses in the physical, biological, and earth sciences to build a firm foundation for later graduate work. Graduate-level work in oceanography is offered by the Scripps Institution of Oceanography.
3. Nursing.
4. Industrial Arts.
5. Journalism. Although no major in journalism is offered, the Department of Literature offers a major in writing that can emphasize journalistic writing, and the development of writing skills is stressed in many disciplines. Many courses offered in the humanities and social sciences will provide the kind of broad-based preparation needed by practicing journalists. Several student newspapers are published on campus, providing ample "laboratory" opportunities for students to practice journalism.
6. Geography.
7. Physical Education. Note: UCSD does not offer athletic scholarships, and there is no intercollegiate football team at UCSD.

The Colleges of UCSD

UCSD undergraduates enjoy the benefits of a great university without the disadvantages of bigness found in many of today's mega-universities. The master plan conceived by UCSD's planners borrowed from the Oxford and Cambridge concept to provide a family of colleges, each with its own special academic and social flavor. UCSD's students gain a sense of belonging through affiliation with one of the campus's semiautonomous colleges.

There are six colleges: Revelle, John Muir, Thurgood Marshall, Earl Warren, Eleanor Roosevelt, and Sixth College. Each is independent, yet all are interrelated: all university academic and support facilities are available to all students, regardless of their college affiliation.

Each college has its own educational philosophies and traditions, its own set of general-education requirements, and its own administrative and advising staff. The objective is to give students and faculty the advantages of a small, liberal arts college combined with the best features of a major university.

Students applying to UCSD should select a college in order of their preference.

Details regarding the individual colleges are given in the "Choosing a College at UCSD" section of the catalog.

Recreation at UCSD

UCSD's undergraduate colleges are situated on a parklike site at La Jolla. La Jolla has some of the finest beaches and coves, art galleries, and other attractions in the nation.

Much of UCSD's recreational and social life centers on the waterfront, with surfing, SCUBA diving, and beach activities among the favorite diversions of UCSD students. Throughout the area, students find a variety of amusements, ranging from the small-town atmosphere of waterfront Del Mar to the primitive wilderness of Mexico's Baja California peninsula.

The city of San Diego, some twelve miles south of the campus, offers a wide range of recreational opportunities, including Old Town (California's birthplace), Sea World on Mission Bay, and the world-famous San Diego Zoo and Wild Animal Park. A year-round calendar of major league sporting events is offered in the city's Sports Arena and in San Diego Qualcomm Stadium.

There are numerous theaters in San Diego. A year-round program of contemporary and classical professional theater may be enjoyed in the Old Globe and the adjacent Cassius Carter Centre Stage, and special summer theater fare is featured on the park's outdoor Festival Stage.

On-campus entertainment includes a year-round series of movies and cultural programs, dances, chamber music, and rock-band concerts sponsored by the University Events Office. The Department of Theatre and Dance presents plays in both the 500-seat Mandell Weiss Theatre and the 500-seat Forum Theatre. The Department of Visual Arts offers a continuing series of art shows in the Mandeville Art Gallery and displays of student art in other campus galleries.

Informal meeting places on campus are hubs of student activity throughout the day and evening, among them the Muir Rathskeller, Marshall College Mountain View Lounge, and the Price Center.

Mountains, Deserts, and Beaches

Many Southern Californians enjoy the out-of-doors. The San Diego metropolitan area enjoys the most comfortable year-round climate in the United States.

Fishing opportunities are plentiful offshore in kelp beds west of La Jolla and surrounding the Coronado Islands in Mexican waters. Fresh water fishing is available in nearby lakes. An hour's drive to the east, the Laguna Mountains provide pleasure during all seasons for campers and hikers. Beyond the Lagunas lies the vast Anza-Borrego Desert with its breathtaking display of wildflowers every spring.

The peninsula of Baja California, one of the world's last great wilderness areas, stretches for 900 miles southward from the international gateway at Tijuana. It is the site every year of the grueling Baja cross-country auto race.

Sports at UCSD

Through its intercollegiate athletic and intramural programs, UCSD provides its students with one of the more extensive and competitive sports programs in the United States. UCSD fields a wide variety intercollegiate athletic teams along with several club sports teams, while the intramural program provides for student competition in a wide variety of sports in three categories of play: men, women, and coed.

Need More Information? Check the Following:

How do I apply for admission? See pages 32 and 41. (See also "Note," below.)

How much does a UCSD education cost? See "Fees and Expenses," page 45.

What's the grading system at UCSD? See page 58.

How should I decide which college to choose at UCSD? See page 13.

What services and facilities are available to students at UCSD? See page 87.

Note: An admissions packet for students interested in applying to UCSD can be obtained from any California high school or community college counselor's office, by writing to the Office of Admissions on any University of California campus, or online at www.ucop.edu/pathways/appctr.html.

Footnote 1: The teaching credential in California requires an academic major, plus professional preparation courses in education, an approved program of practice teaching or an internship, and a full year of college work beyond the baccalaureate. The UCSD Teacher Education Program (TEP) leads to a single subject (secondary) or multiple-subjects (elementary) credential.

Footnote 2: Law schools do not require any particular major, but they do require evidence of good scholarship in demanding subjects. Almost any undergraduate major can qualify a student for consideration by a law school. The UCSD career services staff includes professional prelaw advisers.

Footnote 3: Like law schools, medical schools do not generally demand a particular major but ask for a solid background in the sciences upon which medicine is built. Most premed students major in biology, chemistry, physics, or bioengineering, but a substantial number major in the humanities and social sciences. The UCSD career services staff includes professional premedical advisers.

Choosing a College at UCSD

One of the features which sets UCSD apart from most major universities in the United States is its family of undergraduate colleges: Revelle, John Muir, Thurgood Marshall, Earl Warren, Eleanor Roosevelt, and Sixth.

The division of the campus community into small colleges was patterned after the concept which has served Oxford and Cambridge so successfully for centuries. The planners of the UCSD campus were convinced that students learn more, and find greater fulfillment in their personal lives, when joined academically and socially with a relatively small group of students. At the same time, the advantages of size in a university, including a faculty of international renown, first-rate teaching and research facilities, laboratories, libraries, and other amenities, were to be an important part of the design.

The result was an arrangement which combined the academic advantages of a large research university with the finest features of a small liberal arts college—the UCSD college system. Each of these semi-autonomous undergraduate colleges has its own residence facilities, staff, traditions, general-education requirements, and distinctive educational philosophy. The system was inaugurated with the opening of Revelle College in 1964. In the intervening years, five more colleges—John Muir, Thurgood Marshall, Earl Warren, Eleanor Roosevelt, and Sixth—have been established. Although many American university campuses have a separate college structure, in most cases, these colleges are designed to serve specific disciplines, such as engineering or business administration. At UCSD, however, any undergraduate may select from the full range of majors available. The choice of a college is not based on your major, but on your preferences in terms of the various educational philosophies and environments offered by the colleges.

UCSD's college system allows undergraduates to choose from among *six* distinct general-education curricula supplementing their major requirements. These curricula range from a very structured liberal arts program to a program with a broad range of electives. By contrast, most universities offer only *one* general-education curriculum.

Students must rank the colleges in order of preference when applying for admission. Brief summaries of the various college curricula and philosophies follow. Later in this section, these variations are spelled out in considerable detail, college by college.

Revelle College Educational Philosophy

Revelle College stresses the broad character of general education. A structured liberal arts curriculum establishes a strong educational foundation for any major. All students complete a highly respected core humanities sequence and courses in the arts and social sciences. Students either meet proficiency in a foreign language or complete the fourth quarter of college level instruction. All students also complete sequences in mathematics and science, with separate courses available for science and non-science majors. Throughout the final two years, students concentrate on developing professional competence in an academic discipline.

This curriculum develops three main skills which are essential for a well-rounded education: learning to use the language of scholarship and science, learning how to think creatively, and learning how to learn.

Revelle College is distinguished by its emphasis on academics and student leadership. Its structured and well-rounded curriculum has been acclaimed nationally. Individual academic advising, honors programs, and programs that foster student-faculty interaction, are all hallmarks of UCSD's first college.

John Muir College Educational Philosophy

John Muir College has established a flexible set of general-education and graduation requirements that ensures breadth and depth of learning and encourages the students of the college to take an active role in their own intellectual development. Students complete four year-long sequences drawn from the social sciences; the natural sciences or mathematics; and two sequences out of the following three areas: the humanities, fine arts, or foreign languages. Many choices are available for each of these year-long sequences. Muir has a one-course U.S. cultural diversity graduation requirement. Students also complete two analytical writing courses. Muir's requirements accommodate a wide range of interests and aptitudes, and Muir's academic advisers meet with students on a one-to-one basis. The relative openness and flexibility of its curriculum make Muir College particularly attractive to exceptionally able and well-prepared students with well-defined or developing academic interests.

John Muir College is distinguished by its atmosphere of friendliness and informality and a deep concern for the rights and welfare of others. Concern for one's fellow students goes well with Muir's educational philosophy, which stresses individual choice and development. The environment thus created fosters independence and responsibility, and well-rounded students.

Thurgood Marshall College Educational Philosophy

The dedicated focus of Thurgood Marshall College is the active development of the student as scholar and citizen. The college, a small liberal arts and sciences community, is characterized by an open, friendly environment in which students pursue any major in the natural and physical sciences, social sciences, engineering, humanities, and fine arts offered at the university.

The college's educational philosophy is guided by the belief that, regardless of a student's major, a broad liberal arts education must include an awareness and understanding of the diversity of cultures that comprise contemporary American society, and the richness that socio-cultural diversity brings to the lives of American people.

Integral to the Marshall experience is the unique, three-quarter core sequence, "Dimensions of Culture—Diversity, Justice, and Imagination." This interdisciplinary, issues-oriented curricular experience explores both the diversity of American experiences across race, religion, class, and gender, and also the shared resources all Americans draw on when their different identities and interests conflict. Students also choose courses in mathematics or logic, natural/physical

sciences, writing, humanities, and fine arts to fulfill general-education requirements.

In addition to the strong academic program, Thurgood Marshall College is proud of its emphasis on the student as citizen. Students are encouraged to integrate educational alternatives and public service opportunities, such as Partners at Learning (PAL), for which they earn academic credit, into their curriculum. Through PAL and other options, such as study abroad, internships, public service and leadership activities, students develop skills learned in the classroom and apply them to real-world experiences. Toward that end, the Student Leadership Program is especially designed to encourage active participation in the governance of the college and in community service.

Thurgood Marshall College's hallmark is community, where students are encouraged to be active participants in their university education and take advantage of the abundance of opportunities to learn and develop as exemplary scholars and citizens in a multicultural twenty-first century.

Earl Warren College Educational Philosophy

Earl Warren College was founded in 1974 and named in honor of the former governor of California and Chief Justice of the United States. The Warren Court elaborated a doctrine of fairness in such areas as criminal justice, voting rights, legislative districts, employment, housing issues, transportation, and, most famously, education. Justice Warren had a principled commitment to education, opportunity, and hard work. Warren College offers students the benefit of a small campus environment with the resources of a renowned faculty and major research institution. Consistent with Earl Warren's principles, the college is committed to preparing students for life intellectually, socially, and professionally. The success of each and every Warren student is our goal. Warren students represent all disciplines offered at UCSD. Graduation requirements include a major and two secondary programs of study which encompass academic areas outside of a student's major.

Eleanor Roosevelt College Educational Philosophy

Eleanor Roosevelt College (ERC) emphasizes a comprehensive general education designed to prepare students to compete successfully in the global and multicultural economy of the twenty-first century. Successful professional people will need to understand their own cultural heritage as well as those of people from other societies with whom they will be interacting in their workplaces and communities.

The perspectives gained at ERC prepare students well for the future, whatever their goals and their major field of study, and whether they plan to go on to graduate school, professional school, or the worlds of science and technology, business, or the arts.

At the core of the curriculum are six courses comprising The Making of the Modern World (MMW). This interdisciplinary sequence was developed by faculty from anthropology, history, literature, political science, and sociology. It teaches students to think historically and analytically, as well as across disciplines, about both Western and non-Western societies, and the ways humans have organized their experience in different places and times.

ERC students receive exposure to natural science, quantitative methods, foreign language, and fine arts, and each selects a geographic region for in-depth study. Interested students are encouraged and assisted in finding ways to study, work, or travel in other countries to expand their horizons.

A friendly and supportive campus community, ERC is also distinguished by its emphasis on helping each individual reach his or her full potential intellectually, and in those skills, contributing to effective participation and leadership.

As Eleanor Roosevelt wrote, "Whether or not they have made the world they live in, the young must learn to be at home in it, to be familiar with it. They must understand its history, its peoples, their customs and ideas and problems and aspirations." ERC students and graduates find themselves as much "at home" in the world as any of their generation, and more than most!

Sixth College Educational Philosophy

Sixth College challenges students to explore the historical and philosophical connections among culture, art, and technology, and how they energize each other. Students come to understand that innovation in every field draws upon a cultural ground. Sixth explores new technologies to create a learning community that reaches beyond the campus and encourages lifelong learning. Through interdisciplinary and cross-cultural study, Sixth provides an ideal intellectual and artistic framework for a contemporary liberal arts education. Sixth College general-education requirements include a unique three-quarter sequence which emphasizes study across academic disciplines in culture, art, and technology (CAT), including courses to develop computer and information literacy, writing, and communication skills. The flexible nature of our breadth requirements includes requirements across the social sciences, fine arts, humanities, natural sciences, math/ logic, and statistical methods. In addition, students will develop a project for the upper-division practicum to be completed in the junior or senior year.

Sixth will provide opportunities for student collaborations within the university and beyond, inspiring students to address, thoughtfully and actively, the serious needs of our communities.

Sixth College is a proud participant in the new **Cal-(IT)²** initiative, led by UCSD. As such, the college will take part in, and benefit from, research that guides innovation in telecommunications and information technology, with the goal of revolutionizing how we live, work, and communicate.

College Administration

The provost is a faculty member who acts as chief administrative officer and academic dean. In addition to the provost, each college has a dean of academic advising and a dean of student life.

The academic departments and the college academic advising offices are designated campus units responsible for providing official academic advice and direction to undergraduate students. The college academic advising staff have primary responsibility for providing academic advice and services that assist new and continuing students in developing educational plans and course schedules which are compatible with their interests, academic preparation, and career goals.

The college academic advising offices conduct academic orientation/enrollment programs for all new students and advise continuing students about college general-education and graduation requirements. The advising staff of each college provide general academic and curricular information, clarify academic rules and regulations,

GRADUATION REQUIREMENTS IN THE UCSD COLLEGES

Unless otherwise indicated, the figures in this chart refer to the number of COURSES rather than the number of units. Most UCSD courses carry four quarter-units of credit, and a student usually takes four courses each quarter. Academic disciplines are classified as humanities/fine arts, social sciences, and mathematics/natural sciences/engineering. The term "noncontiguous" refers to a discipline that is different from that of the major. Students must meet the Subject A requirement prior to enrolling in the writing courses of their respective college. Each college's cultural diversity requirement can be fulfilled as noted by an asterisk (*) below.

GENERAL EDUCATION

REVELLE COLLEGE

HUMANITIES 5
Includes intensive instruction in university-level writing.

FOREIGN LANGUAGE ...0-4
Proficiency exam or number of courses.

FINE ARTS 1
Art, music, theatre

PHYSICS AND CHEMISTRY 4
At least one course from each area (Sequences available for science and non-science majors.)

BIOLOGY 1

CALCULUS 3
(Sequences are available for science and non-science majors.)

SOCIAL SCIENCES 3
To include at least one course in American Cultures*

AREA OF FOCUS 3
Focused on one subject noncontiguous to the major.

JOHN MUIR COLLEGE

ANALYTICAL WRITING 2-3

A Three-Course Sequence in one of the disciplines from the: 3
SOCIAL SCIENCES

A Three-Course Sequence in either 3
MATHEMATICS (CALCULUS)
OR
One of the disciplines from the
NATURAL SCIENCES

A Three-Course Sequence in each *of TWO of the disciplines from TWO* different categories.....6
FINE ARTS
HUMANITIES
FOREIGN LANGUAGE

THURGOOD MARSHALL COLLEGE

DIMENSIONS OF CULTURE.....3
Includes two six-unit courses with intensive instruction in university-level writing

HUMANITIES 2
Includes cultural diversity

FINE ARTS.....1

NATURAL SCIENCES 3
One course each in biology, chemistry, and physics. (Courses are available for science and non-science majors.)

MATHEMATICS AND LOGIC 2
(Courses are available for science and non-science majors.)

DISCIPLINARY BREADTH.....4
Noncontiguous to the major. Two must be upper-division; one must include writing.

PUBLIC SERVICE ..... (optional)
The four-unit public service option may be used to fulfill one course in Disciplinary Breadth.

EARL WARREN COLLEGE

WRITING.....2

ETHICS AND SOCIETY.....1

FORMAL SKILLS.....2
Two courses to be selected from a list including calculus, symbolic logic, computer programming, and statistics.

PROGRAMS OF CONCENTRATION*.....12
(for B.A./B.S. degrees in arts/sciences)
Two programs of concentration, each typically consisting of three lower-division and three upper-division courses. Both programs must be noncontiguous to the major and to each other.

OR
AREA STUDIES 6
(for B.S. degrees in engineering)
Two area studies each consisting of three courses. One area of study in humanities/fine arts and one in social sciences.

ELEANOR ROOSEVELT COLLEGE

THE MAKING OF THE MODERN WORLD.....6
Includes two six-unit courses with intensive instruction in university-level writing *and* cultural diversity*.

FOREIGN LANGUAGE...0-4
Proficiency exam or number of courses.

FINE ARTS.....2
To include study of both Western and non-Western arts.

NATURAL SCIENCES 2
(Sequences are available for science and non-science majors.)

MATHEMATICS/ COMPUTER SCIENCE 2
(Sequences are available for science and non-science majors.)

REGIONAL SPECIALIZATION.....3
To include at least two courses taken at the upper-division level.

SIXTH COLLEGE

CULTURE, ART, AND TECHNOLOGY.....3
Three core sequence CAT 1, 2, and 3. Includes two (six unit) courses of intensive instruction in university-level writing.

COMPUTING REQUIREMENT.....1
This requirement may be satisfied with courses from a variety of departments.

MODES OF INQUIRY.....7
Two courses in social sciences, two courses in humanities, two courses in natural sciences, one course in math/logic (different options available for science and non-science majors)

UNDERSTANDING DATA.....1
One course in statistical methods (different options available for science and non-science majors)

SOCIETAL AND ETHICAL CONTEXTS.....2
One course in ethnic or gender studies; one course in ethics.

ART MAKING.....2
Two courses in music, theatre (including dance), or visual arts.

PRACTICUM.....0.5 TO 1.5
Upper-division project with a two unit course in practicum communication.

MINOR/ADDITIONAL GRADUATION REQUIREMENTS

REVELLE COLLEGE	JOHN MUIR COLLEGE	THURGOOD MARSHALL COLLEGE	EARL WARREN COLLEGE	ELEANOR ROOSEVELT COLLEGE	SIXTH COLLEGE
Optional Minor	Optional Minor—*One U.S. Cultural Diversity course to be chosen from an approved list as part of the major, optional minor, elective, or an appropriate general-election course.	Optional Minor	Optional Minor—Students may choose a noncontiguous minor in lieu of a Program of Concentration. *One Cultural Diversity in U.S. Society course to be chosen from an approved list as part of the major, Programs of Concentration/ Area Studies, or elective.	Optional Minor—Students may combine foreign language and regional specialization course work to create a minor focusing on a particular geographic area.	Optional Minor

MINIMUM NUMBER OF COURSES REQUIRED FOR GRADUATION

B.A./B.S. degrees require a minimum of 46 courses (184 units); at least 15 courses (60 units) must be upper-division.	B.A./B.S. degrees require 45 courses (180 units). At least *18 courses (72 units) must be upper-division.*	B.A./B.S. degrees require 45 courses (180 units). At least 60 units must be upper-division.	B.A./B.S. degrees require 45 courses (180 units). At least 15 courses (60 units) must be upper-division.	B.A./B.S. degrees require 45 courses (180 units). At least 15 courses (60 units) must be upper-division.	B.A./B.S. degrees require a minimum of 45 courses (180 units). At least 15 courses (60 units) must be upper-division.

MAJOR

NOTE: STUDENTS MAY PURSUE ANY MAJOR, REGARDLESS OF THE COLLEGE THEY CHOOSE. Majors are identical regardless of the student's chosen college. Most majors require twelve to eighteen upper-division courses based upon adequate lower-division preparation; such preparation may be part of the general-education requirements. *Majors in certain engineering programs may require as many as twenty-one upper-division courses.*

review all aspects of academic probation, monitor academic progress, assist students with decision-making strategies, and give information about prerequisites and screening criteria for majors. In conjunction with the academic departments and the Office of the Registrar, the advising offices certify students for graduation and generally facilitate their academic adjustment to the university.

Moreover, college academic advisers are available to counsel students about educational alternatives; selection of courses and majors; program changes; new academic opportunities; and special programs such as exchange programs, honors programs, outreach programs, etc.

With a central concern for student development, dean's staff members provide a variety of nonacademic services such as coordinating both educational and social programs; overseeing residential programs; assisting students with decisions and procedures regarding withdrawal from school; coordinating disciplinary procedures, both academic and social; and making referrals to other student services on campus. (See also section on "Student Services and Programs.")

Whatever the question or concern, the provost and his or her staff stand ready at all times to assist undergraduates.

Phi Beta Kappa

The UCSD chapter of Phi Beta Kappa elects student members on the basis of high scholastic achievement in academic programs emphasizing the liberal arts and sciences. Phi Beta Kappa was founded in 1776 at the College of William and Mary in Virginia and is the oldest, most prestigious, academic honor society in America. See also "Honors" in the index.

Honors

Each college awards honors to outstanding students on the basis of criteria approved by the Academic Senate. These honors are posted on students' transcripts and noted on their diplomas. For further details, see "Honors" in the index.

Transfer Students

Students transferring to UCSD must complete the requirements of the chosen undergraduate college. Students are strongly advised to complete all lower-division preparation for the major prior to enrollment. In preparation for the New Student Orientation Program, the College Academic Advising staff will evaluate the transfer course work for each student to determine which courses are applicable to general-education requirements. Since a variety of general-education options are available, students are encouraged to choose carefully the college which best fits their general-education program or course work. See Undergraduate Admissions, Policies and Procedures, "University of California Transfer Agreement."

Revelle College

Revelle College, the first college on the UCSD campus, was named in honor of Dr. Roger Revelle, former university-wide dean of research and for many years director of UCSD's Scripps Institution of Oceanography. Dr. Revelle is perhaps best known for his prediction of the Greenhouse Effect.

Revelle College was established in 1958. With the establishment of Revelle College, the faculty was given a rare opportunity to shape an undergraduate curriculum that would, insofar as any educational program can, prepare its students for the modern world. From the outset of planning the curriculum, the faculty asked: What sort of knowledge must students have if they are to be liberally educated? In what areas? To what depth? How specialized must that education be in the undergraduate years?

The educational philosophy of Revelle College was developed in response to such fundamental questions. Its undergraduate program is based on the assumption that students who are granted the bachelor's degree will have attained:

1. An acceptable level of general education in mathematics; foreign language; the physical, biological, and social sciences; the fine arts; and the humanities.
2. Preprofessional competence in one academic discipline.
3. An understanding of an academic area outside their major field.

To this end, a lower-division curriculum has been established which enables students to acquire an understanding of the fundamental problems, methods, and powers of the humanities and the arts, the social and behavioral sciences, mathematics, and the natural sciences.

The lower-division curriculum assumes that undergraduates should not concentrate heavily in a special field until they have had a chance to learn something about the various fields that are open to them. Their general education must, then, be thorough enough for them to see the possibilities in those fields. Early in their careers, they should know three languages: their own, a foreign language, and the universal language of mathematics.

During the students' junior and senior years, their main efforts will be devoted to intensive work in their major field at a level of competence that will enable them to continue their study at the graduate level. In addition to the major, students will study an area of learning distinctly different in content from the major.

Revelle College stresses the broad character of its curriculum. Every student, for example, is required to achieve a certain competence in calculus. The emphasis on calculus and physical science is in some respects a deviation from educational theory of the last hundred years. The older "general-education" theory demanded that scientists achieve a reasonable competence in the social sciences and humanities. The rising importance of science and technology justifies the application of the theory to nonscientists as well.

Four years of college can at best yield only a limited knowledge; the major task is to train students so that they can adapt quickly and effectively to the rapidly changing world.

General-Education Requirements

Students are encouraged to meet the general-education requirements and the prerequisites to the major as rapidly as possible. Variations within the program will occur, of course, depending on the student's interest, prior training, and ability to make use of individual study.

Freshmen who enter with Advanced Placement credits can use many of these advanced courses to meet general-education requirements (see Advanced Placement chart in "Undergraduate Admissions, Policies and Procedures"). Transfer students may meet all general-education requirements before entering by following articulation agreements with community colleges or taking at any institution courses which Revelle College deems approximately equivalent in content to those at UCSD.

Those who demonstrate superior achievement and competence in an academic area may take advanced courses and individual study programs.

In order to fulfill the requirements in the principal fields of knowledge, the student takes a recommended set of courses, the prerequisites for which have been met by the general admission standards of the university.

The general-education requirements are:

1. Satisfaction of the general University of California requirements in Subject A and American History and Institutions.
2. A five-course sequence in an interdisciplinary humanities program including two six-unit courses with intensive instruction in university-level writing. Written work is also required in the remaining (four-unit) three-quarter courses.
3. One course in the fine arts.
4. Three lower-division courses in the social sciences, to include two courses in the same social science and at least one course in American cultures.
5. Three courses in mathematics (three quarters of calculus).
6. Five courses in the physical and biological sciences to include four quarters of physics and chemistry and one quarter of biology.
7. Basic conversational and reading proficiency in a modern foreign language, or advanced reading proficiency in a classical language. This requirement can be met by passage of a UCSD proficiency exam (in which case the result is posted to the transcript), or by completion of the fourth quarter (or third semester) of foreign language instruction with a passing grade, or with an equivalent Advanced Placement Exam score of 4 or an SAT II Language Exam score of 700 or higher.
8. Three courses in an area unrelated to the major and focused in one department, subject area, or topic.

1. SUBJECT A AND AMERICAN HISTORY AND INSTITUTIONS

Satisfaction of the university requirements in Subject A and American History and Institutions. (See "Subject A," "Undergraduate Registration," "Academic Regulations," "Humanities," and "Undergraduate Admissions, Policies and Procedures: American History and Institutions.")

2. HUMANITIES

The purposes of the general-education requirement in humanities are two-fold: (a) to confront students with significant humanistic issues in the context of a rigorous course which can serve as an introduction to the academic disciplines of history, literature, and philosophy; (b) to provide training and practice in rhetorical skills, especially persuasive written expression.

Students may meet this requirement by satisfactorily completing five courses of the interdisciplinary humanities program offered by the Departments of History, Literature, and Philosophy, which focus on some of the great documents of civilization. The sequence of courses, Humanities 1 through 5, is designed to meet the humanities and writing requirement of Revelle College. (Students must have satisfied the university's Subject A requirement before registering for this sequence.)

In connection with learning about the Western tradition, students in Humanities 1 and 2 (six units each) will receive intensive instruction in university-level writing. Instruction in writing is provided in discussion sections, and frequent writing exercises are required. Written work is also required in the remaining three quarters of the sequence (Humanities 3-4-5, four units each).

For course descriptions, see "Courses, Curricula, and Programs of Instruction: Humanities."

3. FINE ARTS

One course is required to provide an introduction to the fundamental experience in the interpretation of creativity in theatre, dance, music, or visual arts. (See "Courses, Curricula, and Programs of Instruction: Theatre and Dance, Music, and Visual Arts.")

4. SOCIAL SCIENCES

Three lower-division courses offered by the Departments of Anthropology, Critical Gender Studies, Economics, Human Development, Linguistics, Political Science, Psychology, Sociology, or Urban Studies and Planning. At least one of these courses must be from a list approved as meeting the requirement in American Cultures (TAG students exempt).

5. MATHEMATICS

As an integral part of their liberal education, students will be brought into contact with a significant area of mathematics. Furthermore, they will gain the facility to apply mathematics in their studies of the physical, biological, and behavioral sciences.

There are two beginning-year sequences which meet the Revelle College mathematics requirement. Both sequences include integral and differential calculus. Freshman placement in these sequences is dependent upon the student's high school or college preparation in mathematics (as evidenced by a placement examination) as well as future plans. Students are urged to keep their mathematical skills at a high level by taking mathematics during their senior year in high school. (See "Courses, Curricula, and Programs of Instruction: Mathematics.")

6. NATURAL SCIENCES

The natural science courses, including the physical and biological sciences, present the fundamental concepts of modern physics, chemistry, and biology. For the student who may major in one of these disciplines, the courses provide a background and preparation for further study; for those students who will continue their studies outside the natural sciences, they offer an opportunity to gain a certain understanding and appreciation of current developments in these fields.

Students choose their five required physical and biological science courses from the following sequences depending upon their interests, prior preparation, and intended majors. The Department of Chemistry offers Chemistry 11, 12, 13 (for non-science majors), Chemistry 6A-B-C, and 6AH-BH-CH (honors). The Department of Physics offers four acceptable sequences: Physics 1A-B-C, 2A-B-C-D, and 4A-B-C-D-E, and 11A (for non-science majors). The Department of Biology offers Biology 1 or 3 or 10 (for non-science majors) to meet the Revelle biology requirement. (See "Chemistry," "Physics," and "Biology" in the "Courses, Curricula, and Programs of Instruction" section of this catalog.)

Students planning to major in a science must consult the appropriate departmental listing under "Courses, Curricula, and Programs of Instruction" to find the additional preparation needed for their major.

7. FOREIGN LANGUAGE

Revelle College students are required to demonstrate basic conversational and reading proficiency in any modern foreign language, or advanced reading proficiency in a classical language or complete the fourth quarter of foreign language instruction with a passing grade.

Modern foreign language programs are currently offered in Chinese, French, German, Hebrew, Italian, Japanese, Korean, Russian, Spanish, and classical language programs are offered in Greek, Latin, and Hebrew. Students who have preparation in other languages should see the Office of the Revelle Provost to arrange a proficiency examination. This exam may also be taken by native speakers of *any* foreign language without further course study.

8. AREA OF FOCUS

Three courses in an area noncontiguous to the major are required. The three courses must be interrelated and should focus on some discipline, subject area, or topic. For the purposes of this requirement, the humanities/arts, the social sciences, and the natural sciences/engineering/mathematics are considered three different areas. Courses from a single department will be considered focused. Courses from more than one department should be approved prior to enrolling. The area of focus is not posted to the diploma or transcript.

These three courses may not be used on any other requirements. These courses may be upper-division or lower-division but one should keep in mind that graduation requirements stipulate that at least sixty units of all work must be from upper-division courses. The courses may be taken pass/not pass and Advanced Placement or International Baccalaureate credits may be used.

Students may complete an optional noncontiguous minor to replace this requirement, if they wish to do so.

* Science majors may want to take part of the social science requirement in the junior year to allow time for additional science laboratories and/or mathematics.

Transfer Students

Transfer students may enter Revelle College by following community college articulation agreements which can be viewed at www.ASSIST.org or by signing up for specific Transfer Admissions Guarantee (TAG) plans or by following the Intersegmental General Education Transfer Curriculum (IGETC). However, Revelle College does not accept IGETC as satisfaction of all its lower division requirements. Revelle accepts IGETC courses to meet requirements with additional classes in

science, mathematics and foreign language. (Students are exempt from the language requirement if they can pass proficiency in any foreign language.) Science and mathematics majors will need these additional classes in preparation (or to meet prerequisites) for their major. The additional math/science classes or language classes can be taken at the community college or after transfer to UCSD. See details on our Web site at http://revelle.ucsd.edu/prospective/ igetc+.html.

The Major

All undergraduate majors offered at UCSD are available to Revelle College students. An exceptional student who has some unusual but definite academic interest for which a suitable major is not offered on the San Diego campus may, with the consent of the provost of the college and with the assistance of a faculty adviser, plan his or her own major. The Revelle Individual Major must be submitted no later than three quarters before the student's intended graduation and be approved by the Executive Committee of the college before it may be accepted in lieu of a departmental or interdepartmental major. The faculty adviser will supervise the student's work, and the provost must certify that the student has completed the requirements of the individual major before the degree is granted.

Students who fail to attain a grade-point average of at least 2.0 in work taken in the prerequisites for the major, or in the courses in the major, may, at the option of the department, be denied the privilege of entering or of continuing in that major. Students majoring in bioengineering, bioinformatics, ICAM, CSE, ECE, or math/computer science need to be aware of additional screening for acceptance into the major.

Optional Minor

A minor is no longer required in Revelle College. However, if a student wishes to complete a Department Minor or a Project Minor and have it posted to the transcript, he or she may do so. If a student completes either of these types of minors in a field noncontiguous to that of the major, it will replace the three-course noncontiguous area of focus general education requirement.

There are two types of minors from which to choose in Revelle College:

1. Department Minor—All courses for the minor are taken in one department and they are chosen with the advice and approval of a minor adviser in that department.
2. Project Minor—A project minor centers on a topic or period chosen by the student. The project is often interdepartmental and interdisciplinary. The program must have the approval of a minor adviser. (See Academic Regulations: Undergraduate Minors and Programs of Concentrations.)

The current university guidelines for the minor require seven courses (twenty-eight units), five of which must be upper-division. Students who entered prior to January 1, 1998, may complete their six course (twenty-four unit), three upper-division course minors.

Enhancing Your Education

Students are able to enhance their undergraduate education by participating in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making regular progress toward graduation. Information on EAP/OAP is detailed in the Education Abroad Program section of the UCSD General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at http://www.icenter/pao. Financial aid recipients may apply aid to the program and special study abroad scholarships are readily available.

Many programs are now available for sophomores, as well as juniors and seniors. With careful planning students should be able to fulfill some general-education, major, and/or minor requirements while studying abroad.

Pass/Not Pass Grading Option

1. No more than one-fourth of an undergraduate student's total course units taken at UCSD and counted in satisfaction of degree requirements may be graded on a Pass/Not Pass basis.
2. Courses used to satisfy the noncontiguous area of focus may be taken on a Pass/Not Pass basis. Use of Pass/Not Pass grades on the optional minor is decided by the department.
3. Courses taken as electives may be taken on a Pass/Not Pass basis.
4. The following general education courses may be taken Pass/Not Pass: American cultures, fine arts, language and area of focus. Nonscience majors may take courses for the natural science requirement Pass/Not Pass.
5. Upper-division courses to be counted toward a departmental major may not be taken on a Pass/Not Pass basis. Individual departments may authorize exceptions to this regulation.

The Graduation Requirements

In order to graduate from Revelle College, a student must:

1. Satisfy the University of California requirements in Subject A and American History and Institutions.
2. Satisfy the general-education requirements.
3. Successfully complete a major consisting of at least twelve upper-division courses as stipulated by the department and meet the department's major residence requirement if applicable.
4. Complete a minimum of fifteen upper-division courses (60 units).
5. Pass at least 184 units for the B.A./B.S. degree. (No more than 3.0 units of physical education, whether earned at UCSD or transferred from another institution, may be counted towards graduation.)
6. Attain a C average (2.0) or better in all work attempted at the University of California (exclusive of University Extension). Departments may require a C average in all upper-division courses used for the major and/or at least C– grades in each course used for the major.
7. Meet the senior residence requirement. (See "Academic Regulations: Senior Residence.")

Honors

Particularly well-prepared students are invited to join the Freshman Honors Program. Students not eligible at admission will be invited to join the Freshman Honors Program upon obtaining a 3.7 GPA with at least twelve graded units during their first quarter. The program includes weekly participation in small faculty seminars, and a variety of other perquisites.

Quarterly provost's honors, honors at graduation, departmental honors, and Phi Beta Kappa honors are awarded. At least five outstanding graduating seniors are honored at graduation each year with a monetary honorarium. An honors banquet is given for the top two hundred students in Revelle each spring. Seniors are selected for participation in honors seminars. For additional information, see "Revelle Honors Program" and "Honors" in the index.

John Muir College

John Muir College admitted its first students in the fall of 1967 and moved to its present quarters in 1970. The college was named for John Muir (1838–1914), a Scottish immigrant who became a famous California naturalist, conservationist, and author. Muir explored the Sierra Nevada and Alaska, and worked for many years for the cause of conservation and the establishment of national parks and forests. Please visit our Web site at http://provost.ucsd.edu/muir

The Character of the College

Naming a college affirms certain ideas and values. John Muir was committed to learning, self-sufficiency, and the betterment of humankind. Throughout his life he was open to new ideas and experiences which he shared with others through his many books. In keeping with his example, the college has, through its interdisciplinary studies programs, developed courses covering contemporary issues, a major or minor in critical gender studies, and minors in film studies and environmental studies. It has established an individualized major called the Muir Special Project. And it has inaugurated an exchange program with Dartmouth College, one of the most distinguished undergraduate institutions in the United States. Each quarter about fifteen UCSD students attend Dartmouth, while a similar number come from Dartmouth to Muir. By these and other means, the college maintains at UCSD the heritage of the remarkable man for whom it was named.

The General-Education Philosophy and Requirements

John Muir College faculty established Muir's general-education program to guide students toward a broad and liberal education while allowing them substantial choice in the development of that education. This is accomplished by granting students the responsibility and flexibility to customize to a high degree their general-education courses within a broad framework of the following areas of learning: social sciences, mathematics (calculus) or science and two of the following three areas; fine arts, humanities, and foreign languages. Each of these four areas of learning has not merely one but several approved sequences from which students may choose. In addition students are required to complete two specific analytical composition courses. Thus students may tailor their general-education to their personal goals, interests, and academic talents in four personally meaningful general-education sequences.

It should be understood that this freedom carries with it certain responsibilities on the part of the student for careful planning. Students should be aware that:

1. Students should request from the Academic Advising unit of the Office of the Provost a list of general-education requirements and year-long sequences before making their final selection of courses.
2. Complete sequences only may be applied to the general-education requirement. Ordinarily an entire sequence from one department is taken in one academic year.
3. Courses taken to satisfy **only** the general-education requirements and not for a major or minor may, in general, be taken for a letter grade or Pass/Not Pass.
4. Units obtained from advanced placement may be applied toward the 180 units needed for graduation; some units may be used to fulfill partially the general-education requirements.

For students who transfer to Muir College from another institution, the general-education requirements will be interpreted in this way: two semester-courses or three quarter-courses in one subject represented on the approved list normally will be accepted as completing one of the four required sequences. After the Office of Admissions evaluates a student's transcript, the Academic Advising unit of the Office of the Provost makes an evaluation of prior work for each student at the time of his or her first enrollment.

Pass/Not Pass Grading Option

Muir students are reminded that to take a course Pass/Not Pass, they must be in good academic standing (2.0 GPA). No more than one-fourth (25 percent) of an undergraduate student's total UCSD course units counted in satisfaction of degree requirements may be in courses taken on a Pass/Not Pass basis . All major-related courses and most minor courses must be taken for a letter grade. Students are advised to check with their major or minor department regarding restrictions or exceptions.

Enhancing Your Education

Students are able to enhance their undergraduate education by participating in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making regular progress toward graduation. Information on EAP/OAP is detailed in the Education Abroad Program section of the UCSD General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at http://www/icenter/pao. Financial aid recipients may apply aid to the EAP program and special study abroad scholarships are available.

Many programs are now available for sophomores, as well as juniors and seniors. **With careful planning** students should be able to fulfill some general education, major, and/or minor requirements while studying abroad.

Major Programs and Special Projects

A Muir College student may pursue any of the approximately 125 undergraduate majors offered at UCSD. Most major programs at UCSD require a pattern of prerequisites at the lower-division level before students may enroll in upper-division major courses. **Students must declare a major upon accumulating ninety units.** Careful planning will assure the student access to a wide range of majors. Students are strongly encouraged to consult regularly with the college academic advisers as well as departmental major advisers concerning the selection of appropriate courses so as to graduate by the 200 unit maximum limitation.

Each academic department has, in its section of this catalog, a paragraph entitled "The Major Program." ***Students are encouraged to read these sections carefully,*** for they indicate both the extent and the nature of the upper-division program. The following points are useful to keep in mind:

1. A substantial command of at least one foreign language is required by some departments (e.g., international studies, linguistics, literature).
2. Specific science courses are required by many departments. For example, the Department of Computer Science and Engineering and the Department of Electrical and Computer Engineering require Physics 2A-B-C-D or Physics 4A-B-C-D-E; the Department of Chemistry and Biochemistry requires Physics 1A-B-C, Physics 2A-B and C or D, or Physics 4A-B-C-D-E, etc.
3. The physical and life sciences, applied sciences (the School of Engineering majors) together with certain social sciences (including cognitive science and economics), require at least one year of calculus.

The Muir Special Project (MSP) major is a ***B.A. degree* only** and is intended for students who have specific talents and interests which are not accommodated by one of the departmental majors. Each proposal and senior thesis or project must be approved by the Muir provost. The MSP normally includes regular course work and independent study representing up to fifteen upper-division four-unit courses as well as a project or thesis. The project may be one of two kinds: creative work of some sort (e.g., a book of poetry, a collection of musical compositions), or a detailed program of study and research in a particular area. The latter results in a long paper representing a synthesis of knowledge and skill acquired. In either case, a regular member of the UCSD faculty must serve as an adviser to a student doing the project. It should be understood that the demands of a special project major are great, and a project is not appropriate for a student who simply does not want the discipline of a normal major. For a course to be included as part of a Muir Special Project, the student must earn in it a grade of C– or better. Further information may be obtained from the Muir Academic Advising Office.

Graduation Requirements

To receive a degree of bachelor of arts or bachelor of science a John Muir College student must:

1. Declare graduation by completing the electronic Degree and Diploma Application. This must be done by **Friday of the ninth** week of the quarter preceding the quarter of anticipated graduation. Students who plan to graduate at the end of a summer session must complete the above-mentioned process by the **Friday of the ninth week of spring quarter.** Fees may be assessed if students miss these deadlines. **Degrees are not automatically granted: students must file their intention to graduate online at http://degree.ucsd.edu.**
2. Meet the general university requirement in Subject A, English Composition. (See "Undergraduate Admissions, Policies and Procedures.")
3. Satisfy the University of California requirement in American History and Institutions (See "Undergraduate Admissions, Policies and Procedures.")
4. Meet the Muir College requirement in writing proficiency. This requirement asks that the student demonstrate an ability to write English according to standards appropriate for all college work. (See Muir College course listings: "The Writing Program.")
5. Fulfill the general-education requirements.
6. Fulfill the **U.S.** cultural diversity requirement.
7. To receive a B.A. or B.S. degree, students must complete a minimum of forty-five four-unit courses **(180 units)** which includes a **minimum of eighteen upper-division courses (72 units).**
8. Show some form of concentration and focus of study. Ordinarily this is accomplished by completing a department or interdisciplinary major. Students in the college may attempt any major upon completion of the prerequisites. (The Department of Literature/Writing requires students to attain a minimum GPA in prerequisite courses and apply for admission to majors in the departments.) Presently, freshman entry to computer science and computer engineering majors in the CSE and ECE departments is restricted. Refer to the departments for current detailed information. Students who do not choose to meet this requirement by means of a departmental or interdisciplinary major and who qualify may propose a special project major. (See the section, "Major Programs and Special Projects," above.)
9. Satisfy the residency requirement which stipulates that 36 of the last 45 units passed be taken at UCSD as a registered Muir College student. Students planning to study abroad during the senior year should be aware that they must return to complete a minimum number of twenty-four units at UCSD. Such students should see their college Academic Adviser for clarification.
10. Accumulate a grade-point average of at least 2.0 overall and in most majors. Departments may require a C average in all upper-division courses used for the major or C– grades in each course used for the major. Students should consult with their department to determine which grading regulation applies.
11. Make up all incomplete grades. Students may not graduate with "NRs," "IPs," or "Incomplete" entries on their transcript. Therefore, they should be sure that all Incompletes have been cleared and final grades have been properly recorded by the end of the quarter in which they plan to graduate.
12. Complete all requirements for the degree during the quarter in which students file to graduate. If the degree requirements are completed after the expiration of the deadline in a quarter, but before the beginning of the next quarter, students must refile to graduate for the subsequent quarter.
13. Refile the electronic Degree and Diploma Application form if unable to satisfy all graduation requirements, including grade changes, by the end of the proposed graduating quarter. Students will graduate at the end of the quarter in which deficiencies are satisfied.
14. **It is the students' responsibility to contact their department adviser to verify that they have satisfied departmental requirements for graduation.**

While John Muir College does not call for the completion of a minor to fulfill its requirements for the degree of bachelor of arts or bachelor of science, it does acknowledge such completion of an approved departmental minor on a student's transcript. **No upper-division courses may be used to satisfy both a major and a minor.**

Students are required to complete ***twenty-eight units*** of interrelated work, of which at least **twenty units** must be upper-division. Departments or programs may establish more stringent criteria than the minimum. **A formal request for the minor must be approved by the**

department or program and college by the quarter before graduation.

Upon satisfaction of the graduation requirements, Muir College will recommend that the students be awarded the degree of bachelor of arts or bachelor of science (180 units, of which at least seventy-two must be upper-division).

Honors

Quarterly provost's honors, departmental honors, college honors, membership in the Caledonian Society of John Muir College, and Phi Beta Kappa honors are awarded. **Please note that graduating seniors must have letter grades for eighty units of work completed at the University of California for college honors.** For additional information, see "Honors" in the Index.

Thurgood Marshall College

Thurgood Marshall College, formerly known as Third College, was founded in 1970. From its inception, the college has enriched the lives of undergraduates with its intellectual and philosophic commitment to the development of students as both scholars and citizens. In July of 1993, the college was renamed in honor of the famous lawyer and Supreme Court Justice, Thurgood Marshall. Justice Marshall was widely known and recognized for his historic contributions to American life and dedication to breaking down barriers to education, civil rights, freedom of speech, women's rights, and the right to privacy. Thurgood Marshall College, its faculty, staff, and students are committed to furthering the ideals and dreams of Justice Marshall; accordingly, students are provided opportunities to develop as both scholars and citizens.

Thurgood Marshall's 3,800 students pursue any major in a variety of disciplines. About 40 percent choose majors in biology, the physical sciences, mathematics, and engineering; 35 percent select majors in the social sciences; and 25 percent pursue majors in the humanities and fine arts areas. One of the primary aims of the college is to prepare its students for the pursuit of a rigorous academic curriculum which in turn promotes entry into graduate/professional schools or into the career of one's choice.

Educational Philosophy

The educational philosophy of Thurgood Marshall College is guided by the belief that regardless of a student's major, a broad liberal arts education must include an awareness and understanding of one's role in society. Therefore, the distinctive core sequence, which serves as the centerpiece of the general-education requirements, emphasizes a critical examination of the human condition in our diverse American society. This three-quarter core sequence, "Dimensions of Culture—Diversity, Justice, and Imagination," challenges students to develop an informed awareness of the many cultural perspectives that have shaped American society. The core sequence is designed as an interdisciplinary, contemporary issues-oriented curricular experience that explores both the diversity of American experiences across race, religion, class, and gender, and also the shared resources all Americans draw on when their different identities and interests conflict. Other general-education requirements include courses in mathematics, the physical and biological sciences, humanities, and the arts.

Wishing to uphold the ideals set forth by the college's namesake, Thurgood Marshall students are encouraged to develop their skills not only as scholars, but also as citizens. Therefore, it is our belief that scholarship and social responsibility are mutually compatible. In this regard, our students receive academic credit for participating in the Partners-at-Learning Program (PAL) by taking courses which train and place them as tutors and mentors in local inner city elementary schools and high schools as well as the on-campus model school, The Preuss School. Because this activity shares importance with other academic experiences, completion of one of these specific public service courses, offered through TEP, satisfies an upper-division general-education requirement.

Further underpinning the educational philosophy of Thurgood Marshall College is the belief that the best preparation for a complex, interdependent, and rapidly changing world is a broad liberal arts education, complemented by in-depth study in areas of the student's choice. This educational approach has several major advantages:

1. It guarantees a basic understanding of the principle branches of knowledge: the humanities and arts, social sciences, the natural sciences, and mathematics.
2. It enables students with well-defined interests and goals to begin work in their chosen field of study as first-year students.
3. It allows students who have not decided on a major to sample an array of potential majors while simultaneously satisfying the general-education requirements of the college.

General-Education Requirements

General-education requirements are established by Thurgood Marshall College faculty to be broad and flexible enough to encourage students to integrate other alternatives, such as public service, internships, study abroad, research, special studies, etc., into their academic program. This permits students flexibility in pursuit of their

academic goals and in the practical application of their liberal arts degree, whether they wish to enter the work force or continue their education in graduate or professional school. These courses are designed to introduce students to the academic focus of the college, provide a broad liberal arts and science background, and furnish students with the academic skills and the basic knowledge necessary to pursue any departmental or interdisciplinary major.

The general-education requirements for first-year students are composed of a core sequence and a menu of choices within a liberal arts framework:

1. DIVERSITY, JUSTICE, AND IMAGINATION: This is a three-course interdisciplinary sequence. Two of the three courses are six-units and include intensive instruction in university-level writing. This is a required sequence for all first-year students. All courses must be completed at UCSD and taken on a letter-grade basis only. (See "Dimensions of Culture" in the departmental listings.)
2. FINE ARTS: One course in either music, theatre, or visual arts (non-performance).
3. NATURAL SCIENCES: Three courses. Choose one course each in biology, chemistry, and physics. Courses are available for science and non-science students.
4. QUANTITATIVE/FORMAL SKILLS: Choose two courses in mathematics or one course in mathematics or statistics and one in computing or logic. Courses are available for majors and non-majors.
5. HUMANITIES AND CULTURE: Two courses. Choose one course each from ethnic studies and Third World studies.
6. DISCIPLINARY BREADTH: Four courses. Students choose four courses from a variety of disciplinary breadth areas: humanities/foreign language; social sciences; natural sciences; math/engineering. Courses used to satisfy the disciplinary breadth requirement come from fields outside the major field of study. Two of these courses must be upper-division. At least one upper-division course must include significant writing.
7. PUBLIC SERVICE (optional): This four-unit public service option may be used to fulfill one course in Disciplinary Breadth for any major and fulfills the upper-division writing requirement. (See "Partners at Learning" and Teacher Education Program listings.)

The Thurgood Marshall College Curriculum and Academic Affairs Committee publishes an annual fact sheet with specific course choices which may be used to meet these requirements. Contact the college academic advising office for additional information or refer to the college Web site.

Graduation Requirements

To receive a bachelor's degree from Thurgood Marshall College, a student must:

1. Satisfy the university Subject A requirement. (See "Undergraduate Admissions, Policies and Procedures.")
2. Satisfy the university requirement in American History and Institutions. (See "Undergraduate Admissions, Policies and Procedures.")
3. Fulfill the general-education requirements as described.
4. Complete a departmental or interdisciplinary major.
5. Satisfy the college residency requirement (thirty-five of the last forty-five units must be completed as a registered Thurgood Marshall College student).
6. Successfully complete a minimum of 180 units for the B.A./B.S. degree. At least 60 of these units must be completed at the upper-division level.
7. A 2.0 or better GPA is required for graduation.

Transfer Students

Transfer students have a variety of academic options available to complete lower-division general education prior to transfer. Specific details regarding appropriate general-education agreement are in the section on "Undergraduate Admissions" and through the community college. Students may also contact UCSD Transfer Student Services prior to transfer. Also, the college Web site contains pertinent information.

Majors and Minors

Majors: Thurgood Marshall College students may pursue any of the departmental or interdisciplinary majors offered at UCSD. The majority of the academic departments have established lower-division prerequisites. Generally, these prerequisites must be completed prior to entry into upper-division major courses. Many of these courses may be counted for general-education credit as well. Students are strongly encouraged to work closely with department faculty and college advisers. For details on the specific major departments, refer to the "Courses, Curricula, and Programs of Instruction" section of this catalog.

Minors are optional. However, students are encouraged to keep as many options open as possible. A minor provides an excellent opportunity to complement the major field of study.

Students are required to complete twenty-eight units of interrelated work, of which at least twenty units must be upper-division.

See your college or department for further information.

Pass/Not Pass Grading Option

1. Courses to be counted toward a departmental major or as prerequisites to the major must be taken on a letter-grade basis.
2. Only one upper-division course to be counted toward a college minor may be taken on a Pass/Not Pass basis.
3. Courses taken toward completion of the college general-education requirements, with the exception of Dimensions of Culture (Diversity, Justice and Imagination), may be taken on a Pass/Not Pass basis, while at the same time the restrictions for prerequisites to majors and courses counted toward a minor must be observed.
4. Courses taken as electives may be taken on a Pass/Not Pass basis, while at the same time the restrictions on the majors and minors must be observed.
5. No more than one-fourth of the total University of California, San Diego units may be completed on a Pass/Not Pass basis.

Honors

Quarterly provost's honors, honors at graduation, departmental honors, and Phi Beta Kappa are awarded to Thurgood Marshall College students. For additional information see "Honors" in the Index or speak with the academic honors program adviser in the academic advising office.

Enhancing Your Education

Students are able to enhance their undergraduate education by participating in the UC

Education Abroad Program (EAP) and UCSD Opportunities Abroad Program (OAP) while still making regular progress toward graduation. Information on EAP/OAP is detailed in those sections in the General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at http://www/icenter/pao. Financial aid recipients may apply aid to the program, and special study abroad scholarships are readily available.

College-Sponsored Programs

INDIVIDUAL STUDIES MAJOR

The Individual Studies major allows students to pursue a coherent course of study not formally offered at UCSD. To apply for the major, students must have a 3.25 grade point average. A written proposal with supporting documentation from a faculty adviser, a list of prerequisite courses, and a proposed curriculum plan are required. Students pursuing this major must be goal-oriented and self-directed.

PARTNERS-AT-LEARNING PROGRAM (PAL)

Students may participate in the Partners-at-Learning Program (PAL) by taking specified Teacher Education Program (TEP) courses which train and place them as tutors and mentors in local elementary and high schools as well as at the on-campus Preuss School. Participation in the PAL program can be counted toward satisfying the Public Service option at Thurgood Marshall College. This campuswide program is open to all students in good standing and at the junior level. (See TEP in the department listing—specifically TEP 130, 134, 136, 138, and 139).

PRICE PUBLIC AFFAIRS FORUM

The Price Public Affairs Forum invites leading public figures to speak on important contemporary issues. Such wide-ranging topics as "Race and Justice in America," "Women's Role in the Workplace," and "The Modern American Family" have been presented. These forums are open to the general public.

PUBLIC SERVICE MINOR

Thurgood Marshall College sponsors the Public Service Minor at UCSD, which encourages students to understand the history and practices of public service and to participate in the development of civic skills. This minor is open to all UCSD students in good standing. Please see "Public Service Minor" in the departmental listings.

THE CONTEMPORARY BLACK ARTS PROGRAM

The Contemporary Black Arts Program is an interdisciplinary minor which provides a broad introduction to Afro-American performing arts. (See Contemporary Black Arts in the department listings.)

THURGOOD MARSHALL COLLEGE HONORS PROGRAM

The Thurgood Marshall College Honors Program sponsors activities and events designed to introduce students to the excitement of pioneering research and innovative scholarship in all disciplines at UCSD and to create opportunities for discussion on public issues with locally and nationally known figures. (See Thurgood Marshall College Honors Program in the department listings.)

THURGOOD MARSHALL INSTITUTE

The Thurgood Marshall Institute is heavily devoted to undergraduate research. The institute has organized and supported faculty and student group research projects in the area of education and public law; hosted conferences and symposia on related issues; and trained junior and senior high school instructors in the teaching of the United States Constitution and its amendments.

UCSD-MOREHOUSE/SPELMAN STUDENT EXCHANGE PROGRAM

The UCSD-Morehouse/Spelman Student Exchange Program was established in the fall quarter of 1989. This formal exchange program was developed by Thurgood Marshall College and is open to all UCSD undergraduates. Morehouse and Spelman Colleges are located in Atlanta, Georgia.

The purpose of the program is to provide a unique opportunity for students to live and study at important institutions of higher learning that are significantly different from the social and educational environment typical of California state colleges and universities. Similarly, the exchange students coming to UCSD from Morehouse and Spelman will have an opportunity to experience an exciting and very different educational environment. See the program coordinator in the college academic advising office for additional information.

STUDENT LEADERSHIP PROGRAM

Complementary to the strong academic programs, Thurgood Marshall College is proud of its emphasis on the student as citizen. The Student Leadership Program is especially designed to encourage active involvement in the governance of the college and participation in community and public service programs. College life outside of the classroom and laboratory is a vital part of each student's undergraduate experience. The college offers a wide variety of opportunities for students to shape the nature and character of student life. This active participation allows students to develop self-confidence and strong interpersonal, organizational, and leadership skills. The friendly and outgoing manner of Thurgood Marshall students contributes to a sense of community and mutual respect. This spirit of cooperation is a college hallmark.

Honorary Fellows of the College

Earl Warren College

Earl Warren College opened in the fall of 1974 and currently enrolls more than 4,000 students. The College is named for Earl Warren, former chief justice of the United States Supreme Court and the only three-term governor of California. A native Californian, Justice Warren earned his college and law school degrees at the University of California (B.L. 1912; J.D. 1914). During his governorship, he served as an ex-officio member of the UC Board of Regents for eleven years. He also saw public service as district attorney of Alameda County and as attorney general of California.

As governor during an era of lightning growth for California, Justice Warren developed the State Department of Mental Hygiene and led in reforms of the prison system in California by establishing the Board of Corrections and the Prisoner Rehabilitation Act. In his final role as a public servant, he was chief justice of the United States Supreme Court, which under his leadership elaborated a doctrine of fairness in such areas as criminal justice, voting rights, legislative districting, employment, housing, transportation, and education.

Earl Warren College is committed to preparing its students for active roles in society in their postbaccalaureate years. Whether students wish to continue their education in graduate or professional school, to seek an immediate career or to pursue other options, the college stands ready to assist. Students are advised by the Warren College administration to identify their abilities and interests, examine career possibilities, and prepare for the future over the course of their undergraduate years at UCSD. In addition, the college is a strong supporter of international education and therefore encourages students to pursue the many opportunities that are available for study abroad.

The college's students and faculty represent all disciplines offered at UCSD. Graduation requirements, which consist primarily of one major and two secondary areas of study, enable students to develop a program covering a wide range of material while also focusing on particular areas in depth. The diversity of its academic program has made Warren College an exciting home for students who seek maximum flexibility in designing their own education.

General-Education Requirements

The Warren College faculty has a firm belief that each student should have the opportunity to develop a program best suited to his or her individual interests, within a framework that ensures both depth and breadth of study. All students are required to have significant exposure to the humanities and fine arts, the social sciences, and the natural sciences. The faculty and staff of the college provide extensive advising on individual academic programs and their possible career implications. Students who enroll at Earl Warren College are required to work within the following academic plan:

1. Each student must complete a two-course sequence in writing, Warren Writing 10A-B, within four quarters following successful completion of the Subject A requirement.
2. The college also requires that all students complete a course entitled "Ethics and Society," offered jointly by the political science and philosophy departments (Philosophy 27/Political Science 27). Upon completion of Warren Writing 10A-B, "Ethics and Society" should be taken by the end of the second year at UCSD for letter grade only.
3. All students must satisfy the formal skills requirement by completing two courses chosen from an approved list that includes calculus, computer programming, statistics, and symbolic logic.
4. To ensure a significant exposure to the three disciplinary areas—humanities/arts, social sciences, and natural sciences—all students are required to complete two focused collections of courses outside the areas of their majors. For all students other than B.S. engineering majors, two **focused collections of courses (programs of concentration) are required,** each of which requires six courses outside of the major. A student may choose to declare an optional department minor. In lieu of a program of concentration, a student may choose to declare a minor in a department or interdisciplinary program. These areas of study must cover the two disciplinary areas outside the student's major.

   A few programs of concentration require more than six courses.

For B.S. engineering majors, each student must complete **an area study in the humanities/arts and an area study in the social sciences.**

Each of these area studies consists of three courses of which at least one must be upper-division level.

All **programs of concentration and area studies** must be approved by the Earl Warren College Academic Advising office. A brochure entitled "Earl Warren College Academic Advising Handbook" will be provided to entering Warren students. All minors must be approved by academic departments or programs.

Majors

Earl Warren College students may pursue any of the departmental or interdisciplinary majors offered at UCSD. The majority of the academic departments has established lower-division prerequisites, which, must be completed prior to entry into upper-division major courses. Students are strongly encouraged to work closely with departmental faculty, staff advisers, and college academic counselors. For details on the specific major department requirements, refer to the "Course, Curricula, and Programs of Instruction" section of this catalog.

A student may declare a double major upon the approval of both academic departments and their academic advising office. If the two majors are from noncontiguous discipline areas, one program of concentration or area of study from the third noncontiguous discipline area will be required. If the two majors are from the same discipline area, two programs of concentration or area studies will be required from each of the remaining noncontiguous discipline areas.

The Earl Warren College Individual Studies Major is designed to meet the needs of students who have a definite academic interest for which a suitable major is not offered at UCSD. The student must submit a written proposal explaining the merit of the program and why it cannot be accommodated within existing UCSD major offerings. The proposal must first be approved

by a faculty adviser and then approved by the College Executive Committee.

Minors

In lieu of a program of concentration, Earl Warren students may pursue a departmental minor to fulfill general education requirements. An approved department minor applied toward the general education requirement will be posted to the student's official transcript. Upper-division courses taken for the departmental minor may not overlap with courses in the major, the program of concentration, or the area studies.

Pass/Not Pass Grading Option

Some general education requirements may be fulfilled by courses taken on the Pass/Not Pass basis. Earl Warren students are reminded that major requirements and prerequisites must be taken on the graded basis. The total number of Pass/Not Pass units may not exceed one-fourth of a student's total UCSD units.

Graduation Requirements

To receive a B.A. or B.S. degree from Earl Warren College a student must:

1. Satisfy the University of California requirements in American History and Institutions, and in Subject A. (See "Undergraduate Admissions, Policies and Procedures.")
2. Fulfill the general education requirements described above.
3. Complete one course in Cultural Diversity in U.S. Society to be chosen from an approved list. This course can be part of the major, the general-education, or the electives.
4. Complete a major chosen from those regularly offered at UCSD. Each department determines the courses and grades required for its major; generally this will include a set of twelve to twenty-two upper-division courses. In addition, most majors require a certain amount of introductory course work, and the beginning student is urged to plan a program that will permit a wide choice of major fields. For example, calculus is required for a significant number of majors; a student who does not take this subject excludes all these majors from further consideration.
5. Attain at least 2.0 GPA overall. Major GPA requirements may differ by department.
6. Satisfy the college residency requirement that thirty-six of the last forty-five units passed must be taken as a student in the college.
7. Pass a minimum of 180 units. A minimum of 60 units must be taken at the upper-division level.

Transfer Students

For students who have completed their lower-division general education requirements at an accredited four-year college, and for students who have completed a systemwide or campuswide approved core curriculum in a California community college prior to entering UCSD, the only additional general education requirements are two **upper-division courses noncontiguous to the discipline area** of the major. For these students graduation requirement 3 [above] is waived. All other transfer students must complete the general education requirements above. (See "Earl Warren College" in the section "General Education Requirements.")

The Warren College Honors Program

The Warren College Honors Program is offered to students with a broad range of interests and a history of outstanding scholastic achievement. The program offers students the opportunity to work closely with faculty throughout their academic career at UCSD. High school seniors with a GPA of 3.8 or above, SAT I scores of 700 verbal/700 mathematics, SAT II writing score of 700, or who are National Merit Scholars or Regents Fellows, are eligible for admission to the program. Students may participate in the program until thirty-six units of UCSD credit are completed. After that, a cumulative GPA of 3.5 on all units completed at UCSD must be maintained to remain in the program. Entering transfer students with a GPA of 3.8 based on at least thirty-six units of college work are also eligible. Other students with strong academic credentials may also apply. (For more information, see "Warren College" in the section "Courses, Curricula, and Programs of Instruction.")

Educational Enrichment

Students may opt to study abroad through the University of California's Education Abroad Program (EAP) or UCSD's Opportunities Abroad Program (OAP) while earning credit toward graduation.

EAP participants study in over 100 institutions in 34 countries, many for a full academic year, others for a shorter term. Most EAP programs require a minimum of 3.0 cumulative GPA and junior standing at the time of participation, but there are some exceptions. OAP can assist students in selecting from a range of study, volunteer, internship, and educational travel programs. More information can be found at http://orpheus.ucsd.edu/icenter/pao/.

Academic Internship

Warren College administers an Academic Internship Program available to students from all five colleges. The program is based on the conviction that quality education results from a combination of classroom theory and practical experience. Participants work full- or part-time for a public or private organization. Placements match students' major areas of academic study and correlate with their career goals. Students may enroll one, four, eight, or twelve units per quarter, with a maximum of four internships and/or sixteen units of internship credit. Although most placements are in the San Diego area, the Academic Internship Program is international in scope and varied in offerings. Students might work for a senator in Washington; a legal-aid office in Los Angeles; a business, a T.V. station, research lab or social service agency in San Diego; a public relations firm in London; or any number of other possibilities. Working closely with faculty advisers, students write research papers that integrate their academic backgrounds and internship experience. For more information, see listing under "Academic Internship."

Honors

Quarterly provost's honors, honors at graduation, departmental honors, and Phi Beta Kappa honors are awarded. For additional information see "Honors" in the Index.

Honorary Fellow of the College

Harry N. Scheiber, Historian

Eleanor Roosevelt College

Eleanor Roosevelt is widely regarded as one of the most visionary and influential American public figures of the twentieth century, and her life and achievements continue to inspire men and women everywhere. She was one of the first to champion human and civil rights for all Americans during the Great Depression and the Second World War. After the war, she was the architect of the United Nations Universal Declaration of Human Rights. In the decades that followed, her tireless efforts to promote international understanding and human rights earned her worldwide respect and the title "First Lady of the World."

The College

Eleanor Roosevelt College (ERC) was established in 1988, and is currently home to more than 3,200 men and women. The college serves students interested in pursuing academic excellence, establishing the groundwork for future success, and becoming lifelong learners and effective world citizens.

ERC fosters the ideal of a comprehensive education that develops intellectual capacities and expands general knowledge. The core curriculum exposes students to a variety of academic disciplines, providing a foundation that is suitable for all majors, whether in the natural or applied sciences, the social sciences, or the humanities and the arts. It prepares students for opportunities to study and conduct research with UCSD faculty and scholars.

The world in which today's students will make their careers is one of rapid scientific and technological change, rich cultural diversity, and intense social and political interactions. ERC's general-education curriculum and co-curricular programs build knowledge of other cultures and skills for working in the rapidly changing environment of the twenty-first century. Students seeking careers in fields as diverse as business, law, medicine, public policy, engineering, the sciences, and the arts or humanities find ERC's curriculum and programs equally valuable and relevant.

At ERC, shared educational goals are pursued in a supportive community where students are valued and respected, where they are challenged and helped to succeed, and where they can develop independence and confidence about their roles in society.

General Education

The general-education requirements at ERC are designed to provide all students with a broad intellectual foundation. The curriculum offers undergraduates opportunities to learn about the various fields that may be open to them, thus assuring that their choices in selecting a major, pursuing graduate study, or seeking employment will be based on clear understandings about the nature of the work and their own interests and talents.

Advanced Placement Credits

University credit may be granted for College Board Advanced Placement Tests on which a student earns a score of 3 or higher. The credit may be applied toward general-education requirements (approximately half of which can be met by Advanced Placement credit), elective units for graduation, as subject credit for use in a minor, or as a prerequisite to a major. For further details, see the advanced placement chart in "Undergraduate Admissions, Policies and Procedures."

ERC academic counselors provide information about advanced placement or courses that meet the general education requirements of the college. Students should take advantage of the counseling available in the Academic Advising Office to help them effectively incorporate the college general-education requirements into their academic program.

ERC General-Education Requirements for Students Entering as Freshmen

The Making of the Modern World (six quarters)

This interdisciplinary sequence of six courses incorporates humanities (literature, history, and philosophy) and social sciences as well as writing. The courses examine Western and non-Western societies, cultures, and state systems both historically and comparatively. The Making of the Modern World (MMW) is taught by faculty from many disciplines, including anthropology, history, literature, political science, and sociology.

MMW is designed to help students search for connections—between past and present, among the societies and civilizations that have inhabited the earth, and among the ways that humans have used to make sense of their experience.

At ERC, the university writing requirement is met through MMW and relies on those courses for its content. Instruction and practice in writing, in turn, help students master the course content and analyze and synthesize the material. In all fields, written communication skills are among the most important qualifications graduates take to the job market and graduate school. Writing is assigned in MMW 2–6; the second and third quarters include intensive writing instruction and carry two additional units of credit. For more details, see "The Making of the Modern World" in the department listings.

Natural Sciences (two quarters)

Two courses are to be chosen from selected offerings in biology, chemistry, physics, and/or earth sciences.

Quantitative Methods (two quarters)

Two courses are to be chosen from selected offerings in pre-calculus, calculus, statistics, symbolic logic, or computer programming.

For students majoring in scientific fields, these courses are preparation for major study; for students who will continue their studies outside the sciences, they provide a basic understanding and appreciation of methods and developments in the fields. Many of the selected courses are designed for non-science majors.

Foreign Language (zero to four quarters)

ERC students are required to demonstrate basic conversational and reading proficiency in a modern foreign language, or advanced reading proficiency in a classical language, by completing the fourth quarter of foreign language instruction (or equivalent) with a passing grade.

Students may also complete this requirement by demonstrating advanced language ability on a special proficiency exam. Students considering this option should consult with an ERC academic counselor during their first year at UCSD.

Advanced placement scores in language or literature, and IB scores in language, may exempt

students from all or part of the ERC language requirement.

College-level language study is a prerequisite for study abroad in most non-English speaking countries and enhances understanding of those societies. Students wishing to study abroad in non-English speaking countries may need to take additional language classes, and will need to take all language courses for letter grades.

Fine Arts (two quarters)

Two four-unit courses are required, to include study of both Western and non-Western music, theatre, dance, and/or visual arts. These courses help students appreciate the rich range of human expression to be found in cultures and ages other than their own.

Regional Specialization (three quarters)

Each ERC student selects three courses dealing with a single geographic region of the world. The college has defined regions broadly enough to assure course availability and narrowly enough to ensure coherence of subject matter. These courses may be chosen from offerings in humanities, social sciences, and fine arts. At least two of the three must be taken at the upper-division level. See "Minors" below about application of this course work to an optional ERC minor.

Upper-Division Writing Requirement

To demonstrate competency in written English at the upper-division level, students submit to the Academic Advising Office a paper or papers of specified lengths that were written for one or more upper-division courses and graded C– or higher. Papers are returned to students after Academic Advising Office staff certify that they meet the upper-division writing requirement.

Sample Program

A program like the sample one shown here would lead to completion of most general-education requirements during the first two years of college. Some variation will occur depending upon a student's academic preparation, choice of major, and individual interests and priorities. For example, students planning to major in science, math, or engineering will be taking many prerequisite courses for their major; those courses typically also fulfill the general-education requirements in natural sciences and/or quantitative methods.

FALL	WINTER	SPRING
FRESHMAN YEAR		
MMW 1	MMW 2	MMW 3
foreign language	foreign language	foreign language
fine art	quantitative methods	quantitative methods
Subject A, major, or elective	fine art	major or elective
SOPHOMORE YEAR		
MMW 4	MMW 5	MMW 6
natural science	natural science	major or elective
major or elective	major or elective	major or elective
major or elective	major or elective	regional specialization
JUNIOR AND SENIOR YEARS		
regional specialization (2)		
major course work		
electives		

Transferring to ERC

Transfer students may meet most ERC general-education requirements before entering UCSD if they have followed articulation agreements with community colleges, or taken courses elsewhere that ERC deems equivalent in content to UCSD courses that meet the college's requirements.

All transfer students must take three quarters of MMW, and it is recommended that the three courses be taken in sequence. Students who have not met their freshman writing requirement elsewhere must complete it by taking MMW 2 and/or MMW 3 as part of this three-course requirement.

All transfer students must also take two upper-division regional specialization courses and satisfy the upper-division writing requirement. See "Graduation Requirements" below.

Grading Options

1. No more than 25% of total UCSD units counted in satisfaction of degree requirements may be taken on a Pass/Not Pass basis.
2. Electives may be taken on a Pass/Not Pass basis except if they are to be applied to majors or minors. Check with the appropriate department or college for rules applying to specific majors or minors.
3. Courses that meet the following ERC general-education requirements may be taken Pass/Not Pass: fine arts, foreign language, natural sciences, quantitative methods, and one regional specialization course. All other general-education courses must be taken for letter grades.

Leadership and Community

ERC students are recognized for their strong sense of community. These bonds are created in part by common classroom experiences in MMW. They also grow from shared explorations in a variety of college programs in which students take active roles: college and campus-wide student government, service to the campus and the larger community, the acquisition of leadership skills, and sports and social activities.

The college is home to UCSD's International House, which offers informative and dynamic discussions for the campus community at its weekly International Affairs Group meetings. ERC also hosts (with the Programs Abroad Office) a retreat each fall to welcome back study abroad returnees from all six colleges and assist with their re-integration into the UCSD community.

Expanding Horizons

Students whose interests extend beyond our borders are encouraged and assisted in finding opportunities to spend part of their college career in another country. There are many options, including short-term or year-long academic programs, work opportunities, and career-related internships.

At one time or another, men and women from ERC have studied in more than forty different countries in Europe, Africa, Latin America, the Middle East, and Asia.

Students on university financial aid who participate in the UC Education Abroad Program pay UCSD fees and retain their financial aid packages, which are budgeted to include study abroad expenses. In addition, there are a number of sources for scholarship aid designated for study abroad.

Majors

An ERC student may pursue any of the approximately 125 undergraduate majors offered at UCSD. Students may complete more than one major, provided they comply with all Academic Senate regulations concerning double majors. To declare a double major, a student must have accrued at least ninety but no more than 135 units, have at least a 2.50 GPA, and meet university requirements regarding total maximum number of units earned and quarters attended at UCSD.

Most majors require the completion of specified "pre-major" or prerequisite courses at the

lower-division level before enrollment in upper-division major courses. For some majors, admission to upper-division course work is contingent upon a satisfactory GPA in certain pre-major courses. Students are strongly encouraged to work closely with department advisers as well as college academic counselors to assure adequate and timely preparation for their majors.

Completion of certain majors may take more than four years or the minimum 180 units required for graduation. Time-to-graduation in other instances may be affected by a student's level of preparation for upper-division work in the major or by a decision to change major. See "The Undergraduate Program(s)" in respective department listings.

ERC Individual Studies Major

ERC offers an Individual Studies major to meet the needs of students who have defined academic interests for which suitable majors are not offered at UCSD. Students who find themselves in this situation should consult a college academic counselor at the first opportunity.

This major includes regular course work and often independent study, representing a minimum of twelve upper-division four-unit courses. A regular member of the faculty serves as adviser to the student. Students admitted to the Individual Studies major may enroll in ERC 199, an independent study course supervised by a faculty member, who tailors the content to fit the major.

Qualifying seniors pursuing an Individual Studies major may undertake an honors thesis research project (ERC 196) under the tutelage of their faculty mentor. See "Eleanor Roosevelt College" in the department listings.

Further information about an Individual Studies major may be obtained from the ERC Academic Advising Office.

Minors and ERC Special Minors

Minors are not required at ERC. However, completion of a minor can be an educational or pre-professional asset. All students have the option of completing any approved departmental or inter-departmental minor.

Alternatively, students may wish to combine foreign language course work with an associated regional specialization to earn an ERC Special Minor in, for example, Asian Studies or Middle Eastern Studies. Such minors must conform to Academic Senate policies: For students entering the University before January 1998, this means completion of at least six courses (twenty-four units), of which at least three (twelve units) must be at the upper-division level. Students entering in January 1998 or later must complete at least seven courses (twenty-eight units), of which at least four (sixteen units) must be at the upper-division level. Upper-division courses applied toward a minor may not be used to meet the requirements of the major.

Internships

As a way to combine classroom theory and practical experience, juniors and seniors are encouraged to consider internships under programs available to any UCSD student and administered by the Academic Internship Program, Career Services, or UCSD Associated Students.

Participants work for various lengths of time in enterprises that match their major interests and career goals. Most placements are local, but some are in such locations as Washington, D.C., Sacramento, Los Angeles, or London.

Working with faculty advisers, students enrolled in academic internships write research papers integrating their work experience with their formal studies, and they can earn up to sixteen units of credit in increments of four, eight, or twelve per quarter.

Graduation Requirements

To graduate with a baccalaureate degree from the University of California, an Eleanor Roosevelt College student must:

1. Satisfy two University of California requirements: the Subject A requirement in English composition and the American History and Institutions requirement. See "Undergraduate Admissions, Policies and Procedures."
2. Fulfill the ERC general-education requirements as described.
3. Complete an approved departmental or inter-departmental major, meeting all requirements as specified by the major department or program.
4. Satisfy the senior residency requirement that thirty-five of the final forty-five units must be completed as a registered UCSD student. Students studying abroad in their senior year may petition to have this requirement waived.
5. Complete and pass a minimum of 180 units for the Bachelor of Arts or Bachelor of Science degree. At least sixty of those (fifteen courses) must be at the upper-division level. The B.S. degree is awarded in biology, physics, cognitive science, chemistry, earth sciences, management science, and designated engineering and psychology programs; the B.A. is awarded in all other majors.
6. Earn a cumulative GPA of 2.0 or higher.

Honors Recognition

Students who earn a quarter GPA of 3.5 or higher are notified by letter of having achieved Provost's Honors. Students who maintain GPAs of 3.5 or higher for a full academic year are awarded Provost's Honors certificates.

Every spring, ERC holds an academic honors recognition event to which high achieving students are invited, and graduating seniors are encouraged to invite individual faculty as their guests.

Also each spring, UCSD's chapter of the Phi Beta Kappa Society invites to membership seniors who have demonstrated outstanding academic achievement (3.65 GPA), breadth in their academic programs (including humanities, language, and quantitative methods), and good character, among other criteria. See "Phi Beta Kappa" in the index.

At Commencement, ERC graduates with extraordinarily outstanding overall academic records are named Provost's Scholars. Graduates with final cumulative GPAs equivalent to approximately the top 14 percent of UCSD graduates become eligible for University Honors and receive their degrees Cum Laude (with honors), Magna Cum Laude (with high honors), or Summa Cum Laude (with highest honors).

ERC Honors Program

The Freshman and Sophomore Honors programs at ERC have been established to provide exceptionally motivated and capable students with enhanced educational experiences in association with faculty and other honors students.

Selected new students are invited to enroll in the Freshman Honors Seminar. During fall quarter, students meet with a variety of faculty members to learn more about their research and about academic enrichment opportunities at UCSD. Seminar members also participate in other enriching academic and cultural events.

The Freshman Honors Seminar continues during winter quarter (and some years through spring quarter) with faculty speakers who focus on international themes. In winter (and spring) quarters, these seminars carry one unit of credit each (ERC 20). See "Eleanor Roosevelt College" in the department listings.

Sophomores who have earned cumulative grade-point averages (GPAs) of 3.5 or higher have opportunities to pursue independent study with individual faculty for credit (ERC 92). See "Eleanor Roosevelt College" in the department listings.

Additional honors opportunities are offered in MMW. Students with excellent grades in MMW 1, 2, and 3 and high cumulative GPAs are eligible to take honors sections of MMW (4H, 5H, and 6H). These students attend regular MMW lectures and meet in separate honors discussion sections. They also attend special guest lectures and enrichment activities related to course content.

At the upper-division level, students may qualify to enroll in honors programs offered by their major departments. These programs usually include research under the direction of a faculty mentor and the writing and presentation of an honors thesis.

Sixth College

The theme of Sixth College, *Culture, Art, and Technology,* was motivated by the rich intellectual challenges inherent in the intersection of technology, culture, and the arts. The educational philosophy exploits the college theme to create a curriculum that will prepare students for a future that demands ethical integrity; teamwork skills; ability to adapt to rapid change; aptitude to think abstractly; the competence to acquire, process, and evaluate new information critically; and the proficiency to communicate across disciplinary boundaries. To achieve this goal, Sixth College will create a learning environment, both inside and outside the classroom, which will emphasize collaborative learning, pattern recognition, deductive reasoning and creative imagination, and the ability to hypothesize, interpret, and express thoughts and ideas through the effective use of communication tools that include the digital medium. Sixth College will provide the skills necessary for lifelong learning, including fluency with information technology and information literacy, and the crucial ability to seek out and learn from experts.

On campus and off, students will be linked in many ways—by digital media, by social and local engagement, by cultural and intellectual projects—so that Sixth College becomes an identifiable, sustaining community that is always reaching out to others.

A fundamental underpinning of the Sixth College philosophy is to create a sense of students' connectedness to the college, to UCSD, and the community at large by creating virtual communities. For example, we will create "Study Rooms" that will include a series of short video streamed lectures. The user will be able to watch and listen to a professor's lectures in any order, and each lecture will feature visual images, outlines, and charts to enrich the user's understanding and enjoyment. Along with the illustrated lectures, the study room will link students to an array of Web sites selected by the faculty as sources of additional information. Each room will have a reference section, with an annotated list of suggested books, articles, journals, films, and other ancillaries prepared by the faculty.

Sixth College challenges students to examine the multi-dimensional interactions between culture, art, and technology, in order to imagine the future and create new forms of inquiry and communication. Teamwork, artistic expression, interdisciplinary ways of thinking and knowing, and multicultural awareness are core educational goals.

Sixth College students will be encouraged to engage with the outlying community. More than an ethical obligation to service, such an engagement is integral to the process of learning to listen across cultures and to consider implications of diverse agencies of change. Sixth College is committed to pioneer meaningful application of evolving technologies inside and outside the classroom. For example, wireless communication technology will be incorporated into the very design of this college's physical infrastructure and curricular planning, allowing Sixth College to pioneer radically new teaching, communication, community, and life-long learning paradigms. The Sixth College community will collectively and consistently be reflecting upon itself. Through "Active Research," students may study how they and their Sixth College companions learn in and beyond the classroom. This research will become the basis for shifts in the curriculum, teaching methods, modes of administration, and residence hall culture. Our students will help continuously transform Sixth College.

Culture, Art, and Technology

All students will take a three-quarter core sequence titled Culture, Art, and Technology (CAT). CAT is a highly interdisciplinary sequence integrating learning in arts and humanities, social sciences, and science and engineering. It introduces students to thinking across disciplines so they can identify interactions, recognize patterns, and provide opportunities for learning by inquiry in a collaborative environment. Exercises and instruction that develop fluency with information technology and information literacy, as well as writing and communication skills, will be embedded in the core sequence.

General-Education Requirements

The Sixth College breadth requirements have three primary goals: (1) to produce breadth of knowledge and connections across that breadth, (2) to encourage creative imagination, and (3) to accomplish these activities from an ethically informed perspective. The aim is to allow students to discover the richness of UCSD's academic life and to see relationships among the sciences, social sciences, engineering, arts, and the humanities. Because Sixth College emphasizes cross-disciplinary ways of thinking, it is critical for students to appreciate the different modes of inquiry within academic disciplines. For information about courses available to satisfy the general-education requirements, please visit the academic advising office in the Sixth Administration Building or check the Web site at sixth.ucsd.edu.

1. **Culture, Art, and Technology:** Three courses. Core Sequence CAT 1, 2, and 3. Includes two (6 unit) quarters of intensive instruction in university-level writing.
2. **Computing Requirement:** One course. This requirement may be satisfied with courses from a variety of departments, including CAT 4.
3. **Modes of Inquiry:** Seven courses. Two courses in social sciences, two courses in humanities, two courses in natural sciences, one course in math/logic (different options available for science and non-science majors).
4. **Understanding Data:** One course in statistical methods (different options available for science and non-science majors).
5. **Societal and Ethical Contexts:** Two courses. One course in ethnic or gender studies AND one course in ethics.
6. **Art Making:** Two courses in literature , music, theatre (including dance), or visual arts.
7. **Practicum:** Students must complete an upper-division project, and present the project with a two-unit course in Practicum Communication. See the Sixth College advising center for details. For B.A. and B.S. degrees in arts and sciences, at least eleven of the general education courses must lie outside the requirements specified by one of the student's major departments or programs. For B.S. degrees in engineering, at least nine of the courses must lie outside the major requirements.

Graduation Requirements

In order to graduate from Sixth College all students must:

1. Satisfy the University of California requirements in Subject A and American History and Institutions (See Academic Regulations: Subject A; and American History and Institutions).
2. Satisfy the general-education requirements.
3. Successfully complete a major according to all regulations of that department.
4. Complete a minimum of fifteen upper-division courses (60 units).
5. Pass at least 180 units for the B.A./B.S. degree. No more than 3 units in physical education (activity) courses may count toward graduation.
6. Attain a C average (2.0) or better in all work attempted at the UC. Departmental require ments may differ. Students are responsible for checking with the department of the major for all regulations.
7. Meet the senior residence requirement. (See Academic Regulations: Senior Residence).

Transfer Students

Transfer students will be admitted to Sixth College beginning in fall 2004. Please see an academic counselor at Sixth for details.

Majors and Minors

Majors: Sixth College students may pursue any of the departmental or interdisciplinary majors offered at UCSD. The majority of the academic departments have established lower-division prerequisites. Generally, these prerequisites must be completed prior to entry into upper-division major courses. Many of these courses may count for general-education credit as well. Students are strongly encouraged to work closely with department faculty and college advisers. For details on the specific major departments, refer to the "Courses, Curricula, and Programs of Instruction" section of this catalog.

Minors are optional. However, students are encouraged to keep as many options open as possible. A minor provides an excellent opportunity to complement the major field of study. Students are required to complete twenty-eight units of interrelated work, of which at least twenty units must be upper-division.

Pass/Not Pass Grading Option

Some general-education requirements may be fulfilled by courses taken on the Pass/Not Pass basis. Sixth College students are reminded that major requirements and prerequisites must be taken on a graded basis. In accordance with University Academic Regulations, the total number of Pass/Not Pass units may not exceed one-fourth of a student's total UCSD units.

Honors

Quarterly provost's honors, honors at graduation, departmental honors, and Phi Beta Kappa honors are awarded. For additional information see "Honors" in the index.

Undergraduate Admissions, Policies and Procedures

All communications concerning pre-applicant undergraduate admission for U.S. citizens should be addressed to:

Office of Admissions and Relations with Schools
Student Affairs
University of California, San Diego,
9500 Gilman Drive, Dept. 0021,
La Jolla, California 92093-0021.
Email: admissionsinfo@ucsd.edu
Telephone: (858) 534-4831
Web site: admissions.ucsd.edu

Definitions

An application to the University of California, San Diego is processed and evaluated as a freshman or transfer, California resident; freshman or transfer, nonresident; or freshman or transfer, international applicant. See definitions below:

An Undergraduate Applicant

A student who wishes to complete a program of studies leading to a bachelor of arts or a bachelor of science degree.

A Freshman Applicant

A student who has graduated from high school but who has not enrolled since then in a regular session in any accredited college-level institution. This does not include attendance at a summer session immediately following high school graduation.

A Transfer Applicant

A high school graduate who has been a registered student in another accredited college or university or in college-level extension classes other than a summer session immediately following high school graduation. A transfer applicant may not disregard his or her college record and apply for admission as a new freshman.

An undergraduate student can earn transfer credit upon successful completion of college-level work which the university considers consistent with courses it offers. Such credit may be earned either before or after high school graduation. The acceptability of courses for transfer credit is determined by the Office of Admissions and Relations with Schools.

For more information regarding transferring to UCSD call or write:

University of California, San Diego
Transfer Student Services
Office of Admissions and Relations with Schools
Student Affairs
9500 Gilman Drive, Dept. 0021,
La Jolla, California 92093-0021
(858) 534-4831
Email: admissionsinfo@ucsd.edu
Web site: admissions.ucsd.edu/transfer

A Nonresident Applicant

A student who lives outside the state of California and who is required to present a higher scholarship average than is required of California residents to be eligible for admission to the university, in addition to paying the nonresident tuition fees.

An International Applicant

A student who holds or expects to hold any nonimmigrant visa.

Educational Opportunity Programs

The Educational Opportunity Program (EOP) is a recruitment and academic support program established by the university to increase the enrollment of educationally disadvantaged and low-income students. Students are provided with pre-admission counseling, and academic and personal support services. EOP eligibility is based on family income level.

Services available to EOP students cover a broad range of needs. Recruitment and application-related services include pre-admission counseling, application fee waivers, application follow-up, and deferral of the Statement of Intent to Register fee. Academic support for EOP students is offered through the Office of Academic Support and Instructional Services (OASIS).

The preferred method of applying is online at http://www.universityofcalifornia.edu/admissions/undergradapp/. Copies will also be available at California high schools and community colleges, as well as at all UC campuses. EOP applicants must be California residents. To apply for EOP, check the appropriate box in the UC application designated for the Educational Opportunity Program. Fill in the information requested in the application pertaining to family size and income, parental education level and occupation. This information is used in conjunction with other information from the admission application in determining eligibility for EOP.

Financial aid is available to eligible EOP students from the regular state, federal, and university sources administered through the UCSD Financial Aid Office. Although EOP eligibility does not guarantee financial aid, the low-income ceilings for EOP eligibility mean that most EOP applicants should qualify for substantial financial assistance. Financial aid information is available from the UCSD Financial Aid Office. Admissions information can be sought from your high school or community college counselor or the Office of Admissions and Relations with Schools. For additional information about EOP eligibility requirements, program services, or general information regarding UCSD, call or write:

University of California, San Diego
Office of Admissions and Relations with Schools

Undergraduate Colleges and Majors

COLLEGES

Even though you may be uncertain about your major, your application for admission must include the name of the UCSD college with which you plan to affiliate (Revelle, John Muir,

Thurgood Marshall, Earl Warren, Eleanor Roosevelt or Sixth College). You must indicate a second and third choice in the event your first choice college closes early. Applicants may be reassigned to another college by the Office of Admissions and Relations with Schools if enrollment quotas prohibit first choice. Applicants who do not indicate a UCSD college preference will be assigned a college.

In the "Choosing a College" section, which describes the educational philosophies of the six colleges at UCSD, you will find information concerning the requirements of each college. It is very important that you read that section of the catalog carefully, and that you decide which of the colleges is the right one for you.

You can also find information about UCSD's six colleges, and much more, on the Web site of the Office of Admissions and Relations with Schools (http://admissions.ucsd.edu).

IMPACTED MAJORS

It sometimes becomes necessary to limit enrollment in certain majors. When this occurs the affected majors will be listed in the *General Catalog* as soon as possible. When the catalog does not reflect these conditions, newly admitted students will be notified of them in the university's admissions letter. Currently, the following majors are considered impacted for freshmen: computer science, and computer engineering (within the computer science and engineering department); electrical engineering, and computer engineering (within the electrical and computer engineering department), bioengineering and bioengineering: biotechnology. Freshmen considering applying to these majors must also select an alternate major on the UC application. Students admitted to UCSD who are not admitted directly into one of these majors will be admitted into their alternate major, provided it is not impacted.

PRE-MAJORS

The following majors admit freshmen to pre-major status only: bioengineering: premedical, engineering physics, human development, ICAM-visual arts, ICAM-music, literature/writing, math-computer science, visual arts-media (computing emphasis).

As a pre-major, you must satisfy all prerequisites before admission to the major. The set of conditions, determined on a department-by-department basis, and approved by the San Diego Committee on Educational Policy, is explained in detail under the department listing in this catalog.

Other departments may be approved to offer pre-majors by the Committee on Educational Policy subsequent to this publication. Please refer to "Major Fields of Study" in the introduction to the catalog.

Undergraduate Admissions

MINIMUM REQUIREMENTS

The university's minimum undergraduate admission requirements, which are the same on all University of California campuses, are based on three principles. They are: (1) the best predictor of success in the university is high scholarship in previous work; (2) the study of certain subjects in high school gives a student good preparation for university work and reasonable freedom in choosing an area for specialized study; and (3) standardized assessment tests provide a broad base for comparison, and mitigate the effects of differing grading practices.

It is important to understand that the academic requirements for admission are minimum entrance standards. Completing the required high school courses with satisfactory grades will not automatically determine whether you will be selected for admission to UCSD, as students are chosen from a large number of highly competitive applicants. Most of these applicants will have greatly exceeded the minimum requirements; therefore, selection depends on additional factors.

Academic preparation is the principal basis for gaining admission to UCSD. Students are encouraged to pursue the most rigorous academic curriculum possible, including honors and Advanced Placement (AP) courses, in order to prepare for the university experience. High test scores are necessary in conjunction with strong performance in classes and a consistent pattern of courses. Overall performance must be well above minimum requirements in order to admit you to the campus and major of your choice.

UCSD Admission Policy and Selection Criteria

The undergraduate admission policy at the University of California, San Diego is designed to select a highly qualified and diverse student body. As a major public institution of higher education serving the teaching, research, and public service needs of California, UCSD strives to reflect the diversity of the population of the state. This undergraduate admission policy has been developed by the San Diego campus in compliance with the University of California Policy on Undergraduate Admissions that "seeks to enroll a student body that, beyond meeting the University's eligibility requirements, demonstrates high academic achievement and exceptional personal talent, and that encompasses the broad diversity of California."

Freshman Selection

In recent years, the number of applicants has far exceeded the number of spaces available, and it has become necessary to adopt standards which are much more demanding than the minimum requirements to admit students. The San Diego campus has developed the following procedures for the selection of applicants to be admitted from its pool of eligible candidates:

COMPREHENSIVE REVIEW

All UC eligible applicants will receive a review which considers a combination of academic and personal achievement factors, including:

- Uncapped grade-point average (maximum of eight semesters of approved honors, AP/IB HL, or transferable college-level courses)
- Scores of all required examinations
- Number of "a-g" courses beyond the minimum specified for UC eligibility
- Eligibility in the Local Context (ELC)
- Educational environment
- Low family income
- First-generation college attendance
- Demonstrated leadership
- Special talents, achievements, and awards
- Volunteer/community service
- Sustained participation in pre-collegiate/motivational and enrichment programs
- Special circumstances and/or personal challenges

Applicants with the highest level of academic and personal achievement will be admitted according to the number of spaces available to incoming UCSD freshmen.

Advanced-Standing Selection

Admitted applicants will be selected primarily on the basis of academic performance, as assessed by review of the GPA in all UC-transferable courses and the total number of UC-transferable units completed one full term prior to the initial quarter of attendance at UCSD.

Applicants who have satisfactorily completed sixty transferable semester units (ninety quarter units) one full term prior to the term of admission will be considered for admission. California community college applicants must have a competitive GPA (based on the strength of the applicant pool) in UC-transferable courses. Highest priority for admission is given to upper-division transfer students from California community colleges, followed by upper-division transfer students from other UC campuses, upper-division California resident transfer students from other two-year or four-year institutions, and upper-division transfer students who are not residents of California.

More than 95 percent of UCSD's transfer students come from California community colleges. A California community college applicant is defined as follows: a student who was enrolled at one or more California community college campuses for at least two terms, excluding summer sessions; the last college the student attended before admission to a UC campus was a California community college; and the student has completed 30 semester (45 quarter) UC-transferable units at one or more California community colleges.

Admission as a Freshman Applicant

MINIMUM REQUIREMENTS

To be eligible for admission to the university as a freshman you must meet the high school diploma requirement, the subject requirement, the scholarship requirement, and the examination requirement, which are described below.

HIGH SCHOOL DIPLOMA REQUIREMENT

You must earn a diploma from a high school in order to enter the university as a freshman. The Certificate of Proficiency, awarded by the California State Department of Education upon successful completion of the High School Proficiency Examination, proficiency tests from other states, and the General Education Development (GED) certificate, will be accepted in lieu of the regular high school diploma. Subject, scholarship, and examination requirements discussed below must also be met.

SUBJECT REQUIREMENT

A student applying for admission as a freshman to the University of California must have completed a minimum of fifteen units of high school work during grades nine through twelve. At least seven of the fifteen units must have been earned in courses taken during the last two years of high school. (A one-year course is equal to one unit; a one-semester course is equal to one-half unit.)

These units must have been earned in academic or college preparatory courses, as specified below. Lists of approved courses are compiled by the UC Office of the President for high schools in California. Lists are specific to each high school and are available through your high school's counseling office, and on Web site (http://www.ucop.edu/doorways). A detailed description of the "a-g" requirements can be found at http://pathstat1.ucop.edu/ag/a-g. Applicants from high schools outside California may find the following guidelines helpful in determining acceptability of courses.

Specific "a-g" Course Requirements

(a) **HISTORY/SOCIAL SCIENCE**

Two units (equivalent to two yearlong courses or four semesters) are required. Coursework must include:

World History, Cultures, and Geography—One year, which can be met by a single integrated course or by two one-semester courses; and

U.S. History/American Government (Civics)—One year of U.S. History, or one-half year of U.S. History combined with one-half year of American government (civics)

(b) **ENGLISH**

Four units (equivalent to four yearlong courses or eight semesters) of college preparatory composition and literature are required. **Both reading and writing components must be included in the courses.**

Reading—Acceptable courses must require extensive reading of a variety of literary genres, including classical and/or contemporary works. Reading assignments must include full-length works. Excerpts from anthologies, articles, etc., can be supplemental but cannot constitute the main component of reading assignments.

Writing—Courses must also require substantial, recurrent practice in writing extensive, structured papers. Student must demonstrate understanding of rhetorical, grammatical, and syntactical patterns, forms, and structures through responding to texts of varying lengths in unassisted writing assignments.

(c) **MATHEMATICS**

Three units (equivalent to three one-year courses) of college preparatory mathematics are required. Four units are strongly recommended.

Elementary Algebra

Geometry—Courses must include topics in two- and three-dimensional geometry.

Advanced Algebra

(d) **LABORATORY SCIENCE**

Two units (equivalent to two one-year courses) of laboratory science are required (three units are strongly recommended) by a course that either

1. Covers the core concepts in one of the fundamental disciplines of biology, chemistry, or physics; or
2. Has as a prerequisite of biology, chemistry, or physics, and builds upon that knowledge. Such a course may include elements of another scientific discipline.

(e) **LANGUAGE OTHER THAN ENGLISH**

Two units (equivalent to two one-year courses) of coursework in a single language. Three units are recommended.

Minimum Performance Objectives—Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, and composition. At this level, emphasis should not be on the ability to describe grammatical features of the language. The minimum performance objectives after two years of high school study should be the following:

- The ability to sustain a brief conversation on simple everyday topics demonstrating good use of the whole sound system (good pronunciation), and the basic structural patterns in the present, past, and future tenses, the subjunctive, and commands.
- Summarize orally and in writing, the main points of a relatively simple reading passage not involving specialized vocabulary

Classical languages (Latin, Greek) and American Sign Language (ASL) are acceptable to fulfill the (e) requirement.

(f) **VISUAL AND PERFORMING ARTS**

One unit (equivalent to one yearlong or two semester courses) required in any of the following categories: dance, drama/theater, music, or visual art.

Intention—To provide a meaningful experience and breadth of knowledge of the arts. Approved VPA courses must be directed at acquiring concepts, knowledge, and skills in the arts disciplines.

Prerequisites—Acceptable courses need NOT have any prerequisite courses.

Co-Curricular Work—Work outside class must be required: for example, portfolio/performance preparation, reading, writing, research projects, and/or critical listening/viewing.

Course Standards—Courses should provide students with an experience that implements the intent of the California State Board of Education approved Visual and Performing Arts (VPA) Content Standards. Each VPA course shall sufficiently address the state content standards under all five component strands:

1. Artistic Perception
2. Creative Expression
3. Historical and Cultural Context
4. Aesthetic Valuing
5. Connection, Relations, and Application

(g) **COLLEGE PREPARATORY ELECTIVE COURSES**

One unit (equivalent to two semester courses) is required. Course(s) can be taken in 9–12 grades but must fall within the following subject areas: visual and performing arts, history, social science, English, advanced mathematics, laboratory science, and language other than English.

Intent—To encourage prospective UC students to fill out their high school programs with courses that will meet one or more of a number of objectives:

* To strengthen general study skills, particularly analytical reading, expository writing, and oral communications;
* To provide an opportunity to begin work that could lead directly into a major at the university; and
* To experience new areas of academic disciplines that might form the basis for future major or minor studies at the university.

Quality—All courses are expected to meet standards of quality similar to those required for the "a–f" requirements.

Advanced Level—While it is preferred that elective courses would be at an advanced and/or specialized level, introductory courses in all of the required academic disciplines are acceptable.

Alternatives—Courses such as political science, economics, geography, humanities, psychology, sociology, anthropology, journalism, speech or debate, computer science, computer programming, and others may also qualify. In addition, courses that are interdisciplinary, drawing knowledge from two or more of these fields, are also acceptable. Approved alternative courses must provide academically challenging study at the same level as advanced courses in the "a-f" subject matter fields. These elective courses must be at the eleventh or twelfth grade level, have appropriate prerequisites, and present material at a sufficient depth to allow students to achieve mastery of

ELIGIBILITY INDEX

CALIFORNIA RESIDENTS

"a-g" GPA	SAT I Total	"a-g" GPA	Test Score Total
2.80–2.84	4640	3.20–3.24	3408
2.85–2.89	4384	3.25–3.29	3320
2.90–2.94	4160	3.30–3.34	3248

"a-g" GPA	Test Score Total
3.40–3.44	3152
3.45–3.49	3128
≥ 3.50	3120

SAT Total equals: [SAT I composite] + [2 x (SAT II writing + SAT II math + third SAT II)]. SAT I composite is highest combined mathematics and verbal scores from a single sitting. Highest individual SAT II scores, from any sitting, will be considered. See adjacent table to convert an ACT score to an SAT I composite.

ACT to SAT 1 Conversion Table

ACT	Equivalent SAT I Score	ACT	Equivalent SAT I Score
36	1600	23	1070
35	1580	22	1030
34	1520	21	990
33	1470	20	950
32	1420	19	910
31	1380	18	870
30	1340	17	830
29	1300	16	780
28	1260	15	740
27	1220	14	680
26	1180	13	620
25	1140	12	560
24	1110	11	500

fundamental knowledge that prepares them for university work or a future career path.

Courses Satisfying the "g" Requirement

History: Courses should enable students to establish a breadth of understanding of history and should provide an understanding of the human past, including its relation to the present. Courses should develop a student's ability to think critically, to evaluate historical data, and to analyze and synthesize evidence. All history courses should require extensive reading and writing.

Social Science: Courses should be in one of the social sciences: anthropology, economics, geography, political science, psychology, or sociology. Courses could also be interdisciplinary in nature, drawing knowledge from two or more of these fields. Course objectives should include as many of the following as are applicable to the field: (1) an understanding of the development and basic features of major societies and cultures, (2) an examination of the historic and contemporary ideas that have shaped our world, (3) an understanding of the fundamentals of how differing political and economic systems function, (4) an examination of the nature and principles of individual and group behavior, and (5) a study of social science methodologies. A social science course must include a body of basic knowledge, extensive reading, and written and oral exposition. Courses that are designed to meet state-mandates social studies graduation requirements are acceptable provided that they meet the above criteria. Courses with applied, service, or career-related content are acceptable only if those components are used to augment the strong academic content of the course.

English: Courses should require substantial reading with frequent and extensive practice in writing that is carefully evaluated and criticized, as noted in the "b" English requirement (above). Courses in journalism, speech, debate, creative writing, or advanced-level ESL are acceptable electives if they meet the general requirements in reading and writing stated above.

Advanced Mathematics: Courses with second-year algebra as a prerequisite such as trigonometry, linear algebra, pre-calculus (analytic geometry and mathematical analysis), calculus, probability, and statistics are acceptable. A computer science course is acceptable if it fulfills the following objectives: (1) enables students to express algorithms in a standard language; (2) requires students to complete substantial programming projects; and (3) involves the study and mastery of various aspects of computer science (e.g., how computers deal with data and instructions, the internal components of a computer, and the underlying computer logic).

Laboratory Science: Acceptable courses should cover topics from the biological or physical sciences and include laboratory activities. A terminal course designed only to meet graduation requirements is not acceptable.

Language Other Than English: Elective courses in the same language used to satisfy the "e" requirement must have at least two years of the language as a prerequisite. In order for a second language other than English to qualify as an elective, at least two years of this language must be completed.

Visual and Performing Arts (VPA): Advanced courses in the Visual and Performing Arts can meet the "g - Elective" requirement, but must still address the five components of the state VPA standards. Advanced courses should enable students to understand and appreciate artistic expression and, where appropriate, to talk and write with discrimination about the artistic material studied. Courses devoted to artistic performance and developing creative artistic ability, should have prerequisites (either one year of introductory coursework or experience approved by the instructor) and should assume proficiency beyond the introductory level. Courses must require on the average the equivalent of a five-period class per week. Work outside of the class must be required (e.g., portfolio/performance preparation, reading, writing, research projects, and critical listening/viewing). In 2006 and beyond, advanced VPA courses that are a semester in length will only be considered for the "g - Elective" area, not the "f - VPA" area, which must be satisfied by completing an appropriate sequential yearlong course.

HONORS LEVEL COURSES

The University of California encourages students to take demanding advanced academic courses in all fields. Accordingly, the grades in up to four units of eleventh and twelfth grade honors courses will be counted on a scale A=5, B=4, C=3, if these courses are certified by the high school and the University of California as offered at an honors level. Honors credit will also be given for up to two of these four units taken in tenth grade. Grades lower than C do not earn honors credit.

EXAMINATION REQUIREMENT

All freshman applicants must take and submit scores from tests specified below. You must take the tests no later than December of your senior year.

1. One assessment test, either a or b:
   a. Scholastic Assessment Test (SAT I: Reasoning Test)
      Your verbal and mathematics scores on this test must be from the same sitting.
   b. American College Test (ACT)
      The composite score must be submitted.
2. Three Subject Tests (SAT II)

   These must include (a) writing;* (b) mathematics, Level 1 or 2; and (c) one from English literature, foreign language, science, or social studies.

If tests are repeated, the university will accept the highest score received. See your counselor for information and registration forms or write to the College Board ATP, P.O. Box 6200, Princeton, New Jersey 08541-6200; Web site: www.collegeboard.org. For ACT information, write to the ACT Registration Unit, P.O. Box 168, Iowa City, Iowa 52240; Web site: www.act.org.

*The SAT II Subject test in literature may not be substituted.

SUBJECT A EXAMINATION

If the Subject A requirement is not satisfied prior to April 1, admitted students are required to take the university-wide Subject A Examination in mid-May. Notice of this examination will be sent to all admitted students. There will be a $55 fee.

Freshman Eligibility

CALIFORNIA RESIDENTS (MINIMUM REQUIREMENTS)

(Refer also to "Admission as a Freshman Applicant.")

Please be advised that these are minimum eligibility requirements. The San Diego campus has been unable to accommodate all minimally eligible applicants. You must exceed these requirements in order to be considered for admission. See "UCSD Admission Policy and Selection Criteria."

Eligibility Index: An "Eligibility Index" is used to determine minimum eligibility for California applicants. The ACT is acceptable in place of the SAT I. See the conversion chart on page 44.

NON-CALIFORNIA RESIDENTS (MINIMUM REQUIREMENTS)

(Refer also to "Admission as a Freshman Applicant" and "Freshman Eligibility: California Residents.")

Please be advised that these are minimum eligibility requirements. The San Diego campus has been unable to accommodate all minimally eligible applicants. You must exceed these requirements in order to be considered for admission. See "UCSD Admission Policy and Selection Criteria."

Scholarship: An applicant who is not a resident of California is eligible to be considered for admission to the university with a grade-point average of 3.40 or better, calculated on the required high school subjects and achieve a correlating test score indicated in the Eligibility Index (p. 37) for Nonresidents. These subjects, referred to as "a through g," are the same for the nonresident as for the resident.

High school Advanced Placement courses and UC-transferable college courses are considered honors courses for admission purposes for non-California resident applicants. **Please note**: College entrance exams are also required of non-California residents.

Additional Preparation for University Work: Freshman Applicants

High school courses required for admission to the university are listed at the beginning of this section. This list is not intended to constitute an outline for a valid high school program. The courses listed were chosen for their value as predictors of success in the university. These required courses add up to fifteen "Carnegie" units, while graduation from high school requires from fifteen to nineteen. Courses beyond our requirements should be chosen to broaden your experience in such fields as social sciences and the fine arts, and should fit in with your personal plans for the future.

For example, besides taking courses in chemistry, physics and biology, a science major will find more than three years of mathematics essential. A science major without a working knowledge of trigonometry and at least intermediate algebra is likely to be delayed in getting a degree. If you have an interest in languages or plan a college program with a language other than English requirement, you should have completed more than the two years of language other than English needed for admission.

It is important to understand that the "a through g" requirements for admission are minimum entrance standards. Completing the required high school courses with satisfactory grades will not automatically prepare you for freshman work in every subject, much less in your major or program of study. Many entering students discover that they are not adequately prepared for basic courses, such as English composition and calculus, which they are expected to take in their freshman year. Also, many undergraduate majors, particularly those in sciences and mathematics, require more high school preparation than that necessary for admission. This lack of preparation can cause delays for students who do not choose a major until after they enter the university, or for those who prepare for one major but later decide to change to another.

For these reasons, you are advised to take courses that will prepare you beyond minimum levels of competence in reading, writing, and mathematics. A student who is well prepared for university work will have taken four years of English in high school, four years of mathematics, two to three years of language other than English, three years of laboratory science, two years of history/social science, and one or more years of art or humanities.

Reading: Freshman-level university work demands a great amount, and high level, of reading. Proficiency in reading and understanding technical materials and scholarly works is necessary. Learn to read analytically and critically, actively questioning yourself about the author's intentions, viewpoint, arguments, and conclusions. Become familiar and comfortable with the conventions of standard written English and with various writing strategies and techniques. Your reading experience should include original works in their entirety (not just textbooks and anthologies) that encompass a wide variety of forms and topics.

Writing: Effective critical thinking and proficiency with the written language are closely related, and both are skills which every university student must master. By university standards, a student who is proficient in English composition is able to: (a) understand the assigned topic; (b) select and develop a theme by argument and example; (c) choose words which clearly and precisely convey the intended meaning; (d) construct effective sentences; (e) demonstrate an understanding of the rules of standard written English; and (f) punctuate, capitalize, and spell correctly.

If you plan to attend the university, it is imperative that you take English courses in high school that require the development and practice of these skills. You must take at least four years of English composition and literature that stress expository writing: the development of persuasive critical thinking on the written page.

Mathematics: Many fields require preparation in mathematics beyond that necessary for admission to the university. Courses in calculus are included in all majors in engineering and the physical, mathematical, and life sciences, as well as in programs leading to professional degrees in fields such as medicine, dentistry, optometry, and pharmacy. Moreover, many majors in the social sciences, business, and agriculture require statistics or calculus, and sometimes both.

Most students take calculus or statistics, if required, during the freshman year. The university strongly recommends that students take four years of mathematics in high school, including pre-calculus in the senior year. Courses in mathematics should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions, and applications and word problems.

Students who are not prepared to take calculus or statistics during the freshman year will have to take one or more preparatory mathematics classes at the university. This could affect their success in other courses and delay their entire undergraduate program.

Laboratory Science: The university requires two years of laboratory science in high school, but many majors require additional science courses. Programs in the biological sciences and some natural resource fields require high school biology, chemistry, and physics. Programs in the physical sciences, mathematics, engineering, agriculture, and the health sciences require chemistry and physics, and recommend biology.

College Credit: Freshman Applicants

There are many steps you can take to earn credit which will be applicable to your graduation from college. Some of these steps may be taken even before you graduate from high school. Among them are the following:

College Courses

Many high schools have arrangements with nearby postsecondary institutions, allowing you to take regular courses while you are still in high school. Many of these courses are accepted by the university exactly as they would be if you were a full-time college student if courses are posted for credit on the college transcript.

No matter how many college units you earn before graduating from high school, you will still apply as a freshman.

College Board Advanced Placement

The university grants credit for all College Board Advanced Placement Tests on which a student scores 3 or higher. The credit may be subject credit, graduation credit, or credit toward general-education or breadth requirements. Students who enter the university with AP credit do not have to declare a major earlier than other students, nor are they required to graduate earlier.

Students are encouraged to take AP tests when appropriate. Counselors should advise a student who is fluent in a language other than English to gain AP credit. AP test scores will not adversely affect a student's chances for admission.

The university grants credit for Advanced Placement tests as described in the AP chart in this catalog. Credit is expressed in quarter-units.

The chart also details requirements met by AP tests by college. Even if subject credit or credit toward specific requirements is not mentioned in the college lists, students receive university credit as described in the chart for all AP tests on which they score 3 or higher. If a student is exempt from a particular course at UCSD, duplication of this course does not earn academic credit.

Admission as a Transfer Applicant

UCSD welcomes transfer students. The campus' Transfer Student Services provides admissions counseling and a variety of programs and services for prospective transfer students. The university defines a transfer applicant as a high school graduate who has been a registered student in another accredited college or university or in college-level extension classes other than a summer session immediately following high school graduation. A transfer applicant may not disregard his or her college record and apply for admission as a new freshman.

Each year UCSD receives more applications from eligible transfer students than the campus can accommodate. In addition to satisfying UC minimum requirements, only transfer students who have completed ninety or more transferable quarter-units by the end of spring term are considered for admission. Priority is given to students transferring from California community colleges. See "Advanced-Standing Selection."

UCSD admits transfer applicants at the junior level only. To be competitive, applicants need to present an academic profile stronger than that represented by the minimum UC admissions requirements, and they should complete preparation for their intended field of study.

IMPACTED MAJORS

It sometimes becomes necessary to limit enrollment in certain majors. When this occurs the affected majors will be listed in the *General Catalog* as soon as possible. When the catalog does not reflect these conditions, newly admitted students will be notified of them in the university's admissions letter. Currently, the following majors *are considered impacted for transfer applicants:* bioengineering and bioengineering: biotechnology; computer science, and computer engineering (within the computer science and engineering department); computer engineering and electrical engineering (within the electrical and computer engineering department). Transfer students interested in applying to any of the above majors must select an alternate major on the UC application. Qualified applicants not admitted directly to the major will be admitted to their alternate major, provided it is not impacted.

PRE-MAJORS

The following majors admit transfer students to pre-major status only: bioengineering: premedical, engineering physics, human development, ICAM-music, ICAM-visual arts, literature/writing, math-computer science, visual arts-media (computing emphasis).

As a pre-major, you must satisfy all prerequisites before admission to the major. The set of conditions, determined on a department-by-department basis, and approved by the San Diego Committee on Educational Policy, is explained in detail under the department listing in this catalog.

Other departments may be approved to offer pre-majors by the Committee in Educational Policy subsequent to this publication. Please refer to "Major Fields of Study" in the introduction to the catalog.

Transfer Eligibility

CALIFORNIA RESIDENTS (MINIMUM UC REQUIREMENTS)

As a transfer applicant you must meet one of the requirements described below to be considered for admission to the university. Admission to UCSD is very competitive. You must exceed the minimum UC admission requirements. See page 42, Advanced Standing Selection.

1. If you were eligible for admission to UC when you graduated from high school—meaning you satisfied the subject, scholarship, and examination requirements—you are eligible to transfer if you have a C (2.0) average in your transferable course work.
2. If you met the scholarship requirements but did not satisfy the subject requirement, you must take transferable college courses in the missing subjects, earning a C or better in each required course, and have an overall C average in all transferable course work to be eligible to transfer.
3. If you met the scholarship requirement but not the examination requirement, you must complete a minimum of twelve semester (eighteen quarter) units of transferable work and earn an overall C (2.0) average in all transferable college course work completed.
4. If you were not eligible for admission to UC when you graduated from high school because you did not meet the scholarship requirements, you must have:
   a. Completed ninety quarter-units (sixty semester-units) of UC *transferable* college credit with a grade point average of at least 2.4, *and;*
   b. Completed a course pattern requirement, earning a grade of C or better in each course, to include:
      - two UC transferable college courses (three semester- or four to five quarter-units each) in English composition, *and;*

- one UC transferable college course (three semester- or four to five quarter-units each) in mathematical concepts and quantitative reasoning, *and;*
- four UC transferable college courses (three semester- or four to five quarter-units each) chosen from at least two of the following subject areas: the arts and humanities, the social and behavioral sciences, the physical and biological sciences.

Students who satisfy the Intersegmental General-Education Transfer Curriculum (see page 51) prior to transferring to UC may satisfy Option 4b above of the transfer admission requirements.

Transfer Eligibility

NON-CALIFORNIA RESIDENTS (MINIMUM UC REQUIREMENTS)

The minimum admission requirements for nonresident transfer applicants are the same as those for residents, except that nonresidents must have a grade-point average of 2.8 or higher in all UC transferable college course work.

Transfer Eligibility

SECOND BACCALAUREATE/LIMITED STATUS APPLICANTS

For the past several years, UCSD has not accepted applications from students who have earned a four-year degree. Please check with the Office of Admissions and Relations with Schools for information on whether applications for second baccalaureate or limited status are being accepted.

If there is a policy change, applications received by the admissions office from nondegree seeking students, or those who have earned a four-year degree, will be reviewed by the college provost's office. Limited status (nondegree-seeking) applicants and those seeking a second B.A. or B.S. will be held to the same restrictions as are other newly admitted students; fields that have restrictions for admission (such as engineering) will also be restricted to these applicants. Students will be screened according to the amount of space available in the college. Admissions will be on an individual basis, and there is no guarantee of admission to the undergraduate college or to a particular major. Applicants seeking a second B.A. or B.S. degree will be given consideration on a space-available basis with a lower priority than all other admitted students. Applicants for a second B.A. or B.S. will have **limited status** until such time as they have met the prerequisites to the major, filed a program approved by the major department and had their proposed program reviewed and approved or disapproved by the college. Limited status students are not awarded on-campus housing.

Limited status students will be eligible to apply for a Guaranteed Student Loan if they have not exceeded the duration limit of eighteen quarters of postsecondary attendance. Academic transcripts will be required from all institutions attended prior to the Financial Aid Office's certifying of the application.

Determining Your Grade-Point Average

Your grade-point average for admission purposes is determined by dividing the total number of acceptable units you have attempted into the number of grade points you earned on those units. You may repeat courses that you completed with a grade lower than C (2.0).

The scholarship standard is expressed by a system of grade points and grade-point averages earned in courses accepted by the university for advanced-standing credit. Grade points are assigned as follows: for each unit of A, four points; B, three points; C, two points; D, one point; and F, no points.

Credit from Another College

The university gives unit credit to transfer students for courses they have taken at other accredited colleges and universities, including some extension courses. To be accepted for credit, the courses must be consistent with those offered at the university, as determined by the Office of Admissions and Relations with Schools. Applications from students who have more than 135 quarter-units (ninety semester-units) of transfer credit and meet selection criteria are considered to have excess units (senior standing). Applicants in this category may be reviewed for admission if space permits.

Many students who plan to earn a degree at the university find it to their advantage to complete their freshman and sophomore years at a California community college. Each community college offers a full program of courses approved for transfer credit. The university will award *graduation credit* for up to seventy semester- (105 quarter-) units of transferable course work from a community college. Courses in excess of seventy semester-units will receive *subject credit* and may be used to satisfy university subject requirements.

The transferability of units from California community colleges and all other postsecondary institutions is as follows: (1) the UC Office of the President determines unit transfer policies which are binding upon, and implemented by, each campus' admissions office; (2) applicability of transferred units to breadth (general-education) requirements is determined for each UCSD college by its provost (see also "Transfer Agreements" below); (3) applicability of units toward the major is determined by the appropriate UCSD academic department. Before applying to UCSD you may obtain more information on many of these matters from the Office of Admissions and Relations with Schools.

Applicants who have completed courses at a postsecondary institution outside the U.S. should have these records sent to the Office of Admissions and Relations with Schools as soon as possible. Advanced standing credit for appropriate courses will be decided on an individual basis.

Note: The University of California does not give credit for CLEP examinations.

University of California/UCSD Transfer Agreements and Preparation Programs

UCSD **strongly recommends** that transfer students complete lower-division breadth and general-education (B/GE) requirements prior to transfer. Transfer students are also strongly advised to complete all lower-division preparation for the major prior to enrollment.

The University of California, San Diego has established five transfer agreements and preparation programs. These agreements and programs, Transfer Admission Guarantee (TAG), UniversityLink, UC Transfer Reciprocity, Intersegmental General-Education Transfer Curriculum Agreement, and Articulation, allow students to fulfill all or most lower-division B/GE requirements prior to transfer.

Transfer students may fulfill their lower-division B/GE requirements with any of these agreements or programs, or they may fulfill them

at UCSD. Completion of IGETC or UC Reciprocity agreements will satisfy the lower-division requirements of Earl Warren, Thurgood Marshall, Sixth, or John Muir College only. Students who follow IGETC or UC Reciprocity are welcome to apply to Eleanor Roosevelt or Revelle College. Courses completed prior to transfer will be applied toward the college's own lower-division requirements. Revelle students must also complete the remainder of the college's requirements. Students at Eleanor Roosevelt College must complete three academic quarters of the "Making of the Modern World" sequence in addition to the IGETC or UC Reciprocity requirements. They must also complete any of the college's general education requirements which can be met by transfer coursework. The college will make every effort to apply as much transfer coursework as possible. Transfer applicants should refer to the catalog pages for individual departments' specific courses for GPA requirements.

Transfer Admission Guarantee (TAG)

UCSD has established a Transfer Admission Guarantee (TAG) program with twenty-five California community colleges. Completing the provisions of the TAG contract will guarantee admission to the term and UCSD college of choice, but not the major. Prospective students completing the provisions of the TAG contract will be guaranteed admission to UCSD and to the college of choice, but not necessarily to an impacted major. Please refer to the catalog pages of individual departments for any specific courses or GPA requirements that may exist for transfer students hoping to be admitted to an impacted major. A list of impacted majors is on page 40 of the catalog. TAG also allows students to fulfill all or most lower-division B/GE requirements prior to transfer. TAG contracts must be signed and submitted by deadlines for specific terms. TAG community college counselors can give you information regarding this program.

Participating TAG colleges are: American River, City College of San Francisco, College of San Mateo, Cosumnes, Cuyamaca, DeAnza, Diablo Valley, El Camino, Foothill, Grossmont, Imperial Valley, Los Angeles Pierce, Mira Costa, Palomar, Pasadena City, Sacramento City, Saddleback, San Diego City, San Diego Mesa, San Diego Miramar, Santa Barbara City, Santa Monica, Sierra, Southwestern, and West Valley.

UniversityLink

UniversityLink provides guaranteed admission to high school seniors who sign an agreement and successfully complete academic and program requirements at a participating community college. UniversityLink partnerships are currently established with the following colleges: Cuyamaca, East Los Angeles, Grossmont, Imperial Valley, Mira Costa, Palomar, San Diego City, San Diego Mesa, San Diego Miramar, and Southwestern.

Transfer Preparation Programs

The following avenues do not guarantee admission. However, they do allow you to fulfill your lower-division general-education requirements at the community college or other UC campus:

UC Transfer Reciprocity Agreement

Transfers who have attended any campus of the University of California and satisfied lower-division breadth and general-education (B/GE) requirements at that campus prior to transfer may consider these requirements satisfied for John Muir, Thurgood Marshall, Sixth, or Earl Warren college only. Students who follow UC Reciprocity are welcome to apply to Eleanor Roosevelt or Revelle college. Courses completed prior to transfer will be applied toward the college's own lower-division requirements. Revelle students must also complete the remainder of the college's requirements. Students at Eleanor Roosevelt College must complete three academic quarters of the "Making of the Modern World" sequence in addition to the UC Reciprocity requirements. They must also complete any of the college's general education requirements which can be met by transfer coursework. The college will make every effort to apply as much transfer coursework as possible.

Transfers in this category should obtain a "certificate of completion of GE requirements" from the campus at which these requirements were satisfied. This can be in the form of a letter or memo addressed to your UCSD undergraduate college academic advising office.

Intersegmental General-Education Transfer Curriculum Agreement

Transfers from California community colleges can fulfill the UC lower-division breadth and general-education (B/GE) requirements by completing the Intersegmental General-Education Transfer Curriculum (IGETC). Completion of IGETC will satisfy the lower-division B/GE requirements at UCSD for Earl Warren, Thurgood Marshall, Sixth, or John Muir college only. Students who follow IGETC are welcome to apply to Eleanor Roosevelt or Revelle college. Courses completed prior to transfer will be applied toward the college's own lower-division requirements. Revelle students must also complete the remainder of the college's requirements. Students at Eleanor Roosevelt College must complete three academic quarters of the "Making of the Modern World" sequence in addition to the IGETC requirements. They must also complete any of the college's general education requirements which can be met by transfer coursework. The college will make every effort to apply as much transfer coursework as possible.

Articulation

UCSD has Articulation Agreements for general education breadth requirements with forty-four California community colleges, and major preparatory agreements for certain majors with a number of California community colleges. These agreements can be found on the ASSIST Web site (http://www.assist.org), which includes statewide transfer information.

International Applicants

International applicants must meet highly rigorous selection criteria for admission.

Courses at UCSD are conducted in English, and every student must have sufficient command of that language to benefit from instruction. To demonstrate such command, students whose native language is not English will be expected to take the Test of English as a Foreign Language (TOEFL). Arrangements for taking this test may be made by writing to the Educational Testing Service, TOEFL Registration Office, P.O. Box 6151, Princeton, New Jersey 08541-6151, U.S.A. Online information is available at http://www.toefl.org. The minimum acceptable TOEFL score is 220 (computer-based exam) or 550 (paper-based exam).

In lieu of the TOEFL, a score of 7 (academic module) on the International English Language Testing System (IELTS) will also be accepted. Information is available at http://www.ielts.org.

The results of this test will be used to determine whether the applicant's command of English

is sufficient to enable him or her to pursue studies effectively at UCSD. International students whose command of English is slightly deficient will be required to take an English course and, therefore, a reduced academic program.

In addition to an adequate English-language background, international students must have sufficient funds available to cover all fees; living, and other expenses; and transportation connected with their stay in the United States (see "Fees and Expenses").

International students are required to obtain health insurance for themselves and dependents who accompany them. Suitable insurance policies and additional information are available at the Student Health Service and at the International Center.

Address all communications concerning undergraduate admission of international students to the University of California, San Diego, Office of Admissions and Relations with Schools, Student Affairs, 9500 Gilman Drive, Dept. 0021, University of California, San Diego, La Jolla, California 92093-0021, email: admissionsinfo@ucsd.edu.

How to Apply for Admission

Undergraduate admissions applications are available online in the fall at the UC Pathways Web site (http://www.universityofcalifornia.edu/admissions.undergradapp/). Copies will also be available at California high schools and community colleges, as well as at all UC campuses. Follow the accompanying directions carefully. If you choose to mail your application, please send it to:

University of California,
Undergraduate Application Processing Center
P.O. Box 4010
Concord, CA 94524-4010

A preaddressed envelope is provided with the paper application.

You may apply to as many as eight campuses of the University of California on one application form.

Application Fees

The basic application fee of $40 entitles you to be considered at one campus of the university. For each additional campus you select, you must pay an extra $40 fee. These fees are not refundable.

When to Apply for Admission

To make sure that you will be considered for admission to the university campus(es) you want to attend, and to the major or program of study you want to pursue, you must submit your completed application during the Priority Filing Period (see below).

If you plan to apply for financial aid, university housing, or other special programs where early application is important, you must also file during this time.

Priority Filing Period

Fall Quarter 2004:
File November 1–30, 2003

Winter Quarter 2005:
File July 1–31, 2004

Spring Quarter 2005:
File October 1–31, 2004

Note: UCSD accepts winter and spring applications from Transfer Admission Guarantee (TAG) students only.

Adding a Campus

If you decide to apply to additional UC campuses after you submit your application, submit your request *in writing* to the processing service before the filing deadline. Be sure to note your application ID number, additional campus(es) to which you wish to apply, major(s), major code(s), and a check or money order for $40 for each additional campus you select, payable in U.S. dollars to the "Regents of the University of California." You may not substitute new campus choices for your original choices. Your request will be honored only if the campus(es) you choose still has space available. The processing service will notify you as to whether your application was accepted. Do not submit a second application form; it will not be processed.

Selecting Campuses and Programs of Study

You are encouraged to approach the selection of a university campus and a program of study very carefully. You may be familiar with only one or two of the university's general campuses, probably those nearest to your home or mentioned more frequently in the news. You should seriously consider the many different educational alternatives and programs offered by other campuses of the university before completing your application. Your counselor and the university staff in the Office of Admissions and Relations with Schools can provide you with insights that will help you in the selection process.

College Choice

The application to UCSD must include a choice of undergraduate college (Eleanor Roosevelt, Thurgood Marshall, Earl Warren, Revelle, John Muir, or Sixth) before it can be processed. Selecting alternative UCSD college choices is also advisable since each college has enrollment quotas that limit the number of new freshmen and transfer students. The Office of Admissions and Relations with Schools will select an alternate college if an alternate choice is not indicated.

Transcripts

If you are admitted for the fall term, you must arrange to have final, official transcripts sent to the Admissions Office no later than July 15. If you attended school outside the United States, see the information in the box below.

Freshman Applicants: If you are admitted you must arrange to have an official, final high school transcript (showing your date of graduation) sent to the campus where you plan to enroll. *Unless a campus requests it, do not send a sixth or seventh semester transcript.*

Transfer Applicants: If you are admitted, you will be asked to submit official transcripts from all schools and colleges you have attended, *including high school*, regardless of your length of attendance or whether you believe the credit is transferable. Some campuses may request transcripts prior to admission.

Transcript Information for Applicants Who Have Attended School Outside the United States

The Admissions Office may make a preliminary evaluation of your application based on the information you provide on your application. However, if you are admitted, the university must receive an official academic record directly from each institution you attended, beginning with grade nine, and up to, and including, the school or college/university you currently attend.

Each academic record must list the dates you attended the institution, the titles of courses and

Advanced Placement Credit:

EXAM AND UNITS FOR UNIVERSITY CREDIT	UCSD COURSE EXEMPTIONS (OR USE ON MAJOR)	REVELLE COLLEGE	MUIR COLLEGE
Art (Studio) • Drawing Portfolio. . . . . 8 • 2D Portfolio. . . . . 8 • 3D Portfolio. . . . . 8 *(8-unit maximum for all tests)*	None	Fulfills fine arts requirement and 1 course of the noncontiguous area of focus or may be used as 8 units of elective credit.	8 units of elective credit.
Art–History. 8	None	Fulfills fine arts requirement or 2 courses of the noncontiguous area of focus or may be used as 8 units of elective credit.	8 units of elective credit.
Biology. 8	Score of 4 or 5 = BILD 1 and 2 Score of 3 = Biol. 10; may take Biol. 1, 2, 3 for credit.	Score of 3, 4, or 5 meets Revelle biology requirement.	Score of 3 exempts BILD 10. Score of 4 exempts BILD 1 and 2.
Chemistry. 8	Score of 3 = exempt Chem. 4 or 11. Score of 4 = exempt Chem. 4, 11 or 6A; may take Chem. 6AH,6BH,6CH for credit Score of 5 = exempt. Chem. 6A-B-C or Chem. 11; may take Chem. 6BH,6CH for credit	Partial completion of natural science requirement.	Score of 3 exempts Chem. II. Score of 4 exempts Chem II or 6A. (May take 6AH, 6BH, and 6CH for credit.) Score of 5 exempts Chem. II or 6A-B-C. (May take 6BH and 6CH for credit.)
Computer Science • Computer Science A. . . . . 2 • Computer Science AB. . . . . 4 *(4-unit maximum for both tests)*	Students must see faculty adviser.	1 course of a noncontiguous area of focus. Score of 3 or 4 on A or AB exam = elective units.	2-4 units elective credit.
Economics • Microeconomics. . . . . 4 • Macroeconomics. 4	Score of 5 AP Micro = Econ. 1A/2A. Score of 5 AP Macro = Econ. 1B/2B. Score of 3, or 4 = elective units.	Each score of 3, 4, or 5 exempts student 1 course on social science requirement.	Score of 3, 4 clears 4 units of elective credit. Score of 5 exempts Econ. 1. Score of 3, 4 clears 4 units of elective credit. Score of 5 exempts Econ. 3.
English • Composition and Literature. . . . . 8 • Language and Composition. . . . . 8 *(8-unit maximum for both tests)*	Score of 3, 4, or 5 meets Subject A requirement.	2 courses of the noncontiguous area of focus or 8 units of elective credit.	8 units of elective credit and clears Subject A. (8 units maximum for both tests)
Environmental Science. 4	Score of 4 or 5 = exempt Earth Science 10	Score of 3, 4, or 5 can be used for one course of noncontiguous area of focus.	Earth Science 10.
Geography, Human 4	None	4 units of elective credit.	4 units of elective credit.
Government and Politics • United States. 4	Score of 3, 4, or 5 satifies American History and Institutions. Score of 5 = exempt Poli. Sci. 10.	1 course toward social science requirement or 1 course of noncontiguous area of focus.	Score of 5 exempts Poli. Sci. 10.
Government and Politics • Comparative. 4	Score of 5 = exempt Poli. Sci. 11.	1 course toward social science requirement or 1 course of noncontiguous area of focus.	Score of 5 exempts Poli. Sci. 11.
History • United States. 8	Score of 3, 4, or 5 = exempt 2 quarters U.S. History: May take HILD 2A, 2B or 2C to complete sequence. Satisfies American History and Institutions.	2 courses toward social science requirement or 2 courses of noncontiguous area of focus.	Score of 3, 4, 5 exempts 2 courses in HILD 2A-B-C sequence.
History • European. 8	None	2 courses of the noncontiguous area of focus.	Score of 3, 4, 5 exempts 2 European history courses by petition.
History • World 8	None	2 courses of the noncontiguous area of focus.	Score of 3, 4, 5 exempts 2 non-Western history courses by petition.
Language • French. . . . . 8 • German. . . . . 8 • Spanish. 8	Score of 3 = exempt Ling. 1C/1CX. Score of 4 = exempt Ling. 1D/1DX or Lit. 2A. Score of 5 = exempt Lit. 2B.	Score of 4 or 5 meets proficiency requirement.	Score of 3 exempts LING 1B/BX and 1C/CX. Score of 4 exempts LING 1D/DX and Lit. 2A. Score of 5 exempts Lit. 2A-B. Determines placement in language sequence if student chooses that option. Same as use on major.
Latin • Latin: Virgil. . . . . 4 • Latin: Literature. 4	Score of 3, 4, or 5 = exempt Latin 1, 2, 3.	Usually prepares student to pass proficiency exam; 2 courses of the noncontiguous area of focus or may be used as 8 units of elective credit.	Latin 1, 2, 3.
Literature • French. . . . . 8 • Spanish. 8	Score of 3 = exempt Ling. 1D/1DX or Lit. 2A. Score of 4 = exempt Lit. 2B. Score of 5 = exempt Span. Lit. 2C or French Lit. 50.	Score of 3, 4, or 5 meets proficiency requirement.	Score of 3 exempts LING 10/10X and Lit. 2A. Score of 4 exempts Lit. 2A-B. Score of 5 exempts Spanish: Lit 2B-C/French/French: Lit. 2B and 50. Determines placement in language sequence if student chooses that option. Same as use on major.
Mathematics • Calculus AB. . . . . 4 • Calculus BC. . . . . 8 *(8-unit maximum for both tests)*	Score of 4 or 5 AB exam = exempt Math. 20A or 10A. Score of 3 on AB exam = exempt Math. 20A or 10A; may take 20A for credit. Score of 4 or 5 on BC exam = exempt Math. 20A, 20B or 10A, 10B. *Score of 3 on BC exam = exempt Math. 20A and may take Math. 20B for credit;* or = exempt Math. 10A, 10B.	AB exam = 1 course toward math requirement; BC exam = 2 courses toward math requirement.	Score of 3 exempts Math. 20A or 10A. May take 20A for credit. Score of 4, 5 exempts Math. 10A or 20A. Score of 3 exempts Math. 20A and may take Math. 20B for credit or exempt Math. 10A-B. Score of 4, 5 exempts Math. 20A-B or 10A-B. AB exam meets 1 course of math. option. BC exam meets two courses of math. option. Same as use on major. (8 unit maximum on both tests)
Music • Theory. 8	None	Fulfills fine arts requirement and 1 course of noncontiguous area of focus.	8 units elective credit only.
Physics • Physics B. . . . . 8 • Physics C Mechanics. . . . . 4 • Physics C Electricity and Magnetism. . . . . 4 *(8-unit maximum for all three tests)*	B exam = elective credit and exempt Phys. 10. C exam (Mech.) score of 3 or 4 = exempt Phys. 1A and may take Phys. 2A or 4A for credit. C exam (Mech.) score of 5 = exempt Phys.2A, 4A. C exam (E&M) score of 3 or 4 = exempt Phys. 1B and may take Phys. 2B or 4B for credit. C exam (E&M) score of 5 = exempt Phys. 2B or 4C and may take Phys. 4B for credit.	B exam = elective credit C exam = (Mech. or E&M) each 4 units can meet 1 course of the natural science requirement.	Score of 3, 4, 5 8 units of elective credit and exempts Phys. 10. Score of 3, 4 exempts Phys. 1A may take Phys. 2A or 4A for credit. Score of 5 exempts Phys. 2A or 4A. Score of 3, 4 exempts Phys. 1B may take Phys. 2B or 4B for credit. Score of 5 exempts Phys. 2A or 4A. Score of 3, 4 exempts Phys. 1B may take Phys. 2B or 4B for credit. Score of 5 exempts Phys. 2B or 4C and may take Phys. 4B for credit. Same as use on major.
Psychology. 4	Score of 4 or 5 = exempt Psych. 1.	1 course toward social science requirement or 1 course of noncontiguous area of focus.	4 units elective credit only.
Statistics. 4	None	4 units of elective credit.	4 units of elective credit.

The University of California grants credit for all College Board Advanced Placement Tests on which a student scores 3 or higher. The credit may be subject credit for use on a minor or prerequisites to a major, or credit toward general-education requirements or elective units toward graduation.

The number of units granted for AP tests are not counted toward the maximum number of credits required for formal declaration of an undergraduate major or the maximum number of units a student may accumulate prior to graduation. Students who enter the university with AP credit do not have to declare a major earlier than other students, nor are they required to graduate earlier.

Application to College and Major Requirements

THURGOOD MARSHALL COLLEGE	WARREN COLLEGE	ELEANOR ROOSEVELT COLLEGE	SIXTH COLLEGE
8 units of elective credit.	2 courses toward Visual Arts or Humanities PofC or Area Study.	1 course toward Group B fine arts requirement. 2D or 3D toward fulfillment of 1 of the 2 GE courses in Fine Art.	1 course toward Art Making.
May apply 1 course toward fine arts	2 courses toward Visual Arts or Humanities PofC or Area Study.	1 course toward Group B fine arts requirement.	1 course toward Narrative, Aesthetic and Historical Reasoning.
1 course of natural science requirement. May also apply 1 course toward disciplinary breadth if non-contiguous to major.	2 courses toward Science and Technology or Fundamentals of Bio PofC. Score of 4 or 5 meets 2 courses toward Biology or Sci & Tec PofC or Fundamentals of Biology PofC. May not take Bio 1 or 2 or BILD 10.	Score of 3, 4, or 5 meets two courses of natural science requirement.	Score of 3, 4, or 5: meets 1 course toward Analytical Methodologies/Scientific Method.
May apply 1 course of natural science requirement and may apply 1 course toward disciplinary breadth if noncontiguous to major.	Score of 3 meets 2 courses toward Science and Technology PofC. Score of 4 meets 2 courses toward Science & Technology PofC; 1 course may apply toward Chemistry PofC (for Chemistry A). Score of 5 exempts Chemistry 6ABC, 6BH; only 2 courses may count toward Science and Technology PofC.	Meets 2 courses toward natural science requirement.	Score of 3, 4, or 5: meets 1 course toward Analytical Methodologies/Scientific Method.
AB exam = 1 course toward mathematics/computer/ statistics requirement.	A exam: 2 units of elective credit; score of 4 on AB exam: 4 units of elective credit; score of 5 on AB exam meets *1 course toward Formal Skills requirement or Science and Technology PofC.*	A exam = 2 units elective credit AB exam = 1 of 2 courses quantitative/ *formal skills requirement.*	1 course toward Computing Requirements.
May apply 1 course toward disciplinary breadth if noncontiguous to major.	Each score of 3 or 4 meets 1 course toward an Economics or Perspectives in Social Science PofC.	4-8 units of elective credit.	Score of 4, or 5: 1 course toward Social Analysis. Score of 3: elective credit.
8 units of elective credit.	Score of 3, 4 or 5 satisfies Subject A requirement.	8 units of elective credit.	Either test: satisfies Subject A requirement; 8 units elective credit.
4 units of elective credit.	I course toward Science and Technology PofC.	Meets 1 course toward natural science requirement.	1 course toward Analytical Methodologies/ Scientific Method.
4 units of elective credit.	4 units of elective credit.	4 units of elective credit.	4 units of elective credit.
May apply 1 course toward disciplinary breadth if noncontiguous to major.	1 course toward Perspectives in Social Science PofC or Political Science PofC or Political Science Area Study (also satisfies American History and Institutions requirement).	4 units of elective credit.	Score of 4 or 5 fulfills Social Analysis requirement. Score of 3: elective credit. Political Science majors: Score of 5 required to meet major requirement.
May apply 1 course toward disciplinary breadth if noncontiguous to major.	1 course toward Perspectives in Social Science PofC or Political Science PofC or Political Science Area Study.	4 units of elective credit.	Score of 4 or 5 fulfills Social Analysis requirement. Score of 3: elective credit. Political Science majors: Score of 5 required to meet major requirement.
May apply 2 courses toward disciplinary breadth if noncontiguous to major.	2 courses toward History or Humanities PofC or Area Studies; may take HILD 2A, 2B, or 2C to complete sequence(s).	8 units of elective credit.	1 course toward Narrative, Aesthetic and Historical Reasoning.
May apply 2 courses toward disciplinary breadth if noncontiguous to major.	2 courses toward History or Humanities PofC or Area Study.	1 course may apply toward regional specialization. See ERC academic counselor for details	1 course toward Narrative, Aesthetic and Historical Reasoning.
May apply 2 courses toward disciplinary breadth if noncontiguous to major.	2 courses toward History or Humanities PofC or Area Study.	8 units of elective credit.	1 course toward Narrative, Aesthetic and Historical Reasoning.
May apply 2 courses toward disciplinary breadth if noncontiguous to major.	Score of 3 meets 2 courses toward a Foreign Language and Culture PofC or Area Study; score of 4 meets 2 courses toward a Foreign Language and Culture PofC or Area Study or 1 course toward a Humanities, Literature PofC and Area Study; score of 5 meets 2 courses toward a Foreign Language and Culture, Literature, or Humanities PofC or Area Study.	Score of 3=8 units of elective credit Score of 4 or 5 meets language proficiency requirement.	1 course toward Narrative, Aesthetic and Historical Reasoning.
May apply 1–2 courses toward disciplinary breadth if noncontiguous to major.	Score of 3, 4 or 5 either test meets 1 course toward Classical Studies PofC; or Humanities PofC or Area Study.	1 course of language usually prepares student to pass proficiency exam.	1 course toward Narrative, Aesthetic and Historical Reasoning.
May apply 2 courses toward disciplinary breadth if noncontiguous to major.	Score of 3 meets 2 courses toward a Foreign Language and Culture or 1 course toward Literature, Humanities PofC or Area Study; score of 4 meets 2 courses toward a Foreign Language and Culture or 2 courses toward Literature, Humanities PofC or Area Study; score of 5 meets 2 courses toward a Foreign Language and Culture, Literature, or Humanities PofC or Area Study.	Meets language proficiency requirement.	1 course toward Narrative, Aesthetic and Historical Reasoning.
If AB exam may apply 1 course toward math and statistical requirement. If BC exam may apply 2 courses toward math and statistical requirement.	AB exam meets 1 course of formal skill requirement; BC exam completes 2 courses formal skills requirement.	AB exam =.1 course toward quantitative/ formal skills requirement. BC exam completes quantitative *formal skills requirement.*	AB or BC exam: 1 course toward Structured Reasoning.
1 course toward fine arts requirement and 1 course toward the disciplinary breadth requirement if non-contiguous to major.	Completes Formal Skills requirement.	1 course toward Group B fine arts requirement	1 course toward Art Making.
B exam = 1 course of natural science requirement and 1 course toward disciplinary breadth if noncontiguous to major. 4 units of C exam = 1 course of nat. sci. requirement. 8 units of C exam = 1 course of natural science requirement and 1 course toward disciplinary breadth if noncontiguous to major.	B exam: score of 3, 4 or 5 meets 2 courses toward Science and Technology PofC; either C exam meets 1 course toward Science and Technology PofC.	B exam = 2 courses for natural science; C exam (E&M) = 1 course for natural science; C exam (Mech.) = 1 course for natural science for a total of 2 courses maximum.	Physics B: elective credit. Physics C: 1 course toward Analytical Methodologies/Scientific Method.
May apply as 1 course toward disciplinary breadth requirements if noncontiguous to major.	1 course toward Psychology or Perspectives in Social Science PofC or Area Study.	4 units of elective credit.	1 course toward Social Analysis.
4 units of elective credit.	1 course toward Formal Skills or Perspectives in Social Science, Psychology, or Sciology P of C	1 course toward quantitative/formal skills requirement	May apply toward breadth requirements

A student cannot receive credit for a UCSD course which duplicates AP credit. Where the chart says "exempt" or "equal to a UCSD course number," that course may not be taken for credit. Students who are fluent in a language other than English should not overlook the opportunity to get AP credit by taking the foreign/literature exams.

Note: Please see college academic adviser for clarification of any questions you may have.

examinations you completed, the grades (marks) you received, the credit, hours or units earned, and any degree or diploma you may have received. In the United States, the academic record is called a "transcript." It may be called by another name —such as leaving certificate, maturity certificate, bachillerato, or baccalauréat—in your country.

Because it may take some time for schools outside the U.S. to forward your records to the university, you are encouraged to send a legible photocopy of your official foreign academic records directly to the Admissions Office at each campus to which you apply. (Do not attach to your application for admission.)

The university recognizes that it may be difficult to obtain foreign records in the event of political upheaval or natural disaster; however, these situations are rare. Failure to provide official records may jeopardize your enrollment at the university.

The transcripts and other documents that you submit as part of your application become the property of the university; they cannot be returned to you or forwarded in any form to another college or university.

Checklist for Applicants

1. File an application on the University of California's Pathways Web site (http://www.universityofcalifornia.edu/admissions/undergradapp) during the November filing period. Fee may be paid by credit card, or you may ask the UC application processing services to bill you by mail.
2. You must select UCSD colleges in order of preference. Be sure to sign the form.
3. Complete your personal statement.
4. Fill in the self-reported academic data and test information carefully and accurately.
5. Take the SAT I or ACT test and SAT II: Subject Tests if you are a freshman applicant **no later than December of your senior year.**
6. Request that your school(s) send transcripts and other required documents directly to:

   Office of Admissions and Relations with Schools
   Student Affairs
   UCSD
   9500 Gilman Drive, 0021
   La Jolla, CA 92093-0021

   Final high school transcripts, and all college transcripts for transfer students, must be on file in the UCSD Office of Admissions and Relations with Schools by July 15.

Notification of Admission

Admission–Freshmen

If you are a freshman applicant and you filed during the priority filing period, UCSD will notify you whether you have been admitted beginning mid-March and no later than March 31. All offers of admission are provisional until the receipt and verification of your test results and official final high school transcript (and college transcript, if applicable). If you are offered admission based on your self-reported academic record, official documents will be used to verify the self-reported academic data you submit. Offers of admission will be rescinded if: a) there are discrepancies between your official transcripts and your self-reported academic record; b) you do not complete the courses listed as "in progress" or "planned"; or c) you do not complete your twelfth-grade courses at the same academic level as in previous course work.

Admission–Transfer

If you are applying to transfer, UCSD will send you notification between mid-March and May 1. All offers of admission are provisional until the receipt and verification of all official transcripts. If you are offered admission based on your self-reported academic record, your official high school transcript and transcripts from all colleges attended will be used to verify the self-reported academic data you submit. Offers of admission will be rescinded if: a) there are discrepancies between your official transcript and your self-reported academic record; b) any college or school attended is omitted from your application; c) you do not complete the courses listed as "in progress" or "planned;" or d) the specified GPA is not maintained for courses "in progress" or "planned."

These admission notification dates apply only to applicants who file within the priority periods. Applicants for winter and spring quarters are notified as soon as possible (within three months) following receipt of all appropriate documents.

After receipt of notification of admission:

1. Read the information in your online admission notification carefully, noting any special provision governing your admission.
2. Request that any outstanding transcripts be forwarded to the Office of Admissions and Relations with Schools by the stated deadline.
3. Complete and submit to the Office of Admissions and Relations with Schools the Statement of Intent to Register (SIR), online or by mail, and the Statement of Legal Residence (SLR). Please note the deadline to return your SIR. If it is submitted or is postmarked after this date, you may be denied enrollment due to space limitations. For fall quarter admitted students, the deadline for return of your SIR and SLR is June 1 for transfers.

Statement of Intent to Register (SIR)

Upon receipt of your Statement of Intent to Register (SIR), the Office of Admissions and Relations with Schools provides information to various campus offices including the Financial Aid Office, Housing and Dining Services, and your college provost. You will then receive additional information from each of these offices. The $100 nonrefundable fee (if required) accompanying your SIR is applied toward payment of the university registration fee for the quarter of your admission. International applicants outside the territorial United States are not required to submit the $100 deposit with the Statement of Intent to Register.

Even though you may be admitted to more than one campus of the University of California, you can return SIR to only one campus.

College Orientation and Registration of New Students

Prior to the quarter for which they have been admitted, new students will receive information from their colleges regarding orientation and enrollment in classes. Admitted students (freshmen and transfers) will be required to participate in new-student orientation. Academic advising and enrollment in courses will take place during orientation sessions.

Student Health Requirement

Entering students are required to complete a Medical History form and to send it to the

Student Health Center. Forms and complete instructions are usually sent to entering students well in advance of registration, or they may be obtained at the Student Health Center. Information submitted to the Student Health Service is kept confidential and is carefully reviewed to help provide individualized health care.

Mandatory Health Insurance: The University of California has established mandatory health insurance as a non-academic condition of enrollment for undergraduates. Health insurance packages will be available for year-round coverage. The cost will be factored into grants, loans, and work-study programs offered to students who receive financial assistance. Students already covered by adequate health insurance can waive the requirement. The new campus-based insurance plans will not replace the primary medical care and referral services provided by the Student Health Service.

Hepatitis B Immunization: The California State Legislature mandates that first-time enrollees at the University of California who are eighteen years of age or younger provide proof of full immunity against Hepatitis B prior to their enrollment. All students who accept UCSD's offer of admission, and who will still be eighteen years old by the beginning of the Fall Quarter, will receive the Hepatitis B information in the mail from the campus. The immunization consists of a series of three vaccinations. You can receive further information through your health care provider or county health department.

Students are urged also to submit a physical examination form completed by their family physician, particularly if they plan to take part in intercollegiate athletic competition. Routine physical examinations are not provided by the Student Health Service. An optional student health plan that provides additional benefits off campus may be purchased at the time registration fees are paid. Student health insurance is also mandatory for all international and graduate level students and is a condition of enrollment.

Reapplication

An application for admission is effective only for the quarter for which it is submitted. If you are ineligible for admission, or if you are admitted and do not register, you must file a new application to be considered for a later quarter. The selection criteria in effect for the new term must be met.

If you have been admitted to the university, enrolled, and paid registration fees, but did not attend, contact the Office of the Registrar for readmission information.

Fees and Expenses

The exact cost of attending the University of California, San Diego will vary according to personal tastes and financial resources of the individual. Generally, the total expense for three quarters, or a college year, is estimated at approximately $19,000 for California residents living away from home.

It is possible to live simply and to participate moderately in the life of the student community on a limited budget. The university can assist the student in planning a budget by indicating certain and probable expenses. For information regarding student employment, loans, scholarships, and other forms of financial aid at UCSD, see "Campus Services and Facilities" in this catalog.

INTERSEGMENTAL GENERAL-EDUCATION TRANSFER CURRICULUM (IGETC)

Summary Outline

Completion of the Intersegmental General-Education Transfer Curriculum (IGETC) will permit a student to transfer from a community college to a campus in the University of California system without the need, after transfer, to take additional lower-division, general-education courses.

It should be noted that completion of the IGETC is not a requirement for transfer to UC, nor is it the only way to fulfill the lower-division, general-education requirements of UC prior to transfer. Depending on a student's major and field of interest, the student may find it advantageous to take courses fulfilling the general-education requirements of the UC campus or college to which the student plans to transfer. IGETC is applicable at Earl Warren, Sixth, Thurgood Marshall, and John Muir colleges only. Courses completed prior to transfer will be applied toward the college's own lower-division requirements. Revelle students must also complete the remainder of the college's requirements. Students at Eleanor Roosevelt College must complete three academic quarters of the "Making of the Modern World" sequence in addition to the IGETC requirements. They must also complete the remainder of the college's general education requirements.

English Communication:	One course, English Composition, three semester- (four to five quarter-) units; this course is a prerequisite to Critical Thinking.
	One course, Critical Thinking-English Composition, three semester- (four to five quarter-) units; strong emphasis on writing; prerequisite: English Composition.
Mathematical Concepts and Quantitative Reasoning:	One course, Mathematics/Quantitative Reasoning, three semester- (four to five quarter-) units.
Arts and Humanities:	Three courses, at least one course in arts, and at least one course in humanities, nine semester- (twelve to fifteen quarter-) units.
Social and Behavioral Sciences:	Three courses in at least two disciplines or an interdisciplinary sequence, social and behavioral sciences, nine semester- (twelve to fifteen quarter-) units.
Physical and Biological Sciences:	One course in each area, at least one must include a laboratory; two courses, seven to nine semester- (nine to twelve quarter-) units.
Language Other than English:	Proficiency equivalent to two years' high school study in the same language.

ESTIMATED EXPENSES FOR UNDERGRADUATE RESIDENTS OF CALIFORNIA

Budget Category	Living With Parents	University Housing	Off Campus
Resident Fees	$6,020.50	$6,020.50	$6,020.50
Room and Board	$2,502	$8,998	$8,016
Books and Supplies	$1,407	$1,407	$1,407
Transportation	$1,844	$1,025	$1,799
Personal Expenses	$1,489.50	$1,347.50	$1,555.50
Health Insurance Fee/Allowance	$ 657	$ 657	$ 657
Basic Budget Totals	$13,920	$19,455	$19,455

Non-Resident Tuition for Undergraduates

$16,476 + $528 Education Fee

Note: Fees are subject to change by the Board of Regents

Undergraduate Registration

Enrollment in Courses

Prior to the quarter for which they have been admitted, new students will receive information from their college regarding orientation dates, course enrollment, and fee-payment deadlines. Enrollment materials will be provided at the college provosts' offices on the days assigned for new students' registration. New freshman students admitted for the fall quarter will be invited to attend a new student orientation during the summer preceding fall quarter. Enrollment in courses will take place at that time.

New Student Orientation

Orientation programs are designed to acquaint students with the nature, functions, and purposes of UCSD's college system, and to show students how to deal with a variety of requirements set by the university, college, and academic departments. Although all six colleges have the same goals for students, each has developed its own distinctive program. The professional staffs of Revelle, Muir, Marshall, Warren, Roosevelt, and Sixth Colleges have designed programs for their respective students and the students' parents. During the school year, these same staff members are occupied in counseling continuing students, so they have planned these orientation sessions for the summer, when they can devote 100 percent of their time to becoming acquainted with new students and introducing them to a whole new way of doing things.

Not only will new students be made aware of the opportunities offered by their college and the UCSD community as a whole, they will also receive a great deal of guidance in selecting courses and will register in advance for their first fall quarter classes.

To prepare for the orientation session, students should spend a little time thinking about what they want from their education. If the decision of which major to pursue has not been made, students can benefit by narrowing their choices, eliminating subjects they know they don't want, and selecting areas of possible interest. Students will have a lot of help in making such choices, but anything they can do in advance will make the process easier.

All new students are required to attend an orientation/registration session, and they will be charged a fee for the program. Parents' attendance is optional, but we hope they will want to come. Parents' concerns about life at UCSD are not exactly the same as students', so they will be invited to separate meetings.

In addition to the Summer Orientation, students should attend Welcome Week—the week before the official opening of the fall quarter and the beginning of classes.

Continuing Student Enrollment

Continuing students (those currently registered or eligible to register) should refer to the quarterly *Enrollment Information and University Policies* for enrollment information, dates, and fee payment instructions. The *Enrollment Information and University Policies* is available on StudentLink each quarter.

Definitions

Students are considered *enrolled* when they have requested space in at least one course and space in classes has been reserved. Students are not considered *registered* until they have both enrolled in courses and paid registration fees.

Enrollment is processed using WebReg in StudentLink on the Web. Continuing undergraduate students are assigned a start time, after which they may enroll in classes. Start times are based on the number of units completed. Students who have completed more units will receive earlier start times than students with fewer units.

Students are responsible for all courses in which they are enrolled. Students should check StudentLink/WebReg to confirm class enrollments. Alternately, students may go to the Registrar's Office and obtain a printout of their class schedule. Students must make any necessary changes by the Add/Change/Drop process (through WebReg in StudentLink or in person at the Registrar's Office) or by appropriate withdrawal.

Adding, Changing, and Dropping Courses

After enrollment, students may make any necessary corrections to their class schedules on WebReg in StudentLink, or by submitting an Add/Change/Drop Card in person to the Registrar's Office. Students may add courses through the second week of instruction, or through the fourth week of instruction with department approval. Please refer to the quarterly *Enrollment Information and University Policies* for appropriate approvals required.

Students may continue to change grading options through the end of the fourth week and to drop courses through the end of the ninth week of instruction. Students who wish to drop *all* their courses are required to file an Undergraduate Withdrawal form with their college academic advising or dean's office. Please see the W (Withdrawal) grade regulation that applies after the fourth week of instruction.

Weeks

1–2: ADD/DROP/CHANGE Grade Option
2–4: DROP/CHANGE Grade Option
5–9: DROP ONLY–"W" recorded on transcript
10 and later: No changes; final grade assigned

The Undergraduate Program

The undergraduate program consists of four four-unit courses each quarter, or sixteen units per quarter, for four years. Students must complete a minimum of thirty-six units in three consecutive quarters in order to satisfy the minimum progress requirements (see "Minimum Progress" in the "Academic Regulations" section). Undergraduate students wishing to take more than twenty-two units of credit in a quarter will need their college provost's approval.

Approval for Enrollment for More than 200 Units

The minimum unit requirement for the bachelor's degree is 184 quarter-units in Revelle College and 180 quarter-units in Muir, Marshall, Warren, Roosevelt, and Sixth Colleges. A student is expected to complete the requirements for graduation within this minimum unit requirement. The bachelor of science degree may require satisfaction of additional units, depending upon the student's major. Candidates for B.S. degrees in engineering are permitted 230 units (240 for engineering majors in Revelle and Roosevelt colleges).

Under special circumstances, students may extend their undergraduate training beyond the minimum. Non-engineering students who are attempting to achieve more than 200 quarter-units will not be permitted to register without their college provost's approval. Other exceptions will be granted only for compelling academic reasons and only with the approval of the college provost and the concurrence of the Committee on Educational Policy. Transfer units applicable toward general-education requirements or major requirements are included in the maximum unit calculation; all other transfer units are excluded. Advanced placement and international baccalaureate units are excluded. (See information regarding "Minimum Unit Limitation" in the "Academic Regulations" section of this catalog.)

Enrollment and Registration Holds

A student may have a "hold" placed on his or her enrollment or registration (payment of fees) and/or academic transcripts for the following reasons:

1. Failure to respond to official notices.
2. Failure to settle financial obligations when due or to make satisfactory arrangements with the Student Business Services Office.
3. Failure to present certification of degrees and/or status on leaving previous institution(s).
4. Failure to comply with admission conditions.

Each student who becomes subject to a hold action is given advance notice and ample time to deal with the situation. However, if the student fails to respond, action will be taken without further notice, and he or she is entitled to no further services of the university, except assistance toward reinstatement.

Undergraduate students wishing to have their status restored must secure a release from the office initiating the hold action. Reinstatement is not final until the registration process is completed.

Change of Address

Students who change their local or permanent addresses are expected to notify the registrar's office either in writing or via StudentLink at once. Change-of-address cards are available at the Office of the Registrar, 301 University Center, and StudentLink is available through the campus Web site: InfoPath, at www.ucsd.edu. Students will be held responsible for communications from any university office sent to the last address on record and should not claim indulgence on the plea of not receiving the communication.

California Residence for Tuition Purposes

TUITION FEE FOR NONRESIDENT STUDENTS

If you have not been living in California with intent to make it your permanent home for more than one year immediately before the residence determination date for each term in which you propose to attend the university, you must pay a nonresident tuition fee in addition to all other fees. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter—and for schools on the semester system, the day instruction begins for the semester.

LAW GOVERNING RESIDENCE

The rules regarding residence for tuition purposes at the University of California are governed by the California Education Code and implemented by Standing Orders of the Regents of the University of California. Under these rules, adult citizens and certain classes of aliens can establish residence for tuition purposes. There are particular rules that apply to the residence classification of minors. (See below.)

WHO IS A RESIDENT?

If you are an adult student (at least eighteen years of age) you may establish residence for tuition purposes in California if: (1) you are a U.S. citizen; (2) you are a permanent resident or other immigrant; or (3) you are a nonimmigrant who is not precluded from establishing a domicile in the United States. Nonimmigrants who are not precluded from establishing domicile in the United States include those who hold valid visas of the following types: A, E, G, H-1, H-4, I, K, L, 0-1, 0-3, or R. To establish residence you must be physically present in California for more than one year and you must have come here with the intent to make California your home as opposed to coming to this state to go to school. Physical presence within the state solely for educational purposes does not constitute the establishment of California residence, regardless of the length of your stay. You must demonstrate your intention to make California your home by severing your residential ties with your former state of residence and establishing those ties with California. If these steps are delayed, the one-year durational period will be extended until you have demonstrated both presence and intent for one full year. Effective fall 1993, if your parents are not residents of California or you were not previously enrolled as a UC student, you will be required to be financially independent in order to be a resident for tuition purposes. Your residence cannot be derived from your spouse or your parents.

REQUIREMENTS FOR FINANCIAL INDEPENDENCE

You will be considered "financially independent" if one or more of the following applies: (1) you are at least twenty-four years of age by December 31 of the calendar year for which you are requesting residence classification; (2) you are a veteran of the U.S. Armed Forces; (3) you are a ward of the court or both parents are deceased; (4) you have legal dependents other than a spouse; (5) you are married, or a graduate student or a professional student, and you were not claimed as an income tax deduction by your parents or any other individual for the tax year immediately preceding the term for which you are requesting resident classification; or (6) you are a single undergraduate student and you were not claimed as an income tax deduction by your parents or any other individual for the two tax years immediately preceding the term for which you are requesting resident classification, and you can demonstrate self-sufficiency for those years and the current year; (7) your parents are residents of the State of California; (8) you reach the age of majority in California while your parent(s) were residents of this state AND the California resident parent(s) leave the state to establish a residence elsewhere AND you continue to reside in the State of California with all your ties here after your parent(s) departure. (Note: Financial dependence will not be a factor in residence status for graduate student instructors, graduate student teaching assistants, research assistants, junior specialists, postgraduate researchers, graduate student researchers, and teaching associates who are employed forty-nine percent or more of full time or awarded the equivalent in University-administered funds, e.g., grants, stipends, or fellowships at the University of California in the term for which classification is sought.)

ESTABLISHING INTENT TO BECOME A CALIFORNIA RESIDENT

Indications of your intent to make California your permanent residence can include the following: registering to vote and voting in California elections; designating California as your permanent address on all school and employment records, including military records if you are in the military service; obtaining a California driver's license or, if you do not drive, a California Identification Card; obtaining California vehicle registration; paying California income taxes as a resident, including taxes on income earned outside California from the date you establish residence; establishing a California residence in which you keep your personal belongings; and licensing for professional practice in California. The absence of these indicia in other states during any period for which you claim residence can also serve as an indication of your intent. Your intent will be questioned if you return to your former state of residence when the university is not in session. Documentary evidence is required, and all relevant indications will be considered in determining your classification.

GENERAL RULES APPLYING TO MINORS

If you are an unmarried minor (under age eighteen), the residence of the parent with whom you live is considered to be your residence. If you have a parent living, you cannot change your residence by your own act, by the appointment of a legal guardian, or by the relinquishment of your parent's right of control. If you lived with neither parent, your residence is that of the parent with whom you last lived. Unless you are a minor alien present in the U.S. under the terms of a nonimmigrant visa that precludes you from establishing domicile in the U.S., you may establish your own residence when both your parents are deceased and a legal guardian has not been appointed. If you derive California residence from a parent, that parent must satisfy the one-year durational residence requirement.

SPECIFIC RULES APPLYING TO MINORS

Divorced/Separated Parents

You may be able to derive California resident status from a California resident parent if you move to California to live with that parent on or before your eighteenth birthday. If you begin residing with your California parent after your eighteenth birthday, you will be treated like any other adult student coming to California to establish residence.

Parent of Minor Moves from California

You may be entitled to resident status and not be required to establish financial independence if you are a minor U.S. citizen or eligible alien whose parent(s) was a resident of California who left the state within one year of the residence determination date if:

1. you remained in California after your parent(s) departed;
2. you enroll in a California public post-secondary institution within one year of your parent(s)' departure; and
3. once enrolled, you maintain continuous attendance in that institution.

Two-Year Care and Control

You may be entitled to resident status if you are a U.S. citizen or eligible alien and you have lived continuously with an adult who is not your parent for at least two years prior to the residence determination date. The adult with whom you are living must have been responsible for your care and control for the entire two-year period and must have been residing in California during the one year immediately preceding the residence determination date.

EXEMPTIONS FROM NONRESIDENT TUITION

Member of the Military

If you are an undergraduate student and a member of the U.S. military stationed in California on active duty or the spouse or dependent children, you may be exempt indefinitely from the nonresident tuition fee. Graduate students continue to be eligible for this exception only until they have lived in California one year from the date they arrived in California with ties to the state. You must provide the residence deputy on campus with a statement from your commanding officer or personnel officer stating that your assignment to active duty in California is not for educational purposes. The letter must include the dates of your assignment to the state.

Child or Spouse of Faculty Member

To the extent funds are available, if you are an unmarried dependent child under age twenty-one or the spouse of a member of the university faculty who is a member of the Academic Senate, you may be eligible for a waiver of the nonresident tuition fee. Confirmation of the faculty member's membership on the Academic Senate must be secured each term this waiver is granted.

Child or Spouse of University Employee

You may be entitled to resident classification if you are an unmarried dependent child or the spouse of a full-time university employee whose assignment is outside of California (e.g., Los Alamos National Laboratory). Your parents' or spouse's employment status with the university must be ascertained each term.

Child of Deceased Public Law Enforcement or Fire Suppression Employee

You may be entitled to a waiver of the nonresident tuition fee if you are the child of a deceased public law enforcement or fire suppression employee who was a California resident at the time of his or her death and who was killed in the course of fire suppression or law enforcement duties.

Dependent Child of a California Resident

A student who has not been an adult resident of California for more than one year, and who is the dependent child of a California resident who has been a resident for more than one year immediately prior to the residence determination date, may be entitled to a waiver of the nonresident tuition until the student has resided in California for the minimum time necessary to become a resident so long as continuous attendance is maintained at an institution.

Native American Graduates of a BIA High School

If you are a graduate of a California high school operated by the Federal Bureau of Indian Affairs, you may be eligible for an exemption from the nonresident fee.

Employee of a California Public School District

Any person holding a valid credential authorizing service in the public schools of the state of California who is employed by a school district in a full-time certificate position may be eligible for a nonresident tuition waiver.

Student Athlete in Training at U.S. Olympic Training Center; ARCO

Any amateur student athlete in training at the United States Olympic Training Center in

Chula Vista may be eligible for a waiver of the non-resident tuition until he or she has resided in the state the minimum time necessary to become a resident.

Graduate of California high school

A student who attended high school in California for three or more years (ninth grade included) and graduated from a California high school (or attained the equivalent) may be exempt from nonresident tuition. For eligibility requirements: www.ucop.edu/sas/sfs/ppolicies/UCTEFAQ.PDF.

Surviving Dependents of California Residents Killed in 9/11/01 Terrorist Attack

A student who was a dependent of a California resident who was killed in the September 11, 2001 terrorist attacks on the World Trade Center, the Pentagon Building, or the crash of United Airlines Flight 93. Eligible students must meet the financial need requirements for the Cal Grant A program.

Recipients of the Congressional Medal of Honor

Any undergraduate student who is a recipient of a Congressional Medal of Honor or who is the child of a recipient of the Congressional Medal of Honor. The recipient must be a California resident or must have been a California resident at the time of his or her death. The student may not be older than twenty-seven, and the student's annual income may not exceed the national poverty level.

MAINTAINING RESIDENCE DURING A TEMPORARY ABSENCE

If you are a nonresident student who is in the process of establishing a residence for tuition purposes and you return to your former home during noninstructional periods, your presence in the state will be presumed to be solely for educational purposes and only convincing evidence to the contrary will rebut this presumption. A student **who is in the state solely for educational purposes will NOT be classified as a resident for tuition purposes regardless of the length of his or her stay.**

If you are a student who has been classified as a resident for tuition purposes and you leave the state temporarily, your absence could result in the loss of your California residence. The burden will be on you (or your parents if you are a minor) to verify that you did nothing inconsistent with your claim of continuing California residence during your absence. Steps that you (or your parents) should take to retain a California residence include:

1. Continue to use a California permanent address on all records–educational, employment, military, etc.
2. Satisfy California resident income tax obligations. (Note: If you are claiming California residence, you are liable for payment of income taxes on your total income from the date you establish California residence. This includes income earned in another state or country.)
3. Retain your California voter's registration and vote by absentee ballot.
4. Maintain a California's driver's license and vehicle registration. If it is necessary to change your driver's license and/or vehicle registration while you are temporarily residing in another state, you must change them back to California within the time prescribed by law.

PETITION FOR RESIDENT CLASSIFICATION

You must submit petition and documentation by mail or drop off by the Registrar's Office for a change of classification from nonresident to resident status. All changes of status must be initiated prior to the first day of class for the term for which you intend to be classified as a resident.

TIME LIMITATION ON PROVIDING DOCUMENTATION

If additional documentation is required for residence classification but is not readily accessible, you will be allowed until the end of the applicable term to provide it.

INCORRECT CLASSIFICATION

If you were incorrectly classified as a resident, you are subject to a nonresident classification and to payment of all nonresident tuition fees not paid. If you concealed information or furnished false information and were classified incorrectly as a result, you are also subject to university discipline. Resident students who become nonresidents should immediately notify the campus residence deputy.

INQUIRIES AND APPEALS

Inquiries regarding residence requirements, determinations, and/or recognized exceptions should be directed to the Residence Deputy, Office of the Registrar, 9500 Gilman Drive, La Jolla, CA 92093-0021, or the Legal Analyst-Residence Matters, Office of the General Counsel, University of California, 1111 Franklin Street, 8th Floor, Oakland, CA 94607-5200. **No other university personnel are authorized to supply information relative to residence requirements for tuition purposes.**

Additional information is available in the Office of the Registrar. Please note that changes may be made in the residence requirements between the publication of this statement and the relevant residence determination date. Any student, following a final decision on residence classification by the residence deputy, may appeal in writing to the legal analyst within forty-five days of notification of the residence deputy's final decision.

Payment of Registration Fees

BILLING STATEMENT AND PAYMENT INFORMATION

Registration at UCSD is a two-step process: (1) enrollment in classes and (2) payment of fees. You must enroll first so that your fees can be assessed. You can pay fees anytime after you enroll in classes. A billing statement will be sent to you after enrollment; however, if you wait to enroll just prior to the enrollment deadline, you don't need a billing statement to pay your fees. Write your student ID number on your check and mail it or drop it in the Central Cashier's drop box. Fees are due and payable by the published deadline whether or not a billing statement is received.

Your monthly billing statement from the university will list your credits, including your payments, and your charges. This includes registration fees, housing, parking, and other indebtedness. If you are a financial aid recipient, the funds which are disbursed through UCSD, e.g., Pell Grants, scholarships, and Perkins Loans, will offset against the statement's charges, and you will either pay the remaining amount on the statement or receive a remainder check if there is a credit. If you have any questions about the entries, use the phone numbers listed on the back of the statement to contact the appropriate office.

Billing statements are mailed to students' billing, current, or permanent mailing address.

To make a payment, mail the top of your statement to the Central Cashier's Office at the address provided on the statement stub (9500 Gilman Drive, La Jolla, CA 92093-0009).

If your fees are fully paid by financial aid or other programs and you decide not to attend UCSD, it is very important that you contact your college and initiate withdrawal/leave of absence procedures immediately. Graduate students should refer to the "Graduate Studies" section of the catalog for leave of absence or withdrawal procedures. Failure to do this may result in F grades being assigned to your courses.

Financial Aid/Remainder Check Disbursement

Student financial aid, graduate support, or fee waivers awarded to pay registration fees will be directly credited to your student account and appear on your billing statement as a credit. Financial aid will not be credited to your account until you have completed the enrollment process. Financial aid recipients are expected to be enrolled full-time. Student Business Services will refund all financial aid through direct deposit or be mailed to the current mailing address, these include remainder checks and other forms of financial aid such as all outside agency scholarships and private loans. All federal Perkins Loan borrowers must complete the information sheet and Perkins Loan master promissory note. Loan funds will not be released (credited) to student accounts until the master promissory note is signed. You may complete these documents during your financial aid award and acceptance process, by going to the student business services Web site: http://sbs.ucsd.edu, or in person at the Student Business Services Office.

Loan Counseling

It is required by law and/or university policy that all students receiving Perkins, Stafford (subsidized/unsubsidized), or university loans have a pre-loan counseling session wherein they are informed of the rights, obligations, and consequences attached to the loans. These counseling sessions are called entrance interviews. At these sessions, the students sign documents acknowledging their attendance and understanding of the issues involved. Also, all graduating students and students who withdraw or take a leave of absence who have received a loan must have final counseling before they leave school. These sessions are called exit interviews. At this time, students are individually told how much they owe on student loans, what their repayment amounts will be, and when their repayments will begin. In both sessions, students are provided with copies of all counseling content and documentation. You may complete your entrance interview by going to the student business services Web site: http://sbs.ucsd.edu, or in person at the Student Business Services Office. No appointment is necessary.

Registration and Other Payments through the Central Cashier's Office

Registration payments must be made by mail, e-check, or in the Cashier's Office drop box as early as possible. The Central Cashier's Office receives payments for *all* university debts. The mailing address of the Cashier's Office is: Central Cashier's Office, UCSD, 9500 Gilman Drive, La Jolla, CA 92093-0009. (Make checks or money orders payable to UC Regents.)

INDEBTEDNESS COUNSELING AND BURSAR HOLD RELEASES

Entering college for the first time can be an overwhelming experience. And part of that experience is learning to handle your own finances. Most students have no real problem, but sometimes things can get out of control. University Billing Services staff members will counsel you on campus indebtedness which you have already incurred and how to prevent such conditions in the future. It is the policy of the University of California that no student can continue in the next academic quarter if that individual owes the university money. Consequently, when a student owes the university money, an automatic **hold** prevents him or her from future registration until the bill is paid. It is recognized that there are occasional problems and situations which may be taken into account. Therefore, on occasion, after counseling, the Student Business Services Office may authorize a Time Payment Agreement (TPA) with a student.

TRITON REGISTRATION INSTALLMENT PLAN

The UCSD Triton Registration Installment Plan (TRIP) is available for students who desire an alternative method of financing their registration fees on a short-term basis. All students in good financial and academic standing are eligible for the program, except for those students whose financial aid or graduate support will pay their registration fees. A prerequisite to apply for the program is enrollment for the term. The Triton Registration Installment Plan allows registration fees to be paid in up to three installments each quarter. On a three-month plan, the first payment is required by the quarterly registration due date. The remaining payments are itemized on the student's next two monthly UCSD Billing Statements. There is a $30 per quarter nonrefundable fee that must be submitted with the first payment. This fee is strictly used to offset the costs of the program. Applications may be picked up at the Student Business Services Office or downloaded via the SBS Web site at: www-bfs.ucsd.edu/sbs.

LOCATION

The Student Business Services (SBS) Office is located in Building 201 in the University Center, across the street from the Office of Admissions and Registrar. The Central Cashier's Office is at the intersection of Myers and Rupertus Drives in Building 401 University Center.

OFFICE HOURS

The Central Cashier's Office is open from 8:00 a.m. until 4:00 p.m.

The Student Business Services Office is open from 8:00 a.m. until 4:30 p.m.

DEADLINES AND PENALTY FINES

Students should refer to StudentLink for actual deadline dates.

All prior delinquent debts must also be paid. Health insurance is mandatory for all students, both graduate and undergraduate, as a condition of enrollment. All students will be assessed the cost of the policy provided by the campus. Undergraduates who already have adequate health insurance should access StudentLink to request a waiver of this premium. An additional charge will be made for failure to pay required fees or deposits by the dates announced in this catalog and on StudentLink. Please note that students who enroll in courses but fail to pay fees by the published deadline will be assessed a late payment fee. Students who fail to enroll in courses prior to the enrollment deadline will be assessed a late enrollment fee and a late payment fee. Currently these fines are $50 each. (See "Miscellaneous Expenses" on the next page.)

With the exception of appeals to the legal analyst regarding a student's residence classification, no claim for remission of fees will be considered unless such claim is presented during the fiscal year to which the claim is applicable.

Receipts are issued for all payments, and these should be carefully preserved. No student

will be entitled to a refund except after surrender to the Cashier's Office of the student's original receipt, if issued, or cancelled check or money order receipt.

EXEMPTION FROM FEES

Except for miscellaneous fees and service charges, no fees of any kind are assessed any surviving child of a California resident who was an active law enforcement or active fire suppression official and who was killed in the performance of active duties or died as a result of an accident or injury caused by external violence or physical force incurred in the performance of such duties.

No fees of any kind are assessed a student who was a dependent of a California resident who was killed in the September 11, 2001 terrorist attacks on the World Trade Center, the Pentagon Building, or the crash of United Airlines Flight 93. Eligible students must meet the financial need requirements for the Cal Grant A program. No fees of any kind are assessed any undergraduate student who is a recipient of a Congressional Medal of Honor or who is the child of a recipient of the Congressional Medal of Honor. The recipient must be a California resident or must have been a California resident at the time of his or her death. The student may not be older than twenty-seven, and the student's annual income may not exceed the national poverty level.

Students who believe themselves entitled to one of these exemptions must apply for a fee exemption at the Office of the Registrar before registering. Without this authorization, students will not be permitted to register without payment of the entire fee. Graduate students should apply to the dean of Graduate Studies.

NONRESIDENT TUITION

Students who have not established and maintained California residence for at least one year immediately prior to the residence determination date for the term during which they propose to attend the university, and who do not otherwise qualify for resident classification under California law, are charged, along with other fees, a nonresident tuition fee each quarter. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter. Final classifications are made by the residence deputy, who is located in the registrar's office, on the basis of a Statement of Legal Residence completed by the student and signed under oath. Prospective students who have questions regarding their residence status should consult the *General Catalog* or contact the residence deputy.

UNIVERSITY REGISTRATION FEE

The university registration fee is $713 per year for undergraduates and must be paid at the time of registration. It covers services that benefit the student and are complementary to, but not a part of, the instructional program, and it includes recreational activities, student organizations, and the Student Health Service. No part of this fee is refunded to students who do not make use of these privileges.

In addition, there is a campus activity fee of $63 per year for undergraduates, a university center fee of $112.50 per year for all students to be used for the construction and operation of the student centers, a $276 per year recreational facility fee, and college activity fees of $21, $15, $21, $24, and $6 per year for Muir, Eleanor Roosevelt, Revelle, Sixth, and Thurgood Marshall Colleges, respectively.

EDUCATIONAL FEE

The educational fee was established by the regents for all students beginning fall quarter 1970. The educational fee is a charge assessed against each registered student to cover part of the cost of the student's education at the University of California. The educational fee is $4,271 per year for resident undergraduates, $4,506 per year for resident graduates, and $4,751 for all non-resident students. The educational fee may be reduced by one-half for students approved on part-time status.

MISCELLANEOUS EXPENSES, FEES, FINES, AND PENALTIES

Books and supplies average about $469 per quarter. However, students should be aware of the following possible expenses:

Statement of Intent to Register fee (new undergraduate)	$100
Application fee (one campus)	40
Each additional campus	40
Duplicate Photo I.D. Card	15
Transcript of record	6
Verification of Student Data/Status	6
Muir Activity (per quarter)	7
Eleanor Roosevelt (per quarter)	5
Revelle Activity (per quarter)	7
Sixth College Activity (per quarter)	8
Thurgood Marshall Activity (per quarter)	2
Late enrollment	50
Return check collection	35
Return e-check collection	35
Late payment of fees (late registration)	50
Duplicate diploma	25
Statement late charge	25

(See also "Withdrawal from the University.")

RETURNED CHECK POLICY

Several facilities at UCSD accept personal checks for payments and/or cash. Any individual who writes checks with insufficient funds will be subject to all legal action deemed appropriate by the university. In addition, anyone who writes to the university three or more checks that are subsequently returned will have their check writing privileges permanently revoked.

PARKING

Students who park motor vehicles on the campus are subject to parking fees. Parking permits may be purchased through StudentLink or at the Cashier's Office. A copy of the campus parking regulations may be obtained from the cashier at the time of permit purchase.

Part-Time Study at the University of California

GENERAL POLICY

1. Degree programs in the university may be open to part-time students wherever good educational reasons exist for so doing.
2. No majors or other degree programs will be offered only for part-time students, except as specifically authorized by the Academic Senate.
3. For the purposes of this statement of policy and procedures, the following definition applies:

A part-time undergraduate student is one who is approved to enroll for ten units or fewer, or an equivalent number of courses, per quarter.

ADMISSIONS AND ENROLLMENT

1. The same admissions standards that apply to full-time students will apply to part-time students.
2. Approval for individual students to enroll on a part-time basis will be given for reasons of occupation, family responsibilities, health, or, for one time only, graduating senior status.

3. Approval to enroll as a part-time student shall be given by the appropriate dean or provost.
4. Students must apply for part-time study prior to the end of the second week of the quarter *and* must be enrolled in ten or fewer units at that time (*including* any units taken through UCSD Extension) to qualify for reduced fees.

PROCEDURES

Students must apply for part-time status on the Part-Time Study application form available at their colleges *prior to the end of the second week of the quarter.* Approval for part-time study is granted for one academic year only–fall through spring quarters, winter through spring quarters, or spring quarter only. Students must reapply for approval each fall quarter and substantiate reasons for request. Approval for part-time study will automatically exempt students from the thirty-six unit-per-year minimum progress requirement. Students who are receiving financial assistance should contact their college financial aid office regarding eligibility requirements.

REDUCED FEES

Undergraduate students who have been approved for part-time study and who are enrolled in ten units or fewer at the end of the second week of classes are eligible for a reduction of one-half of the educational fee and one-half of nonresident tuition, if applicable. Students who drop to ten or fewer units after this date will receive no reduction, and any student who receives a reduction in fees will be billed for the difference if the number of units increases to ten and one-half or more anytime in the quarter.

Undergraduates enrolled in Education Abroad and other special programs are excluded from this reduced fee policy. Employees of the university enrolled as students in the Employee Program have fees reduced by waiver from the Personnel Office and are not eligible to receive this further reduction. Extension courses taken by students in the Complimentary Enrollment Program *will* be included in the unit count whether or not the credit is accepted as part of a university degree program. Questions concerning this policy may be addressed to the Office of the Registrar.

Undergraduate Degree Requirements

Each of the undergraduate colleges on the San Diego campus has specific requirements for a degree. (See "Choosing a College at UCSD.")

Changes in Requirements

It is campus policy to introduce changes in graduation requirements so that students who began higher education (at UCSD or elsewhere) before the change will not be hindered substantially in the orderly pursuit of their degrees. This principle will have different implications for different kinds of requirement changes. To find out about the implications of particular changes, students should check with colleges, departments, or other sources of information.

Students transferring to UCSD from another UC campus who have completed their lower-division general-education requirements at a UC campus are considered to have met UCSD's lower-division general-education requirements at Thurgood Marshall College, Warren College, and John Muir College. A letter certifying satisfaction of general education requirements under the UC reciprocity agreement must be sent to the Academic Advising Office of the student's college. UCSD upper-division general education requirements must be satisfied. (See "Graduation Requirements" for each undergraduate UCSD college.)

Students transferring to UCSD from California Community College campuses may elect to satisfy their lower-division general-education and breadth requirements prior to transfer by completing general-education/breadth requirements using the UCSD Articulation Agreement on file at the California Community Colleges; following the Intersegmental General Education Transfer Agreement; or signing a TAG (Transfer Admission Guarantee) contract and completing TAG requirements prior to entering UCSD. See "New University of California Transfer Agreements" in the "Undergraduate Admissions, Policies and Procedures" section of this catalog.

Requirements for the Bachelor's Degree

All course work required for a degree must be completed by the end of the quarter filed for graduation.

Every candidate for a bachelor's degree must have completed a major.

1. A major shall require the equivalent of twelve or more upper-division courses (forty-eight or more units).
2. Requirements for majors shall be determined by departments and programs, subject to the approval of the Committee on Educational Policy.
3. **Double Majors:** With the approval of both departments or programs and of the college provost, a student may declare a double major after reaching junior level (90 UC units) and no later than 135 units, with a minimum cumulative grade point average of 2.50.
   a. A student with a double major must fulfill the separate requirements of each major, and the equivalent of at least ten upper-division courses (forty units) must be unique to each major. Courses taken in fulfillment of lower-division requirements may overlap to any degree.
   b. The two majors may not be within the School of Engineering, nor, except with the approval of the Committee on Educational Policy, within a single department. When a department major is combined with a major in an interdepartmental or interdisciplinary program, the ten courses counted as unique in the interdepartmental or interdisciplinary program must all be drawn from outside the departmental major.
   c. A student who has declared a double major is not subject to the maximum-unit limitations of Regulation 600.C. and may accrue up to 240 units.
   d. A student with a double major may graduate only upon completion of all requirements for both majors. Both majors will be noted on the student's transcript

and diploma. If the two majors lead to different degrees (B.A. and B.S.), that fact will be noted on the transcript, and the two degree designations will appear on one diploma.

e. A student who has declared a double major may graduate in one major upon completion of all requirements for that major, but may not continue in the University for completion of the second major.

4. An undergraduate student must have declared a major or pre-major upon completion of ninety units.

Other requirements for graduation shall be determined by the colleges in conformity with universitywide regulations and subject to approval by the San Diego Division of the Academic Senate.

American History and Institutions

A knowledge of American history and of the principles of American institutions under federal and state constitutions is required of all candidates for the bachelor's degree. This requirement may be met in any one of the following ways:

1. By having passed with a grade of C or better one high-school unit in American history, or one-half high-school unit in American history and one-half high-school unit in civics or American government.
2. By completing with a grade of P or C– or better any one-quarter course of instruction accepted as satisfactory by the Committee on Educational Policy and Courses. Any of the following courses are suitable for fulfilling the requirement: HILD 2A-B-C, HILD 7A-B-C, or any course listed under HIUS (other than HIUS Colloquia); Political Science 10, 100A, 100B, 100C, 102C, 102H, 104A, 110EA-EB, 110J, 142A; and Ethnic Studies 112A-B, 125, 130, 131, 149, 167, 170A-B.
3. By presenting proof of having received a score of 550 or more on the SAT II Subject Test of the College Entrance Examination Board (CEEB) in American History.
4. By presenting proof of having received a grade of 3 or higher on the Advanced Placement Test in American History administered by the Educational Testing Service, Princeton, New Jersey.
5. By presenting proof of having satisfied the present requirement as administered at another collegiate institution within the state.
6. By presenting proof of successful completion of an acceptable one-quarter or one-semester course, with a grade of C or better, in either American history or American government at a community college within the state.
7. By presenting proof of successful completion of an acceptable one-quarter or one-semester course, with a grade of C or better, in either American history or American government at a recognized institution of higher education, junior college included, in another state.
8. An alien attending the university on an F-1 or J-1 student visa may, by showing proof of temporary residence in the United States, petition for exemption from this requirement through the office of his or her college provost.

SUBJECT A: ENGLISH COMPOSITION

The University of California requires all undergraduate students (including international students) to demonstrate a minimum proficiency in English composition (the Subject A requirement). This proficiency can be demonstrated by:

1. Submitting a score of 680 or better on either the Writing Test, English Composition, or the English Composition with Essay Test, SAT II Subject Tests of the College Entrance Examination Board (CEEB) (Note: not to be confused with the verbal portion of the Scholastic Assessment Test [SAT I]); or
2. Submitting a score of 3, 4, or 5 on the CEEB Advanced Placement Test in English; or
3. Submitting a score of 5 or better in the International Baccalaureate Higher Level examination in English (Language A only); or
4. Submitting proof of completion, prior to enrollment at UCSD, of an acceptable transfer-level college course of four quarter-units or three semester-units in English composition with a grade of C or better; or
5. Writing a passing essay on the Subject A Proficiency Test (which is *required* of all students who have not otherwise met the requirement). This exam is administered statewide during May and on campus at the start of fall quarter. *This examination may be taken only once.*

All students who have not previously satisfied the Subject A requirement must take the Subject A Proficiency Test prior to enrollment at UCSD. Students who fail this examination must enroll each quarter in an approved Subject A course until they satisfy the Subject A requirement. Students satisfy the requirement by achieving a grade of C or better in SDCC 1 (English Composition–Subject A) and by passing the Subject A Exit Examination at the end of SDCC 1. The Exit Examination is administered by the Subject A Program office. Students whose performance on the Subject A Proficiency Test indicates they need work in English as a Second Language must enroll in ESL courses for three quarters (or until released by the ESL director) before enrolling in SDCC 1. Students must enroll in SDCC 1 (or ESL) during their first quarter of residence at UCSD. For further information on SDCC 1, refer to "Subject A" in the catalog section "Courses, Curricula, and Programs of Instruction." For further information on ESL, see "English as a Second Language" in the catalog section "Courses, Curricula, and Programs of Instruction."

The Subject A requirement must be satisfied during a student's first year of residence. Students will be barred from enrollment at the university if they fail to satisfy the Subject A requirement by the end of their third quarter of enrollment at UCSD. (Exception: Students in need of ESL course work may have up to three extra quarters of residence in which to satisfy the Subject A requirement.)

Students will not be allowed to enroll in university-level writing courses at UCSD until the Subject A requirement has been satisfied.

Students who have been barred from enrollment because of failure to satisfy Subject A will be allowed to present evidence of further work in composition. If the Subject A director approves, these students may take a Subject A examination a final time. Students performing successfully on this final examination will be eligible to apply for re-enrollment at the university.

For further information about the Subject A requirement or the Proficiency Test, please visit the Subject A Program office, 3232 Literature Building, or call (858) 534-6177.

Senior Residence

Each candidate for the bachelor's degree must complete thirty-five of the final forty-five units in residence in the college or school of the University of California in which the degree is to be earned.

Under certain circumstances exceptions may be granted by the provost, such as when a student attends classes on another UC campus as an approved visitor or participates in the UC Education Abroad, the UCSD Opportunities Abroad, Dartmouth, Spelman, Morehouse, or University of New Mexico exchange programs.

Note: Courses taken through the UCSD Extension Concurrent Enrollment Program will not apply toward a UCSD student's senior residency requirement. For further details see "Graduation Requirements" in the Index.

Maximum Unit Limitation

1. An undergraduate student may register for no more than 200 course units. An exception is permitted for candidates for B.S. degrees in engineering, for whom the limits are 240 units in Revelle and Roosevelt Colleges and 230 units in all other colleges. Other exceptions will be granted only for compelling academic reasons and only with the approval of the college provost and the concurrence of the Committee on Educational Policy.
2. Transfer units applicable toward general-education requirements or major requirements are included in the maximum unit calculation; all other transfer units are excluded. Advanced Placement and international baccalaureate units are excluded.

Special kinds of study–e.g., laboratories, reading programs, studio work–may be required in addition to the basic course work in given curricula.

Graduation Credit for Physical Education Courses

No more than three units of physical education, whether earned at UCSD or transferred from another institution, may be counted toward graduation.

Undergraduate Minors and Programs of Concentration

A minor curriculum–or "minor" for short–is a set of courses on a well-defined subject. For students entering after January 1, 1998: a minor shall consist of at least twenty-eight units, of which at least twenty units must be upper-division. For sound academic reasons and with the approval of the Committee on Educational Policy, a minor may be established with fewer than twenty upper-division units. In the case of a subject that is the responsibility of a particular department, such as literature, physics or sociology, that department specifies which courses are acceptable for a minor curriculum in its section of this General Catalog. All other minor curricula must be approved by the Committee on Educational Policy and be published in this General Catalog. A student may not apply toward the minor any upper-division course that has been used to satisfy the requirements of his or her major curriculum. A student's successful completion of a minor curriculum will be recorded on his or her transcript at graduation.

Certain colleges require their students to complete one or more "programs of concentration" before graduation, and the courses or types of courses acceptable for programs of concentration are determined by the faculty of the college or a subcommittee thereof. A program of concentration is not necessarily a minor. Indeed, a program of concentration is a minor only if it meets the criteria in the above paragraph, and only then may it be listed on a student's transcript as a minor. Otherwise it will be recorded as a concentration at graduation.

Honors

COLLEGE HONORS AT GRADUATION

The Academic Senate has established the following standards for award of college honors at graduation:

There shall be a campus-wide requirement for the award of college honors at graduation. No more than 14 percent of the graduating seniors on campus shall be eligible for college honors. Normally, no more than the top 2 percent shall be eligible for summa cum laude and no more than the next 4 percent for magna cum laude, although minor variations from year to year shall be permitted. The remaining 8 percent are eligible for cum laude. The ranking of students for eligibility for college honors shall be based upon the grade-point average. In addition, to be eligible for honors, a student must receive letter grades for at least eighty quarter-units of course work at the University of California. Each college may award honors at graduation only to those who are eligible to receive college honors.

DEPARTMENT HONORS

Each department or program may award honors to a student at graduation in accordance with the following criteria:

1. The student must have completed a *special* course of study within the department or program. The requirements for this *special* course of study shall be approved by the divisional Committee on Educational Policy and published in the catalog. The requirements must include 8–12 units of supervised research or other creative activity leading to the preparation of a paper or other appropriate project. Public presentation of the project, through performance, participation in the undergraduate research conference, or other appropriate means, shall explicitly be encouraged.
2. The department or program shall establish formal procedures and criteria for application and admission to the program, which shall normally include a GPA of 3.5 in the major as a prerequisite. Students with a GPA lower than 3.5 may be admitted by exception if they show promise of success in research or creative activity.
3. Each student whose project earns the equivalent of a grade of "B" or better and who has maintained a GPA of at least 3.25 in the major shall be entitled to the designation "with distinction" on the diploma after the departmental or program name. Subject to the approval of the Committee on Educational Policy, each department or program shall establish criteria for the award of the designations "with high distinction" and "with highest distinction."

Honors awarded by departments may be designated on the diploma by the words "with distinction," "with high distinction," and "with highest distinction" after the departmental or program name. Currently the departments and majors listed below are approved to award honors to graduating seniors: Anthropology, Biology, Chemistry, Chinese Studies, Classical Studies, Cognitive Science, Communication, Critical Gender Studies, Earth Sciences, Economics, Electrical and Computer Engineering, German Studies, History, Human Development, International Studies, Japanese Studies, Judaic Studies, Linguistics, Literature, Management Science, Muir Special Project, Music, Philosophy, Physics, Political Science, Psychology, Roosevelt Individual Studies, Sociology, Study of Religion, Theatre and Dance, Urban Studies and Planning, and Visual Arts.

PROVOST HONORS

Provost honors are awarded quarterly based upon the completion of twelve graded units with a GPA of 3.5 or higher with no grade of D, F, or NP recorded for the quarter.

PHI BETA KAPPA

Phi Beta Kappa is the oldest and most prestigious academic honor society for the liberal arts and sciences in America. UCSD is one of only 265 four-year institutions that have been granted chapters since the society was founded in 1776. In addition, there are approximately fifty active PBK alumni associations in major cities around the country.

More than 200 UCSD faculty and staff were initiated at their own undergraduate colleges, and they make up the local chapter, Sigma of California. Each spring the campus chapter elects student members on the basis of high scholastic achievement and breadth of academic background. The minimum criteria for membership, evaluated at the end of winter quarter, include:

1. Successful completion of at least 160 quarter-units by the time of consideration and at least junior standing.
2. Cumulative GPA of 3.65 or higher for work at UCSD. GPAs from transfer work are considered, but the GPA at UC must be at least 3.65, as must the overall GPA. (Juniors are rarely invited into Phi Beta Kappa, and they are held to higher standards, including a minimum GPA of 3.80.)
3. A minimum of five courses in the humanities or equivalent subjects, explicitly excluding performance or studio courses as required by the National Society.
4. At least one year of college-level course credit in a second language or officially demonstrated equivalent literacy and proficiency.
5. At least one year of college-level course credits in mathematics, quantitative science, logic, or statistics (not all science courses fulfill this requirement).
6. Full-time enrollment at UCSD for at least two years.

As required by the National Society of Phi Beta Kappa, when they consider a student for membership the reviewers examine the excellence of the individual's academic record, the breadth and quality of the courses taken, and evidence that the student has pursued a serious line of work and is of good character. Invitations to membership are sent by email and by letter to each student's permanent address, as maintained by the student on StudentLink. Letters are sent in mid-May, and initiation takes place in early June.

Application for Degree

Undergraduate seniors are required to file a Degree and Diploma Application form with their college academic advising office. Students should check with their college academic advising office for exact deadlines. Advising and counseling sessions should take place well before the quarter of graduation to ensure all degree requirements will be satisfied. Applications not on file by the deadline are subject to special approval, a $3 late filing fee, and a $25 special-order diploma fee. Students who have not completed all degree requirements by the end of the quarter filed for graduation must file a new application. Failure to file this petition may delay the graduation date and receipt of diploma.

Specific Regulations

Progress toward Degrees

In order to apply the units of a course toward unit requirements for a degree, a student must receive an A, B, C, D, P, or S grade in the course. (Plus or minus suffixes (+/–) may be affixed to A, B, and C.) Further, an undergraduate student must have a 2.0 or higher grade-point average (GPA) to receive a bachelor's degree, and a graduate student must have a 3.0 or higher GPA to receive a higher degree.

Probation

An undergraduate student is subject to academic probation if at the end of any term his or her GPA for that term or his or her cumulative GPA is less than 2.0.

Subject to Disqualification

An undergraduate student is subject to academic disqualification from further registration if at the end of any term his or her GPA for that term is less than 1.5 or if he or she has completed two successive terms on academic probation without achieving a cumulative GPA of 2.0. Continued registration of an undergraduate who is subject to disqualification is at the discretion of the faculty of the student's college or its authorized agent (generally the provost/Office of the Provost).

If a student is not currently in scholastic good standing or has been denied registration for the next ensuing quarter on the date on which he or she left the university, a statement of his or her status shall accompany his or her transcript. A student who has been disqualified from further registration at the University of California may not register for UCSD courses through Summer Session, through UCSD Extension by way of the concurrent enrollment mechanism, or in UCSD Extension courses offered at the 100 level. Students receiving financial assistance should refer to information in the Financial Aid section of this catalog. Unique scholarship eligibility requirements must be met.

Note: Veteran students receiving financial assistance from the Veterans Administration should refer to unique requirements set by state approving agencies. See veterans' information under Financial Aid.

Minimum Progress

A full-time undergraduate student is subject to disqualification from further registration if he or she does not complete thirty-six units in any three consecutive quarters of enrollment. Continued registration of an undergraduate who is subject to disqualification due to lack of minimum progress is at the discretion of the faculty of the student's college or its authorized agent (generally the provost/Office of the Provost).

Eligible students may file for an exemption from the minimum progress requirement by completing the Part-time Study application and receiving college approval prior to the end of the second week of the quarter. (See "Part-time Study at the University of California.")

Double Majors

See "Requirements for the Bachelor's Degree" in this section.

Repetition of Courses

Repetition for credit of courses not so authorized by the appropriate Committee on Courses is allowed subject to the following limitations:

1. A student may *not* repeat a course for which a grade of A, B, C, I, P, or S is recorded on his or her transcript. (Plus or minus suffixes (+/–) may be affixed to A, B, and C.)

2. Courses in which a grade of D or F has been awarded may not be repeated on a P/NP or S/U basis. (Graduate students must petition and receive approval in-advance to repeat a course for credit.)
3. Undergraduate students may repeat a course in which a grade of NP has been awarded for a P/NP or letter grade, if applicable. Graduate students may repeat a course in which a grade of U has been awarded on an S/U basis only.
4. Repetition of a course for which a student's transcript bears two or more entries with grades among D, F, NP, or U requires approval of the appropriate provost or dean.
5. All grades received by a student shall be recorded on the student's transcript.
6. The first sixteen units of courses that have been repeated by an undergraduate student and for which the student has received a grade of D, F, or NP, shall not be used in grade-point calculations, unless the course is repeated by a student who has admitted to or been found guilty of academic dishonesty; in which case, the units for both the initial course and the repeated course shall be counted in grade-point calculations.

Note: Although the University of California grade-point average will not include these repeated courses, other institutions/graduate programs, and agencies may recalculate the grade-point average to reflect all assigned grades.

Special Studies Courses

Subject to the limitations below, a student may earn credit for supervised special studies courses on topics of his or her own selection. An undergraduate taking one or more special studies courses must complete an application for each such course before the start of the course.

COURSE NUMBER

Ordinarily, special studies courses are numbered 97, 98, or 99 for lower division and 197, 198, or 199 for upper division. The 97 and 197 courses are for individually arranged field studies. The 98 and 198 courses are for directed group study. The 99 and 199 courses are for individual independent study.

LIMITATIONS

1. Enrollment requires the prior consent of the instructor who is to supervise the study and the approval of the department chair. The applicant shall show that his or her background is adequate for the proposed study.
2. A student must have completed at least thirty units of undergraduate study at UCSD and must have attained a UCSD grade-point average of at least 3.0 to enroll in a lower-division special studies course, and at least ninety units of undergraduate study and must have attained a grade- point average of at least 2.5 to enroll in an upper-division special studies course.
3. A student may enroll for no more than a total of four units of 98, 99, 198, and 199 Special Studies courses in one term.
4. Except as may otherwise be authorized by the CEP Subcommittee on Courses (e.g., for honors programs), only a grade of P or NP is to be assigned for undergraduates enrolled in any special studies course.
5. Subject to the approval of the CEP Subcommittee on Undergraduate Courses, a department may impose additional limitations on its supervised special studies courses.

EXCEPTIONS

On the advice of the instructor(s) and the department chair concerned, the provost of a student's college may authorize exceptions to the limitations (2) and (3) listed above.

PROCEDURES

1. Students must complete an "Application for UCSD Special Studies Course Enrollment," available in department offices, and secure instructor and department chair approval.
2. Students must submit an approved form to the Office of the Registrar to enroll in a special studies course.

Undergraduate Assistance in Courses

An undergraduate instructional apprentice is an undergraduate student who serves as an assistant in an undergraduate course under the supervision of a faculty member. The purpose of the apprenticeship is to learn the methodology of teaching through actual practice in a regularly scheduled course.

GUIDELINES

1. An undergraduate instructional apprentice shall be an upper-division student. He or she shall be involved only with lower-division courses.
2. Students are not permitted to assist in courses in which they are enrolled.
3. An undergraduate instructional apprentice must have a minimum grade-point average of 3.0. Departments may establish higher grade-point average requirements.
4. The faculty instructor is responsible for course content and for maintaining the overall quality of instruction, including supervision of undergraduate instructional apprentices. The faculty instructor is responsible for all grades given in the class.
5. The instructor is expected to meet regularly with the undergraduate apprentice to evaluate the student's performance and to provide the direction needed for a worthwhile educational experience.
6. An undergraduate instructional apprentice may receive credit on a Pass/Not Pass basis only (through registration in a 195 course), subject to approval by the Committee on Educational Policy.
7. A student may not be an instructional apprentice more than once for the same course for credit.
8. A student may not be an instructional apprentice in more than one course in a quarter.
9. The total credit accumulated as an apprentice shall not exceed eight units.

PROCEDURE

All departments/programs using undergraduate instructional apprentices shall submit to CEP a description of the role of the undergraduate instructional apprentice, as part of the petition for approval. Any deviation from the guidelines above must be explained and justified in a memo accompanying the petition. Any major change in the function or duty of the apprentice in a course should also be approved by CEP. **All UGIA applications must be received and approved by the CEP prior to the start of the quarter in which the student is to apprentice.**

Writing Requirements

A student may register in an upper-division course only if the student has satisfactorily completed the writing requirement of his or her college or has obtained the consent of the instructor of the upper-division course. The requirement is waived for a student who has been admitted as

a transfer student and has not completed three quarters of residence at UCSD.

Final Examinations

Final examinations are obligatory in all undergraduate courses except laboratory courses, or their equivalent, as individually determined by the Committee on Courses.

Each such examination shall be conducted in writing whenever practical and must be completed by all participants within the announced time shown in the *Enrollment Information and University Policies* (located on StudentLink) for the quarter in question. These examinations may not exceed three hours in duration.

In laboratory courses, the department concerned may, at its option, require a final examination subject to prior announcement in the *Enrollment Information and University Policies* (located on StudentLink) for the term.

Religious Accommodation

It is the policy of the university to make reasonable efforts to accommodate students having bona fide religious conflicts with scheduled examinations by providing alternative times or methods to take such examinations. If a student anticipates that a scheduled examination will occur at a time at which his or her religious beliefs prohibit participation in the examination, the student must submit to the instructor a statement describing the nature of the religious conflict and specifying the days and times of conflict.

1. For final examinations, the statement must be submitted no later than the end of the second week of instruction of the quarter.
2. For all other examinations, the statement must be submitted to the instructor as soon as possible after a particular examination date is scheduled.

If a conflict with the student's religious beliefs does exist, the instructor will attempt to provide an alternative, equitable examination which does not create undue hardship for the instructor or for the other students in the class.

Policy on Final Examinations

a. Academic Senate Regulations specify that final examinations are required in all undergraduate courses, unless an exception has been approved by CEP or the CEP Subcommittee on Undergraduate Courses. Final examinations are, however, normally not required in laboratory courses.
b. Final examinations may not be given at any time before examination week without explicit approval of CEP.
c. Although the instructor may give a final examination at an alternative time during final examination week with the approval of CEP, students must be permitted to take an equivalent examination at the originally scheduled time if they so desire.
d. An instructor may administer an examination at an alternative time if a valid reason is given by the student for not taking the regularly scheduled examination. Valid reasons include: serious illness and family disasters. Rescheduling as a result of a religious obligation is governed by the UCSD Policy on Religious Accommodation.
e. No student may be excused from assigned final examinations.
f. A final examination must, whenever practicable, be written and must be completed by all participants within a previously announced time limit.
g. Final examinations in non-laboratory courses may not exceed three hours duration.
h. No instructor may require a "take-home" final examination be turned in before the date and hour at which the examination for the course was scheduled by the Registrar's Office.
i. Faculty members (including visiting faculty) must be available to students during final examination week up to the time when the final examinations of their courses are given and, physically present in the examination room for the entire final examination, except in special cases when an exam is given in more than one room. In cases where the approved absence of a course instructor cannot be avoided, the department chair or program director must seek CEP approval to designate another faculty member to administer the final examination. Nevertheless, faculty course instructors themselves must assign grades for the courses they teach.
j. CEP will not recommend approval of faculty absences during finals week unless arrangements to administer the final examination have been worked out in advance with the department chair or program director.

Policy on Midterm Examinations

a. Faculty are obliged to have printed in the *Schedule of Classes* the date and time of any midterm which is to be given outside of the regularly scheduled class hours (beginning with the winter 2001 *Schedule of Classes*).
b. Additionally, any midterm given outside of the regularly scheduled class hours must be announced in a syllabus distributed to the class at the beginning of the quarter.

Retention of Examination Papers

Instructors are required to retain examination papers for at least one full quarter following the final examination period, unless the papers have been returned to the students.

Credit by Examination

With the instructor's approval and concurrence by the student's provost, a currently enrolled and registered undergraduate student in good standing may petition to obtain credit for some courses by examination. Credit by examination is intended for students who study the course material on their own and then petition for credit by examination when they feel they are prepared. The examination will cover work for the entire course. Except as authorized by the instructor and appropriate provost, credit by examination may not be used to repeat a grade of D, F, or W. A part-time student who, by registering to take a course credit by examination, surpasses the number of units allowed for part-time status must pay fees as a full-time student. There will be a $5 fee for each Credit by Examination petition.

Use of Student Petition

For exceptional circumstances, students may request approval for variances to regulations and policies. This should be done by filling out an Undergraduate Student Petition (available on StudentLink, in the provosts' offices, or the Office of the Registrar), securing the necessary approvals, and filing the petition with the appropriate department or college academic advising office.

Grading Policy

Grades in undergraduate courses are defined as follows: A, excellent; B, good; C, fair; D, poor; F,

fail; I, incomplete (work of passing quality but incomplete for good cause); and IP (In Progress). The designations P (Pass) and NP (Not Pass) are used in reporting grades for some undergraduate courses. P denotes a letter grade of C– or better. A blank grade indicates no record or no report of grade was received from the instructor. W is recorded on the transcript indicating the student withdrew or dropped the course sometime after the beginning of the fifth week of a quarter.

Note: Students who drop certain laboratory courses after the second scheduled meeting period will receive a W grade.

Instructors have the option of assigning plus (+) and minus (–) suffixes to the grades A, B, and C. This option became available as of fall 1983.

Grade Points

For each student, the registrar will calculate a grade-point average (GPA) over courses taken at any campus of the University of California, not including Extension courses. Grade points per unit will be assigned as follows: A=4, B=3, C=2, D=1, F=0. When attached to the grades of B and C, plus (+) grades carry three-tenths of a grade point more per unit. The grade of A+, when awarded, represents extraordinary achievement but does not receive grade-point credit beyond that received for the grade of A. When attached to the grades of A, B and C, minus (–) grades carry three-tenths of a grade point less per unit than the unsuffixed grades. Courses in which an I, IP, P, NP, S, U, or W grade has been awarded will be disregarded in grade-point calculations. A graduate student's GPA will be calculated over courses taken while in graduate standing.

Grade	Grade Points	Grade	Grade Points
A+	4.0	C+	2.3
A	4.0	C	2.0
A–	3.7	C–	1.7
B+	3.3	D	1.0
B	3.0	F	0
B–	2.7		

The grade-point average is computed by dividing the total number of grade points earned by the total unit value of letter-graded courses completed.

At the end of each quarter, the instructor of each course will assign a letter grade to each student who was enrolled in that course at the end of the ninth week of instruction on the basis of the work required for the entire course. An I grade may be assigned if appropriate.

Changes in Grades

All grades except I and IP are final when filed by instructors on end-of-term grade reports. However, a final grade may be corrected when a clerical or procedural error is discovered. No change of a final grade may be made on the basis of revision or augmentation of a student's work in the course. No term grade except Incomplete may be revised by further examination. No grade may be changed after one calendar year from the time it was recorded. Petitions for exceptions are referred to the Committee on Educational Policy.

No Report/No Record

A blank entry appearing on student transcripts in lieu of a grade indicates that no grade was assigned by the instructor. A blank entry will lapse automatically into an F, NP, or U if not replaced by a final grade by the last day of instruction of the subsequent quarter, and will be computed in the student's GPA.

Pass/Not Pass

The Pass/Not Pass option is designed to encourage undergraduate students to venture into courses which they might otherwise hesitate to take because they are uncertain about their aptitude or preparation. Consistent with college policy, an undergraduate student in good standing may elect to be graded on a P/NP basis in a course. No more than one-fourth of an undergraduate student's total UCSD course units may be graded on a P/NP basis. Departments may require that courses applied toward the major be taken on a letter-grade basis. Enrollment under this option must take place within the first four weeks of the course. A grade of Pass shall be awarded only for work which otherwise would receive a grade of C- or better. Units passed shall be counted in satisfaction of degree requirements, but such courses shall be disregarded in determining a student's grade-point average. (See "Physical Education Credit toward Graduation.")

If students wish to change their selected grading option after enrolling, they may use WebReg in StudentLink, or complete an Add/Change/Drop card and file it at the Registrar's Office. The last day to change grading options is the end of the fourth week of instruction.

Only a grade of P or NP is to be assigned for courses numbered 195, 197, 198, and 199. Subject to the approval of the CEP Subcommittee on Undergraduate Courses, departments may impose additional limitations or restrictions.

Only a grade of P or NP is to be assigned an undergraduate student's work in a noncredit (0-unit) course.

Note: See "Choosing a College at UCSD" section for further information regarding the P/NP grading option.

The W Grade

When a student withdraws from the university or drops a course, other than a laboratory course, between the beginning of the fifth week of instruction and the end of the ninth week of instruction of a quarter, the registrar will assign a W to the student for each course affected. Only the registrar may assign a W.

Note: Students who drop certain laboratory courses after the second scheduled meeting period will receive a W grade.

Courses in which a W has been entered on the student's transcript will be disregarded in determining a student's grade-point average.

ADDING AND DROPPING COURSES AND THE W GRADE

A student may, with the approval of the instructor (and adviser, if required), add a course to the study list before the end of the second week of instruction of a quarter.

A student may drop a course before the end of the ninth week of instruction by filing the appropriate form with the registrar, after first notifying the instructor and/or department.

A student who wishes to drop all courses is required to file an Undergraduate Request for Withdrawal form with the college academic advising or dean's office.

1. A course dropped before the end of the fourth week of instruction will not appear on the student's transcript.

   Note: Students who drop certain laboratory courses after the second scheduled meeting period will receive a W grade.

2. If a student drops a course after the end of the fourth week of instruction and before the end of the ninth week of instruction, the registrar will assign a final grade of W to the student for that course.

3. A student may not drop a course after the end of the ninth week of instruction.

When an instructor has assigned a grade in a course in accordance with the Academic Senate policy on Integrity of Scholarship prior to the end of the ninth week of instruction, that grade may not subsequently be changed by dropping the course or withdrawing from the university.

WITHDRAWING FROM SCHOOL AND THE W GRADE

A student may withdraw from the university before the end of the ninth week of instruction of a quarter.

1. If a student withdraws before the end of the fourth week of instruction, no course entries will appear on the student's transcript for that quarter.

   Note: Students who drop certain laboratory courses after the second scheduled meeting period will receive a W grade.

2. If a student withdraws after the end of the fourth week of instruction and before the end of the ninth week of instruction, the registrar will assign a final grade of W to the student for each course in which the student was enrolled at the beginning of the fifth week of instruction.
3. Each student will receive a final grade for each course in which the student was enrolled at the end of the ninth week of instruction of the quarter.

When an instructor has assigned a grade in a course in accordance with the Academic Senate policy on Integrity of Scholarship prior to the end of the ninth week of instruction, that grade may not subsequently be changed by dropping the course or withdrawing from the university.

The In Progress (IP) Grade

For exceptional and compelling reasons, a course extending over more than one quarter may be authorized with the prior approval of the Committee on Educational Policy and Courses (for undergraduate courses) or the Graduate Council (for graduate courses). In such courses an evaluation of a student's performance may not be possible until the end of the final term. In such cases the instructor may assign the provisional grade IP (in progress).

IP grades shall be replaced by final grades if the student completes the full sequence. The instructor may assign final grades, grade points, and unit credit for completed terms when the student has not completed the entire sequence provided that the instructor has a basis for assigning the grades and certifies that the course was not completed for good cause. An IP not replaced by a final grade will remain on the student's record.

In calculating a student's grade-point average, grade points and units for courses graded IP shall not be counted. However, at graduation, courses still on the record as graded IP must be treated as courses attempted in computation of the student's grade-point average in assessing a student's satisfaction of Senate Regulation 634.

The Incomplete (I) Grade

Academic Senate regulations state that the Incomplete grade I for undergraduates shall be disregarded in determining a student's grade-point average, except at point of graduation, when students must have an overall 2.0 (C) on all work attempted at the University of California. All work required for a degree must be completed by the end of the quarter the student filed for graduation. Students requesting an I grade the last quarter before graduation may have their graduation date delayed.

Undergraduate students whose work is of non-failing quality but incomplete for good cause, such as illness, must file a Request to Receive/Remove Grade Incomplete form.

Graduate students enrolled in graduate courses may request instructors to assign the grade of "Incomplete" in order to be permitted to complete required work within the following quarter. If the required work is not submitted by the end of the quarter following so that the grade can be reported by the instructor, the grade will automatically be changed to one of "Failure" by the registrar. Graduate students must file a Request to Receive/Remove Grade Incomplete form.

1. Students should complete their portion of the request form, including the reason they are requesting the Incomplete, and provide appropriate documentation to support their request (e.g. doctor's note). The deadline for filing an Incomplete shall be no later than the first working day after final examination week.
2. The instructor has the option to approve or disapprove the request and should state on the form *how* and *when* the I is to be completed. If approved, the instructor submits the form with term grade reports.
3. Students must complete the work to remove the Incomplete on or before the date agreed upon with the instructor and in time for the instructor to assign a grade **before the end of finals week the following quarter.**
4. Failure to complete this work within the regulation time limit will result in the Incomplete lapsing to a *permanent* F, NP, or U grade.

A student who has received an I grade should not re-enroll in the course to make up the missing work. If the student were to re-enroll, the course would be considered a repeat and would not remove the prior quarter's Incomplete, which would lapse to a permanent F, NP, or U grade.

INTENDED USE OF THE INCOMPLETE

The Incomplete is intended for use when circumstances *beyond a student's control* prohibit taking the final exam or completing course work.

The Incomplete is *not* intended as a mechanism for allowing a student to retake a course. A student who has fallen substantially behind and needs to repeat a course can drop the course prior to the end of the ninth week of classes. Otherwise, the instructor should assign the appropriate final grade (D, F, NP, or U, for example).

An Incomplete may not be used simply to allow a bit more time for an undergraduate student who has fallen behind for no good reason. An I may be granted *only* to students who have a legitimate excuse. Examples of unacceptable reasons for approving an Incomplete include the need to rewrite a paper; the demands of a time-consuming job; the desire to leave town for a vacation, family gathering, or athletic contest; the desire to do well on GRE tests; and the like.

EXTENSION OF INCOMPLETE

For justifiable reasons, such as illness, students can petition to extend the Incomplete past one quarter. Petitions to extend the Incomplete must be submitted to the Academic Senate or the dean of OGSR (for graduate students), and must have the prior approval of the instructor and the department chair. Requests for extensions must be submitted before the Incomplete grade lapses to an F, NP, U grade. The extension cannot be made retroactively.

An I grade may be replaced upon completion of the work required by a date agreed upon with

the instructor, but no later than the last day of finals week in the following quarter. If not replaced by this date, the I grade will lapse into an F, NP, or U grade, depending upon the student's initial grading option.

Student Copy of Final Grades

At the end of each quarter students should check StudentLink for grade information. Grades are usually available ten working days after the end of final examinations. Students should examine their record for accuracy and report any omissions or errors to the Office of the Registrar immediately.

Transcript Requests

Application for an official transcript of record to be sent to another party or institution should be submitted to the registrar several days in advance of the time needed. An application for a transcript must bear the student's signature. A $6 fee is charged per copy. Checks should be made payable to the Regents of the University of California.

Grade Appeals

A. 1. If a student believes that nonacademic criteria have been used in determining his or her grade in a course, he or she may follow the procedures described in this regulation.

2. *Nonacademic criteria* means criteria not directly reflective of academic performance in this course. It includes discrimination on political grounds or for reasons of race, religion, sex, or ethnic origin.

3. Appeals to this committee [see (B)(4)] shall be considered confidential unless both the complainant and the instructor agree otherwise. They may agree to allow the student representatives to the committee to participate in the deliberations of the committee, or they may agree to open the deliberations to members of the university community.

B. 1. The student may attempt to resolve the grievance with the instructor within the first month of the following regular academic quarter.

2. If the grievance is not resolved to the student's satisfaction, he or she may then attempt to resolve the grievance through written appeal to the department chair or equivalent, who shall attempt to adjudicate the case with the instructor and the student within two weeks.

3. If the grievance still is not resolved to the student's satisfaction, he or she may then attempt to resolve the grievance through written appeal to the provost of the college, the dean of Graduate Studies, or the dean of the School of Medicine, who shall attempt to adjudicate the case with the instructor, the chair, and the student within two weeks.

4. If the grievance is not resolved to the student's satisfaction by the provost or dean, the student may request consideration of the appeal by the CEP Subcommittee on Grade Appeals (hereinafter called the Committee) according to the procedures outlined below. This request must be submitted before the last day of instruction of the quarter following the quarter in which the course was taken.

C. 1. The student's request for Committee consideration should include a written brief stating the nature of the grievance, including copies of any and all documents in his or her possession supporting the grievance. The submission of the brief to the Committee places the case before it and restricts any change of the challenged grade to a change initiated by the Committee, unless the Committee determines that all other avenues of adjudication have not been exhausted.

2. Upon receipt of the student's request, the Committee immediately forwards a copy of it to the instructor involved and asks the instructor, the department chair or equivalent, and the provost or dean for written reports of their attempts to resolve the complaint.

3. The Committee, after having determined that all other avenues of adjudication have been exhausted, shall review the brief and the reports to determine if there is substantial evidence that nonacademic criteria were used.

a. If the Committee finds substantial evidence that nonacademic criteria were used, it shall follow the procedure in paragraph (D) below.

b. If the Committee decides the allegations are without substance, it shall serve written notification of its findings to the complainant and to the instructor within two weeks. Within ten days the complainant or the instructor may respond to the findings and any member of the Committee may appeal the Committee's findings to the full Committee on Educational Policy and Courses. If there are no responses, or if after consideration of such responses the Committee sustains its decision, the grade shall not be changed.

D. 1. If the Committee determines that there is evidence that nonacademic criteria were used, it shall interview any individual whose testimony might facilitate resolution of the case. The complainant shall make available to the Committee all of his or her work in the course which has been graded and is in his or her possession. The instructor shall make available to the Committee all records of student performance in the course and graded student work in the course which is still in his or her possession. The complainant and the instructor shall be interviewed. At the conclusion of the case each document shall be returned to the source from which it was obtained.

2. The Committee shall complete its deliberations and arrive at a decision within two weeks of its determination that evidence of the use of nonacademic criteria had been submitted. A record of the Committee's actions in the case shall be kept in the Senate Office for three years.

3. If the allegations of the complainant are not upheld by a preponderance of the evidence, the Committee shall so notify the complainant and the instructor in writing. Within one week of such notification, the complainant and the instructor shall have the opportunity to respond to the findings and the decision of the Committee. If there are no responses, or if after considering such responses the Committee sustains its decision, it shall so notify the complainant and the instructor in writing and the grade shall not be changed.

4. If the Committee determines that nonacademic criteria were significant factors in

establishing the grade, it shall give the student the option of either receiving a grade of P or S in the course or retroactively dropping the course without penalty. A grade of P or S awarded in this way shall be acceptable towards satisfaction of any degree requirement, even if a minimum letter grade in the course had been required, and shall not be counted in the number of courses a student may take on a P/NP basis. If the student elects to receive a grade of P or S, the student may also elect to have a notation entered on his or her transcript indicating that the grade was awarded by the divisional grade appeals committee.

a. The Committee shall serve written notification of its finding and its decision to the complainant and the instructor. The complainant and the instructor may respond in writing to the findings and the decision of the Committee within one week of such notification.

b. If there are no responses, or if after considering such responses the Committee sustains its decision, the grade shall be changed; the Committee shall then instruct the registrar to change the grade to P or S or, if the student elected the drop option, to retroactively drop the course from the student's record. Copies of the Committee's instruction shall be sent to the complainant and the instructor.

E. These procedures are designed solely to determine whether nonacademic criteria have been used in assigning a grade, and if so to effect a change of that grade.

1. No punitive actions may be taken against the instructor solely on the basis of these procedures. Neither the filing of charges nor the final disposition of the case shall, under any circumstances, become a part of the personnel file of the instructor. The use of nonacademic criteria in assigning a grade is a violation of the Faculty Code of Conduct. Sanctions against an instructor for violation of the Faculty Code may be sought by filing a complaint in accordance with San Diego Division By-Law 230(D). A complaint may be filed by the student or by others.

2. No punitive actions may be taken against the complainant solely on the basis of these procedures. Neither the filing of charges nor the final disposition of the case shall, under any circumstances, become a part of the complainant's file. The instructor may, if he or she feels that his or her record has been impugned by false or unfounded charges, file charges against the complainant through the office of the vice chancellor for Student Affairs, the dean of Graduate Studies, or the associate dean for Student Affairs of the School of Medicine.

UCSD Policy on Integrity of Scholarship

Integrity of scholarship is essential for an academic community. The university expects that both faculty and students will honor this principle and in so doing protect the validity of university intellectual work. For students, this means that all academic work will be done by the individual to whom it is assigned, without unauthorized aid of any kind. Instructors, for their part, will exercise care in planning and supervising academic work, so that honest effort will be upheld.

The following policies apply to academic course work for both undergraduate and graduate students. A separate policy exists governing integrity of research. Medical students are governed by policies specified in the *Handbook for School of Medicine Advisers and Students,* as formulated by the School of Medicine Committee on Educational Policy.

INSTRUCTORS' RESPONSIBILITY

At the beginning of the term the instructor shall state in writing (e.g., in the syllabus, information sheets, or Web site) what graded assignments and exams will be required of students. If there are any course-specific rules required by the instructor for maintaining academic integrity, the instructor shall also inform students in writing what kinds of aid and collaboration, if any, are permitted on graded assignments and exams. The UCSD Policy on Integrity of Scholar--ship states the general rules for student integrity.

STUDENTS' RESPONSIBILITY

Students are expected to complete the course in compliance with the instructor's standards. No student shall engage in any activity that involves attempting to receive a grade by means other than honest effort, for example:

No student shall knowingly procure, provide, or accept any unauthorized material that contains questions or answers to any examination or assignment to be given at a subsequent time.

No student shall complete, in part or in total, any examination or assignment for another person.

No student shall knowingly allow any examination or assignment to be completed, in part or in total, for himself or herself by another person.

No student shall plagiarize or copy the work of another person and submit it as his or her own work.

No student shall employ aids excluded by the instructor in undertaking course work.

No student shall alter graded class assignments or examinations and then resubmit them for regrading.

No student shall submit substantially the same material in more than one course without prior authorization.

A student acting in the capacity of an instructional assistant (IA), including but not limited to teaching assistants, readers, and tutors, has a special responsibility to safeguard the integrity of scholarship. In these roles the student functions as an apprentice instructor, under the tutelage of the responsible instructor. An IA shall equitably grade student work in the manner agreed upon with the course instructor. An IA shall not make any unauthorized material related to tests, exams, homeworks, etc. available to any student.

Responsibility for Disposition of Cases of Academic Dishonesty

The responsibility for maintaining the standards of academic honesty rests with two university authorities: the faculty and the administration.

Under the standing orders of the Regents, discipline is the exclusive responsibility of the campus administration, while authority over courses and curricula is delegated to the faculty through the Academic Senate. When a student has admitted to or has been found guilty of a violation of the standards of academic honesty, two separate actions shall follow.

(1) The instructor shall determine the student's grade on the assignment and in the course as a whole. Any breach of academic honesty may be considered grounds for failure in the course, although less serious consequences may be incurred in less serious circumstances.

(2) The appropriate administrative authority shall impose a disciplinary penalty. For undergraduates, the appropriate administrative authority is the Council of Deans of Student Affairs. For graduate students, the appropriate administrative authority is the assistant dean of Graduate Studies. Sanctions will be imposed in accordance with guidelines authorized by the Committee on Educational Policy.

Procedures for Disposition of Cases of Academic Dishonesty

The procedure for disposition of cases of academic dishonesty is divided into three phases (A. initial phase; B. decision and resolution phase; C. appeals phase):

A. The Initial Phase

When an instructor has reason to believe that a student has violated UCSD's Policy on Integrity of Scholarship, the instructor should proceed in one of two ways:

I. Call the student to a meeting to discuss the suspected violation. If the instructor decides that there is evidence of academic dishonesty, he or she must report the suspected violation to the Office of the Student Conduct Coordinator (SCC) in the Office of Student Policies and Judicial Affairs (SPJA).

II. Notify the SCC directly that there is a suspected violation of academic integrity.

Once the SCC has been notified by the instructor, the SCC shall notify the appropriate dean that a student is suspected of a violation of academic integrity and initiate record keeping to track the disposition of the case. For graduate students, the appropriate dean is the assistant dean of Graduate Studies. For an undergraduate student who is alleged to have acted alone or in concert with students from his or her own college, the appropriate dean is the dean of Student Affairs of the student's college. If students from more than one college are allegedly involved in the same incident, the SCC will direct the case to the chair of the Council of Deans of Student Affairs. The chair will then appoint one of the deans to proceed with the case for all students, regardless of college.

The dean shall contact the instructor and discuss the evidence in the case. If the instructor decides to proceed with the charges, the dean shall notify the student of the charges in writing and inform the student of the procedures for processing cases of academic dishonesty under the UCSD Policy on Integrity of Scholarship and where to obtain advice and assistance, such as from Student Legal Services. If the instructor is absent, the instructor's department chair or program director may represent the instructor.

B. The Decision and Resolution Phase

The student shall have ten (10) business days following notification by the dean to meet with the dean to discuss the charges and possible administrative penalties. The student shall then decide whether:

I. to accept the charge of academic dishonesty

II. to deny the charge of dishonesty and to proceed to a formal hearing

Consequences of each of these decisions are presented below. If the student fails to respond to the written notification of alleged misconduct and does not meet with the dean, he or she shall be presumed to have taken decision I.

Decision I *(Student accepts charge of academic dishonesty):* If an undergraduate makes decision I, the dean shall notify the SCC of the student's decision. The SCC shall notify the instructor and, if the course has been completed, request a grade assignment. The instructor shall assign a grade for the course and notify the SCC of the grade.

The dean shall also make a recommendation of any administrative penalty to the Council of Deans of Student Affairs. The Council of Deans of Student Affairs shall decide the administrative penalty and notify the SCC of the decision. Notification to the SCC of the administrative penalties should take no longer than 30 business days from the time the dean is notified by the SCC of the charge.

Within (10) ten business days of being notified by the Council of Deans of Student Affairs, the SCC shall notify the student, the dean, and the instructor of the administrative penalty. Once the course has been completed and the SCC has been notified of the grade by the instructor, the SCC will notify the student, the dean, and the Registrar of the grade.

If a graduate student makes decision I, the assistant dean of Graduate Studies shall decide the administrative penalty and the instructor shall decide the course grade. Both shall notify the SCC of their decisions. The SCC shall then notify the student, the dean, and the Registrar of the grade, and the instructor of the administrative penalty.

A record of the administrative penalty shall be maintained in the office of the appropriate dean, the Council of Deans, and the SCC. A statement of the final disposition of the case shall be sent by the SCC to the chairperson of the department or program in which the violation occurred.

Decision II *(Student denies charge and requests a formal hearing):* If the student denies having committed the alleged act of academic dishonesty (decision II), he or she must submit a written request for a formal hearing to the appropriate dean within ten (10) business days of being notified of the charges by the dean. The dean shall transmit the written request to the SCC. Within thirty (30) calendar days after receipt of the request, the SCC shall schedule a formal hearing of the case by the Academic Dishonesty Hearing Board ("Hearing Board"). The SCC shall provide at least ten (10) business days' notice to the student and the instructor of the time, date, and location of the hearing. The SCC shall be available to advise the instructor of the procedures and options for presentation of the case and, if the instructor so chooses, to present the case to the hearing board.

The Standing Hearing Board shall be composed of three faculty members appointed by the Academic Senate, one graduate

student appointed by the assistant dean of Graduate Studies, one upper-division undergraduate student appointed by the vice chancellor of Student Affairs, and a college dean, who shall serve as the presiding officer. Members shall normally serve a two-year term. The presiding officer shall conduct the hearing and advise the hearing board on procedure, but shall not vote. If the student is enrolled in the same college as the presiding dean, a dean from another college shall serve as the presiding officer.

The hearing board shall be governed by the general UCSD rules of procedural due process. When standing members are not available, the formal hearing may be conducted with alternates appointed from the appropriate panel as listed below. To proceed with the hearing, however, the hearing board must have three of the faculty members present, at least one of which must be a member of the standing board. The SCC shall select alternates to the hearing board from the following panels:

1. A panel of ten faculty members appointed by the Academic Senate Committee on Committees.

2. A panel of upper-division (junior or senior) undergraduate students, one from each college, to be appointed by the college dean. Members of this panel must have completed at least one year on a standing judicial board at UCSD.

3. A panel of five graduate students to be appointed by the assistant dean, OGSR.

The hearing board shall hold a formal hearing and decide on the basis of a preponderance of the evidence whether the student engaged in academic dishonesty. In cases in which the hearing board deems that expert advice is essential to its judgment, the hearing board, in consultation with the Committee on Committees, may appoint an ad hoc committee to advise it. The ad hoc committee shall consist of three faculty members with knowledge of the field in question. The members of the ad hoc committee shall be present at the hearing and shall advise the hearing board during the board's deliberations. The final judgment on the case shall rest with the hearing board. Within five (5) business days from the date on which the hearing is completed, the presiding officer shall forward the hearing board's findings to the appropriate dean, with copies to the SCC, department chairperson or program director, the instructor, and the accused student.

If the student is found guilty of academic dishonesty, the appropriate administrative authority (for undergraduate students the Council of Deans of Student Affairs; for graduate students the assistant dean of Graduate Studies) shall then decide the administrative penalty and shall inform the student in writing within ten (10) business days after receipt of the notice of the hearing board's final judgment. They shall also notify the instructor, the SCC, and the department chair or program director. The instructor shall then assign a grade for the course and notify the SCC of the grade within ten (10) business days. The SCC shall notify the student, the dean, and the Registrar of the grade.

If the hearing board finds the evidence insufficient to sustain the charge of academic dishonesty, the administrative authority and the instructor shall dismiss the matter without further action against the student, who shall be permitted either to complete the course without prejudice or to withdraw from it. The student shall notify the SCC of his or her decision, and the SCC shall notify the Registrar of the student's decision. If the student withdraws from the course, it shall not be listed on his or her transcript.

C. **The Appeals Phase: (Section I describes the appeal of the judgment of the hearing board, and Section II describes appeals of the academic action, administrative penalty, or both.)**

I. **Appeal of the Judgment of the Hearing Board:** If the hearing board sustains the charge of academic dishonesty, an undergraduate student may appeal the judgment by writing to the Council of Provosts. Appeals must be made within five (5) business days of formal notification of the final disposition of the case. The Council of Provosts will consider the appeal within ten (10) business days from the date of appeal.

A graduate student or IA may submit an appeal to the dean of Graduate Studies.

The basis for appeal of the hearing board's judgment shall be: (i) that the standards of procedural fairness were violated, e.g. that the student did not have sufficient opportunity to present his or her side of the case; or (ii) that there exists newly discovered important evidence that has substantial bearing on the findings of the hearing board. If the appeal is sustained, the case shall be referred back to the hearing board for a new hearing. Except for such appeals, the judgment of the hearing board shall be final.

II. **Appeal of the Academic Action, Administrative Penalty, or both:** Within five (5) business days of receipt of the SCC's notification, the student may appeal the instructor's grade assignment, or the administrative officer's administrative penalty, or both, by submitting a written request as provided below:

Request for Modification of Academic Action: A request for review of the grade assignment may be directed to the CEP Subcommittee on Grade Appeals. If the case has been heard by the hearing board, the CEP Subcommittee on Grade Appeals shall receive the report of the hearing board and accept its findings as to the facts of the case.

Request for Reduction of Administrative Penalty: An appeal of the appropriate authority's administrative penalty under the provisions of paragraphs A or C shall be directed by an undergraduate student to Council of Provosts. The Council of Provosts will evaluate the student's appeal and make a final decision within ten (10) business days of receiving the appeal. An appeal by a graduate student shall be directed to the dean of Graduate Studies.

Policies for Student Records and Timeline Extensions

Once an instructor has decided to proceed with a charge of academic dishonesty, he or she will refrain from assigning a course grade for the student until the charge has been resolved. If the

course concludes before the charge is resolved, the instructor will assign an "IP" on the course grade sheet for the student's grade and will indicate in the memorandum column that this IP is for a "Pending Charge of Academic Dishonesty." Academic Records will note in attached text to the course (i.e., not on the student's transcript) that the hold is for a "Pending Charge of Academic Dishonesty." The student's transcript will show an "IP" for the course until the charge is resolved. While a hold is in effect, the student shall not drop the course. The faculty hold shall not be removed by the Registrar until notification from the SCC, who shall release the hold once the charge is resolved and a grade has been assigned by the instructor. If a passing grade is assigned and a conflict arises with a duplicate, cross-listed, or equivalent course taken after the charge has been recorded, the SCC will direct the Registrar to drop the student from the duplicate course or remove the grade for the duplicate course from the student's record.

If the student accepts the charge of academic dishonesty or is found guilty by the hearing board, the grade assigned by the instructor will be counted in the student's GPA even if the course is retaken. Academic Records will permanently note in text attached to the course (i.e., not on the student's transcript) that the grade was given as a result of "Academic Dishonesty."

If the student withdraws from UCSD before the final disposition of the case, the following policy shall govern. If the student is found to have committed an act of academic dishonesty, and the instructor assigns him or her a final grade in the course, this grade shall be permanently entered on the transcript. If the administrative penalty is dismissal, the transcript shall bear a notation that readmission is contingent upon the approval from the chancellor. Any administrative penalty less severe than dismissal shall be imposed when the student returns to the university.

If a case of suspected academic dishonesty is also the subject of an administrative inquiry under the Policy on Integrity of Research, then the senior vice chancellor for Academic Affairs, in consultation with the hearing board, may make such modifications in procedure as are necessary to coordinate the two inquiries.

If the final decision in the case results in dismissal of the student, a record of the case and its outcome shall be established in the office of either the vice chancellor for Student Affairs or the dean of Graduate Studies, depending on the registration status of the student. If the administrative penalty is suspension or dismissal, the fact that the student was suspended or dismissed for academic dishonesty must be posted on the academic transcript for the duration of the penalty.

The director of SPJA may extend any timelines in this policy when practical exigencies so dictate. If a delay is imposed, the affected individuals will be notified.

Reporting, Record Keeping, and Review of this Policy

The SCC shall report annually to the Academic Senate Committee on Educational Policy, the Council of Provosts, and the vice chancellor for Student Affairs on the number and character of misconduct, the pattern of decision-making (contested or uncontested), the severity of sanctions, both administrative and academic, and other relevant matters as decided by the Committee on Educational Policy.

Special Programs

Education Abroad Program and the Opportunities Abroad Program

Please refer to the "Courses, Curricula, and Programs of Instruction" section of this catalog, where the Education Abroad Program and the Opportunities Abroad Program are described in full.

Intercampus Transfer (ICT)

An undergraduate in good academic standing who is now, or was previously, registered in a regular session at any campus of the University of California and has not since registered at any other institution may apply for admission as a transfer in the same status to another campus of the university.

HOW TO APPLY

Intercampus transfers must complete the University of California Undergraduate Application form. These forms are available in the Office of the Admissions. You may apply to one or to as many as eight UC campuses of the university using one application form. Send your completed application to:

University of California
Admissions Application Processing Service
P.O. Box 23460
Oakland, CA 94623-0460

Mail only your application form, fees, and essay to the processing service address above. Send your transcripts, test scores, and all other correspondence relating to your application directly to the Admissions Office at the university campus(es) to which you apply. The processing service will not forward them.

You may apply online using Pathways: www.ucop.edu/pathways.

APPLICATION FEES

The basic application fee of $40 entitles you to apply to one university campus. If you apply to more than one campus, you must pay an additional $40 for each campus you select. These fees are not refundable.

WHEN TO APPLY

Priority dates for filing applications for intercampus transfer are identical to the application filing dates for new students: fall, November 1–30; winter, July 1–31; and spring, October 1–31. UC Berkeley fall semester, November 1–30.

A campus will accept applications after the priority period only if it still has openings. If you apply after the priority filing period to a campus that is no longer accepting applications, the Admissions Application Processing Service will notify you by mail that your application will not be forwarded to that campus. In this case, you may receive a full or partial refund of the application fee.

Please note: UCSD does not accept applications for winter and spring quarters. Consult the application for undergraduate admission for information regarding other campuses.

Intercampus Visitor (ICV)

Qualified undergraduates may take advantage of educational opportunities on other campuses of the University of California as an Intercampus Visitor (ICV). This program is designed to enable qualified students to take courses not available on their home campus, to participate in special programs, or to study with distinguished faculty members on other campuses of the university. Students who meet the following requirements should complete an application available in the Office of the Registrar.

1. An undergraduate student must have completed at least one year in residence on the home campus and have maintained a grade-point average of at least 2.0 (or equivalent) to apply as an intercampus visitor.
2. Approval of the appropriate provost office is required.
3. Some UC campuses have additional requirements. See the application for requirements and deadlines.

If students meet the above conditions, they should complete the ICV application form and return it to the Office of the Registrar on the home campus, on or before the appropriate deadlines. The ICV application is subject to approval of both the home and host campuses.

A nonrefundable fee of $40 is charged for each ICV application.

Simultaneous Enrollment of UCSD Students at other UC Campuses

UCSD students may enroll in classes at another UC campus for the same term providing the student:

- Has completed one quarter as a matriculated student at UCSD
- Is enrolled and paid for a minimum of twelve units for the current term at UCSD and maintains this status
- Is in good standing
- Has the appropriate academic preparation as determined by the host campus.

Financial aid is available only through UCSD. Students eligible for veterans, rehabilitation, social security, and other federal, state, or county benefits must secure eligibility certification through the UCSD financial aid office. Units taken at both campuses may be combined to establish full-time enrollment for financial aid.

ROTC

UCSD does not have an ROTC program. Students may, however, with the permission of their college, enroll in ROTC courses at another institution in conjunction with completing their degree programs at UCSD.

ROTC courses are conducted on the campuses of the University of San Diego and San Diego State University (College of Extended Studies for the Navy ROTC, and at San Diego State University for Army and Air Force ROTC. Further information on these programs may be obtained from the ROTC adviser at the Aerospace Studies Department, (619) 594-5545, and the Military Science Department, (619) 594-4943, at San Diego State University, or the Department of Naval Science, (619) 260-4811, at the University of San Diego.

Absence/Readmission to the University

Undergraduate students absent for no more than one quarter are considered to be continuing students and should contact the Office of the Registrar for registration information.

Students in good academic standing who are absent for **two or more consecutive quarters** must file an application for readmission no later than four weeks prior to the beginning of the quarter at the Office of the Registrar, 301 University Center. A nonrefundable fee of $40 is charged.

Students in good academic standing who were absent for **three quarters or more**, must consult with a college academic adviser before enrollment to ensure adherence to graduation requirements.

Students who were on probation or subject to dismissal the last quarter of attendance at UCSD may be required to consult with an academic adviser prior to approval of the readmit application and establish a contract before enrollment.

Students who were dismissed from UCSD, but have subsequently met the conditions stipulated in their original dismissal letter, must consult with an academic adviser and establish a quarterly contract before readmission and enrollment.

Students who attended another institution since leaving UCSD must submit official transcripts for all academic work completed. This work must be of passing or higher quality.

In the case of major departments with approved screening criteria, students may be readmitted as pre-majors.

Withdrawal from the University

Enrolled or registered (paid fees) students who wish to withdraw either prior to or during the quarter are required to complete the Undergraduate Application for Withdrawal. The form should be filed with the student's college academic advising or dean's office. These forms serve two purposes: 1) a means to provide a refund of fees, if appropriate (see below); 2) automatic withdrawal from classes (see also "The W Grade"). Students considering withdrawing are urged to consult with their respective college. The colleges recognize that there are many reasons for students withdrawing from the university.

Refund Policy

NEW UNDERGRADUATE STUDENTS

Prior to the first day of instruction, the registration fee is refunded minus the $100 statement of intention to register fee.

REFUND SCHEDULE

The following schedule of refunds is effective beginning with the first day of instruction and refers to calendar days (including weekends):

0–1 days	2–7 days	8–18 days	19–35 days	36 days and over
100 percent	90 percent	50 percent	25 percent	0 percent

(Subject to Change)

The effective date of withdrawal used in determining the percentage of fees to be refunded is the date indicated on the withdrawal form by the college academic advising or dean's office.

RETURN OF TITLE IV FEDERAL STUDENT AID

Financial aid recipients may be required to return some or all of their aid at the time of withdrawal. This requirement applies only to undergraduate students who withdraw prior to completing 60 percent of the quarter. Questions about financial aid repayment should be directed to the Financial Aid Office.

Auditing

Interested individuals, including registered students, are permitted to audit courses only with the explicit and continuing consent of, and under such rules as may be established by, the faculty member in charge of the course. The instructor is not obligated to devote time to the work of individuals not officially enrolled in the course. All persons auditing are required to abide by University policies and campus regulations.

Graduate Studies

At the University of California, San Diego all programs leading to master's degrees and to doctoral degrees (other than the M.D.) are under the jurisdiction of the Graduate Council and are administered by the Office of Graduate Studies and Research.

The combined administrative responsibility for graduate studies and for research reflects the intention of the San Diego campus to emphasize the research character of graduate education. Doctoral and most master's degrees are the culmination of creative effort and attest to the ability of the recipient to continue original inquiry. In addition to requiring original research, most of UCSD's graduate programs expect their students to obtain teaching experience.

Much of the training UCSD offers takes place outside the classroom–not only in seminars but in independent research and in tutorial work. Students can benefit from the many visitors from other universities; there are opportunities to study at other campuses of the University of California; and many students become involved in the research activities of UCSD's research institutes and centers. La Jolla has become one of the most important intellectual centers of the West. Not only has UCSD attracted many of the world's great scholars, but other research institutions located nearby such as the Salk Institute for Biological Studies, the Burnham Institute, and The Scripps Research Institute have enhanced the area's reputation.

The Nature of Graduate Instruction

Graduate courses demand, on the part of both instructor and student, a capacity for critical analysis and a degree of research interest beyond those appropriate for undergraduate study. These courses generally carry a number in the 200 series and may be conducted in any of several ways: (1) as advanced lecture courses; (2) as seminars in which faculty and students present critical studies of selected problems within the subject field; (3) as independent reading or study under faculty supervision; or (4) as research projects conducted under faculty supervision. Graduate courses numbered 400–499 are designed for professional programs and may not be used to satisfy minimum graduate course requirements for degrees other than the specific degree program for which they are offered. Courses at the upper-division level (100–197) may be taken in partial satisfaction of the requirements for an advanced degree.

Graduate students may take lower-division courses (1–99) for a letter grade, but grades earned in those courses will not be considered in their overall grade-point average (GPA) for the purpose of determining good standing, except for students in the M.P.I.A. program who may take lower-division language courses for a letter grade and for inclusion in their GPA for the purpose of determining good standing.

The graduate student is accorded considerable liberty in choice of courses as long as minimum departmental core course, departmental requirements and grading standards, and residency requirements are met.

Administration

The Office of Graduate Studies and Research

The Office of Graduate Studies and Research is administered by the dean of Graduate Studies, who is responsible for graduate admissions; graduate degree programs; the administration of fellowships, traineeships, and other graduate student support; the development of new programs; and the maintenance of common standards of high quality in graduate programs across the campus.

The dean reports to the senior vice chancellor of Academic Affairs and to the Graduate Council, on the administration of graduate affairs.

The Graduate Council

The Graduate Council is a standing committee of the San Diego Division of the Academic Senate composed of faculty and graduate students. The primary function of the council is to exercise overall responsibility for graduate study programs and to implement systemwide policies, procedures, requirements, and standards.

The Graduate Adviser

The graduate adviser in a department, group, or school is the faculty member to whom graduate students direct requests for information about graduate study in a particular program.

The graduate adviser's duties include:

1. Advising the dean on admission of graduate students.
2. Advising graduate students regarding their programs of study and other matters pertinent to graduate work.
3. Appointing individual advisers for each graduate student.
4. Approving official study lists.
5. Acting on the petitions of graduate students.
6. Insuring that adequate records are maintained on all graduate students in the department, group, or school, and supplying relevant information as requested by the dean.
7. Assisting the dean of Graduate Studies in the application of university regulations governing graduate students, graduate study, and graduate courses.
8. Advising the chair of the department and the dean of Graduate Studies about developments of the graduate program in the department, group, or school.

Graduate Student Association

The Graduate Student Association (GSA) is the officially recognized graduate student government at UCSD. It represents all graduate and medical students—including those at Scripps Institution of Oceanography, the Graduate School of International Relations and Pacific Studies, Rady School of Management, the School of Medicine, and the School of Pharmacy and Pharmaceutical Sciences—in academic, administrative, campus, and university matters. The GSA Council, composed of six executive officers and representatives from each department, group and school, nominates graduate student representatives for appointment to campus governing bodies and committees, including the Graduate Council, the Registration Fee Committee, and the systemwide Student Body Presidents' Council.

The GSA also sponsors projects and social activities designed to improve the academic and social lives of students. Meetings are open to all graduate and School of Medicine students.

For more information contact the GSA at (858) 534-6504.

Graduate Student Diversity

The University of California, San Diego actively recruits and admits qualified students to graduate programs who will enhance the diversity of UCSD graduate programs.

UCSD recognizes the value to students, faculty, staff, and the community in having a campus which reflects the full richness and talents of the people of California. Diversity is viewed as a campus strength and a critical component of higher education. The campus has a firm commitment to recruit and admit graduate students from all demographic groups including students from traditionally underrepresented backgrounds.

The Graduate Student Affairs Unit in the Office of Graduate Studies and Research provides an array of counseling and advocacy services to assist U.S. citizens and permanent residents in applying to graduate school, obtaining financial support, and successfully completing graduate degree programs.

UCSD offers the San Diego Fellowship Program, which is designed to increase campus diversity. The fellowship provides two awards: The San Diego Fellowship and the Eugene Cota-Robles Fellowship. Incoming students who have overcome significant economic, educational, or social hardship in pursuit of their education or whose presence would enhance campus or departmental diversity in other ways are eligible for awards through the San Diego Fellowship Program. Refer to the Fellowship and Traineeship section for more details.

In addition, a limited number of graduate student research awards are available in specific science disciplines through the UCSD-NIH Scholars program and The National Science Foundation Minority Access to Science, Engineering and Math (MASEM) Fellowship.

For assistance and further information about special opportunities for underrepresented students, contact the assistant dean, Office of Graduate Studies and Research, 518 University Center, (858) 534-3555 or (858) 534-3678.

For additional information on students with disabilities, see "Disabled Student Services" (page 97).

Career Services for Graduate Students

The Career Services Center offers a wide range of programs and services to assist graduate students with their career planning and job search needs. Individual career counseling is available on both an appointment and drop-in basis. In addition, workshops and special events are regularly offered covering such areas as resume writing, job search strategies, and nonacademic employment options. The Career Services Center houses a career reference library containing information on employers, job listings, alumni contact list, salaries, sample resumes, and publications pertinent to graduate students' career issues. An online database and Internet access computer lab is also available to assist in placement efforts. For more information, see the "Career Services" section of this catalog or visit the Career Services Office.

General Requirements for Higher Degrees

Courses and Grades

Only upper-division and graduate courses in which a student is assigned grades A, B, C (including plus [+] or minus [–]), D, or S are counted in satisfaction of the requirements for doctoral and master's degrees, the master of fine arts, master of Pacific international affairs, master of arts, master of engineering, master of science, doctor of musical arts, and doctor of philosophy degrees. An Incomplete grade, as well as an NR, will automatically lapse to an F or U if it has not been removed when the final report for the degree is approved by the Office of Graduate Studies and Research. (See also "Grades.")

Undergraduate language courses and courses in the 400 series are only used for degree credit in the program for the M.P.I.A. degree offered by the Graduate School of International Relations and Pacific Studies. For course information see the section on "International Relations and Pacific Studies" elsewhere in this catalog.

Registration in the Final Quarter for the Award of the Degree

A student completing course work, using university facilities including the library, or making any demands upon faculty time (other than final reading of the thesis or dissertation, or administering the comprehensive or doctoral examination), must register in the final quarter in which the degree is to be conferred. Students who need only to submit their theses or dissertations, or to take the comprehensive or final examination may pay a filing fee in lieu of registration in the final quarter (see "Filing Fee").

Master Degrees

Master of Advanced Study (M.A.S.)

The University of California offers graduate professional degree programs leading to the Master of Advanced Study (M.A.S.) degree. This degree meets the needs of working professionals continuing in educational programs. While some M.A.S. programs are tailored to career advancement, other programs enable individuals to pursue new career directions or advanced study in the liberal arts. Each M.A.S. program accommodates flexible, part-time, academically qualified working adults who cannot be full-time students. All M.A.S. degree programs must be in conformity with one of the following two plans: Plan I. Thesis Plan or Plan II. Comprehensive Examination Plan. Pending program approval, an alternative capstone plan is a third option. Specific degree requirements, curriculum, and other details are available with each individual program.

Master of Arts (M.A.) and Master of Science (M.S.)

The master of arts and master of science degrees are offered under two plans: Plan I, Thesis, and Plan II, Comprehensive Examination. Since some departments offer both plans, with varying unit requirements, students should consult with their advisers before selecting a plan for completion of degree requirements.

Master of Business Administration (MBA)

The MBA is a professional degree that provides distinguished education in the theory and practice of management. The program provides a comprehensive education in the fundamental disciplines of business coupled with a focus on the business and management issues faced by technology and innovation driven companies.

Students interested in becoming managers and leaders in such companies and in understanding the role that technologies play in driving the global business marketplaces will be well suited for the Rady School of Management. For degree requirements and curriculum, please refer to the school.

Master of Education (M.Ed.)

The Teacher Education Program offers a Master of Education (M.Ed.)/Multiple Subject Credential to authorize teaching grades K–6, and a Masters of Education (M.Ed.)/Single Subject Credential for teaching 7–12 grades is offered in the subject areas of biology, chemistry, geoscience, English, mathematics, and physics. Degree requirements, curriculum, and other details regarding the program may be obtained from the Teacher Education Program.

Master of Engineering (M.Eng.)

Several departments in the School of Engineering offer the Master of Engineering (M.Eng.). The M.Eng. is a terminal degree designed to address the technical needs of engineers. Degree requirements, curriculum, and other details regarding the program may be obtained from the Department of Electrical and Computer Engineering and the Department of Bioengineering.

Master of Fine Arts (M.F.A.)

The Master of Fine Arts degree is offered in the Departments of Theatre and Dance, and Visual Arts under a modified thesis plan. A short written thesis that may be regarded as a position paper, presenting a descriptive background for the student's work, is required. There is no written final examination, but great weight is given to the candidate's final presentation and the oral defense of the thesis.

Master of Pacific International Affairs (M.P.I.A.)

The Master of Pacific International Affairs program provides training for those interested in pursuing professional careers in international affairs and international management with an emphasis on the countries of the Pacific Rim. For degree requirements and curriculum, please refer to the International Relations and Pacific Studies description under the catalog listings of programs of instruction.

Programs of Study

PLAN I: THESIS PLAN

A minimum of at least thirty-six quarter-units are required: eighteen units in graduate courses, including a minimum of twelve units in graduate-level courses in the major field; twelve additional units in graduate or upper-division courses; and six units in research course work leading to the thesis. Consult your department for specific unit and course requirements.

Following advancement to candidacy, the student electing Plan I must submit a thesis. The thesis committee, appointed by the chair of the department or group and approved by the dean of Graduate Studies, consists of at least three faculty members, with at least two from the candidate's major department.

Information covering thesis preparation is contained in the publication, *Instructions for the Preparation and Submission of Doctoral Dissertations and Masters' Theses*, which is mailed to students electing Plan I, upon their advancement to candidacy. The completed thesis is submitted to the thesis committee for review.

When all members of the committee have approved the thesis, a Final Report of the Thesis for the Master of Arts or Master of Science Degree under Plan I must be completed. The candidate submits the thesis to the Office of Graduate Studies and Research and upon approval by the dean of Graduate Studies, files the thesis with the university archivist who accepts it on behalf of the Graduate Council. Acceptance of the thesis by the archivist with a subsequent second approval by the dean of Graduate Studies represents the final step in the completion of all requirements by the candidate for a master of arts or master of science degree on the San Diego campus.

PLAN II: COMPREHENSIVE EXAMINATION PLAN

A minimum of at least thirty-six quarter-units are required: twenty-four units in graduate courses, including a minimum of fourteen units in graduate-level courses in the major field; and twelve additional units in graduate or upper-division courses. Consult your department for specific unit and course requirements.

Apprentice Teaching

A maximum of six units of 500-level courses (apprentice teaching) may be credited toward the degree requirements.

Academic Residence

The minimum residence requirement is three academic quarters, at least one of which must follow advancement to candidacy. Academic residence is met by satisfactory completion of six units or more per quarter, some of which must be graduate level.

A candidate must be registered in the quarter in which the degree is to be awarded. (See "Registration in the Final Quarter for the Award of the Degree.")

Advancement to Candidacy

After completing all preliminary requirements of the major with a GPA equivalent to 3.0 in upper-division and graduate course work undertaken, a total of no more than eight units of F and/or U grades, and a minimum of two quarters or more of residency, the student may file an Application for Candidacy for the Thesis or Comprehensive Examination, Plan I or II, for the Master of Arts or Master of Science Degree. An Application for Candidacy must be filed no later than two weeks after the first day of the quarter in which degree requirements are to be completed. (See "Academic Calendar.")

Following advancement to candidacy, the student electing Plan II must pass a comprehensive examination administered by the major department. A Final Report of the Comprehensive Examination for the Master of Arts or Master of Science Degree under Plan II is used to report successful completion of the examination requirement.

Transferring Credit

With the approval of the major department and the dean of Graduate Studies, upper-division and graduate course work completed with a grade of B– or better while in graduate standing at another campus of the University of California may be accepted in satisfaction of one of the three quarters of residence and up to one-half of the quarter-units of credit required for the master's degree at UCSD.

On the recommendation of the major department and with the approval of the dean of Graduate Studies, a maximum of eight quarter-units

GRADUATE DEGREES OFFERED: 2004–2005

Anthropology	Ph.D.
Art History, Theory, and Criticism	Ph.D.
Audiology	Au.D.
(Joint with San Diego State University)	
Bioengineering	M.S., Ph.D., M.Eng.
(Bioinformatics)	Ph.D.

*The master's degree may be awarded to students pursuing work toward the Ph.D. after fulfillment of the appropriate requirements. See appropriate section of catalog.

§ Students who have completed some graduate study at UCSD and have been admitted to a doctoral program may apply for this interdisciplinary program.

**UCSD undergraduates in the junior or senior year may apply to their respective departments for admission to the integrated B.S./M.S. degree program. A similar program is available to UCSD undergraduates in several of the engineering and science specialties. Consult department personnel and/or catalog departmental listing for complete information.

*** Pending approval.

of credit for work completed with a grade of B– or better in graduate standing at an institution other than the University of California may be applied toward a master's degree at UCSD. Courses used must be taken prior to matriculation at UCSD.

In any case, no more than a total of one-half of the units required for a master's degree may be transferred in from any UC or other institutions. Courses used for a previous degree may not be transferred. A letter from the institution from which the courses are being transferred will be required stating the courses were not used toward another degree.

Course work approved for transfer credit will not be included in calculating a student's grade-point average, regardless of the source.

Program of Study

PLAN III: MODIFIED THESIS PROGRAM

Seventy-two quarter-units for visual arts and ninety quarter-units for theatre, with a GPA equivalent to 3.0 in upper-division and graduate course work undertaken, are required for a Master of Fine Arts degree. Information covering thesis preparation is contained in the publication, *Instructions for the Preparation and Submission of Doctoral Dissertations and Masters' Theses*, which is mailed to students upon their advancement to candidacy. The completed thesis is submitted to the thesis committee for review.

Following the filing of an Application for Candidacy for the Modified Thesis, Plan III, the candidate must submit a thesis. The thesis committee, appointed by the chair of the department and approved by the dean of Graduate Studies, consists of four faculty members; three from the department and one, preferably tenured, from outside the department.

When all members of the committee have approved the thesis, a Final Report of the Modified Thesis Examination, Plan III, for the Master of Fine Arts degree must be completed. Approval by the dean of Graduate Studies and subsequent acceptance of the thesis by the university archivist, Special Collections, represents the final step in the completion of all requirements by the candidate for a Master of Fine Arts degree on the San Diego campus.

Academic Residence

The minimum residence requirement is six academic quarters for visual arts and eight academic quarters for theatre, at least one of which must follow advancement to candidacy in either program. Academic residence is met by satisfactory completion of six units or more per quarter, some of which must be graduate level. The entire residence requirement must be satisfied at UCSD.

A candidate must be registered in the quarter in which the degree is to be awarded. (See "Registration in the Final Quarter," page 78)

Advancement to Candidacy

After completing all preliminary requirements of the department with a GPA equivalent to 3.0 in upper-division and graduate course work undertaken, a total of no more than eight units of F and/ or U grades, and a minimum of five quarters of residency, the student may file an Application for Candidacy for the Modified Thesis, Plan III, for the Master of Fine Arts Degree. An application for candidacy must be filed no later than two weeks after the first day of the quarter in which degree requirements are to be completed. (See "Academic Calendar.")

Graduate Work Completed Elsewhere

In exceptional circumstances, a student may be given a leave of absence for the purpose of studying elsewhere. While appropriate credit may be allowed for course work completed elsewhere with a grade of B or better in a graduate program, the period involved will not reduce the UCSD academic residence requirement of six academic quarters for visual arts and eight quarters for theatre.

Doctoral Degrees

Doctor of Audiology (Au.D.)

The Au.D. is a professional doctoral degree offered jointly with San Diego State University (SDSU). The four-year degree program is designed for individuals who intend to specialize in clinical practice and to meet professional standards requiring a clinical doctorate as the entry-level degree for a certified audiologist. Graduates of this program will have the knowledge base, research exposure, and advanced clinical skills to enter the workforce in any setting, and be prepared to function as independent audiology professionals in the expanding health care arena. For degree requirements and curriculum, please refer to the Audiology section in the catalog.

Doctor of Education (Ed.D.)

The Ed.D. is a professional degree in which regional professional educators gain content knowledge as well as specific skills related to instructional leadership within the K–12 and postsecondary educational community. Advanced Ed.D. students will conduct research on professional practice within their own institution addressing specific local problems that have national implications for education. For degree requirements and curriculum, please refer to the Teacher Education Program section in this catalog.

Doctor of Musical Arts (D.M.A.)

The DMA degree emphasizes the dual preparation for professional careers in the performance of contemporary music, as well as in the equally demanding area of teaching these skills on an advanced level. Candidates for this degree are expected to demonstrate musical excellence, artistic maturity, and the capability for doing original scholarly work. For degree requirements and curriculum, please refer to the Department of Music description under the catalog listings of programs of instruction.

Doctor of Philosophy (Ph.D.)

The doctor of philosophy degree is a research oriented degree which requires individual study and specialization within a field or the establishment of connections among fields. It is not awarded solely for the fulfillment of technical requirements such as academic residence and course work. Candidates are recommended for the doctorate in recognition of having mastered in depth the subject matter of their discipline and having demonstrated the ability to make original contributions to knowledge in their field of study. More generally, the degree constitutes an affidavit of critical aptitude in scholarship, imaginative enterprise in research, and proficiency in communication, including—in most departments—practice in teaching.

Program of Study

The student's program of study is determined in consultation with the adviser who supervises the student's activities until the appointment of the doctoral committee. A doctoral program generally involves two stages.

The first stage requires at least three quarters of academic residence and is spent in fulfilling the requirements established by the Academic Senate and by the major department, group, or school. When the department considers the student ready to take the qualifying examination, it arranges for the appointment of a doctoral committee. Immediately upon passing the qualifying examination administered by the doctoral committee, the student advances to candidacy.

The second or in-candidacy stage is devoted primarily to independent study and research and to the preparation of the dissertation. A minimum interval of three quarters of academic residence must elapse between advancement to candidacy and the filing and final defense of the dissertation.

Foreign Language Requirements

Some doctoral programs require candidates to demonstrate language proficiency in one or more languages as part of the formal requirements for the Ph.D. degree. In these cases, the testing of proficiency is the responsibility of the department, group, or school concerned.

Doctoral Time Limits

All graduate students in doctoral programs are subject to campus policy on time limits to the Ph.D. Each graduate program has three time limits pertaining to students' academic progress toward the doctoral degree:

(1) the registered time by which a student must advance to doctoral candidacy; (2) the registered time during which a doctoral student is *eligible* for support; and (3) the registered time by which a student must complete all doctoral requirements. Students will not be permitted to continue in doctoral status beyond the pre-candidacy and total registered time limits. Students will not be permitted to receive UCSD-administered financial support beyond the support limit. Information about these time limits is given in the descriptions of each department's graduate program in this catalog and departmental publications.

University policy requires that graduate students be continuously registered—unless on an approved leave of absence—from the first quarter of enrollment to completion of degree requirements. (See "Continuous Registration" and "Leave of Absence.")

For purposes of calculating when precandidacy and total registered time limits are reached, accrued time is the elapsed time from first enrollment as a graduate student at UCSD less (a) time withdrawn or on approved leave of absence, and (b) time between completion of one graduate program at UCSD and first registration in another. For the support time limit, a maximum of three quarters of approved leave or withdrawal may be deducted from elapsed time in calculating accrued time. Time spent in graduate study at another institution or University of California campus prior to beginning graduate study at UCSD will not count toward accrued time, with the exception of students entering the doctoral program in electrical engineering, computer science, or music who have earned a master's degree in that discipline. All of the following will count toward accrued time: time spent at UCSD as a master's, non-degree, or intercampus exchange graduate student; time spent on leave beyond three quarters; time spent between completion of or withdrawal from a graduate program at UCSD and re-registration in the same field of study. Precandidacy and total registered time limits will not accrue during periods of leave of absence and/or withdrawal in excess of three quarters.

Further information may be obtained from departmental graduate coordinators or the Office of Graduate Studies and Research.

Academic Residence

The minimum residence requirement for a doctoral degree is six quarters, three of which must be in continuous academic residence at UCSD. Residency is established by the satisfactory completion of six units or more per quarter, at least some of which must be at the graduate level. Joint doctoral students meet the UCSD academic residency requirement by successfully completing a minimum of thirty-six units of course work at UCSD.

A candidate must be registered in the final quarter in which the degree is to be awarded. (See "Registration in the Final Quarter.")

The Doctoral Committee

At least three weeks prior to a scheduled qualifying examination, the department requests approval for the appointment of the doctoral committee by the dean of Graduate Studies. This committee conducts the qualifying examination, supervises the preparation of and passes upon the dissertation, and administers the final examination.

The committee consists of five or more officers of instruction, no fewer than four of whom shall hold professorial titles of any rank. The committee members shall be chosen from two or more departments/programs; at least two members shall represent academic specialties that differ from the student's field and one of these two must be a tenured UCSD faculty member from another department. Consult the departmental graduate coordinator or the Office of Graduate Studies and Research for further details.

Reconstituted Doctoral Committee

For a variety of reasons a doctoral committee may need to be reconstituted. The request for reconstitution of the membership of a doctoral committee must be submitted on a reconstitution form to the dean of Graduate Studies by the chair of the candidate's major department, group, or school no less than two weeks prior to the qualifying examination or defense of the dissertation. The request must include departmental affiliation of the members of the proposed reconstituted committee and the reason(s) for requesting the change.

Qualifying Examination and Advancement to Candidacy

The doctoral committee administers the qualifying examination and authorizes the issuance of the Report of the Qualifying Examination and Advancement to Candidacy. Formal advancement to candidacy requires the student to pay a candidacy fee to the cashier prior to submitting the form to the dean of Graduate Studies for approval. Students must maintain a GPA equivalent to 3.0 or better in upper-division and graduate course work undertaken with a total of no more than eight units of F and/or U grades in order to take the qualifying examination and advance to candidacy.

If the committee does not issue a unanimous report on the examination, the dean of Graduate

Studies shall be called upon to review and present the case for resolution to the Graduate Council, which shall determine appropriate action.

Dissertation and Final Examination

A draft of the doctoral dissertation should be submitted to each member of the doctoral committee at least four weeks before the final examination. The form of the final draft must conform to procedures outlined in the publication, *Instructions for the Preparation and Submission of Doctoral Dissertations and Masters' Theses,* which is mailed to candidates upon their advancement to candidacy.

The doctoral committee shall supervise and pass on the candidate's dissertation and conduct the final oral examination which shall be public and so announced.

If the committee does not issue a unanimous report on the examination, the dean of Graduate Studies shall be called upon to review and present the case for resolution to the Graduate Council, which shall determine appropriate action.

The Report of the Final Examination and Filing of the Dissertation for the Doctoral Degree form is initiated by the department, group, or school, signed by members of the doctoral committee, and the chair of the (major) department, group, or school.

The candidate submits the dissertation to the Office of Graduate Studies and Research and, upon approval by the dean of Graduate Studies, files the dissertation with the university archivist, who accepts it on behalf of the Graduate Council. Acceptance of the dissertation by the archivist, with a subsequent second approval by the dean of Graduate Studies, represents the final step in the completion by the candidate of all requirements for the doctoral degree. All dissertations and theses submitted in partial satisfaction of doctoral or master's degree requirements shall be catalogued and shelved in the university library and dissertations shall be submitted to University Microfilms, Inc., for publication.

Candidate in Philosophy Degree

In several departments, as approved by the Graduate Council, the intermediate degree of candidate in philosophy (C.Phil.) is awarded to students upon advancement to candidacy for the Ph.D. degree. The minimum residence requirement for this degree is three quarters of continuous academic residence at UCSD. The C.Phil. degree cannot be conferred simultaneously with or following the award of a Ph.D. degree.

Letter of Completion

The Office of Graduate Studies and Research will direct the Office of the Registrar to issue a Letter of Completion to a graduate student who has completed all requirements for a higher degree but whose diploma has not yet been issued.

Postgraduate Appointments

A UCSD graduate student is not eligible for any UCSD postdoctoral appointment until all requirements for the Ph.D. degree have been completed. Such appointments may begin after the university archivist has accepted the dissertation and the Office of Graduate Studies and Research has accepted the final report.

Special Degree Programs

Graduate Programs in the Health Sciences

The university offers research training programs in the health sciences leading to the doctor of philosophy degree. The purpose of these graduate programs is to prepare students for careers in research and teaching in the basic medical sciences. Program requirements are flexible, consisting of graduate courses and supervised laboratory or clinical investigation. Graduate programs in the health sciences are offered by (1) regular campuswide departments with activities related to the health sciences, for example, the Departments of Bioengineering, Biology, Chemistry and Biochemistry, and Psychology and (2) interdisciplinary groups of faculty drawn from the School of Medicine and from campuswide departments or from San Diego State University.

The following departments or interdisciplinary graduate groups provide research training opportunities in the biomedical sciences and should be contacted directly for further information: biomedical sciences, biochemistry (in either biology or chemistry and biochemistry), bioengineering, bioinformatics, biology, biophysics, chemistry, clinical psychology, molecular pathology, neurosciences, physics, psychology, public health (in either epidemiology or health behavior), and the Scripps Institution of Oceanography.

Ph.D.-M.D. Program

Students may meet the requirements for both the Ph.D. and M.D. degrees in programs offered jointly by the School of Medicine and the graduate programs in the health sciences. In most cases, students are first admitted to the School of Medicine and may then apply for admission to a relevant graduate program. However, those students who wish to be considered for admission to the Medical Scientist Training Program (MSTP) may apply for admission to the School of Medicine and the MSTP concurrently.

Elements of the first two years of the medical school curriculum satisfy many of the requirements of the graduate program, but additional courses will be required. Thus, the student must complete requirements for the Ph.D. in accordance with the regulations of a department or a group and must in addition meet the requirements for the professional degree. Students interested in such programs should consult the associate dean for Student Affairs, School of Medicine.

Joint Doctoral Programs

Certain departments of the University of California cooperate with similar departments on the several campuses in the California State University System to offer joint programs of study leading to the doctoral degree. At UCSD, joint doctoral programs in audiology, biology, chemistry, clinical psychology, language and communicative disorders, engineering sciences (applied mechanics), mathematics and science education, and public health (in either epidemiology or health behavior) are currently offered in conjunction with San Diego State University and a Ph.D. in drama and theatre is offered in conjunction with University of California, Irvine. Applicants interested in these joint programs should consult the Departments of Biology, Chemistry and Biochemistry, Communicative Disorders, Mechanical Engineering, Psychology, Surgery, Theatre and Dance; or the Office of the Dean, College of Engineering; or the Center for Research in Mathematics and Science Education; or School of Public Health at San Diego State University. Joint doctoral students meet the UCSD academic residency requirement by successfully completing a minimum of thirty-six units of course work at UCSD.

Special Programs

Intercampus Exchange Program for Graduate Students

A graduate student registered on any campus of the University of California, who wishes to take advantage of educational opportunities for study and research available on another campus of the university, must apply to become an intercampus exchange student on that UC campus. UCSD students must have completed at least one quarter of study and be in good standing prior to beginning an exchange.

Informal arrangements between departmental faculty on the two campuses must be undertaken prior to submission of a student's application to assure that space in desired courses, seminars, or facilities will be available.

No later than four weeks prior to the opening of the term on the host campus, a student must complete the Application for Intercampus Exchange Program for Graduate Students available at the Office of Graduate Studies and Research. This application, approved by the student's departmental graduate adviser and and the graduate dean of the home campus, is forwarded for approval by the department and the graduate dean on the host campus.

Students participating in an intercampus exchange must pay all required fees and enroll as appropriate at the home campus. Evidence of fee payment, at the home campus, must be presented to enroll in classes at the host campus.

An exchange student is not admitted to graduate standing at the host campus, but is considered a graduate student in residence at the home campus. Grades obtained in courses taken by the student enrolled in the intercampus graduate student exchange program are transferred to the home campus for entry on the student's official record. Library, health center, and other student privileges are extended by the host campus.

Off-Campus Study

(Other than Intercampus Exchange Program)

If the research and study program of a graduate student requires being off campus for extended periods of five weeks or more, the student may apply for off-campus study. During such periods a student is required to remain a registered student at UCSD and to carry twelve units of course work or research.

If the off-campus study is outside the state of California, one-half of the registration fee may be waived. All required fees including, but not limited to the full educational fee, student center fee, recreation facility fee, health insurance fee, and nonresident fee, if applicable, must be paid.

A graduate student who holds a fellowship, traineeship, or a research assistantship and desires to study off campus may do so under the following circumstances: The student must have completed at least one year of graduate study at UCSD, obtained the approvals of the academic department and the dean of Graduate Studies, and agreed to comply with the rules and regulations governing the award or appointment.

Regulations concerning accepting additional awards or compensation for appointments as outlined under the financial assistance section apply to off-campus study as well as on-campus study.

UCSD Extension

Students wishing to offer UCSD Extension course work taken **prior** to admission at UCSD as a graduate student in partial satisfaction of requirements for a master's degree must file a General Petition with the Office of Graduate Studies and Research. Acceptance of such course work is subject to the regulations on "Transferring Credit" (which are described elsewhere in this catalog) the recommendation of the major department, and approval of the dean of Graduate Studies, and will be considered upon satisfactory completion of course work in a regular session.

COMPLIMENTARY ENROLLMENT

Through a reciprocal agreement with UCSD Extension, a limited number of spaces in extension classes are open to full-time graduate students (registered for twelve units or more) in good standing without payment of additional fees. The number of spaces available for each quarter varies. The student must obtain a UCSD Application for Enrollment from the Office of Graduate Studies and Research and personally secure the necessary approvals. Course work taken through Complimentary Enrollment cannot be used in partial satisfaction of requirements for a master's degree, nor can it be used toward the twelve unit full-time enrollment requirement.

Education Abroad Program

Graduate students may apply to study at most Education Abroad Program (EAP) host institutions, provided that they meet EAP requirements and have completed at least one year of graduate work prior to departure, are in good standing, and have the support of their academic department and graduate dean.

Costs vary according to location.

Students pay fees to the University of California and are enrolled at UCSD while abroad. Full academic credit is received for courses satisfactorily completed.

At UCSD, complete information and application forms for the various overseas campuses may be obtained from the Programs Abroad Office, International Center, University Center, 0018 or on the Programs Abroad Web site http://orpheus.ucsd.edu/icenter/. In addition, the Programs Abroad Office also offers information and advisory services to graduate and undergraduate students interested in pursuing other activities involving study, research, work, or travel abroad.

For a detailed list of the countries with EAP study centers, see also Education Abroad Program in chapter entitled "Courses, Curricula, and Programs of Instruction." Study abroad information is also available online by accessing the EAP Web site http://www.uoeap.ucsb.edu.

Postdoctoral Study

Postdoctoral fellows, trainees, scholars, and medical fellows play an important role in UCSD's teaching and research programs. All interested candidates should make advance arrangements with the appropriate department or research unit. The Office of Graduate Studies and Research has administrative responsibility for the appointment and census of postdoctoral scholars undertaking training at UCSD. A scholar is appointed by means of a Postdoctoral Study Appointment form initiated in the office of the faculty sponsor and is eligible for a UCSD academic photo identification card and library privileges. The scholar is also eligible to purchase OGSR-sponsored Health Net medical and DentiCare dental insurance.

All scholars are required to have adequate health insurance. Information on Health Net, DentiCare, and enrollment procedures may be obtained from administrative offices of departments, organized research units, or OGSR.

Fees

The following schedule of fees is anticipated for the 2004–2005 academic year:

FEES PER QUARTER*

	Resident	Non-Resident
Tuition	$	$4,082.00
Registration	238.00	238.00
Educational	1,502.00	1,584.00
Student Center	37.50	37.50
Recreational Facilities	87.00	87.00
Graduate Student Assoc.	12.00	12.00
Health Insurance	362.00	362.00
Totals	$2,238.50	$6,402.50

Miscellaneous Fees and Fines

Students should also be aware of the following charges:

Application fee for admission	$40
Duplicate Photo-ID card	10
Petition for Readmission	40
Advancement to Candidacy for Ph.D.	50
Transcript of Record	5
Late payment of fees (Late registration)	50
Late enrollment	50
Late and retroactive Add/Drop	3
Returned check collection	25
Filing fee	119
UCSD Statement Late Charge	25

* Subject to change without notice. Updated information regarding fees may be found on the Web site https://ogsr.ucsd.edu/financialinfo/gradstudent/tuition_fees/index.htm.

All receipts for payments made to the cashier, whatever their nature, should be carefully preserved. Not only do they constitute evidence that financial obligations have been discharged, but they may be required to support a claim that certain documents or petitions have been filed.

**Fees for graduate students approved for enrollment in a half-time program (not to exceed six units) may be reduced by one-half of the Educational fee and one-half of nonresident tuition for nonresidents.

California Residency and the Nonresident Tuition Fee

Each new student entering UCSD is required to submit a Statement of Legal Residence to the Office of the Registrar. No tuition is charged to students classified as residents of California. Nonresidents, however, are required to pay a quarterly tuition fee.

A complete statement covering California residence requirements, determination of residence for tuition purposes, and/or recognized exceptions appears in the section "Residence Requirements" or on the Web site https://hollerith.ucsd.edu/cgibin/studentlink.p1/5/students/finances/residency/. Additional information may be obtained from the Campus Residence Deputy, Office of the Registrar, Building 301, University Center. No other university personnel are authorized to supply information relative to residence requirements for tuition purposes. Students seeking to establish California residency for tuition purposes are advised to review the requirements and deadlines. Adherence to the published deadlines is the responsibility of each student and is essential. Exceptions to waive or extend deadlines are not considered.

To the extent funds are available, subject to change, waiver of nonresident tuition may be granted to spouses and dependent, unmarried children under age twenty-one of university faculty members who are qualified for membership in the Academic Senate. Inquiries should be directed to the Office of the Registrar or the Academic Senate Office.

University Registration Fee

The university registration fee is a quarterly fee required of all registered students, and it must be paid at the time of the student's registration. This fee is for services which benefit the student and are complementary to, but not part of, the regular instructional programs of the university. No part of this fee is refunded to students who do not make use of these services; however, students who petition and are approved for out-of-state study will receive a waiver for one-half of the registration fee. Exemption from this fee may be granted to surviving children of certain deceased California fire fighters or police officers. Students who believe they may qualify for an exemption on this basis must consult with the Student Financial Services Office, Building 201, University Center, for a ruling.

Student Health Services and Insurance Plans

The Student Health Service (SHS) is a nationally accredited health care facility providing primary health care for no or minimal charge during the academic year for all students who pay the university registration fee. Students with the Graduate Student Health Insurance Plan (GSHIP) in the spring have access to the SHS during the summer at no additional charge. Students without GSHIP may be seen in the summer for a modest fee. Additional information on the wide variety of services available at SHS is available via the Web at www.ucsd.edu/shs.

SHS provides primary health care to all students with GSHIP. Access to GSHIP benefits requires written SHS referral except in cases of emergency care or 100 miles out of the UCSD area.

The Graduate Student Health Insurance (GSHIP)

GSHIP is a mandatory year-round insurance plan for graduate and professional students unless a waiver has been granted (see WAIVERS). Students must be enrolled in GSHIP for the spring quarter in order to retain coverage through summer. Three quarterly payments will provide year-round coverage under GSHIP. The spring quarter premium extends insurance coverage through the summer quarter. Benefits and additional information may be viewed at the Web site www.ucsd.edu/shs.

Premium payment for GSHIP is due with the payment of the registration fee. Premiums for students holding graduate academic appointment titles for a full academic term at 25 percent time or greater will be paid directly by the university. Premiums for most students holding fellowships and training grants are also paid directly. Loans to cover premiums may be available for students who receive need-based financial assistance.

For first-year students arriving on campus prior to the start of the academic calendar year, it is highly recommended that the student review current insurance status and purchase short term coverage if necessary. Insurance information may be obtained by calling the insurance counselor at (858) 534-2123.

REFUNDS

No premium refunds are permitted, except when a student withdraws on or prior to the first day of classes, in which case a full refund of the premium will be made and coverage for that quarter will be canceled effective from the first day of the quarter. If an insured enters the armed forces, a pro-rata refund of premium paid will be

made upon request. Refunds for all other fees are subject to the Refund Fee Schedule published in the *Schedule of Classes*. That refund schedule is effective beginning on the first day of the quarter and counts **all** calendar days. Students cannot expect exceptions to this schedule, regardless of the circumstances of the leave of absence/withdrawal request.

LEAVE OF ABSENCE

A student is eligible to be enrolled in GSHIP when on approved Leave of Absence for a total of three academic quarters. A student on approved leave is responsible for his or her enrollments and premium payments and for the Student Health Service access fee which is payable each quarter including summer. Enrollment in GSHIP is through the Student Health Insurance Office at the Student Health Services (SHS).

WAIVERS

Students already insured under a policy containing benefits equal to or better than GSHIP may be eligible for GSHIP waivers up to one academic year. Documents required for a waiver are: 1) student's written request, 2) proof of present insurance and premium payment to the end of the quarter, 3) a copy of the summary of insurance benefits, and 4) a copy of the insurance identification cards. Submit written requests directly to UCSD, Student Health Insurance Office, 9500 Gilman Drive, Dept. 0039, La Jolla, CA, 92093-0039 no later than the last business day of the first week of the quarter. Final decisions regarding waiver requests will be mailed to the student by SHS.

Educational Fee

The educational fee was established as a required fee for all students beginning with the fall quarter 1970. It is used to cover a variety of educational costs as determined by the regents. The educational fee may be reduced by one-half for students enrolled in six units or fewer (see "Part-time Study").

Student Center Fee

Every student is required to pay a student center fee each quarter.

Recreation Facility Fee

Every student is required to pay a recreation facility fee each quarter.

Reduced Fee Enrollments

1. One-half of the established registration fee may be waived for graduate students whose research or study requires them to remain outside the state of California for five weeks or more of the quarter. Students must file a General Petition for this privilege. The reduction pertains to one-half of the registration fee only. A student must pay, in addition, all required fees including, but not limited to, the educational fee, student center fee, recreation facility fee, health insurance fee, and nonresident tuition fee, if applicable.
2. Graduate students approved for enrollment in a half-time program (not to exceed six units) are eligible for a reduction in fees of one-half the educational fee, and, if applicable, one-half of the nonresident tuition fee.
3. A full-time employee who is not subject to nonresident tuition, who has worked full time for the university for at least six months prior to the latest date that registration will be accepted, and who meets the admission requirements of the university is eligible for two-thirds reduction of both the university registration fee and the university educational fee for up to nine units or three regular session university courses per quarter, whichever is greater. An employee so registered is ineligible for the services and facilities of the Counseling Center, recreation facilities, or the Student Health Services, other than those services to which the employee is regularly entitled (University of California Staff Personnel Policy 260.23). Authorization for this privilege is secured from the Staff Personnel Office for staff employees, or from the Academic Personnel Office for individuals on academic appointments.

NOTE: In accordance with Academic Senate regulations, no voting member of the San Diego Division of the Academic Senate shall be recommended for a higher degree from UCSD unless the dean of Graduate Studies shall have certified that all requirements for that degree have been met prior to the appointment to a rank carrying the voting privilege.

Filing Fee

A student registered in the immediately preceding quarter, or on an approved leave of absence who has completed all requirements except for the final reading of the dissertation or thesis or the taking of the final examination is eligible to petition to pay a filing fee in lieu of registering and paying all required fees in the final quarter. The filing fee applies to both residents and nonresidents. Students must apply for this privilege by means of a General Petition.

Refund of Fees

Students who withdraw from the university during the first five weeks of instruction (35 calendar days) may receive partial refunds of fees, excluding health insurance, if applicable. The date of withdrawal, as related to the fee refund schedule, shall be the date on which notice of withdrawal is submitted to the Office of Graduate Studies and Research (OGSR). See Schedule of Classes for schedule of refunds.

Parking Fee

Students who park motor vehicles, including motorcycles, on the campus are subject to parking fees. (See "Parking," in chapter entitled "Campus Services and Facilities.")

Penalty Fees

Penalty fees (see "Fees"), are charged for failure to comply with normal deadline dates. To avoid such fines, students should fulfill all requirements in advance of the deadlines listed in the Schedule of Classes.

Transcript Fees

Students may obtain transcripts of their UCSD records from the Office of the Registrar for $6 for each copy. Transcripts must be requested several days in advance of date needed.

Late Fees

Students are responsible for meeting quarterly enrollment and registration (fees payment) deadlines which are published on StudentLink, in the Schedule of Classes, and a variety of student-directed Web sites and publications. A $50 late fee will be assessed for late enrollment and/or late registration up to $100 total. Late enrollment automatically causes late registration as payments cannot be credited to a student's account until enrollment occurs. Late fee waivers are rarely granted and only in extenuating and verifiable circumstances. Only certain staff in the Office of Graduate Studies and Research (OGSR) are authorized to grant waivers.

Financial Assistance

Several kinds of financial assistance are available to graduate students at UCSD. These include fellowships and traineeships; assistantships in teaching, language instruction, and research; scholarships in full or partial payment of tuition and/or fees; and loans and grants-in-aid. Further details about these awards/appointments may be obtained from departmental, group, or school offices.

Descriptions in this section deal entirely with awards administered directly by the university.

Applicants for financial assistance should note the following: "Pursuant to Section 7 of the Privacy Act of 1974, applicants for student financial aid or benefits are hereby notified that mandatory disclosure of their Social Security number is required by the University of California to verify the identity of each applicant. Social Security numbers are used in processing the data given in the financial aid application; in the awarding of funds; in the coordination of information with applications for federal, state, university, and private awards or benefits; and in the collection of funds and tracing of individuals who have borrowed funds from federal, state, university, or private loan programs."

Fellowships and Traineeships

Regents Fellowships, offered to students with excellent academic and research qualifications, provide a stipend of $10,000 for nine or ten months, plus tax-free resident fees and nonresident tuition, if applicable. These awards may be supplemented with a partial graduate student researcher or research fellowship from available departmental resources. The amount of the supplement varies by department.

The San Diego Fellowship is designed to increase the quality of education and research by enhancing campus diversity. Currently it provides a minimum stipend of $1,000 per month plus resident fees and one year of nonresident tuition. These awards are usually given for two years. Academic departments are responsible for two additional years of support for the Ph.D., D.M.A., or Ed.D. students awarded this fellowship. Look online at http://ogsr.ucsd.edu/fellowships/sd_fellowship/index.htm for further information.

The seven most outstanding nominees for the San Diego Fellowship are awarded the Cota-Robles Fellowship. Fellows receive a $15,000 stipend plus fees for two years. Non-resident fellows are eligible for a tuition scholarship in their first year. Doctoral fellows are guaranteed comparable departmental support for at least two additional years.

The Minority Access to Science, Engineering and Mathematics (MASEM) program is funded by the National Science Foundation (NSF). This fellowship is awarded to a limited number of new underrepresented graduate students in selected programs in science, mathematics, and engineering. For further information, look online at http://ogsr.ucsd.edu/masem/index.htm.

The NIH Scholars Program is funded by the National Institutes of Health (NIH). This award is for a limited number of new graduate students from underrepresented groups in biomedical and behavioral science programs. For further information look online at http://ogsr.ucsd.edu/nih/index.asp.

All other fellowship stipends are established by the department, group, or school and may vary in tenure from one to twelve months and in any amount up to a maximum of $3,000 per month. Fellowships awarded for one, two, or three quarters will also provide tax-free resident fees and nonresident tuition, if applicable. Awardees must register for twelve units of upper-division and graduate-level work each quarter and must remain in good academic standing, as described under "Standards of Scholarship" of this catalog.

Fellows and trainees on twelve-month tenure are required to devote full time to graduate study and research during the summer as well as during the academic year. A brief resume of proposed summer graduate study or research, approved by the appropriate adviser, must be filed with the dean of Graduate Studies before the end of the spring quarter preceding the summer portion of the fellowship or traineeship tenure.

Some fellowships and traineeships offer the privilege of participation in the teaching or research programs of the university.

The principal types of fellowships/scholarships at UCSD are the following:

1. Regents Fellowships
2. San Diego and Cota-Robles Fellowships
3. Research Fellowships
4. U.S. Public Health Service Predoctoral Traineeships
5. Fee Scholarships
6. Tuition Scholarships
7. Tuition and Fee Scholarships

Assistantships

Graduate students may be appointed by UCSD on a part-time basis as graduate student researchers and teaching assistants.

Graduate students enrolled full-time (twelve units or more) may be appointed up to 50 percent time (twenty hours/week) during the academic year and 100 percent time during the summer months, although most departments limit support to 50 percent time year-round. Students enrolled for less than full-time (one to eleven units) are eligible, at the discretion of the department, for 25 percent time appointments. Appointees must remain in good academic standing, as described under "Standards of Scholarship."

Graduate students who are appointed as graduate student researchers are eligible for remission of tuition and fees if they have a minimum 25 percent appointment for the entire quarter for which tuition and fees are paid, or the dollar equivalent; have an appointment effective with the first week of instruction in the quarter for which tuition and fees are paid; and are within the time limits for support described earlier in this section.

Teaching assistants and others appointed on academic titles at 25 percent time or more for the quarter are eligible for payment of partial fee remission of 100 percent of the annual education and registration fees and 100 percent of the Graduate Student Health Insurance fee.

Graduate students appointed as teaching assistants, associates, readers or tutors (ASE'S) are represented by the Association of Student Employees/UAW under a collective bargaining agreement with the university. All salary payments under these titles are subject to a deduction of 1.15 percent for union membership dues or a 0.92 percent agency fee deduction for students who choose not to become members of the union. The university/UAW Agreement can be retrieved electronically at http://ogsr.ucsd.edu/ase/index.htm

All graduate students who are U.S. citizens and appointed as teaching assistants or graduate student researchers or are employed by the university in other positions are required by the California Constitution to sign the State Oath of Allegiance. In addition, all graduate student

appointees and employees are required by university policy to sign the university's Patent Agreement. Copies of both documents may be obtained from the student's academic department.

Taxability of Awards

Under the 1986 Tax Reform Act, the taxability of awards is as follows:

1. *Fellowships and Scholarships.* The portion of the stipend used for tuition, fees, books, and course-related expenses required of all students in the course are *not* taxable income. The portion of a stipend used for other purposes are taxable income.
2. *Graduate Student Researchers and Teaching Assistants.* All compensation is taxable income.
3. Payment of tuition and fees under the Graduate Student Researcher Tuition and Fee Remission program and payment of partial fee remission and graduate student health insurance for those appointed 25 percent time or more as teaching assistants or other academic titles, is nontaxable income.
4. *Grants for Travel to Scholarly Meetings and for Graduate Student Research Expenses.* May be taxable.

Students are advised to review available tax materials and make their own decisions about tax withholding, reporting of income, excluding income from taxation, and filing required tax forms. UCSD departmental and central administrative staff are not able to advise students on individual tax matters.

Graduate student fellowships, scholarships and traineeships are not subject to withholding for taxes under the Federal Insurance Contribution ACT (FICA). The salary of graduate students appointed as Teaching Assistants and Graduate Student Researchers, Readers, or Tutors, or who are employed on campus is exempt from FICA if the students are registered for a minimum of 6 units each quarter (including summer). Nonresident aliens on F-1 and J-1 visas are, by federal law, exempt from FICA.

Limited written tax information is available from academic departmental offices and the Office of Graduate Studies and Research.

Application Procedures

Entering students. The online application for graduate admissions form is used to apply for any of the following: fellowships, traineeships, scholarships, and assistantships (teaching, language, or research).

In order for an applicant to be considered for the ensuing academic year, all supporting materials must be received by the department application deadline. No assurance can be given that requests for fellowships, traineeships, or scholarships can be processed after stated deadlines. Requests for assistantships may be accepted after the deadline, but most departments offer assistantships at the same time they consider applications for fellowships. Therefore, applicants for these appointments are strongly urged to submit their requests as early as possible.

Continuing and returning students. Consult with their departments.

Award Notification

The awarding of fellowships and similar awards for the following academic year will be announced not later than April 1. UCSD subscribes to the agreement of the Council of Graduate Schools of the United States, under which successful applicants for awards are given until April 15 to accept or decline such awards. An award accepted from one of the member universities may be resigned at any time through April 15. However, an acceptance given or left in force after that date commits the student not to accept another appointment without first obtaining formal release for that purpose.

Loans and Grants-in-Aid

An excellent package of grants-in-aid, work-study, and loans is available to graduate students who show evidence of financial need as determined by analysis of a completed Free Applica-tion for Federal Student Aid (FAFSA).

See section on financial assistance in chapter entitled "Campus Services and Facilities."

Time Limits for Graduate Student Support

For Ph.D. and D.M.A. students, all financial support administered by UCSD (including fellowships, scholarships, and appointment but excluding loans) is restricted to students who are within their departmental support time limits (see "Ph.D. Time Limits" and description of each department's graduate program).

M.F.A. and M.P.I.A. students can be supported for a maximum of ten quarters. M.A. and M.S. students can be supported for a maximum of seven quarters.

Fellowships and Research Awards from Outside the University

In addition to fellowships, traineeships, and loans administered by the university, other types of graduate student support are available through federal agencies and private foundations. Students wishing to explore such sources of support for their studies at UCSD are urged to consult one of the many directories available in the reference section of Geisel Library, the fellowship listings provided via the Graduate Studies World Wide Web site (http://ogsr.ucsd.edu), the Community of Science Web site (www.cos.com), other Web sites dedicated to graduate fellowships, through the reference departments of other large libraries or the fellowship adviser in the Office of Graduate Studies and Research, 518 University Center. Most application deadlines occur in the fall or early winter. Among the many organizations which award fellowships to students at UCSD are the Department of Defense; the Ford Foundation; the Hertz Foundation; Institute of International Education; the National Aeronautics and Space Administration; the National Science Foundation; the Social Science Research Council; and, the Woodrow Wilson National Fellowship Foundation.

General Policies and Requirements

Integrity of Scholarship

See "UCSD Policy on Integrity of Scholarship" in the Academic Regulations section of this catalog.

Student Conduct

Graduate students enrolling in the university assume an obligation to conduct themselves in a manner compatible with the university's function as an educational institution. Rules concerning student conduct, student organizations, use of university facilities, and related matters are set forth in *UC San Diego Campus Regulations Applying to Campus Activities, Organizations, and Students,* copies of which are available online at http://ugr8.ucsd.edu/judicial and at the Office of Graduate Studies and Research, and the Office of Judicial Affairs.

Student Appeals

ACADEMIC APPEALS

Department and program faculty have primary responsibility for maintaining the excellence of graduate programs, and they are in the best position to judge their students' academic performance. Consequently a graduate student appeal of an academic decision should first be made to the individual faculty member who made the decision. If this does not result in a resolution that is satisfactory to the student, he or she may appeal to the department or program chair. Graduate students may appeal a course grade or Ph.D. or master's qualifying or final exam result only if they believe that nonacademic criteria were used in determining their grade. Students who wish to appeal a course grade should follow the procedure described in "Grade Appeals" in the "Academic Regulations" section of the UCSD General Catalog.

EMPLOYMENT APPEALS

Students holding an academic appointment, such as graduate student researcher, are subject to the Academic Personnel Manual policy 140. A copy of this policy is available in the Office of Graduate Studies and Research or it may be viewed online at http://www.ucop.edu/acadadv/acadpers/apm/apm-140.pdf. Appeals by teaching assistants, readers, and tutors are covered by the ASE/UAW contract that may be viewed at http://ogsr.ucsd.edu/ase/index.htm.

NON-ACADEMIC APPEALS

Graduate students may appeal actions of departments, programs, individual faculty members, departments, or administrators relating to a student's academic program or financial support if they believe that:

1. due process was not followed in arriving at a decision

   OR

2. personal prejudice affected the judgment rendered.

A non-academic appeal may be submitted to the department or program chair, individual faculty member, or administrator within one month of the date of learning of the action or the date that the student should have reasonably known of the action.

If an appeal to an individual faculty member or administrator is not resolved to the student's satisfaction, he or she may then submit a written appeal to the department or program chair, who shall attempt to adjudicate the case with the faculty member or administrator and the student within two weeks.

If the appeal is not resolved to the student's satisfaction, he or she may then attempt to resolve the matter through written appeal to the dean of Graduate Studies, who will attempt to adjudicate the case within two weeks. The dean may take the appeal to the Graduate Council for review, which may extend the time required to reach a final resolution.

The student's request for the dean's review should include a written statement describing the nature of the grievance, along with copies of any and all documents in his or her possession supporting the grievance. Students are encouraged to contact the assistant dean for Student Affairs in the Office of Graduate Studies and Research for assistance with the appeal process.

Exceptions

A student may request an exception to the normal procedures and requirements governing graduate studies by submitting a General Petition, available from the department. The petition must state clearly the reasons for requesting the exception and bear all required approvals before being submitted to the Office of Graduate Studies and Research.

Requests for exceptions to time limits require a letter of explanation and support from the student's research adviser, and support and justification from the program's graduate adviser and endorsement by the department or group chair. Such requests are submitted to the Graduate Council through the dean of Graduate Studies. Exceptions to the time limits policy are granted only in the case of truly exceptional and unavoidable circumstances.

Grades

Standards of Scholarship

Only upper-division, graduate, and professional courses in which grades of A, B, C (including plus [+] or minus [–]), D, or S (Satisfactory) are earned can be counted in satisfaction of the requirements for a higher degree.

A student's grade-point average (GPA) is computed by dividing the total number of grade points earned by the total unit value of graded upper-division, graduate, and professional courses undertaken at UCSD with the exception of those undertaken in UCSD Extension. Grades of S, U, I, IP, NR, and W are excluded in computing a grade-point average. Lower-division course work units are not used in computing a graduate student's grade-point average nor in satisfying program requirements for a higher degree with the exception of language courses taken by students in the M.P.I.A. program.

Each department or group prepares, not later than the second week of each spring quarter, a detailed, written evaluation of each of its Ph.D., D.M.A., or M.F.A. students. These evaluations are designed to inform students of their progress and to improve communications between faculty and graduate students. Evaluations are discussed with students who may elect to add written comments before signing the copy of the evaluation sent to the Office of Graduate Studies and Research. A student's signature on the evaluation indicates knowledge of the assessment but does not necessarily signify agreement.

To be in good standing academically a graduate student must meet departmental standards including a satisfactory spring evaluation, maintain a GPA of 3.0 or the equivalent in upper-division, graduate, and professional course work, and must not have accumulated more than a total of eight units of F and/or U grades overall, unless departmental standards specify more stringent grade requirements.

Good standing is a requirement for:

1. Holding academic and staff appointments.
2. Holding fellowship, scholarship, or traineeship appointments.
3. Participating in the Education Abroad Program (EAP)
4. Advancing to candidacy for a graduate degree.
5. Going on leave of absence.
6. Receiving a graduate degree from UCSD.

Graduate students who are not in good standing for any reason are subject to probation and/ or disqualification from further graduate study.

Grading System

The grade of A+, when awarded, represents extraordinary achievement but does not receive grade-point credit beyond that received for the grade of A. The grades of A, B, and C may be modified by plus (+) or minus (–). When attached to the grades of B and C, plus (+) grades carry three-tenths of a grade point more per unit, and when attached to A, B, and C, minus (–) grades carry three-tenths of a grade point less per unit. Grades and grade points are described as follows:

Grade		Grade Points per Unit
A+		4.0
A	Excellent	4.0
A–		3.7
B+		3.3
B	Good	3.0
B–		2.7
C+		2.3
C	Fair	2.0
C–		1.7
D	Poor	1.0
F	Fail	0.0
S	Satisfactory (equivalent to B– or better)	0.0

Grade	
U	Unsatisfactory
I	Incomplete—but work of non-failing quality*
IP	In Progress (provisional grade; replaced when full sequence is completed)
W	Withdrawal (assigned when withdrawing or dropping a course beginning fifth week to end of ninth week of instruction)

* Requires Request to Receive Grade Incomplete form to be initiated and completed by the student, approved by the instructor, and filed with the department prior to the end of finals week. The Incomplete grade will lapse to F or U if not made up by the last day of finals week in the following quarter.

All grades except Incomplete and In Progress are final when entered in an instructor's course report filed at the end of the quarter.

While grades of U are not computed in a grade-point average, they are not considered satisfactory grades for students on appointment, nor are they considered to be evidence of satisfactory progress on the part of any student. Therefore, a student whose record bears more than eight units of U and/or F grades in upper-division, graduate, or professional course work may not be eligible to continue on appointment and may be subject to academic probation or disqualification.

Changes in Grades

All grades except I and IP are final when filed by the instructor unless a clerical or procedural error is discovered.

No change of a final grade may be made on the basis of revision or augmentation of a student's work; no term grade except Incomplete may be revised by further examination; and no grade may be changed after one calendar year from the time the grade was recorded.

Repetition of Courses

A student assigned a grade of D, F, or U may petition to repeat the course on the same grading basis for which it was first taken. That is, a course in which a grade of D or F has been received may not be repeated on an S/U basis. Conversely, a course in which a grade of U has been awarded may not be repeated on the basis of a letter grade. Degree credit for a course will be given only once, but the grade assigned for each enrollment shall be permanently recorded. Only the grade received in the repetition of the course will be used in calculating the overall grade-point average for the first sixteen units repeated. For additional units repeated, the grade assigned for each enrollment shall be used in calculating the grade-point average.

No Report/No Record

A blank entry appearing on student transcripts in lieu of a grade indicates that the student's name appeared on a grade report but no grade was assigned by the instructor. A blank entry will lapse automatically into an F or U if not removed or replaced by a final grade by the last day of instruction of the subsequent quarter, and will be computed in the student's GPA.

I (Incomplete)

The grade of I may be assigned by an instructor only when the student's work is of passing quality but is incomplete. The student must complete and submit to the instructor the form, Request to Receive Grade Incomplete and Removal of Grade Incomplete, which will contain both the reason for requesting the grade I and the conditions to be met before the Incomplete can be replaced with a final grade. The Incomplete must be made up, the grade assigned, and the completed form filed with the Office of the Registrar no later than the end of final examination week the following quarter.

Incomplete grades assigned in the quarter before a graduate student withdraws or takes an approved leave of absence must be replaced by a final grade before the end of the academic quarter following to prevent the Incomplete from lapsing to F or U.

IP (In Progress)

An IP is assigned in a sequential course which extends over more than one quarter, and the evaluation of a student's performance may not be possible until the end of the course. A student who has dropped out without completing the entire sequence may be assigned final grades and unit credit for any quarter(s) completed, provided that the instructor has a basis for assigning the grades and certifies that the sequence was not completed for good cause. An IP not replaced by a final grade will remain on the student's record. Courses graded IP are not used in calculating a student's grade-point average until graduation. At that time course units still graded IP on a student's record must be treated as units attempted in calculating the GPA; **thus units graded IP will have the same effect on the overall GPA as an F or U.**

S/U (Satisfactory/Unsatisfactory)

The minimum standard of performance for a grade of Satisfactory shall be the same as the minimum for a grade of B–.

With the approval of the Graduate Council, departments may offer graduate courses in which graduate students may elect to be evaluated on an S/U basis and courses in which S/U grading shall be the *only* grading option. Grading options for a given course are identified in course listings in the *UCSD General Catalog.*

In addition, and with the approval of the department and the instructor concerned, graduate students may elect to have the following courses graded on an S/U basis: any upper-division or lower-division course taken (provided they have obtained approval of the instructor and the department), and any graduate or upper-division course outside their major department. If departmental requirements have been fulfilled for advancement to candidacy for the Ph.D. or D.M.A.

degree, graduate students may take any course on an S/U basis.

Selection of S/U as a grading option **must be made in the first two weeks of a quarter.** Units graded Satisfactory shall be counted in satisfaction of degree requirements but shall be disregarded in determining a student's grade-point average. No credit shall be allowed for work marked Unsatisfactory.

W (Withdrawal)

Students who discontinue graduate study any time during a quarter without formally withdrawing will receive failing grades for all course work undertaken. Formal withdrawal requires filing a Leave of Absence, Extension and/or Withdrawal form prior to leaving campus with the Office of Graduate Studies and Research after receiving departmental approval and all other approvals listed on the form. When a student withdraws before the end of the fourth week of instruction, no course entries will appear on the transcript for that quarter. Students who withdraw from the university or drop a course between the beginning of the fifth week of instruction and the end of the ninth week of instruction will be assigned a W (Withdrawn) by the registrar for each course affected.

Courses in which a W has been assigned will be disregarded in determining a student's grade-point average.

Final Grades

Students may access their full UCSD graduate academic record on StudentLink in the academic history module. The student must have his/her PID and PAC numbers to access StudentLink. If lost or misplaced, the PAC number may only be obtained from the Office of the Registrar (OAR) after providing proof of identification; the PID may be obtained through the departmental graduate program coordinator or the OAR. Students may receive computer-generated telephone verification of their fall and winter grades (see Schedule of Classes for complete information). While grade reports submitted by instructors at the end of the quarter are generally considered final, **students should carefully examine their grade report or transcript for omissions and clerical errors and consult with instructors and the Office of the Registrar to clarify any discrepancies.**

Admission Requirements

Academic

Applicants for graduate admission must present official evidence of receipt of a baccalaureate degree from an accredited institution of higher education or the equivalent, with training comparable to that provided by the University of California. A minimum scholastic average of B or better is required for course work completed in upper-division, or prior graduate study.

Admission Policies

Duplication of Advanced Degrees

Normally, duplication of advanced academic degrees, M.A., M.S., Ph.D., is not permitted. A duplicate academic degree is one at the same level, e.g., a second master's degree or second Ph.D., regardless of the discipline or the specialization awarding the degree. A professional degree at the master's or doctoral level, e.g., M.Ed., M.P.I.A., MD. Pharm.D., is not regarded as a duplicate of an academic degree.

Students who already hold an advanced degree may be admitted to UCSD to pursue a second advanced degree at the same level only under limited circumstances, and only with the consent of the Graduate Council. Recognizing that there are circumstances in which it is appropriate for a student to pursue a second degree, the Graduate Council will consider the following criteria when reviewing requests for permission to do so at UCSD.

1. The degree already held by the student must be in a fundamentally different disciplinary field from the department to which the student is applying. A request for permission to be admitted to a degree program at UCSD should document this clearly, and should indicate the differences both in intellectual training and in qualification for future employment that the second degree would confer.
2. The department or program considering the applicant must make a clear case that there is no other way at UCSD for the student to obtain the same outcome for future employment prospects, e.g., by pursuing a master's program or post-doctoral study rather than a second Ph.D.

If the decision of the Graduate Council is that the student should be admitted to a particular department or program for a master's degree alone, the student is barred from requesting permission to continue for a Ph.D. in that department or program.

Non-Degree Study

There is no "student-at-large" classification at UCSD; application for admission must be made to a specific department or group. Applicants who wish to enroll for "course work only" within a department or group and who do not intend to pursue a higher degree at UCSD may request admission for non-degree study. Applicants for non-degree study must satisfy all admission requirements and are not eligible for fellowships or assistantships. Non-degree status is granted for up to one year; students may petition the dean of Graduate Studies for a second year of non-degree status.

Part-Time Study, Including Half-Time

Students who enroll in fewer than twelve graduate or upper-division units each quarter are considered part-time students. International students on F1 or J1 visas must be enrolled full-time each quarter. Students who are approved by their major department and by the dean of Graduate Studies for enrollment in a program of half-time study (maximum of six units or fewer) for reasons of occupation, family responsibilities or health, may be eligible for a reduction in fees. All other part-time students (7–11 units) pay the same fees as full-time students.

Part-time study may be pursued in several masters' programs and a few Ph.D. programs at UCSD. In all instances, part-time students must satisfy the same admission requirements as full-time students and are eligible, at the discretion of a department, for appointment to 25 percent time teaching or research assistantships. Admitted students must file the petition for half-time study with the Office of Graduate Studies and Research no later than the last day of the second week of the quarter to be eligible for a fee reduction.

Application Procedures

When to Apply

Most graduate programs have an application deadline of mid-January for fall admissions. A few programs accept applications for winter and spring admissions. For specific deadlines refer to the online application instructions at http://ogsr.ucsd.edu or contact the specific program office. Applicants need not have completed their undergraduate programs prior to applying.

How to Apply

UCSD encourages the use of the online application and payment of the $60 nonrefundable application fee by credit card. The online application can be accessed at http://ogsr.ucsd.edu where detailed instructions for completion of the application are provided. If a paper mail-in application is necessary, it must be obtained from the academic department where the applicant is applying.

Additional program and application information can be obtained from each graduate program office. Access the UCSD Web site http://ucsd.edu and the appropriate program's graduate study information. Telephone numbers and campus addresses are listed with the department information in this catalog. The Graduate Admissions Application includes application for a fellowship, traineeship, scholarship, or assistantship. The primary documents required in support of an application are listed below. Each program may require additional documents.

Social Security Number Disclosure

Pursuant to the Federal Privacy Act of 1974, applicants are hereby notified that disclosure of their Social Security number is mandatory. The Social Security number entered on the application for graduate admission may be used as the applicant's identification number for part of the UCSD graduate student record keeping system. A personal identification (PID) number will also be assigned by the UCSD student information system for record-keeping purposes. This record-keeping system was established prior to January 1, 1975 pursuant to the authority of the Regents of the University of California under Art. IX, Sec. 9 of the California Constitution.

Required Supporting Documents

All supporting documents, including letters of recommendation, should be completed using the online system. Any additional supplemental materials are mailed directly to the applicant's prospective major department.

ACADEMIC RECORDS

Applicants must request that official transcripts of all previous academic work, including certification of degrees received or documentation of status upon leaving each institution, be forwarded to their prospective major department. Transcript labels can be printed from the online application site. Only official records bearing the signature of the registrar and the seal of the issuing institution will be accepted. Applicants with academic work in progress who expect to complete a degree program before the intended date of enrollment at UCSD **must submit evidence of degree conferral** and a final academic record, as soon as they are available. The undergraduate degree must be completed prior to the start of graduate study.

SPECIAL NOTE TO INTERNATIONAL APPLICANTS

In all applications for graduate admission, official records bearing the signature of the registrar or other responsible academic officer and the seal of the issuing institution are required. However, true copies, facsimiles, or photostatic copies of **foreign academic records** will be accepted if, after the copies have been made, they have been personally signed and stamped by an educational official of the issuing institution, **who certifies that they are exact copies of the original document.** Properly signed copies should be sent instead of irreplaceable original documents. Unless academic records are issued in English by the institution itself, **certified English translations must accompany official documents written in a language other than English.**

Foreign academic records should show all courses attended each year, examinations passed, seminars completed, and grades or marks received in all institutions where formal records are maintained. **Official evidence of degree conferral must also be supplied,** together with evidence of rank in class if possible.

GRADUATE RECORD EXAMINATIONS (GRE) SCORES

Most graduate programs require that applicants take the GRE. Contact the specific program for further information. Applicants who are applying for admission to a department, group, or school which requires that they take the GRE should do so as early as possible to insure the timely receipt of their score results. **Applicants must take the GRE no later than fall in order to meet most departmental deadlines for admission.** Consult the GRE Information & Registration Bulletin or the GRE Web site http://gre.org for further information. Only official scores sent to UCSD by E.T.S. will be accepted for admission.

To facilitate the processing of applications for admission, applicants may forward to their proposed major department, group, or school a copy of their GRE examination score as soon as it is received, since official copies are not always immediately received by the appropriate department at UCSD.

LETTERS OF RECOMMENDATION

Applicants should arrange to have three letters of recommendation submitted online to UCSD. If paper letters are necessary they must be mailed to the prospective major department, group, or school. (Recommendation forms can be printed from the online application site). It is most important that letters of recommendation be completed by individuals in a position to analyze an applicant's abilities and academic or professional promise. Applicants who have applied within the last two years, and were admitted, but did not enroll, should check with their major department or group to determine if letters of recommendation are still on file.

INTERNATIONAL APPLICANT FINANCIAL STATEMENT

Foreign applicants are required to certify that they possess sufficient funds to cover all fees, transportation, and living expenses during the first academic year of graduate enrollment at UCSD. In addition, they must certify as to the probability of funds for subsequent years of study. An International Applicant Financial Statement, for the purpose of indicating the amount and source of funds available for graduate study, is forwarded to foreign applicants upon admission into a graduate program.

A written summary of present and future financial resources must be provided before visa forms can be granted.

Opportunities for employment on or off campus, are extremely limited, and foreign applicants should not base their educational plans on the hope of finding employment after arriving in the United States.

Admissions Examination Information

There are a variety of internationally administered examinations which may be taken to meet requirements for admission to graduate study or to satisfy certain requirements for advanced degrees. Several examinations of importance to UCSD applicants are listed here.

TEST OF ENGLISH AS A FOREIGN LANGUAGE (TOEFL)

All international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English must take the TOEFL and submit their test scores to the Office of Graduate Admissions. Some departments now require the Test of Written English (TWE) as well as the Listening, Structure, and Reading Sections of the TOEFL.

The minimum TOFEL score for admission is 550 for the paper-based test or 213 for the computer-based test. Applicants admitted with low scores may be required to take an English proficiency test upon arrival at UCSD and to enroll in an English course until the required proficiency is attained.

Application: Information and forms are available online at http://toefl.org, or from TOEFL Services, P.O. Box 6151, Princeton, NJ 08541-6151, or from United States embassies, consulates, and related centers.

TEST OF SPOKEN ENGLISH (TSE)

The Test of Spoken English helps foreign students provide a reliable measure of proficiency in spoken English. This test is highly recommended for foreign applicants who wish to be considered for a teaching assistantship. Test information is available at http://tse.org.

Admission and Registration

Official admission to graduate study at the university is contingent upon review of an applicant's record, receipt of final undergraduate transcript showing degree(s) awarded, receipt of official transcripts of all attended institutions, an affirmative recommendation by the prospective department, group, or school, and action by the Office of Graduate Studies and Research. The dean of Graduate Studies or the prospective major department, group, or school may deny admission if an applicant's scholastic record is undistinguished, if the preparation is judged inadequate as a foundation for advanced work, or in the event that no further students can be accommodated for a given quarter. **Only the official Certificate of Admission from the dean of Graduate Studies constitutes formal approval of admission to a graduate program at UCSD.**

Official notification of admission by the dean of Graduate Studies will be mailed well in advance of the beginning of the quarter for which application has been made. Applicants should call their prospective major department, if formal notification is not received four weeks prior to the beginning of the quarter for which they applied.

Admission to graduate standing does not constitute registration for classes. A student is not officially registered for classes until the entire registration procedure is completed each quarter. Information and all necessary registration materials will be available at department offices approximately two weeks before the opening of the quarter (see "Academic Calendar").

Reapplication

Applicants who are admitted but decide not to register in the quarter for which they first apply may request deferral of their application for a later quarter within the same academic year or the academic year immediately subsequent. Application for admission of an approved deferred applicant for the subsequent academic year may be made by submitting a statement of activities and official transcripts of any academic work undertaken since the first application to the department or group. Admission is not guaranteed to previously admitted applicants who have an approved deferral. In no case are application files retained for more than four consecutive academic quarters from the date of first application. Application after this period may be made only by completing a new application and providing all necessary documents, including payment of the graduate application fee.

Students who are denied admission must submit a new application and fee together with required documentation in order to be considered for admission in another academic year.

Readmission

A graduate student whose status has lapsed because of an interruption in registration must petition his or her department for readmission at least eight weeks prior to the first day of the quarter in which reenrollment is intended. **Do not complete an Application for Admission.** Students must submit supplementary transcripts of all academic course work undertaken since last enrolled at UCSD, pay a readmission fee of $40, and complete a General Petition and a supplementary Statement of Activities. In addition, a Statement of Legal Residence is required for all students returning after an absence of two quarters or more.

Readmission is not automatic.

Registration Requirements and Procedures

All students must enroll and pay fees on or before the deadline dates established by the Office of the Registrar for each quarter to avoid paying late fees. Enrollment materials are obtained at the major department. (See Schedule of Classes for current deadlines.)

Full-Time Student

A full-time student is required to be registered for twelve units each quarter of each academic year until the completion of all requirements for the degree, including the filing of the thesis or dissertation.

Part-Time Student

A part-time student is enrolled in fewer than twelve units a quarter but is admitted as a regular student. A part-time student must pay full fees unless approved by the dean of Graduate Studies to enroll in half-time status for six units or fewer.

A student must file the petition for half-time study with the Office of Graduate Studies and Research no later than the last day of the second week of the quarter to be eligible for reduced fees. (See "Admissions Policies-Part-Time Study.")

Schedule of Classes

Detailed information on registration and enrollment procedures is contained in the quarterly *Schedule of Classes*, available for purchase at the University Bookstore before the beginning of the quarter. **It is the responsibility of each graduate student to keep informed of and meet all enrollment and registration (fee payment) deadlines.** Scheduling information may also be found on the Office of Admissions and Records home page on the World Wide Web: http://studentlink.ucsd.edu

Priority Enrollment

CONTINUING STUDENTS

Continuing graduate students may enroll in classes through WebReg or by coming to the Registrar's office any time during the quarterly enrollment period. A Personal Access Code (PAC) number is issued to graduate students by the Office of the Registrar. Students may also use WebReg to add, change, and drop classes. Students who do not use WebReg may complete Add/Drop Cards and file them with the Office of the Registrar any time during enrollment periods.

Complete instructions for enrolling by WebReg or Add/Drop Cards can be found in the quarterly Schedule of Classes and on StudentLink.

Confirmation of classes is immediate by WebReg. Students must officially withdraw from a course to avoid receiving a failing grade.

NEW STUDENTS

New students are given academic advising in their respective academic departments and enroll just prior to or at the beginning of their first quarter at UCSD.

Registration Receipt

Upon payment of fees in person, the Cashier's Office will provide a cash register receipt and will affix a validation sticker to the back of the Student Photo-Identification Card. Students who pay fees by mail may obtain the validation sticker from the Bursar's Office.

Student Photo-Identification Card

A validated Student Photo-Identification Card is the official ID for registered students and entitles the student to library privileges, a student health card, and use of other university facilities, as well as for purchasing tickets and/or admission to certain university events and voting in student body elections.

If the Student Photo-Identification Card is lost, students may obtain a duplicate at the Campus Card Services Office, 508 University Center.

Registration Procedures

Students are considered enrolled when they have requested at least one course and space in it has been reserved. Every effort will be made to enroll students in their preferred class sections. Students are not considered registered until they have both enrolled in classes and paid registration fees.

Payment of Registration Fees

Please refer to the "Payment of Registration Fees" section in the "Undergraduate Registration" portion of this catalog or the quarterly *Schedule of Classes* which outlines procedures for payment of registration fees.

Note to Fellowship, Scholarship, or Traineeship Holders:

The first billing statement will be sent to the major department, group, or school about one month prior to the start of each quarter. Fees and tuition awarded to pay registration fees will be credited to the graduate student's account and appear on the statement as a payment or credit. Each award recipient should carefully check the amounts listed on the statement against the graduate award letter and contact the Office of Graduate Studies immediately at (858) 534-6464 if there is a discrepancy. Graduate students with partial fee and/or tuition awards will be required to pay the balance by the fee deadline to complete their registration.

Fellowship, scholarship, or traineeship holders must enroll in and maintain full-time enrollment status (at least twelve units per quarter).

Note to Students on Academic Titles:

Students appointed 25 percent time or more as graduate student researchers on the tuition and fee remission program will have the amount of their required tuition/fees credited to their account prior to the beginning of the quarter. This payment will also appear on the student's university billing statement.

Students appointed 25 percent time or more as teaching assistants, associates, and readers or, tutors guaranteed by the hiring department to work at least 110 hours (25 percent) for the quarter will have partial fee remission (including remission of the health insurance fee) credited to their university account prior to the beginning of the quarter. Students who are readers and/or tutors who are not guaranteed 25 percent time at the beginning of the quarter, but subsequently work 110 hours or more, are issued refunds for partial fee remission at the end of the quarter.

Teaching assistants appointed 25 percent time or more are eligible to apply for the TA Fee Deferment program. Under this program, the balance of resident fees (but not tuition) is deducted from the second and third check each quarter.

During the fall quarter only, teaching assistants and graduate student researchers appointed 25 percent time or more may be eligible to apply for the TA/RA Loan program.

For additional information, contact your graduate department or the Office of Graduate Studies and Research.

Full-time graduate study and support requires enrollment in a minimum of twelve units each quarter.

Continuous Registration

All graduate students are required to be registered each quarter until all degree requirements have been completed, including filing of the thesis or dissertation and the final examination, or to be on an approved leave of absence.

A student who fails to register or to file an approved leave of absence form by the registrar's deadline date (no later than the end of the second week each quarter) will be assumed to be withdrawn from UCSD and will be dropped from the official register of graduate students. In addition, all outstanding Incomplete grades, and NRs assigned by the registrar, will lapse to F's or U's unless cleared by the end of the current quarter. A student who is on leave of absence or who has withdrawn from the university is not entitled to withdraw books from the library or to use other university facilities or faculty time. A student who is withdrawn must petition for readmission to resume study at a later date, pay the nonrefundable readmission fee, and be consid-

ered for readmission with all others requesting admission to that quarter.

Ph.D. degree candidacy will lapse for graduate students who fail to register and are not granted a formal leave of absence. To be reinstated to candidacy, a graduate student must be readmitted, enroll and register, be readvanced to candidacy, and pay the candidacy fee.

Late Registration/Deadline and Penalty Fees

Students will be assessed late fees if not enrolled and registered by the registrar's published deadlines outlined in this catalog and the quarterly *Schedule of Classes.* Please refer to the "Graduate Admission Information and Enrollment Deadlines" portion of this catalog or to the quarterly Schedule of Classes for additional information.

A student who has not completed registration (enrolled and paid fees) by the deadline for change of program **must petition for permission to register late and will pay late fees totalling $100,** regardless of the source of fees payment.

A student whose registration in classes is cancelled for non-payment of fees and seeks reinstatement will be assessed both the late enrollment ($50) and late registration fees ($50), currently totaling $100, regardless of the source of fees payment.

Students are advised to consult the quarterly Schedule of Classes for current deadline dates.

Changes in Course Selection

Add/Drop Cards reflecting changes in class enrollment must be filed with the Office of the Registrar in order for the student to receive credit for added courses and be relieved of responsibility for dropped courses.

Add/Drop Cards must be completed in full and include correct course information and course codes as listed in the current *Schedule of Classes.*

After enrolling in courses, a graduate student may add courses, change sections of a given course, or change grading options up to the end of the second week of instruction without fee by completing an Add/Drop Card available at the Office of the Registrar. Students may also use WebReg. Students in some programs must obtain approval of their graduate adviser or department. See *Schedule of Classes,* "Changes of Programs." Any requests to the dean of Graduate Studies for exception to this policy require written explanation and instructor verification of attendance/course work completion to date.

A graduate student may drop a class up to the end of the ninth week of classes by filing an Add/Drop Card with the registrar, **after** first notifying the instructor, and obtaining the approval of the graduate adviser or department and the dean of Graduate Studies. If the course is dropped before the end of the fourth week of classes, no course entry will appear on the student's transcript. Courses dropped after the end of the fourth week of instruction and before the end of the ninth week of instruction will remain on the transcript as permanent entries showing course number and title, and the registrar will assign a final grade of W, signifying Withdrawal.

Students may not drop courses after the end of the ninth week of instruction and will receive the earned grade or an Incomplete, if applicable. When a grade in a course has been assigned in accordance with the Academic Senate policy on Integrity of Scholarship, a student may not subsequently change that grade by dropping the course or withdrawing from the university.

Enrollment Limits

A full-time graduate student in a regular quarter is expected to enroll in twelve units of upper-division or graduate course work with the exception that in the Graduate School of International Relations and Pacific Studies the normal course load is sixteen units. A student who wishes to take units in excess of these limits must obtain the approval of the graduate adviser or department chair.

Graduate students holding half-time appointments as graduate student researchers, teaching assistants, language assistants, readers, or other employment titles, or who receive support from traineeships, fellowships, or scholarships paid through the university or directly to the student, must enroll and register for twelve units of upper-division and/or graduate course work and research each quarter.

Teaching units (500 series) above the full-time program of twelve units are not considered an overload.

Graduate students approved for half-time study are limited to a maximum of six units of upper-division or graduate course work each quarter.

Changes of Name or Address

Students must file official change of name or address forms with the Office of the Registrar. Students are advised to also notify their major department, group, or school.

Leave of Absence/Extension

A student who discontinues graduate study with the intention of resuming during a later quarter, with department approval, files a formal Leave of Absence, Extension and/or Withdrawal form prior to leaving the campus. Graduate students must have completed at least one quarter of academic residence and be in good standing (GPA 3.0 minimum or equivalent and no more than eight units of U or F) to be granted a leave. All graduate students are limited to a maximum of three quarters of leave and/or withdrawal.

Prior to the end of the second week of instruction of the quarter in which the leave is to begin, a student must complete a Leave of Absence form and obtain required signatures as listed under the clearance section of the form, and the approvals of the graduate adviser, chair of the (major) department, group, or school, and dean of Graduate Studies. If a student has registered, paid fees and enrolled for the quarter in which a leave is being requested, the validation sticker will be removed from the Photo-Identification Card; **fee refund will be subject to the refund schedule published in the quarterly Schedule of Classes (see section on "Withdrawal").** A graduate student who enrolled in classes before requesting a Leave of Absence must also request a withdrawal from course work for the quarter of leave to avoid paying fees for that quarter. Graduate students may request an extension of an approved leave prior to the expiration of the leave, up to the maximum of three quarters in all degree programs. For an extension of an approved leave, the student must complete a new leave of absence form and obtain the signatures of the graduate adviser, chair of (major) department, housing, and dean of graduate studies.

PARENTING LEAVE

A graduate student who is bearing a child, who has primary responsibility for the care of an infant immediately following birth, a child under the age of five, or adoption of a child under age five, and is in good academic standing will be granted, on request, a one-quarter extension of

all unexpired Ph.D. time limits. During the quarter in which childbirth or adoption occurs, the graduate student may choose one of the following registration options:

1. continue registering as a full-time graduate student and retain eligibility for support
2. reduce to part-time status (less than twelve units) and be eligible for up to 25 percent time employment on campus
3. take a leave of absence

After the quarter in which childbirth or adoption occurs, a graduate student who has primary responsibility for caring for a child up to the age of five will be granted, on request, a leave of absence for the purpose of caring for the child for a maximum of two quarters (or three quarters, if a one-quarter extension has not been granted for the quarter in which childbirth or adoption occurred).

The total amount of time for which graduate students may receive extensions of time limits for parenting or childbearing may not exceed three quarters in a graduate student's career at UCSD. Approved leaves for childbearing and parenting will not count in the three-quarter leave limit available to all graduate students.

A student who has a long-term loan is considered to be out of school while on a leave of absence and **must set up an exit interview with the Loan Records Office before leaving the campus.** Since rules and regulations pertaining to such loans are complex, it is to the student's advantage to determine loan requirements prior to seeking a leave of absence.

A student on leave of absence may not (1) be employed by UCSD, UCSD Medical Center or UC Extension, or hold a fellowship, traineeship, or similar appointment administered by the university, (2) use university facilities, (3) complete a qualifying examination for advancement to candidacy, or (4) place demands on faculty, including discussion of thesis or dissertation work, either directly or by correspondence, during the period of leave.

A student may remain in student housing while on an approved leave of absence providing he or she has been a full-time student (twelve units or more) for three consecutive quarters immediately prior to the leave of absence and is eligible for university housing.

Students must return all borrowed library material if requesting a leave of absence or withdrawing.

Any student on an approved Leave of Absence must contact their major department to be reinstated and cleared for enrollment and registration.

A new Statement of Legal Residence is required for all graduate students **returning from a leave of absence of two quarters or more.**

Withdrawal

A student withdrawing from the university must obtain a Leave of Absence, Extension and/or Withdrawal form and secure appropriate signatures. The approved form must be filed with the Office of Graduate Studies and Research and the validation sticker removed from the Photo-Identification Card.

Students who withdraw during the first thirty-five days of instruction will receive refunds of fees in proportion to the number of *elapsed calendar days since the first day of instruction.* **The date of withdrawal used in calculating the refund shall be the date on which the approved notice of withdrawal is submitted to the Office of Graduate Studies and Research.**

A registered student who stops attending classes and fails to file a Leave of Absence, Extension, and/or Withdrawal form will receive a grade of F or U in each course, thus jeopardizing eligibility for readmission.

Return of Title IV Federal Student Aid

Financial aid recipients may be required to return some or all of their aid at the time of withdrawal. This requirement applies only to undergraduate students who withdraw prior to completing 60 percent of the quarter. Questions about financial aid repayment should be directed to Student Financial Services Office.

Bar from Registration/Nonacademic

After suitable warning, a student may be barred from further registration for a variety of nonacademic reasons, including failure to comply with official notices, to settle financial obligations when due, to provide final undergraduate transcripts, or other related matters.

Bar from Registration/Academic

Academic disqualification is determined by the dean of Graduate Studies in consultation with the student's department, and normally relates to: unsatisfactory academic performance, e.g., failure to maintain a grade-point average of 3.0 or better; failure to meet departmental criteria of performance; failure to advance to candidacy or complete the degree within established time limits; accumulation of more than eight units of F or U grades; or failure to comply with conditions set at the time of admission to a graduate degree program.

Academic Services and Programs

Academic Advising

The college academic advising offices and the academic departments are the designated campus units responsible for providing official academic advice and direction to undergraduate students. The college academic advising offices and departments have primary responsibility for academic advice and services that assist new and continuing students to develop educational plans and course schedules which are compatible with their interests, academic preparation, and educational and career goals.

COLLEGE ADVISING OFFICES

Revelle College, Office of the Provost, Revelle College, Mail Code 0321, (858) 534-3490

John Muir College, 2126 H&SS, Mail Code 0106, (858) 534-3580

Thurgood Marshall College, Admin. Building, Mail Code 0509, (858) 534-4110

Earl Warren College, Literature Building, Second Floor, Mail Code 0422, (858) 534-4350

Eleanor Roosevelt College, Admin. Building, Mail Code 0546, (858) 534-9864

Sixth College, Multipurpose Building, Main Office, Mail Code 0054, (858) 822-5955

Specifically, the college academic advisers conduct academic orientation/enrollment programs for all new students and advise new and continuing students about college general-education and graduation requirements. The advising staff of each college provides general academic and curricular information, clarifies academic rules and regulations, reviews all aspects of academic probation, monitors academic progress, assists students with decision-making strategies, and provides information about major prerequisites as well as criteria for departments that screen students. In conjunction with the academic departments and the Office of the Registrar, the advising offices certify graduation and generally facilitate students' academic adjustment to the university.

Moreover, academic advisers are available to counsel students about educational alternatives, selection of courses and majors, program changes, new academic opportunities, and special programs such as exchange programs, honors programs, outreach programs, etc.

See your college academic adviser for assistance with academic concerns or referral to appropriate academic support units.

Academic Computing Services

User Support Office
2113 Applied Physics and Mathematics, Muir College
(858) 534-4060

Administration and Director's Office
1141–1161 AP&M
(858) 534-4050
http://acs.ucsd.edu/

Academic Computing Services (ACS) plays a variety of roles relating to computing at UCSD. Among these are support of instructional computing, management of the main academic computer network, hardware repair, and administration of site agreements for the licensing and distribution of software.

Student Computing

The main function of ACS is to provide facilities for instructional computing. In addition to timesharing systems ACS maintains over 1800 workstations of various types available across campus. These include Windows, Macintosh, and UNIX workstations located in public areas, computer labs, and libraries.

A wide variety of software is available on various platforms, including general word processing, spread sheet and Web site design applications; compilers and program development tools; special purpose packages for electronic design, mechanical engineering, animation, statistics, genetic studies, and symbolic mathematics.

Beyond instructional computing, ACS provides facilities to students for popular activities such as electronic mail and other network-based communications. Incoming students receive personal account information at Orientation.

ACS has student assistants who are available at scheduled times in computer labs to help students use the facilities. These assistants complement other forms of support such as guidance from instructors and teaching assistants, and online documentation.

ACS provides both instructional and extracurricular computing services to students through a single "personalized" account. The goal is to make computing more convenient and flexible, and to allow students to pursue academic computing interests on their own initiative.

Network Management

The Office of Network Operations is a branch of ACS. Network Operations plays a major role in the management of campus computer networks and services, including the student residential network (ResNet), the campus wireless network, a dial-in modem service, Web proxy, Internet connectivity, Active Directory, the campus email gateway, and an email registry of campus members and affiliates.

Students can obtain more information about ResNet at http://resnet.ucsd.edu and can obtain support at that Web site or by calling (858) 822-2800.

Wireless access is available in most campus buildings and common spaces. A UCSD network login and a wireless network card are required to attach to the network. For more information, students should see http://resnet.ucsd.edu (Wireless Access).

To use campus dial-in lines, UCSD users must sign up and pay for dial-in service. Users will also need a network security username and password. Incoming students have these issued automatically; others may register by bringing a picture ID to the Office of Network Operations in room 2113 AP&M. Signups for dial-in service may be made at this location or via the Web at http://www-no.ucsd.edu.

Network Operations can assist you in connecting your computer to make use of Internet services using electronic mail and mailing lists. Information about many of these services can be found on the World Wide Web at http://www-no.ucsd.edu.

Network Operations Access Services is located in 2113 AP&M. The Network Operations technical help line is (858) 534-1857 or userserv@ucsd.edu. Dial-in billing questions may be directed to (858) 822-2900.

Software Licensing and Distribution
http://software.ucsd.edu

ACS manages agreements with several software vendors under which UCSD departments are able to license and obtain software at a discount.

Desktop Support
(858) 822-0047
http://desktop.ucsd.edu

The ACS Desktop Support Program provides assistance on a fee-for-service basis to UCSD departments, as well as to residence hall customers. Services include installation, configuration, and repair of Windows and Macintosh workstations; Windows and Novell Netware server support. For more information, email desktop@ucsd.edu.

Instructional WWW Development Center
(858) 822-3315
http://iwdc.ucsd.edu
http://courses.ucsd.edu

ACS' Instructional WWW Development Center (IWDC) provides instructional Web site creation, development assistance, and training for faculty. The IWDC offers more extensive services on a recharge basis, including departmental and UCSD-affiliated group Web hosting and fee-for-service Web-related programming. For more information, email iwdc@ucsd.edu.

Computer Repair and Installation
(858) 534-4057
http://cri.ucsd.edu

Computer Repair and Installation provides computer and printer maintenance and repair for over 1800 workstations and printers in various labs across campus including network installation and support. ACS Computer Repair and Installation also provides the UCSD community with expert hardware repair and upgrade support. They have professional certified full-time staff with extensive combined repair service and upgrade support. They repair and upgrade most computer and printer products and are available for network installation and repair. Their goal is to provide UCSD faculty, staff, and students with an efficient and cost effective solution for all their computing needs.

Other ACS Functions

ACS operates one UNIX system which is available on a fee-for-service (recharge) basis. This system is primarily used by UCSD academic departments for electronic mail and administrative purposes. ACS also has a service to distribute campus administrative data to academic departments.

Academic Enrichment Programs/Student Educational Advancement/Student Affairs

University Center 411
Mail code 0074
(858) 534-1774

Dedicated to providing UCSD undergraduates with research and other academic enrichment experiences beyond the classroom.

PROGRAM DESCRIPTIONS:

Faculty Mentor Program

The Faculty Mentor Program offers valuable research experience to juniors and seniors who want to prepare for graduate or professional school. Participants work as research assistants to UCSD faculty members for at least ten hours per week for two quarters. Students receive four units of 199 independent study credit each quarter, attend seminars on how to write and present a research paper, and receive graduate school and fellowship information. At the conclusion of the program, students present their research papers at the annual Faculty Mentor Program Research Symposium.

Health and Medical Professions Preparation Program

HMP^3 assists students in their undergraduate preparation for careers in the health professions. These include medicine, dentistry, pharmacy, veterinary, public health, nursing, and others. The program provides students with activities and resources including preprofessional seminars, review course scholarships, volunteer placement information, peer discussion series, and mentorship opportunities. Participants have access to a library of information on summer and postbaccalaureate programs, upcoming conferences, health professional schools, etc. The program also serves as a clearinghouse for information about other campus resources available to the prehealth professional student.

Summer Research Program

The Summer Research Program offers a paid full-time research experience to students who are interested in preparing for careers in research or university teaching. As research assistants, students work on their faculty mentor's projects for at least thirty hours per week. Students are trained in research skills, how to write and present a research proposal or paper, and how to prepare for the Graduate Record Examination (GRE). At the conclusion of the program, students present their papers at the annual UCSD Summer Research Conference.

McNair Program

The McNair Program is a U.S. Department of Education initiative designed to serve low-income, first-generation college students and underrepresented minorities who are interested in pursuing a Ph.D. It is a rigorous one-year program of scholarly activities that includes participation in the Faculty Mentor Program and the Summer Research Program. In addition, participants receive training in how to write and present a scholarly paper, preparation for the GRE, and assistance with the graduate school application process. All participants have the opportunity to present a paper at a minimum of two research conferences.

CAMP Science Program

The CAMP Science Program is funded by the California Louis Stokes Alliance for Minority Participation in Science, Engineering and Mathematics (CAMP) grant from the National Science Foundation. This program is designed to provide support and advancement opportunities to ethnically underrepresented students who are seeking bachelor's degrees in the sciences, mathematics, engineering, and technology. Participants in this program may attend informational and skill-building workshops, tour UCSD laboratories, local companies and research institutes, attend local and/or national conferences, participate in a book exchange program, attend study break dinners and coffee with faculty events, and are eligible to earn book scholarships. In addition, students are encouraged to participate in academic year and/or summer research, and pursue graduate school preparation.

Computer Science, Engineering, and Mathematics Scholarship (CSEMS)

The Computer Science, Engineering, and Mathematics Scholarship (CSEMS) is a two- or four-year program providing research and outreach opportunities to low-income, academically talented students in the Jacobs School of Engineering and the Department of Mathematics. The

chief objectives of the program are to promote full-time enrollment and degree completion.

University of California Leadership Excellence through Advanced Degrees (UC LEADS)

The University of California Leadership Excellence through Advanced Degrees (UC LEADS) is a selective two-year research program for undergraduates majoring in science, engineering, or mathematics. Students receive stipend support for two summers of research and support for travel to conferences, membership in professional associations, and other research-related activities. UC LEADS participants work on well-defined projects under the supervision of faculty mentors. The UC LEADS experience will prepare students to be competitive applicants for admission to doctoral programs, preferably within the UC system, and eventually to assume leadership positions in society.

Undergraduate Research Conference

The UCSD Undergraduate Research Conference is an annual event where more than 100 students who have written outstanding research papers are invited to present their research. Invitation is by faculty nomination. Students present their papers at small roundtable discussions led by a faculty presider.

Education Abroad Program (EAP)

International Center (corner of Gilman Drive and Library Walk)
Mail code 0018
(858) 534-1123
http://www.ucsd.edu/icenter

The Education Abroad Program provides students enrolled at the University of California an opportunity for an intercultural experience at UC centers located in Australia/New Zealand, Africa, Asia, Europe, Latin America, and North America, while allowing normal progress toward a degree.

The program is described in detail in the "Courses, Curricula, and Programs of Instruction" section of this catalog under the "Education Abroad" heading.

International Scholar Adviser

International Center (corner of Gilman Drive and Library Walk)
Mail code 0018
(858) 534-3730
http://www.ucsd.edu/icenter

The international scholar adviser provides assistance to UCSD's international faculty, researchers, and post-doctoral fellows, in the areas of immigration and visa matters, financial, health, and personal issues. The adviser also informs campus departments about regulations and documentation pertaining to international visitors. The Friends of the International Center provide additional hospitality services and programs to international scholars and their family members.

International Student Adviser

International Center (corner of Gilman Drive and Library Walk)
Mail code 0018
(858) 534-3730
http://www.ucsd.edu/icenter

The international student adviser provides assistance to UCSD's nonimmigrant undergraduate and graduate international students, including advising on immigration, financial, health, and personal matters. The international student adviser also coordinates campus programs such as orientation and check-in for new students, and provides support to international student organizations.

OASIS (Office of Academic Support and Instructional Services)

3rd Floor, Center Hall
Mail code 0045
(858) 534–3760

The Office of Academic Support and Instructional Services (OASIS) provides a variety of services to maximize student performance and retention at the University of California, San Diego.

MISSION

The mission of OASIS is to assist UCSD students in reaching their full potential by developing an appreciation for learning. OASIS strives to facilitate learning by concentrating on learners, and supporting their academic, intellectual, and personal growth at UCSD. Services are designed to assist students to develop the academic skills to excel in their subject matter at UCSD and eventually in graduate or professional school.

SERVICES

A description of services offered each quarter is available at the OASIS office on the third floor of Center Hall. All students in any of the five colleges are eligible for OASIS services. Underrepresented students are strongly encouraged to use OASIS services in order to maximize their valuable contribution to UCSD.

The Academic Transition Program

The Academic Transition Program coordinates a residential Summer Bridge Program and professional and academic transition counseling for freshmen at UCSD. A variety of academic support and personal development activities are offered to facilitate a smooth transition from high school to UCSD's fast-paced quarter system.

The Math and Science Tutorial Program

The Math and Science Tutorial Program is designed to support students in their desire to excel in mathematics and science courses. The program offers workshops for mathematics, physics, biology, chemistry, engineering, and economics courses.

The Language Program

Students whose first language is not English are assisted in the Language Program. In addition, students doing academic work in Spanish, French, and other foreign languages can participate in Language Program tutorial sessions conducted by bilingual staff. Language Program services include group or individual intensive reading and writing sessions, workshops on grammar and mechanics, and individual conferences where feedback on drafts of writing in the languages is provided.

The Student Support Services Program

The Student Support Services Program is a comprehensive U.S. Department of Education initiative designed to support the academic efforts of participating students. The program seeks to maximize the achievement and development of eligible students, particularly those who have been traditionally underrepresented due to race or ethnicity, gender, disability, and/or economic status. Student Support Services also strives to enhance each program participant's eligibility for entrance to graduate and professional schools and to foster an institutional climate which will support the success of program participants. The program consists of intensive individual tutoring, professional counseling, peer mentoring, and various cultural enrichment activities.

Study Management Program

The Study Management program equips students with strategies and techniques for more efficient and enjoyable learning. Study strategies

are provided for freshmen, transfer, and continuing UCSD students with a focus on undergraduates. Study Management Program staff assist students in developing and/or refining skills in areas including time management, active listening, note taking techniques, forming/conducting study groups, concentration/memory development, active reading techniques, test preparation, and exam strategies. Services are provided through workshops and individual conferences with peer tutors or professional staff.

The Research and Evaluation Program

Administered jointly by the Office of the Assistant Vice Chancellor for Student Educational Advancement and OASIS, the Research and Evaluation Program maintains data about students using OASIS services and conducts research projects which examine a particular problem or issue related to OASIS services. In addition, longitudinal studies of the effect of services on student users are undertaken, such as follow-up studies on the retention of Summer Bridge students. Evaluation activities that are essential to the provision of effective services to students are also the responsibility of this program.

TEP 116–The Psychology of Teaching

OASIS offers a four-unit, upper-division course that provides instruction to all OASIS student staff members on the teaching-learning process. The course is designed to balance lectures and readings with supervised, practical experience.

Office of International Education

International Center
(corner of Gilman Drive and Library Walk)
Mail code 0018
(858) 534-3730
http://www.ucsd.edu/icenter

The International Center houses the offices of the international student and scholar advisers and advisers for the Education Abroad Program and the Opportunities Abroad Program, as well as the Programs Abroad Resource Library. In addition, the center has American English tutors available to international students, scholars and spouses, and houses the office of all the community volunteers who provide a wealth of hospitality programs to international students, scholars, and spouses, including language tutors and host families.

The staff and community volunteers as well as the International Club also sponsor a variety of international/intercultural programs and services for all members of the UCSD community. These include lectures, language exchanges, linkages with international faculty specialists, and weekly international cafe lunches which are open to the entire campus.

Opportunities Abroad Program (OAP)

International Center (corner of Gilman Drive and Library Walk)
Mail code 0018
(858) 534-1123
http://www.ucsd.edu/icenter

The Opportunities Abroad Program (housed in the Programs Abroad Office, along with the Education Abroad Program) facilitates participation in programs abroad sponsored by institutions other than the University of California. OAP offers a resource library and advisory services enabling UCSD students to choose study, work, internship, and educational travel abroad programs best suited to their individual needs. Programs are available for students in all majors, for periods ranging from a quarter to a full academic year. Students participating in approved academic programs abroad transfer credit back to UCSD. They receive assistance with this as well as application, financial aid, predeparture, and re-entry issues through the OAP. Special study abroad scholarships are also available. Students participating in non-academic programs generally do not earn credit but in some instances may arrange to do so, for example, through the Academic Internship Program.

San Diego Supercomputer Center (SDSC)

Mail code 0505
(858) 534-5000 (general inquiries)
(858) 534-5100
www.sdsc.edu

The San Diego Supercomputer Center (SDSC) is an organized research unit of UCSD focusing on computational science and engineering research. The mission of its staff of 400 scientists, software developers, and research, operations, and user support staff is to innovate, develop, and deploy technology that enables and facilitates the next generation of scientific advances. Since its inception in 1985, SDSC has served more than 10,000 researchers at 300 academic, government, and industrial institutions in the United States and abroad. These researchers use SDSC high performance computing resources to study problems in many scientific areas and to investigate new paradigms of computing. Areas of effort include:

- capability computing—providing computing and information resources of exceptional capability to enable scientific discovery at scales not previously achievable
- discovery environments—developing and deploying integrated, easy-to-use computational environments to foster scientific discovery in traditional and emerging disciplines

SDSC was founded in 1985 with a $170 million grant from the National Science Foundation's Supercomputer Centers program. In October 1997, SDSC extended its leadership in computational science and engineering to form the National Partnership for Advanced Computational Infrastructure (NPACI), teaming with approximately 40 university partners around the country. Since 2001, NPACI collaborated with four partners—the National Center for Supercomputing Applications at the University of Illinois, Argonne National Laboratory, and the Center for Advanced Computing Research at the California Institute of Technology, and the Pittsburgh Supercomputing Center—on an $88 million, multi-year effort to build the TeraGrid, (http://www.teragrid.org), which is the world's most powerful and most comprehensive, distributed computational infrastructure for open scientific research.

Through the NPACI and TeraGrid programs and other high performance computing initiatives, SDSC engages in:

- conducting and fostering scientific research (see "Research at UCSD")
- broadening the impact of computational science and engineering through education, outreach, and training activities
- expanding the existing infrastructure to data-intensive computing that enables management, curation, analysis, and visualization of huge amounts of data
- integrating high performance computational technology into commercial research, design, and manufacturing processes through partnerships with industry.

Current technology thrusts for SDSC and its NPACI partners include grid computing, programming tools and environments, data-intensive

computing, and interaction environments. Applications thrusts are molecular science, neuroscience, Earth systems science, and engineering. Each project teams applications and technology developers, and involves representatives from multiple partner sites. This infrastructure is being developed further through partnerships with computer vendors and companies with high-performance computing applications.

The demanding research problems that are being tackled by scientists using SDSC's high performance computing power include: understanding the origin of the universe, modeling supramolecules of more than one million atoms, determining chemical reaction rates, designing new materials, simulating the human nervous system, modeling water and pollutant transport underground, and modeling climate and predicting storms.

COMPUTATIONAL RESOURCES

NPACI funding along with grants from the NSF, NIH, and other sources keep SDSC's computational resources at the state of the art and support a variety of software development projects led by faculty and staff members. SDSC computational resources include the following:

- DataStar is a 10.4 teraflops supercomputer with total shared memory of 4 terabytes. DataStar is among the 20 top supercomputers in the world and targeted at large-scale, data intensive scientific research applications.
- Under the TeraGrid program, SDSC operates two large IA-64 based clusters with a total peak speed of 4 teraflops. These systems are part of the national TeraGrid system with our partners, which is connected to the other national TeraGrid partners by a 40 Gbps cross-country backbone network.
- SDSC continues to operate Blue Horizon, a 1,152-processor IBM SP capable of 1.7 trillion calculations per second.
- SDSC has more than 540 terabytes of online disk storage as well as 6 petabytes of archival tape storage, one of the world's largest data storage installations.
- Meteor is a Linux cluster with 200 Intel processors, the biggest Linux/Intel cluster on campus. Meteor is devoted to UCSD research.
- Sun Enterprise SunFire 15000 is a 72-processor system with 288 GB memory attached to SDSC's storage area network.
- RockStar is a 128-node Sun Fire V60x supercomputer used for cluster management research.
- A visualization laboratory features advanced display systems, facilities for producing solid 3-D models of geometric data sets, and a suite for producing professional-quality videotapes of visualized research results.

RESEARCH ALLOCATIONS, RESOURCES, AND SUPPORT

UCSD faculty and students are eligible for allocations of time on SDSC's supercomputers and other NPACI resources. Undergraduate and graduate students may obtain time through applications submitted by their advisers. Such allocations should support research projects or class curricula. All proposed projects must be nonproprietary. To apply for time, applications must be submitted at least sixty days prior to the quarter in which the allocation is to begin (quarters begin January 1, April 1, July 1, and October 1; allocations are typically made for twelve-month periods). Applications for relatively small amounts of time can be submitted any time and are reviewed shortly after receipt (www.npaci.edu/Allocations).

The Academic Associates Program, formerly known as the Block Grant Program, was started in 1995 to give University of California (UC) researchers access to computational resources at the San Diego Supercomputer Center (SDSC). Any UC researcher can request supercomputing time online at http://www.sdsc.edu/aap.html. Resources include free supercomputer time, high-performance storage, software and technical support including training and workshops. Administrators are available at each UC campus to help researchers with any questions or problems they may have regarding the Academic Associates Program. For more information, contact Natasha Balac, AAP program liaison, at natashab@sdsc.edu or (858) 534-5161.

Accounts also are available on workstations in SDSC's VisLab to any academic researcher, undergraduate, or graduate student. To apply, fill out the SDSC Workstation Access Request form, which is available from Rachel Chrisman, chrisman@sdsc.edu, (858) 534-5025. Each form is reviewed to ensure that the goals of the applicant are consistent with the mission of SDSC. This review process takes two to four weeks.

Researchers with access to SDSC's resources are supported by SDSC's consulting staff and other staff at the University of Texas and the University of Michigan. SDSC consultants are available through the Web (www.npaci.edu/Consult) 5 a.m.–5 p.m. (Pacific Time), Monday–Friday. Researchers and students with accounts are welcome to attend SDSC's periodic training workshops, which usually are free (www.npaci.edu/Training).

ADDITIONAL OPPORTUNITIES FOR THE CAMPUS COMMUNITY

SDSC offers the following additional opportunities for UCSD faculty, staff, and students:

- Access to high-performance computers through UCSD classes—Many UCSD classes make use of the SDSC resources, providing a hands-on way to learn about high-performance computing. Check class listings for biology, chemistry and biochemistry, computer science and engineering, mechanical and aerospace engineering, Scripps Institution of Oceanography, and UCSD Extension.
- Seminars—SDSC hosts a wide variety of seminars on topics of interest to the high-performance computing and computational science community. Most are open to the UCSD community (www.sdsc.edu/CSSS).
- Publications—SDSC publishes a science magazine, EnVision; a monthly electronic newsletter, and other documents and reports. All are free to the campus community. For subscriptions, please contact Gretchen Rauen, gretchen@sdsc.edu, (858) 534-5111.
- Internships—Students can obtain work experience at SDSC for course credit through the academic internship program at UCSD. SDSC has internships in systems software development, computational science research, visualization and applications programming, scientific and technical writing, and curriculum development. For more information, contact Rozeanne Steckler, steckler@sdsc.edu, (858) 534-5122.
- Part-time and full-time employment—SDSC posts part-time and full-time professional job openings at the UCSD Career Services Center. Typical jobs are in research programming support, scientific writing, computer operations, and reception work.
- Tours—SDSC offers a 45-minute tour for the public conducted by the operations department at 4 p.m. the first Friday of every month. Reservations are recommended and can be made by contacting the reception desk, (858)

534-5000. Special-interest tours for education and industry groups can be arranged by contacting April Bailey at tours@sdsc.edu.

Additional information about SDSC can be obtained from the SDSC and NPACI Web sites (www.sdsc.edu and www.npaci.edu) or by calling SDSC at (858) 534-5000.

UCSD Extension–Extended Studies and Public Programs

extension.ucsd.edu
UCSD Campus
9600 North Torrey Pines Road
Mail code 1076H
(858) 534-3400
email: unex-reg@ucsd.edu
fax: (858) 534-8527

UCSD Extension is an innovator in providing lifelong learning solutions for the San Diego community and abroad. Through networking forums, technology-focused programs, and cutting-edge education, UCSD Extension has inspired an unstoppable creative community; provided early awareness of emerging business trends; and educated one of the most competitive workforces in the world.

Course work may be pursued year-round at three San Diego locations, online, and overseas. Choose from a variety of learning formats including individual classes, certificates, signature programs, lecture series, workshops, institutes, and conferences. The majority of Extension's students hold bachelor's degrees while an increasing number have advanced degrees including M.S., Ph.D., J.D,. and M.D. UCSD students, in particular, find Extension's "real-world" curricula highly valuable in supplementing their studies.

Complementing its state-of-the-art classes, UCSD Extension supports a series of strategic programs designed to improve the region's economy through entrepreneurial development, public forums, and civic roundtables. By tapping into Extension's many networks, participants quickly benefit from local innovation and global reach.

Our resources are yours: Explore our website to learn more.

CONTINUING EDUCATION: AREAS OF STUDY — EXTENSION.UCSD.EDU

ART, MUSIC, AND PHOTOGRAPHY

Courses and workshops offered in Abstract Painting, Book Arts, Drawing, Black and White Photography, Digital Photography, Singing, Guitar, and Piano. For more information, call (858) 964-1051.

BASIC SCIENCES AND MATH

Courses offered in Biochemistry, Molecular Biology, Organic Chemistry, Biostatistics, Cancer Biology, Neurobiology, Computer Science, Ocean Engineering, and Calculus. For more information, call (858) 964-1347.

BEHAVIORAL HEALTH AND COUNSELING

Courses and workshops offered in Alcohol and Drug Abuse Counseling, Geriatric Activity Programs, Gerontological Information and Assistance, Art Therapy, Play Therapy, and Multicultural Counseling. For more information, call (858) 964-1070.

BIOTECH AND PHARMECEUTICALS

Courses and intensive programs offered in Computer Aided Drug Design, Medicinal Chemistry, Computational Biology and Bioinformatics, Drug Discovery and Development, Regulatory Affairs, Quality Assurance and Control, Biotechnology Manufacturing, Proteomics, Microarrays, and Biomedical Product Development. For more information, call (858) 964-1347.

BUSINESS

Courses offered in Accounting, Business Management, Communication, Enterprise Management, Facilities Management, Finance, Fraud Examination, Fundraising and Development, Human Resources Management, International Business, Marketing, Meeting Management, Project Management, Purchasing and Supply Management, Real Estate, and Urban Planning. If you are a full time student, consider the Undergraduate Certificate in Business or the graduate-level certificate in Technology Business Creation. For more information, call (858) 882-8010.

DIGITAL ARTS AND MEDIA

Courses offered in Computer-Aided Design, Graphic Design, Internet and Web Technologies including XHTML, JavaScript, PHP and PERL, and Multimedia. An eighteen-month daytime program is also available focusing on digital design, web development, multimedia, marketing practices, and portfolio creation. Job placement and internships available. For more information, call (858) 622-5739.

EDUCATION

State-approved credential programs offered in Adult Education/Vocational Education, as well as state-approved certificate programs in Cross-Cultural Language and Academic Development (CLAD), and Education of the Gifted and Talented (GATE). Certificate programs and supplementary authorizations are offered for Teaching English as a Second Language (TESL) and Educational Technologies. Additional certificates are Community College Instructor, Educational Therapy, Developmentally Appropriate Practices, and Teaching Mathematics. For more information, call (858) 964-1063.

ENGINEERING

Courses offered in Communications Engineering, Wireless Communications, RF Engineering, Network Technologies, Embedded Computer Engineering, Systems Engineering, VLSI Digital Design, Biomedical Product Development, CDMA Engineering, Lean Enterprise, Open Source Engineering, Thermoplastic Injection Molding, SensorNets and Six-Sigma Black Belt. For more information, call (858) 605-0110.

ENGLISH LANGUAGE PROGRAMS (FOR INTERNATIONAL STUDENTS)

Courses and workshops offered in Academic Writing, Intermediate Business Writing for Non-Native Speakers, Conversation Improvement, Grammar/Vocabulary Building, Pronunciation & Fluency and Accent Reduction. For more information, call (858) 534-0049.

FOREIGN LANGUAGES AND TRAVEL STUDY

Courses offered in Arabic, Chinese (Mandarin), French, German, Italian, Japanese, Korean, Persian, Portuguese, Russian, and Spanish, including Translation and Interpretation. For those seeking to "live the language," students may travel abroad for language immersion programs in more than five countries. For more information, call (858) 964-1051.

HEALTHCARE

Courses offered in Clinical Trials, Medical Procedural Coding, Emergency Department Nursing, Childbirth Education, Diabetes Education, Case Management, Legal Nurse Consulting, Fitness Instruction, and Exercise Science. For more information, call (858) 964-1010.

HUMANITIES AND WRITING

Courses offered in History, Politics and Culture, Conflicts of Religion with Science, Screenwriting, Writing the Short Story, Expository Writing in the Workplace, Information Design for Critical Thinkers, Copyediting, Feature Writing, and Technical Communication. Every quarter, The Revelle Forum at The Neurosciences Institute offers an innovative series of lectures, readings, and public interviews with leading figures from the worlds of arts and culture, literature, current events, and the media. Speakers have included David Rockefeller, Calvin Trillin, Dava Sobel, and Scott Turow. For more information, call (858) 964-1051.

LAW

Courses offered in Bankruptcy Law, Domestic Relations Law, Civil Litigation, Evidence Law, California Litigation Procedures, Law Office Technology, Intellectual Property, and Professional Practice Administration. For more information, call (858) 882-8010.

LEADERSHIP AND MANAGEMENT DEVELOPMENT

Courses and workshops offered in Biotech Business Development, Business Plans, Financing a Start-Up, Validating Market Demand, Executive Knowledge Management, Organizational Dynamics, IT Governance, Business Process Optimization and ERP Essentials, Six Sigma and Lean Enterprise. Advanced programs for astute, broadly educated managers include the Executive Program for Scientists and Engineers (EPSE), The Leadership and Management Program for Technology Professionals (LAMP), Principals Executive Program (PEP), Healthcare Executive Leadership Program (HELP), CONNECT Entrepreneur Development, UCSD Athena, and the UCSD Summer School in Innovation and Entrepreneurship. For more information, call (858) 882-8010.

OCCUPATIONAL HEALTH AND SAFETY

Courses offered through the OSHA Training Institute in Occupational Safety in General Industry and Construction, Hazardous Materials, Respiratory Protection, Fall Arrest Systems, Industrial Hygiene, and more. A professional certificate in Occupational Health and Safety is also available. For more information, call (858) 605-0109.

TECHNOLOGY

Courses offered in Data Management and Analysis and IT and Software Engineering including Data Warehousing, Biological Database Design, Data Modeling, Oracle, Microsoft Access, Microsoft Certification, Networking, BioJava, Perl for Bioinformatics, C/C++, Java, Visual Basic, Security, Software Engineering, UNIX/Linux, Web Services, and .NET. For more information, call (858) 622-5740.

HOW TO ENROLL

Online: extension.ucsd.edu
By phone: (858) 534-3400

In person:
La Jolla
9600 N. Torrey Pines Road, Bldg. C
La Jolla, CA 92093
(858) 534-3400

North County
Carmel View Office Plaza
15373 Innovation Drive
Carmel Mountain Ranch, CA 92128
(858) 451-7474

Sorrento Mesa
AT&T Wireless Building
6925 Lusk Blvd.
San Diego, CA 92121
(858) 882-8000

Concurrent registration: Permits individuals who are not officially matriculated UCSD students to enroll for credit in regular UCSD courses. Offered on a space-available basis with the approval of the course instructors. For more information, call (858) 534-3400.

Complimentary enrollment: UCSD Extension offers a limited number of complimentary enrollments to full-time UCSD students who may enroll in one free course of up to $270 (students must pay anything over that amount) on a first-come, first-served basis. For more information, call (858) 534-3400.

PUBLIC PROGRAMS: In the Community

Academic Connections
www.academicconnections.ucsd.edu

Academic Connections provides students with access to the resources of a research university. This program gives motivated students the opportunity to explore different fields of study, pursue their interests, and better prepare for a university experience. A combination of summer residential programs, year-round academies, and distance education courses will extend the reach of the University, better serving the San Diego community and beyond.

Border Health Education Network
www.extension.ucsd.edu/borderhealth

The Border Health Education Network provides education and training services for healthcare professionals based in the binational California and Baja California region. The Border Health Education Network works closely with the San-Diego Tijuana Border Initiative, the UCSD School of Medicine and UCSD Medical Center, San Diego Dialogue, State of California Office of Border Health, as well as many other organizations, hospitals, and healthcare groups throughout the border region.

Global CONNECT
www.connect.org/globalconnect/

Global CONNECT is a dynamic collection of international organizations working together to develop high-technology and life science linkages. The network will extend partnering opportunities across national borders, offering globally minded entrepreneurs and firms the resources needed to accelerate technological- and science-based enterprises.

Helen Edison Lecture Series
www.helenedison.ucsd.edu

The Helen Edison Lecture Series presents free public lectures on issues advancing humanitarian purposes and objectives. Past speakers have included John Kenneth Galbraith, Naom Chomsky, Luis Valdez, Toni Morrison, Carlos Fuentes, and Robert McNamara.

San Diego Dialogue
www.sandiegodialogue.org

San Diego Dialogue advances solutions to our cross-border region's challenges in economy, environment, and equity. The goal is to improve this region's quality of life through cross-border development, smart growth, and school reform.

UCSD Civic Collaborative
www.ucsd-civic-collaborative.org

The UCSD Civic Collaborative is designed to encourage a two-way flow of knowledge between members of UCSD and the San Diego region. The collaborative sponsors forums, conferences, and informal gatherings to help UCSD researchers become more knowledgeable about San Diego and to direct their best thinking toward understanding and improving the quality of life.

UCSD CONNECT
www.connect.org

UCSD CONNECT is the globally recognized, university-based organization fostering entrepreneurship in the San Diego region by accelerating the growth of technology and life science-based companies. Part of UCSD, CONNECT offers valuable insight and expertise to San Diego's tech community by teaming up with the region's most prominent organizations and by partnering with world-class resources, such as the School of Medicine, Jacobs School of Engineering, San Diego Super Computer Center, and Scripps and Salk Institutes.

UCSD Economics Roundtable
www.econ.ucsd.edu/roundtable

The UCSD Economics Roundtable is a forum for more than 2,000 San Diego business and community leaders to exchange ideas and information with world class economists and financial experts. The UCSD Economics Roundtable has hosted several prominent guests including Ben Bernanke, Board of Governors of the Federal Reserve System, and Robert Shiller, professor of economics at Yale University.

UCSD Institute for Continued Learning (ICL)
www.icl.ucsd.edu

The Institute for Continued Learning (ICL) rekindles the zest for life for retired San Diego professionals. ICL is a membership organization that inspires conversations between interesting people about stimulating topics, offering twenty different programs each quarter. Subjects include archaeology, science, tai chi, computing, live musical performances, literature, foreign languages, and master courses and lectures from UCSD faculty members.

UCSD-TV
www.ucsd.tv

UCSD-TV, the only broadcast television station operated by the University of California, is an Emmy Award-winning, non-commercial station that extends the resources of the university to the greater San Diego community and partners extensively with regional civic, cultural and arts institutions in programming. UCSD-TV broadcasts on UHF Channel 35, Cox Communi-cations, and Time Warner Cable. Programs from UCSD-TV and other University of California campuses are broadcast nationwide on UCTV and on demand.

MORE ON UCSD EXTENSION

Also see UCSD Extended Studies and Public Programs under "Campus Resources."

The UCSD Libraries

http://www.ucsd.edu/libraries

The UCSD Libraries include the Arts Libraries (Art and Architecture Library, Film and Video Library, Music Library), the Biomedical Library, the Center for Library & Instructional Computing Services (CLICS), the Center for Magnetic Recording Research Library (CMRR), the International Relations and Pacific Studies Library, the Mandeville Special Collections Library, the Medical Center Library, the Science and Engineering Library, the Scripps Institution of Oceanography Library, and the Social Sciences and Humanities Library.

COMBINED UCSD LIBRARIES STATISTICS, 2003

Volumes	2,953,024
Periodical and other serial publications received	
Paper	17,711
Electronic	10,735
Graphic materials	339,084
Maps	220,701
Microforms	3,121,676
Audio and video materials	110,705
Slides and other pictorial items	316,233
Computer files	20,768

The Libraries serve as centers for study, reading, and scholarship at UCSD. Their collections and services are basic resources supporting undergraduate and graduate instructional programs, as well as advanced research. The library units are organized and staffed to meet these academic objectives. While each library may have varying rules, all are open to all members of the UCSD community.

Reference services are available at each of the campus libraries and are designed to assist students and faculty with their course needs and research activities. Through their Instruction and Outreach Programs, the Libraries offer campus users a variety of orientation and instructional opportunities. The Contemporary Issues 50 course (Information and Academic Libraries) of Muir College is one example. Group tours of the libraries can be arranged through the reference librarians.

The Interlibrary Loan Service locates and borrows materials not held at UCSD. This service is available to all faculty, staff, and students of the university. Our students enjoy direct borrowing privileges at the other UC campuses.

InfoPath is a World Wide Web-based campus-wide information system developed by UCSD Libraries to provide access to campus and community electronic resources as well as a gateway to the resources of the Internet. Services and resources currently offered through InfoPath include extensive library resources such as ROGER (UCSD Libraries catalog); MELVYL®/ California Digital Library (the University of California systemwide catalog, indexes, and full-text databases), and links to research resources on the Internet. A wide variety of other information about the campus is available through InfoPath, and new resources are added continually. The InfoPath URL is http://www.ucsd.edu.

Library hours of service vary and are regularly posted in the libraries and on InfoPath. Most units extend hours during examination periods.

Note: Call (858) 534-3336 for an up-to-date schedule of open hours for all libraries (recorded message).

ART AND ARCHITECTURE LIBRARY

West Wing, Geisel Library
Mail code 0175F
(858) 534-4811

The Art and Architecture Library's collections support the study of the visual arts and architecture (81,283 vols.; 244,166 slides). Collection strengths include art history, performance and environmental art, photography, painting, sculpture, and architectural design, theory, and history, urban design, landscape architecture, and building technology. The Slide Collection provides visual materials for on-campus instructional purposes.

BIOMEDICAL LIBRARY AND MEDICAL CENTER LIBRARY

Basic Science Building, School of Medicine
Mail code 0699
(858) 534-3253
http://scilib.ucsd.edu/bml

The Biomedical Library contains collections in biology and medicine which are especially rich in the journal literature of the basic sciences and clinical medicine, with emphasis on cellular and molecular biology, neurosciences, and genetics

(209,974 vols.; 14,871 microfiche). A branch library, the Medical Center Library (22,479 vols.), supports the activities of health care providers at the UCSD Medical Center in the Hillcrest area of San Diego. Mail code 8828, (619) 543-6520.

CLICS (Center for Library & Instructional Computing Services)

Galbraith Hall
Mail Code 0318
(858) 822-5427

Opened in fall 2000, CLICS offers more than 200 computer workstations, group study rooms, a popular reading collection, a reference collection, current magazines and a popular computing collection, and a program of library instruction and outreach. CLICS offers research classes and workshops like Contemporary Issues 50, a two-credit course on how to find, evaluate, and use information; writing class workshops; and one-on-one appointments to help you with your research.

CMRR (Center for Magnetic Recording Research Library)

Center for Magnetic Recording Research
Mail code 0401
(858) 534-6199

Formed in October 1984, the Information Center provides a centralized location for information resources on magnetic recording, including books, journals, theses, technical reports, standards and specifications, videotaped seminars, corporate information sources, and databases. The holdings of the CMRR collection are listed in the University of California's catalog MELVYL. Holdings, including items on order, materials in process, and loan information are also available in the UCSD Libraries' catalog ROGER. These catalogs, along with many other resources are available through the UCSD campuswide information system InfoPath.

FILM AND VIDEO LIBRARY

West Wing, Geisel Library
Mail code 0175Q
(858) 534-8074

The Film and Video Library collection includes over 7,703 videos, laser discs, DVDs, and films. Collection strengths include feature films, documentaries, experimental film, and the Factual Film archive. Moving image materials on course reserve are available at the Film and Video Reserves service point.

INTERNATIONAL RELATIONS AND PACIFIC STUDIES LIBRARY

Robinson Complex, Bldg. 3
Mail code 0514
(858) 534-7785

The IR/PS Library features materials on contemporary political, economic, and business affairs in East Asia, Latin America, and the rest of the Pacific Basin region (109,233 vols.; 123,272 microfiche).

THE MANDEVILLE SPECIAL COLLECTIONS LIBRARY

West Wing, Geisel Library
Mail code 0175S
(858) 534-2533

http://orpheus.ucsd.edu/speccoll/

The Mandeville Special Collections Library houses rare books, manuscripts, archives, original art, and other primary materials (250,000 books, 30 million manuscripts) which support specialized UCSD research and instructional programs. Areas of strength include experimental American poetry, the Spanish Civil War, Baja California, early voyages of exploration to the Pacific, twentieth-century science, Melanesian anthropology, California history, Dr. Seuss, and the history of UCSD.

MUSIC LIBRARY

West Wing, Geisel Library
Mail code 0175Q
(858) 534-8074

Located on the first floor of Geisel Library, the Music Library contains a strong collection of books and periodicals emphasizing music of the twentieth century and music theory, as well as music scores centered around twentieth-century and chamber music performance materials (27,974 vols.; 48,975 scores; 79,598 sound recordings). The Listening Room has sixty stations for listening and viewing of course reserve and related materials; it contains a large and diverse collection of music and spoken word Lp recordings, CDs, audio tapes, and CD-ROMs.

SCIENCE AND ENGINEERING LIBRARY

East Wing, Geisel Library
Mail code 0175E
(858) 534-3258

The Science and Engineering Library contains strong collections in the physical sciences and technology (279,268 vols.; 390,914 microfiche). Of particular importance are its research materials in chemistry, computer science, electronics, engineering, mathematics, physics, space sciences, nuclear energy, and materials science. Course reserve materials used by faculty in the physical sciences and engineering are provided at the circulation desk.

SCRIPPS INSTITUTION OF OCEANOGRAPHY LIBRARY

Eckart Bldg.
Mail code 0219
(858) 534-3274

Scripps Institution of Oceanography Library is one of the largest marine science libraries in the world (208,440 vols.; 778,311 maps; 68,614 microfiche). It has outstanding collections in marine biology, oceanography, and marine technology, and also specializes in geology, geophysics, and zoology.

SOCIAL SCIENCES AND HUMANITIES LIBRARY

(located north of the Price Center in Geisel Library)
Mail code 0175R
(858) 534-3336

The SS&H Library houses the research collections in the social sciences and humanities (2,121,259 bound vols.; 142,390 maps; 2,357,376 microfiche). Its reference collection contains an outstanding collection of bibliographies, indexes, encyclopedias, biographical directories, and other information resources in print and electronic form. The Government Information Collection is a depository for the official publications of California and the United States, and also contains a major topographical and political map collection. Course reserve materials used by faculty in their classes are provided electronically and at the circulation desk.

Student Services and Programs

Vice Chancellor, Student Affairs

Building 112 University Center
Mail code 0015
(858) 534-4370
http://vcsa.ucsd.edu

The Office of the Vice Chancellor of Student Affairs is responsible for the overall quality of life at UCSD for undergraduate and graduate students. The office provides coordination and direction to more than two dozen student service departments and works closely with other components of the campus to ensure that programs, services, policies, and procedures foster the development of students and the achievement of their academic and career goals.

Career Services Center

Located on Library Walk
Mail code 0330
(858) 534-3750
http://career.ucsd.edu

The Career Services Center (CSC) helps students and alumni with virtually any career-related concern and offers a wide range of programs and services throughout the year. Online registration at http://career.ucsd.edu is required to use the center.

Exploring Career Options: Career advisers meet one-on-one with students to guide them through the phases of career development. Self-assessment tools, panel presentations, occupational resources, and networking programs are available to help students explore career options and determine career goals. CSC's new Career Information Lab features career books, CDs, and videos, as well as computers for accessing career information on the Internet.

Internship Resources: All students are encouraged to gain practical work experience through internships. CSC is a one-stop shop for internship resources, information, and opportunities. Services include advising, workshops, internship listings, and the Internship SuperSite at http://career.ucsd.edu. The new Internship Resource Room includes internship directories, career-specific internship books, and computer stations to help students find local, regional, and national internships, including the UCDC Program in Washington, D.C.

Graduate and Professional School Preparation and Admission: All students considering an advanced degree in any field after graduation from UCSD should visit CSC for advice and information on schools, admission requirements, applications, reference letters, tests, essays, fellowships, and interviews. Advisers assist students interested in any field of professional and graduate education, including medicine, law, business, teaching, and other health fields. Resources include over 2,000 professional and graduate school catalogs, directories, and brochures. Recruiters from across the country attend CSC's Professional and Graduate School Info Fair and Law School Info Fair each fall.

Job/Internship Listings: CSC lists thousands of internships and part-time and full-time job listings year-round, including on-campus and off-campus work-study and non-work-study jobs. To access the listings, you must: 1) be currently enrolled at UCSD; or newly enrolled and have returned the UCSD Statement of Intent to Register; and 2) complete the online registration at http://career.ucsd.edu. Students are required to update their registration each academic year.

Job Search Preparation and Networking: Services include job search programs, resume and curriculum vitae critiques, and practice interview workshops. Professional association contacts and career consultants are available for job search advice and career information. CSC presents a series of networking events each spring to connect students with professionals.

Job Fairs and On-Campus Interviewing: CSC presents a Science & Technical Job Fair (fall), Winter Job Fair and Spring Job Fair each year featuring recruiters from a variety of employers. Recruiters also conduct interviews on campus at CSC for career positions and internships.

Graduate Student Services: CSC offers special workshops and resources for master's and Ph.D. students seeking academic or nonacademic careers. Resources include job search handbooks and a UCSD alumni contact list of nearly 700 Ph.D. recipients.

Alumni Services: University of California alumni are eligible to use all CSC programs and services. Alumni registration fee required.

Online Resources: The CSC Web site features helpful resources and links, in-depth information, and easy-to-print publications for UCSD students and alumni, faculty and staff, parents, and recruiters.

Calendar of Events: CSC offers a variety of information sessions, group workshops, and special presentations. A quarterly calendar is available online and at CSC.

For more information and building hours, call (858) 534-3750 or go to http://career.ucsd.edu.

College Dean of Student Affairs' Offices

http://marshall.ucsd.edu

Warren, Mail code 0422, (858) 534-4731
http://warren.ucsd.edu

Roosevelt, Mail code 0069, (858) 534-2237
http://roosevelt.ucsd.edu

Sixth College, Mail code 0054, (858) 822-5953
http://sixth.ucsd.edu

The offices of the college deans of student affairs perform many functions. They provide help, advice, counseling, and referral for students and parents in many areas including commuter, transfer, and residential matters. The deans' offices develop and coordinate activities such as Orientation, Welcome Week, commencement; leadership and co-curricular learning opportunities; decisions about remaining in or withdrawing from school; college disciplinary matters; involvement in student governments; community service/volunteer opportunities; planning social, educational and cultural activities; assisting students with disabilities; and assisting in hearing procedures regarding grievances.

Contact your college dean of student affairs' office for assistance, particularly if you do not know which university office or resource would best be able to assist you with your problem or concern.

Dining Services

Administration: Muir Commons Annex
Mail code 0122
(858) 534-7587
www.hds.ucsd.edu

Students, faculty, staff, and members of the public are welcome at all UCSD Dining Services restaurants. Eleven locations serve a variety of high-quality and ethnically diverse food. Each offers a comfortable dining atmosphere with unique menus and convenient hours ranging from 7:00 a.m. to 1:00 a.m. Samples menus are online at www.hds.ucsd.edu.

UCSD's college residence program includes housing space and a dining plan of 1,800 Dining

Dollars per year, which can be used at any Dining Services location.

TritonPlus Account, the campus debit account, offers an easy, convenient, and secure way to shop and dine at over forty locations, on and off campus. For more information, go to www.hds.ucsd.edu/tritonplusaccount.

Students use their official UCSD Campus Card to access Dining Dollars and TritonPlus Account.

Additional dining options on campus include six fast-food restaurants and a convenience store located at the Price Center; the Food Co-op and Grove Caffe at the Student Center; and Ché Cafe on Revelle campus. In addition, a limited selection of food may be purchased at portable food carts, convenience stores, and vending machines throughout UCSD.

Disabilities, Office for Students with (OSD)

202 University Center
(858) 534-4382 (Voice/TDD)
(858) 534-4650 (Fax)
http://orpheus-l.ucsd.edu/osd/

The Office for Students with Disabilities (OSD) facilitates student independence, academic/social success, and self-advocacy through access to campus programs, services, and facilities. OSD works directly with students and academic departments on development of effective planning and adaptation. OSD serves as a liaison to UCSD academic departments, the campus community, and off-campus disability-related agencies. Service coordination may include disability management counseling, note takers, sign language interpreters, real-time captionists, readers, typists, library/laboratory assistants, special equipment loans/minor repair, priority registration/enrollment assistance, on-campus housing coordination, exam accommodations, on-campus transportation/parking coordination, and referrals. College learning skills seminars (including memory strategies, note-taking, test taking, time management, and study skills) are offered on an individual and small group basis in collaboration with OASIS. In addition, OSD provides disability awareness through maintenance of a resource library of books, periodicals, articles, films, video formats, and an online quarterly newsletter, *Aware.*

Students who have been diagnosed as having a disability should consult promptly with a qualified specialist at the Office of Students with Disabilities (OSD), as only students registered with OSD are eligible for accommodation in classes. In order to implement an OSD-approved accommodation for examinations or assignments, students must meet with the course instructor within the first two weeks of the quarter and present a certificate from OSD recommending the appropriate accommodations.

If the student's disability has been certified by OSD, the course instructor should accommodate the student's needs. Faculty are not responsible for determining what accommodations are appropriate for a particular student. If an instructor is presented with a claim of a disability by a student who has *not* been certified by OSD, the course instructor should refer the student to OSD and not become personally involved in diagnosing or evaluating the seriousness of the disability. OSD is available to assist instructors in providing accommodation. If for any reason an instructor cannot meet the request, the department chair and OSD should be promptly consulted.

The full text of the Policy on Students with Disabilities and Steps for Academic Accommodation has been posted to the Academic Senate Web site (as an Appendix to the San Diego Division Regulations), at the following address: http://www-senate.ucsd.edu/apxtoc.html.

Financial Aid

All financial assistance for undergraduate and medical students and need-based aid for graduate students is administered by the Financial Aid Office (FAO). Information relating to graduate student support in the form of fellowships and assistantships is presented in the catalog section entitled "Graduate Studies."

The Financial Aid Office, which also includes the Undergraduate Scholarship Office and the Office of Veterans' Affairs, is located in University Center 201 and can be contacted at the phone numbers below.

Financial Aid Office	(858) 534-4480
Scholarship Office	(858) 534-3263
Veterans Affairs	(858) 534-4480
Medical School Financial Aid	(858) 534-4664

Our email addresses are: finaid@ucsd.edu, scholarships@ucsd.edu, vao@ucsd.edu (Veterans Benefits).

Other information about our services and programs is available on our Web site: **http://www.ucsd.edu/finaid**.

Applications and requests for information should be addressed to the Financial Aid Office, 0013, 9500 Gilman Drive, La Jolla, California 92093-0013.

No student should leave the university for financial reasons before exploring all possible avenues of assistance with a Financial Aid Office counselor. *All information contained herein is intended to serve as a general guide and is subject to change due to new and revised federal, state, and University of California regulations and procedures.*

Applying for Financial Aid

A student is eligible for financial aid if she or he:

1. Is a United States citizen or eligible noncitizen.
2. Has a valid social security number.
3. Is not in default on a federal student loan or has made satisfactory arrangements to repay it.
4. Does not owe money back on a federal student grant or has made satisfactory arrangements to repay it.
5. Is registered with Selective Service (males at least eighteen years old, unless not required).
6. Is enrolled at UCSD (minimum of six units per quarter) in a degree or certificate program. Limited status students (non-degree/non-certificate) enrolled in a course of study necessary to be accepted in a degree or certificate program are only eligible for one year of Federal Stafford Loan(s). After one year, these limited status students are not eligible for any financial aid funding.
7. Is making satisfactory academic progress for financial aid recipients.

Students must maintain Satisfactory Academic Progress as a condition for maintaining eligibility for financial aid. For UCSD undergraduate financial aid recipients the standards are thirty-six units (or an average of twelve units per quarter for full-time enrollment) and an overall grade-point average of 2.0 during the current academic year and the following summer (similar unit requirements apply to graduate students who must maintain a 3.0 minimum GPA). Under-graduate students are considered for all financial aid sources up to their fifth year of college attendance (except for Cal Grants) and limited funding up to their sixth year. For

graduate student duration requirements and for more detailed information on UCSD's Satisfactory Academic Progress standards for students enrolled full-time in a degree program, please see our Web site at www.ucsd.edu/finaid. For policy information on *approved* part-time status students, limited status and extension students, please contact the Financial Aid Office.

For evaluation of financial need, all applicants must submit a *Free Application for FederalStudent Aid (FAFSA)* or *renewal FAFSA* and, if requested, copies of the 2003 federal income tax returns, and any other required documents. The *FAFSA* form should be filed by March 3, 2004, the UCSD priority filing date, with the appropriate processing agency and must indicate the University of California, San Diego (list Federal School Code 001317) to receive a processed copy of the *FAFSA*. Late applicants will be considered for limited aid.

Receiving Financial Aid

UC financial aid for students with demonstrated financial need is funded by a combination, or "package", of gift and self-help aid. Grants and scholarships are awards that do not have to be repaid. Self-help aid may consist of a loan, which does have to be repaid, or a work-study award, earned by working a part-time job while attending school, or a combination of both. UCSD ensures that students in similar circumstances receive similar packages. Grant funds are directed to the most needy students. Students who are nonresidents of California should note that need-based financial aid funds are not sufficient to meet the additional cost of nonresident tuition ($13,730 during 2003–2004). The family should be prepared to provide this amount from their own personal resources or educational loan programs. The various types of aid and programs which may be included in need-based packages are listed below:

Federal Pell Grant

The Federal Pell Grant program is designed to provide financial assistance to undergraduates attending postsecondary educational institutions. Amounts range from $400–$4,050 for 2004–2005.

University of California Grant Program

The University of California Grant Program provides grants to undergraduate and graduate students.

Federal Supplemental Educational Opportunity Grant (SEOG)

SEOG awards are federally funded and are available only to undergraduates. Awards may range from $100 to $4,000 per academic year.

Cal Grants (Undergraduate)

Cal Grants are awarded by the California Student Aid Commission to undergraduate California residents. All resident applicants for UCSD aid are required to apply for a Cal Grant. To be considered as a new winner, the *FAFSA* or *renewal FAFSA* and the GPA Verification Form must be postmarked prior to March 3, 2004. Current recipients must file a *FAFSA* or a *renewal FAFSA* each year to have their award renewed.

Repayable Scholarships/Fellowships for Teaching Credential Students

The Cal Grant T is awarded by the California Student Aid Commission to students who have been accepted into the Teaching Credential Program. The Governor's Teaching Fellowship (GTF) Program is administered by the California State University system. Those wishing to apply need to contact the UCSD Teacher Education Program at (858) 534-1680.

Work-Study

Federal and state work-study awards are employment programs that provide funds for student employment by the university or by public and private profit/nonprofit organizations. The work-study program provides experience in many fields, including experimental sciences, library work, recreation, computer sciences, peer counseling, and office work. Pay ranges from minimum wage and above. Job listings and referrals are provided through the Career Services Center.

Federal Perkins Loans

This loan carries a 5 percent interest rate. Students begin paying both the principal and the interest nine months after ceasing to be enrolled at least half-time.

Federal Subsidized Stafford Loans

The annual maximum allowed during the first year of undergraduate study is $2,625. Sophomores can borrow an annual maximum of $3,500, and the yearly limit for juniors and seniors is $5,500, with an undergraduate cumulative maximum of $23,000. Graduate students may borrow up to $8,500 per academic year with an aggregate sum up to $65,000, including the amount borrowed as an undergraduate. The interest rate for new borrowers is variable, not to exceed 8.25 percent. The 2003–2004 rate was 2.82 percent.

The federal government pays (subsidizes) the interest on the student's behalf during in-school (enrolled in six units or more), grace, and authorized deferment periods. Repayment of principal and interest begins six months after the borrower leaves school or ceases to be enrolled as a half-time student.

Federal Unsubsidized Stafford Loans

Students who do not have financial need eligibility for the maximum Federal Stafford Loan may borrow under this program. The annual maximum and interest rate are the same as the Subsidized Stafford Loan. Independent undergraduates may borrow an additional $4,000–$5,000 annually; graduate students may borrow an additional $10,000 annually. The maximums include amounts borrowed under the Federal Stafford Loan program. Aggregate maximums are $23,000 for dependent undergraduates, $46,000 for independent undergraduates, and $138,500 for graduate students. The interest is **not** paid on the student's behalf. Interest begins accruing immediately after disbursement, but payment of principal and interest may be deferred until six months after ceasing to be enrolled for six units or more. The amount borrowed cannot exceed the cost of education minus other financial aid resources (including other need-based loans).

Federal PLUS Loans for Parents

Parents of dependent undergraduate students are eligible to borrow under this program if they have no adverse credit history and meet program eligibility requirements. The interest rate for this loan is variable, but not to exceed 9 percent. In 2003–2004, the interest rate was 4.22 percent. Parents are eligible to borrow up to the cost of education minus other financial aid (including other loans). The first payment is due within sixty days after disbursement by the lender.

Triton Registration Installment Plan (TRIP)

The UCSD Triton Registration Installment Plan (TRIP), administered by the Student Business Services (SBS), is a monthly payment arrangement and is available for students who desire an alternative method of financing their

registration fees on a short-term basis. All students in good financial and academic standing are eligible for the program, except for those students whose financial aid or graduate support will pay their registration fees by the quarterly registration fee due date. A prerequisite to applying for the program is enrollment for the term. The TRIP allows registration fees to be paid in up to three installments each quarter. On a three-month plan, the first payment is required by the quarterly registration due date. The remaining payments are itemized on the student's next two monthly UCSD Billing Statements. There is a $30 nonrefundable quarterly fee that must be submitted with the application to the Billing Services unit of the Student Business Services Office. This fee is strictly used to offset the costs of the program. For further information, please contact the Billing Services Unit at (858) 534-6806, or online at: http://www-bfs.ucsd.edu/bur.

Short-Term Emergency Loans

The limited emergency loan funds, administered by the Financial Aid Office, are loaned in small amounts to help students in critical short-term emergencies, and usually must be repaid within thirty days. There currently is a service charge of $20 per emergency loan, and students must be enrolled in at least six units. Registration fees must be paid prior to applying. Applications and further information are available from the Financial Aid Office.

Federal Tax Credits

Two federal tax credits may benefit you or your parents, if the grants and scholarships you receive do not fully cover your fees. Both tax credits are tied to the tuition and fees paid for college.

The Hope Scholarship Credit (up to $1,500) is available for the first two years of at-least-half-time enrollment in postsecondary education.

The Lifetime Learning Credit (up to $1,000 per tax year) is available for postsecondary enrollment at any level.

To find out more about these tax credits, consult your tax adviser or visit the U.S. Dept. of Education Web site www.ed.gov/inits/hope/ and the "Where Do You Want To Go" section on StudentLink.

Graduate Financial Assistance

See catalog section titled "Graduate Studies" for additional types of financial assistance available to graduate students.

THE UNDERGRADUATE SCHOLARSHIP PROGRAM

The purpose of the Undergraduate Scholarship Program at UCSD is to recognize outstanding achievement, to encourage academic excellence, and to offer support to meritorious students.

Scholarships are awarded on a competitive basis by the UCSD Faculty Committee on Undergraduate Scholarships and Honors. **Merit** scholarships are awarded on the basis of academic excellence. **Restricted** scholarships are awarded based on one or more additional criteria or restrictions such as financial need, study in a particular major, or leadership. Students who are awarded scholarships restricted by financial need must file a Free Application for Federal Student Aid (FAFSA) in order to receive the award. Additionally, undergraduate research scholarships are offered to current students which enable them to pursue special studies and projects under faculty supervision.

UCSD is actively engaged in developing new scholarship opportunities. Many of these awards were established through the generous support of individual sponsors, foundations, businesses, and community organizations. Every gift toward undergraduate scholarships is appreciated and appropriately recognized. Further information about supporting scholarships at UCSD may be obtained from Kim Signoret Paar, director of Student Affairs Development. Ms. Signoret may be reached at (858) 822-1536. Her address is 9500 Gilman Drive, La Jolla CA 92093-0937.

You may view a listing of scholarships, financial aid resources, and information on outside agency scholarship opportunities on the UCSD Financial Aid Office (FAO) Web page at: **http://www.ucsd.edu/finaid**.

The Scholarship Office is part of the UCSD Financial Aid Office and is located in Building 201, University Center, 9500 Gilman Drive, La Jolla, CA 92093-0013. Office hours are from 8:00 a.m. to 4:30 p.m., Monday through Friday. For additional information regarding the scholarship program, contact the Scholarship Office at scholarships@ucsd.edu or (858) 534-3263.

HOW TO APPLY FOR SCHOLARSHIPS

Entering Students

The University of California Application for Undergraduate Admission and Scholarships is also used to apply for the UCSD Regents and other campus scholarships. No other paperwork is required. The application is submitted in November for the following academic year. Because scholarships are awarded to entering students on a very competitive basis, students should carefully comply with instructions on the UC Application for Undergraduate Admission and Scholarships to ensure full consideration for all eligible scholarships. Entering students who receive a scholarship from UCSD will be notified in writing before May 1. We regret that we are unable to mail denial notification letters to other applicants.

Current UCSD Students

Current UCSD students apply for scholarships annually during winter quarter for the following fall quarter by filing the UCSD Continuing Student Scholarship Application. This application is available online via StudentLink in February and is due in April. Current students who receive a scholarship from UCSD will be notified in writing by the end of June. Students who do not receive an award will not be notified due to the large volume of applications.

UCSD Undergraduate Scholarships

The scholarships listed below are generally available at UCSD. Although every effort is made to present the most accurate information, this listing is subject to change due to federal, state, and university funding limitations, and changes in policy or law.

Entering Freshman Awards

Art for Science Scholarship: Awarded to Sixth College entering freshmen that have an interest in science and art and have shown outstanding performance in the visual or performing arts. This is a one-year award up to $2,500.

James Avery Scholarship: Awarded to an African-American student pursuing studies in the performing arts at Thurgood Marshall College. This is a four-year award up to $4,000, paid in the amount of up to $1,000 annually.

Bay Area Alumni Scholarship: Awarded to entering freshmen, from the Greater Bay Area, based on demonstrated financial need and academic merit. This is a four-year award of up to $10,000, paid in the amount of up to $2,500 annually.

Black Alumni Scholarship: Awarded to entering African-American students based on academic merit. This is a four-year award up to $4,000, paid in the amount of up to $1,000 annually.

Chancellor's Scholarship: Awarded to outstanding entering freshmen on the basis of academic achievement, and other factors, which may include the personal essay, financial need, extracurricular and community activities, educational environment, and first-generation college attendance. As a Chancellor's Scholar, students will receive the following benefits: extended housing benefits (provided housing deadlines are met) and priority registration for four years as a UCSD scholar; and participation in the Study Abroad and Faculty Mentor programs. This is a four-year award, up to $20,000, paid in the amount of up to $5,000 annually.

Clayton H. Brace Scholarship: Awarded to an entering student with an interest in communications. This is a one-year award. The award amount varies.

CREATE Undergraduate Scholarship: Awarded to entering freshmen that have graduated from a San Diego high school participating in the UCSD CREATE program. The amount and term of the award varies.

Del Mar Thoroughbred Club Scholarships: Awarded to entering freshmen from San Diego and Imperial County high schools, based on academic achievement, financial need, and community involvement and/or participation in school extracurricular activities while in high school. This is a four-year award up to $10,000, paid in the amount of up to $2,500 annually.

Herbert Greenberg Memorial Scholarship: Awarded to entering freshmen based on academic merit and demonstrated financial need. The award amount and term varies.

Hispanic Scholarship Council Scholarship for Community Service: Awarded to entering freshmen based on community service, demonstrated academic merit and financial need, with a preference for first-generation college students, open to all students regardless of ethnicity. This is a four-year award up to $10,000, paid in the amount of up to $2,500 annually.

Charmaine and Maurice Kaplan Scholarship: Awarded to entering students on the basis of academic merit, demonstrated financial need, and involvement in extracurricular activities. The award amount and term varies up to $2,000 per year.

Kelly J. Kolozsi Scholarship: This outside agency scholarship is awarded to students in the following priority: (1) Graduates of Menlo Atherton High School; (2) graduates of a high school in the Sequoia Union High School District. Preference is given to students diagnosed with a learning disability. This is a one-year award. The award amount varies. The recipients are chosen by the Kolozsi Scholarship Selection Committee.

Madge E. Lawhead Scholarship: Awarded to outstanding entering freshmen on the basis of academic achievement, and other factors, which may include the personal essay, financial need, extra-curricular and community activities, educational environment, and first-generation college attendance. As a Lawhead Scholar, students will receive the following benefits; extended housing benefits (provided housing deadlines are met) and priority registration for four years as a UCSD scholar; and participation in the Study Abroad and Faculty Mentor programs. This is a four-year award up to $20,000, paid in the amount of up to $5,000 annually.

McFarland Scholarship: Awarded to Native-American entering freshmen based on academic merit and financial need. This is a four-year award up to $10,000, paid in the amount of up to $2,500 annually.

Dr. A.R. Moossa Scholarship: Awarded to a premedical student who plans a career as a physician, who has financial need, is a full-time student with at least a 3.0 GPA. This is a four-year award up to $7,680, paid in the amount of up to $1,920 annually.

National Merit University-Sponsored Scholarship: Awarded to entering freshmen who are National Merit finalists and who are sponsored by UCSD. Finalists are nominated by the National Merit Scholarship Corporation for their exceptional academic performance in high school. This is a four-year award. Students with demonstrated financial need may receive up to $2,000 per year. Students without demonstrated financial need receive $500 per year. Four-year UCSD-sponsored and corporate-sponsored National Merit Scholars are also eligible for certain privileges such as preferred class enrollment, extended housing benefits for four years (providing housing deadlines are met), extended student library privileges, and expanded computer accounts. One-year National Merit Office sponsored and one-year corporate-sponsored National Merit Scholars, are eligible for housing for freshman and sophomore years (providing housing deadlines are met). One-year scholars will also receive priority registration, extended library privileges, and expanded computer accounts for their freshman year only.

Sheila Owens-Collins Scholarship: Awarded to an African-American student pursuing studies in the life sciences. This is a four-year award up to $4,000, paid in the amount of up to $1,000 annually.

Parker Foundation Scholarship: Awarded to an outstanding entering freshman from a San Diego or Imperial County high school that has made valuable contributions through community service. This is a one-year award and the amount varies up to $3,000.

George Parker Memorial Scholarship: Awarded based on financial need to students who were orphaned for at least three years prior to the age of 18, and/or who were raised in foster care for at least three years immediately prior to the age of 18. Students must show evidence of orphan or foster care status. This is a renewable award, paid in the amount of up to $2,000 annually.

Mary Pillot Scholarship: Awarded to meritorious graduates of San Jose High School Academy, as nominated by the high school principal. This is a one-year award up to $500.

Ray and Betty Ramseyer Scholarship: Awarded to an entering student with an interest in the social sciences. This is a four-year award up to $4,000, paid in the amount of up to $1,000 annually.

Regents Scholarship: The Regents Scholarship is the most prestigious scholarship awarded to outstanding entering freshmen on the basis of academic achievement, and other factors which may include the personal essay, financial need, extracurricular and community activities, educational environment, and first-generation college attendance. This scholarship is offered to entering freshmen for four years. If a student is offered the Regents Scholarship and has financial need, the student will receive additional scholarship and/or grant funds up to the amount of demonstrated need for four academic years, excluding non-resident tuition costs. Entering freshmen applying in the 2004–2005 academic year without documented financial need will receive a four-year honorarium of $20,000, paid at $5,000 per year for the four years of their appointment at UCSD. Entering freshmen apply for the Regents Scholarship through the admissions application. UCSD Regents Scholars are also eligible for certain privileges and recognitions such as preferred class enrollment, extended housing benefits for four years (providing housing deadlines are met),

UCSD college of choice at time of admission, extended student library privileges, honors program, and expanded computer accounts.

Roger and Ellen Revelle Scholarship: Awarded to entering freshmen based on academic merit. This is a four-year award up to $10,000, paid at up to $2,500 annually.

Rose Foundation Scholarship: Awarded to students who graduated from San Diego or Imperial County high schools that historically are underrepresented at UC campuses. Students must have financial need, be full-time students, and they must be in fair academic standing (at least a 2.5 GPA). This is a four-year award up to $7,680, paid in the amount of up to $1,920 annually.

Senior Gift Scholarship: This scholarship was established by UCSD graduating seniors and seeks to recognize outstanding freshmen and transfer students who have proven community service and philanthropic spirit, and who have financial need. This is a one-year award and the amount varies up to $1,000.

Shimotori Memorial Scholarship: Awarded to a student with demonstrated academic merit and financial need. This is a one-year award up to $4,000.

Ludwig & Ada Strauss Scholarship: Awarded to an academically outstanding entering freshman with demonstrated financial need. This a one-year award and the amount varies.

UCSD Student Foundation Scholarships: Awarded to entering freshmen based on demonstrated community service, financial need, and academic excellence. This is a one-year award with a maximum of $5,000.

Awarded to Students Transferring from Community Colleges

Engelhorn Family Scholarship: The Engelhorn Family Scholarships are awarded to transfer students who are participants in the UniversityLink or TAG program, have high financial need, with a preference for students who are first-generation college students. This is a two-year award, paid in the amount of up to $2,000 annually.

High Tech Marketing Alliance Scholarship: Awarded to a transfer student from a community college, majoring in communications, with a 3.0+ GPA, enrolled full time, and who plans on a career in communications or journalism. This is a one-year award and the amount varies.

Current Student Awards

Christopher B. Arrott—Gay, Lesbian & Bisexual Scholarship: Awarded to gay, lesbian or bisexual undergraduate students with a record of active service and involvement in the gay, lesbian, and bisexual community. This is a one-year award up to $1,000.

Charles and Clara Ash Scholarship: Awarded to students with demonstrated financial need. This is a one-year award. The award amount varies.

BAE SYSTEMS Scholarship: Awarded to full-time students who are seniors in the 2004–2005 academic year, with a 3.2+ GPA, majoring in computer science, applied mathematics, computer or electrical engineering with a computer sciences emphasis, are U.S. citizens and plan to pursue a career in computer science in San Diego. This is a one-year award up to $5,000.

Errett Bishop Scholarship: Awarded to upper division mathematics majors with financial need. Preference given to graduating seniors. The award amount varies up to $3,000.

The Darcy C. and Robert Bingham Scholarship: Awarded to full-time students who are in good academic standing and are employed with UCSD Recreation, UCSD Student Affairs, or UCSD. Students must work for an average of ten hours per week during the three-quarter academic year at UCSD, and must have worked at least one quarter prior to the submission of their application. This is a one-year award up to $1,500.

Boeing Engineering Scholarship: Awarded to full-time students majoring in electrical engineering, mechanical engineering, aerospace engineering, computer science, or computer engineering, who have demonstrated high financial need. This is a one-year award up to $1,900.

Braille Transcribers Guild: Awarded to students who are legally blind, or have substantial, uncorrectable vision loss, registered with the UCSD Office for Students with Disabilities. This award amount and term varies.

Julia Brown Undergraduate Scholarship: Awarded to a full-time junior or senior in the 2004–2005 academic year, who intends to pursue a career in the health sciences (including medicine, research, and public health). The award is based on academic merit and financial need. This is a one-year award up to $5,000.

California Retired Teachers Association—Laura E. Settle Scholarship: This outside agency scholarship is awarded to current sophomores or juniors with demonstrated financial need who are planning a career in teaching. Students must be U.S. citizens and residents of California. This is a one-year award and the amount varies up to $2,000.

CK and Jenny Cheng CSE/ECE Scholarship: Awarded to undergraduate students majoring in Computer Science and Engineering or Electrical and Computer Engineering at the UCSD Jacobs School of Engineering, based on academic merit. The scholarship is a one-year award of approximately $400.

Cohu, Inc.—William S. Ivans and Frank W. Davis Scholarships: Awarded to undergraduate students who are enrolled full-time, majoring in mechanical or electrical engineering with at least a 3.0 GPA. This is a one-year $2,500 award.

Conexant Systems Scholarship: Awarded to full-time students majoring in electrical engineering, computer engineering, or computer science, with junior or senior standing in 2004–2005, who will graduate no earlier than December 2005. Potential candidates have an interest related to the semiconductor industry, possess a minimum 3.3 GPA, and are able to work in the United States. This is a one-year award up to $2,800.

Thomas E. Curtis Scholarship: Awarded to juniors or seniors in the 2004–2005 academic year, majoring in the fields of biology, chemistry, or physics, who also demonstrate interest in the larger world around them, with leadership-level involvement outside the classroom, and have a minimum 2.75 GPA. This is a one-year award. The award amount varies.

Richard L. and Fern W. Erion and Laidlaw-Erion Scholarships: Awarded to full-time UCSD students who will be seniors in 2004–2005, with demonstrated financial need, as determined by information submitted on their 2004–2005 FAFSA or renewal FAFSA. The award amount varies.

Brython P. Davis Scholarship: Awarded to current students whose parent is or was a regular member of the U.S. Navy or Marine Corps. This is a one-year award. The award amount varies.

Klara D. Eckart Scholarship: Awarded to current students in the fields of computation, mathematics, or physics. This is a one-year award. The award amount varies.

The Willis and Jane Fletcher Foundation and P and G Company Scholarship: This outside agency scholarship is awarded to a graduate of a San Diego County high school with demonstrated financial need. This is a one-year award up to $2,500.

Jaye Haddad Memorial Scholarship: Awarded to students who have been diagnosed with cancer, with Acquired Immune Deficiency Syndrome, with AIDS-related conditions, or to students with physical disabilities. This is a one-year award. The award amount varies.

E. Coke Hill Scholarship: Awarded to students with demonstrated financial need. This is a one-year award. The award amount varies.

Irvine Memorial Scholarship: Awarded to students based on academic merit. This is generally a one-year award. The award amount varies.

Jeffrey R. Leifer Scholarship: Awarded to current students who have demonstrated financial need and academic merit, are the first generation in their family to attend college, and graduated from California high schools that historically are underrepresented at UC campuses. This scholarship has been established through the generous contributions of Jeffrey R. Leifer. As a student at UCSD, he served as associated student body president and founded International Student Pugwash, a worldwide organization dedicated to issues surrounding ethics, technology, and society. This is a one-year award and the amount varies.

Alice Marriott Scholarship: Awarded to students with demonstrated financial need. This is a one-year award. The award amount varies.

Thurgood Marshall College Scholarship: Awarded to students enrolled in Marshall College who have a 3.2 GPA by the end of spring quarter, and have completed a minimum of seventy-two graded quarter units. Transfer students need thirty-six graded UCSD units with a 3.2 GPA and 3.5 cumulative GPA in advanced standing work. Seniors who apply should have a minimum of thirty-six units remaining to be completed in the academic year the scholarship is awarded with a minimum 3.2 cumulative GPA. This is a one-year award up to $1,500.

Marx and Marshall—Gay and Lesbian Scholarship: Awarded to gay and lesbian students with a record of active service and involvement in the gay, lesbian and bisexual community. This is a one-year award. Preference will be given to students with financial need. The award amount is up to $1,000. Recipients may reapply.

S. Falck Nielsen Scholarship: Awarded to current freshmen. The amount and term varies.

LaVerne Noyes Scholarship: Awarded to current students who are descendants of U.S. World War I Veterans (defined as four months of service in the U.S. military prior to November 11, 1918). This is a one-year award. The award amount varies.

Sven Peterson Memorial Scholarship: Awarded to a current freshman or sophomore, UCSD Warren College student, enrolled full-time, majoring in an area other than engineering or life sciences. The recipient must have been placed on the college provost's honors list at least one quarter during his or her academic career in advance of applying for the award and must maintain a 3.0 cumulative GPA. This award is up to $3,000 per year and may be renewable.

QUALCOMM Scholarship: Awarded to students who are juniors in the 2004–2005 academic year, majoring in electrical engineering, computer engineering, or computer science with at least a 3.15 GPA. Special consideration is given to students who have been a San Diego resident for three or more years, who are willing to consider an internship at QUALCOMM, or who have volunteered a minimum of four hours per month at a K–12 educational institution. This is a one-year award up to $5,000.

Tenie Remmel Memorial Scholarship: Awarded based on academic merit and demonstrated financial need to a full-time student in the Division of Physical Sciences. This is a one-year award of up to $1,000.

Gary C. Reynolds Scholarship: Awarded to students who will be juniors or seniors in 2004–2005, who are mathematics-computer science majors, who show exceptional promise for making future contributions in their field of study. The amount of this award varies up to $2,000.

Mabel Wilson Richards Scholarship: This outside agency scholarship is awarded to women who were residents of the Greater Los Angeles area for two years prior to attending UCSD, with a B average and demonstrated financial need. Must be a U.S. citizen or, if under 21, one parent should possess a permanent resident visa. This is a one-year award. The award amount varies up to $2,000.

Elizabeth W. Russell Scholarship: Awarded to students who will be juniors or seniors in 2004–2005, who are pursuing studies in studio art, art history, or art criticism/theory. The award amount varies.

Bevan Schroeder Memorial Scholarship: Awarded to students majoring in computer science engineering. Selection is based on academic merit, financial need, and involvement in campus activities. This is a one-year award up to $1,000.

Sempra Scholarship: Awarded to juniors or seniors in the 2004–2005 academic year, with majors that lead to careers in technology/information systems (computer science, computer engineering) or careers in electrical or material engineering, including chemical engineering. This is a one-year award up to $4,000.

Malcolm R. Stacey Memorial Scholarship: Awarded to Jewish students in the following priority: 1) undergraduate who is an orphan and preparing for graduate study in aeronautical engineering, 2) undergraduate in the field of aeronautical engineering, 3) a student in the division of engineering, and 4) a student in any field of study. This is a one-year award. The award amount varies.

William H. Stout Scholarship: Awarded to students based on academic merit. This is a one-year award. The award amount varies.

Russ Ty—Gay and Lesbian Scholarship: Awarded to gay and lesbian students based on academic merit and financial need. This is a one-year award. The award amount is a maximum of $1,000.

Visual Arts Endowment Scholarship: Awarded to full-time current students, with the intent to support talented undergraduates majoring in visual arts. This is a one-year award up to $4,000.

If you have any questions regarding graduate scholarships, they should be directed to the Office of Graduate Studies at (858) 534-3555.

UNDERGRADUATE RESEARCH SCHOLARSHIPS

These special awards are for current undergraduate students who wish to engage in special studies or research projects under faculty supervision. The work must be above and beyond the normal course of study. The subject matter does not have to be related to the student's major, minor, or other course work. These are one-year awards; however, a student may submit a new application each year for consideration. Awards are up to $3,000.

Applications are available from the UCSD Financial Aid Office in March and are due in May. Winners are notified by the middle of June. All recipients are required to submit a brief final summary report, including details of how the funds were used. Also, the sponsoring faculty member must submit a review and appraisal of the results of the project.

David Marc Belkin Memorial Research Scholarship will give preference to those proposals designed to pursue special studies and projects in the general areas of environmental and ecological issues. The maximum award amount is $1,500.

Julia Brown Research Scholarships will give consideration to juniors or seniors in the 2004–2005 academic year, whose career objectives include medical school and/or medical research. Preference given to students with extenuating circumstances or financial need. The maximum award amount is $2,500.

Chancellor's Research Scholarship will give consideration to proposals regardless of project topic. The maximum award amount is $3,000.

David Jay Gambee Memorial Research Fellowship will give preference to proposals which involve the student as an active citizen in university governance, the local community, or national and international affairs. Also receiving preference are proposals which lead to a heightened awareness of the relationship between environment and society. Service in the community through volunteer activities or participation in programs related to the Institute on Global Conflict and Cooperation is encouraged. The maximum award amount is $1,500.

Doris A. Howell Foundation Research Scholarship will give consideration to juniors or seniors in the 2004–2005 academic year whose proposals are designed to improve the physical, mental, spiritual and behavioral health, and/or well-being of women. Proposals may encompass all areas related to women's health including biological, medical, cultural, economic, behavioral, psycho-social, or cross-cultural influences. The essay must describe how the project specifically addresses women's health or well-being. The Howell Foundation for Research in Women's Health is a not-for-profit spin-off of Soroptimist International of La Jolla. The maximum award is $2,500.

SCHOLARSHIPS FOR STUDY ABROAD

UCSD students study abroad through the UC Education Abroad Program (EAP) and the UCSD Opportunities Abroad Program (OAP). In addition to the UCSD scholarships listed above, study abroad students may also qualify for special awards restricted to EAP and OAP participants. All of the scholarships listed below require a separate application through the International Center, unless otherwise indicated.

For more information about these scholarships and other outside opportunities for study abroad, contact the Programs Abroad Office at the International Center at (858) 534-1123 or via email to: **abroad@ucsd.edu**.

Betty Tate International Scholarships: Awarded based on financial need and students must have a minimum 2.8 GPA.

Chris Borton Memorial Study Abroad Scholarships: Awarded on the basis of academic merit and without consideration of financial need.

EAP Scholarships: Awarded primarily on the basis of financial need.

Eleanor Roosevelt College (ERC) Scholarships: Awarded to ERC students with financial need. Applicants should apply through ERC.

Friends of the International Center: Awarded predominantly on academic merit, with some consideration of financial need.

Judaic Studies Scholarship: Awarded to students bound for Israel, with preference given to students with a major or minor in Judaic studies. Applicant should apply through the Department of Judaic Studies.

INTERNSHIP PROGRAMS

University of California President's Washington D.C. Scholarship: Awarded to students on internship in Washington D.C. with financial need and a 3.0 GPA. Applicants should apply through the Academic Internship Program Office. Telephone (858) 534-4355 or the UC/DC Program Office, telephone (858) 534-2705.

International Center

(Located at the corner of Gilman Drive and Library Walk)
Mail code 0018
(858) 534-3730
Facility reservation: (858) 534-6442
http://www.ucsd.edu/icenter

The International Center assists U.S. students going abroad as well as international students, scholars and families, and facilitates interaction among all internationally minded UCSD students, faculty, and staff.

Services to students going abroad include advising on a wide range of study, work, and travel opportunities through the UCSD Programs Abroad Office, and administration of the system-wide UC Education Abroad Program.

The International Student/Scholar Office serves as the liaison with government agencies for all nonimmigrants, and advises international students, researchers, faculty, and campus departments about immigration and visa matters. The office also provides pre-arrival information, orientation, and check-in for new students and scholars. The Friends of the International Center provide additional services and programs to international visitors and their family members.

The staff and Friends of the International Center as well as the International Club sponsor a variety of international/intercultural programs and services for all members of the UCSD community. These include lectures, language exchanges, a tutoring program, linkages with international faculty specialists, and weekly international cafes.

The International Center facility also includes a resale shop, a reservable conference room, and a meeting/office facility for Oceanids, the volunteer support organization for the university.

Housing

OFF-CAMPUS HOUSING

Off-Campus Housing is a rental listing referral and housing information resource center. This office receives and maintains up-to-date available rentals from people in the community within the various areas near campus. The rental listings include individual houses, apartments, and condos, as well as roommates, rooms in private homes, and work-exchange situations.

The most popular housing situation involves sharing a house, condo, or apartment with other UCSD students.

The university is located in the midst of a resort area that results in relatively high rent in the coastal towns of San Diego: Del Mar and Solana Beach to the north of campus, La Jolla, and Pacific Beach to the south. A general rule of thumb: the closer to the beach, the higher the rent.

Available through this office are helpful landlord/tenant materials such as: leases, room rental agreements, bus schedules, wall maps, a courtesy phone for local calling, and a variety of house-hunting aids.

Our Web site is useful for students and others unable to come into the office. Search through up-to-date rental listings and available roommates on our online database. Downloadable rental agreement forms are available. Links to

local papers allow access to the classifieds. In addition, answers to frequently asked questions ease anxiety regarding a housing search.

Services are available to registered students, staff, faculty, and alumni of the University of California only. You must show a current UC ID card or official Letter of Acceptance to receive rental contacts. Rental referrals are not mailed, faxed, or given out over the telephone. The office staff will be happy to assist you with any housing questions or concerns. Our office is located in the Student Center, Building A, Suite 200–202 on the second floor.

email: housinginfo@ucsd.edu

UNDERGRADUATE RESIDENTIAL HOUSING

Each college houses students in residence halls and/or apartments that are part of a single housing system on campus. While facilities at each college are occupied primarily by students registered at that college, students from other colleges may also be residents.

Residence Halls and Apartments

Residence halls are arranged in suites of eight to ten students who share a study/living room and restroom facilities. Apartments are self-contained units with kitchens, bathrooms, living areas, and combinations of two, three, or four bedrooms. Typically four to five students share an apartment. While incoming freshmen are generally assigned space in residence halls, high demand for on-campus housing has resulted in the assignment of apartment spaces for many incoming freshmen. Rooms are furnished and provide ample space for effective studying, sleeping, and storing of personal belongings, books, and clothes.

Each college's resident dean makes specific room assignments in early September when the majority of spaces are filled. Housing and Dining Administrative Services Office administers all other details related to housing contracts.

General Information

The *Living On Campus Housing Application Instructions Information Brochure* was mailed in mid-March to all who were admitted to UCSD. Only online applications were accepted and students were given instructions on how to apply for on-campus housing via Student Link. To be eligible for on-campus housing, the Housing Application and the Statement of Intent to Register form must have been received by the specified deadline dates. On-campus housing spaces will be filled on a first-come, first-served basis according to the date the housing application was received in the Housing and Dining Administrative Services Office. The priority system is explained in detail in the *Living On Campus Housing Brochure.*

Housing application deadline for fall 2004-05 was May 3, 2004 for incoming freshmen. Due to high demand, transfer students will not receive on-campus housing. For the best selection of housing closest to campus, contact the UCSD Off-Campus Housing Office. Web site address: http://offcampushousing.ucsd.edu
email: offcampushousing@ucsd.edu

The Housing and Dining Administrative Services Office recommends that freshmen, not offered housing by the first of June, call (858) 534-4010 for further information.

AFFILIATED HOUSING (OFF-CAMPUS)

The University of California, San Diego Affiliated Housing Team operates several housing complexes in an effort to provide the highest level of flexibility when selecting your residence.

Mesa Residential Apartments (located minutes off campus) are designed to house single graduate or medical students, couples with or without children, and single parents. Residents must be enrolled full-time in a degree-granting program or Teacher Education Program. The Mesa Residential Apartments offer unfurnished one-, two-, and three-bedroom units. Each unit features carpeting, blinds/drapes, range/oven, and refrigerator. In addition, apartments are prewired for cable television and feature private patios or balconies.

Some units include utilities and some require electricity to be paid by the residents. The community is a parklike setting, and amenities include community rooms, coin-operated laundry rooms, co-op garden plots, storage space for each apartment, ample parking, playgrounds for children, and an outdoor sports area, providing courts for tennis, basketball, and volleyball.

La Jolla Del Sol, a condominium-style community owned by UCSD in San Diego's Golden Triangle, just minutes from campus, is designed to housing UCSD faculty, staff and graduate/medical students.

Each one- and two-bedroom apartment has a full-size washer and dryer, refrigerator, dishwasher, range/oven, ceiling fan, and private patio or balcony. Second- and third-floor apartments have wood burning fireplaces and assigned covered parking. Unassigned parking is also available for all residents. All apartments are prewired for cable.

Residents can enjoy the use of two heated pools with adjoining spas, two lighted tennis courts, and a fitness center and community room. Doyle Community Park is across the street, and local malls and grocery stores are within walking distance. Apartments are assigned on an individual basis. To apply for housing and to be added to the wait list at La Jolla Del Sol, please call (858) 587-1221 or email ljds@ucsd.edu.

SINGLE GRADUATE HOUSING (ON CAMPUS)

Single Graduate apartments (located on the Warren Campus) are designed to house unmarried graduate and medical students without children. Residents must be enrolled full-time in a degree-granting graduate or medical course of study, or participating in the Teach Education Program. Single Graduate Apartments all have four single bedrooms and a shared living room, dining room, kitchen, and bath area. Units are fully furnished with the exception of personal linen and cooking utensils. All utilities are included in the rental rate. All units have cable TV included at no extra charge and optional connections to the campus computer system for a fee. All spaces are available on a twelve-month lease. This is a nonsmoking facility.

NOTE: All policies and procedures concerning the operation of Affiliated Housing, the eligibility for housing, and the application process are subject to change without notice.

For more detailed information on any of the above housing facilities and/or to apply, please visit our Web site: www.hds.ucsd.edu/hsgaffil.

Affiliated Housing Operations

Psychological and Counseling Services

Central Location:
190 Galbraith
Mail Code 0304
(858) 534-3755
http://www.ucsd.edu/psychserv

Psychological and Counseling Services provide professional assistance with a wide array of personal difficulties that may interfere with academic success. Specific concerns for which students often seek assistance include loneliness and isolation, homesickness, parent/family/partner conflict, difficulty studying, concentrating or test-taking, challenges in interpersonal relations and communication, educational/career concerns, identity issues, sexuality, depression, and anxiety. Students often consult with counselors when experiencing a variety of life issues, transitions, or emotional situations. In order to enhance the UCSD student experience, Psychological and Counseling Services professionals also offer consultation to the university at large regarding a wide range of student issues.

Individual counseling, psychotherapy, marriage or relationship counseling, family sessions, and many issue-focused groups are provided to support the emotional and social growth of students. During the course of a year, special forums, psychotherapy groups, support groups, and psycho-educational groups are offered to students according to their needs and the demand for services. Listings are posted quarterly on the Web site.

Psychological and Counseling Services are geared toward developing a positive and robust mental health climate in the university community. The emphasis is on helping students maintain healthy lifestyles so that they may enjoy a sense of wellness, express themselves with confidence, manifest their creativity and productivity, manage stress successfully, and engage in interpersonal relations as they achieve their career goals.

Psychological and Counseling Services staff are clinical and counseling psychologists and psychologists-in-training. Student peer counselors present programs concerning a variety of topics to student groups throughout the year. In order to provide greater accessibility, the service has offices in all colleges in addition to the central location. Services are available to any currently enrolled undergraduate or graduate student, and appointments can be arranged by contacting the central office. The counseling relationship is private and confidential.

Recreation

RIMAC
Mail code 0529
(858) 534-4037
http://recreation.ucsd.edu

Campus Recreation provides UCSD students with quality recreation programs. They are designed to meet leisure-time needs and interests through on-campus programs offering clubs, intramural sports, recreation classes, outings, and a myriad of activities and special event programming. Our goal is to provide opportunities promoting a lifetime of health-conscious options.

FACILITIES

RIMAC with arena, gymnasium, weight room, racquetball and squash courts, and equipment room.
Main and Recreation Gymnasia
Main Gym Weight Room
Indoor 25-Yard Natatorium Pool and Spa
Outdoor 50-Meter Canyonview Pool and Spa
Outback Indoor Climbing Center
Outback Team Challenge Course
Tennis Courts
Playing Fields
Canyonview Weight Room
Golf Driving Range
Mission Bay Aquatics Center
Spanos Training Facility with weight training equipment, martial arts studio, and trainers' facility
Running and Jogging Track
Par Courses
Sand Volleyball Courts
Outback Adventures equipment rentals

INTRAMURAL SPORTS

The Intramural Sports Program at UCSD is a balanced blend of team and individual sports activities that are designed to meet the diverse needs of the campus community. Sports offered include flag football, floor hockey, tennis, basketball, softball, soccer, bowling, volleyball, tube waterpolo, and badminton.

RECREATION CLUBS

Recreation Clubs are special-interest activity clubs open to the entire campus community. The clubs are designed to bring together people with common interests. Students may join or begin new recreation clubs and participate in the workouts, meetings, social gatherings, and special events that are part of the RecClub structure.

SPORT CLUBS

Sport Clubs are those teams that compete on an intercollegiate basis but without many of the restrictions of the formal Intercollegiate Athletic Teams. The clubs offer students the opportunity to become involved in somewhat less traditional competitive sports, while still enjoying the travel to and competition against other institutions. Teams include ballroom dance, badminton, dance sport, dance team, triathlon, equestrian, water ski, cycling, lacrosse, sailing, surfing, rugby, alpine ski/snowboard racing, ice hockey, ultimate disc, and wrestling.

RECREATION CLASSES

Recreation classes provide students and the university community an opportunity for non-credit, nongraded instruction in a range of physical and leisure activities. The program includes professional instruction in everything from cardio and conditioning, tennis, weight training and swimming to karate, gymnastics, dance, and yoga.

OUTBACK ADVENTURES

Outback Adventures (outdoor recreation program) is a passport to adventure and the great outdoors. The program offers fun, full-service trips (transportation, meals, instruction, equipment) in backpacking, rock-climbing, cross-country skiing, canoeing, kayaking, mountain-biking, and other outdoor pursuits. The Outback Adventures director will also arrange customized trips. In addition, the program offers instructional workshops, a resource library of maps and park information, and a camping and outdoor equipment rental service which includes downhill and cross-country skiing equipment, camping equipment, and game equipment. Outback also runs the indoor climbing center, with facilities for beginning to advanced climbers, rentals, and instruction.

AQUATICS

UCSD Campus Recreation Aquatics encompasses a wide range of aquatic activities. Student users can participate in competitive and training programs in swimming and water polo. Masters Programs in swimming, running, and triathlon provide an intensive competitive and training experience. Special events scheduled throughout the year range from student social activities to international team competitions. Additionally, an extensive recreational lap swim program is maintained to accommodate daily users from the campus and community.

INFORMAL RECREATION

Informal recreation provides individuals and groups of students the opportunity to make use of any and all of the physical activity facilities at UCSD. From jogging on the par course to shooting hoops in the gym, or playing racquetball in RIMAC, "open rec" time allows students to develop their own leisure activities.

MISSION BAY AQUATIC CENTER

Located on Santa Clara Point in Mission Bay, this facility and its programs provide students with an exclusive opportunity to participate in all aspects of aquatic recreation. From highly structured classes to equipment rentals, MBAC is a "first class" operation. (488-1036)

PERSONAL WELLNESS

Our weightroom and Personal Wellness programs offer a free student personal wellness program with small groups and personalized comprehensive fitness program for sixty students each quarter. Nutrition counseling, personal fitness assessments, and massage therapy are also offered.

INTERCOLLEGIATE ATHLETICS AT UCSD

http://athletics.ucsd.edu

With 23 intercollegiate teams to choose from the UC San Diego Athletics program provides students with varying interests the opportunity to participate in a highly-competitive program. As a non-scholarship institution, UCSD's Tritons have competed in the NCAA Division III, achieving national prominence in nearly every sport. In 1998, UCSD won the Sears Directors' Cup, which is awarded to the nation's top overall athletics program in the NCAA Division III. In the fall of 2000, UCSD moved to Division II and immediately captured an NCAA Championship in Women's Soccer while finishing runner-up in the NCAA Water Polo Championship.

Triton teams have captured 94 first-, second-, and third-place national finishes, led by Women's Volleyball's seven titles. Women's Soccer has won six championships, followed by Women's Water Polo with five, Women's Tennis with four, Men's Soccer with three and Men's Golf with one national championship. Individually, 90 Tritons have won national championships while a remarkable 721 have earned All-American Recognition. Tritons have been named Academic All-Americans on 122 occasions and 10 student/athletes have been awarded the prestigious NCAA Postgraduate Scholarship.

Sports offered for men and women include basketball, crew, cross country, fencing, soccer, swimming and diving, tennis, track and field, volleyball, and water polo. Men's baseball, men's golf, and women's softball are also offered.

With the move to Division II, most teams now compete in the California Collegiate Athletic Association, widely considered to be the top Division II athletic conference in the country.

In addition to athletic competition, UCSD students may get involved through support groups, game management, and internships. The UCSD Pep Band has grown steadily in recent years and is a fixture of spirit at all basketball and volleyball events. In 1999, the Triton Tide made its debut as a student booster club, and students may also join the UCSD Cheerleaders, the UCSD Twirl Flag Team, or the UCSD Dance Team. In addition to the student groups, Triton Athletic Associates, a booster group of parents, alumni, and friends assists UCSD Athletics with much-needed financial support. Students interested in a firsthand experience in the operations of an athletics program should check into opportunities to work in game management, which provides the staff for all home athletic events, or inquire about internships within the Athletics Department.

Religious Affairs

Building 201 University Center
Mail code 0081
(858) 534-2521

The Office of Religious Affairs (ORA) is a privately funded program that promotes dialogue on moral, ethical, spiritual and religious issues, questions, and concerns. Professional staff provides non-sectarian consultation, counseling, and education for the campus community.

Student Office for Human Relations (SOHR)

Main Gym, Floor 2
Mail Code 0362
(858) 534-6708, sohr@ucsd.edu
http://ugr8.ucsd.edu/sohr

The Student Office of Human Relations, (SOHR), monitors and assesses campus programs, practices, and procedures to maximize achievement by UC/UCSD of a student oriented, positive and nurturing, learning environment that promotes understanding and acceptance of diversity in the UC/UCSD community through a broad educational program for UCSD students, staff, and faculty in student oriented human/race relations, cultural pluralism, hate/bias prevention education. It also serves as the campus contact for any student related hate/bias crimes or incidents, and complaints of unlawful discrimination involving UCSD students.

Student Health Service

Mail code 0039
(858) 534-3300
http://studenthealth.ucsd.edu

General medical appointments, some specialty clinics, in-house laboratory and x-ray, as well as health education programs are provided *at no charge* to all registration-paying students during the academic quarters. Summer access to Student Health Service (SHS) is at no additional charge for students with the university student health insurance plans (USHIP or GSHIP). Continuing students waiving USHIP or GSHIP are charged a summer health fee.

Reduced fees are charged for pharmaceuticals, contraceptives, travel immunizations, and laboratory tests sent to our reference lab. If you have USHIP or GSHIP many fees are covered. A Vision Clinic is available at modest fees and offers eye glasses, designer frames, lenses, sunglasses, contacts, and eye exams. If you have USHIP or GSHIP additional discounts apply.

Although undergraduate, graduate, medical, and international students may have unlimited visits with Student Health Service (SHS), students requiring medical or surgical care from practitioners, hospitals, or clinics other than SHS should be prepared to assume the cost of such care.

Starting fall term 2001, the University of California Board of Regents established a requirement that all undergraduate students have mandatory

major medical health insurance as a nonacademic condition of enrollment. The Undergraduate Student Health Insurance Plan (USHIP) provides benefits for ambulance, emergency room, hospitalization, certain outpatient services, surgery, and major medical expenses **with written SHS referral**. USHIP also includes benefits for a dental plan, pharmaceuticals, and intramural, club, and intercollegiate sports. Discounts at the SHS Vision Clinic are included. The cost for USHIP is factored into grants, loans, and work-study programs offered to students who receive financial assistance. Students covered by health insurance meeting certain criteria can ***waive USHIP*** by completing information on *STUDENTLINK* prior to posted deadlines. Only one waiver per year can be filed on *STUDENTLINK*; for additional changes, requests, and information contact the USHIP office at (858) 822-5980. The campus-based insurance plans do not replace the primary medical care and referral services provided by the Student Health Service.

Participation in the *Graduate Student Health Insurance Plan (GSHIP)* is mandatory for all graduate, professional, and international students. GSHIP provides benefits for certain outpatient services, hospitalization, surgery, and major medical expenses by **written referral** of SHS. GSHIP also contains a dental and pharmaceutical benefits and optometry discounts at the SHS clinic. The fee for GSHIP is paid by the university for graduate and professional students holding academic appointments of 25 percent time or more.

Brochures describing these insurance plans, their limitations, exclusions, and open enrollment periods are available at Student Health Service and through the SHS Web page at http://studenthealth.ucsd.edu. The insurance coordinators and are available to assist students:

USHIP Office (858) 822-5980

Student Policies and Judicial Affairs

Building B, Student Center
Mail code 0329
(858) 534-6225
http://ugr8.ucsd.edu/judicial

Student Policies and Judicial Affairs (SP&JA) consists of the administration of student judicial affairs, which includes campus-wide coordination of student conduct, including graduate students, monitoring of compliance requirements, with applicable federal and state laws, and university policies and campus regulations, such as Right to Privacy as it affects students. In addition, the director also serves as the liaison to Campus Counsel and UC General Counsel for Student Affairs and other student related legal matters and policy questions, and provides advice and recommendations for their disposition. Other programs encompassed by SP&JA include the Student Legal Services Office, Student Office for Human Relations (SOHR), Student Conduct Coordinator, and the Office of Religious Affairs.

Student Legal Services

Building B, Student Center
Mail code 0329
(858) 534-4374
http://sls.ucsd.edu
email: sls@ucsd.edu

Student Legal Services (SLS) provides advice to UCSD students in legal matters. It prepares and drafts legal documents for students seeking to represent themselves in court. These include Petitions for Dissolution, Name Change, Immigration Petitions, and Restraining Orders. Student Legal Services also counsels and prepares students for *in pro per* court appearances, i.e., Small Claims, Municipal, Traffic, and Misdemeanor Arraignment hearings. As SLS cannot represent students, if such representation is deemed necessary the student is referred to an outside attorney or agency specializing in that particular area of the law. SLS conducts twenty legal education workshops on a wide variety of topics each quarter. Additionally, SKS advises Phi Alpha Delta Law Fraternity, the Community Law Project, and the Minority Law Foundation.

Student Safety Awareness and Sexual Assault Resource Center

Main Gym, north side
Mail code 0372
(858) 534-5793
http://www.ucsd.edu/ssap
email: studentsafety@ucsd.edu

The Student Safety Awareness and Sexual Assault Resource Center (SARC) is the primary source of information, crisis intervention, and follow-up support regarding sexual assault, dating violence, and general personal safety on the UCSD campus. The goals of the peer-to-peer education programs for men and women are to dispel myths, to promote awareness of personal violence, and to prevent the incidence of these crimes. The program also explains the victim's options to notify law enforcement and to utilize other resources, i.e., campus and community counseling, and student services. SARC outlines procedures to follow if a sex offense occurs, if a victim reports to law enforcement, and/or uses the on-campus disciplinary process.

University Centers

The facilities, services, and programs of the University Centers at UCSD complement the teaching and research functions of the university. Both the Price Center and the Student Center provide opportunities for students and the campus community to meet, relax, dine, and enhance their experiences outside the classroom or lab.

THE PRICE CENTER

Mail code 0076
Administration office: (858) 534-7666
Web site: theuniversitycenters.ucsd.edu

The centrally located, modern facilities of the Price Center are home to a variety of services geared to the needs of students and the campus community. The Price Center is the place for eating, studying, surfing the Internet, running errands, and catching the latest feature film at the Dolby Digital sound equipped movie theatre. With its computer resources, the Sun God Lounge is a perfect place to study. Services located in the Price Center include the university bookstore, a copy and technology center, a travel agency, a post office, a game room, a Ticketmaster outlet, and a flower stand. Many afternoons, sounds of bands and socializing fill the patio in the plaza. An equally vibrant indoor food court has a variety of fast-service restaurants such as: Wendy's, Subway, Round Table Pizza, Jamba Juice, Star Wraps, Rubio's Baja Grill, Panda Express, and Espresso Roma. A large ballroom hosts major exhibits, conferences, meetings, concerts, and dances throughout the year. Fifteen state-of-the-art conference/meeting rooms are available for use by the campus community. Professional catering and high-tech audio and visual services can also be arranged. The Price Center is also home to many student organizations. In addition, the offices of Campus Tours, Volunteer Connection, Associated Students, University Events, and the Office of Student Organizations and Leadership Opportunities are located in the Price Center.

THE STUDENT CENTER

Student Center Services
Mail code 0323
Administration office: (858) 534-8929
Web site: theuniversitycenters.ucsd.edu

Nestled among the eucalyptus trees, the wood exterior of the Student Center stands in contrast to the modern marble of the Price Center. The casual atmosphere and unique blend of services make the Student Center a special place. The main building is home to The General Store, Groundwork Books, and the Food Co-op. These are UCSD's own brand of student-run cooperatives. The UCSD Guardian newspaper, KSDT radio station, and SRTV are located here along with several student organizations and alternative campus media. The Student Center is a popular study spot with academic services such as A.S. Soft Reserves, A.S. Lecture Notes, and plenty of comfortable outdoor study areas. There are also conference/meeting rooms, two ATMs, and the UCSD Bike Shop, which sells, repairs, and maintains bikes and bike accessories. The Off-Campus Housing Office, which helps students find housing, is located on the second floor. Next to the main building is The Stage at the Pub where dances, concerts, and many other events occur. The Stage is connected to Porter's Pub which serves lunch, dinner, and microbrew beer. Students, faculty, staff, alumni, and community members learn the art of neon, pottery, glass blowing, and other crafts in classes offered at the Crafts Center. The work of artists from around the world is exhibited at the adjacent Grove Gallery. Nearby, specialty coffees, light cuisine, and an occasional musical performance are served up in the patio setting of the Grove Caffe, one of the most beautiful places on campus. Just south of the Student Center on the Revelle campus is the Ché Café, which serves a vegetarian menu at very affordable prices.

STUDENT INFORMATION CENTER (EDNA)

Price Center
Mail code 0076
Administration Office: (858) 534-3362
Web site: theuniversitycenters.ucsd.edu

Located in the Price Center Plaza next to the theatre lobby, the information desk serves the campus community by providing information and a variety of other services benefiting the students, faculty, and the general public.

STUDENT GOVERNMENTS

Associated Students
Third Floor, Price Center
Mail code 0077
A.S.: (858) 534-4451
Hours: 8:00 a.m.– 4:30 p.m. Monday–Friday
http://as.ucsd.edu
Graduate Student Association
Student Center A
First Floor, room 132
Mail code 0353
GSA: (858) 534-6504
Hours: 9:00 a.m.–5:00 p.m. Monday–Friday
http://weber.ucsd.edu/~gsa

The Associated Students (A.S.) and the Graduate Student Association (G.S.A.) provide students with practical leadership experience in the areas of programming, financial planning, lobbying, and in the development of programs and services that are designed to meet the students' needs. The Associated Students (A.S.) operates A.S. Lecture Notes, A.S. Soft Reserves, A.S. Microwave/Refrigerator Rentals, A.S. Volunteer Connection, A.S. Undergraduate Scholastic Grants, A.S. Triton Taxi, A.S. Academic Success Program, A.S. SRTV, KSDT radio, Grove Caffe, and the Holiday Airport Shuttle. The A.S. has an official liaison with the A.S. Student Initiated Outreach and Recruitment Commission (SIORC), A.S. Alliance, A.S. Women's Commission, A.S. Triton Tide, and the A.S. All-Campus Transfer Student Association. The A.S. also sponsors a wide variety of programming, including speakers, concerts, and festivals.

The G.S.A. takes a proactive stance on graduate concerns in the areas of housing, TA/RA work-related issues, and mandatory health insurance. The Student Government staffs work with the A.S. and the G.S.A. in providing logistical, accounting, and programmatic advice. The student leaders and the staff of the A.S., the G.S.A., and the Student Government Services office encourage you to get involved and take part in the many leadership opportunities available at UCSD.

University Events Office

Price Center
Mail code 0078
(858) 534-4090
http://ueo.ucsd.edu

The University Events Office is a professional presenting organization and a central resource for programming of events and activities at UCSD. The office hosts over fifty events annually. It provides the campus and community with programs in the areas of internationally acclaimed dance, music, drama, chamber music, popular entertainment, and the San Diego International Film Festival. All programs are presented in conjunction with student committees, and volunteers are welcome.

The staff is a central resource for programming advice and assistance in the areas of event planning, publicity, marketing, ticket handling, and contracting. The management of the Central Box Office provides for the sale of tickets to most campus events as well as tickets sold on the Ticketmaster system to events in town and around the country.

STUDENT ORGANIZATIONS AND LEADERSHIP OPPORTUNITIES

Price Center
Mail code 0078
(858) 534-0501
http://solo.ucsd.edu

The office of Student Organizations and Leadership Opportunities strongly supports the notion that the university must provide learning experiences for students both within and outside the classroom. Participating in leadership workshops, seminars, conferences, and in any of the over 300 student organizations is an integral part of the university experience. With so many organizations to choose from, there is bound to be one that sparks individual interest. If not, students can start their own organization! Registration for student organizations begins in the fall and continues throughout the academic year. The advisers are here to assist in selecting an organization or in starting one.

In addition, leadership seminars are organized to help strengthen the leadership potential of students. Listed below are some of the training programs we schedule each year:

- Improving interpersonal skills
- Public relations
- Interviewing techniques
- Fund raising
- Team building
- Running effective meetings
- Time management
- Careers in student affairs
- Budget management

Motivation
Stress management
Ethics
Publicity/advertising
Recruiting volunteers
Diversity

We invite you to stop by the Student Organizations Center on the third floor of the Price Center to learn more about student organizations and leadership opportunities!

Veterans' Affairs

Building 201 University Center
Mail code 0013
(858) 534-4480
http://www.ucsd.edu/finaid

ELIGIBILITY

The following persons may be eligible for federal veterans' educational benefits:

Chapter 35

1. Sons, daughters, spouses, and surviving spouses of veterans who died, or are permanently and totally disabled as the result of a service-connected disability, or persons missing in action, or captured in line of duty by a hostile force.

Chapter 30

2. A person who entered active duty for the first time after June 30, 1985, and served continuously for three years.

Chapter 106

3. Persons who have a six-year obligation to serve in the Selected Reserve signed after June 30, 1985.

Attention Veterans:

All VA recipients must submit a degree check from their college to the Veterans' Affairs Office at Financial Aid. (After the add/drop date for spring.)

CalVet Fee Waiver

4. California Veterans' Dependents College Fee Waiver Program: A student who is the child of a deceased veteran or veteran with a service-connected disability may receive a waiver of registration and educational fees. Eligibility is determined by individual county veterans' services offices.

OTHER SERVICES

In addition to certifying paperwork to initiate a student's veterans' benefits, the Student Financial Services staff can answer questions about check problems or other programs administered by the Veterans Administration such as tutorial assistance and VA work-study, or can provide you a phone number so that you can make an inquiry to the Veterans Administration Regional Office.

Upon admission to the university, please contact the Student Financial Services Office to request certification of VA educational benefits, or notify the office of your eligibility for the CalVet waiver.

Other Services and Programs

UCSD Alumni Association

202 University Center
Mail code 0083
(858) 534-3900
email: alumni@ucsd.edu
http://www.alumni.ucsd.edu

The UCSD Alumni Association was formed in 1964 by a small group of early graduates, and it has grown today to represent over 95,000 alumni. Our mission is to foster a lifelong, mutually beneficial relationship of alumni and students with UCSD. The association works to provide alumni with continued access to the resources of the university, communicate UCSD news and happenings, and facilitate a network for alumni and student interaction.

The Alumni Association awards undergraduate scholarships, recognizes outstanding alumni, faculty, and students, assists the university with legislative advocacy, and brings alumni together in social, educational, and networking forums in San Diego and across the nation. The association publishes *@UCSD* magazine and hosts an active online community.

Increasingly, the Alumni Association is providing current students with access to alumni as a resource for social, career, and community connections. When students become members of the association they maximize their interaction with this larger community of alumni. Offerings include career mentoring, skills development training, and support for student organizations and activities.

Student and alumni members have access to campus discounts and privileges, networking and volunteering opportunities, educational travel programs, a subscription to all alumni publications, and discount cards for UCSD and community activities.

Art Galleries

UNIVERSITY ART GALLERY

Mandeville Center, Room 101
Mail code 0327
(858) 534-2107
http://www.universityartgallery.ucsd.edu

The University Art Gallery presents four exhibitions each year with an emphasis on contemporary works. Painting, sculpture, and photography are joined by newer art forms such as performance art, installation works, and video art, giving visitors a chance to experience the full range of contemporary artistic expression. Recent exhibitions have included: Edward Burtynsky and Stéphane Couturier, *Altered States: Landscape Transformations in the Wake of Progress;* Doug Hall, *In Finite Spaces;* and Eleanor Antin, *The Last Days of Pompeii.*

Gallery hours are from 11:00 a.m. to 4:00 p.m., Tuesday through Saturday. The gallery is closed Sundays, Mondays, and school holidays. There is no admission charge.

MANDEVILLE ANNEX GALLERY

Mandeville Center, Room B-118
Mail code 0327

The Mandeville Annex Gallery is for Visual Arts undergraduate art exhibitions. A new exhibition is mounted each week of the quarter. Included in the exhibition schedule are individual, group, and class shows. Gallery hours are from 12:00 noon to 5:00 p.m., Monday through Friday. There is no admission charge.

VISUAL ARTS GRADUATE GALLERY

Visual Arts Facility, Room 309
Mail code 0084
http://visarts.ucsd.edu

The six-building complex houses the Visual Arts Graduate Gallery. First-year review shows and M.F.A. exhibitions will be mounted each week of the quarter. Gallery hours are from 12:00 noon to 5:00 p.m., Monday through Friday. There is no admission charge.

Child Development Center

Mail code 0962
(858) 534-2768
http://admissions.ucsd.edu

The UCSD Early Childhood Education Center serves the children of students, staff, faculty, and the community at large. Age requirements are eleven months and walking through kindergarten. State subsidy is available for income-eligible staff and full-time students on a limited basis. Only full-time enrollment is offered, 7:30 a.m. to 5:00 p.m., Monday through Friday. Breakfast, lunch, and afternoon snack are included in the cost. For further information or to visit, call the Childcare Center's office at (858) 534-2768 between 7:30 a.m. and 5:00 p.m.

As an alternative, the Infant Toddler Referral Program aids campus families in locating licensed home-care providers for children from six weeks through preschool ages. For assistance, call (858) 534-2768 during office hours or leave a recorded message for a return call.

Crafts Center

Mail code 0338
(858) 534-2021
http://www-crafts.ucsd.edu

Located in the center of the campus, the Crafts Center offers studio and art/crafts instructional facilities in ceramics, photography, jewelry, drawing, neon, glassblowing, and other crafts. The center provides personal enrichment and creative educational opportunities to individuals wishing to develop artistic skills in an active studio-classroom situation.

The Grove Gallery is a part of the center, and offers ongoing exhibits of contemporary crafts and ethnic arts. The Grove Gallery Store sells an international selection of handmade crafts and other decorative accessories.

Registration for Crafts Center activities takes place the first week of every quarter at the center. Specific classes, schedules, and course fees information can be obtained by calling (858) 534-2021 or http://www-crafts.ucsd.edu.

UCSD Cross-Cultural Center

Building 510, Mail Code 0053
(858) 534-9689, Fax (858) 822-0173
cccenter@ucsd.edu
http://ccc.ucsd.edu

Established in May of 1995, the UCSD Cross-Cultural Center (CCC) functions as a campus community center committed to creating space for dialogue while also maintaining an environment conducive to the recruitment and retention of students, staff, and faculty from underrepresented backgrounds.

The CCC offers programs and services specifically designed to reflect UCSD's commitment to excellence, scholarship, and community through cross-cultural interactions. The center's focus areas include: faculty, staff, and student exchanges, educational materials and resources, student outreach and retention activities, speakers, film series, community outreach, support and discussion groups, and leadership development.

Imprints

http://imprints.ucsd.edu

YOUR UCSD PRINT RESOURCE CENTER

Self-serve copies, full color copies, fax service, posters, lamination, large format, plus a large variety of other printing and binding services are available. Price Center Imprints is open evenings and weekends. In addition to standard services, computer workstations are available on a rental basis with both black and white and color laser printer options.

Campus Locations:

- Applied Physics and Math Bldg., Room #3301, (858) 534-2197
- Campus Services Complex, Bldg. A, (858) 534-3020
- Geisel Library, Main Flr (858) 534-2534
- Price Center, Upper level (858) 822-4422
- University Center, Bldg. 201, (858) 534-7050

Triton Plus Card, Library photocopy card, cash, and check payment accepted. Visa and Mastercard accepted at Price Center and Geisel Library locations.

Transportation and Parking Services

Located in the Gilman Parking Structure
Mail code 0040
(858) 534-4223
http://parking.ucsd.edu

Transportation and Parking Services, (T&PS) sponsors a variety of programs and services designed to help students living at UCSD without a car. An extensive network of shuttles spans the campus and also serves several off-campus locations. A special sticker can be affixed to a UCSD ID card, free of charge, allowing unlimited rides on San Diego Transit buses within a two-mile radius of campus. T&PS offers a free holiday shuttle service to the airport, helping students get home during breaks. For information, route maps, or schedules, please telephone (858) 534-RIDE, or check our Web site at *parking. ucsd.edu*.

A number of money-saving rideshare programs have been developed for commuting students. Carpool, vanpool, rail, bicycle, and subsidized transit programs feature terrific additional incentives including a free emergency ride home and complimentary parking. For program details, call Rideshare Operations at (858) 534-RIDE.

If you choose to bring a car to campus, be aware that a parking permit is required on UCSD property, Monday through Friday, 7:00 a.m. to 11:00 p.m., unless otherwise posted. (A short grace period during September's Welcome Week allows parking in student spaces without a parking permit.) Parking permits can be obtained at the Parking Office (858) 534-4223, or by accessing StudentLink.

Student spaces are defined by yellow squares, student ("S") parking permits are valid in these yellow spaces at all times. After 4:30 p.m. weekdays, all UCSD permits are upgraded and become valid in spaces marked with green ("B") or red ("A") squares, and metered (no fee required) spaces. Permits are not required on campus Saturday and Sunday, unless otherwise posted. Student permits are never valid in spaces marked *"A" Permit Required, 24 Hours a Day, 7 Days a Week*, or in any other 7/24 parking space.

T&PS has a Motorist Assistance Program which provides battery jumps, help with lock outs, flat tire inflation, or a lift to the nearest station to buy gas for drivers stranded on campus. Call (858) 534-8108.

If you have questions about T&PS, purchasing a permit, or parking at UCSD, please telephone a service representative at (858) 534-4223, visit our Web site: parking.ucsd.edu or stop by the Parking Office, located in the Gilman Parking Structure (entrance on Russell Lane).

Student Mail Services

Campus Services Complex, Bldg. A
Mail code 0047
(858) 534-7098
http://www-bfs.ucsd.edu/mails/

The Student Mail Services provides Monday through Friday distribution of mail to resident students during the academic year. Hours of operation are 8:00 a.m. to 4:00 p.m. Stamps and various other U.S. Postal commodities can be purchased.

The UCSD Bookstore

Rancho Bernardo Extension Complex

Course Materials/Textbooks

Required and recommended course materials for undergraduate and graduate classes are stocked at the UCSD Bookstore, along with additional supplementary study aids.

Course materials for UCSD Extension courses are stocked in the Extension section of the UCSD Bookstore; they can also be ordered online via the Bookstore's Web site at http://bookstore.ucsd.edu/books/extension/index.htm. Extension course materials ordered via the Web may be shipped, held for pick-up in La Jolla, or delivered for pick-up at the North County or Sorrento Mesa Extension centers.

Online Look-Up: Undergraduate, graduate, and Extension course materials lists, along with prices and availability, may be viewed on the World Wide Web the same day they are entered into the Bookstore's database once the feature is activated for each term. For graduate and undergraduate classes, within the Schedule of Classes on UCSD's StudentLink, click on the blue book icon for the desired section. For Extension course materials lists, use the look-up/purchase feature at http://bookstore.ucsd.edu/books/extension/.

Faculty: Each quarter, the UCSD Bookstore sends a memo to faculty requesting course materials information ("adoptions") for the upcoming quarter. Faculty can submit adoptions directly to the Course Materials Department at the UCSD Bookstore, through the various academic departments, or via the Bookstore's Web site at http://bookstore.ucsd.edu/books/textbooks/coursematerials.htm. Faculty should submit their adoptions before the quarterly deadline to ensure that the course materials can be stocked before classes begin. Information about and links to other campus instructional support services (library eReserves, course Web pages, A.S. Soft Reserves, Imprints, etc.), are at http://coursematerials.ucsd.edu/.

Course Materials/Textbook Reservation Service (TRS)

At the beginning of every fall quarter, the UCSD Bookstore offers a convenient course materials/textbook reservation service (TRS). Students can submit reservations using the special form each entering student receives in the mail and in an orientation packet, or via the Bookstore's Web site at http://bookstore.ucsd.edu/trs.

Custom Publishing

As part of the UCSD Bookstore's mission to serve the UCSD community as an essential academic resource, the course materials department provides custom-printed course materials, including out-of-print and out-of-stock books, journal and newspaper articles, syllabi, anthologies, lab manuals, and original works. To ensure compliance with legal requirements involving reproduced printed materials, the Bookstore secures all necessary copyright permissions. Faculty should submit adoptions for custom-printed materials along with their other adoption requests.

Digital Course Content

Unique in the college bookstore industry, the UCSD Bookstore has a staff member dedicated to digital course content delivery. Acting in concert with other instructional support departments on campus, the Bookstore can assist faculty in locating digital materials and making them available to UCSD students.

Course Materials/Textbook Buyback

During the first week and finals week of each quarter, the UCSD Bookstore provides a buyback

service allowing students to sell their textbooks for cash. If a title is being used in the upcoming term, students may receive up to half the new price of the book.

Book Information

The book information department's experienced staff of booksellers can help find just the right book from among the impressive selection of general, technical, scientific, and medical books stocked at the UCSD Bookstore. Booksellers can also research any title that is in print in the United States by accessing databases that contain information on hundreds of thousands of additional titles. They are happy to special order books that are not available in the store. In addition to offering in-store service, booksellers take orders and answer inquiries via phone, fax, and email and can assist with searching for books and placing orders on their Web site: bookstore.ucsd.edu, which shows availability of more than 140,000 titles contained in their database. To search for and order from more titles, the Bookstore offers two additional Web sites: BookSense, for trade and technical books and the UCSD medical Web store for medical books.

General, Scientific, and Technical Books

The general, scientific, and technical department contains books from hundreds of different publishers. To support the academic mission of the university, a wide array of academic disciplines in the arts and humanities, social sciences, languages, mathematics, science, and engineering are represented. Strong general interest sections in categories such as fiction, travel, reference, and children's books complete the selection. Find excellent values in the bargain books section and on discounted bestsellers. All general, scientific, and technical books are discounted 10 percent during "Happy Hours" from 4:00 p.m.–6:00 p.m. every Wednesday. Check availability of titles in the store online at bookstore.ucsd.edu. The home page provides the opportunity to search and order from among two million additional titles, and explore their partner stores, BookSense for trade and technical books, and the UCSD medical Web store for medical books..

Medical Books and Instruments

The UCSD Bookstore is proud of its partnership with the medical community at the university and in the San Diego area. It has long been recognized as the primary resource for an up-to-date, comprehensive selection of medical books and instruments. In the store, find medical textbooks for the UCSD School of Medicine and UCSD School of Pharmacy along with more than 5,500 reference titles in nearly one hundred medical categories. A large selection of medical instruments is available along with lab coats, clinical jackets, scrubs, and unique medical gift items. All medical books and instruments are discounted 5 percent during "Happy Hours" from 4:00 p.m.–6:00 p.m. every Wednesday. Check availability of medical titles in the store online at bookstore.ucsd.edu. For a larger selection of medical titles, search the UCSD medical Web store accessed from the home page. This Web site features more than 90,000 titles and offers up to a 5 percent discount on medical and nursing books as well as medical supplies and instruments.

Faculty Authored Books

The UCSD Bookstore is pleased to display and sell recent publications authored by UCSD faculty. Inside the bookstore find books shelved in a special Faculty Author section and in the categorical section that applies. Look for a selection of recently published titles on display at the Faculty Club. Faculty members with a new book they would like the UCSD Bookstore to stock should contact the store using one of these methods: (858) 534-3149; (800) 520-7323; bookstore.ucsd.edu and click on the Visitors and Friends tab and provide the title, publisher, and ISBN number.

Gifts and Clothing

Visit the gifts and clothing department and discover an exciting selection of UCSD insignia merchandise, as well as seasonal, trendy, and everyday clothing and gift merchandise. You can shop for bath and body products as well as home décor, jewelry, and sandals. In-store events for this department include the spring break sale, grad fair, and holiday sale, all of which bring a mini mall shopping experience to campus. Shop online: bookstore.ucsd.edu/clothing, or call to find out about the latest arrivals, (800) 520-7323 (READ).

Supplies: School, Art, Office, and Residence Halls

The bookstore caters to UCSD's office, school, art, and residence hall supply needs as well as professor required art, engineering, and lab supplies. Students living in the residence halls have a selection of linens, towels, shower caddies, picture hangers, trash cans, white/cork boards, extension cords, T.V. cables, batteries, and much more to get their rooms set-up in style. Call (858) 534-3786 for a copy of the Super Catalog featuring over 30,000 office, art, school, and residence hall supplies. Special orders are easy to place and usually arrive within one to two days. For some of the most common supplies, shop online: bookstore.ucsd.edu/supplies.

Electronics

Brand name calculators, CD players, and voice recorders such as Hewlett Packard, Texas Instruments, Sharp, Sony, and Panasonic are always in stock at the bookstore. This department is full of fun and useful gadgets and accessories.

Computers

The extremely knowledgeable staff of the UCSD Bookstore computer department is available to assist those who wish to purchase computer and printer hardware and accessories. Educational pricing is offered for full-time UCSD students, extension students (certificate courses), faculty, and staff on Macintosh and PC software and hardware. Special orders are encouraged for products that may not be stocked. The UCSD Bookstore One Stop Shopping (BOSS) system was created to allow ordering computer products online: bookstore.ucsd.edu/computers/index.htm.

Computer Repair

At very reasonable prices the bookstore's computer center repair shop accepts in-warranty repairs for: Apple, Dell, Gateway, and Compaq commercial laptop.

In adddition, they repair almost all out-of-warranty computers and printers including PC clones. They do not repair out-of-warranty monitors. To receive service bring your system to the bookstore computer center. The average repair is 3–5 days.

Special Orders

Books, gifts, clothing, office and art supplies, medical instruments, computer hardware and software can be special ordered at any time. Call us to request a personal shopper.

BIRCH AQUARIUM AT SCRIPPS BOOKSHOP

2300 Expedition Way
La Jolla, CA 92093-0207
Monday–Sunday 9:30 a.m.–5:00 p.m.

(858) 534-8753
(Closed Thanksgiving Day, Christmas Day, and New Year's Day)

The Aquarium Book and Gift Shop has been operated by the UCSD Bookstore since August 1994. Its goal is to support the education and community service missions of the Scripps Institution of Oceanography and the Birch Aquarium at Scripps. The bookshop has an exciting selection of educational books concerning the geological, biological, and physical sciences and how they interact with the sea. A dazzling variety of children's books and educational toys are available to children of all ages who have interest in the ocean and its marine life. Other popular items are guides to scuba diving and snorkeling, tide pool guides, San Diego tourist guides, and maps. The bookshop's selection of souvenirs and gifts is fun-loving with a wide-ranging selection of T-shirts, sweatshirts, postcards, calendars, video tapes, stuffed animals, jewelry, and lots more. Visit the Web store at bookstore.ucsd.edu/aquarium.

THE SUNSHINE STORE

Monday–Friday 7:00 a.m.–8:00 p.m.
Saturday 9:00 a.m.–5:00 p.m.
Most Sundays 12:00 noon–5:00 p.m.

Visit the Sunshine Store for all your favorite groceries and needs including: frozen, microwavable, and packaged meals, snacks, soda, juice, coffee, tea, ice cream, sandwiches, donuts, candy, international foods and snacks, health and personal products, cleaning supplies, and household essentials. Film and film processing are available with specials running throughout the year. Join the Coffee Club (buy ten cups, get the eleventh cup free)! Library-safe mugs are sold here, as well as scantrons, blue books, batteries, daily newspapers, and munchies when everything else is closed on campus! Established in April 1979 as an auxiliary operation of the UCSD Bookstore, the Sunshine Store is a busy annex located next to the UCSD Bookstore on the ground floor of the Price Center plaza.

RETURN/REFUND POLICY

The UCSD Bookstore strives for complete customer satisfaction. Should any product you select from the UCSD Bookstore fail to meet your expectations, they will respond to your concern and assist you in an exchange, refund, or credit whenever possible within the guidelines that apply to their specific merchandise categories.

- All categories of refundable merchandise require an original receipt to obtain a refund.
- Undergraduate, graduate, and Extension textbooks must be accompanied by the cash register receipt and meet the conditions and timeframes printed on the bookmark that accompanies the receipt.
- Books used for School of Medicine and School of Pharmacy and Pharmceutical Sciences courses must be returned within 14 days from the date on the receipt.
- General interest, technical, and medical books may be returned for refund, exchange, or credit within 14 days if they are in resalable condition and are among the titles currently carried in the UCSD Bookstore.
- Nonrefundable/nonexchangeable merchandise: medical instruments, Medical (MDTEST), other testing (REFEXM) books, magazines, and clearance books.
- Computer hardware and software refund policies are available in the computer department.
- For supply department electronics, original packaging and cash register receipt are required for refund or exchange.

University Police Department

Building 500 University Center
Mail code 0017
EMERGENCY, DIAL 9-1-1
Business, (858) 534-4357
http://police.ucsd.edu

The UCSD Police Department protects life and property through the enforcement of local, state, and federal laws. The police department strives for a safe campus environment, where the educational and research pursuits of the university can be realized.

The Police Department provides continuous twenty-four-hour-a-day police patrol to protect the campus community, along with the dispatching of emergency fire and ambulance services.

In addition, student residential areas are provided with additional security with on-site residential security officers (RSOs) during the evening and early morning hours.

CLERY CAMPUS CRIME REPORT

For information concerning campus crime statistics, crime reporting, policies and practices pertaining to campus security, and/or crime prevention tips, please visit the UCSD Police Department's Web site—Crime/Victim Information located at www.police.ucsd.edu.

CRIME PREVENTION PROGRAM

(858) 534-3644

The Police Department's Crime Prevention Program offers a variety of information to the campus community on crime prevention methods. Pamphlets and informative seminars are available.

COMMUNITY SERVICE OFFICER PROGRAM

(858) 534-9255

CSOs are students employed by the UCSD Police Department. They provide a variety of services related to crime prevention and campus safety. One of the services is the safety ESCORT program, which is available every evening from 5:00 p.m. to 1:00 a.m. They also provide security for campus events and facilities. For more information contact the program coordinator at (858) 822-1130.

LOST AND FOUND

(858) 534-4361

The Police Department serves as a central repository for lost and found articles. Lost and found items should be taken to the police station. The station is open twenty-four hours daily.

U.S. Neighborhood Post Office

2.425 Price Center
Mail code 0047
(858) 534-1164
http://www-bfs.ucsd.edu/mails/

The Price Center Post Office is a contract station operated under the rules and regulations of the U.S. Postal Service. Stamps, money orders, and other postal items may be purchased and mailed at this location Monday–Friday, 8:30 a.m. to 5:00 p.m. P.O. Box rentals are available in various sizes.

Research at UCSD

Organized Research Units (ORUs) are academic units the University of California has established to provide a supportive infrastructure for interdisciplinary research complementary to the academic goals of departments of instruction and research. The functions of ORUs are to facilitate research and research collaborations; disseminate research results through research conferences, meetings, and other activities; strengthen graduate and undergraduate education by providing students with training opportunities and access to facilities; seek extramural research funds; and carry out university and public service programs related to ORUs' research expertise. The senior staff of these units are faculty members in related academic departments. Institutes and centers currently in operation at UCSD are described below.

In addition, the university is formally and informally affiliated with various private research organizations such as the Institute of the Americas, The Salk Institute for Biological Studies, Howard Hughes Medical Institute, Ludwig Institute for Cancer Research, and The Burnham Institute.

Universitywide Institutes/ Organized Research Units

California Space Institute (Cal Space) was established in 1979 as a multicampus organized research unit of the University of California (UC). Cal Space maintains centers on several campuses, which support and conduct pure and applied space-related science and technological research and development. Specific areas of investigation include the following:

Remote Sensing–acquisition, processing, and application of observations by satellites or other remotely automated instruments to study the Earth and its changing environment. The primarily satellite-based investigations study the greenhouse effect, global warming, hydrological cycle, land surface processes, air-sea interactions, radiation, and cloud dynamics.

Climate–interdisciplinary scientific research that applies space observations and numerical modeling techniques to fundamental issues of climate prediction and global change caused by both natural and human forces within the atmosphere, the oceans, and on land surfaces.

Space science and engineering–investigations of both the solar system and universe, and the development of automation and robotic systems for space exploration. Current investigations include the study of comets, asteroids, the solar wind, and cosmic background radiation. Space observations are often conducted with instruments and techniques designed by Cal Space researchers.

Education–promotion of undergraduate and graduate education in the interdisciplinary fields of climate and global change, and space science and engineering. The Cal Space-led state-wide consortium (California Space Grant Consortium) was designated in 1989 as a Space Grant College by NASA's Office of Education. The program expands leadership in the development and application of space resources through research and hands-on space projects, fellowship funding, and educational outreach activities. The California Space Grant Program works with NASA Centers and the aerospace and high technology industries to strengthen its educational objectives.

Institute of Geophysics and Planetary Physics (IGPP) was established in 1960 and named the Cecil H. and Ida M. Green IGPP in 1994. It is a multicampus research unit of the University of California, headquartered at UCSD, with branches at UCI, UCLA, UCR, UCSC, as well as Los Alamos and Lawrence Livermore National Laboratories. The present facility includes the Roger and Ellen Revelle Laboratory and the Judith and Walter Munk Laboratory. Present research concentrates on the study of crustal dynamics by measurements of gravity, tilt, displacement, and strain in both continental and oceanic environments; of regional seismicity and linear and nonlinear earthquake and explosion source mechanisms; of the variability of the earth's geomagnetic field and its generation by the geodynamo; of the spherical and aspherical structure of the earth by measurements of free oscillations, surface waves, and travel times; of seafloor tectonics using marine geophysical methods; of linear and nonlinear theoretical and computational fluid dynamics; of the variable mesoscale structure of the oceans and global ocean warming by acoustic tomography; of the structure of the oceanic crust and lithosphere by seismic and electromagnetic measurements on the ocean bottom and at the ocean's surface through seismic multichannel methods; of sea-floor and planetary topography and gravity using satellite methods; of nonlinear dynamics applied to geomorphology; and of tides, waves, turbulence, and circulation in the oceans; of surface change caused by tectonic activity, or climate change using satellite Interferometric Synthetic Aperture Radar (InSAR), as well as airborne and spaceborne laser altimetry. The institute operates a global network of some forty broadband seismometers, the IDA (International Deployment of Accelerometers) Array, with ten of these stations in the former Soviet Union which are telemetered by satellite to the institute; a crustal strain and seismic observatory at the Cecil and Ida Green Piñon Flat Observatory near Palm Springs; a scientific wireless network in California with SDSC, the High Performance Wireless Research and Education Network (HPWREN); a southern California network of Global Positioning System (GPS) satellite geodetic sites operated by the Scripps Orbit and Permanent Array Center (SOPAC) and the California Spatial Reference Center (CSRC); an acoustic network in the Pacific for measuring ocean temperature variability; a modern 3D data visualization facility; a 5m, X-band satellite receiving antenna for satellite remote sensing; a national Ocean Bottom Seismograph Instrument Pool (OBSIP); and telemetered seismic arrays in Kirghizia, and two locations in California. The institute does not grant degrees, but makes its facilities available to graduate students from various departments who have chosen to write their dissertations on geophysical problems. Undergraduate students are involved in independent research projects and as laboratory assistants. Members of the institute staff now hold joint appointments with the Departments of the Scripps Institution of Oceanography, and Applied Mechanics and Engineering Sciences. Support for visiting scholars and grant matching funds is provided through an endowment to the Cecil and Ida Green Foundation for the Earth Sciences.

The **University of California Institute on Global Conflict and Cooperation (IGCC)** is a multicampus research unit serving all ten UC campuses and the UC-managed Lawrence Berkeley, Lawrence Livermore, and Los Alamos National Laboratories. IGCC is based at the Graduate School of International Relations and Pacific Studies (IR/PS) at UCSD, whose faculty provides IGCC's leadership.

IGCC's mission to educate the next generation of international problem-solvers and peacemakers is carried out through teaching activities and research and public service opportunities. Scholars and researchers from inside and outside the UC system, government officials, and students from the United States and abroad have participated in IGCC projects.

IGCC's initial research focused on averting nuclear proliferation through arms control and confidence-building measures between the superpowers. Since then, its research program has diversified to encompass several broad areas of inquiry: regional relations, international environmental policy, ethnic conflict, terrorism, and international trade and policy issues. In addition, receipt of a prestigious NSF award in 2002 for a program to train the next generation of nuclear policy experts has lead to a rekindling of interest in research on traditional security issues.

IGCC supports research and teaching on the causes of international conflict and opportunities to promote cooperation through its annual fellowship and grant cycle. IGCC's development office provides an additional resource for UC aculty seeking foundation funding for their projects. IGCC also serves as a liaison between the academic and policy communities through its Washington, D.C. office, located in the UC Washington Center (UCDC). The Washington, D.C. office administers a graduate internship program in international affairs and the IGCC Dissertation/Foreign Policy Fellow Program. Interns and fellows are placed with governmental and nongovernmental organizations involved in international policy. The Washington office also sponsors policy seminars to showcase UC faculty research results and to provide opportunities for interaction between professors and policymakers.

IGCC's annual **NEWS***Wired* provides an overview of the previous year's research, funding, awards, projects, meetings, workshops, colloquia, news, and publications. **POLICY***Packs* provide concise summaries of IGCC research programs for the policy community. A new annual journal, **IGCC***Review*, will feature articles addressing the policy implications of IGCC research conducted by senior UC faculty.

IGCC receives primary support from the regents of the University of California. Additional funding has been provided by the U.S. Departments of Energy, State, and Defense, the U.S. Institute of Peace, the National Science Foundation, the Japan-U.S. Friendship Commission, and Japan's National Institute for Research Advancement (NIRA). IGCC has also received important support from foundations such as the Japan Foundation Center for Global Partnership (CGP), the Carnegie Corporation of New York, The John D. and Catherine T. MacArthur Foundation, the William and Flora Hewlett Foundation, the Markle Foundation, the Smith Richardson Foundation, and the Rockefeller Foundation.

For more information about IGCC and its research programs, including full-text publications and downloadable **POLICY***Packs*, visit the IGCC Web site at http://www-igcc.ucsd.edu. IGCC publications can also be downloaded from the California Digital Library's E-Scholarship Repository at http://repositories.cdlib.org.

The White Mountain Research Station (WMRS) was established as a UC multicampus research unit in 1950 to support high altitude research. The station includes 4 laboratory facilities located over a 3,000m (10,000 vertical ft.) altitude transect, ranging from the floor of the Owens Valley to the highest peak in the White/Inyo Mountains. Located on the western edge of the Great Basin, WMRS also provides access to three major biogeographic regions (Sierra Nevada and White/Inyo montane, Mojave desert and Great Basin desert), and geologically rich and diverse field sites. WMRS has evolved into a major multidisciplinary research and teaching institution in eastern California, and hosts programs in archaeology and anthropology, atmospheric and space sciences, biological and medical sciences, ecology, conservation and natural resource management, geological, hydrological, and earth sciences.

WMRS facilities include: (1) the business office, laboratories, classrooms, dormitories, and dining hall for up to seventy people in Bishop, (2) a newly renovated lodge, cabins, and classroom laboratory at Crooked Creek (3,094m altitude), which accommodates up to fifty people, (3) the Nello Pace Laboratory and Mount Barcroft facilities (3,801m altitude) which accommodate thirty-five people in dormitories, and (4) the 450 square foot Summit Laboratory located on White Mountain peak (4,342m altitude), which is the highest research lab in North America.

The Bishop facilities includes wet and dry labs, a modern biology laboratory, The Deepest Valley Interagency Plant Propagation Center, and a geographic information system (GIS) laboratory that houses the USGS-funded "Eastern Sierra Geospatial Data Clearinghouse." This is used by visiting researchers and local agency scientists, as well as off-site investigators and policy makers via World Wide Web access.

WMRS hosts more than 3,000 users from over 100 institutions per year for research, teaching, and conferences. WMRS also hosts a Center for Astrophysics and Cosmology at Barcroft. Research occurs year-round with access to the high-altitude labs at Barcroft via snowmobile. Summer is the busiest time at WMRS, with undergraduate internships, graduate students supported by WMRS Fellowships in residence, plus students and faculty from other universities around the world. Educational uses include several geology field courses and a course on Integrated Methods in Ecology with the undergraduates in residence for the spring quarter. WMRS sponsors professional and post-graduate training courses, annual professional society meetings, and offers published proceedings from symposia on the environmental science in the region.

Campuswide Institutes

The AIDS Research Institute
http:// ari.ucsd.edu/index.html

Established in 1996 and formally opened in 1997, the AIDS Research Institute (ARI) serves as the conduit for the UCSD Programs in HIV Infection and AIDS, in which AIDS researchers in all university departments and our associated institutions can collaborate on research, with the objective of developing new approaches to the prevention, diagnosis, and the treatment of HIV/AIDS.

UCSD faculty have made major advances in our understanding of how the virus works, how it causes disease, how to treat HIV infection and its complications, and the impact of HIV infection on nationwide health and healthcare costs. In addition to the 104 faculty members from 19 departments, the UCSD Program in HIV Infection and AIDS is internationally recognized for its contributions to science and patient care, bringing in more than $30 million in HIV and AIDS-related grants annually and is ranked among the top ten AIDS programs in the country.

ARI programs include:

- The Center for AIDS Research (CFAR)
- The Adult AIDS Clinical Trials Group (AACTG)
- The Pediatric AIDS Clinical Trials Group (PACTG)
- The California Collaborative Treatment Group (CCTG)
- The HIV Neurobehavioral Research Center (HNRC)
- The Southern California Primary Infection Program
- The HIV Costs and Services Utilization Study (HCSUS)
- The VA Quality Enhancement Research Initiative for HIV (QUERI-HIV)
- The San Diego AIDS Education and Training Center (AETC)
- The Owen Clinic, providing primary health care services
- The AntiRetroviral Research Center (AVRC)
- The UCSD Mother, Child and Adolescent Program

The institute sponsors seminars and workshops as well as offering developmental grants to new investigators in the area of human immunodeficiency virus (HIV) and acquired immune deficiency syndrome (AIDS) related research.

Together with research and development the ARI is fully committed to serve as a community resource for information and assistance regarding infection, treatment, and education in HIV and AIDS. We are here to serve as the regional resource for all aspects pertaining to HIV and AIDS and, as a leader in research and education, to cure the infected and prevent the uninfected from becoming infected.

The California Institute for Telecommunications and Information Technology (Cal-(IT)²) (http://www.calit2.net) is an organized research unit that seeks to ensure that California maintains its leadership in the telecommunications and information technology marketplace. The institute's mission is simple: Extend the reach of the Internet throughout the physical world. Cal-(IT)² is a partnership between UCSD and UC, Irvine, and is one of four institutes established in December 2000 through the California Institutes for Science and Innovation (CalISI). It is funded by a state capital grant, federal research grants, industry, and foundations.

The institute is organized conceptually into five vertically interlocking "layers." The five layers are materials and devices; networked infrastructure; interfaces and software systems; four applications areas; and policy, management, and socioeconomic evolution. The initial four applications—environment and civil infrastructure, intelligent transportation and telematics, digitally enabled genomic medicine, and new media arts—are target core concerns related to California's quality of life and represent large market segments of California's economy poised to be transformed by the new Internet. Each layer and application has a leader listed on the Cal-(IT)² Web site.

More than 220 professors and senior researchers, industrial partners, postdoctoral researchers, and graduate and undergraduate students are collaborating on interdisciplinary projects in living laboratories. These labs include collaborative frameworks that span multiple layers to enable creation of larger-scale activities to address real world problems, such as pollution, traffic congestion, and the pressing needs of medical practice. Early activities have focused around eight living labs; some are "technology-driven," some are "application-driven," and one is "culture-driven." The labs provide a context to deploy and test new technologies in various combinations and experiment with new applications.

The Institute for International, Comparative, and Area Studies (IICAS) was created in 2001 to promote research on international, comparative, and cross-regional topics. Building on the substantial existing strengths of UCSD in international studies, IICAS coordinates and supports the research of faculty in departments, area studies programs, and the Graduate School of International Relations and Pacific Studies. It is closely associated with undergraduate and graduate education in international studies, including Eleanor Roosevelt College and the international studies major, whose program offices are housed within the institute.

IICAS has three principal initial roles. First, it serves as a research catalyst, fostering and incubating interdisciplinary and cross-area research groups and projects. Activities have included the launch of a European Studies initiative, a faculty research project on globalization, territoriality, and conflict, and a multiyear, interdisciplinary research workshop examining the empire-to-nation transition. Second, IICAS coordinates and provides services for existing and new international and area studies programs in development and events planning and coordination. It also encourages new programs in international and area studies. In this role, IICAS has co-sponsored campus-wide panels and seminars that address critical international issues. Third, the IICAS director and advisory committee advise the senior vice chancellor for academic affairs on campus priorities and appointments in international studies. IICAS also provides campus wide services in support of UCSD's international contacts, including international visitors, requests for affiliation agreements, and collaborative international research projects.

The UCSD Institute of Molecular Medicine (IMM). Our mission is: *Integration of Molecules and Medicine*—to create an Olympic village for translational medicine in the San Diego biomedical community, *Innovation at Disease Interfaces*—to lead in the cross-fertilization between diverse human diseases and disciplines, *Interdisciplinary Training*—to mentor many of the highest caliber physician-scientists from the United States and abroad, and *International Programs*—to offer global outreach to Europe and Asia through innovative collaborations and partnerships. IMM is designed to provide a unique research and training atmosphere for graduate students, Ph.D. students, M.D. fellows, and M.D./Ph.D. fellows with a scientific focus on molecular medicine in the post-genome era. The Institute of Molecular Medicine was established in June 2000 as an organized research unit at UCSD, and has been designed as a Center Without Walls to encour-

age interactive, interdisciplinary, educational, and research opportunities in the growing field of molecular medicine. The faculty members of this institute are committed to creating and maintaining a collaborative environment that will ensure the rapid development of novel, biologically targeted therapies to enhance the lives of the patients of tomorrow. The first phase of programs has been established in the areas of cardiovascular and neurological diseases; however, it is anticipated that studies in other complex human diseases will be included as scientific and clinical opportunities are solidified in the new institute. A current National Institutes of Health Training Program is a joint program with collaborators at The Salk Institute, which affords students an opportunity to work for periods of time at both institutions, depending upon the technology that is being applied to their particular research project. Research and educational programs include stem cell biology, regeneration, chemical biology, neuroscience, computer modeling, and genomics.

The Institute of Molecular Medicine's goals and objectives are: 1) to expand on the growing vertebrate genomic databases and a variety of genetic based approaches to form a multidisciplinary research program to unravel complex human diseases, including heart and neurological disorders; 2) to provide a high-technology platform that will be based upon collaborative research efforts between prominent scientists in the fields of bioengineering, neuroscience, chemistry, physiology, biology, and genetics; 3) to provide an international, cross-institutional, interdisciplinary training program in the Molecular Basis of Complex Human Physiology and Diseases, for M.D., M.D./Ph.D., and Ph.D. postdoctoral fellows; 4) to develop strategic research collaborations, educational exchange programs, and training alliances with other international institutions; and 5) to promote the development of industrial collaborations for specific targeted areas of both scientific and clinical interest.

Seventy-five faculty members from UCSD, the Salk Institute for Biological Studies, The Scripps Research Institute, The Burnham Institute, and internationally based collaborators are participating in the Institute of Molecular Medicine. These participants represent a cross-section of the investigators and educators who constitute the scientific and clinical community of leading investigators working and teaching in areas related to molecular, cellular, genetic, and bioengineering approaches to identify pathways that control complex human physiological systems and related diseases. Each year the IMM hosts an international symposium, Days of Molecular Medicine, which brings world leaders to La Jolla to present state-of-the-art lectures and provides programs that allow students in the IMM to meet and discuss their projects with the speakers and senior scientists in attendance. This year, the journal *Nature Medicine* and IMM will co-sponsor the 2004 symposium "Integrative Physiology and Human Disease: Neurohormonal and Metabolic Pathways" at the Wellcome Trust Genome Center, Hinxton Campus in Cambridge, England. Further information can be found online at http://www.imm.ucsd.edu/dmm/foundation.html. The 2005 DMM conference will once again return to the Salk Institute in La Jolla. In addition to strengthening the ties in academia, the symposium also provides an opportunity for corporate sponsors to discuss potential collaborations and meet with the next generation of physician-scientists in this ever-changing field. The Institute of Molecular Medicine is based on the vision that a new era in human health and drug discovery lies at the borders between curiosity-driven science and tomorrow's medical therapies.

The Institute for Neural Computation (INC) focuses on research into how nervous systems function through experimental investigation and modeling of neural activity, and on applying knowledge of nervous system function to the design of new technologies. The institute supports graduate training programs in cognitive neuroscience and computational neurobiology.

The Swartz Center for Computational Neuroscience develops models of brain dynamics from electromagnetic and hemodynamic data acquired during novel human behavioral experiments.

The Machine Perception Laboratory studies human perception and develops similar capabilities for robots. Additional areas of research include visual coding, motor control systems, and learning algorithms. The goal is to gain insights into how the brain works by investigating the nature of the problems it faces. This includes the development of possible solutions to these problems in the form of robots that interact with humans in real time.

The goal of the Lee Laboratory is to develop new machine learning algorithms for advanced signal and image processing inspired by recent progress in understanding how the brain represents and learns sensory information.

Faculty from the Departments of Biology, Computer Science and Engineering, Cognitive Science, Economics, Philosophy, Neurosciences, and Radiology, and the Salk Institute for Biological Studies are actively involved in the institute's activities. The institute has an active visitors program and an industrial affiliates program with ongoing joint research projects. The institute sponsors a seminar series, the annual Rockwood Memorial Lecture, and several scientific workshops and conferences annually.

The Institute for Nonlinear Science (INLS) promotes interdisciplinary research and graduate education in the development and application of contemporary methods in the study of nonlinear dynamical systems. Using a common mathematical language, faculty and students from disciplines as diverse as physics, mathematics, oceanography, biology and neuroscience, mechanical and electrical engineering, and economics pursue the implications of generic characteristics of nonlinear problems for their subjects. Each year the institute sponsors several long- and short-term senior visitors from the University of California and elsewhere and provides, through funds from external funding agencies, support for approximately ten graduate students to work on Ph.D. dissertations concerned with nonlinear problems. Also associated with INLS are approximately twenty full-time research scientists and postdoctoral researchers.

The core of INLS activities is composed of (1) joint research among faculty and students across disciplinary lines and (2) lecture series and working seminars designed to convey recent research progress and to stimulate new investigations. Through contracts with external agencies the INLS supports experimental, numerical, and theoretical studies of nonlinear dynamics and chaos in neurophysiology, investigations in nonlinear fluid dynamics and pattern formation, studies (jointly with the University of California, Los Angeles and Stanford University) of applications of chaos in communications, as well as in the nonlinear dynamics of granular materials.

INLS has developed joint research programs with universities, research institutes, and commercial companies in areas of common interest. It actively works with colleagues at UCLA, Stanford, Cal Tech, Argonne National Laboratory, ST Microelectronics, Time Domain Inc., and Randle Corporation. These affiliations provide new

research horizons and realistic opportunities for technology transfer.

Institute for Pure and Applied Physical Sciences (IPAPS) is an interdisciplinary research unit which brings together faculty and researchers in physics, chemistry, engineering, and Scripps Institution of Oceanography. The institute is concerned with fluids and materials. Specific subjects of research include superconductivity, ferromagnetism, semiconductor heterostructures, solid surfaces, plasma physics, hydromagnetics, turbulence, fluid mechanics, laser physics, and numerical analysis.

Within the IPAPS is the Center for Interface and Materials Science (CIMS), which emphasizes interdisciplinary collaborative research on the properties of surfaces, thin-layered composites, and novel materials, as well as their technological applications. With centralized space and equipment, CIMS brings together faculty and research staff from the Departments of Physics, Applied Mechanics and Engineering Sciences, Chemistry and Biochemistry, Electrical and Computer Engineering, and the Scripps Institution of Oceanography.

The **Sam and Rose Stein Institute for Research on Aging (SIRA)** is an ORU committed to fostering healthy aging by supporting advances in patient care through innovative research, training, and education. Established in 1983, the unit consists of eighty-five researchers representing eleven different departments ranging from bioengineering to family and preventive medicine and from neurosciences to psychiatry. This wide diversity fosters an interdisciplinary approach to solving the problems posed by diseases that increase with age. SIRA sponsors "Faculty Start-up Grants" to junior-level scientists in order to allow them to lay a foundation of data necessary to compete for national funding and help with career development. To facilitate cooperative research endeavors, SIRA has also instituted the Faculty Collaborative Grant Program that provides funding for researchers from different medical/biological disciplines to work together in developing innovative projects.

In addition, the institute is active in recruiting young students to the field of aging through the "Student Investigator Grant Program." Undergraduate and medical students, who have expressed an interest in age-related research, are teamed with established senior scientists to pursue a research project. *Healthwise*, the monthly newsletter, informs community members of upcoming lectures and events sponsored by SIRA and UCSD, health and wellness information, and advances in medical research. Coupled with the newsletter, a monthly public lecture open to the public is presented by SIRA faculty members. These lectures are videotaped and replayed on UCSD-TV, other local stations, and also by satellite stations. These tapes are available to SIRA members, faculty, and students, and can be purchased at the UCSD Bookstore. In addition to our community outreach and education, SIRA and the Academic Geriatric Resource Center has developed a new series called "Aging in the New Millennium." These health promotion presentations provide information to seniors enabling them to make appropriate and healthy lifestyle choices. These presentations are taped and will be aired on UCSD-TV.

Lastly, SIRA provides health promotion presentations to the public and non-profit community groups through its executive director and research faculty. Contact steininstitute@ucsd.edu for information and scheduling.

All of the above information and more can be accessed on the SIRA Web site, http://SIRA.ucsd.edu.

Whitaker Institute of Biomedical Engineering (WIBE) was established as an organized research unit in 1991 and named as the Whitaker Institute in 2000. Its purpose is to promote and coordinate interdisciplinary research among faculty and students at the interfaces of engineering, biology, and medicine. The overarching theme is integrative bioengineering, spanning the spectrum from molecular to organismal levels and integrating engineering and biomedical sciences. The major research thrusts are genomic bioengineering, molecular biomechanics, tissue engineering, and systems biology. Engineering principles and techniques are combined with biomedical research across the entire biological hierarchy ranging from genomic and molecular levels, through cells and tissues, to organs-systems. The aim is to have an integrative understanding of the structure-function relationships in normal and pathological conditions and development of bioengineering approaches to restore, maintain, or improve functions. The research pursued in WIBE involves the heart, blood vessels, blood, lung, kidney, liver, pancreas, muscle, bone, cartilage, tendon, ligament, skin, nerve, brain, retina, and cochlea, as well as targeted molecular delivery based on engineering principles. WIBE research and training activities include medical subjects such as cancer, diabetes, myocardial infarction, hypertension, atherosclerosis, peripheral vascular diseases, hemolytic anemias, pulmonary diseases, renal diseases, hepatobiliary diseases, inflammation, AIDS, burns, trauma, shock, retinopathies, tympanic membrane perforation, orthopedic disorders, and sports injuries. Coordinated engineering and biomedical research allows generations of quantitative information and new investigative approaches.

The ultimate goal is improving the methods of prevention, diagnosis, and treatment of diseases. WIBE facilitates university-industry cooperation. It sponsors regular research seminars, workshops, and symposia to promote information exchange and generate new ideas and projects, and fosters interdisciplinary training of graduate students and postdoctoral fellows. WIBE has nearly 100 faculty and research scientists from the Jacobs School of Engineering, School of Medicine, Divisions of Biological Sciences and Physical Sciences, Scripps Institution of Oceanography, and members of neighboring institutions, including The Burnham Institute, the Salk Institute for Biological Studies, and The Scripps Research Institute. The institute has an industrial advisory board, which has twenty company representatives in San Diego and elsewhere, that fosters collaborative research projects, joint grant applications, co-sponsoring of symposia and workshops, student internship, and other academia-industry cooperative activities. Together with the Department of Bioengineering, WIBE received a Leadership Award from the Whitaker Foundation. Matching gifts from the Charles Lee Powell Foundation and the William J. von Liebig Foundation, as well as other donors, have made possible the construction of the new Powell-Focht Bioengineering Hall in 2002, the first privately funded building on the UCSD campus.

The **Project on Glucose Monitoring and Control** is a unit within WIBE. Its goal is to develop and evaluate new approaches, both natural and engineered, to achieve ideal blood glucose control and metabolic management in diabetes and related diseases. The project brings together researchers and clinicians from bioengineering, electrical engineering, computer science, and medicine, as well as extramural collaborators. The project serves as a nucleus for information exchange, development of new sensor and medication delivery approaches, and development and evaluation of control strategies.

Centers

The **Rebecca and John Moores UCSD Cancer Center (CC)**, active in the fight against cancer since 1979, is a National Cancer Institute-designated Comprehensive Cancer Center. The specific goals of the Cancer Center are to enhance the present level of basic research, increase collaborative research, increase the application of basic science to solve clinical problems through translational research, disseminate new knowledge to oncology professionals and scientists in the San Diego community, enable the biomedical industry to transfer new technology to the clinical setting, develop a strong effort in cancer prevention and control, and educate and train undergraduate and postgraduate physicians, and basic scientists. Under the auspices of a Cancer Center Support Grant from the National Cancer Institute, there are seven active program areas within the Cancer Center. These include Cancer Biology, Cancer Genetics, Cancer Prevention and Control, Cancer Pharmacology, Cancer Symptom Control, Translational Oncology, and Viral Malignancy. Shared resources at the Cancer Center include Biostatistics, Clinical Trials, Data Compilation and Analysis, Digital Imaging, DNA Sequencing, Flow Cytometry, Histology and Immunohistochemistry, Microarray, Molecular Pathology, Nutrition, Radiation Medicine, and Transgenic Mouse.

Research and educational grants support the training of postdoctoral fellows and medical students. The Clinical Trials Office coordinates clinical research trials involving cancer patients at UCSD and is the focal point for a large Oncology Outreach Network which provides state-of-the-art protocol treatment opportunities for patients in a broad geographic area. Patient care activities of the Cancer Center are located in the Combined Oncology Clinic at the Theodore Gildred Facility and in UCSD Medical Center, both located in Hillcrest, and at the Oncology Clinic of the Perlman Ambulatory Care Center and in UCSD Thornton Hospital, both located in La Jolla. Basic research activities of the Cancer Center are carried out at a variety of other locations on or adjacent to the La Jolla campus. Total membership of the Cancer Center exceeds 260 laboratory investigators and clinical physicians from twenty-two academic departments. The research funding for Cancer Center members exceeds $180 million. Construction is currently underway on the university's east campus to erect a five-story, 270,000-square-foot building to unite many of the center's essential programs and services; it is scheduled for completion in early 2005.

The **Center for Astrophysics and Space Sciences (CASS)** is an interdisciplinary research unit established in 1979. The center brings together academic and research staff from the Departments of Physics, Chemistry, and Electrical and Computer Engineering. Research is conducted in the scientific areas of theoretical cosmology, computational astrophysics, observational cosmology, interstellar medium, star formation; solar observational and theoretical studies; X-ray and gamma-ray astrophysics; experimental and theoretical magnetospheric and space plasma physics; and cosmochemistry, including the chemistry of interstellar matter.

CASS provides a jointly shared facility which has office, laboratory, and computer space to enhance the interchange of expertise. Researchers in CASS have access to many University of California observing facilities, including the 2 Keck 10m telescopes, Lick Observatories, and Keck Telescopes, and have contributed experiments to many major NASA space missions including *the Hubble Space Telescope and the Rossi* X-Ray Timing Explorer. Associated with CASS are included seventeen faculty, about twenty-five Ph.D.-level research staff, twelve graduate students, and thirty technical and administrative support personnel.

The center's facilities, faculty, and research staff are available to graduate students in the Departments of Physics, Electrical and Computer Engineering, and Chemistry who have chosen to write their dissertation on subjects of research encompassed by CASS. Graduate and undergraduate courses in astrophysics, astronomy, and space sciences are developed and taught by the academic staff of CASS. The total yearly budget is about $5 million, mostly from federal funding sources.

The Center for Comparative Immigration Studies (CCIS) is an interdisciplinary, multinational research and training program devoted to comparative work on international migration and refugee movements. Its primary missions are to conduct comparative (especially cross-national) and policy-oriented research, train academic researchers, students, and practitioners, and disseminate research conducted under its auspices to academics, policymakers, and NGOs through research seminars, conferences, publications, the Internet, and the mass media. The center is also committed to actively collaborating with other academic institutions, governmental and nongovernmental organizations, and the local community.

The overall objective of the **Center for Energy Research (CER)** is to provide an academic research unit for interdisciplinary interactions among UCSD faculty, research staff, and students aimed at promoting and coordinating energy research and education. Approximately sixty-one faculty, staff, and students are affiliated with the CER. The goals of the CER are complementary to academic departments of instruction and research with an emphasis on bridging the various disciplines related to energy research on the campus. Emphasis is currently on combustion and fusion energy research. The CER will also provide a vehicle for developing other dimensions of energy research, including energy policy research. The specific goals of the CER are: (1) to provide an inter-departmental coordinating function for energy research groups and projects at UCSD, (2) to enhance the prospects of extramural research funding involving interdepartmental and multi-disciplinary collaborations in energy research, (3) to promote the visibility *of energy topics in undergraduate and graduate* programs at UCSD, (4) to provide a mechanism for interacting with other institutions involved in energy research with particular attention to potential industrial partners, and (5) to promote the visibility of energy research at UCSD to potential sponsors and funding agencies.

A number of graduate research assistantships are available. Applications for graduate study in any of the disciplines covered by the CER should be directed to the academic department in which graduate study is to be undertaken.

The **Center for Environmental Research and Training (CERT)** coordinates the broad range of environmental research activities across the university. Departmental participation includes the Departments of Anthropology, Chemistry and Biochemistry, Economics, Division of Biological Sciences, School of Engineering, School of Medicine, Scripps Institution of Oceanography, the Center for U.S.-Mexican Studies, and the Graduate School of International Relations and Pacific Studies. This extensive group offers an opportunity to address environmental issues across traditional disciplinary boundaries. This opportunity is particularly crucial for understanding the complex interactive nature of global and regional environmental issues. The CERT also provides an interface for interaction

with environmental agencies outside the university, including the environmental technology sector and governmental agencies.

The **Center for Human Development (CHD)** is an interdisciplinary, research-centered unit designed to meet the growing needs for interdisciplinary exchange on issues related to human development. The goal of CHD is to provide a forum for interdisciplinary exchange that creates dialogue between members of diverse disciplines. The Center is organized around five structurally distinct components, but with integrated functions. Each function is designed to serve a specific set of needs and to make unique contributions to the larger enterprise. These components are the following: (1) research support and infrastructure, (2) enrichment of human development's instructional counterparts–the undergraduate Human Development Program and a proposed interdisciplinary graduate program, (3) dissemination activities focused on but not limited to local community needs, (4) public policy analysis, and (5) assessment activities. In addition, the Center serves as a focal point for research, evaluation, and assessment activities associated with the campuswide Center for Research in Educational Equity, Assessment, and Teaching Excellence (CREATE).

The **Center for Human Information Processing (CHIP)** is a research facility for the study of the neural and cognitive mechanisms underlying human perception, thought, and emotion.

CHIP has two missions—a practical one and a theoretical one. The practical goal is to help develop new therapeutic approaches for the treatment of neurological and psychiatric patients (e.g., stroke and childhood autism). The theoretical agenda is to understand the neural basis of human behavior—the question of how the activities of millions of tiny wisps of protoplasm in the brain gives rise to all the richness of our conscious experience and the complexity of our cognitive processes.

It is ironic that even though we now have a vast amount of factual information about the brain, even the most basic questions about the human mind remain unanswered. How does the human brain create and respond to art? Why do we enjoy music? How are metaphors represented in the brain? What is "body image" and why does it get distorted in Anorexia nervosa? How did language evolve? Or even more basic questions such as: How do we see color? Can we pay attention to only one thing at a time? How do we recognize faces so effortlessly?

CHIP has become well known for tackling questions such as these experimentally. CHIP has played a major role in the emergence of such new disciplines as "neuro-ethics," "neurotheology," "neuroeconomics," "neuro-aesthetics," and "neuro-epistemology."

CHIP has four divisions, each operating with the common goal of furthering our understanding of human cognitive processes and the neurological bases of these processes. The subdivisions are: brain and perception division, the cognitive processes division, the division of neuropharmacology and alternative medicine, and the language processing division.

CHIP provides facilities for visiting scholars and supports workshops, conferences, and brown-bag discussion groups centering on the theoretical and empirical issues in each of these areas.

The **Laboratory of Comparative Human Cognition**: Each member of LCHC pursues forms of critical empirical research, which aim to understand the historical construction of human life. We use a range of methodological tools to throw into relief the contingency of culturally inflected collective social practices, change over time, and the implications of social practices for human development. And, in keeping with the critical ethos of our orientation, we often utilize strategies to actively initiate change in the settings we investigate. We take an ecological approach, looking at systems that include meditating tools, people, representations, institutions, and activities. We are especially interested in the collective accomplishment of knowledge practices—cognition, learning, remembering (and forgetting), teaching, research, and engineering. Collectively, our research spans all ages. At the same time, because the institutionalization of social practices holds an important place in our studies, specific projects often take the form of "educational" or "workplace" research. In both "domains," the place of discourses, economics, and technologies in the development of social relations of power, and their implications for change over time, are scrutinized. We find comparisons across these realms a powerful source of insight and theoretical development.

The LCHC published fifteen volumes of *The Quarterly Newsletter of the Laboratory of Comparative Human Cognition*. It now publishes a journal, *Mind, Culture, and Activity: An International Journal*. The LCHC also coordinates an international electronic discussion (http://communication.ucsd.edu/MCA/Mail/index.html) that currently includes more than 400 researchers from sixteen countries. The LCHC conducts a weekly seminar and workshops focused on special topics, including cutting-edge research reports from members of an interdisciplinary, international group of LCHC alumni who visit periodically.

The **Center for Iberian and Latin American Studies (CILAS)** coordinates and promotes Latin American and Iberian research and service activities for faculty and students in all departments at the university and outreach programs for the San Diego community. It sponsors multi-disciplinary colloquia, conferences, projects and publications, collaborations and exchanges with Latin American institutions, as well as library expansion. The center is currently launching new initiatives in the areas of public health; democracy, civil society, and citizenship; and cultural studies. The center also hosts visiting scholars, and it awards grants and fellowships each year to promising graduate students.

The Center for Magnetic Recording Research (CMRR) is devoted to multidisciplinary research and education in areas of science and engineering that form the foundation for information storage technologies for computer disk and tape drives. Founded in 1983 in partnership with a consortium of industrial sponsors, the center's continuing mission is to advance the state-of-the-art in magnetic disk and tape storage technologies, while producing highly trained graduate students and postdoctoral professionals. Together, the center's faculty and graduates have made major contributions to the remarkable progress that storage systems have achieved in storage capacity, data transfer rate, and cost efficiency over the past two decades.

CMRR supports four endowed professorial chairs, currently in the areas of magnetic materials, recording physics, tribology and mechanics of the head/medium interface, and signal processing and coding. The chaired professors also hold faculty appointments in the Departments of Physics, Electrical and Computer Engineering, and Mechanical and Aerospace Engineering. Graduate student researchers, post-graduate researchers, professional scientists, and visiting scholars representing international academic institutions and industrial laboratories contribute to a research and educational environment that is dynamic and varied.

As part of the center's mission to educate future leaders in the vital information storage industry, the faculty teach specialized classes at the undergraduate and graduate levels that train students in the theoretical methods and experimental techniques underlying advanced magnetic recording technology. In addition, the center contributes to the continuing education of professionals in the storage industry through regular seminars, research reviews, and focused workshops.

Virtually all major information storage companies are sponsors of CMRR, and they provide substantial research support through their membership fees, focused research grants, and graduate student fellowships. "Real-world" research opportunities are also available to students through academic-year and summer internships with selected sponsors. Additional support has come from private foundations, state, and federal funding agencies, as well as from active participation in joint university-industry programs, such as those coordinated by the Information Storage Industry Consortium (INSIC).

Through cooperative research projects and the CMRR affiliated faculty program, the center also fosters interactions with researchers in other campus organizations, including the Department of Chemistry and Biochemistry, the Department of Computer Science and Engineering, the San Diego Supercomputer Center, and the Information Storage Industry Center in the Graduate School of International Relations and Pacific Studies. The interests of these affiliates cover a broad spectrum, including novel materials for data recording, disk-drive failure prediction, computational analysis of the recording process, and the globalization of the magnetic recording industry.

CMRR also supports a world-class Library/Information Center for information storage technology that provides a range of services to sponsors, resident researchers, and students. Services include licensed database searching, patent searching, document retrieval, and expedited access to proprietary technical resources.

The **Center for Molecular Agriculture (CMA)** promotes research and education in plant genetics and plant molecular biology with an eye to the application of that research to the improvement of crops. Crop improvement cannot any longer rely exclusively on traditional plant breeding methods but requires the application of new technologies that include but are not limited to genetics and genomics, informatics, molecular gene isolation, and plant transformation. The CMA brings together researchers from UCSD and the Salk Institute and is a resource for the entire San Diego community. It provides a focal point for interaction with the local and statewide agricultural biotechnology industry. The Center wishes to play an active role in the debate about the safe cultivation and use of genetically modified crops.

The **Center for Molecular Genetics (CMG)** promotes molecular genetic research and the training of graduate students and postdoctoral fellows in the biological, chemical, and biomedical sciences. The center's research incorporates studies in both model systems and humans that share a focus on dissecting the molecular basis of human diseases. The latest techniques of gene isolation and manipulation, as well as the genetic transformation of both cells and organisms, are applied to major problems in biology and medicine. The center serves as a resource for the entire UCSD campus for molecular genetic techniques, materials, and facilities. The CMG also is host to seminar series, conferences, and workshops that encourage cross-disciplinary interactions among biomedical and bioinformatic investigators.

The Center for Research in Biological Systems (CRBS) is an organized research unit that exists to provide human resources, high-technology equipment, and administrative services to researchers engaged in fundamental research on cell structure and function relationships, particularly those involved in central nervous system processes, cardiovascular networking, and muscular contraction. CRBS scientists investigate these processes through invention, refinement, deployment of sophisticated technologies, especially

- High-powered electron microscopes that reveal three-dimensional cell structures
- State-of-the-art X-ray crystallography and magnetic resonance analysis that provide detail on protein structures at high resolution
- Laser-scanning and Confocal light microscopes that reveal molecules tagged with fluorescent markers as they traffic within cells and pass transfer signals within and between cells
- High performance computing and grid-based integration of distributed data

CRBS facilitates an interdisciplinary infrastructure in which people from biology, medicine, chemistry, and physics can work with those from computer science and information technologies in collaborative research. CRBS researchers share interests in the study of complex biological systems at many scales, from the structures of enzymes, proteins, and the body's chemical communications network at atomic and molecular levels, to an organism's physiology, strength, and support at cellular and tissue levels.

The CRBS infrastructure integrates resources for high-performance computing, visualization and database technologies, and the grid-integration of large amounts of archival storage data. The California Institute for Telecommunications and Information Technology (Cal-IT^2) and the San Diego Supercomputer Center (SDSC) are collaborators in simulating the activity of biological systems, analyzing the results, and organizing the growing storehouse of biological information.

The aims of CRBS researchers are met in interdisciplinary research efforts of major federally funded research efforts that are presently the heart of CRBS:

- BIRN, the Biomedical Informatics Research Network http://www.nbirn.net tests new modes of large-scale biomedical science. BIRN builds infrastructure and technologies to enable large-scale biomedical data mining and refinement.
- NCMIR, the National Center for Microscopy Imaging Research http://www.ncmir.ucsd.edu specializes in the development of technologies for improving the understanding of biological structure and function relationships spanning the dimensional range from 5nm3 to 50μm3.
- NBCR, the National Biomedical Computation Resource http://nbcr.ucsd.edu conducts, catalyzes, and advances biomedical research by harnessing, developing, and deploying forefront computational, information, and grid technologies.
- JCSG, the Joint Center for Structural Genomics http://www.jcsg.org creates new technologies to drive high-throughput structure determination. The Bioinformatics Core at UCSD is responsible for target selection, sample tracking, information management, structure validation and deposition, and poststructural analysis. Through these functions, the group provides the integrated informatics backbone required for the successful operation of JCSG.

CRBS researchers also have significant roles in collaborations with

- PRAGMA, Pacific Rim Applications and Grid Middleware Assembly, http://www.pragma-grid.net establishes sustained collaborations and advances the use of grid technologies in applications throughout the Pacific Region to allow data, computing, and other resource sharing.
- Optiputer, http://www.optiputer.net, involves the design and development of an infrastructure to integrate computational, storage and visualization resources over parallel optical networks using lambda switching communication mechanisms.

CRBS is an entity evolving as research evolves. It was established in 1996 to involve researchers from disciplines across UCSD, the School of Medicine, the Salk Institute for Biological Studies, Cal-IT², and SDSC, including bioengineering, biology, chemistry, computer science, mathematics, neurosciences, pharmacology, psychiatry, and physics, and forges interactions with biotechnology and biocomputing companies for technology transfer. Interaction, collaboration, and multiscale research produce new perspectives, reveal fruitful research topics, lead to the development of new technologies and drugs, and train a new generation of researchers in biological systems.

The Center for Research in Computing and the Arts (CRCA) is an organized research unit of UCSD whose mission is to facilitate the creation of new forms of art that arise out of the developments of digital technologies. Current focus areas include networked multimedia, virtual reality, computer-spatialized audio, and live performance techniques for computer music and graphics.

As the University of California's oldest arts research center, CRCA pursues innovative approaches to the arts, crossing disciplinary boundaries with the humanities, engineering, and the sciences. Faculty members devise new modes of artistic practice through their liaisons with international cultural institutions, high-tech industries, and interdisciplinary collaborations.

CRCA coordinates the New Media Arts layer of the California Institute for Telecommunications and Information Technologies [Cal-(IT)²] at UCSD. The center's cultural research activities are considered a model "living laboratory" for Cal-(IT)² provocatively, and critically, pursuing new cultural forms and social engagements provided by developments in IT and telecommunications.

CRCA provides the support framework for a broad range of approaches to artistic, scholarly, and technological development that is at the basis of our digitally transformed culture. We actively encourage the investigation of what constitutes the potent cultural acts of our time and the viable mechanisms that should be engaged to create them. More information about the center, its researchers, public events, and the process for engagement, can be found at http://crca.ucsd.edu.

Center for Research in Language (CRL). The foci of the center are on language processing, language learning, language disorders, and simulations of all these aspects of language in artificial systems. Research in the center is interdisciplinary and draws upon the fields of linguistics, psychology, cognitive science, neurosciences, computer science, and communication.

The center's facilities are designed to accommodate laboratory research projects by the faculty and graduate students; facilities include a number of high-performance work stations, a computer laboratory, extensive equipment for audio recording and analysis, and equipment for psycholinguistic experimentation.

Current research projects include studies of language and cognitive development in children; language impairment in children and adults; word and sentence processing in bilinguals; foreign vocabulary in American Sign Language; development of neurally inspired parallel processing models of speech perception; studies in first language acquisition; cross-linguistic comparisons of the process of language acquisition and aphasia; research on the integration of grammatical analyses and theories; a project to collect large-scale text corpora in electronic form; and a study of expectancy generation in sentence processing. The center administers an NIH pre- and postdoctoral training grant, "Language, Communication and the Brain." CRL has also entered into several institutional agreements with research institutions in Europe, Asia, and the Americas, providing for the exchange of personnel and support for projects of mutual interest. An ongoing speaker series presents a broad range of experimental approaches to the study of language. The center publishes a monthly electronic newsletter.

The Project in Cognitive and Neural Development is an activity of CRL. Its purpose is to provide a forum for interdisciplinary research on brain and cognition in human children, including research on the neural bases of language and communication. The project brings together faculty and research staff from the UCSD Departments of Cognitive Science, Communication, Linguistics, Neurosciences, Psychology, Psychiatry and Sociology, the San Diego State University Departments of Psychology and Communication Disorders, and the Salk Institute for Biological Studies.

The **Center for U.S.-Mexican Studies (CUSMS),** established in 1979, is the nation's largest program devoted to the study of Mexico and U.S.-Mexican relations. It supports research in the social sciences and history, graduate student training, publications, and public education activities that address the full range of problems affecting economic and political relations between Mexico and the United States.

Through its visiting researchers program, the center each year sponsors the research of predoctoral and postdoctoral scholars, who spend three to nine months in residence. Typically, people from Mexico receive over half of these awards, which are made through an open, international competition. Other visiting fellows come from Europe, Canada, East Asia, and the rest of Latin America. The center's permanent academic staff also conducts long-term studies of Mexico's competitiveness in the global economy, Mexican financial markets, the impact of remittances on development, political change and the administration of justice in Mexico, environmental problems in Mexico and the U.S.-Mexico borderlands, Mexican immigration to the U.S., and new forms of North American economic integration. The center publishes much of the research conducted under its auspices.

Each summer, the center conducts a seminar in studies of the United States for twenty-three to twenty-five Latin American social scientists and nonacademic professionals.

The center's interdisciplinary Research Seminar on Mexico and U.S.-Mexican Relations, which meets throughout the academic year, features presentations of recent research by scholars from throughout the United States, Mexico, and other countries. In addition, several research workshops on specialized subjects are held each year.

The center has an active public education program, which includes frequent briefings for journalists, public officials, and community groups.

The **Glycobiology Research and Training Center (GRTC)** seeks to facilitate and enhance

glycobiology research and training at UCSD. Current faculty membership includes many UCSD faculty from several departments across the School of Medicine, SIO, and the general campus as well as adjunct faculty at nearby institutions. Affiliate members include interested scientists in the La Jolla area as well as faculty from other UC campuses.

Glycobiology is the study of the structure, biosynthesis, and biology of sugar chains (called oligosaccharides or glycans) that are widely distributed in nature. All cells and many proteins in nature carry a dense and complex array of covalently attached glycans. These are often found on cellular and secreted macromolecules, in an optimal position to modulate or mediate events in cell-cell and cell-matrix interactions that are crucial to the development and function of a complex multicellular organisms. They can also mediate interactions between organisms (e.g., between host and parasite). In addition, simple, rapidly turning-over protein-bound glycans are abundant in the nucleus and cytoplasm, where they appear to serve as regulatory switches. The development of a variety of new technologies for exploring the structures of these glycans has recently opened up this new frontier of molecular biology.

The GRTC seeks to foster interactive research in glycobiology by coordinating the availability of state-of-the-art instrumentation and expertise in the structural analysis of glycans through a Glycotechnology Core Resource, increasing intellectual and collaborative interactions by organizing symposia, joint programs and seminars, coordinating joint applications for extramural support, improving access to relevant informatics, and facilitating the transfer of basic glycobiology research to practical applications. The Center also strongly emphasizes graduate, postgraduate, and medical student education in glycobiology, including contributions by the faculty to core curricula, as well as to elective courses and journal clubs.

The San Diego Supercomputer Center (SDSC) is an organized research unit of UCSD that provides world leadership in developing and applying technology to advance science. SDSC research activities are undertaken jointly with faculty from UCSD departments, including computer science and engineering, bioengineering, biochemistry and chemistry, pharmacology, physics, and Scripps Institution of Oceanography; local research institutions such as The Scripps Research Institute and the Salk Institute for Biological Studies; and national and international collaborators.

With a staff of 400 scientists, software developers, and research, operations, and user support staff, SDSC is focused on data management, high-end computing, integrative biosciences, geoscience, grid and cluster computing, and visualizations.

SDSC's data management activities provide data integration for large-scale application efforts within UCSD and beyond in fields such as geosciences, biological and environmental sciences. Two key projects include the Geoscience Network (GEON) and the Sceince Environment for Ecological Knowledge (SEEK). GEON weaves together separate informational strands into a unified fabric that enables the discovery of data relationships within and across Earth science disciplines.

SEEK uses SDSC's computational science resources to provide the computational and data-management components of UCSD's strong environmental informatics program. Reflecting the dramatic increase in humankind's ability to change the environment, the study of environmental informatics is increasingly critical to California. SDSC and UCSD are building and supporting a program that spans scales from the molecular level to entire populations, accurately modeling the impact of population on the environment.

In addition, SDSC pursues data management activities such as digital library initiatives, data-system standardization, and opportunities to impact large-scale data mining, analysis, and knowledge synthesis with academic, federal, and commercial partners. SDSC's high-end computing unit is leading a national effort to understand and deploy the most capable computational environments and to make those environments easily accessible and usable by scientific communities—locally, nationally, and globally. SDSC maintains leadership in critical strategic capabilities, including chemistry, parallel applications and performance modeling, scientific visualization, and increasing collaborations with the social sciences.

Researchers involved in SDSC's integrative biosciences area are developing projects to understand how cellular behavior emerges from the molecular level, how tissue behavior emerges from the cellular level, and so on up to the level of the organism. SDSC is collaborating in this area with the UCSD School of Medicine, the Center for Research in Biological Structure, The Scripps Research Institute, the Salk Institute for Biological Studies, and local biotech and pharmaceutical companies. SDSC also is focusing on large-scale collaborative bioscience projects worldwide using an infrastructure based on high-performance computation and analysis of massive amounts of data.

As the leading-edge site of the National Partnership for Advanced Computational Infrastructure, SDSC is collaborating with forty-one partner institutions. The partnership is developing a ubiquitous, continuous, and pervasive computational environment for tomorrow's scientific discovery. Major academic researchers around the country use the powerful computing resources at SDSC to make breakthroughs in diverse areas of science—from astronomy and biology to chemistry and particle physics.

In early 2004, SDSC deployed DataStar, a 10.4 teraflops (trillion floating point operations per second) supercomputer with a total shared memory of 3.2 terabytes. DataStar is among the top supercomputers in the world. DataStar is used by researchers in academia and industry to conduct large-scale scientific research applications that involve extremely large data sets or have stressful input/output requirements.

SDSC and four partners are developing the TeraGrid—the first large-scale and production grid that provides a national computational infrastructure for open scientific research. SDSC's partners are the National Center for Supercomputing Applications at the University of Illinois, Argonne National Laboratory, the Center for Advanced Computing Research at the California Institute of Technology, and the Pittsburgh Supercomputing Center. The TeraGrid integrates more than 20 teraflops of computing power distributed at the five sites through a cross-country network backbone that operates at 40 gigabits per second. The storage facilities at SDSC alone include more than 500 terabytes of high-speed disk and six petabytes of archival storage. The complete TeraGrid project also includes facilities for high-resolution visualization environments, as well as toolkits for grid computing.

SDSC hosts huge digital collections, including astronomical images from the 2-Micron All Sky Survey, images from the Art Museum Image Consortium, Chinese text from the Pacific Rim Digital Library Alliance, and tomographic images of the human brain. The technology is also being used to prototype persistent digital archives for

the National Archives and Records Administration and other government agencies with huge data archives.

The Cooperative Association for Internet Data Analysis (CAIDA) at SDSC engages Internet providers, vendors, and users in engineering and technical collaborations to promote a more robust, scalable Internet infrastructure. CAIDA works with the community to develop and transfer tools and technologies that provide engineering and other insights relating to the operation and evolution of the Internet infrastructure. CAIDA works with providers and researchers to refine Internet traffic metrics, foster shared research environments, and encourage the development and testing of advanced networking technologies.

SDSC's Applied Network Research group is currently conducting two Internet research projects. The first involves the National Laboratory for Applied Network Research (NLANR), an NSF-supported collaboration to provide technical, engineering, and traffic analysis support for NSF's High Performance Connections sites and the nation's high-performance network infrastructure. NLANR members include SDSC, the National Center for Supercomputing Applications at the University of Illinois, the Pittsburgh Supercomputing Center, and the National Center for Atmospheric Research.

The second activity of the Applied Network Research group is the High Performance Wireless Research and Education Network (HPWREN), a collaboration with SIO that created a noncommercial, prototype, high-performance, wide-area wireless network in San Diego County. The NSF-funded network includes backbone nodes on the UCSD campus and a number of "hard to reach" areas in the county. HPWREN is demonstrating, and evaluating uses of the prototype for network analysis research, for high-speed Internet access for scientists involved in field research projects involving geophysics, astronomy, and ecology, and for educational opportunities for rural Native American learning centers and schools.

The SDSC Fellows Program promotes computational science and engineering activities at UCSD and seeks to strengthen intellectual ties between SDSC staff and other researchers on campus. UCSD faculty members are invited to join this program by contacting Kim Baldridge, kimb@sdsc.edu, (858) 534-5149.

Research Experiences for Undergraduates (REU), funded by NSF, provides an opportunity for undergraduates to work on computational science research projects under the guidance of SDSC mentors and their campus advisers. Students can participate in a full-time summer program or part-time during the academic year. Candidates must apply to and be accepted by the program. Stipends are provided. For more information, contact Rozeanne Steckler, steckler@sdsc.edu, (858) 534-5122.

Projects

The goal of the **African and African-American Studies Research Project (AAASRP)** is to facilitate faculty, postgraduate, and graduate research in the areas of Africa and African diaspora studies in the social sciences and the humanities, and to foster the comparative, cross-national, and interdisciplinary dimensions of research, with a core group of scholars drawn from several fields in the social sciences and humanities. These research efforts are linked directly to larger local and international community concerns.

The project sponsors visiting scholars, focused research groups, a seminar, and symposia. Faculty from seven university departments are involved. The project oversees the African Studies Minor. The project is also part of the UC Systemwide Consortium of African Studies Programs and the national Association of African Studies Programs. It provides the basis for the establishment of an organized research unit on African and African-American Studies at a later time. For more information, contact the AAASRP office at (858) 822-0265.

The **Project for Explaining the Origin of Humans** is a broad-based multidisciplinary coalition of individuals in the La Jolla area (from UCSD as well as surrounding institutions) who are interested in defining and explaining the evolutionary origins of humans and in generating testable hypotheses and new agendas for research regarding this matter. Areas of current interest include primate genetics and evolution, paleoanthropology and hominid origins, mammalian and primate neurosciences, primate biology and medicine, the roles of nature and nurture in language and cognition, human and primate society and culture, comparative primate reproductive biology, geographic, environmental and climatic factors in hominid evolution, as well as general theories for explaining humans. The group includes faculty from the Departments of Anthropology, Biology, Chemistry and Biochemistry, Cognitive Science, Linguistics, Medicine, Neurosciences, Oceanography, Pathology, and Psychology. A listing of participants can be found at http://origins. ucsd.edu.

The **Project in Display Phosphor Research** provides a forum for research on the synthesis, characterization, and processing of phosphors for high definition display applications. The project brings together faculty and researchers from the UCSD Departments of Chemistry and Biochemistry, Mechanical and Aerospace Engineering (MAE), and Electrical and Computer Engineering (ECE). The project was organized in 1992 in order to expand collaboration with other colleagues at UCSD and to extend research efforts to address both near-term and future research issues concerning phosphor materials and advanced displays.

The **Project In Econometric Analysis (PEA)** is concerned with the analysis of economic and financial data and with techniques for modeling relationships between economic variables and testing economic theories. As economic variables have properties not generally found in other fields, standard procedures from mainstream statistics are often not appropriate. The field of econometrics has been developed to deal with these issues. Its importance is indicated by its effect on the methodologies in other social sciences, such as political science and empirical history, and the fact that several Nobel Prize winners in economics have been econometricians. In fact, the 2003 Nobel Prize in economics was awarded to Clive Granger and Robert Engle, two of the founders of the PEA.

The Project in Econometric Analysis (PEA) supports the work of an active group of researchers and provides opportunities for productive interaction among faculty and students. Areas of active research include financial econometrics, non-linear time series modeling, properties of neural network models, the theory of economic forecasting and various actual applications including evaluations of models and forecasts in finance and economics. The PEA allows links with workers from other universities in this and other countries. In 2000–2001 and 2001–2002 the project had visitors from Europe, Asia, North America, and Australia; some were senior and some were pre- and post-doctoral students.

Faculty members and graduate students associated with the project presented their research at workshops and conferences worldwide. In addition, PEA facilitates the submission of grant proposals to outside agencies.

The **Project in Geometry and Physics (PGP),** established in 1987, provides opportunities for increased collaboration between mathematicians and physicists. The project hosts several scientific meetings each year and also sponsors a number of research seminars with distinguished scientists from inside and outside the UCSD community.

The **Project on International Affairs (PIA)** is one of the international programs within the Institute on International, Comparative, and Area Studies, focusing on economic and political interactions between states. The project serves to promote interdisciplinary research on international politics and international economics; disseminate current research to UCSD faculty and students; provide a multidisciplinary focal point for research and programming; and enhance campus and community understanding of international political and economic affairs.

The **Project on Responsible Conduct of Research Education (RCR Education Project)** was created in 2003 to promote RCR education both at UCSD and nationally. To achieve this goal, the RCR Education Project is facilitating the formation of an independent Responsible Conduct of Research Education Consortium (RCREC). The RCREC will provide leadership to the research community in promoting education in the responsible conduct of research.

The RCR Education Project and the RCREC are intended to be a broad-based coalition, representing medical, social, and behavioral research, and public and private institutions. Through these collaborations, the RCR Education Project will lay the foundations for the RCREC to advance programs of RCR education, develop RCR education standards, certify or identify programs that meet those standards, facilitate the exchange of RCR education programs among research institutions, and develop outcome measures to evaluate the success of the endeavor. Specific objectives of the RCREC are to: 1) promote RCR education as a central responsibility for any institution involved in research; 2) develop clear definitions for RCR education, including goals, standards, competencies, and methods for evaluating the effectiveness of programs; 3) assist institutions, RCR programs, and investigators in identifying and developing RCR education curricula and resources; 4) facilitate discussion and collaboration among federal agencies, public and private research institutions and organizations, professional societies, and businesses in developing, coordinating, and sharing new and existing RCR educational programs within the research community; and (5) identify and overcome barriers to fulfilling RCR educational needs and requirements.

The **Public Policy Research Project** was established to facilitate interdisciplinary research and educational opportunities in public policy and business-government interaction. Through conferences, focused research groups, and lecture series, the project acts as a catalyst for interaction among economists, political scientists, moral philosophers, historians, cognitive scientists, anthropologists, and sociologists. The project supports programs that: (1) help faculty obtain funding that are engaged in policy-related research, (2) conduct research apprenticeships for doctoral students working on research projects dealing with issues and processes of public policy, and (3) provide technical support and arrange faculty-proposed conferences within the scope of the project's mission statement.

Natural Reserve System (NRS)

The **Natural Reserve System (NRS)** was founded to establish and maintain significant examples of California's diverse ecosystems and terrain. These reserves are used for teaching and research in all disciplines, from geology and environmental sciences to anthropology and art. Faculty and students of the University of California and other institutions are encouraged to use any of the thirty-four reserves in the system for serious academic pursuits. The San Diego campus administers the following four reserves:

Dawson Los Monos Canyon Reserve: This 218-acre reserve is located in the cities of Carlsbad and Vista in north coastal San Diego County. Its young, stream-cut valley contains a year-round creek with precipitous north- and south-facing slopes. The major habitat types are Southern Riparian Woodland, Diegan Coastal Sage Scrub, Perennial Coastal Stream, Coast Live Oak Woodland, Mixed Grassland of native bunchgrass and introduced annuals, and South Coastal Mixed Chaparral. This area is also of unique and significant historical and archaeological value. A small field station provides opportunities for small laboratory classes, overnight stays, and on-site research.

Elliott Chaparral Reserve: Located ten miles to the east of campus, this 107-acre reserve, adjacent to the large expanse of Marine Corps Air Station Miramar that is undeveloped, features Chamise Chaparral typical of the Southern California coastal plain and a large stand of mature planted eucalyptus. It is readily available during a normal three-hour lab period or for term paper-length field studies as well as for more lengthy projects.

Kendall-Frost Mission Bay Marsh Reserve: This sixteen-acre reserve, together with the city of San Diego's contiguous Northern Wildlife Preserve, constitute the last remaining forty acres of tidal salt marsh on Mission Bay and one of the few such wetlands remaining in Southern California. It is recognized for the habitat it provides for several rare and endangered birds including the light-footed clapper rail, Belding's savannah sparrow, and the California least tern, as well as many resident and migratory shorebirds and waterfowl, and several fish species. An on-site trailer houses limited residential and laboratory facilities, and extensive facilities exist within ten miles on the UCSD main campus and at the Scripps Institution of Oceanography. There are opportunities for studying restoration ecology of upland and tidal habitats.

Scripps Coastal Reserve: This reserve consists of disjunct shoreline and cliff-top (or "knoll") portions. The shoreline part consists of the 67 acre San Diego Marine Life Refuge extending seaward 1,000 feet from the high tide line, and surrounding the Scripps Institution of Oceanography (SIO) Pier. Habitats include sandy beach and submerged plain, to 60 feet below mean lower low water, seasonally exposed cobble beach, rocky reef, pier pilings, and upper submarine canyon ledges. Habitats of the clifftop knoll and canyons include coastal sage scrub, maritime succulent scrub, southern coastal mixed chaparral, and disturbed grassland. The latter is particularly suitable for ecological restoration experiments. This reserve is enhanced by the availability of the laboratories and facilities of adjacent SIO and the main San Diego campus.

Rady School of Management

Robert S. Sullivan, Ph.D., *Dean*

UCSD's School of Management was established in 2001 and was named Rady School of Management in January 2004. It will open its doors to executive M.B.A. students in fall 2004, and to full-time M.B.A. students in fall 2005. It will pioneer the education of tomorrow's business leaders through an innovative curriculum led by internationally recognized faculty. Seeking to rapidly obtain top-tier status in its first five years, the school will leverage UCSD's strengths as a preeminent research institution, especially its outstanding programs in science, engineering, medicine, economics, and international relations. Unlike conventional M.B.A. programs, UCSD's program will target students from diverse cultural backgrounds who, although early in their careers, have an understanding and appreciation of science and technology. At steady state, targeted for 2011–12, the school will enroll 600 full-time students, 510 part-time students, and 50 Ph.D. students.

Currently located at University Center on the UCSD campus in La Jolla, the Rady School of Management facility is under design and will be located north of Eleanor Roosevelt College. Occupancy is expected to be in fall 2006.

Degree Programs

The school offers the FlexMBA, an M.B.A. degree program specifically designed for working professionals. A full-time M.B.A. program will be added in 2005. The FlexMBA is designed to meet the educational needs of working professionals in science- or technology-driven organizations who have gained or anticipate gaining managerial or leadership roles in their organizations. It provides a thorough grounding in the fundamentals of business and management in a global environment and builds on this with a distinctive curriculum focused on the implications of management principles and business realities for organizations driven by science, technology, and innovation. The FlexMBA program enables students to develop:

- knowledge of business fundamentals and their application to real-world situations
- analytical skills for evaluating information and making rigorous decisions
- an understanding of organizations and of the skills essential to collaborating with and managing people effectively
- an integrated understanding of the complex global, technological, and governmental environments in which organizations operate
- advanced abilities to assess the implications of cutting-edge scientific and technological developments for business and to move ideas from development to the marketplace
- effectiveness in communication, collaboration and teamwork, and leadership
- a commitment to ethical behavior and to integrity in business practice

For further information about courses and curriculum, program of study, and admissions requirements, refer to the Rady School of Management Web site at http://management.ucsd.edu/.

The school also offers non-degree executive education for executives and working professionals. Information on executive education course offerings is available at the school's Web site.

The School of Medicine

The faculty of the School of Medicine is committed to nurturing and reinforcing the attributes that are important in the making of a doctor–dedication, compassion, and intellectual curiosity.

The goal of the medical school curriculum, clinical experience, and faculty-student interactions is to develop well-trained, objective, and conscientious physicians prepared for the changing conditions of medical practice and continuing self-education. Students acquire understanding of the basic medical sciences and clinical disciplines and are encouraged to choose their own areas of interest for eventual development into careers in the broadly diversified medical community. Required course offerings are designed to provide students with a broad background suitable for general practice, and all students are trained in the delivery of primary care.

The School of Medicine accepted its charter class in 1968. The founding faculty drew upon the strength of UCSD's existing basic science departments rather than recreating such departments for the new school. Today this unique relationship continues with faculty from campus departments joining faculty from the School of Medicine's fourteen departments in teaching the core courses in medicine. Both preclinical and clinical courses are taught by UCSD faculty physicians who also have active patient caseloads. Courses are continually evaluated and updated by interdisciplinary course committees.

An honors, pass, fail grading system puts the emphasis on mastering the knowledge students need to practice medicine. The honors grade is not used in the first quarter of year one (only) to allow students to make a smooth transition to medical school. The honors grade is not used to rank the class numerically but to acknowledge students who have demonstrated superior academic performance. Students receive individual evaluations written by the faculty.

Students at the UCSD School of Medicine are encouraged to explore a variety of clinical, laboratory, and community-based experiences.

UCSD facilities are the main sites for clinical education and are licensed for 500 beds. The majority of UCSD inpatients are admitted at UCSD Medical Center-Hillcrest, where a number of Regional Care Centers are located, including San Diego and Imperial Counties' only Level I Trauma Center. The UCSD Ambulatory Care Center is located across the street from the hospital tower.

In July 1993, a 120-bed general medical-surgical hospital, The John M. and Sally B. Thornton Hospital, opened at UCSD Medical Center-La Jolla which is located on the La Jolla campus. Adjacent to the Thornton Hospital is the Perlman Ambulatory Care Center and the Shiley Eye Center.

The Veterans Affairs Medical Center, located adjacent to the School of Medicine campus in La Jolla, also is an important training site. The UCSD School of Medicine's partnership with Children's Hospital and Health Center enables students to treat a significant number of the region's pediatric patients.

Outpatient experiences include private medical practice, community clinics, and home visitation programs. Students see patients in many of San Diego's most modern hospitals and outpatient facilities, as well as in some of the disadvantaged neighborhoods of San Diego and Baja California, Mexico.

In all of their clinical experiences UCSD medical students have an opportunity to see how physicians work as a team with physician assistants, nurses, nurse practitioners, laboratory technicians, social workers, physical and occupational therapists, pharmacists, and other health care professionals to provide health care. In many cases they also can see how the trend toward "managed care" affects both patients and the practice of medicine.

There are many opportunities for students to participate in cutting-edge research in laboratories of UCSD School of Medicine researchers, as well as in the laboratories of scientists from the general UCSD campus, the Veterans Affairs Medical Center, The Salk Institute, Scripps Clinic and Research Foundation, and some of the many private biomedical research companies in the region.

The medical school curriculum provides flexibility so that the individual needs and goals of each student can be met. The curriculum is divided into two major components: the core curriculum and the elective programs.

Elective opportunities constitute a substantial portion of classes during the first two years and close to 50 percent during the last two years. The core curriculum of the first two years is designed to provide each entering student an essential understanding of the fundamental disciplines underlying modern medicine. The core curriculum of the last two years is composed of the major clinical specialties taught in hospital settings, outpatient situations, and relevant extended-care facilities.

A Medical Scientist Training Program provides the opportunity for a limited number of students to earn both the M.D. and Ph.D. degrees over a six- to seven-year period of study.

The School of Medicine cooperates with the San Diego State University Graduate School of Public Health (SDSU-GSPH) in assisting interested students who wish to pursue a Master's Degree in Public Health (M.P.H.) while enrolled in medical school. Students can also receive an M.P.H. at other schools of public health, although a formal agreement exists only with the SDSU-GPSH.

The UCSD School of Medicine and the Department of Family and Preventive Medicine jointly offer a Master of Advanced Studies (MAS) in the Leadership of Healthcare Organizations. The degree program permits a student to complete the Doctor of Medicine (M.D.) curriculum and studies leading to a Master's Degree in the Leadership of Healthcare Organizations in a total of five years.

Each student is expected to develop an individualized program of independent study in conjunction with a faculty member and to describe it in writing.

Freshman student enrollment is 122, and a total of 535 medical students were enrolled in 2003–2004.

Selection Factors

Selection is based upon the nature and depth of scholarly and extracurricular activities undertaken, academic record, performance on the MCAT, letters of recommendation, and personal interviews.

The Admissions Committee gives serious consideration only to those applicants with above average GPA values and MCAT scores.
The School of Medicine is seeking a student body with a broad diversity of backgrounds and interests reflecting our diverse population.

A complete catalog and information on the foregoing programs are available on the school's Web page http://meded.ucsd.edu/Catalog/.

For additional information about the UCSD School of Medicine and its programs, write or call:

Programs for Prospective Medical Students

UCSD offers no special premedical major. An undergraduate student considering medicine as a career may choose any major or concentration area leading to the bachelor's degree, provided that he or she elects those additional courses which the medical school of his or her choice may require for admission. Admission requirements differ among medical schools, but most desire a solid foundation in the natural sciences–biology, chemistry, physics, mathematics–and a broad background in the humanities, social sciences, and communication skills. A premedical/dental advisory program is available through the campus-wide Career Services Center.

MASTER OF ADVANCED STUDIES (MAS) IN LEADERSHIP OF HEALTHCARE ORGANIZATIONS

The UCSD Department of Family and Preventive Medicine in the School of Medicine offers a Master of Advanced Studies (MAS) in the Leadership of Healthcare Organizations. The degree is designed to meet the needs of health care professionals who have clinical and executive or management responsibilities. All courses will be held in the late afternoon, evenings, and weekends for the convenience of working professionals. Extension's EdVantage provides administrative support for the program. Further information on the degree program may be obtained by contacting UCSD.

The School of Pharmacy and Pharmaceutical Sciences

The newest health sciences professional school on the UCSD campus is the School of Pharmacy and Pharmaceutical Sciences. Approved by the regents in summer 2000, the charter class of students was enrolled in fall 2002. Students study an innovative curriculum dedicated to educating future pharmacy practitioners to provide the pharmaceutical care needs of our growing and increasingly diverse society. The goal of the doctor of pharmacy curriculum is to prepare students to be leaders in the profession of pharmacy and to provide them with the tools to practice effectively in a wide variety of currently existing and potential future roles in academia, hospitals and clinics, long-term facilities and home care, government, health policy, the pharmaceutical industry, and innovative community pharmacy practice settings. It is expected that the emerging fields of pharmacogenomics and bioinformatics will have a profound influence on the future practice of pharmacy, and that graduates of the UCSD School of Pharmacy and Pharmaceutical Sciences will be in an excellent position to bring these advances to the patient care setting.

Future growth in enrollment in the School of Pharmacy and Pharmaceutical Sciences is planned for thirty students in the class entering in 2004 and sixty students in 2007. The Pharmaceutical Sciences Building, which will house the administrative, teaching, and research activities of the school, is scheduled for occupancy in fall 2005. Until these facilities are available, enrollment will be limited to a maximum of thirty students in each class. Once the building is available for occupancy, the entering class size is planned to increase to sixty students.

Rather than duplicate existing departments on the UCSD campus and in the School of Medicine, the founding faculty of the school draw upon the strengths of the basic and biomedical science departments that have provided an outstanding education to undergraduate, graduate, and medical students for more than thirty years. Faculty from campus departments and the School of Medicine join School of Pharmacy and Pharmaceutical Sciences faculty in teaching the preclinical courses in the curriculum. Clinical faculty, who are active practitioners in a variety of medical center, community, and industry locations, provide both classroom instruction as well as guidance of students during advanced pharmacy practice clinical experiences.

During the first years of implementation, the curriculum will be dynamic, under constant review, and using faculty and student input, updated by interdisciplinary faculty committees. Presently, the four-year curriculum leading to the doctor of pharmacy degree is designed as follows:

In the first year, students are enrolled in courses in anatomy and histology, pharmaceutical chemistry, pharmaceutics, bioinformatics, law and ethics, biostatistics and an introduction to the practice of pharmacy. Students gain their first exposure to patient care by working alongside medical students in UCSD sponsored, student-run, free medical clinics in San Diego. In the second year, pharmacy and first-year medical students are concurrently enrolled in courses that serve as a foundation for understanding disease and disease management. In this unique environment, pharmacy and medical students study cell biology and biochemistry, organ physiology, pharmacology, neurosciences and endocrinology, reproduction and metabolism, laboratory medicine, and health policy. This is another step in developing the collegial relationship they encounter in the patient-care setting. Courses, specific to the needs of pharmacy students, such as additional course work in pharmacology, drug study design, and pharmacy practice are also provided. The third year focuses on the application of the information learned in the previous years with additional course work in microbiology, pharmacology, drug information, pharmaceutical chemistry, pharmaceutics, and pharmacogenomics. A major course sequence in drug therapeutics begins the process of applying the knowledge gained in the basic sciences to the clinical management and care of patients. The fourth year is devoted entirely to advanced pharmacy practice clinical experiences where students learn to apply the skills and knowledge obtained in the curriculum in a variety of patient care settings. Many of these advanced practice experiences take place at UCSD-affiliated medical centers, such as UCSD Medical Center–Hillcrest, UCSD Medical Center– La Jolla, the Veteran's

Administration Medical Center in La Jolla, and San Diego Children's Hospital and Medical Center. In addition, many other health care facilities throughout the region are utilized. Not only do students participate in the care of patients in many of the most modern medical facilities in the San Diego area, but they also learn to appreciate the challenges faced in providing care to some of the less advantaged citizens of the region. Both classroom elective courses as well as advanced practice experience electives provide flexibility for the student to explore the many facets of the profession and provide an opportunity for the curriculum to meet a particular student's educational goals and objectives.

The San Diego region ranks third in the nation in the development of new biotechnology. The school is developing relationships with this burgeoning biotechnology industry, which is adjacent to the UCSD campus. There are advanced practice and research experiences available to students in these exciting new areas of practice.

The common required and elective course work taken by pharmacy and medical students and advanced practice clinical experiences where medical and pharmacy students work closely together have been created to foster the development of cooperation between the professions as well as to develop an appreciation for the unique roles that each professional provides in the care of patients.

For the past twenty-five years, UCSF School of Pharmacy students have been enrolled in advanced practice clinical activities at UCSD Medical Centers. This long-standing relationship is continuing. The two schools are utilizing distance-learning facilities to enhance communication and to share educational and research experiences between students and faculty on the two campuses.

Selection Factors

The Admissions Committee seeks a diverse pool of applicants who have demonstrated strong academic ability in both the required prerequisite course work and in their entire academic career as well as a wide breadth of extracurricular interests. In addition, the committee selects applicants for matriculation who have demonstrated the personal qualities of intelligence, maturity, integrity, dedication to the ideal of service to society, and who are best suited for meeting the educational goals of the school. The ability to express oneself clearly in both oral and written English is essential. The School of Pharmacy and Pharmaceutical Sciences is committed to admitting students with diverse cultural, economic, and social backgrounds. Although grade-point average is an important factor, it is not the sole criterion for acceptance. In addition to intellectual and academic competence, the Admissions Committee considers communication skills, leadership ability, community service, and health care-related experience. Preference for admission is afforded to California residents when all other selection factors are equal, and consideration at this time is given only to applicants who are either United States citizens or permanent residents.

All students are enrolled in the full-time, four-year professional program leading to the doctor of pharmacy degree (Pharm.D.). No students in advanced standing, transfer students from other schools of pharmacy, or part-time students are accepted. All students enter at the first-year level.

The faculty of the School of Pharmacy and Pharmaceutical Sciences is exploring the implementation of a seven-year B.S./Pharm.D. program and a Pharm.D./Ph.D. program. As development of each program matures, information will be made available on the School of Pharmacy Web site. It is not anticipated that the programs will be ready for student enrollment until fall 2005.

Scripps Institution of Oceanography

Scripps Institution of Oceanography is one of the oldest, largest, and most important centers for marine science research, graduate training, and public service in the world. Its preeminence in the marine sciences is reflective of its excellent programs, distinguished faculty and research scientists, and outstanding facilities.

Scripps Institution was founded in 1903 as an independent biological research laboratory, which became an integral part of the University of California in 1912. At that time the laboratory was given the Scripps name in recognition of donors Ellen Browning Scripps and E.W. Scripps.

In all, Scripps occupies sixty-seven buildings on 230 acres mostly along the Pacific coastline below the mesa on which UCSD is located. Its staff numbers approximately 1,300, including more than 200 graduate students. The institution's annual expenditures exceed $140 million.

Research at Scripps encompasses physical, chemical, biological, geological, and geophysical studies of the oceans. Among the hundreds of research programs that may be under way at any one time are studies of air-sea interaction, climate prediction, earthquakes, the physiology of marine animals, marine chemistry, beach erosion, the marine food chain, the ecology of marine organisms, the geological history of the ocean basins, and the multidisciplinary aspects of global change and the environment.

Scripps operates four ships and one platform for oceanographic research in support of programs by Scripps researchers as well as oceanographers from other institutions throughout the world. Cruises range from local, limited-objective trips to far-reaching expeditions in the world's oceans.

Investigations supported by contracts and grants, primarily federal, cover a wide latitude of marine research. The general research effort is conducted by five divisions: Climate Research Division (CRD), Geosciences Research Division (GRD), Integrative Oceanography Division (IOD), Marine Biology Research Division (MBRD), and Physical Oceanography Research Division (PORD). The diversity of Scripps's work is extended by special purpose laboratories and multidisciplinary centers: Marine Physical Laboratory (MPL), Center for Marine Biotechnology and Biomedicine (CMBB), Center for Atmospheric Sciences (CAS), Center for Marine Biodiversity and Conservation (CMBC), Center for Observations, Modeling, and Prediction at Scripps (COMPAS), and Center for Marine Genomics (CMG).

The La Jolla laboratory of the University of California's Cecil H. and Ida M. Green Institute of Geophysics and Planetary Physics, and UC's California Space Institute, although organizationally separate, are closely affiliated with Scripps.

Other specialized groups also are located on campus. The California Sea Grant College Program, a systemwide program with more than forty projects and approximately forty-five trainees supported on California campuses and in several specialized research units, is headquartered at Scripps. The Southwest Fisheries Science Center (SWFSC), located near the Scripps campus, is one of thirty major laboratories and centers operated by the National Marine Fisheries Service, a component of the National Oceanic and Atmospheric Administration of the U.S. Department of Commerce. Also, the Inter-American Tropical Tuna Commission is colocated at SWFSC.

A ship operations and marine technical support unit provides essential services and facilities to all research units of the institution.

The Birch Aquarium at Scripps provides a wide variety of educational courses in the marine sciences for students from primary grades to high school level. UCSD students may become involved in work-study programs or serve as volunteers or aquarist trainees. A limited number of students can be accommodated for a four-unit course in independent study by arrangement with a faculty member and the aquarium director. The facility's resources include natural habitat groupings of marine life from local and Gulf of California waters; many of these marine groups are on display in the aquarium. The museum exhibits present basic oceanography concepts and explain research undertaken at Scripps. The aquarium is open from 9:00 a.m. to 5:00 p.m. daily.

Scripps's educational program has grown hand in hand with the research programs. Instruction is on the graduate level, and students are admitted as candidates for a Ph.D. degree. Academic work is conducted through an organizational segment of the institution known as the Graduate Department of Scripps and its eight curricular groups: biological oceanography, physical oceanography, marine biology, geological sciences, marine chemistry and geochemistry, geophysics, climate sciences, and applied ocean sciences. Approximately ninety professors are complemented by an academic staff of more than 200 research scientists, many of whom have a regularly scheduled role in the instructional program. Many Scripps scientists also teach courses in undergraduate programs such as biology, earth sciences, and environmental systems.

Students enter oceanography with extremely varied interests and backgrounds—naturalists, explorers, engineers, and theorists from the United States and many foreign countries. One thing they have in common, however, is that they come to Scripps with a very strong understanding of science. Most students select positions as research assistants when they enter the program—a practice that not only gives them an early involvement with research, but also provides salaries. The student-faculty ratio at Scripps is about two to one; consequently, classes are small, and the student has the opportunity to work closely with his or her thesis adviser. Oceanography is an interdisciplinary field that allows for informal exchange and interaction on a variety of levels.

While at Scripps, students have for their use some of the nation's most sophisticated and complete special laboratories and facilities for oceanographic studies covering a wide range of disciplines from biology and physiology to geophysics and atmospheric sciences. The Hydraulics Laboratory features a unique 90-foot stratified flow channel and a unique 150-foot wind-wave channel, and the Analytical Facility has scanning electron microscopes and other high-precision instruments. Among the many computer resources is access to the San Diego Supercomputer Center. The Scripps Library is the University of California's major collection of marine science materials, with outstanding collections in oceanography, marine biology, and marine technology. It also specializes in atmospheric sciences, fisheries, geology, geophysics, and zoology. The various marine life

and geological specimens housed at Scripps form a vast "library" of oceanographic resources available for investigations. Two underwater research areas that are part of the UC Natural Reserve System are adjacent to the Scripps campus. During a student's tenure at Scripps, he or she will have the opportunity to go to sea on any of Scripps's four research vessels as well as those from other oceanographic institutions.

The combination of a large scientific staff and extensive facilities at Scripps provides an extraordinary opportunity for each student to enjoy close contact with existing oceanographic concepts and active participation in research.

See "Scripps Institution of Oceanography" in "Courses, Curricula, and Programs of Instruction" for further details on study programs, requirements, degrees, and courses.

Graduate School of International Relations and Pacific Studies

The Graduate School of International Relations and Pacific Studies (IR/PS), at the University of California, San Diego was created by the Board of Regents in 1986 as the University of California's first professional school of international affairs. The school's regional focus is on the Pacific Rim, which extends from the southernmost tip of Latin America northward, across the United States and Canada, down through the Soviet Union, Japan, China, Korea, the Philippines, Australia, New Zealand, and the other nations of Oceania.

The school's programs have been developed in response to the increasing participation of the United States in global economic and political affairs. The United States wields less economic and political influence than it did in the immediate postwar years; at the same time, American industries face increasing competitive pressures in domestic and international markets. As a result, professionals who can understand and work in an internationalized environment are needed in both the public and private sectors. Moreover, while the United States once looked primarily to Europe as the site of its major commercial, financial, and strategic interests, the United States now has large stakes in the Pacific Basin, a likely source of both our greatest national challenges and possibilities in the next decades. These changes create both a need and an opportunity: a need for new programs of training and research in international affairs and an opportunity for a new school of international affairs and management to develop a distinctive, modern program that links professional training with international competence and gives greater prominence to the Pacific Basin.

The school's primary objectives are to prepare students with an interest in the Pacific Rim countries for positions of leadership in business, government, journalism, diplomacy, public service, and other fields; to serve as a center of excellence for research on economic, political, social, technological, and security issues confronting those nations; and to promote dialogue on Pacific region issues of common concern.

1. The degree programs provide students with professional training for careers in international affairs and management, including jobs in industry, government, international organizations, foundations, schools, and research institutes. Whatever their specific goals, students receive a broad training across professional areas so that those headed for the government have a grasp of decisions in the private sector and those planning business careers acquire a grasp of decision-making in public organizations. A program combining applied social science and professional subjects with courses on Pacific region countries provides students with both general skills and particular knowledge of the history, culture, language, and contemporary situations of those countries.
2. The school serves as a center for research on issues of common concern to the nations of the Pacific Rim. Since the Pacific Rim countries have become important foci of economic and security relations, the need for information and research centered on this dynamic region has become urgent. The diversity of national experiences represented by the Pacific region countries suggests a research agenda that includes comparisons of different approaches to economic management, foreign relations, policymaking, and development.
3. As part of the University of California, the school plays an important role in developing public awareness and understanding of the Pacific region. Programs of public outreach contribute to the information available to citizens and specialized groups about international issues that affect their lives.

Degree Programs

The degrees offered by the school include a professional Master of Pacific International Affairs (M.P.I.A.), a Ph.D. in Political Science and International Affairs offered jointly with the Department of Political Science, and a Ph.D. in Economics and International Affairs offered jointly with the Department of Economics. Training emphasizes international relations, economics and management, international technology management, policy, knowledge of specific countries or regions, analytical and research skills, and foreign language.

Mid-career and other executive certificate programs are also offered by IR/PS. In particular,

the International Career Associates Program (ICAP) is designed for working professionals seeking additional study in international management, international relations, and comparative public policy. Participants in the program spend an academic year at IR/PS beginning in mid-September and ending in mid-June. Under the auspices of the program, associates have the opportunity to further internationalize their knowledge and experience as well as enhance their professional development in such areas as finance, accounting, quantitative methods, econometrics, and long-range strategic planning. The program of study is tailored to individual interests under the guidance of the program's director and faculty advisers.

The M.P.I.A. program is distinctive in several respects. The program:

1. Exposes students to the perspectives of both private business and public policymaking.
2. Offers specialized training in economics, management, international relations, and political analysis and integrates the languages, history, and cultures of the Pacific region into the curriculum.
3. Creates a laboratory for comparative analysis of economic management, foreign relations, policymaking, and development in the diverse countries of the Pacific region.
4. Offers language skills training necessary for international affairs professionals specializing in Pacific Rim countries.

The Ph.D. in International Affairs is offered only in conjunction with either the Ph.D. in political science or the Ph.D in economics. These Ph.D. programs are designed for students who seek a rigorous training in a discipline (either economics or political science) along with a specialization in a specific policy area and regional expertise. Ph.D. students will be required to demonstrate knowledge of a foreign language linked to their regional specialization.

The master's and Ph.D. programs are distinct and separate. There is little overlap in the structure or requirements of the two programs because their objectives are very different. The master's program provides professional training for graduates who will pursue international careers in business, government, journalism, and other fields. The Ph.D. programs offer an academic education to a small number of students who will pursue international careers requiring advanced research capabilities in universities, corporations, government agencies, consulting firms, or other research organizations.

The master's and Ph.D. programs do share a common intellectual framework. Both the professional master's curriculum and the academic Ph.D. curriculum are designed to bring the theories, methods, and insights of various disciplines together to analyze policy issues of the Pacific region and to blend the perspectives of public policy makers and private managers. The same faculty teach and advise students in both the master's and Ph.D. programs.

The Faculty

The school has attracted an interdisciplinary faculty from such fields as economics, management sciences, international relations, comparative politics, public policy, and linguistics. The various programs draw upon and contribute to research which focuses on the regions of the Pacific Rim and on major issues that affect the region.

The school places special emphasis on research in and teaching of topics of particular importance to the program. These topics currently include:

1. The Pacific Rim as system, including the interaction of the countries and regions within it (e.g., Latin American-Japanese economic relations, U.S. relations with both East Asia and Latin America, and the placement of the Pacific in the global system of international relations, both contemporary and historical).
2. Studies in international economics, management, and finance, including such subject areas as international competition, comparative industrial organizations, international trade and development, industrial relations, technological innovation, international financial structures, policies, institutions, and historical patterns of development.
3. Comparison of the trajectories of socioeconomic development among the countries of Asia and Latin America, including the exploration of differences and similarities in state-society relations, culture, entrepreneurship, linkage to the global economy, and geopolitical position.
4. Comparative analysis of patterns of policymaking in the countries of the Pacific region to understand how different governmental structures, economic systems, and social group interests shape the policy process and influence policy choices in such areas as budget allocation, regulation of industry, and foreign trade.

For further information, contact the Office of Admissions, Graduate School of International Relations and Pacific Studies, UCSD, 9500 Gilman Drive, La Jolla, CA 92093-0520. (858) 534-5914, email: irps-apply@ucsd.edu, Web site: http://www-irps.ucsd.edu.

Flavin, Marjorie	Associate Professor	Economics	Roosevelt
Fogler, Michael	Assistant Professor	Physics	Sixth
Fonville, John W.	Professor	Music	Revelle
Forbes, Camille	Assistant Professor	Literature	Sixth
Forbes, Douglass Jane	Professor	Biological Sciences—Cell and Developmental Biology	Muir
Ford, Joseph	Associate Professor	ECE	Muir
Forman-Barzilai, Fonna	Assistant Professor	Political Science	Sixth

Fortes, P. A. George	Associate Professor	Biological Sciences—Neurobiology	Marshall
Frangos, John A.	Professor	Bioengineering	Warren
Frank, Ross H.	Associate Professor	Ethnic Studies	Marshall
Frankel, Theodore T.	Professor Emeritus	Mathematics	Revelle
Franks, Peter J. S.	Professor	SIO	SIO
Fredkin, Donald R.	Professor	Physics	Revelle
Freedman, David Noel	Professor	History	Revelle
Frenk, Margit	Professor Emeritus	Literature	Marshall
Friedman, Richard E.	Professor	Literature	Muir
Friedmann, Theodore	Professor	Pediatrics	SchMed
Frieman, Edward A.	Professor Emeritus/Vice Chancellor Emeritus	SIO/Marine Sciences	SIO
Fry, Andrew	Assistant Professor	Music	Marshall
Frymer, Paul	Associate Professor	Sociology	Revelle
Fu, Xiang-Dong	Associate Professor	CMM	SchMed
Fujitani, Takashi	Associate Professor	History	Roosevelt
Fuller, George M.	Professor	Physics	Roosevelt
Fung, Yuan-Cheng B.	Professor Emeritus	Bioengineering	Revelle
Gaasterland, Terry	Professor	SIO/MBRD	SIO
Gaffney, Floyd	Professor Emeritus	Theatre and Dance	Marshall
Galambos, Robert	Professor Emeritus	Neurosciences	SchMed
Galton, Ian	Professor	ECE	Muir
Gan, Wee Teck	Assistant Professor	Mathematics	Warren
Garsia, Adriano M.	Professor	Mathematics	Revelle/SchMed
Gee, Jeffrey	Professor-in-Residence	SIO/GRD	SIO
Geiduschek, E. Peter	Professor Emeritus	Biological Sciences—Molecular Biology	SchMed/Roosevelt
George, Rosemary M.	Associate Professor	Literature	Roosevelt
George-Graves, Nadine	Associate Professor	Theatre and Dance	Revelle
Getoor, Ronald K.	Professor Emeritus	Mathematics	Revelle/SchMed
Geyer, Mark A.	Professor-in-Residence	Psychiatry	SchMed
Ghosh, Anirvan	Professor	Biological Sciences—Neurobiology	Muir
Ghosh, Gourisankar	Associate Professor	Chemistry and Biochemistry	Marshall
Ghosh, Partho	Associate Professor	Chemistry and Biochemistry	Roosevelt
Gibson, Carl H.	Professor	MAE/SIO	Revelle/SIO
Gibson, Clark	Associate Professor	Political Science	Muir
Gieskes, Joris M.T.M.	Professor	SIO	SIO
Gilbert, J. Freeman	Professor Emeritus	SIO	SIO
Giles, Wayne	Professor-in-Residence	Bioengineering/Medicine	Warren/SchMed
Gill, Gordon N.	Professor	Medicine/CMM	SchMed
Gill, Philip E.	Professor	Mathematics	Marshall
Gille, Sarah T.	Assistant Professor	SIO/MAE	SIO/Revelle
Gilpin, Michael E.	Professor Emeritus	Biological Sciences—Ecology, Behavior, and Evolution	Muir
Glass, Christopher K.	Professor	Medicine	SchMed
Gleditsch, Kristian S.	Assistant Professor	Political Science	Warren
Glymour, Clark	Professor	Philosophy	Roosevelt
Goddard, Joseph D.	Professor	MAE	Marshall
Goguen, Joseph	Professor	CSE	Roosevelt
Goldberg, Edward D.	Professor Emeritus	SIO	SIO
Goldberger, Marvin	Professor	Physics	Warren
Goldfarb, Brian D.	Assistant Professor	Communication	Revelle
Goldman, Harvey S.	Professor	Sociology	Marshall
Goldrath, Ananda	Assistant Professor	Biological Sciences—Molecular Biology	Marshall

Goldstein, Lawrence S.B.	Professor	Pharmacology	SchMed
Goldstein, Paul S.	Associate Professor	Anthropology	Revelle
Goodall, Grant	Professor	Linguistics	Warren
Goodblatt, David	Professor	History	Muir
Goodkind, John M.	Professor	Physics	Revelle
Goodman, Murray	Professor	Chemistry and Biochemistry	Revelle
Goodson, James	Assistant Professor	Psychology	Warren
Gordon, Nora	Assistant Professor	Economics	Roosevelt
Gordon, Roger H.	Professor	Economics	Warren
Gorin, Jean-Pierre	Professor	Visual Arts	Marshall
Gorman, Michael R.	Assistant Professor	Psychology	Roosevelt
Gough, David A.	Professor	Bioengineering	Marshall
Gould, Meredith	Lecturer (PSOE)	Biological Sciences—Cell and Developmental Biology	Warren
Gould, Robert J.	Professor Emeritus	Physics	Revelle
Goulian, Mehran	Professor Emeritus	Medicine	SchMed
Gourevitch, Peter A.	Professor	IRPS/Political Science	IRPS/Roosevelt
Graham, Fan Chung	Professor	Math/CSE	Muir
Graham, Ronald L.	Professor	CSE	Roosevelt
Granger, Clive W.J.	Professor Emeritus	Economics	Warren
Granholm, Eric L.	Associate Professor-in-Residence	Psychiatry	SchMed
Grant, Igor	Professor	Psychiatry	SchMed
Green, Allyson	Associate Professor	Theatre and Dance	Sixth
Green, Melvin H.	Professor Emeritus	Biological Sciences	Revelle
Greenstein, Jack M.	Associate Professor	Visual Arts	Muir
Griest, Kim	Professor	Physics	Roosevelt
Grinstein, Benjamin	Professor	Physics	Muir
Griswold, William G.	Professor	CSE	Warren
Groisman, Alexander	Assistant Professor	CSE	Sixth
Gross, Mark W.	Professor	Mathematics	Revelle
Groves, Philip M.	Professor Emeritus	Psychiatry/Neurosciences	SchMed
Groves, Theodore	Professor	Economics	Revelle
Grush, Rick	Associate Professor	Philosophy	Roosevelt
Guest, Clark C.	Associate Professor	ECE	Warren
Gupta, Rajesh	Professor	CSE	Warren
Gusfield, Joseph R.	Professor Emeritus	Sociology	Muir
Gutierrez, David G.	Associate Professor	History	Marshall
Gutiérrez, Ramón A.	Professor	Ethnic Studies	Marshall
Guy, Nancy	Assistant Professor	Music	Roosevelt
Guza, Robert T.	Professor	SIO	SIO
Haas, Richard H.	Professor	Neurosciences/Pediatrics	SchMed
Haff, Leonard R.	Professor	Mathematics	Marshall
Haggard, Stephan M.	Professor	IRPS	IRPS
Hajnal, Zoltan L.	Assistant Professor	Political Science	Marshall
Halberstam, Judith M.	Professor	Literature	Revelle
Halkin, Hubert	Professor Emeritus	Mathematics	Revelle
Halleck, DeeDee	Professor Emeritus	Communication	Warren
Hallin, Daniel C.	Professor	Communication	Marshall
Hamburger, Robert N.	Professor Emeritus	Pediatrics	Revelle/SchMed
Hamilton, James D.	Professor	Economics	Roosevelt
Hammel, Harold T.	Professor Emeritus	SIO	SIO/SchMed
Hampton, Randolph	Associate Professor	Biological Sciences—Cell and Developmental Biology	Warren

Hanson, Gordon	Professor	IRPS/Economics	IRPS/Warren
Hardimon, Michael	Associate Professor	Philosophy	Marshall
Harel, Guershon	Professor	Mathematics	Marshall
Harkins, Edwin L., Jr.	Professor	Music	Muir
Harper, Elvin	Professor Emeritus	Chemistry and Biochemistry	Marshall
Harris, Christine	Assistant Professor	Psychology	Revelle
Harrison, Helen M.	Professor Emeritus	Visual Arts	Roosevelt
Harrison, Newton A.	Professor Emeritus	Visual Arts	Roosevelt
Hartouni, Valerie A.	Associate Professor	Communication	Muir
Hasson, Tama	Assistant Professor	Biological Sciences—Cell and Developmental Biology	Roosevelt
Hastings, Philip A.	Associate Professor	SIO	SIO
Hasty, Jeffrey	Assistant Professor	Bioengineering	Marshall
Haubrich, Richard A.	Professor Emeritus	SIO	SIO
Hauger, Richard L.	Professor-in-Residence	Psychiatry	SchMed
Havis, Allan	Professor	Theatre and Dance	Muir
Hawkins, James W.	Professor	SIO	Revelle/SIO
Haxo, Francis T.	Professor Emeritus	SIO	SIO
Hayashi, Masaki	Professor Emeritus	Biological Sciences—Cell and Developmental Biology	Revelle
Haydu, Jeffrey M.	Professor	Sociology	Roosevelt
Haygood, Margo G.	Professor	SIO	SIO
Heaton, Robert K.	Professor	Psychiatry	SchMed
Hedrick, Stephen M.	Professor	Biological Sciences—Molecular Biology/ CMM	Marshall/SchMed
Hegemier, Gilbert A.	Professor	SE	Revelle
Helinski, Donald R.	Professor Emeritus	Biological Sciences—Molecular Biology	Marshall
Heller, Michael J.	Professor/Professor-in-Residence	Bioengineering/ECE	Revelle
Hellman, Frances	Professor	Physics	Marshall
Helstrom, Carl W.	Professor Emeritus	ECE	Muir
Helton, J. William	Professor	Mathematics	Marshall
Henaff, Marcel	Professor	Literature	Warren
Hendershott, Myrl C.	Professor	SIO	SIO
Hendrickson, David N.	Professor	Chemistry and Biochemistry	Muir
Hertz, Deborah	Professor	History	Revelle
Herz, Richard K.	Associate Professor	MAE	Warren
Hessler, Robert R.	Professor Emeritus	SIO	SIO
Heyman, Gail D.	Assistant Professor	Psychology	Warren
Hildebrand, John A.	Professor	SIO	SIO
Hillyard, Steven A.	Professor	Neurosciences	SchMed
Hilton, David R.	Associate Professor	SIO	SIO
Hirsch, Jorge E.	Professor	Physics	Revelle
Ho, Steffan	Assistant Professor	Pathology	SchMed
Hock, Louis J.	Professor	Visual Arts	Marshall
Hodgkiss, William S., Jr.	Professor	SIO	SIO
Hoekstra, Hopi	Assistant Professor	Biological Sciences—Ecology, Behavior and Evolution	Sixth
Hoffman, Alexander	Assistant Professor	Chemistry and Biochemistry	Marshall
Hofmann, Alan F.	Professor Emeritus	Medicine	SchMed
Hoger, Anne	Professor	MAE	Warren
Hollan, James D.	Professor	Cognitive Science	Revelle
Holland, John J.	Professor Emeritus	Biology	Warren
Holland, Nicholas D.	Professor	SIO	SIO/Revelle

Holst, Michael J.	Professor	Mathematics	Warren
Holston, James	Associate Professor	Anthropology	Warren
Holway, David A.	Assistant Professor	Biological Sciences—Ecology, Behavior, and Evolution	Muir
Horwitz, Robert B.	Professor	Communication	Marshall
Hoshi, Takeo	Professor	IRPS	IRPS/Roosevelt
Hoston, Germaine A.	Professor	Political Science	Revelle
Houston, Alan C.	Associate Professor	Political Science	Roosevelt
Howden, William E.	Professor	CSE	Muir
Howe, Fanny Q.	Professor Emeritus	Literature	Warren
Howell, Stephen B.	Professor	Medicine	SchMed
Hu, Ping C.	Lecturer (SOE)	History	Muir
Hu, Te C.	Professor	CSE	Warren
Huang, Xiaohua	Assistant Professor	Bioengineering	Revelle
Huber, Gary	Assistant Professor	Bioengineering	Roosevelt
Huelsenbeck, John	Associate Professor	Biological Sciences—Ecology, Behavior and Evolution	Marshall
Huerta, Jorge A.	Professor	Theatre and Dance	Marshall
Hughes, Judith M.	Professor	History	Roosevelt
Humphries, Tom L.	Lecturer (SOE)	TEP/Communication	Marshall
Hunefeldt, Christine F.	Professor	History	Marshall
Hutchins, Edwin L., Jr.	Professor	Cognitive Science	Revelle
Hwa, Terence T.	Professor	Physics	Revelle
Ideker, Trey	Assistant Professor	Bioengineering	Warren
Ierley, Glenn R.	Professor	SIO	SIO
Impagliazzo, Russell	Professor	CSE	Marshall
Inman, Douglas L.	Professor Emeritus	SIO	SIO
Insel, Paul A.	Professor	Pharmacology/Medicine	SchMed
Intaglietta, Marcos	Professor	Bioengineering	Revelle/SchMed
Intriligator, Kenneth	Professor	Physics	Muir
Iragui-Madoz, Vicente J.	Professor of Clinical Neurosciences	Neurosciences	SchMed
Irons, Peter H.	Professor	Political Science	Marshall
Jackson, Gabriel	Professor Emeritus	History	Revelle
Jackson, Jeremy	Professor	SIO	SIO
Jacobson, Gary C.	Professor	Political Science	Marshall
Jain, Ramesh C.	Professor Emeritus	ECE/CSE	Roosevelt
James, Luther	Associate Professor Emeritus	Theatre and Dance	Muir
Januszewski, Silke I.	Assistant Professor	Economics	Warren
Jed, Stephanie H.	Associate Professor	Literature	Muir
Jenik, Adriene	Associate Professor	Visual Arts	Roosevelt
Jenkins, Elizabeth	Professor	Physics	Muir
Jennings, Patricia	Professor	Chemistry and Biochemistry	Roosevelt
Jensen, Henrik	Assistant Professor	CSE	Muir
Jeremijenko, Natalie	Assistant Professor	Visual Arts	Sixth
Jernigan, Terry L.	Professor-in-Residence	Psychiatry/Radiology	SchMed
Jeste, Dilip V.	Professor-in-Residence	Psychiatry	SchMed
Jin, Sungho	Professor	MAE	Sixth
Johnson, Catherine L.	Associate Professor	SIO/IGPP	SIO
Johnson, Chalmers	Professor Emeritus	IRPS	IRPS/Roosevelt
Johnson, Randall S.	Assistant Professor	Biological Sciences—Molecular Biology	Marshall
Johnson , Tracy	Assistant Professor	Biological Sciences—Molecular Biology	Revelle

Johnson La-O, Sara E.	Assistant Professor	Literature	Roosevelt
Jones, Barbara	Professor	Physics	Muir
Jones, Walton	Professor	Theatre and Dance	Muir
Jordan, David K.	Professor/Provost	Anthropology/Warren	Warren
Joseph, Simpson	Assistant Professor	Chemistry and Biochemistry	Roosevelt
Judd, Lewis L.	Professor	Psychiatry	SchMed
Jules-Rosette, Bennetta W.	Professor	Sociology	Muir
Kadonaga, James T.	Professor	Biological Sciences—Molecular Biology	Revelle
Kagnoff, Martin F.	Professor	Medicine/Pediatrics	SchMed
Kahler, Miles E.	Professor	IRPS	IRPS
Kahng, Andrew B.	Professor	CSE/ECE	Revelle
Kahr, Madlyn M.	Professor Emeritus	Visual Arts	Warren
Kamps, Mark P.	Associate Professor	Pathology	SchMed
Kane, Alex	Professor	IRPS	IRPS/Roosevelt
Kaprow, Allan	Professor Emeritus	Visual Arts	Warren
Karbhari, Vistasp M.	Professor	SE	Muir
Karin, Michael	Professor	Pharmacology	SchMed
Karin, Sidney	Professor-in-Residence	CSE	Warren
Karis, Aleck	Professor	Music	Warren
Karten, Harvey J.	Professor	Neurosciences/Psychiatry	SchMed
Kassner, Michael E.	Professor	MAE	Warren
Kastner, Miriam	Professor	SIO	SIO/Revelle
Katzman, Robert	Professor Emeritus	Neurosciences	SchMed
Kayali, Hasan	Associate Professor	History	Roosevelt
Kearns, David R.	Professor Emeritus	Chemistry and Biochemistry	Revelle
Keating, Brian	Assistant Professor	Physics	Muir
Keeling, Charles D.	Professor Emeritus	SIO	SIO
Keeling, Ralph F.	Professor	SIO	SIO
Kehler, Andrew	Assistant Professor	Linguistics	Roosevelt
Kelly, Carolyn J.	Professor-in-Residence	Medicine	SchMed
Kelner, Michael J.	Professor	Pathology	SchMed
Kelsoe, John R., Jr.	Associate Professor	Psychiatry	SchMed
Kennel, Charles F.	Professor/Vice Chancellor/Director	SIO/Marine Sciences	SIO
Kernell, Samuel H.	Professor	Political Science	Warren
Kester, Grant	Associate Professor	Visual Arts	Roosevelt
King, Nicole R.	Associate Professor	Literature	Marshall
Kipps, Thomas J.	Professor	Medicine	SchMed
Kirkland, Theo N., III	Professor-in-Residence	Pathology/Medicine	SchMed
Kirkpatrick, Susan	Professor/Associate Chancellor	Literature	Muir
Kirsch, David J.	Associate Professor	Cognitive Science	Roosevelt
Klatch, Rebecca E.	Professor	Sociology	Muir
Klein, Rachel	Associate Professor	History	Warren
Kleinfeld, David	Professor	Physics	Warren
Klima, Edward S.	Professor Emeritus	Linguistics	Muir
Klimenko, Mikhail M.	Assistant Professor	IRPS	IRPS
Kluender, Robert E.	Associate Professor	Linguistics	Warren
Knowlton, Nancy	Professor	SIO	SIO
Kobayashi, Yoshihisa	Assistant Professor	Chemistry and Biochemistry	Revelle
Kogut, Sandra	Associate Professor	Visual Arts	Sixth
Kohn, Joshua R.	Associate Professor	Biological Sciences—Ecology, Behavior, and Evolution	Warren
Kokotovic, Milos	Assistant Professor	Communication	Muir

Kolodner, Richard D.	Professor	Medicine	SchMed
Komives, Elizabeth A.	Professor	Chemistry and Biochemistry	Roosevelt/SchMed
Konecni, Vladimir J.	Professor	Psychology	Muir
Kontje, Todd C.	Professor	Literature	Marshall
Koo, Edward	Professor	Neurosciences	SchMed
Kooyman, Gerald L.	Professor-in-Residence Emeritus	SIO	SIO
Kosmatka, John B.	Professor	SE	Warren
Kousser, Thaddeus B.	Assistant Professor	Political Science	Muir
Krasheninnikov, Sergei	Professor	MAE	Muir

Key to Course Listings

Courses numbered 1 through 99 are lower-division courses and are normally open to freshmen and sophomores. Courses numbered 87 are Freshman Seminars.

Courses numbered 100 through 199 are upper-division courses and are ordinarily open only to students who have completed at least one lower-division course in the given subject, or six quarters of college work.

Courses numbered 200 through 299 are graduate courses and are ordinarily open only to students who have completed at least eighteen upper-division units basic to the subject matter of the course.

Courses numbered 300 through 399 are professional courses for teachers, which are specifically designed for teachers or prospective teachers.

Courses numbered 400 through 499 are other professional courses.

Sample Course Listing:

100 (see above) Title of Course (4) (number of quarter hours or units of credit)
Course Description. Prerequisites: [listed]. (F) [Quarter the course is taught].

Academic Internship Program

OFFICE: Literature Building, Second Floor, Warren College
http://provost.ucsd.edu/warren

THE PROGRAM

The Academic Internship Program (AIP) offers qualified juniors and seniors the opportunity to acquire valuable work experience related to academic and career interests. Although most internships are in the San Diego area, the Academic Internship Program is national in scope, including the popular Washington, D.C. program, and international, including the London program. Housing arrangements and orientations are parts of both programs. An extensive library lists more than 2000 available internships in varied settings including, but not limited to, TV and radio stations, law offices, medical research labs and clinics, government agencies, high-tech and biotech companies, engineering, advertising and public relations firms, and financial institutions. Students also can work with the internship office to set up their own positions.

The program operates all four quarters; students intern a minimum of ten hours per week and can earn units of upper-division credit ranging from one to twelve. Students may enroll in a maximum of four internships and/or earn sixteen units of internship credit during the course of their junior and senior years. The number of units earned corresponds to the number of hours worked, actual job description and the length of a research paper/project. The research paper/project and relevant readings comprise the academic component of the program, which is directed by a faculty adviser. selected by the student. One-unit internships require assigned faculty advisers and extended program evaluations. All students earn grades of P/NP and receive transcript notations.

The AIP serves students from all five colleges and handles all undergraduate majors. Students planning to participate in the Academic Internship Program should apply at least one quarter before they want to be enrolled in the program, or two quarters prior to a Washington, D.C. or London internship. Students planning to set up their own out-of-town internships are encouraged to apply two quarters in advance. In cooperation with AIP and UCSD's Programs Abroad Office, students also may participate in, and earn academic credit for, other established internships abroad.

To be eligible for the program, students must have completed at least ninety units of credit with some related upper-division course work and have a minimum 2.5 GPA at the date of application.

197. Academic Internship Program (1-12)
Individual placements for field learning which are integrated with academic programs will be developed and coordinated by the program. A written contract involving all parties will include learning objectives, a project outline, and means of supervision and progress evaluation, and must be received prior to the beginning of the internship. *Prerequisites: consent of instructor and submission of a written contract.*

African Studies Minor

OFFICE: 135 Social Science Building, Thurgood Marshall Campus
(858) 822-0265

PARTICIPATING FACULTY

Professors

Zeinabu Davis, M.F.A., *Communication*
Bennetta Jules-Rosette, Ph. D., *Sociology, Director*
Thomas E. Levy, Ph. D., *Anthropology*
Maria Polinsky, Ph.D., *Linguistics*
Edward Reynolds, Ph. D., *History* (Emeritus)
Marc J. Swartz, Ph. D., *Anthropology*

Associate Professors

Robert Cancel, Ph. D., *Literature*
Ivan Evans, Ph. D., *Sociology*
Clark Gibson, Ph.D., *Political Science*
Robert Horwitz, Ph. D., *Communication*
Sharon Rose, Ph.D., *Linguistics*

Assistant Professors

Boatema Boateng, Ph.D., *Communication*
Karen Ferree, Ph.D., *Political Science*

African studies is an interdisciplinary minor that covers African topics and issues through a coordinated set of courses offered in the Departments of Anthropology, Communication, Ethnic Studies, History, Literature, Music, Political Science, Sociology, Theatre and Dance, and Visual Arts. In addition to the offerings at UCSD, opportunities for further study in Africa and Europe are available through the University of California Education Abroad Program, with programs in Ghana and South Africa as well as at the National University of Côte d'Ivoire, the Université de Paris V, the Université de Bordeaux II, and study abroad programs offered through other U.S. universities. A number of African languages are available through the UCSD Department of Linguistics. Students may take independent study units and tutorials with faculty in the program to learn the languages of their respective areas of interest. In addition, students are encouraged to participate in special seminars and presentations offered annually by the African and African-American Studies Research Project. Students may take the seminars for credit by signing up for a 198/199 with a qualified African studies professor. A minor in African studies consists of seven total courses. Students may take no more than four courses in any one department. Also, a minimum of one course each from of the following three groups is required: Group A–Traditional Cultures and Premodern Africa, Group B–African Society and Politics, and Group C–African Expressive Culture.

The **African studies minor** provides students with a broad background in African history, soci-

eties, culture, and politics. Please contact Professor Bennetta Jules-Rosette in the Department of Sociology (Social Science Building, Rm. 471), (858) 534-4790 or the African Studies Office at (858) 822-0265 for more information. Quarterly course offerings are subject to change. Interested students should consult the program faculty for an up-to-date list.

COURSES

Group A: Traditional Cultures and Premodern Africa

ANRG 104. Traditional African Societies and Cultures (4)

Com/Cul 118. Oral History (4)

Ethnic Studies 142. Languages of Africa (4)

HIAF 110. History of Africa to 1880 (4)

HIAF 120. History of South Africa (4)

HIUS 135. Slavery and the Atlantic World (4)

Group B: African Society and Politics

ANGN 183. Chiefdoms, States, and the Emergence of Civilizations (4)

Com/Cul 179. Colonialism and Culture (4)

Ethnic Studies 157. Ethnic Conflict in the Third World (4)

HIAF 111. Modern Africa since 1880 (4)

HIAF 130. African Society and the Slave Trade (4)

HIAF 140. Economic History of Africa (4)

HIUS 136. Slavery and Freedom in Nineteenth-Century U.S.: Images and Realities (4)

Political Science 132A. Political Modernization Theory (4)

Political Science 135A. Ethnic Conflict in the Third World (4)

Political Science 136B. Comparative Politics and Political Culture (4)

Soc C/148C. Power, Culture, and Social Revolt (4)

Soc C/157. Religion in Contemporary Society (4)

Soc D/158. Islam in the Modern World (4)

Soc D/188A. Community and Social Change in Africa (4)

Soc D/188J. Change in Modern South Africa (4)

Group C: African Expressive Culture

Com/Cul 127. Folklore and Communication (4)

Com/Cul 146. Culture and Thought (4)

Com/Cul 179. Colonialism and Culture (4)

Ethnic Studies 176. Black Music/Black Text: Communication and Cultural Expression (4)

LTGN 130. Novel and History in the Third World (4)

LTGN 132. African Oral Literature (4)

LTGN 133. Introduction to Literature and Film of Modern Africa (4)

LTGN 185. Literature and Ideas (4)

LTGN 186A-B-C. Modernity and Literature (4-4-4)

LTEN 187. Black Music/Black Text: Communication and Cultural Expression (4)

LTEN 188. Contemporary Caribbean Literature (4)

MUS 13AF. World Music/Africa (4)

MUS 111. World Music Traditions (4)

MUS 126. Introduction to Oral Music (4)

MUS 127A-B. Music of Black Americans (4-4)

Soc A/105. Ethnographic Film and Media Methods (6)

Soc D/187. African Societies Through Film (4)

TH/HS 109. Modern Black Drama (4)

TH/HS153. Dance History-Jazz Dance & Related Ethnic Studies (4)

Visual Arts 126A. African and Afro-American Art (4)

Visual Arts 127B. Western & Non-Western Rituals & Ceremonies (4)

Visual Arts 127D. Primitivism and Exoticism in Modern Art (4)

Visual Arts 128E. Topics in Non-Western Art (4)

Anthropology

Office: Social Science Building

Professors

Guillermo Algaze, Ph.D.
Margaret J. Schoeninger, Ph.D., *Chair*
Shirley C. Strum, Ph.D.
Marc J. Swartz, Ph.D.
Donald F. Tuzin, Ph.D.
Kathryn A. Woolard, Ph.D.

Professors Emeritus

F. G. Bailey, Ph.D., *Academic Senate Career Distinguished Teaching Award*
Roy G. D'Andrade, Ph.D. *(No longer in San Diego)*
David K. Jordan, Ph.D.
Michael E. Meeker, Ph.D. *(No longer in San Diego)*
T. Schwartz, Ph.D. *(Retired, not available)*
Melford E. Spiro, Ph.D.

Associate Professors

Suzanne A. Brenner, Ph.D.
Paul S. Goldstein, Ph.D.
James Holston, Ph.D.
Jim Moore, Ph.D.
Steven M. Parish, Ph.D.
Joel Robbins, Ph.D.

Assistant Professors

Geoffrey Braswell, Ph.D.
Keith E. McNeal, Ph.D.
Nancy G. Postero, Ph.D.
Katerina Semendeferi, Ph.D.

Adjunct Professors

Robert McC. Adams, Ph.D., *Adjunct Professor*
Fred Bercovitch, Ph.D., *Adjunct Professor*
Brian F. Byrd, Ph.D., *Associate Adjunct Professor*
Alan Dixson, Ph.D., *Adjunct Professor*

Associated Faculty

Charles Briggs, Ph.D., *Professor, Ethnic Studies*
Edwin L. Hutchins, Ph.D., *Professor, Cognitive Science*
Martha Lampland, Ph.D., *Associate Professor, Sociology*
Paula F. Levin, Ph.D., *Senior Lecturer S.O.E., Teacher Education Program*
Lawrence A. Palinkas, Ph.D., *Professor, Family and Preventive Medicine, School of Medicine*
Lola Romanucci-Ross, Ph.D., *Professor, Family and Preventive Medicine, School of Medicine*
Christena Turner, Ph.D., *Associate Professor, Sociology*
Lisa Yoneyama, Ph.D., *Associate Professor, Literature*

Anthropology is a humanistic social science dedicated to understanding the worldwide diversity of social institutions and cultural traditions. Because there is increasing awareness of the importance of sociocultural factors in domestic and international relations, a bachelor's degree in anthropology has become accepted as a valuable preparation for careers in law, medicine, education, business, government, and various areas of public service. Anthropology majors can qualify for a California teaching credential from UCSD through the Teacher Education Program. The department offers a full range of courses in cultural, social, psychological and biological anthropology, as well as archaeology. Courses include offerings which focus on specific societies or regions of the world as well as more theoretically oriented materials. The department offers undergraduate minor and major programs, a senior thesis program, an undergraduate internship program, and a graduate program leading to the doctoral degree. Students may also enroll in a Field School when available.

The Undergraduate Program

Lower-Division

Lower-division offerings in anthropology are concentrated mainly in the core series, ANLD 1, 2, 3. These courses are designed to provide a comprehensive orientation to the ideas and methods of anthropological investigation and a familiarity with case materials from a number of different societies and historical periods.

Students who intend to major or minor in archaeological anthropology are advised to take ANLD 3.

Students who intend to major or minor in biological anthropology must take ANLD 2 (or equivalent), which is prerequisite to most upper-division biological anthropology courses.

ANLD 23, which may not be offered every year, satisfies the campus-wide requirement for a course in American Cultures.

Students who have already completed ANPR 105, 106, and 107 may not receive academic credit for ANLD 1.

Other lower-division courses are offered from time to time and will vary from year to year.

The Minor

Students may choose a minor in general anthropology, archaeological anthropology, or biological anthropology. Each consists of seven anthropology courses. At least five courses must be upper-division; at least four should be taken at UCSD. The list of courses offered for each minor is available from the undergraduate coordinator. Transfer credits from other anthropology departments are usually accepted. Education Abroad Program credits are acceptable at the discretion of the undergraduate adviser.

The Major

To receive a B.A. degree with a major in anthropology, the student must meet the requirements of Revelle, John Muir, Thurgood Marshall, Earl Warren, Eleanor Roosevelt College, or Sixth College including the following requirements of the Department of Anthropology:

1. A minimum of twelve four-unit upper-division courses in the Department of Anthropology must be completed.
2. ANPR 105, 106, and 107 must be completed (included as three of the twelve courses required under No. 1, above). All or some of the courses in this sequence are prerequisites for some other upper-division courses. This sequence consists of:

   105 Social Anthropology

   106 Cultural Anthropology

   107 Psychological Anthropology
3. No courses taken in fulfillment of the above requirements may be taken on a Pass/Not Pass (P/NP) basis. (An exception is made for some courses accepted from other schools and for **one** independent study course (199), **or one** directed group study course (198), **and a** combination of **one** internship seminar (ANBI 187A, C or ANPR 187B) with the corresponding academic internship project (AIP 197). However, this exception does not extend to ANPR 105, 106 and 107, or to transfer credits accepted in lieu of them. These must be taken for a letter grade.)
4. For the B.A. degree, a minimum average of 2.0 is required, both as an overall average in all anthropology courses and in the ANPR 105-106-107 sequence considered separately.
5. At least seven of the upper-division courses submitted for the major must be taken at the University of California, San Diego. The seven normally must include ANPR 105, 106, and 107. A transfer course may be accepted in lieu of one of these "core" courses, if, in the opinion of the undergraduate adviser, the content is substantially the same. In no case will transfer credit be accepted in lieu of more than one of these courses.
6. Majors are required to obtain a background in basic statistical techniques. Cognitive Science 14, Psychology 60, Math 10D, and BIEB 100 are recommended as courses to fulfill this requirement.

The Major in Anthropology with Concentration in Archaeology

The department offers an additional B.A. degree, "Anthropology with Concentration in Archaeology." This degree requires the following:

1. The Anthropology Core Sequence: ANPR 105, 106, 107.
2. The Archaeology Core Sequence: ANGN 181, 182, 183.
3. An additional upper-division course in sociocultural anthropology.
4. Five elective courses, three of which must be in archaeology, and the remaining two can be either from offerings in archaeology or in related disciplines. A handout listing these courses is available from the department's undergraduate coordinator. Students are encouraged to participate in the department's Archaeological Field School (ANPR 194) opportunities in the eastern Mediterranean region and San Diego county.

The Major in Anthropology with Concentration in Biological Anthropology

The department offers another B.A. degree, "Anthropology with Concentration in Biological Anthropology." This degree requires the following:

1. The Core Sequence: ANPR 105, 106, 107.
2. Five four-unit anthropology courses identified as biological anthropology courses; ENVR 110 may be substituted for one of these. A handout listing these courses is available from the department's undergraduate coordinator.
3. Four four-unit courses in the Department of Biology; ECON 131 may be substituted for one of these. Courses which are applicable are also listed in the biological anthropology handout.
4. Items 3 through 6 in the above section ("The Major in Anthropology") also apply to the major in anthropology with concentration in biological anthropology.

Senior Thesis Program

The senior thesis is prepared during two successive quarters of ANPR 196, senior thesis research, and is counted as two of the twelve upper-division courses required for a major. Students are admitted to the program by invitation of the faculty. Under normal circumstances, eligibility for the program requires the student (1) to have completed eight upper-division courses, including the core sequence, and (2) to have achieved grade point averages of at least 3.6 both overall and in the anthropology major by the end of the junior year. Some of these requirements may be waived by vote of the faculty. During the first quarter of the program (fall quarter), students select their research topic and write a preliminary paper. Those who receive a B+

or better will be invited to continue in the program and complete a thesis on the chosen topic by the end of the winter quarter. The thesis will be evaluated by a committee consisting of the thesis adviser and one other faculty member appointed by the department chair in consultation with the thesis coordinator. The thesis adviser has the sole responsibility for the grade the student receives in the winter quarter. The reading committee advises the faculty on the merit of the thesis for departmental honors. A senior thesis is required in order to be considered for department honors as commencement.

Students who wish to be considered for the Senior Thesis Program should notify the department's undergraduate adviser by the second week of the spring quarter prior to the senior year.

Internship Program

The department sponsors an internship program that allows students to gain academic credit for supervised work in the Museum of Man, the San Diego Zoo, or the Wild Animal Park. The three tracks of the program allow internship experience in (1) biological anthropology, (2) ethnology and archaeology at the museum, or (3) primate behavior and conservation at the Zoo or Wild Animal Park. A combination of on-campus and on-site supervision makes these courses intellectually provocative but practical and applied. They are an especially valuable complement to a major or minor in anthropology. One four-unit internship (AIP 197) taken with the corresponding two-unit internship seminar (ANBI 187A, C and ANPR 187B) can be counted as one of the twelve upper-division courses for the anthropology major or minor. Applications to these programs are accepted during the first seven weeks of the quarter before the one in which the internship is to be done.

Academic Enrichment Programs

Faculty Mentor Program

The program offers research experience to any junior or senior with a GPA of 2.7 or higher who wants to prepare for graduate or professional school. Participants work as research assistants to UCSD faculty members during the winter and spring quarters. Students present their research papers at the Faculty Mentor Research Symposium at the conclusion of the program in the spring.

Summer Research Program

The program offers full-time research experience to under-represented (i.e., minorities, women, and low-income, first-generation college) students who are interested in preparing for careers in research or university teaching. Juniors and seniors who have a 3.0 GPA or above and plan to attend graduate or professional school are eligible to participate.

Education Abroad Program

One of the best ways to understand the concept of "culture" is to live in a different culture for a time. Anthropology majors are encouraged to participate in the UC Education Program (EAP) or UCSD's Opportunities Abroad Program (OAP). Students considering this option should discuss their plans with the faculty undergraduate adviser before going abroad, and courses taken abroad must be approved for credit to the major by the adviser upon return. More information on EAP and OAP is provided under the Education Abroad Program in the UCSD General Catalog. Interested students should contact the EAP staff in the International Center.

The Graduate Program

The Department of Anthropology offers graduate training in social, cultural, and psychological anthropology, anthropological archaeology, and biological anthropology. The graduate program is designed to provide the theoretical background and the methodological skills necessary for a career in research and teaching anthropology at the university level, and for the application of anthropological knowledge to contemporary problems. It is assumed that all students enter with the goal of proceeding to the doctoral degree.

Admission to the graduate program occurs in the fall quarter only.

Graduate Advising

One member of the departmental faculty functions as the graduate adviser. The role of graduate adviser is to inform students about the graduate program, approve individual registration forms, and give assistance with respect to administrative matters. After completion of the requirements for the master's degree, the chair of the student's doctoral committee serves as the student's major adviser.

Any decision to waive a requirement for either the master's degree or the Ph.D. must be made by a majority of the faculty.

Evaluation

In the spring of each year, the faculty evaluate each student's overall performance in course work, apprentice teaching, and in research progress. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student should not continue in the graduate program.

The Master of Arts Degree

Students entering the doctoral program must complete a master's degree before continuing toward the doctorate. Entering students who already have a master's degree in anthropology are not permitted by university regulations to receive a second social science or related field master's degree, but are required by the department to complete the requirements for the master's degree. Rare exceptions may be made on a case by case basis by the consent of the majority of the faculty and approval of the Office of Graduate Studies and Research.

Requirements for Master's Degree

Required Courses:

230	Departmental Colloquium (4 quarters, 1 unit each)
281A-B	Introductory Seminars (1 unit each)
295	Master's Thesis Preparation (1–12 units)

Four of the following six core courses, as designated by the sub-field to which the student has been admitted:

Students must take four core courses out of a total pool of six courses identified as "Core." One of these will be an integrated core course to be taken during the first year. The other three required courses will be specified by faculty of the three sub-fields now identified within the department (Sociocultural, Anthropological Archaeology, and Biological Anthropology) for the students admitted to their respective tracks.

ANGR 280A. Core Seminar in Social Anthropology (4 units)
ANGR 280B. Core Seminar in Cultural Anthropology (4 units)
ANGR 280C. Core Seminar in Psychological Anthropology (4 units)
ANGR 280D. Core Seminar in Anthropological Archaeology (4 units)
ANGR 280E. Core Seminar in Biological Anthropology (4 units)
ANGR 280F. Integrated Core Seminar (4 units) (Required for all first year students)

Elective Courses

Four elective, letter grade courses are required. Required courses may not be counted as elective courses, although the Integrated Core Seminar (ANGR 280F) may be repeated in another year for elective credit (provided the teaching staff for the course have changed). Two of these elective courses must be within the anthropology department. Other electives may be taken outside of the department with the approval of the department chair or the graduate adviser.

Master's Thesis

Students must complete a master's thesis of roughly sixty pages which will be due on the first day of the winter quarter of the student's second year. They must have completed three quarters of coursework in order to begin writing a master's thesis. By the end of the spring quarter of the student's first year, he/she will have a master's committee in consultation with whom he/she will design the thesis. The graduate adviser will be responsible for organizing the masters' committees. The thesis will be literature based but will have its own argument, and will not simply be a review of the literature.

An option open only to anthropological archaeology and biological anthropology students is to make the literature-based thesis (defended by the beginning of the winter quarter of the second year) one component of a larger project involving the collection of original data. Data collection could begin in the summer after the student's first year and analysis of it could continue after the master's thesis has been defended. If the thesis includes the analysis of original data which must be shipped back from the field, the student would write the thesis during the winter quarter and hand it in on the first day of the spring quarter.

The Doctoral Degree

Continuation in the doctoral program is granted to students who have satisfactorily completed the master's program and who have completed courses and the master's thesis at a level of excellence which indicates promise of professional achievement in anthropology.

Requirements for the Doctoral Degree

1. Required Courses

In order to achieve candidacy, students must complete two additional letter grade electives beyond the four required for the Masters.

Only one 290-level course may be taken in any one quarter until a student attains Ph.D. candidacy.

2. Research Methods

Students are required to develop a plan for their training in research methods and present it to the anthropology department faculty on their proposed dissertation committee in the spring quarter of their second year.

3. Apprentice Teaching

In order to acquire teaching experience, each student in the graduate department is required to participate in the teaching activities designated by the department. Teaching may be in the anthropology department or in any other department or program on campus. It can be fulfilled anytime in the first four years of residence. The requirement can be waived by the faculty. The teaching requirement is discharged under the auspices of the course titled ANGR 500: Apprentice Teaching or comparable number in the relevant teaching areas. (1 quarter, 4 units, S/U grade.)

4. Foreign Language

Unless a student is planning on fieldwork in English-speaking areas, knowledge of one or more foreign languages may be essential for the successful completion of a Ph.D. in anthropology at UCSD. Students will determine specific language requirements for their degree in consultation with the faculty and their doctoral committee.

5. Formation of the Doctoral Committee

Students should choose their doctoral committee by the end of the second year. They must have the completed committee by the end of the first week of the fall quarter of their third year. In consultation with the chair of the doctoral committee, two more departmental committee members are selected, and two faculty members from outside of the department are added. One of the outside members must be tenured.

Anthropologists in other departments who are identified by the faculty may serve as either inside members or outside members of the committee. However, there must be at least two inside members from within the department, and only one outside member may be an anthropologist. The final composition of the committee is approved by the Office of Graduate Studies and Research.

The chair of the doctoral committee serves as the student's adviser for the remainder of the student's program.

6. The Fieldwork Proposal

Advancement to Candidacy will be based on the submission of a research proposal of fifteen to thirty double-spaced pages and three papers of fifteen to twenty double-spaced pages in length.

One paper must be submitted in each quarter. The papers should be fifteen to twenty double spaced pages in length. They will usually be in the areas of theory, methods and area, though in some cases a different breakdown of the papers will be allowed in consultation with the student's committee. Three directed reading courses will be allowed in the preparation of the papers (one each in the spring of the second year and the fall and winter of the third year.) All papers and the exam must be completed by the end of a student's third year, though they may be completed earlier. The proposal and all papers must be turned in three weeks prior to the examination.

7. Advancement to Candidacy

In the spring quarter of the third year, after completion of all of the above requirements and submission of the papers and proposal, the student sits for the oral qualifying examination administered by the student's committee, as required by the Office of Graduate Studies and Research. This examination may contain questions on any aspect of anthropology, but focuses particularly upon the merits of the student's field research proposal, areas covered in the papers, and accompanying field statements.

Successful completion of this examination marks the student's advancement to doctoral candidacy. These exams will be open to the extent that university regulations allow.

8. Dissertation and Dissertation Defense

Upon completion of the dissertation research project, the student writes a dissertation which must be successfully defended in an oral examination conducted by the doctoral committee and open to the public. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. A full copy of the student's dissertation must be in the hands of each of the student's doctoral committee members four weeks before the dissertation hearing. An abstract of the student's dissertation must be in the hands of all faculty members ten days before the dissertation defense. It is understood that the edition of the dissertation given to committee members will not be the final form, and that the committee members may suggest changes in the text at the defense. Revisions may be indicated, requiring this examination to be taken more than once. Acceptance of the dissertation by the university librarian represents the final step in completion of all requirements for the Ph.D.

9. Time Limits

Pre-candidacy status is limited to three years. Candidates for the doctorate remain eligible for university support for eight years. Instructional support (teaching assistantships) is limited to six years (eighteen quarters). The doctoral dissertation must be submitted and defended within nine years. This is in accordance with university policy.

Introduction to Required Core Courses

ANGR 280A. Core Seminar in Social Anthropology. First-year core seminar focuses on individual action and social institutions.

ANGR 280B. Core Seminar in Cultural Anthropology. First-year core seminar focuses on personal consciousness and cultural experience.

ANGR 280C. Core Seminar in Psychological Anthropology. First-year core seminar focuses on motives, values, cognition, and qualities of personal experience.

ANGR 280D. Core Seminar in Anthropological Archaeology. Integral part of the training for graduate students focusing on Anthropological Archaeology. It is one of a set of core anthropology courses available to graduate students; required of first-year anthropological archaeology students but open for students in other sub-fields.

ANGR 280E. Core Seminar in Biological Anthropology. This seminar will examine the central problems and concepts of biological anthropology, laying the foundation for first-year graduate students in Biological Anthropology as well as providing an overview of the field for graduate students in other areas of anthropology.

ANGR 280F. Integrated Core Seminar. Two faculty members from different sub-fields (sociocultural, anthropological archaeology, and biological anthropology) address issues of mutual interest, illustrating areas of overlap between the aspects of anthropology. REQUIRED OF ALL FIRST-YEAR STUDENTS.

ANGR 281 A-B. Introductory Seminars. These seminars are held in the first two quarters of the first year of graduate study. Faculty members will present an account of their current research and interests. When appropriate a short preliminary reading list will be given for the particular lecture.

NOTE: Not all anthropology courses are offered every year. Please check the quarterly UCSD Schedule of Classes issued each Fall, Winter, and Spring, for specific courses.

The Melanesian Studies Resource Center and Archive

These facilities embody the substantial interests in the Pacific Basin that are represented on the UCSD campus and the special prominence of the UCSD Department of Anthropology in the study of cultures and societies of Oceania and especially of Melanesia. In cooperation with the UCSD libraries, the Melanesian Studies Resource Center and Archive has two major projects. First, there is an ongoing effort to sustain a library collection of monographs, dissertations, government documents, and journals on Melanesia that make UCSD the premier center for such materials in the United States. Second, there is an endeavor to collect the extremely valuable unpublished literature on Melanesia, to catalog such materials systematically, to produce topical bibliographies on these holdings, and to provide microfiche copies of archival papers to interested scholars and to the academic institutions of Melanesia. This innovative archival project is intended to be a model for establishing special collections on the traditional life of tribal peoples as dramatic social change overtakes them. In the near future, anthropological research on tribal peoples will take place largely in archives of this kind. These complementary collections will support a variety of research and teaching activities and are already attracting students of Melanesia to this campus.

The Melanesian Studies Resource Center and Archive are directed by members of the Department of Anthropology faculty, in collaboration with Geisel Library.

The Archaeological Research Laboratory

Archaeology laboratories were established at UCSD in 1995. The present facilities are geared to the study of lithics, ceramics, biological remains, and other small finds retrieved on faculty expeditions in the old and new worlds, including Belize, Israel, Jordan, and Peru. Multimedia research, AutoCAD, and other computer based studies are carried out in the lab. Undergraduate and graduate students are encouraged to participate in lab studies.

The Biological Anthropology Laboratory

The biological anthropology laboratories have twin missions in teaching research. They house collections of modern skeletal material and fossil hominid casts used for teaching both at the lab and in local outreach presentations. The primary research focus involves a large collection of histological sections and computerized images of living and postmortem human and non-human primate brains that were obtained through magnetic resonance scans. These are reconstructed in 3D using state-of-the-art equipment for comparative analysis and study of the evolution of the human brain. Undergraduate and graduate student involvement in the lab is welcomed.

The Anthropology of Modern Society Faculty Research Group

The Anthropology of Modern Society is a project of graduate training and research dedicated to the critical study of modernity and its

counterpoints. The group is concerned with the changing nature of membership in modern society. Its participants focus on issues of citizenship and democracy, social formations in tension with the nation-state, modern subjectivities, social and religious movements, governmental rationalities and public works, transnational markets and migrations, relations of local to global processes within the current realignments of regional, national, and transnational sovereignties, and the social life of cities as making manifest these kinds of concerns. Participants are committed to reorienting anthropological theory and ethnographic practice towards such contemporary social and political problems. Guiding this project is the group's interest in combining critical theory with a comparative and empirically grounded study of cases to constitute an anthropology of modernity.

Director: James Holston, Department of Anthropology, (858) 534-0111.

COURSES

Note: Not all courses are offered every year. Please check the quarterly Schedule of Classes for specific courses issued fall 2004, winter 2005, and spring 2005.

ANTHROPOLOGY: LOWER-DIVISION

ANLD 1. Introduction to Culture (4)
An introduction to the anthropological approach to understanding human behavior, with an examination of data from a selection of societies and cultures.

ANLD 2. Human Origins (4)
An introduction to human evolution from the perspective of physical anthropology, including evolutionary theory and the evolution of the primates, hominids, and modern humans. Emphasis is placed on evidence from fossil remains and behavioral studies of living primates. *Prerequisite for upper-division biological anthropology courses.*

ANLD 3. World Prehistory (4)
This course examines theories and methods used by archaeologists to investigate the origins of human culture. A variety of case studies from around the world are examined. *(Recommended for many upper-division archaeology courses.)*

ANLD 5: The Human Skeleton (4)
This course will introduce students to all the bones in the body with an emphasis on function by detailing areas of muscle attachment and bone shape.

ANLD 7: The Paradox of Social Life (4)
Humans being as selfish as they are, how can they live together? Beginning with the imagined "social contract," an examination of a variety of societies aims at showing the basis for the unlikely fact of human sociability.

ANLD 8. Freshman Honors Seminar (4)
Special seminar for a select group of outstanding first-year undergraduates. Course content will shift according to the interests of the instructor. *Prerequisites: freshman standing, ANLD 1 or Making of the Modern World 1, and by invitation.*

ANLD 13. The Mysterious Maya (4)
The archaeology, anthropology, and history of the ancient Maya civilization, which thrived in Mexico and Central America from 1000 B.C. until the Spanish conquest.

ANLD 23. Debating Multiculturalism: Race, Ethnicity, and Class in American Societies (4)
This course focuses on the debate about multiculturalism in American society. It examines the interaction of race, ethnicity, and class, historically and comparatively, and considers the problem of citizenship in relation to the growing polarization of multiple social identities.

ANLD 42. The Study of Primates in Nature (4)
Major primate field studies will be studied to illustrate common features of primate behavior and behavioral diversity. Topics will include communication, female hierarchies, protocultural behavior, social learning and tool use, play, cognition and self-awareness. *(Prerequisite for several upper-division biological anthropology courses.)*

ANLD 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges. Topics vary from quarter to quarter. Enrollment is limited to 15–20 students, with preference given to entering freshmen. *Prerequisites: none.*

ANLD 90. Undergraduate Seminar (1)
The seminar will focus on a variety of issues and special areas in the field of anthropology. The seminar will meet a total of eight hours during the quarter.

ANTHROPOLOGY: PROGRAM COURSES

ANPR 105. Social Anthropology (4)
A systematic analysis of social anthropology and of the concepts and constructs required for cross-cultural and comparative study of human societies. *Prerequisite: upper-division standing. (Required for all majors in anthropology.)*

ANPR 106. Cultural Anthropology (4)
A web of problematic meanings lies behind social relationships and institutional frameworks. This perspective plays an important role in the discussion of human affairs. Course considers the concept of culture in anthropology as a particularly forceful statement of such a perspective. *Prerequisite: upper-division standing. (Required for all majors in anthropology.)*

ANPR 107. Psychological Anthropology (4)
Interrelationships of aspects of individual personality and various aspects of sociocultural systems are considered. Relations of sociocultural contexts to motives, values, cognition, personal adjustment, stress and pathology, and qualities of personal experience are emphasized. *Prerequisite: upper-division standing. (Required for all majors in anthropology.)*

ANPR 187B. Intern Seminar in Ethnography and Archaeology (2)
Seminar complements students' research in the Academic Internship Program in ethnography and archaeology at the Museum of Man. Readings and discussions focus on problems in the analysis of material culture and classifications of artifacts and site excavations. Research paper required. *Prerequisites: ANPR 106 and simultaneous enrollment in Warren 197: Ethnography Archaeology-Museum of Man. (P/NP grades only.) Department approval required.*

ANPR 194S. Middle East Archaeological Field School (12)
The archaeological field school will take place in Jordan. It is an introduction to the design of research projects, the techniques of data collection, and the methods of excavation. Includes post-excavation lab work, study trips, and field journal. *Prerequisite: upper-division standing or consent of instructor.*

ANPR 195. Instructional Apprenticeship in Anthropology (4)
Course gives students experience in teaching of Anthropology at the lower-division level. Students, under direction of instructor, lead discussion sections, attend lectures, review course readings, and meet regularly to prepare course materials and evaluate examinations and papers. Course not counted toward minor or major. *Prerequisites: consent of instructor and department stamp, upper-division standing, grade of A in course to be taught or equivalent.*

ANPR 196A. Thesis Research (4)
Independent preparation of a senior thesis under the supervision of a faculty member. Completion of this course with a grade of at least B+ is a prerequisite to ANPR 196B. *Prerequisites: students will be admitted by invitation of the department. Department approval required.*

ANPR 196B. Thesis Research (4)
Independent preparation of a senior thesis under the supervision of a faculty member. Students begin two-quarter sequence in fall quarter. *Prerequisite: completion of ANPR 196A with grade of B+ or better.*

ANPR 197. Field Studies (4)
Individually arranged field studies giving practical experience outside the university. *Prerequisites: consent of instructor and department approval required. (P/NP grades only.)*

ANPR 198. Directed Group Study (2-4)
Directed group study on a topic or in a field not included in the regular departmental curriculum by special arrangement with a faculty member. *Prerequisites: consent of instructor and upper-division standing. (P/NP grades only.) Department approval required.*

ANPR 199. Independent Study (2-4)
Independent study and research under the direction of a member of the faculty. *Prerequisites: consent of instructor. (P/NP grades only.) Department approval required.*

ANTHROPOLOGY: BIOLOGICAL ANTHROPOLOGY

These courses can be counted for the biological anthropology minor or concentration.

ANBI 100: Special Topics in Biological Anthropology (4)
Course usually taught by visiting faculty in biological anthropology. Course will vary in title and content. When offered, the current description and title is found in the current Schedule of Classes and the anthropology department Web site. (Can be taken a total of four times as topics vary.)

ANBI 101: Special Topics in Bio-Medical Anthropology (4)
Course usually taught by visiting faculty in bio-medical anthropology. Course will vary in title and content. When offered, the current description and title is found in the current Schedule of Classes and the anthropology department Web site. (Can be taken a total of four times as topics vary.)

ANBI 110. Perspectives on Human Evolution (4)
Special seminar for students who wish to explore advanced topics in biological anthropology. Course focus will change year to year. May be repeated one time for credit. *Prerequisites: upper-division standing, ANLD 2, one other course in biological anthropology, and consent of instructor. Department approval required.*

ANBI 116: The Evolution of Primate Reproduction (4)
This course examines reproductive biology and its evolution among the Order Primates. Lectures cover the hormonal control of sexual and parental behavior, the evolution of mating systems, mating tactics, and sexual selection. Human reproduction is considered in the comparative perspective. *Prerequisites: upper-division standing, ANLD 2: Human Origins or comparable, or consent of instructor.*

ANBI 132. Conservation and the Human Predicament (4)
(Same as BIEB 176.) Interdisciplinary discussion of the human predicament, biodiversity crisis, and importance of biological conservation. Examines issues from biological, cultural, historical, economic, social, political, and ethical perspectives emphasizing new approaches and new techniques for safeguarding the future of humans and other biosphere inhabitants. *Prerequisite: upper-division standing, ANLD 2 or consent of instructor.*

ANBI 133. The Cultural Ecology of Health (4)
The goal of this course is to place health in a cultural and ecological framework, using an evolutionary (through time) and worldwide perspective. *Prerequisite: upper-division standing.*

ANBI 139. Introduction to the Primate Brain (4)
Examination of the basic organization of the human and non-human primate brain with an emphasis on structures involved in cognitive behaviors, emotions, and responses to social stimuli. Introduction to the field of comparative neuroanatomy as applied on selected anthropoid species. *Prerequisite: upper-division standing.*

ANBI 140. The Evolution of the Human Brain (4)
Introduction to the organization of the brain of humans and apes. Overview of the theoretical perspectives on the evolution of the primate cortex and limbic system. Exposure to contemporary techniques applied to the comparative study of the hominoid brain. *Prerequisite: upper-division standing.*

ANBI 141: The Evolution of Human Diet (4)
The genotype of our ancestors had no agriculture or animal domestication, or rudimentary technology. Our modern diet contributes to heart disease, cancers, and diabetes. This course will outline the Natural Diet of Primates and compare it with early human diets. *Prerequisite: upper-division standing.*

ANBI 142: The Primate Skeleton (4)
This course will compare long bones, head, and torso shape in tree-living and ground-living primates. The emphasis is on correlating locomotion with bone shapes. *Prerequisite: ANLD 42: The Study of Primates in Nature*

ANBI 144: Human Anatomy (4)
This course will introduce students to the internal structure of the human body through dissection tutorials on CD ROM. *Prerequisite: ANLD 5: The Human Skeleton or related course.*

ANBI 145: Bioarchaeology (4)
How are skeletal remains used to reconstruct human livelihoods throughout prehistory? The effects of growth, use, and pathology on morphology and the ways that skeletal remains are understood and interpreted by contemporary schools of thought. *Prerequisite: ANLD 5: The Human Skeleton, related course, or consent of instructor.*

ANBI 146: Stable Isotopes in Ecology (4)
The stable isotopes of carbon, nitrogen, oxygen, and hydrogen in animal tissues, plant tissues, and soils indicate aspects of diet and ecology. The course will introduce students to this approach for reconstructing paleo-diet, paleo-ecology, and paleo-climate.

ANBI 147: American Creationism (4)
Over the last several decades in North America an attack has been directed toward organic evolution as the explanation for the origin of life, especially as it relates to humans. The course will review the history of the movement and its implications.

ANBI 148. Primate Behavioral Ecology (4)
The course examines various behaviors (e.g., group formation, dispersal, parenting, coalition formation) from a comparative and evolutionary perspective. Observational methodology and analytical methods will also be discussed. Lab sections are required. *Prerequisites: upper-division standing. ANLD 42. Strongly recommended: BIEB 100, Biometry or comparable statistics course, and BIEB 164, Sociobiology.*

ANBI 159. Biological and Cultural Perspectives on Intelligence (4)
Attitudes toward other individuals (and species) are often shaped by their apparent "intelligence." This course discusses the significance of brain size/complexity, I.Q. tests, communication in marine mammals and apes, complex behavioral tactics, and the evolution of intelligence. *Prerequisites: upper-division standing, any one of the following: ANLD 2, 42, BILD 3, or consent of instructor.*

ANBI 161. Human Evolution (4)
Interpretation of fossil material–its morphology, variation, phylogenetic relationships, reconstruction of ecological settings and cultural patterns of early human life–demands the integration of many disciplines. Lectures cover major stages of human evolution, time ranges, distribution, archaeology, and distinctive morphology. *Prerequisite: ANLD 2 or consent of instructor.*

ANBI 173. Cognition in Animals and Humans (4)
(Previously titled: The issues of consciousness in animals and humans.) The last divide between humans and other animals is in the area of cognition. A comparative perspective to explore recent radical reinterpretations of the cognitive abilities of different primate species, including humans and their implications for the construction of evolutionary scenarios. *Prerequisite: upper-division standing, ANLD 2 or introductory course in evolution/animal behavior or consent of instructor.*

ANBI 175. Modeling the Behavior of our Early Ancestors (4)
Models of human evolution combine science and myth. This course examines methods used in reconstructions of human evolution. Models such as "man the hunter" and "woman the gatherer" are examined in light of underlying assumptions, and cultural ideals. *Prerequisite: upper-division standing, ANLD 2 or equivalent.*

ANBI 187A. Intern Seminar in Physical Anthropology (2)
Seminar complements students' research in the Academic Internship Program in physical anthropology at the Museum of Man. Readings and discussions focus on anatomy, pathology, and classification and x-ray analysis of skeletal remains. Research paper required. *Prerequisites: ANLD 2 and simultaneous enrollment in Warren 197: Physical Anthropology-Museum of Man. (P/NP grades only.) Department approval required.*

ANBI 187C. Intern Seminar in Ethology (2)
Seminar complements students' research in the Academic Internship Program at the San Diego Wild Animal Park and/or Zoo. Focus on problems of analysis in observational study of animal behavior and conservation in relation to ethological studies. Research paper required. *Prerequisites: ANLD 2 and one upper-division course in animal behavior, either in anthropology or biology. To qualify, must be last-quarter junior or senior with a 3.3 GPA. Simultaneous enrollment in Warren 197: Ethology Zoo. (P/NP grades only.) Department approval required.*

ANTHROPOLOGY: GENERAL

ANGN 100: Special Topics in Socio-Cultural Anthropology (4)
Course usually taught by visiting faculty in socio-cultural anthropology. Course will vary in title and content. When offered, the current description and title is found in the current Schedule of Classes and the anthropology department Web site. (Can be taken a total of four times as topics vary.)

ANGN 101: Special Topics in Anthropological Archaeology (4)
Course usually taught by visiting faculty in anthropological archaeology. Course will vary in title and content. When offered, the current description and title is found in the current Schedule of Classes and the anthropology department Web site. (Can be taken a total of four times as topics vary.)

ANGN 103: The Archaeology of Hunters-Gatherers (4)
Course examines current theoretical issues in the field of hunter-gatherer archaeology. Considerable emphasis is given to ethnographic and ethno-archaeological sources for understanding such topics as prehistoric hunter-gatherer adaptations, culture change, social organization, and inter-group interaction. *Prerequisite: ANLD 3 recommended.*

ANGN 104. Anthropology of Fantasy (4)
A theoretical examination of the sources and relationships of public and private fantasy, based on cross-cultural studies of dreams, myths, and ritual.

ANGN 108. Archaeology of the UCSD Campus (4)
Our campus houses some of the earliest human settlements in North America. This course reviews the archaeology, climate, and environment of the sites and outlines research aimed at understanding the lives of these early peoples. *Prerequisite: upper-division standing. Permission of instructors.*

ANGN 112. Language, Identity, and Community (4)
This course examines the use of language difference in negotiating identity in bilingual and bidialectal communities, and in structuring interethnic relations. It addresses social tensions around language variation and the social significance of language choices in several societies.

ANGN 114: Culture and Human Values (4)
The role of values in human society will be analyzed. Class work will include projects to develop ways of measuring values, as well as collecting and analyzing data.

ANGN 117. Anthropology of Education (4)
This course considers ways in which language and culture influence educational goals and processes. Cultural and sociolinguistic explanations of school successes and failures are examined.

ANGN 118. Cognitive Anthropology (4)
This course explores the relation between culture and cognition. Topics include cultural influences on belief systems, reasoning, perception, and motivation. The teaching style for the course is discussion and lecture, with simple classroom demonstrations. *Prerequisite: upper-division standing.*

ANGN 119. Archaeological Field and Lab Class (8)
The archaeological field and laboratory class will take place at San Elijo Lagoon, San Diego County. It is an introduction to the research design of interdisciplinary projects, the technique of data collections, the methods of excavation and post-excavation lab work. *Prerequisite: none.*

ANGN 120. Anthropology of Religion (4)
Explores religious life in various cultures. Topics addressed include the problem of religious meaning, psychocultural aspects of religious experience, religious conversion and revitalization, contrasts between traditional and world religions, religion and social change. *Prerequisite: upper-division standing.*

ANGN 121. Digital Archaeology: GIS Foundations (4)
Concerns modern archaeological data with Geographic Information Systems and performing spatial analysis. Lectures and lab exercises—learn spatio-temporal analysis techniques with interactive online computer mapping. Hands-on skills with ArcView, GIS, and several ArcView extensions. *Prerequisite: none.*

ANGN 122. Advanced Digital Archaeology Lab (4)
Expands GIS knowledge in group project meetings and discussions interspersed with lectures on more advanced topics integrating GIS and digital archaeology. Student GIS projects will be converted into interactive online presentations integrating maps, text documents, and archaeological imagery. *Prerequisite: permission of instructor.*

ANGN 125. Gender, Sexuality, and Society (4)
How are gender and sexuality shaped by cultural ideologies, social institutions, and social change? We explore their connections to such dimensions of society as kinship and family, the state, religion, and popular culture. We also examine alternative genders/sexualities cross-culturally. (**Note**: Students who have taken ANRG 117: Gender Across Cultures may not take this course for credit.)

ANGN 128. The Anthropology of Medicine (4)
(Same as Cont. Issues 136.) We examine the medical profession, the sick and the healers, and culture as communication in the medical event through aspects of medical practice and medical research of medicine as well as primitive and peasant systems. *Prerequisite: upper-division standing.*

ANGN 130. The Political Economy of Early Empires (4)
Archaeological and textual evidence for selected early empires of pre-Columbian America and the Ancient Near East will be used to illuminate cross-cultural similarities and differences in the ways complex pre-capitalistic societies acquired, produced, exchanged, and distributed wealth. *Prerequisite: upper-division standing. ANLD 3: World Prehistory is recommended.*

ANGN 135. Bodies and Boundaries: Symbols in Ritual and Everyday Life (4)
This course looks at symbols in sacred and mundane spheres of life. Topics include ritual and religious symbolism; the symbolism of gender, sex, and body; representations in popular culture; and the manipulation of symbols to establish and transgress boundaries.

ANGN 142. Pastoralism in Archaeological and Ethnographic Perspective (4)
Pastoralism is a distinctive form of human subsistence which evolved and is often intertwined with farming societies. These societies are examined using archaeological and ethnographic materials from the Near East and Africa. *Prerequisite: upper-division standing, ANLD 3 is recommended.*

ANGN 149. Language in Society (4)
After a brief introduction to linguistic concepts, the course covers the relations between culture and language, how languages reflect culture, how languages change, language and social life, language and political policy.

ANGN 151. Political Anthropology (4)
Humans are goal seekers, some with public goals. Course considers ways goals are pursued, which are desirable, and how this pursuit is carried out at the local level with attention to the parts played by legitimacy and coercion.

ANGN 154. Patterns of Conquest and Colonization (4)
Centuries of European worldwide expansion, resting largely on military superiority, had profound effects on indigenous ecosystems, states, and peoples. The rise, decline, and continuing effects of this are traced in subsistence, demography, economic relationships, and colonial and post-colonial political systems.

ANGN 157. The Analysis of Systematic Data (4)
This course will examine the techniques and logic of statistical methods used by anthropologists, including correlation and various measures of association, ANOVA, principal components, cluster analysis, and correspondence analysis. Simple graphic techniques will also be considered. *Prerequisite: basic lower-division course in statistics.*

ANGN 160. Nature, Culture, and Environmentalism (4)
Course examines theories concerning the relation of nature and culture. Particular attention is paid to explanations of differing ways cultures conceptualize nature. Along with examples from non-western societies, the course examines the western environmental ideas embedded in contemporary environmentalism.

ANGN 163. Evolution of Technology (4)
(Formerly titled Technological Revolutions and Evolution) While not really existing outside the social order, technological systems are basic to civilization. Across six millennia, this course examines their growth—complex, largely indeterminate, and marked by irregular spurts of acceleration. While comparative, it concentrates on England and America.

ANGN 167. Rituals and Celebrations (4)
Explores the nature and significance of ritual. The course will examine religious rituals, civic festivals, and popular celebrations. Topics include ritual symbolism, social and psychological aspects of ritual, life cycle rites, urban festivals, ritual theory.

ANGN 170. Research Design in Anthropological Archaeology (4)
This course trains students to design, implement, and conduct research in anthropological archaeology. Writing and presenting work in progress will take place in a seminar like forum. *Prerequisite: junior/senior standing.*

ANGN 172. Life-History Seminar and Practicum (4)
Examines life-history research as a method for understanding the cultural and psychological experience of people. Combines reading of life-histories with training in life-history research methods. Students develop a life-history project, conduct interviews, and analyze data. *Prerequisites: upper-division. ANPR107 or concurrent enrollment in ANPR 107. Consent of instructor.*

ANGN 173. General Theory (4)
This course will consider theories in anthropology and related fields which treat culture, society, and personality as causal factors in explaining human action. Emphasis will be on the propositional structures of such theories rather than the comparison of particular theorists.

ANGN 181. Anthropological Archaeology (4)
As part of the broad discipline of anthropology, archaeology provides the long chronological record needed for investigating human and social evolution. The theories and methods used in this field are examined. (Archaeology core sequence course.) *Prerequisite: ANLD 3 is recommended.*

ANGN 182. Origins of Agriculture and Sedentism (4)
Varying theoretical models and available archaeological evidence are examined to illuminate the socio-evolutionary transition from nomadic hunter-gathering groups to fully sedentary agricultural societies in the Old and New World. (Archaeology core sequence course.) *Prerequisite: ANLD 3 is recommended.*

ANGN 183. Chiefdoms, States, and the Emergence of Civilizations (4)
The course focuses on theoretical models for the evolution of complex societies and on archaeological evidence for the development of various pre- and protohistoric states in selected areas of the Old and New Worlds. (Archaeology core sequence course.) *Prerequisite: ANLD 3 is recommended.*

ANGN 184. Archaeology, Anthropology, and the Bible (4)
The relationship between archaeological data, historical research, the Hebrew Bible, and anthropological theory are explored along with new methods and current debates in Levantine archaeology. *Prerequisite: upper-division standing.*

ANGN 189. The Anthropology of the End of the World: Millenarian Movements Across Cultures (4)
Course focuses on historical and contemporary millenarian movements in the western and non-western world. Topics addressed include origins, role of prophets, conceptions of time, relation to politics and influence on social change. Examples include Christian and non-Christian movements.

ANTHROPOLOGY: REGIONAL

ANRG 104. Traditional African Societies and Cultures (4)
Attention to three main sociopolitical types of societies: egalitarian hunting and gathering groups, loosely organized agricultural and herding groups, and centrally organized kingdoms. Representatives are considered, and societies from all parts of sub-Saharan Africa studied intensively. *Prerequisite: upper-division standing.*

ANRG 108. Hinduism (4)
An anthropological introduction to Hinduism, focusing on basic religious concepts and practices. Topics include myth, ritual, and symbolism; forms of worship; gods and goddesses; the roles of priest and renouncer; pilgramages and festivals; the life cycle; popular Hinduism, Tantrism. *Prerequisite: upper-division standing.*

ANRG 114. Urban Cultures in Latin America (4)
This course examines four interrelated and historically structured themes of urban culture in Latin America: the role of cities in organizing national space and society; immigration and race; modernism; and popular culture as new religion, music, and film.

ANRG 114-XL. Foreign Language Discussion—Urban Cultures in Latin America (1)
Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered anthropology language foreign area course. This section is taught by the course instructor, has no final exam, and does not affect the grade in the course, ANRG 114. Urban Cultures in Latin America. *Prerequisite: Concurrent enrollment in ANRG 114.*

ANGN 115: The Foundation for Social Complexity in the Near East (4)
This course critically examines the theoretical models and archaeological evidence of nascent social complexity and inequality in the Near East. The time period under consideration encompasses the shift from generalized hunting and gathering through complex hunter-gatherers to large-scale agricultural communities.

ANRG 116. The Archaeology of Society in Syro-Palestine (4)
Syro-Palestine, the area which includes Israel and adjacent regions, provides a microcosm of social evolution in the eastern Mediterranean. Course examines the archaeological evidence for social change from the emergence of complex societies (ca. 10,000 B.C.E.) to the Israelite kingdoms (ca. 586 B.C.E.). *Prerequisite: upper-division standing.*

ANRG 121. The Archaeology of South America (4)
This course will examine archaeological evidence for the development of societies in the South American continent. From the initial arrival of populations through to the Inca period and the arrival of the Spaniards. *Prerequisite: upper-division standing.*

ANRG 122. Peoples and Cultures of the Middle East (4)
This course explores the living structures, family and gender relations, economy, and religion in the Middle East. We will especially focus on how people come to terms with recent transformations such as nationalism, literacy, globalism, and Islamism. *Prerequisite: upper-division standing.*

ANRG 124. Paths to European Hegemony (4)
Diverse, mostly traumatic cultural encounters accompanied European expansion across most of the world from the later Middle Ages onward. Historically and geographically wide-ranging, this course examines how the asymmetric patterns of interaction then imposed are only slowly being replaced. *Prerequisite: upper-division standing.*

ANRG 132. Modernity in Brazil (4)
Construction of Brazilian modernity through four perspectives: Liberalism among slave-owning elites compared with democratic citizenship among contemporary poor, millenarian religions; construction of the urban periphery by residents; and a modernist theory (antropofagia) about authentic versus imported culture. *Prerequisite: upper-division standing.*

ANRG 143. Indigenous Peoples of Latin America (4)
Indigenous peoples in the Americas have long been dominated and exploited. They have also resisted and reworked the powerful forces affecting them. This course will trace this centuries-long contestation, focusing on ways anthropological representations have affected those struggles. *Prerequisite: upper-division standing.*

ANRG 150. The Rise and Fall of Ancient Israel (4)
(Previously titled: The Archaeology of Israel in the Iron Age.) The emergence and consolidation of the state in ancient Israel is explored by using archaeological data, Biblical texts, and anthropological theories. The social and economic processes responsible for the rise and collapse of ancient Israel are investigated. *Prerequisite: upper-division standing, ANLD 3 is recommended.*

ANRG 170. Traditional Chinese Society (4)
Course examines major institutions and culture patterns of traditional China, especially as studied through ethnographic sources. Topics include familism, religion, agriculture, social mobility, and personality. *Prerequisite: upper-division standing.*

ANRG 173. Chinese Popular Religion (4)
The religious world of ordinary precommunist times, with some reference to major Chinese religious traditions. *Prerequisite: upper-division standing. Background in pre-modern Chinese history is recommended.*

ANRG 182. Ethnography of Island Southeast Asia (4)
This is an introduction to the diverse cultures of island and peninsular Southeast Asia, including those of Indonesia, the Philippines, and Malaysia. We look at ritual, politics, gender, popular culture, and social change in agrarian and urban societies. *Prerequisite: lower-division anthropology or consent of instructor.*

ANTHROPOLOGY: GRADUATE

ANGR 200. Culture and Social Structure (4)
Culture and social structure are central concepts for understanding behavior but their relationship and joint use present problems which will be examined with the aim of increasing their explanatory power. *Prerequisite: graduate standing.*

ANGR 201. Special Topics in Anthropological Archaeology (4)
Course usually taught by visiting faculty in anthropological archaeology. Course will vary in title and content. When offered, the description and title is found on the current Schedule of Classes on StudentLink, and the anthropology department Web site. (Can be taken a total of four times as topics vary.)

ANGR 219: Seminar in Political Anthropology (4)
The focus here is "politics," broadly constructed, in various societies. Analysis is from the perspective of the resourses deployed by all involved, including but not limited to power, with emphasis on the role of culture and social structure. *Prerequisites: graduate standing*

ANGR 223. Anthropological Interviewing (4)
The course teaches techniques of long-term, intensive interviewing in fieldwork settings with an emphasis on psychodynamic inference and its usefulness in different cultural settings. *Prerequisite: graduate standing in anthropology.*

ANGR 224. Advanced Topics in the Anthropology of Gender (4)
A critical analysis of ethnographic and theoretical texts focusing on the sociocultural study of gender. We will also draw on studies of gender and feminist theory from other disciplines (e.g., history, philosophy) to illuminate issues relevant to anthropology. *Prerequisite: graduate standing in anthropology or permission of instructor.*

ANGR 226. Ethnography of Christianity (4)
Directed to graduate students planning ethnographic work in Christian societies, this course explores variations in the interpretation and expression of Christianity using historical and ethnographic sources. *Prerequisite: graduate standing or consent of instructor.*

ANGR 230. Department Colloquium (1)
A forum to present work by faculty, students, and guests. Course will be offered quarterly. *Prerequisite: graduate standing in anthropology. (S/U grades only.)*

ANGR 231. The Social and Cultural Works of Sigmund Freud (4)
In this seminar we shall examine Freud's works on culture, gender, morality, religion, sex, society, and the arts, and assess their contemporary anthropological relevance. *Prerequisite: graduate standing.*

ANGR 234: Dynamics of Culture (4)
Examination of the actual operation of culture with attention to the importance of cultural Products and social structures. Course goal is to develop skill in understanding the Influence, direct and indirect, of culture and behavior. *Prerequisites: Graduate standing*

ANGR 235. The Anthropology of Modernity (4)
The seminar considers the theorizing of modern society as an anthropological project. Topics include issues of modernity current theory and method, their place in the foundations of anthropology, and prospects for

future work. Lectures and readings change yearly. *Prerequisite: graduate standing.*

ANGR 237: Enduring Issues in Anthropological Theory (4)
The seminar focuses on a number of fundamental issues that have long been at the core of inquiry and explanation in the discipline including the place of the individual in society, the role of values, the effects of group structure, and the ways in which cultures change. *Prerequisite: none.*

ANGR 238. Citizenship and the Nation State (4)
This course examines various conceptions of citizenship, nation, and state and considers their historical development as fundamental to the organization of most contemporary societies. It covers a range of theoretical readings, recent debates, and case studies. *Prerequisite: graduate standing.*

ANGR 239. Person-Centered Ethnography (4)
Person-centered ethnography takes the person as a unit of analysis and description, exploring personal experience in sociocultural context. This course examines selected works in this tradition and assesses the descriptive and theoretical contributions these studies make. *Prerequisite: graduate standing.*

ANGR 251. Ethnographies of Modern Society (4)
This seminar explores the experience and representation of modernity through ethnography. Readings will highlight such issues as: the social dynamics of the city; postcoloniality; globalization and transnationalism; the politics of culture; contemporary religious movements; and gender and modernity. *Prerequisite: graduate standing or permission of the instructor.*

ANGR 253. History of Anthropology (4)
A synoptic treatment of the intellectual currents affecting anthropology during its premodern period, between approximately 1880 and 1940. Coverage will include developments in American, British, and Continental traditions of the discipline. *Prerequisite: graduate standing.*

ANGR 256. Seminar on Brain Evolution (4)
We will review the neural basis of cognition in humans and other primates. Neurobiological findings will be related to contributions from various sub-fields of anthropology. Brain/mind associations will be explored in the context of hominid evolution. *Prerequisite: graduate student in anthropology or consent of instructor.*

ANGR 259. Europeans and Others (4)
Interaction between peoples and powers of Europe and those of Asia, Africa, and the Americas until the end of the colonial epoch. Varying character of the encounter, modes of maintenance of European hegemony, and representations and rationalizations of the process.

ANGR 260. Psychodynamic Anthropology (1)
The focus of the seminar will be on the relation between psychodynamic models and culture and society. Readings and discussion. *Prerequisite: graduate standing. (S/U grades only.)*

ANGR 263. The Anthropology of Language and Discourse (4)
This course emphasizes the importance of linguistic and discursive processes in constituting social relations and systems. We examine different approaches to analyzing this relationship of social and linguistic structures. *Prerequisite: graduate standing.*

ANGR 264. Culture, Power, and the State (4)
This seminar examines distinct theoretical approaches to the contested concepts of culture, power, and the state. We will read fundamental theoretical texts and current ethnographies to examine how cultural beliefs, nationalist ideologies, and ethnic relations shape subjectivities and identities. *Prerequisite: graduate standing.*

ANGR 265. Cultures of Late Capitalism (4)
Radical transformations shifted the boundaries between what is considered political and apolitical, public and private, and legitimate at the turn of the twenty-first century. This class studies how these developments shape and are shaped by local political structures. *Prerequisite: graduate standing.*

ANGR 266: Classics in "Culture and Personality" (4)
This seminar will examine the classic studies of "Culture and Personality," such as Cora DuBois' study of Alor and Gregory Bateson's and Margaret Mead's study of Bali, which laid the foundation for the psychodynamic approach to psychological anthropology. *Prerequisite: graduate standing.*

ANGR 267. The Anthropology of Ethics (4)
This course examines ethical and moral ideas and their relation to other aspects of culture. It also considers how attention to the ethical dogma can provide a foundation for rethinking social scientific theories of culture and practice. *Prerequisite: graduate standing.*

ANGR 268: Anthropology of Cities (4)
Although cities are fundamental sites of emergent social relations and cultural forms, the anthropological study of modern urban society remains problematic. This seminar aims to develop an anthropological understanding of cities, focusing on recent ethnographies, methodological problems, and theoretical debates. *Prerequisite: graduate standing.*

ANGR 269. Current Readings on Latin America (4)
This is a graduate reading seminar focusing on new anthropological works about Latin America. We will cover a wide range of critical current issues, including poverty, the state, gender, race/ethnicity, indigenous politics, memory, and violence. *Prerequisite: graduate standing.*

ANGR 270A-B-C. Psychiatry and Anthropology (0-4)
Introduction to interviewing and diagnostic techniques in psychiatry and their application to anthropological research. Content will vary from quarter to quarter. Students must begin the program in the fall quarter. (Fall and winter, S/U grades only. Spring quarter S/U optional.) *Prerequisites: graduate standing in anthropology and consent of instructor.*

ANGR 273: General Theory (4)
This seminar will be concerned with theories that attempt to construct an integrated account of personality, culture, and society, and how such general theories can be applied to the modern world. Classic and current theorists of modernization will be examined.

ANGR 274. Debates in Anthropology (4)
This seminar will review a series of current or recent significant debates in anthropology. The debates will be examined in the light of their substantive, theoretical, and epistemological implications, with some attention to the rhetorical elements of the arguments themselves. *Prerequisite: graduate student in anthropology.*

ANGR 278. Evolutionary Perspective on Cognition (4)
This seminar examines key issues in (human and nonhuman) primate cognition using perspectives from primate behavior, cognitive ethology, primate and human evolution, and human cognitive science. Topics include tool use, imitation, language, culture, tertiary relations, theory of mind, and models of mind. *Prerequisite: open to graduate students in anthropology and other departments and to advanced undergraduates with instructor's approval.*

ANGR 279. Special Topics in Language and Society (4)
Selected topics in the anthropology of language, such as linguistic ideology, language and identity, multilingualism, discourse analysis. Topics will vary from year to year, and the course may be repeated with instructor's permission. *Prerequisite: graduate standing.*

ANGR 280A: Core Seminar in Social Anthropology (4)
First-year core seminar focuses on individual action and social institutions. *Prerequisite: first-year graduate student in anthropology.*

ANGR 280B: Core Seminar in Cultural Anthropology (4)
First-year core seminar focuses on personal consciousness and cultural experience. *Prerequisite: first-year graduate student in anthropology.*

ANGR 280C: Core Seminar in Psychological Anthropology (4)
First-year core seminar focuses on motives, values, cognition, and qualities of personal experience. *Prerequisite: first-year graduate student in anthropology.*

ANGR 280D. Core Seminar in Anthropological Archaeology (4)
(Formerly numbered ANGR 285.) Integral part of the training for graduate students focusing on Anthropological Archaeology. It is one of a set of core anthropology courses available to graduate students; required of first-year anthropological archaeology students but open for students in other sub-fields. *Prerequisite: anthropology graduate students.*

ANGR 280E. Core Seminar in Biological Anthropology (4)
(Formerly numbered ANGR 284.) This seminar will examine the central problems and concepts of biological anthropology, laying the foundation for first-year graduate students in Biological Anthropology as well as providing an overview of the field for graduate students in other areas of anthropology. *Prerequisite: graduate standing in anthropology.*

ANGR 280F. Integrated Core Seminar (4)
(Formerly numbered ANGR 282.) Two faculty members from different sub fields (sociocultural, anthropological archaeology, and biological anthropology) address issues of mutual interest, illustrating areas of overlap between the aspects of anthropology. *Prerequisite: required core seminar for first year anthropology graduate students.*

ANGR 281A-B. Introductory Seminar (1)
These seminars are held in the first two quarters of the first year of graduate study. Faculty members will present an account of their current research and interests. When appropriate a short preliminary reading list will be given for the particular lecture. *Prerequisite: first-year graduate standing in anthropology.*

ANGR 283A. Fieldwork Seminar (4)
A seminar given to acquaint students with the techniques and problems of fieldwork. Students carry out ethnographic field research in a local community group under faculty supervision. *Prerequisite: anthropology graduate students or consent of instructor.*

ANGR 286. Topics in Anthropological Archaelogy (4)
Seminar examines the central problems and concepts of archaeological anthropology, laying the foundation for first-year graduate students. Also provides an overview of the field in other areas of archaeology. Entire anthropological archaeology faculty and graduate students participate. *Prerequisite: graduate standing in anthropology.*

ANGR 287. Human Biology and Social Policy (4)
Several important issues relate to social interpretations of human biological variation (e.g., race, sex, sexual orientation), putative universals (e.g., violence), and origins (creation or evolution). Seminar explores the thesis that biosocially trained anthropologists can contribute to educating people about these debates. *Prerequisite: graduate standing in anthropology.*

ANGR 293. Primate Socioecology (4)
Course examines theories for the causes of sociality in primates. Implications for our understanding of human evolution are considered. *Prerequisite: graduate standing or permission of instructor.*

ANGR 295. Master's Thesis Preparation (1-12)
The student will work on the master's thesis under the direction of the departmental committee chair. The course will be taken in the student's second year. *Prerequisites: graduate student in anthropology and permission of master's thesis chair.* (S/U grades only.)

ANGR 296A. Fieldwork Proposal Preparation (4)
The student will work in cooperation with his or her departmental committee to develop a research proposal for the doctoral research project. *Prerequisites: graduate standing in anthropology and permission of departmental committee chair.* (S/U grades only.)

ANGR 296B. Fieldwork Proposal Preparation (4)
The student will work in cooperation with his or her departmental committee to develop a research proposal for the doctoral research project. *Prerequisites: advanced graduate standing in anthropology and permission of departmental committee chair.* (S/U grades only.)

ANGR 297. Research Practicum (1-4)
Supervised advanced research studies with individual topics to be selected according to the student's special interests. *Prerequisite: for anthropology graduate students who have returned from their field research.* (S/U grades permitted.)

ANGR 298. Independent Study (1-4)
Supervised study of individually selected anthropological topics under the direction of a member of the faculty. *Prerequisite: graduate standing.* (S/U grades only.)

ANGR 299. Dissertation Research (1-12)
Prerequisite: Ph.D. candidacy in anthropology. (S/U grades only.)

ANGR 500. Apprentice Teaching (4)
Anthropology graduate students participate in the undergraduate teaching program during one quarter anytime in the first four years of residence. Teaching may be in the anthropology department or other departments or programs on campus. Equivalent to duties expected of a 50 percent T.A. Enrollment in four units documents the Ph.D. requirement. (S/U grades only.) *Prerequisite: graduate student in anthropology.*

ANGR 501. T.A.ing in Sixth College/C.A.T. (4 or 6)
Consideration and development of pedagogical methods appropriate to undergraduate teaching in the interdisciplinary Sixth College Core Sequence, Culture, Art, and Technology under supervision of Core Program faculty, with assistance of the Core Program director, associate director for the Writing Program and the associate director of the Thematic program. (S/U grades only.) *Prerequisite: Anthropology graduate student teaching for the C.A.T./Sixth College Writing Program.*

The Graduate Program

Applied Ocean Science (AOS) is an interdepartmental Ph.D. program with a focus on the interface between ocean exploration and technology. It is administered by an interdepartmental group composed of members of the faculties of cooperating departments: the Graduate Department of the Scripps Institution of Oceanography (SIO), the Department of Mechanical and Aerospace Engineering (MAE), the Department of Structural Engineering (SE), and the Department of Electrical and Computer Engineering (ECE).

This interdepartmental curriculum combines the resources of these departments to produce oceanographers who are knowledgeable about modern engineering and instrumentation, as well as marine oriented engineering scientists who are familiar with the oceans. Since physical, chemical, geological, and biological aspects of the oceans and all forms of engineering may be involved, the curriculum provides maximum flexibility in meeting the needs of each individual student.

Candidates for admission should apply directly to one of the departments participating in the Applied Ocean Science program, listing Applied Ocean Science as an area of specialization. The choice of department should be based on the individual student's planned area of major emphasis. Applicants will be expected to meet the admission requirements of the department to which they have applied.

The program is primarily directed toward the Ph.D. degree. However, both the candidate of

philosophy and master of science degree (either Plan I, thesis, or Plan II, comprehensive examination) also will be offered under special circumstances. Students applying for a terminal master's program should be aware of any special requirements for the department to which they apply.

The degrees completed under this program in the Department of SIO will carry the title "Oceanography." Those degrees completed in the other cooperating departments will have the parenthetical title "(Applied Ocean Science)" appended to the appropriate authorized title.

COURSES

All students enrolled in the program are required to take or demonstrate proficiency in the following core courses or their equivalent:

SIO 210 (Physical Oceanography)

SIO 240 (Marine Geology)

SIO 260 (Marine Chemistry)

SIO 280 (Biological Oceanography)

MAE 294A-B-C (Methods in Applied Mechanics) or

Math. 210A-B-C (Mathematical Methods in Physics and Engineering) or

SIO 203A-B-C (Methods of Applied Analysis)

The students are expected to enroll in the Applied Ocean Science Seminar (SIO 208) throughout their period of residency. This seminar will make use of outside speakers, faculty members, and students in presenting various topics on applied ocean science and related fields. It provides a central forum in which all AOS students can participate. In addition to these basic requirements, the student will be subject to whatever additional requirements are prescribed by his or her department.

Course work occupies much of the first one and one-half to two years of graduate study. During this period there are numerous opportunities for students to investigate the research programs of the various research groups on the campus, and cultivate association with professors and research groups which can provide support and guidance for thesis research in their selected field of specialization. In consultation with an adviser, students will plan a curricular path of courses which will adequately prepare them in their field of specialization. The courses may be selected from the entire catalog of courses available on the UCSD campus or where appropriate from other UC campuses and other universities.

Audiology

Joint Doctoral Program between San Diego State University and the University of California, San Diego

Erik Viire, M.D., Ph.D.

Professional Doctorate in Audiology (Au.D.)

A professional doctorate in audiology (Au.D.) is offered jointly by San Diego State University (SDSU) and the University of California, San Diego (UCSD). The Au.D. program is a four-year graduate degree program designed for individuals who intend to specialize in clinical practice and to meet professional standards requiring a clinical doctorate as the entry-level degree for a certified audiologist. Graduates of this program will have the knowledge base, research exposure, and advanced clinical skills to enter the workforce in any setting, and will be prepared to function as independent audiology professionals in the expanding health care arena. The program encompasses academic, clinic, and research experiences in audiology and otology, through the combined resources from the Department of Communicative Disorders at SDSU and the Department of Surgery (Otolaryngology) in the School of Medicine at UCSD. More information about the program and admission can be found on the Web site, http://chhs.sdsu.edu/slhs/audmain.php.

Faculty members of the cooperating institutions teach courses, provide clinic instruction and research experiences, and are available as members of joint doctoral committees and advisers for student doctoral projects.

Admissions

Students will apply to the Au.D. Joint Doctoral Program through SDSU. It is expected that students will come into this program from a variety of different science backgrounds, including communicative disorders, biological and physical sciences, engineering, psychology, nursing, or a pre-med curriculum. Applicants for admission to the Au.D. program must meet the general requirements for admission to both universities with classified graduate standing as outlined in the respective catalogs. Applicants must also meet the special requirements of this program. These include (a) overall grade-point average of 3.20 or better in undergraduate courses and in any graduate courses completed; (b) submission of scores on the GRE with satisfactory performance on both quantitative and verbal portions of the examination; (c) prerequisite completion of at least one course in statistics, three courses in biological/physical sciences, two courses in behavioral/social sciences, and one course in American Sign Language. Deficiencies in these areas may be completed after admission to the program if approved by the admissions committee.

Applicants must submit transcripts of all postsecondary coursework, three letters of recommendation from former or current professors, supervisors, or other appropriate persons able to judge their academic potential, and an applicant essay (statement of purpose) indicating their interests and strengths relative to their career objectives. Details of these requirements will be made available with the application form. Assuming that students meet the requirements for admission outlined above, each student admitted to the program will have a program advisor evaluate their preparation in view of their needs and career goals, as well as professional certification requirements.

Applicant files are reviewed as a group by an admissions committee composed of Au.D. program faculty from each campus. Other Au.D. program faculty may review files and make recommendations to the admissions committee. Given the limited number of spaces available (ten new admissions each year are anticipated, subject to available facilities), the admissions committee will select the best-qualified applicants to fill the available spaces. No minimum set of qualifications will guarantee an applicant admission to the program. The admissions committee will make recommendations for admission to the graduate deans from each campus.

Students seeking admission to the Au.D. program should consult the program's Web site or contact the Au.D. program directors for more information, online applications, and application instructions. A complete application requires the following:

appropriate application form

applicant essay (detail provided in application packet)

transcripts of academic work complete.

results of Graduate Record Examination

three letters of recommendation

Students will be admitted to the Au.D. program only in the fall semester (first year is at SDSU). Complete applications must be received by January 20 to be considered for the program beginning in the following fall semester.

Post Master's Degree Admissions: Students admitted to the Au.D. program with a master's degree in audiology will be expected to complete the four-year Au.D. curriculum. However, some students may have had a master's preparation in audiology in which some of the course work was similar to some of the foundation courses in the Au.D. program. Upon entering the program, each individual will be assessed to determine competencies/knowledge in material that would put them on par with expectations for the Au.D. program. For some of the foundation core courses offered the first year at SDSU, e.g., Audiology 705, 710, 725, students may be given credit for the courses or be required to substitute a Doctoral Special Study (Audiology 798) course for one or more of these courses to ensure competencies or remediate deficiencies if approved by the program faculty. Credit for some of the first year clinic units may also be approved based on work experience; however, a full-complement of expected clinical skills must be demonstrated.

REQUIREMENTS FOR THE AU.D. DEGREE

Upon admission to the program, each student will be assigned a faculty adviser. The faculty adviser will help the student select a program of study to meet all program requirements. The Au.D. program is a four-year program, including summer semesters (summer semester between year two and year three may be optional if the requirements are satisfied in other ways). An exact unit minimum is not specified due to the mixing of semester units (SDSU) and quarter units (UCSD) and differences in clinical hours at different settings; however, the program is approximately 134 semester-equivalent course units. All students in the Au.D. program will fulfill the following requirements. Any alternative method of fulfilling these requirements requires advanced written permission from the program directors.

Residency

After formal admission to the Au.D. program, the student must complete a minimum of course hours equivalent to one year's full-time enrollment at each campus. The definition of residence must be in accord with the regulations of San Diego State University and the University of California, San Diego. The program is designed to be shared between the two campuses. The first year is entirely at SDSU, the second year is entirely at UCSD, and the third year will have options from both campuses. The fourth year of the program will be a full-time clinical externship at a program-approved clinic agency or site. Both campuses will share equally in the academic, clinic, and research components of the program.

Courses

The program for each student will consist of prescribed set of courses, with the first year of courses entirely at SDSU and the second year of courses entirely at UCSD. The student's faculty advisor will approve any changes to the standard curriculum.

Clinic

Each student will progress through a variety of clinical experiences involving patient assessment and management throughout their program of study. Clinic experiences will require concurrent enrollment in clinic courses appropriate for the campus in which they are doing the clinical work. These supervised clinical experiences are completed in the SDSU Audiology Clinic, UCSD Otology Clinics, and in community field sites. Clinic courses may be repeated as needed and require adviser approval prior to enrollment. Prior to the fourth year externship, each student will obtain approximately 500 hours of clinic experience. A minimum of 2,000 clinical hours is required by the end of the program.

- *Clerkship in Otology.* All students will have at least one quarter of a clinical rotation with otology staff associated with UCSD. Students will accompany one of the otology faculty during their clinics and receive training in one or more of the following areas—clinical otology, pre-and post-operative assessment of patients, pharmacology related to otology, design and implementation of clinical trials with balance disorders, and pediatric otology.
- *Clinical Staffings.* In addition, all students will be required to regularly participate in formal clinical case study/staffing experiences. At SDSU, these clinical staffings include student and faculty presentations and discussions of interesting cases seen in their clinics. At UCSD, these staffings include, the Chairman's Conference, where Au.D. students/residents and medical staff discuss otological problem cases and disorders and the Neurotology Conference, where UCSD and community physicians, and students/residents discuss cases dealing with neurological diseases and vestibular disorders.
- *Fourth-Year Externship.* The fourth-year externship is a full-time clinical experience in an approved agency/site. These externships may require a competitive interview process by the agency. Externship sites may be in other parts of the country. All students in their fourth-year externship must also enroll in the online clinical seminar at SDSU each semester.

Research Practicum

Each student will spend at least two semesters or quarters participating in research being done by program faculty. Students are encouraged to spend time in two different laboratories (one on each campus) with different methodologies. Students will not be conducting independent research, but will actively participate in data collection and analysis at the discretion of the lab director. Students must enroll in the research practicum course for the appropriate campus.

Examinations

All students in the program will be evaluated at the following levels:

- *First Year.* Students must have achieved a 3.0 grade-point average on all core and elective courses during the first year, and have appropriate clinical skills as determined by the student's clinic supervisors. The student's ability to integrate the academic material and clinic procedures appropriate for the end of the first year will be assessed through a first year qualifying exam. This examination will be a written examination to be taken at the end of the spring semester. The first year qualifying exam may be repeated once following additional directed study by the student's adviser. Students must pass the first year evaluation in order to enroll in second year courses.
- *Second Year.* Students must have achieved a cumulative grade-point average of 3.0 on all core and elective courses, and have appropriate clinical skills as determined by the student's clinic supervisors. The student's ability to integrate the academic and clinic procedures appropriate for the end of the second year will be assessed through a second year qualifying examination. This examination will be a written examination to be taken at the end of the spring semester. The second year qualifying examination may be repeated once following additional directed study by the student's adviser. Students must pass the second year evaluation in order to enroll in third year courses.
- *Comprehensive Examination.* At the end of the third year, and after advancement to candidacy (see below), the student will take a comprehensive examination, which has an integrative written component and a practical component involving clinical procedures. The comprehensive examination must be passed before a student can be registered for the externship.

Advancement to Candidacy

Candidates will be recommended for advancement to candidacy after successfully completing all course, laboratory rotation, and clinic requirements for Year 1 and Year 2 (with a minimum grade-point average of 3.0), satisfactory performance on the first and second year evaluations, and approval of the doctoral project proposal. Students cannot enroll in the doctoral project course, take the comprehensive examination, or register for their externship until advanced to candidacy. The program's executive committee recommends students eligible for advancement to candidacy to the graduate deans of both institutions

Doctoral Project

Each student will complete an innovative doctoral project. The doctoral project can take the form of a number of different options, e.g., a research-based investigation, evidence-based position paper, critical literature review with applications to clinical problem solving, grant proposal, development of a clinical protocol based on published research findings, or other projects proposed by the student that are accepted by the committee. The project should be designed to allow an opportunity to demonstrate critical thinking on clinical issues. Each student will select a doctoral project committee comprised of two Au.D. program faculty (one from each campus) and a faculty member external to the program. The chair of the committee can be from either campus. The executive committee will approve each student's doctoral project committee. All doctoral projects will be written in a format approved by the student's doctoral project committee. The student's final written document will be approved by the student's doctoral project committee. Each student will enroll in the appropriate doctoral project course depending on the campus in which their committee chair resides.

The Doctor of Audiology (Au.D.) degree will be awarded jointly by the Regents of the University of California and the Trustees of The California State University in the names of both cooperating institutions.

Funding for graduate students cannot be guaranteed, although every effort will be made to provide some financial support for as many students as possible, through graduate/teaching assistantships, research grants, clinical traineeships, and/or scholarships. Financial support will be awarded consistent with the policies of the two universities. Tuition and fees will be charged in accordance with the extant policies at the campus in which the student is matriculated in a given year.

COURSES

AUD 236. Neuro-otology Preceptorship (2)
Students observe in UCSD Otology clinics, learning the procedures for taking histories and performing clinical examinations, as well as providing treatment and patient education. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 255. Anatomy and Physiology of the Auditory and Vestibular Systems (4)
This course describes the detailed anatomy of the auditory and vestibular systems, from the external ear to the central pathways associated with each system. This includes the ultra-structure, histology and neuronal connections of the systems. In addition, they physiological responses that underlie the actions of each system are described, from the cellular to the systems levels. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 256. Pathophysiology of the Auditory and Vestibular Systems (4)
This course describes the known physiological and anatomical substrates of auditory and vestibular disorders. This includes conductive, sensorineural and retrocochlear hearing loss, and peripheral vestibular disorders. Congenital disorders due to genetic causes or infections, as well as acquired ototoxic, noise-induced, infective, autoimmune, age-associated, and traumatic disorders will be described. The influences of neurological disorders upon these two sensory systems will also be covered. *Prerequisites: AUD 255 or consent of instructor.*

AUD 257. Ear Diseases and Treatment (3)
This course describes the differential diagnosis and treatment of auditory and vestibular disorders, audiological components of neuro-otology, as well as interactions between the audiologist and neuro-otologist in a clinical setting. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 263. Physiological and Behavioral Tests of Vestibular Function (3)
This course will discuss the clinical evaluation of vestibular function, using techniques such as caloric and rotational electronystagmography and posturography. The interpretation of clinical findings and implications for rehabilitative strategies will be covered. The course will include observation of testing in an otology clinic setting. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 264. Auditory and Vestibular Development and Genetics (3)
This course describes the embryology and functional development of the auditory and vestibular systems, from their initial appearance to achievement of adult function. Inherited disorders of these two sensory systems are also addressed, including phenotypic description and, when known, the genetic basis. Genetic counseling and the potential for gene therapy will also be discussed. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 270. Newborn Hearing Screening and Management (3)
This course describes procedures and requirements for newborn hearing screening, and the detection and clinical management of congenital auditory disorders. This will include the opportunity to observe newborn screening demonstrations in a neonatal ICU environment. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 271. Temporal Bone Anatomy (4)
This course will describe the detailed anatomy of the temporal bone, including surgical approaches. Students will participate in dissecting a human cadaver

temporal bone specimen, and observe medical residents/staff learning to perform surgical drilling of temporal bone under the supervision of experienced otologic surgeons. In addition, radiographic and magnetic resonance imaging of the temporal bone will be described and discussed. *Prerequisites: second- or third-year Au.D. student or consent of instructor.*

AUD 275. Intraoperative Monitoring (3)
This course will detail the methods and procedures required for monitoring of evoked auditory responses in the operating room. The indications for the use of intraoperative monitoring will be covered, as will difficulties that are unique to this setting. The responses of auditory potentials to surgical levels of anesthesia will also be described. The course will include the opportunity to observe auditory potential monitoring in the operating room. *Prerequisites: second- or third-year Au.D. student or consent of instructor.*

AUD 276. Cochlear Implants and Other Implantable Sensory Aids (3)
This course will cover the theory and practice of cochlear implantation. Current concepts regarding the activation of primary auditory neurons by electrical stimulation are discussed. Indications for cochlear implantation and surgical procedures are described. Audiological management of patients after implantation forms the bulk of the material presented. *Prerequisites: second- or third-year Au.D. student or consent of instructor.*

AUD 277. Seminar in Advanced Topics and Research in Audiology (3)
Discussion of advanced topics in audiology and hearing science. Reading and critiquing journal articles and data emerging from research laboratories. *Prerequisites: second-year Au.D. student or consent of instructor.*

AUD 284. Clinical Practice in Audiology II (1-4)
Applications of clinical procedures to patient assessment. Includes clinical observation, interaction with otologists, and supervised patient care involving diagnostics and hearing aid evaluations in the UCSD audiology clinics. This course may be taken more than once. *Prerequisites: open to second- or third-year doctoral students or consent of instructor.* One quarter unit represents 3 to 4 hours per week.

AUD 291. Clinical Case Studies/Staffing (1)
Presentations and discussion of clinical cases and issues related to clinical practice. Students' clinical experiences are discussed relative to medical and audiological assessment and management. This course may be taken more than once. *Prerequisite: second-year Au.D. student or consent of instructor. Must be taken concurrently with AUD 284.*

AUD 296. Independent Research (1-4)
Independent research on topics relevant to audiology, consisting of literature review, data collection. Faculty supervision and mentoring on practical elements of research design and methodology. *Prerequisite: consent of instructor.*

AUD 301. Doctoral Project (3)
Individual investigation and preparation of the doctoral project for the Au.D. degree will be performed under the supervision of an experienced research mentor. This course may be taken more than once. *Prerequisite: advancement to candidacy.*

Biochemistry

Students wishing to major in biochemistry should refer to programs offered by the Division of Biological Sciences, which has an undergraduate major in biochemistry and cell biology, or the Department of Chemistry and Biochemistry, which has an undergraduate major in biochemistry/chemistry.

Both the Division of Biological Sciences and the Department of Chemistry and Biochemistry offer graduate programs with specialization in biochemistry. Those programs are described in the biological sciences and chemistry and biochemistry sections of this catalog.

Bioengineering

See Engineering, School of.

Bioinformatics

The explosion in biological knowledge spawned by various genome projects has created entirely new fields and industries, and a need for a new cadre of trained computational biologists who are familiar with biology, mathematics, chemistry, and computer sciences. A new interdisciplinary undergraduate major has been created beginning in fall 2001 leading to B.S. degrees with a major or specialization in bioinformatics. The major involves the Division of Biology and the Departments of Bioengineering, Chemistry and Biochemistry, and Computer Science and Engineering as well as researchers at the San Diego Supercomputer Center. This major is designed to provide career opportunities for B.S. graduates, as well as opportunities for future advanced training at the graduate level. Bioinformatics will have a tremendous impact upon our understanding of cellular functions, protein structure and design, evolutionary biology, regulatory networks, and the molecular basis of disease.

Admissions

Students wishing to pursue a study in bioinformatics may select from majors offered by the Division of Biology, or the Departments of Bioengineering, Chemistry and Biochemistry, and Computer Science and Engineering. A major in bioinformatics is available within each of the listed departments and divisions. All the participating departments have a substantially common curriculum, but each has its own emphasis through its electives, and there are some differences in the core requirements. There is a limited number of seats available campuswide and admission into the bioinformatics premajor and major will be based on academic excellence and preparation as measured by GPA and a written statement. Currently, the combined number of premajors is limited to 75 and the number of majors is limited to 50. These limits may change from time to time. The major, its specific requirements, and the screening criteria are listed in the corresponding catalog sections of the Division of Biology, Department of Bioengineering, Department of Chemistry and Biochemistry, and Department of Computer Science and Engineering.

Program Focus

The Interdisciplinary Bioinformatics Graduate Program draws upon the expertise of affiliated faculty from the Division of Biological Sciences; Departments of Bioengineering, Chemistry and Biochemistry, Computer Science and Engineering, Mathematics, Physics, and Psychiatry; the Biomedical Sciences Graduate Program.

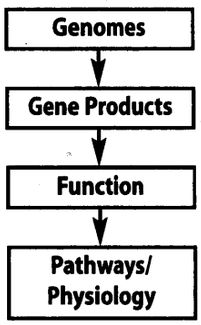
The University of California, San Diego is a premier research institution that has fostered interdisciplinary research since its inception. Specifically, bioengineering (at the interface of biology, medicine, and engineering), neuroscience (at the interface of biology and medicine), biophysics (at the interface of chemistry, biology, and physics), and cognitive science (at the interface of medicine and computer science) are all nationally ranked interdisciplinary graduate research programs. This has led to growth and innovation in many new areas of science and engineering research and the training of an exceptionally high caliber of graduate and postdoctoral students.

In recent years, bioinformatics has been identified by the UCSD administration as one of the most important growth areas for the campus. Several recent new faculty hires have been targeted in bioinformatics-related fields. UCSD has also seen a significant increase in the research activity associated with bioinformatics across the traditional disciplines.

Development of the Field and Departmental Strength in the Field

We are witnessing the birth of a new era in biology. The ability to decipher the genetic code of living organisms is dramatically changing our understanding of the natural world and promises to improve substantially the quality of human life. Recent advances in technology have led to the creation of a new interdisciplinary science—genomics. In simple terms, genomics is the reading and understanding of the blueprints for life. Understanding how genomes work requires sophisticated computer-based information handling tools *(bioinformatics)*, and new high throughput technologies for understanding the function of genes on a genome-wide scale *(functional genomics)*.

Bioinformatics characterizes the flow of information in living systems and can be schematically represented by the following:



The most pressing problem in the post-genome sequencing era will be to understand the integrated functions of thousands of genes. Dealing with this problem will require an interdisciplinary research structure dedicated to developing intellectual and human capital in bioinformatics and genome science. Due to the complexity of this new paradigm in biology, i.e., understanding the organization, evolution, and function of whole genomes rather than single genes, entirely new sets of tools and human resources will be necessary. Thus, future developments in genomics, and the applications that

derive from genomics, will be dependent upon the scientific progress at the interface of three major disciplines—biology, engineering, and computer science. In addition to the scientific advances required to understand the functions of genomes, the accelerated growth of modern biology warrants revolutionary changes in academic curricula.

Each department represented in this program participates in various interdisciplinary graduate programs in addition to providing very strong intradisciplinary graduate training. One example is the La Jolla Interfaces in Science program (LJIS), a campus- and mesa-wide fellowship opportunity sponsored by the Burroughs Wellcome Fund. LJIS supports exploration of interfaces between the biological and biomedical sciences and the physical, computer, and mathematical sciences at UCSD, The Scripps Research Institute (TSRI), the Salk Institute, and the San Diego Supercomputer Center.

Bioengineering, consistently ranked among the top three programs nationally by *U.S. News and World Report*, has several new faculty hires in the area of bioinformatics and computational biology and has identified bioinformatics as a major area of focus.

Biological Sciences, a premier division at UCSD, will spearhead the interdisciplinary, undergraduate specialization in bioinformatics and is planning to hire new faculty in bioinformatics fields.

Biomedical Sciences, is an interdisciplinary Ph.D. program, based in the School of Medicine, with tracks in pharmacology, physiology, and cellular and molecular medicine. It will be closely linked to the planned new School of Pharmacy and Pharmaceutical Sciences. In addition to a strong computational biology presence amongst its faculty, there are plans to hire more faculty whose main interests are in computational pharmacogenomics and bioinformatics.

Chemistry and Biochemistry, the home of the Molecular Biophysics Training Grant, is highly recognized for its strong computational biology program with plans to further expand in chemo and bioinformatics areas.

Computer Science and Engineering is unique in having a critical mass of faculty whose research interests focus on biology. These faculty have very strong collaborative research interactions with biology, chemistry, and engineering researchers. CSE is currently recruiting for a senior faculty member with computational biology expertise.

Mathematics has expressed strong interest in building in the area of bioinformatics with emphasis on statistics and probability. This focus is one of fundamental importance for the future of bioinformatics, and the department is committed to both hiring new faculty and launching new courses in statistics pertinent to bioinformatics.

Physics is the home of leaders in the field of computational statistical mechanics applied to biology and provides the foundation for sophisticated modeling of complex biological systems. Physics also plans to recruit new faculty members whose research focus will be on development of information/theory-based models of biological systems.

Admissions Requirements

Admission is in accordance with the general requirements of the graduate division. Candidates will have an interdisciplinary persuasion to work across computers, biology, medicine, and engineering; with an undergraduate degree majoring in any of the disciplines in biological science, physical science, computer science, mathematics, or engineering with a strong background in quantitative sciences and biology.

Admission review will be on a competitive basis based on the applicants' undergraduate track record, Graduate Record Examination General Test (GRE) scores, and other scholastic achievements. Attention will also be given to the motivation and career plans of the applicant candidates. Special attention will be given to the quantitative and analytical section scores of the GRE. The applications will be screened and evaluated by the Admissions Committee with input from all program faculty. In addition, applicants must submit a completed UCSD Application for Graduate Admission (use major code BF75), official transcripts (English translation must accompany official transcript written in other languages), TOEFL scores (required ONLY for all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English), and three letters of recommendation from individuals who can attest to the academic competence and to the depth of the candidates' interest in pursuing graduate study.

Acceptance letters to incoming students will indicate academic areas in which the Admissions Committee believe the individual is deficient and suggestions for remedial materials to be examined prior to the fall quarter may be provided.

For further admission information and/or to request an application packet, students should contact the bioinformatics graduate coordinator via email at bioinfo@ucsd.edu or at (858) 822-4948. You may also visit our Web site at http:///www.bioinformatics.ucsd.edu.

Foreign Language Requirement

Competence in one or more foreign languages is encouraged but not required.

Curriculum

Specific fields of emphasis:

- biological data and analysis tools
- sequence analysis
- genomic analysis
- statistical methods for bioinformatics

The Interdisciplinary Bioinformatics Graduate Program is organized around a formal course requirement consisting of three quarters of course work, with enrollment in four four-unit courses each quarter. One four-unit course in each quarter will be a research rotation in the laboratory of a program faculty mentor. The remaining nine courses will include four compulsory core courses and five courses to be chosen from a list of electives approved by the Course Committee.

The electives are intended to maximize the flexibility of the program, but at least one course must be chosen from the biology field and one from the computer science and engineering field. The faculty adviser(s) will pay particular attention to deficits in the background of each student and will assist in making appropriate course choices from the elective fields. Students electing to take any of the undergraduate courses listed in these fields will receive an additional course component in order to make it equivalent to a graduate level course. Students have the option to test out of a field by passing an exam designed by the faculty committee. This exam will fulfill one of the breadth requirements of the program.

It is the general policy of the program to be as adaptable as possible to the needs of the individual student. The faculty advisory committee will work closely with students to identify what might be lacking in a particular curriculum program.

Core Training Courses

- Bioinformatics I: Biological Data and Analysis Tools (Pharm 201)
- Bioinformatics II: Sequence and Structure Analysis—Methods and Applications (BENG 202/CSE 257A)
- Bioinformatics III: Genomic Analysis (BENG 203)
- Bioinformatics IV: Statistical Methods in Bioinformatics (Math 283)

PROGRAM ELECTIVES

(Each student will select from five of the eight elective fields below. One must be from the biology field and one from the computer science field. For each elective, multiple course options currently available are listed).

Elective 1: Biochemistry

BENG 230:	Biochemistry
BIBC 100:	Structural Biochemistry
CHEM 114A:	Biochemical Structure and Function
CHEM 213:	Chemistry of Macromolecules
CHEM 218:	Macromolecular Biochemistry

Elective 2: Data Structures

CSE 100:	Data Structures
CSE 200:	Computability and Complexity
Math 176A:	Computer Implementation of Data Structures

Elective 3: Algorithms

CSE 101:	(also Math 188) Design and Analysis of Algorithms
Math 173:	Mathematical Software Scientific Programming

Elective 4: Information Retrieval, Databases and Data Mining

CSE 132A:	Database System Principles
CSE 133:	Information Retrieval
CSE 254:	Machine Learning

Elective 5: Molecular Genetics

BICD 100:	Genetics
BIMM 100:	Molecular Biology
BIBC 116:	Evolution of Genes and Proteins
BGGN 220:	Advanced Molecular Biology
BGGN 223:	Advanced Genetics

Elective 6: Cell Biology

BICD 110:	Cell Biology
BICD 130:	Embryos, Genes, and Development
BIOMED 210:	Cellular Biology
BIOMED 212:	Cellular and Molecular Pharmacology
BGGN 222:	Advanced Cell Biology

Elective 7: Physics and Engineering

BENG 253:	Biomedical Transport Phenomena
BENG 275:	Computational Biomechanics
PHYS 210A:	Equilibrium Statistical Mechanics or higher

Elective 8: Mathematics and Statistics

Math 174:	Numerical Methods in Science and Engineering
Math 181E:	Mathematical Statistics
Math 280A:	Probability Theory

EXAMPLE 1–SAMPLE PROGRAM (YEAR 1)

A student with an undergraduate background in biology might make the following course selections:

YEAR 1

FALL	WINTER	SPRING
Bioinformatics I	Bioinformatics II	Bioinformatics III Bioinformatics IV
	CSE 100	CSE 101
Test out– Chem. 114A	BENG 275	Test out– BICD 110
Elective	Elective	Elective
	Research Rotation	Research Rotation

EXAMPLE 2–SAMPLE PROGRAM (YEAR 1)

A sample program for a student with an undergraduate degree in computer science and engineering might be structured as follows:

YEAR 1

FALL	WINTER	SPRING
Bioinformatics I	Bioinformatics II	Bioinformatics III Bioinformatics IV
	BIOMED 210	Chem. 213
Test out – CSE 101	Math 280A	Elective
Elective	Elective	Test out – CSE 132A
	Research Rotation	Research Rotation

YEAR 2

All students, regardless of their background and elective track, will be expected to begin working in the laboratory of their choice by the second year. Additionally in Year 2, students will begin preparing for their qualifying examination and will participate in advanced seminar courses and journal clubs identified by program faculty.

End of Year 2 through 5

Spring of Year 2: Qualifying Examination

Spring of Year 3: Advance to Candidacy

End of Year 5: Ph.D.

In summary, in addition to three quarters of research rotations, students must complete the four compulsory bioinformatics core courses; and, either test out of, or select at least five courses from the eight elective areas.

Research Rotations

Each student in the graduate program will participate in three research rotations, at least two of which will be in the laboratory of mentors other than the thesis directors. The purpose of the research rotation will be to train the students in research methodology in specific bioinformatics areas. At the end of the research rotation period, the student will submit a written report that will be evaluated by the faculty mentor in whose laboratory the project was carried out. The report will also be sent to the Qualifying Examination Committee who will take this into consideration in the assessment of the student for admission to candidacy.

Seminars, Informal Courses, Group Meetings, and Symposia

As well as formally structured courses and research rotations, graduate students will have access to seminars, group meetings, and informal sessions during which they will have frequent opportunities to interact closely with faculty mentors and to present their research plans, problems, and findings. In addition to weekly bioinformatics seminars, the graduate program will launch monthly student/faculty meetings at which students can present their research findings and discuss their progress. Graduate students will also be expected to organize an annual symposium where they will invite leading researchers to UCSD for one-day talks and discussions.

Besides the activities noted above, UCSD as a premier research institution has many excellent seminar programs sponsored by each research department and organized research group. Several interdisciplinary programs facilitate research

meetings. Notable ones include the La Jolla Interfaces in Sciences (LJIS) Program, the Neurosciences Program, the Molecular Biophysics Program, the Whitaker Institute for Biomedical Engineering, the San Diego Supercomputer Center, and the Structural Genomics Program. LJIS, for example, is an extremely successful interdisciplinary program sponsoring stimulating and state-of-the-art seminars. LJIS recently sponsored a well- received symposium on Post-Genomic Bioinformatics. Many program faculty are involved in several of the areas mentioned above, and the bioinformatics graduate program benefits from all of these additional programs and symposia.

Research Training

Students, upon completion of the appropriate course work, will be given research orientation lectures by the bioinformatics program faculty. Each graduate student will participate in a research experience in the laboratory he or she selects to carry out the research rotation. During this period students will become acquainted with scientific methodology for designing experiments, analyzing the results, organizing the data, conducting research in a responsible manner, preparing oral and poster presentations of research results, and writing scientific papers.

Upon successful completion of the Qualifying Examination (described in the following section), graduate students will choose their research project from the many possibilities offered in the program and begin to work on a research problem with their faculty advisers. In consultation with their mentors, students will formulate the research activity that will lead to their dissertation. Graduate students will have the opportunity to do internships in the local bioinformatics/biotechnology industry if the thesis project is of mutual interest to a corporate sponsor and the thesis advisers. The research program is designed with two key objectives in mind: (1) to provide a truly interdisciplinary research training at the interface area between biology and computer science and engineering; and (2) to address fundamentally strong research problems that will lead to the advancement of the field of bioinformatics. We anticipate that every graduating student will emerge as a highly trained bioinformatician who can either pursue an academic career by choosing optimal postdoctoral research positions or enter the next generation biotechnology/biopharmaceutical industry.

It is our belief that active research under proper tutelage is the best means of training and that the foundations of a good graduate training program rest on an outstanding faculty group, an excellent student body, and a strong and well-coordinated research program. Each of the faculty members in this program has expertise and interests that will contribute importantly to the Interdisciplinary Bioinformatics Graduate Program. Participating faculty have pooled their resources in terms of laboratories, and the knowledge and experience to ensure the success of the program. Through daily contact with faculty and other research colleagues, students will learn to develop critical and creative thinking skills, scientific methodology, and a sound knowledge of research problems.

Advancement to Ph.D. Candidacy

Upon completion of formal course requirements, each student will be required to take a written and oral qualifying examination that will admit the student to the candidacy of the Ph.D. program. In advance of the qualifying examination, each student, in consultation with his or her faculty adviser(s), will establish a dissertation committee of five faculty members. The committee will consist of three faculty, at least two of whom are affiliated with the bioinformatics program, and two other faculty from departments affiliated with the program, or who are themselves members of the program faculty. At least one of the two other committee members must be tenured. The thesis advisers will have the major responsibility for the student's research and dissertation.

It is anticipated that each student will complete the qualifying examination before the end of the second year of his or her tenure, but no later than the end of the third year. The student is expected to join a research laboratory for completing a thesis dissertation no later than the beginning of the second year of tenure.

Thesis and/or Dissertation

Each graduate student in the program will work on a bioinformatics thesis project under dual mentorship of the program faculty. As a partial fulfillment for the Ph.D. degree, the student will submit a complete dissertation to be evaluated by a doctoral committee chosen by his or her mentors in consultation with the bioinformatics steering committee. The doctoral dissertation will be submitted to each member of the doctoral committee at least four weeks before the final examination. The student will defend his or her final thesis after the committee's evaluation and will pass or fail depending on the committee's decision. The entire graduate program is expected to be completed within the proposed timeline of the program.

Final Examination

Bioinformatics graduate students will defend their thesis in a final oral examination. The exam will consist of (1) a presentation of the thesis by the graduate student, (2) questioning by the general audience, and (3) closed door questioning by the thesis committee. The student will be informed of the exam result at the completion of all three parts of the oral examination. The final report of the doctoral committee will be signed by all members of the committee and the final version of the dissertation will conform to the procedures outlined in the publication, *Instructions for the Preparation and Submission of Doctoral and Master's Theses*.

Teaching Requirement

Each graduate student admitted to the Ph.D. program in bioinformatics is mandated to serve as a teaching assistant (TA) for at least two quarters. This will aid in preparing the students for a teaching career. In addition, each student will make periodic research presentations to the graduate program students/faculty. Students will also discuss their progress at the annual program meeting to be held each year. It is anticipated these formal presentations will serve as valuable training in preparing the student for a teaching career.

Bioinformatics graduate students will also participate in additional TA training provided by the Office of Graduate Studies and Research through the Center for Teaching Development (CTD).

Financial Support

It is expected that all students admitted into the Ph.D. program in bioinformatics will receive financial assistance subject to their continuance and performance in the program. The assistance will be provided from (1) departmental financial commitments, (2) university financial commitments, (3) teaching assistantships, (4) research assistantships, and (5) NIH-funded graduate training grant.

Employment Prospects

There is enormous demand from industry for trained professionals in bioinformatics. The pharmaceutical industry, agrobusiness, and biotechnology companies often look to academia for people with the appropriate interdisciplinary skills. There is also a great need for academic faculty who have broad, interdisciplinary training, because much of the success of the next generation of undergraduate and graduate students will depend on their ability to master materials in several disciplines. Competition for people skilled in bioinformatics is so intense that salary offers are being driven sky-high and there is concern that the universities—few of which are training students in the field—are rapidly being depleted of the best researchers.

A report from the Working Group of Biomedical Computing of the NIH recognized the shortage of biologists with appropriate computing expertise and called for strong NIH support of cross-disciplinary education and training.

Ph.D. Degrees with a Specialization in Bioinformatics

Currently, UCSD offers Ph.D. degrees with a specialization in bioinformatics from the participating departments listed in this section. Students are admitted into one of the departmental graduate programs and satisfy the requirements of both the departmental and the interdisciplinary bioinformatics graduate program. If you are interested in the Ph.D. degree with a specialization in bioinformatics, please consult with the Student Affairs Office of the department you are interested in to obtain further information on admission and individual program requirements.

Further Information

For further information please visit our Web site at http:///www.bioinformatics.ucsd.edu, or contact the bioinformatics student affairs office at (858) 822-4948, bioinfo@ucsd.edu.

Division of Biological Sciences Required Review of Student Progress

Freshmen

Effective fall 2002, the Division of Biological Sciences will eliminate pre-major status with the exception of the biology major with specialization in bioinformatics. Entering students who have indicated the desire to major in biology will be admitted directly to the biology major of their choice. To remain in good standing the student must complete a minimum of eight of the following courses (or equivalent) during their first five quarters at UCSD:

BILD 1, BILD 2, BILD 3

Chemistry 6A-B-C

Math 10A-20A, 10B-20B, 10C-11-20C

Physics 1A-2A, 1B-2B, 1C-2C

Chemistry 140A-141A, 140B-141B

BICD 100

BIBC 103

A student's best six grades from the eight courses listed will be used to calculate a GPA which must be at least a 2.5. If a student fails to complete the required courses, or to obtain the required minimum GPA, they will be dismissed from the biology major.

(**Note:** These are the minimal requirements to remain in the major, and do not satisfy all of the lower-division requirements of any biology major. Please consult the section regarding your particular major to ensure that you satisfy all lower-division and upper-division requirements.)

Continuing Students

Continuing UCSD students who wish to transfer into the major will be evaluated under the rules that were in effect the year in which they entered the university.

Transfer Students

Effective fall 2002, the Division of Biological Sciences will eliminate pre-major status with the exception of the biology major with specialization in bioinformatics. Entering students who have indicated the desire to major in biology will be admitted directly to the biology major of their choice. To remain in good standing the student must have completed eight of the following courses, or course equivalency, prior to transfer to UCSD:

BILD 1, BILD 2, BILD 3

Chemistry 6A-B-C

Math 10A-20A, 10B-20B, 10C-11-20C

Physics 1A-2A, 1B-2B, 1C-2C

Chemistry 140A-141A, 140B-141B

BICD 100

BIBC 103

A student's best six grades from the eight courses listed will be used to calculate a GPA which must be at least a 2.5. If a student fails to complete the required courses, or to obtain the required minimum GPA, they will be dismissed from the biology major. Transfer students who do not meet these requirements will be allowed a maximum of three quarters to satisfy any unmet requirements. Transfer students are therefore strongly encouraged to complete these requirements at their community college. (**Note:** These are the minimal requirements to remain in the major, and do not satisfy all of the lower-division requirements of any biology major. Please consult the section regarding your particular major to ensure that you satisfy all lower-division and upper-division requirements.)

Satisfactory Progress

All students admitted into a biology major must maintain satisfactory progress in order to remain in a biology program. If the GPA in biology courses for such a student falls below 2.0, he or she will be placed on probation during the quarter after the average fell below the line. If the GPA is not brought above the 2.0 level during the quarter on probation, the student will be dropped from the major.

Prerequisites

All students are expected to have completed all prerequisites prior to enrolling in any biology course. Please visit the student affairs office or consult our Web page for the most current information. Prerequisites are enforced in all courses and must be taken for a letter grade. Students who have satisfied the prerequisites of a class at another college may need to be pre-authorized to enroll. Please come to the biology student affairs office (1128 Pacific Hall) BEFORE your priority enrollment to be pre-authorized.

Exceptions

The division will accept petitions from students to remain in the major with less than the

required GPA or course work, and the success of such petitions will be evaluated based upon academic promise that is not reflected in the GPA. Exceptions might also be made to accommodate students who showed exceptional promise in laboratory experimentation, or students who had overcome extraordinary hardship while taking the required courses.

Enrollment in Biology Classes by Non-Biology Students

Because biology is a popular major, enrollment in some lower-division and upper-division biology courses is limited to biology majors, and those majors for which biology courses are required for graduation. Every effort will be made, on a space available basis, to enroll students from other majors in those biology lecture and laboratory courses which may be required for post-graduate study.

Division of Biological Sciences Residency Requirement

To receive a bachelor of science degree in biology from UCSD, all students must complete at least nine upper-division biology courses (each course must be at least four units) in the Division of Biological Sciences while officially enrolled at UCSD. (Students participating in the Education Abroad Program (EAP), and courses at other UC campuses, may petition up to three of these courses to count toward their residency minima.) Biology courses completed through the UC Extension program (concurrent enrollment) will not be counted toward this residency requirement.

Division of Biological Sciences Laboratory Requirement

Freshmen

Effective fall 2003, the Division of Biological Sciences will require students in all biology majors, with the exception of bioinformatics, to take one biology lab before the end of the sophomore year.

Continuing Students

Continuing UCSD students who wish to transfer into the major will be evaluated under the rules that were in effect the year in which they entered the university.

Transfer Students

Effective fall 2003, the Division of Biological Sciences will require students in all biology majors, with the exception of bioinformatics, to take one biology lab before the end of the sophomore year. Transfer students may petition to have community college course work cover the lab requirement. Transfer students whose community college laboratory course is determined to be equivalent in content to an existing biology lab will have completed the requirement upon transfer. Transfer students are therefore strongly encouraged to complete this requirement at their community college. Transfer students who do not meet this requirement at the time of transfer may petition the division for an extension.

Grade Requirements for the Majors

The minimum GPA requirement (for both the major and overall UC) for graduation is 2.0. D grades in courses required for the major are acceptable, providing that the student's major GPA and overall UC GPA is at least 2.0. Students who received D and/or F grades should contact one of the Division of Biological Sciences undergraduate advisers to determine the effect of such grades on their GPAs. The biology major GPA calculation is based on upper-division courses required for the major. (Upper-division courses from other UCs, other UCSD departments, and EAP which have been approved via petition to count toward the major are counted into the major GPA. Other transfer courses do not count toward the UC or major GPA.) All courses, required for any of the eight majors, must be taken for a letter grade with the exception of BISP 195, 196, 197, or 199.

Students with Transfer Credit

All courses (including prerequisites) taken at other institutions must be reviewed by the Division of Biological Sciences before they can be applied toward any major requirement. Students must obtain approval from the Biology Student Affairs office prior to taking courses outside of UCSD (for example, students wishing to take a Chem. 6BL equivalent at another institution must consult with Biology Student Affairs *before enrolling in the substitute course*). In addition, any student wishing to satisfy a major requirement with upper-division transfer work (with the exception of organic chemistry) must first submit a General Petition. Contact Biology Student Affairs (1128 Pacific Hall) for specific information regarding transfer documentation and petition procedures.

Effective fall 2000, the Division of Biological Sciences will require that students take the full content equivalencies to UCSD series in math, chemistry, and physics. The Division of Biological Sciences will follow the respective department's recommendations for equivalency. In some cases, attaining full content equivalency will require a student to complete more than two semesters in a subject. If the courses a student took do not provide full content equivalency, s/he will be required to complete the lacking material at UCSD or at a community college where the material is equivalent.

Programs Abroad

The Division of Biological Sciences strongly encourages students to participate in the Education Abroad Program (EAP) or the UCSD Opportunities Abroad Program (OAP). It is very important that students who plan to participate in the UC Education Abroad Program (including the Costa Rica Tropical Ecology program) or the UCSD Opportunities Abroad Program obtain the name of a faculty adviser from the Biology Student Affairs Office in order to discuss the proposed program of study. For most EAP programs, it is strongly recommended that biology majors complete biochemistry (BIBC 100 or 102) and genetics (BICD 100) and their prerequisites before going abroad.

Special Studies Courses

Only one quarter of BISP 195 and one quarter of BISP 196, 197, or 199 may be counted toward any biology major. For information on requirements and application procedures for special studies courses students should go to the Biology Student Affairs Office (1128 Pacific Hall).

BISP 195—Introduction to Teaching in Biology

Being a teaching assistant is an important task and can provide students with experience and faculty contact which can be valuable when applying for graduate school. Students who are interested in being an undergraduate tutor should have received a strong grade in the course which they want to teach, have an overall GPA of at least 3.0, and have taken at least ninety total

units. Students should apply very early in the quarter prior to the quarter they wish to teach. Applications will be accepted beginning the second week of the quarter prior to the quarter in which the student wishes to teach. All undergraduate tutor applications are online and may be accessed through the biology Web site, http://www.biology.ucsd.edu/undergrad/index.html.

BISP 196—Honors Thesis in Biological Sciences

Students in any one of the eight biology major programs who have a 3.7 grade-point average or above in upper-division science courses, the biology major, and overall UC at the end of their junior year are eligible to undertake the honors thesis. This program covers the senior year of undergraduate study and involves a maximum of twelve units of senior thesis research (BISP 196) taken in addition to the major requirements for graduation. (Four units of senior thesis research BISP 196 are to be taken during three consecutive quarters.) Research is conducted under the supervision of a faculty member of the Division of Biological Sciences only and cannot be performed in the research labs of other departments such as the School of Medicine, SIO, etc. If there are any questions as to which faculty members are eligible, students should consult with Biology Student Affairs. The research will culminate in a senior thesis and an oral report (see below). Students who complete the program satisfactorily will have "Distinction in Biology" recorded on their transcript. Students who fail to make satisfactory progress will be advised to withdraw from the program and, if eligible, will receive four units per quarter of BISP 199. Students may also withdraw voluntarily from the program and, if eligible, receive appropriate credit for BISP 199. Grades for BISP 196 are P, NP, or I only.

APPLICATION TO THE HONORS THESIS PROGRAM

1. Students interested in the program who are eligible as of the end of the spring quarter of their junior year (the fourth quarter prior to graduation) need to find a Division of Biological Sciences faculty member willing to act in the capacity of thesis adviser and inform the Biology Student Affairs Office of their intent.
2. After an adviser is selected, the student and the adviser should complete the Special Studies application form (available from the Biology Student Affairs Office, 1128 Pacific Hall). The form should contain the research proposal.
3. The application form should then be submitted to the Biology Student Affairs Office. The deadline for submitting this form is the end of the eighth week of the quarter prior to the quarter the research will begin.
4. The application will be submitted to the honors thesis coordinator after eligibility has been determined.
5. If the student is approved for admission to the program, he or she will then be authorized to register for BISP 196.

Entry into the second and third quarter of the program will require submission to the honors thesis adviser of a written report in which the student summarizes the data obtained in the previous quarters. A brief oral interview with the student on this report can also be expected. If the progress made appears reasonable for an honors student, then the 196 petition will be signed. If not, conversion of the 196 credit to BISP 199 will be recommended. Completion of the program will require a final written report by the student at the end of the third quarter in addition to an oral presentation in the middle of the quarter to a suitable group of faculty and students, including the honors thesis adviser.

BISP 197—Biology Internship Program

The Division of Biological Sciences, in collaboration with local biotech industries, created Biotechnology Internship Opportunities (BIO). The mission of BIO is to provide biology majors with an opportunity to participate in research in an industrial setting. We believe that working as an intern in the private sector will enrich a student's educational experience. Students will gain valuable insight into the relationship between theory and practice, and hence, a better understanding of the relevance of course work in their major. Most importantly, students will learn the importance of outstanding oral and written communication skills. This course may be counted as one of the upper-division electives for a biology major, providing that no other special studies courses have already been counted toward the major. Information on BIO may be accessed through the undergraduate biology Web site, http://www.biology.ucsd.edu/undergrad/index.html.

To enroll in BISP 197, students must have accrued at least ninety-quarter units with an overall UC GPA of at least 3.0.

There will be one weekly scheduled meeting lasting up to 1.5 hours. Attendance and participation at these meetings are mandatory and will affect the grade a student receives. There will be three formal oral and three written presentations, interspersed with informal discussions of progress achieved. All written reports must be done with the input of the industry and must have that mentor's signature. Grading will be based on the formal and informal written and oral presentations, as well as input from the industry mentor.

BISP 199—Independent Study for Undergraduates

Independent Study BISP 199 is intended to provide interested and qualified biology students with an opportunity to work closely with faculty and professionals in their chosen field and can be a valuable contribution to the student's preparation for graduate school or career goals. To enroll in BISP 199, students must have accrued at least ninety quarter-units with an overall UC GPA of at least 3.0. Students may select for their instructor any professor at UCSD, but the BISP 199 application must be submitted for approval to the Division of Biological Sciences. The deadline to apply for BISP 199 is the eighth week of the quarter prior to the quarter in which the research will begin.

AIP 197—Academic Internship Program

Because the undergraduate research conducted through the Academic Internship Program is generally done at a site not affiliated with the UCSD Division of Biological Sciences, students who wish to request that an AIP 197 course be counted toward their major must submit a General Petition for their request before the end of the eighth week of the quarter prior to the quarter in which research will begin. This early deadline allows time for the biology faculty to review and contribute to the student's research proposal and ascertain the project's compatibility with the student's academic goals. If an AIP 197 course is approved for the student's major, no other special studies course (BISP 196, 197, or 199) can be used toward the major. For further information, please see http://aip.ucsd.edu.

Major Programs in Biological Sciences

For more information, please see biology's web page, http://www-biology.ucsd.edu/

The UCSD Division of Biological Sciences is structured around the different levels of biological organization—biochemical, cellular, physiological, and ecological. The research and teaching of the division emphasize the fundamentally important processes that occur at each of these levels. With a solid foundation in these processes future training and study in any area of biology is possible, from plant breeding to genetic counseling, from medical microbiology to ecological epidemiology, from veterinary science to cancer research. The UCSD campus is situated among some of the finest research institutions in the world. The Division of Biological Sciences is fortunate in having close ties with the Scripps Institution of Oceanography, the Salk Institute of Biological Studies, and the Scripps Clinic and Research Foundation, all of which open interesting avenues for motivated students.

The division offers eight different major programs, each of which provides an excellent background for future graduate or professional study. They are (1) animal physiology and neuroscience, (2) biochemistry and cell biology, (3) biology with a specialization in bioinformatics, (4) ecology, behavior, and evolution, (5) general biology, (6) human biology, (7) microbiology, and (8) molecular biology. The requirements of each of the majors are designed to meet the needs of a different group of students. These requirements are quite concordant, reflecting the division's philosophy that familiarity with certain basic aspects of the subject is fundamental to all specialized understanding. Bachelor of science degrees granted in each of these majors will be so designated.

The Student Affairs Office (1128 Pacific Hall) administers the undergraduate biology program for all six colleges. For complete details regarding policies and procedures pertaining to the biology programs, please contact Biology Student Affairs.

Animal Physiology and Neuroscience Major

Please refer to the "Division of Biological Sciences Required Review of Student Progress" notice detailed earlier in the Division of Biological Sciences section of this catalog.

The animal physiology and neuroscience major provides a program for studying the bodily and neural functions of complex organisms. Within this major, a student may concentrate upon more specialized areas of study, such as human biology, neurobiology, or endocrinology. This major is most directly applicable to health-related professions such as medicine, nursing, dentistry, veterinary medicine, pharmacy, physical therapy, and medical technology. Animal physiology and neuroscience majors are also well prepared to enter other professions such as physiological research, physical education, agriculture, and wildlife management.

Lower-Division Requirements

BILD 1 and 2 or BILD 1 and 3

Chemistry 6A-B-C, and one lab

Mathematics 10A-B, and 10C or 11 or 20A-B-C

Physics 1A/1AL, 1B/1BL, 1C/1CL or 2A-B-C, and one lab

Upper-Division Requirements

Listed below are the upper-division courses required for the animal physiology and neuroscience major. The first four requirements provide exposure to the current understanding of subcellular function that should be at the command of all modern biologists. Requirements 6 and 7 constitute the core of the animal physiology and neuroscience major. By choosing three optional four-unit upper-division biology courses (requirement 9), a program geared to the needs of the individual student can be formulated.

1. Organic Chemistry (Chemistry 140A, 140B, or 141A, 141B)
2. Organic Chemistry Laboratory (Chemistry 143A)
3. Metabolic Biochemistry (BIBC 102)
4. Genetics (BICD 100)
5. Molecular Biology (BIMM 100)
6. Four from the following seven courses:

   Mammalian Physiology I (BIPN 100)
   Mammalian Physiology II (BIPN 102)
   Comparative Physiology (BIPN 106)
   Cellular Neurobiology (BIPN 140)
   Systems Neurobiology (BIPN 142)
   Developmental Neurobiology (BIPN 144)
   Computational Neurobiology (BIPN 146)
7. One of four laboratories (BICD 131, BICD 133, BIPN 105, BIPN 145)
8. One upper-division biology lab to be chosen from the following: BIBC 103, 105, BICD 101, 111, 123, 131, 133, 145, BIEB 121, 131, 165, 167, 179, BIMM 101, 103, 121, 127, BIPN 105, 145. This requirement may include a lab from number 7 that has not already been taken by the student.
9. Three additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biological Sciences are required and may include the above (numbers 6–8). These may include no more than one quarter of BISP 195 and one quarter of either BISP 196, 197, or 199 (AIP 197 may be used in place of BISP 196, 197, or 199 upon approval by the faculty adviser). (Subsequent quarters of 195, 196, 197, or 199 may be applied toward college and university requirements.)

Biochemistry and Cell Biology Major

Please refer to the "Division of Biological Sciences Required Review of Student Progress" notice detailed earlier in the Division of Biological Sciences section of this catalog.

This major is designed to provide students with the fundamental courses required for entry into a school of medicine or into postgraduate training in a wide variety of areas of biological and biomedical sciences: biochemistry, biophysics, genetics, molecular biology, cell biology, developmental biology, microbiology, virology, human biology (physiology, metabolism, genetic disorders), cancer biology, pharmacology, and others. The emphasis is on basic principles which help us understand those processes unique to living organisms at the molecular level.

The program includes two required upper-division biology laboratory courses to provide practical experience with modern techniques and useful technology for those seeking positions as lab technicians in clinical and basic research laboratories. The opportunity to select five elective courses allows students either to seek a still broader background in a variety of biology courses or to begin specialization in a chosen field of study.

Lower-Division Requirements

BILD 1 and 2 or BILD 1 and 3

Chemistry 6A-B-C, and one lab

Mathematics 10A-B, and 10C or 11 or 20A-B-C

Physics 1A/1AL, 1B/1BL, 1C/1CL or 2A-B-C, and one lab

Upper-Division Requirements

1. Organic Chemistry (Chemistry 140A and 140B or 141A and 141B)
2. One chemistry laboratory: Organic Chemistry (Chemistry 143A) or Physical Chemistry (Chemistry 105A)
3. Structural Biochemistry (BIBC 100) or Physical Biochemistry (BIBC 110) or Physical Chemistry (Chemistry 126)
4. Metabolic Biochemistry (BIBC 102)
5. Biochemical Techniques (BIBC 103)
6. Genetics (BICD 100)
7. Cell Biology (BICD 110)
8. Molecular Biology (BIMM 100)
9. One of the following four courses: Signal Transduction Lab (BIBC 105), Physical Biochemistry (BIBC 110), Pathways of Intracellular Protein Trafficking and Compartmentation (BICD 118), Pharmacology (BIMM 118)
10. One upper-division biology lab to be chosen from the following: BIBC 105, BICD 101, BICD 111, BICD 123, BICD 131, BICD 133, BICD 145, BIMM 101, BIMM 103, BIMM 121, BIMM 127, BIMM 141, BIPN 105, BIPN 145), or Organic Chemistry (Chemistry 143C).
11. Four additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biological Sciences are required. Only one quarter of BISP 195 and one of BISP 196, 197, or 199 may be applied toward the fulfillment of this requirement. Students may use only one BISP 199 for meeting major requirements. (Subsequent quarters of BISP 195, 196, 197, or 199 may be applied toward college and university requirements.)

The following courses offered by the Department of Chemistry and Biochemistry are recommended as electives for the biochemistry and cell biology major: Chemistry 115, 116, 122, 124, 126, 127. Please note that these courses will not count towards the Division of Biological Sciences residency requirement and must be petitioned.

Bioinformatics Specialization in the Division of Biological Sciences

This major offers a rigorous, interdisciplinary training in the new and rapidly-evolving field of bioinformatics within the Division of Biological Sciences. Bioinformatics refers to advanced computational and experimental methods that model the flow of information (genetic, metabolic, and regulatory) in living systems to provide an integrated understanding of the systems properties of model organisms. For a detailed understanding of the large amount of qualitative and quantitative data that is currently accruing, the bioinformatician of the future must have a substantial mastery in biology, chemistry, mathematics, physics, and computer sciences. This interdisciplinary specialization will be offered by three other departments (computer science and engineering, chemistry, and bioengineering), each with their own set of requirements and electives. The program offered by the Division of Biological Sciences is aimed at a student interested in applying, and to some extent developing, tools of bioinformatics for the study of biological systems. Students will receive a B.S. degree in Biology with a Specialization in Bioinformatics. This degree will prepare students for graduate studies in biological and biomedical sciences, or provide excellent opportunities in the biomedical, pharmaceutical, biotechnology, and bioinformatics industries.

Admission

Because the number of pre-majors and majors will be limited as described in the section on bioinformatics, student demand may exceed capacity. Therefore, admission to the specialization is not guaranteed and will be based on academic excellence, as described below. Since bioinformatics is an interdisciplinary major, a steering committee involving faculty from the participating departments will select among the best candidates applying and recommended through each department, while insuring active participation of the departments and divisions offering the major.

Freshmen

Effective fall 2001, entering freshmen will go through a two-stage process to be admitted to a bioinformatics program. Students should enter the division as a declared major in some subdiscipline offered by the division (e.g., molecular biology, general biology, etc.) Freshmen can choose to apply for a bioinformatics pre-major after completing the following courses by the end of their first year. Admission will be based primarily on the GPA in the following courses, but also on a written statement, completion of the other listed requirements and overall academic excellence:

BILD 1

Chemistry 6A

Math 20B

Math 20C

Pre-bioinformatics majors can then choose to apply for admission to the bioinformatics major after competing CSE 11 and CSE 12 by the end of their sophomore year. Admission to the bioinformatics major within each department or division will be based on the GPA in all six screening courses. The final decision on admission to the pre-major and major will be made by the bioinformatics Steering Committee, in consultation with the departments.

If a student applies for admission to the bioinformatics specialization but is not selected after completion of the screening courses, that student will be eligible to remain in the specialization or major to which they were admitted initially. Students with undeclared majors may also apply to the bioinformatics specialization, but in the event they are not selected for this competitive major, they may choose any other major in biology as long as they satisfy the requirements of that major.

Continuing Students

Students who have not declared the bioinformatics pre-major, but who have completed the screening courses, may apply for entry to a bioinformatics program after six quarters (the end of the sophomore year). They will be admitted on a space-available basis, after pre-majors have been screened for admission to the major.

Transfer Students

Effective fall 2003, applicants seeking admission to a bioinformatics major must have

completed the following courses with a strong GPA that is competitive with that of UCSD students applying for entry into this specialization:

a year of calculus (equivalent to Math 20A-B-C)

a year of general chemistry, with lab (equivalent to Chem 6A-B-C and 6BL)

the highest level programming course offered at the community college (equivalent to CSE 11 and 12)

one semester of biology (equivalent to BILD 1 and BILD 2)

Those who have not completed the equivalent courses may be admitted as pre-majors, using the same criteria that apply for UCSD students, and will be allowed a maximum of three quarters to complete pre-major requirements. Transfer students are therefore encouraged to complete these requirements at the community college.

If a student applies for admission to a bioinformatics specialization but is not selected after completion of the screening courses, that student will remain eligible for specialization or major to which they were originally admitted.

Lower-Division Requirements

Mathematics 20A-B-C, 20F and Mathematics 15B or CSE 21

Chemistry 6A-B-C, and lab

Physics 2A-B-C

BILD 1 and 2

BILD 94

CSE 11, CSE 12 (Students may take the slower paced version, CSE 8A + CSE 8B, instead of CSE 11.)

Upper-Division Requirements

1. Organic Chemistry (Chemistry 140A-B)
2. Advanced Data Structure (CSE 100 or Mathematics 176)
3. Design and Analysis of Algorithms (CSE 101 or Mathematics 188)
4. Metabolic Biochemistry (BIBC 102) or Biochemical Energetics and Metabolism (Chemistry 114B)
5. Biochemical Techniques (BIBC 103)
6. Physical Biochemistry (BIBC 110) or Physical Chemistry (Chemistry 127)
7. Genetics (BICD 100)
8. Cell Biology (BICD 110)
9. Molecular Biology (BIMM 100) or Molecular and Cellular Biochemistry (Chem 114D)
10. Recombinant DNA Lab (BIMM 101)
11. Molecular Sequence Analysis (BIMM 181)
12. Biological Databases (BIMM 182)
13. Applied Genomic Technologies (BENG 183)
14. Computational Molecular Biology (BIMM 184)
15. Bioinformatics Lab (BIMM 185)
16. Probability and Statistics (Math 186)
17. Three additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biological Sciences are required.

Ecology, Behavior and Evolution Major

Please refer to the "Division of Biological Sciences Required Review of Student Progress" notice detailed earlier in the Division of Biological Sciences section of this catalog.

This major includes the fields of population biology, ecology, conservation biology, animal behavior, population genetics, biogeography, and evolution. These fields have in common a focus on evolutionary processes and whole organisms in relation to each other and to their environments. Research careers in ecology, behavior, and evolution can be found in universities, government agencies, and the biotechnology industry. More applied careers for ecologists are equally varied: recent graduates now work in forestry and wildlife management, as ecological consultants for U.S. and foreign governments and private industry, as teachers, or in new fields such as ecological medicine and epidemiology, environmental design and planning, and conservation biology. Because organismal biology spans such a wide variety of topics, this major has been designed to provide the basic fundamentals while allowing maximum flexibility within the general topic areas.

Lower-Division Requirements

BILD 1, 2, and 3

Chemistry 6A-B-C. Laboratories in chemistry are not required.

Mathematics 10A-B, and 10C or 11 or 20A-B-C

Physics 1A/1AL, 1B/1BL, 1C/1CL or 2A-B-C

Upper-Division Requirements

1. Genetics (BICD 100)
2. Biometry (BIEB 100)
   This course is a prerequisite for several core courses and should be taken in the first or second year.
3. Ecology (BIEB 102)
4. Evolution (BIEB 150)
5. Seven core courses to be chosen from BIEB 121-180 are required. At least two of these courses must be laboratory or field courses (BIEB 121, 131, 165, 167, and/or 179). Laboratory courses may be taken either concurrently with the prerequisite lecture course *if Biometry (BIEB 100) has been taken.* Note that some of the courses may not be offered every year. For that reason, it is recommended that students take as many required courses as possible when the courses are offered. Students who take the intensive EAP field courses in tropical biology offered in Costa Rica or marine biology in Australia will receive credit toward their degree. All EAP courses must be petitioned upon return. Consult the Education Abroad Program Office at the UCSD International Center for details.
6. Three additional upper-division courses (each course must be at least four units) in biology or other departments are required. EBE-related courses are offered in mathematics, chemistry, environmental systems, earth sciences, economics, biological anthropology, urban studies (GIS), some other social science departments, and in the graduate programs at SIO (marine biology and oceanography) and IR/PS. *Students are required to meet the Division of Biological Sciences residency requirement.* Courses to be completed outside of the Division of Biological Sciences **must be petitioned** (prior to enrollment) to satisfy this requirement. Only one quarter of BISP 196, 197, or 199 and one quarter of BISP 195 may be used to fulfill this requirement. (Subsequent quarters of 195, 196, 197, or 199 may be applied toward college and university requirements.) EBE students whose graduate education or careers require biochemistry should take Organic Chemistry 140A, 140B, and Metabolic Biochemistry (BIBC 102) to satisfy this three-course requirement.

A systemwide supercourse in environment biology held at the White Mountain Research

station provides another attractive alternative to gaining field experience. For more information, consult http://www.wmrs.edu/

General Biology Major

Please refer to the "Division of Biological Sciences Required Review of Student Progress" notice detailed earlier in the Division of Biological Sciences section of this catalog.

This program allows the most diversified exposure to biology of any of the majors offered by the Division of Biological Sciences. It is designed for students with broad interests who do not wish to be constrained by the specialized requirements of the other majors and who desire maximum freedom to pursue their particular educational goals.

Lower-Division Requirements

Lower-division requirements are designed to provide the foundations in mathematics, physics, and chemistry that are fundamental to the study of biology. In addition, an introduction to biology is required to provide the appropriate background for upper-division biology courses. The lower-division requirements are subsumed in large part under those of the various colleges.

BILD 1, 2, and 3
Chemistry 6A-B-C, and one lab
Mathematics 10A-B, and 10C or 11 or 20A-B-C
Physics 1A/1AL, 1B/1BL, 1C/1CL or 2A-B-C and one lab

Upper-Division Requirements

Listed below are the upper-division course requirements for the general biology major. Specific requirements have been held to a minimum for this major in order to allow students maximum freedom in fitting course schedules to their particular educational goals. Because of the central positions of biochemistry and genetics in all of modern biological thought, only Biochemistry (BIBC 100 or 102), its organic chemistry prerequisites (Chemistry 140A and B), and Genetics (BICD 100) are prescribed requirements for general biology majors.

1. Organic Chemistry (Chemistry 140A and 140B or 141A and 141B)
2. Metabolic Biochemistry (BIBC 102)
3. Genetics (BICD 100)
4. Two upper-division biology labs to be chosen from the following: BIBC 103, 105, BICD 101, 111, 123, 131, 133, 145, BIEB 121, 165, 167, 179, BIMM 101, 103, 121, 127, BIPN 105, or 145.
5. Seven additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biological Sciences are required. Only one quarter of BISP 195 and one quarter of either BISP 196, 197, or 199 may be applied toward this requirement. (Subsequent quarters of 195, 196, 197, or 199 may be applied toward college and university requirements.)

Although students are free to design upper-division curricula which meet their individual educational goals, Molecular Biology (BIMM 100) and Cell Biology (BICD 110) are strongly recommended for those contemplating applying to graduate or professional schools.

Human Biology Major

This major is designed to provide students with the fundamental courses required for entry into: schools of medicine, veterinary medicine, dentistry, and pharmacy; Ph.D. programs in the biomedical sciences; and biotech research, teaching, medical technology, patent law, physical therapy, nutrition, and nursing. The core classes required of all human biology majors provide the student with the basic principles that help us understand normal human physiology and the molecular basis of human disease. The course options in Human Physiology, Human Disease, and Biomedical-related laboratories provide the students with educational breadth while still allowing them considerable flexibility in tailoring their course of study to suit their educational goals.

Lower-Division Requirements

1. BILD 1 and BILD 2 or BILD 1 and BILD 3
2. Chemistry 6A, 6B, 6C and one lab
3. Physics 1A/1AL, 1B/1BL, 1C/1CL or Physics 2A, 2B, 2C and Physics Lab (2BL or 2CL)
4. Mathematics 10A-B, and 10C or 11 or 20A-B-C

Upper-Division Requirements

1. Organic Chemistry (Chemistry 140A and 140B or 141A and 141B)
2. Organic Chemistry Lab (Chemistry 143A)
3. Metabolic Biochemistry (BIBC 102)
4. Genetics (BICD 100)
5. Molecular Biology (BIMM 100)
6. Molecular Basis of Human Disease (BIMM 110)
7. Mammalian Physiology I (BIPN 100)
8. Three courses from the following two groups, Human Physiology and Human Disease. At least one course must be taken from each group.

Human Physiology
Nutrition (BIBC 120)
Embryos, Genes, and Development (BICD 130)
Human Reproduction and Development (BICD 134)
Immunology (BICD 140)
Endocrinology (BICD 150)
Mammalian Physiology II (BIPN 102)
Biology of Exercise (BIPN 108)
Cellular Basis of Learning and Memory (BIPN 148)

Human Disease
AIDS Science and Society (BICD 136)
Topics in Human Genetics (BICD 170)
Virology (BIMM 114)
Pharmacology (BIMM 118)
Bacteriology (BIMM 120)
Medical Microbiology (BIMM 124)
Biology of Cancer (BIMM 134)

9. Two of the following lab courses:
Biochemical Techniques (BIBC 103)
Signal Transduction Lab (BIBC 105)
Cell Biology Lab (BICD 111)
Embryology Lab (BICD 131)
Developmental Biology Lab (BICD 133)
Laboratory in Molecular Medicine (BICD 145)
Recombinant DNA Techniques (BIMM 101)
Microbiology Lab (BIMM 121)
Animal Physiology Lab (BIPN 105)
BISP 196/199 (The second consecutive quarter of BISP 196 or 199 taken in the same research laboratory may be substituted for one of the upper-division lab requirements.)
10. At least two other upper-division courses (each course must be at least four units) offered by the UCSD Division of Biological Sciences. Recommended courses include additional courses from the Human Physiology and Human Disease lists in section 8 above and BICD 110 (Cell Biology), BIEB 154 (Molecular Evolution), and BICD 118 (Pathways of Intracellular Protein Trafficking and Compartmentation). Other acceptable courses include one

quarter of BISP 195 and one quarter of either BISP 196, 197, or 199. (Exception: students who use BISP 196 or 199 to satisfy the lab requirement in section 9 above cannot use BISP 196, 197, or 199 to satisfy this requirement.)

Microbiology Major

Please refer to the "Division of Biological Sciences Required Review of Student Progress" notice detailed earlier in the Division of Biological Sciences section of this catalog.

The microbiology major is designed to prepare students for graduate studies and for professional careers in a variety of health-related programs. The specialization in microbiology can provide the basic background for work in medical technology, or for further training in public health or other health-related specialties. The program is also designed to provide a foundation for graduate studies in microbiology, virology, and a variety of allied fields as well as for medical and dental school.

Lower-Division Requirements

BILD 1 and 2 or BILD 1 and 3

Chemistry 6A-B-C, and one lab

Mathematics 10A-B, and 10C or 11 or 20A-B-C

Physics 1A/1AL, 1B/1BL, 1C/1CL or 2A-B-C and one lab

Upper-Division Requirements

1. Organic Chemistry (Chemistry 140A-B or 141A-B)
2. Organic Chemistry Laboratory (Chemistry 143A)
3. Metabolic Biochemistry (BIBC 102)
4. Biochemical Techniques (BIBC 103)
5. Genetics (BICD 100)
6. Immunology (BICD 140)
7. Molecular Biology (BIMM 100)
8. Virology (BIMM 114)
9. Bacteriology (BIMM 120)
10. Laboratory in Microbiology (BIMM 121)
11. Medical Microbiology (BIMM 124)
12. Three additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biological Sciences are required. These may include no more than one quarter of BISP 195 and one quarter of BISP 196, 197, or 199. (Subsequent quarters of 195, 196, 197, or 199 may be applied toward college and university requirements.) Other courses of special interest to microbiology majors are listed below:

    Cell Biology (BICD 110)

    Regulation of Gene Activity in Eucaryotic Cells (BIMM 112)

    Microbial Genetics (BIMM 122)

    Recombinant DNA Techniques (BIMM 101)

Molecular Biology Major

Please refer to the "Division of Biological Sciences Required Review of Student Progress" notice detailed earlier in the Division of Biological Sciences section of this catalog.

The program for molecular biology is designed to provide an intensive exposure to the theoretical concepts and experimental techniques of molecular biology. The concepts and techniques of molecular biology are the foundation for the studies of all aspects of biology in modern time. A focus on molecular biology, therefore, provides an excellent preparation for a wide range of advanced studies including basic research, medicine, bioengineering, and biotechnology. Considerable emphasis is placed on chemistry, biochemistry, and genetics for students enrolled in the program. As such, it is recommended for those students who have a particularly strong interest in this field of study.

Lower-Division Requirements

BILD 1 and 2 or BILD 1 and 3

Chemistry 6A-B-C, and one lab

Mathematics 20A-B-C

Physics 1A/1AL, 1B/1BL, 1C/1CL or 2A-B-C, and one lab

Upper-Division Requirements

1. Organic Chemistry (Chemistry 140A-B or 141A-B)
2. Organic Chemistry Laboratory (Chemistry 143A) or Physical Chemistry Laboratory (Chemistry 105A)
3. Structural Biochemistry (BIBC 100)
4. Metabolic Biochemistry (BIBC 102)
5. Biochemical Techniques (BIBC 103)
6. Genetics (BICD 100)
7. Cell Biology (BICD 110)
8. Molecular Biology (BIMM 100)
9. Recombinant DNA Techniques (BIMM 101)
10. Regulation of Gene Activity in Eukaryotic Cells (BIMM 112)
11. Microbial Genetics (BIMM 122)
12. Four additional upper-division biology courses (each course must be at least four units) taken through the UCSD Division of Biological Sciences are required. Attention is drawn to BICD 120, BICD 122, BICD 140, BIMM 110, and BIMM 114. Only one quarter of 196, 197, or 199 and one of BISP 195 may be used to fulfill this requirement. (Subsequent quarters of BISP 195, 196, 197, or 199 may be applied toward college and university requirements.)

Minor in Biological Sciences

To receive a minor from the Division of Biological Sciences, a student must complete at least seven four-unit biology courses, including at least five four-unit upper-division biology courses (for a total of at least twenty-eight units of course work). Students may apply transferable biology courses from another institution toward the lower-division requirement, after obtaining approval from both the UCSD Division of Biological Sciences *and* the student's college. Upper-division courses must be taken for letter grade. No courses taken outside of the Division of Biological Sciences may be applied toward the biology minor (i.e., Chemistry 140A, Psychology 106, etc.). Advanced placement biology scores of four or five may be counted in lieu of BILD 1 and BILD 2. An advanced placement biology score of three may be counted in lieu of BILD 10.

Secondary School Biology Teaching

UCSD's biological sciences division is committed to the education of future biology teachers and offers an excellent preparation for teaching biology in secondary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It

is recommended that you contact TEP and the Biology Student Affairs Office early in your academic career to help you plan a suitable biology curriculum. If you plan to get your credential at another institution, keep in mind that a broad education in biology is the best preparation to become a teacher.

We suggest that students take courses in plant and animal biology, microbiology, ecology, population biology, evolution, marine biology, genetics, and biochemistry. Courses in cellular and molecular biology are also advisable. After completion of BILD 1, 2, and 3, a suggested program of upper-division courses would be: BIBC 100 or 102, BICD 100, 120, 130, BIEB 102, 150, BIPN 106, SIO 275B. This would give you as a prospective teacher the required breadth of education.

Integrated Bachelor's/ Master's Degree Program

An integrated program leading to a bachelor of science degree and a master of science degree in biology is offered to those undergraduate students who are enrolled in any of the major programs offered by the Division of Biological Sciences at UCSD. Qualified students are able to obtain the M.S. degree within one year following receipt of the B.S. degree. Students interested in applying to this program should meet with the BS/MS adviser in the Biology Student Affairs Office BEFORE the end of their junior year.

The program is open only to UCSD undergraduates. The Division of Biological Sciences does not have financial aid available for students enrolled in this program.

Eligibility and Enrollment

To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and must have an overall UC GPA of at least 3.0. Students' major GPA should be at least 3.3. Students must demonstrate excellent performance in upper-division biology core courses during their undergraduate program to be eligible to enroll in biology graduate core courses.

It is the responsibility of the prospective B.S./M.S. student to select a faculty member (from the Division of Biological Sciences) who would be willing to serve as the student's adviser and in whose laboratory the student would complete at least twenty-four units of research over a two-year period. The units of research which must be completed during the student's senior undergraduate year, must be taken IN ADDITION to the requirements for the bachelor's degree. These units will count toward the requirements for the master's degree only. Students must complete six consecutive quarters of research to fulfill the research component of the program. Any deviation from this plan, such as a break in enrollment for one or more quarters, will be cause for the student to be dropped from the program.

Students who have been approved (by both the Division of Biological Sciences and the UCSD Office of Graduate Admissions) for the program must enroll in a Special Studies Course, BGGN 271, for each, and every, quarter of participation in the B.S/M.S. program. Students can obtain the appropriate course code and division stamp at the Biology Student Affairs Office.

Research work (BGGN 271) will be credited toward the B.S./M.S. program requirements only if it is completed during the time a student is officially enrolled at UCSD and has paid tuition for that quarter.

Requirements for the Master of Science Degree

1. Completion of six consecutive quarters of research during the senior undergraduate year and the graduate year.
2. Completion of at least thirty-six units of graduate course work (BGGN 200-level or higher, or approved [via petition] graduate courses offered by related departments at a similar level) during the graduate year. The course of study must be approved by the faculty adviser.
3. Twelve of the thirty-six units must be in courses other than BGGN 271 (BGGN 297 and BGGN 299 may not be used to satisfy this requirement).
4. Serve as a graduate teaching assistant.
5. Maintenance of a grade-point average (both overall and in the major) of at least 3.0 for all course work, both cumulatively and for each quarter of enrollment in the B.S./M.S. program. If the student's GPA falls below 3.0 (for either overall or in the major), he or she will be automatically dropped from the program.
6. Completion of a thesis, with an oral presentation to, and approval of, a three-member Thesis Committee. A student may have any regular faculty at UCSD or any adjunct faculty as their adviser and chair of their Thesis Committee. The Thesis Committee must contain at least two regular faculty from the Division of Biological Sciences and no more than one adjunct faculty can serve on the committee. If an adjunct faculty serves as chair of the Thesis Committee, one of the biology members must serve as co-chair.
7. At least three complete, separate, and consecutive quarters of residency as a graduate student which will commence the quarter immediately following the quarter in which the B.S. degree is awarded. (Note: The summer session is not considered an official quarter during the graduate year.)
8. Students who have been approved for the B.S./M.S. program must provide the Office of Graduate Admissions with a copy of their official UCSD transcripts with the B.S. degree posted, PRIOR TO THE COMMENCEMENT OF THE GRADUATE YEAR IN THE PROGRAM.

Non-Degree Program

The Division of Biological Sciences will accept applicants into the non-degree program for a maximum of one year only. Qualified applicants must have at least a 3.0 GPA in their upper-division work to be accepted. Justification will not be made for those who fall below the GPA minmum.

Students who wish to apply to the UCSD biological sciences Ph.D. program at a later date should not apply for this program. However, students who have applied to graduate or medical schools elsewhere, but have not yet been accepted, are welcome to apply.

Once accepted into this program, the student has graduate status for the academic year. Courses may be taken on the undergraduate or graduate level with consent of the instructor. Students will not be assigned faculty advisers and must make their own academic plans.

The Doctoral Program

Graduate studies for a Ph.D. degree in the Division of Biological Sciences in affiliation with the Salk Institute are oriented mainly toward the development of the capacity for independent research and for teaching in the biological sciences.

The requirements for entrance to graduate study in the Division of Biological Sciences are flexible, but a strong background in mathematics, chemistry, and physics is recommended.

Formal course work and opportunities for dissertation research include most basic areas of experimental biology, with emphasis in the general areas of biochemistry, biophysics, cell biology, developmental biology, genetics, immunology, molecular biology, neurobiology, plant molecular biology, ecology, behavior and evolution, virology, and cancer biology.

During the first year of graduate study, each student undertakes a research project in the laboratory of each of four to six different faculty members, and is expected to spend a major portion of his or her academic time on this project. The laboratories are selected by the student in consultation with the first year adviser to provide a broad view of the research interests of the division. The student is also expected to enroll in the first-year graduate biology sequence which includes advanced material in genetics, developmental biology, plant biology, neurobiology, molecular biology, cell biology, virology, and immunology. Students are also required to complete a minimum of twelve units of BGGN 500 (Apprentice Teaching in Biology.) A program of further study, including seminars and courses appropriate to a student's background and interests, is arranged through consultation between the student and the faculty. Much reliance is placed on informal instruction through early and close association of the student with the faculty and research staff, and through regular seminars. After becoming familiar with the research activities of the faculty through the laboratory rotation program, the student begins work on a thesis research problem of his or her choice no later than the end of the first year. The student is free to choose for the thesis adviser a regular member of the UCSD faculty or an adjunct member of the Division of Biological Sciences faculty. The student is required to have completed a two-part examination in order to be admitted to candidacy for the Ph.D. degree. The purpose of the examinations is for the student to demonstrate competence in the field of major interest and in related fields of biology. The major remaining requirement for the Ph.D. degree is the satisfactory completion of a dissertation consisting of original research carried out under the guidance of a faculty member.

Close collaboration with members of the Department of Chemistry and Biochemistry is a vital and stimulating aspect of the biology program. Additional strength and breadth in biology are gained by collaborating with the Department of Marine Biology of the Scripps Institution of Oceanography, with The Scripps Research Institute, and with the Salk Institute for Biological Studies.

Divisional Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed seven years.

Specialization in Computational Neurobiology

Students interested in computational neurobiology may apply to the Division of Biological Sciences. Students in Biology with a Specialization in Computational Neurobiology are supported by the Institute for Neural Computation (INC). These young scientists are trained in the broad range of scientific and technical skills essential to understand the computational resources of neural systems. Students enrolled in this specialization receive financial support through a National Science Foundation (NSF) Integrative Graduate Education and Research Training (IGERT) award to UCSD.

Joint Doctoral Program with San Diego State University

The Division of Biological Sciences at UCSD participates in a joint graduate program with the Department of Biology at SDSU, primarily in the areas of cell and molecular biology, and leading to the Ph.D. degree in biology. Graduate student participants in the joint doctoral program are required to spend one year enrolled at UCSD; thesis research is carried out under the supervision of the SDSU faculty.

Information regarding admission is found in the current edition of the San Diego State University Graduate Bulletin.

COURSES

NOTE: The division will endeavor to offer the courses as outlined below; however, unforeseen circumstances sometimes mandate a change of scheduled offerings, especially the quarter offered (F,W,S). Students are strongly advised to check the Schedule of Classes or with the division's Student Affairs Office (1128 Pacific Hall, (858) 534-0557) before relying on the following schedule. This is of particular importance in planning schedules for graduation requirements. It is the student's responsibility to contact the Student Affairs Office to determine the specific quarter that certain courses will be offered. The following schedule is tentative for the academic year 2004–2005 only. It should not be assumed that the same schedule will continue after this academic year.

Students who have satisfied the prerequisites for courses at another college or by AP credit may need to be pre-authorized to register for the course. Please come to the Biology Student Affairs Office before your registration time to be authorized. If the class is full please place your name on the waitlist and attend the first class meeting.

Students who do not attend the first thirty minutes of the first scheduled meeting (be it lab or lecture) will be considered not enrolled in the course. Prior written notification to the instructor regarding an anticipated absence will ensure a space. However, responsibility for officially dropping the lab from the registrar's records belongs to the student.

IF A STUDENT DROPS A LAB COURSE AFTER THE END OF THE SECOND SESSION, THE DIVISION WILL REPORT A "W" FOR THE COURSE.

LOWER-DIVISION

BILD 1. The Cell (4)
An introduction to cellular structure and function, to biological molecules, bioenergetics, to the genetics of both procaryotic and eucaryotic organisms, and to the elements of molecular biology. Three hours of lecture and one hour of recitation. *Prerequisites: two quarters of general chemistry (second quarter of chemistry may be taken concurrently).* (F,W,S)

BILD 2. Multicellular Life (4)
An introduction to the development and the physiological processes of plants and animals. Included are treatments of reproduction, nutrition, respiration, transport systems, regulation of the internal environment, the nervous system, and behavior. Three hours of lecture and one hour of recitation. *Prerequisites: two quarters of general chemistry (Chem. 6A-B, second quarter of chemistry [Chem. 6B] may be taken concurrently.)* (F,W,S)

BILD 3. Organismic and Evolutionary Biology (4)
The first principles of evolutionary theory, classification, ecology, and behavior; a phylogenetic synopsis of

the major groups of organisms from viruses to primates. Three hours of lecture and one hour of lab. *Prerequisite: none.* Note: E.B.E. majors should complete this course during their first year at UCSD. (F,S)

BILD 7. The Beginning of Life (4)
An introduction to the basic principles of plant and animal development, emphasizing the similar strategies by which diverse organisms develop. Practical applications of developmental principles as well as ethical considerations arising from these technologies will be discussed. *Prerequisite: none.* (S)

BILD 10. Fundamental Concepts of Modern Biology (4)
An introduction to the biochemistry and genetics of cells and organisms; illustrations are drawn from microbiology and human biology. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 10 after receiving credit for BILD 1. (F,W,S)

BILD 12. Neurobiology and Behavior (4)
An introduction to the organization and functions of the nervous system; topics include molecular, cellular, developmental, systems, and behavioral neurobiology. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major.

BILD 14. Introduction to Plant Biology (4)
Plant biology for non-majors with emphasis on human concerns. Plants as food for a growing population; plant growth, development and reproduction; the soil ecosystem; genetically engineered plants; organic farming; environmental concerns of agriculture. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 14 after receiving credit for BICD 120.

BILD 16. History of Life (4)
Life has a very long history on earth and this course will chronicle patterns of biological diversity from its origin over 3 billion years ago to the present day. Topics covered will include methods for reconstructing the history of life on this planet, the origin and evolution of major groups of plants and animals, dinosaur paleobiology, past environmental changes and their effects on species and communities, and extinctions. We will also explore how insights from the past can be used to understand how present and future environmental changes will impact biological diversity. This course is designed for non-biology majors.

BILD 18. Human Impact on the Environment (4)
Course will focus on issues such as global warming, species extinction, and human impact on the oceans and forests. History and scientific projections will be examined in relation to these events. Possible solutions to these worldwide processes and a critical assessment of their causes and consequences will be covered. *Prerequisite: open to non-biology majors only.* (S)

BILD 20. Human Genetics in Modern Society (4)
Fundamentals of human genetics and introduction to modern genetic technology such as gene cloning and DNA finger printing. Applications of these techniques, such as forensic genetics, genetic screening, and genetic engineering. Social impacts and ethical implications of these applications. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 20 after receiving credit for BICD 100. (S)

BILD 22. Human Nutrition (4)
A survey of our understanding of the basic chemistry and biology of human nutrition; discussions of all aspects of food: nutritional value, diet, nutritional diseases, public health, and public policy. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 22 after receiving credit for BIBC 120. (S)

BILD 24. Biology of Human Reproduction (4)
The topics covered are: sexual development in embryo and fetus, the nature and regulation of changes at puberty, the functioning of the mature sexual system. Three hours of lecture. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 24 after receiving credit for BICD 134. (W)

BILD 26. Human Physiology (4)
Introduction to the elements of human physiology and the functioning of the various organ systems. The course presents a broad, yet detailed, analysis of human physiology, with particular emphasis towards understanding disease processes. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. (F)

BILD 30. The Biology of Plagues: Past and Present (4)
An introduction to diseases caused by viruses, bacteria, and parasites, and the impact of these diseases on human society. Topics include the biology of infectious disease, epidemiology, and promising new methods to fight disease. Three hours of lecture and one hour discussion. This course is designed for non-biology majors and does not satisfy a lower-division requirement for any biology major. (**Note:** Students may not receive credit for BILD 30 after receiving credit for BIMM 120.) (F)

BILD 32. Biomedicine/Cancer (4)
An introduction to molecular, cellular, and immunological aspects of cancer and a consideration of the sociological and psychological impact of cancer on the individual and general society. Three hours of lecture. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 32 after receiving credit for BIMM 134.

BILD 36. AIDS Science and Society (4)
An introduction to all aspects of the AIDS epidemic. Topics include the epidemiology, biology, and clinical aspects of HIV infection; HIV testing; education and approaches to therapy; and the social, political, and legal impacts of AIDS on the individual and society. In order to count for their major, biology majors must take the upper-division course, BICD 136. (W)

BILD 87. Freshman Seminar (1)
The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshmen seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. (F,W,S)

BILD 90. Undergraduate Seminar (1)
This seminar is restricted to lower-division undergraduate students (freshmen and sophomores). The course introduces current biological topics. The topics vary with instructors and for each quarter. Examples of topics which may be discussed are: wildlife conservation, signalling within and between cells, mapping the human genome, etc. This course does not satisfy any requirement for the biology major, biology minor, or college general/education.

BILD 92. Professional Topics (1)
This seminar will introduce students to the various subdisciplines and their research methodology in the biological sciences. Emphasis will be on bioinformatics, neurophysiology, and biotechnology. Current research topics in the specialized areas in academe and industry will be discussed. The role and professional identity of biologists in research, consulting, government, management, and teaching will be reviewed. In addition, issues surrounding professional ethics will be discussed. (F)

BILD 94. Professional Issues in Bioinformatics (1)
This seminar will introduce undergraduate students, especially freshmen and sophomores, to a variety of issues and topics in the field of bioinformatics. (S)

BILD 95. Undergraduate Workshops (1)
The workshops will be restricted to lower-division undergraduates. The course will introduce students to the methods of scientific research and to a variety of research topics in the biological/biomedical sciences. Examples of topics are: Introduction to Scientific Research, AIDS, Medical and Social Aspects, Is the Mind the Same as the Brain, Wildlife Conservation.

UPPER-DIVISION

Biochemistry

BIBC 100. Structural Biochemistry (4)
The structure and function of biomolecules. Includes protein conformation, dynamics, and function; enzymatic catalysis, enzyme kinetics, and allosteric regulation; lipids and membranes; sugars and polysaccarides; and nucleic acids. Three hours of lecture and one hour of recitation. *Prerequisites: two quarters of organic chemistry (second quarter may be taken concurrently).* (Note: Students may not receive credit for both BIBC 100 and Chem. 114A.) (F,W,S)

BIBC 102. Metabolic Biochemistry (4)
Energy-producing pathways–glycolysis, the TCA cycle, oxidative phosphorylation, photosynthesis, and fatty acid oxidation; and biosynthetic pathways–gluconeogenesis, glycogen synthesis, and fatty acid biosynthesis. Nitrogen metabolism, urea cycle, amino acid metabolism, neucleotide metabolism, and metabolism of macromolecules. Three hours lecture and one hour recitation. *Prerequisites: two quarters of organic chemistry (second quarter may be taken concurrently).* Note: Students may not receive credit for both BIBC 102 and Chem. 114B.) (F,W,S)

BIBC 103. Biochemical Techniques (4)
Introductory laboratory course in current principles and techniques applicable to research problems in

biochemistry and molecular biology. Techniques include protein and nucleic acid purification; identification methods such as centrifugation, chromatography, and electrophoresis; immunological, spectrophotometric, and enzymatic methods. *Prerequisite: BILD 1.* Students may not receive credit for BIBC 103 after taking Chem. 112A. (F, W, S)

BIBC 105. Signal Transduction Laboratory (6)
A laboratory course involving the application of molecular, cellular, and biochemical techniques to explore signal transduction mechanisms in mammalian cells. The events between ligand-biding to a cell surface receptor and activation of gene transcription in the nucleus will be studied. *Prerequisites: BIBC 100, BIBC 103 and BIMM 100.*

BIBC 110. Physical Biochemistry (4)
The theory and applications of physical chemistry to biological molecules, process and systems and techniques used in biochemistry and physiology. Topics include reversible and irreversible thermodynamics, bioenergetics, energy coupling and transduction, solutions of macromolecules, sedimention, chromatography, electrophoresis, passive and active membrane transport, spectroscopy, and chemical kinetics. Three hours of lecture and one hour of recitation. *Prerequisites: calculus and organic chemistry.* (S)

BIBC 115. Computer Programming in Biology (4)
Use of computer programming in the analysis and presentation of biological data (computation of best value and standard deviation, histogram, least squares fitting procedure, simulation of genetic experiments, etc.) Students learn the C++ computer language and run their programs at the Computer Center. There are some visits to laboratories and hospitals to see applications of computers in biology and medicine. Three hours of lecture and about ten hours of homework per week; limited enrollment. *Prerequisite: upper-division standing or consent of instructor.* (**Note**: Students may not receive credit for both BIBC 115 and Chem. 134.)

BIBC 116 Evolution of Genes and Proteins (4)
The history of an organism can be found in its genome. analysis of the primary sequences will be used to recognize families of genes that arose by duplication and divergence. Topics include comparisons of amino acid sequences and three dimensional structures and range from the oldest and most widely distributed proteins to modem mosaics. Where possible, specific motifs and folds will be traced to their ancestral beginnings. *Prerequisites: BIBC 100, BIMM 100.* (W)

BIBC 120. Nutrition (4)
Emphasis is on the biochemical aspects of nutrition. The known functions of vitamins, minerals, fats, carbohydrates, and protein are discussed in terms of experiments in nutrition and an evaluation of the relation of the knowledge to nutrition in man. Three hours of lecture. *Prerequisite: BIBC 102 (may be taken concurrently).* (S)

BIBC 130 Marine Biochemistry (4)
Biochemical mechanisms of adaptation in organisms to the marine environment. Special emphasis will be on the effects of pressure, temperature, salinity, oxygen, and light on the physiology and biochemistry. *Prerequisites: BIBC 102 or consent of instructor.* (F)

Genetics, Cellular and Developmental Biology of Plants and Animals

BICD 100. Genetics (4)
An introduction to the principles of heredity in diploid organisms, fungi, bacteria, and viruses. Mendelian inheritance; population genetics; quantitative genetics; linkage; sex determination; meiotic behavior of chromosome aberrations, gene structure, regulation, and replication; genetic code. Three hours of lecture and one hour of recitation. *Prerequisite: BILD 1 or the equivalent.* (F,W,S)

BICD 101. Eucaryotic Genetics Laboratory (4)
This course emphasizes the principles of Mendelian inheritance and requires the student to apply both cytological and genetic analysis to the solution of problems in transmission genetics. One hour of lecture and seven hours of laboratory. *Prerequisite: BICD 100.* Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

BICD 110. Cell Biology (4)
The structure and function of cells and cell organelles, cell growth and division, motility, cell differentiation and specialization. Three hours of lecture and one hour of recitation. *Prerequisites: BIBC 100 or BIBC 102, and BICD 100.* (F,W,S)

BICD 111. Cell Biology Laboratory (4)
A laboratory course in the application of cellular techniques to biological problems. The establishment, growth, transformation, immortalization, and senescence of mammalian cells will be studied at the molecular and the cellular level. Ten hours of laboratory. In addition to the formal lab hours listed above, there will be an average of two hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisite: BICD 110 (may be taken concurrently); BIBC 103 is strongly recommended.* (F) Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course.

BICD 118. Pathways of Intracellular Protein Trafficking and Compartmentation (4)
This course will focus on various subcellular organelles, their function, protein traffic, disulfide bond formation, protein folding, assembly of macromolecular complexes, protein quality control, and cellular responses to misfolded proteins. The emphasis will be on experimental approaches and model systems for the analysis of these problems, and on the connection of these topics to human disease. Three hours of lecture and one hour of mandatory discussion of primary publications per week. Open to upper-division students only. *Prerequisites: BICD 110 and BIMM 100.* (W)

BICD 120. Fundamentals of Plant Biology (4)
An introduction to the biology of plants. Basic principles of plant anatomy, physiology, development, and diversity are covered as well as specialized topics, including plant genetic engineering, plant disease and stress, medicinal plants, plants and the environment, and sustainable agriculture. *Prerequisites: BILD 1 and 2.*

BICD 122. Plant Cellular and Molecular Biology (4)
The cellular and molecular basis of plant development, including plant hormones, signal transduction mechanisms, light and plant growth, plant microorganism interaction, plant transformation, genetic engineering of plants. *Prerequisite: BIBC 102 required.* (W)

BICD 123. Plant Molecular Genetics and Biotechnology Laboratory (6)
Techniques in plant cell and tissue culture, plant transformation, genetic selection and screening of mutants, host pathogen interactions, gene regulation, organelle isolation, membrane transport. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least eight hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: upper-division standing; BICD 120 strongly recommended.* Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

BICD 130. Embryos, Genes, and Development (4)
Developmental biology of animals at the tissue, cellular, and molecular levels. Basic processes of embryogenesis in a variety of invertebrate and vertebrate organisms. Cellular and molecular mechanisms that underlie cell fate determination and cell differentiation. More advanced topics such as pattern formation and sex determination are discussed. Open to upper-division students only. Three hours of lecture and one hour of recitation. *Prerequisites: BICD 100, upper-division standing, BIBC 100 or BIBC 102; BICD 110 strongly recommended, BIMM 100 strongly recommended.* (W)

BICD 131. Embryology Laboratory (6)
Descriptive and experimental embryology of marine invertebrates and of vertebrates. One and one-half hours of lecture and ten hours of laboratory each week. In addition to the formal lab hours, there will be at least six and a half hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: BILD 1; BILD 2 or BIPN 100.* Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (F)

BICD 132. Molecular Basis of Development (4)
Explores the molecular mechanisms that underlie cell fate determination and cell differentiation during animal development. Emphasizes the action of key regulatory networks in directing developmental events in a variety of vertebrate and invertebrate systems. This course is open to upper-division students only. Three hours of lecture and one hour of recitation. *Prerequisites: BIMM 100, upper-division standing.*

BICD 133. Developmental Biology Lab (6)
Explore fundamentals of embryonic development using advanced techniques in light and fluorescent microscopy and by analyzing developmental mutants. Course includes selecting and knocking out genes of interest followed by phenotypic analysis. Invertebrate and vertebrate organisms covered. *Prerequisites: BILD 1; BILD 2 or BIPN 100; BIMM 100 and BIMM 110 are recommended.* Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course.

BICD 134. Human Reproduction and Development (4)
This course is addressed to the development of the human sexual system, including gametogenesis, fertil-

the major groups of organisms from viruses to primates. Three hours of lecture and one hour of lab. *Prerequisite: none.* Note: E.B.E. majors should complete this course during their first year at UCSD. (F,S)

BILD 7. The Beginning of Life (4)
An introduction to the basic principles of plant and animal development, emphasizing the similar strategies by which diverse organisms develop. Practical applications of developmental principles as well as ethical considerations arising from these technologies will be discussed. *Prerequisite: none.* (S)

BILD 10. Fundamental Concepts of Modern Biology (4)
An introduction to the biochemistry and genetics of cells and organisms; illustrations are drawn from microbiology and human biology. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 10 after receiving credit for BILD 1. (F,W,S)

BILD 12. Neurobiology and Behavior (4)
An introduction to the organization and functions of the nervous system; topics include molecular, cellular, developmental, systems, and behavioral neurobiology. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major.

BILD 14. Introduction to Plant Biology (4)
Plant biology for non-majors with emphasis on human concerns. Plants as food for a growing population; plant growth, development and reproduction; the soil ecosystem; genetically engineered plants; organic farming; environmental concerns of agriculture. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 14 after receiving credit for BICD 120.

BILD 16. History of Life (4)
Life has a very long history on earth and this course will chronicle patterns of biological diversity from its origin over 3 billion years ago to the present day. Topics covered will include methods for reconstructing the history of life on this planet, the origin and evolution of major groups of plants and animals, dinosaur paleobiology, past environmental changes and their effects on species and communities, and extinctions. We will also explore how insights from the past can be used to understand how present and future environmental changes will impact biological diversity. This course is designed for non-biology majors.

BILD 18. Human Impact on the Environment (4)
Course will focus on issues such as global warming, species extinction, and human impact on the oceans and forests. History and scientific projections will be examined in relation to these events. Possible solutions to these worldwide processes and a critical assessment of their causes and consequences will be covered. *Prerequisite: open to non-biology majors only.* (S)

BILD 20. Human Genetics in Modern Society (4)
Fundamentals of human genetics and introduction to modern genetic technology such as gene cloning and DNA finger printing. Applications of these techniques, such as forensic genetics, genetic screening, and genetic engineering. Social impacts and ethical implications of these applications. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 20 after receiving credit for BICD 100. (S)

BILD 22. Human Nutrition (4)
A survey of our understanding of the basic chemistry and biology of human nutrition; discussions of all aspects of food: nutritional value, diet, nutritional diseases, public health, and public policy. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 22 after receiving credit for BIBC 120. (S)

BILD 24. Biology of Human Reproduction (4)
The topics covered are: sexual development in embryo and fetus, the nature and regulation of changes at puberty, the functioning of the mature sexual system. Three hours of lecture. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 24 after receiving credit for BICD 134. (W)

BILD 26. Human Physiology (4)
Introduction to the elements of human physiology and the functioning of the various organ systems. The course presents a broad, yet detailed, analysis of human physiology, with particular emphasis towards understanding disease processes. Three hours of lecture and one hour of discussion. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. (F)

BILD 30. The Biology of Plagues: Past and Present (4)
An introduction to diseases caused by viruses, bacteria, and parasites, and the impact of these diseases on human society. Topics include the biology of infectious disease, epidemiology, and promising new methods to fight disease. Three hours of lecture and one hour discussion. This course is designed for non-biology majors and does not satisfy a lower-division requirement for any biology major. (**Note:** Students may not receive credit for BILD 30 after receiving credit for BIMM 120.) (F)

BILD 32. Biomedicine/Cancer (4)
An introduction to molecular, cellular, and immunological aspects of cancer and a consideration of the sociological and psychological impact of cancer on the individual and general society. Three hours of lecture. This course is designed for non-biology students and does not satisfy a lower-division requirement for any biology major. Note: Students may not receive credit for BILD 32 after receiving credit for BIMM 134.

BILD 36. AIDS Science and Society (4)
An introduction to all aspects of the AIDS epidemic. Topics include the epidemiology, biology, and clinical aspects of HIV infection; HIV testing; education and approaches to therapy; and the social, political, and legal impacts of AIDS on the individual and society. In order to count for their major, biology majors must take the upper-division course, BICD 136. (W)

BILD 87. Freshman Seminar (1)
The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshmen seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. (F,W,S)

BILD 90. Undergraduate Seminar (1)
This seminar is restricted to lower-division undergraduate students (freshmen and sophomores). The course introduces current biological topics. The topics vary with instructors and for each quarter. Examples of topics which may be discussed are: wildlife conservation, signalling within and between cells, mapping the human genome, etc. This course does not satisfy any requirement for the biology major, biology minor, or college general/education.

BILD 92. Professional Topics (1)
This seminar will introduce students to the various subdisciplines and their research methodology in the biological sciences. Emphasis will be on bioinformatics, neurophysiology, and biotechnology. Current research topics in the specialized areas in academe and industry will be discussed. The role and professional identity of biologists in research, consulting, government, management, and teaching will be reviewed. In addition, issues surrounding professional ethics will be discussed. (F)

BILD 94. Professional Issues in Bioinformatics (1)
This seminar will introduce undergraduate students, especially freshmen and sophomores, to a variety of issues and topics in the field of bioinformatics. (S)

BILD 95. Undergraduate Workshops (1)
The workshops will be restricted to lower-division undergraduates. The course will introduce students to the methods of scientific research and to a variety of research topics in the biological/biomedical sciences. Examples of topics are: Introduction to Scientific Research, AIDS, Medical and Social Aspects, Is the Mind the Same as the Brain, Wildlife Conservation.

UPPER-DIVISION

Biochemistry

BIBC 100. Structural Biochemistry (4)
The structure and function of biomolecules. Includes protein conformation, dynamics, and function; enzymatic catalysis, enzyme kinetics, and allosteric regulation; lipids and membranes; sugars and polysaccarides; and nucleic acids. Three hours of lecture and one hour of recitation. *Prerequisites: two quarters of organic chemistry (second quarter may be taken concurrently).* (Note: Students may not receive credit for both BIBC 100 and Chem. 114A.) (F,W,S)

BIBC 102. Metabolic Biochemistry (4)
Energy-producing pathways–glycolysis, the TCA cycle, oxidative phosphorylation, photosynthesis, and fatty acid oxidation; and biosynthetic pathways–gluconeogenesis, glycogen synthesis, and fatty acid biosynthesis. Nitrogen metabolism, urea cycle, amino acid metabolism, neucleotide metabolism, and metabolism of macromolecules. Three hours lecture and one hour recitation. *Prerequisites: two quarters of organic chemistry (second quarter may be taken concurrently).* Note: Students may not receive credit for both BIBC 102 and Chem. 114B.) (F,W,S)

BIBC 103. Biochemical Techniques (4)
Introductory laboratory course in current principles and techniques applicable to research problems in

biochemistry and molecular biology. Techniques include protein and nucleic acid purification; identification methods such as centrifugation, chromatography, and electrophoresis; immunological, spectrophotometric, and enzymatic methods. *Prerequisite: BILD 1.* Students may not receive credit for BIBC 103 after taking Chem. 112A. (F, W, S)

BIBC 105. Signal Transduction Laboratory (6)
A laboratory course involving the application of molecular, cellular, and biochemical techniques to explore signal transduction mechanisms in mammalian cells. The events between ligand-biding to a cell surface receptor and activation of gene transcription in the nucleus will be studied. *Prerequisites: BIBC 100, BIBC 103 and BIMM 100.*

BIBC 110. Physical Biochemistry (4)
The theory and applications of physical chemistry to biological molecules, process and systems and techniques used in biochemistry and physiology. Topics include reversible and irreversible thermodynamics, bioenergetics, energy coupling and transduction, solutions of macromolecules, sedimention, chromatography, electrophoresis, passive and active membrane transport, spectroscopy, and chemical kinetics. Three hours of lecture and one hour of recitation. *Prerequisites: calculus and organic chemistry.* (S)

BIBC 115. Computer Programming in Biology (4)
Use of computer programming in the analysis and presentation of biological data (computation of best value and standard deviation, histogram, least squares fitting procedure, simulation of genetic experiments, etc.) Students learn the C++ computer language and run their programs at the Computer Center. There are some visits to laboratories and hospitals to see applications of computers in biology and medicine. Three hours of lecture and about ten hours of homework per week; limited enrollment. *Prerequisite: upper-division standing or consent of instructor.* (**Note**: Students may not receive credit for both BIBC 115 and Chem. 134.)

BIBC 116 Evolution of Genes and Proteins (4)
The history of an organism can be found in its genome. analysis of the primary sequences will be used to recognize families of genes that arose by duplication and divergence. Topics include comparisons of amino acid sequences and three dimensional structures and range from the oldest and most widely distributed proteins to modem mosaics. Where possible, specific motifs and folds will be traced to their ancestral beginnings. *Prerequisites: BIBC 100, BIMM 100.* (W)

BIBC 120. Nutrition (4)
Emphasis is on the biochemical aspects of nutrition. The known functions of vitamins, minerals, fats, carbohydrates, and protein are discussed in terms of experiments in nutrition and an evaluation of the relation of the knowledge to nutrition in man. Three hours of lecture. *Prerequisite: BIBC 102 (may be taken concurrently).* (S)

BIBC 130 Marine Biochemistry (4)
Biochemical mechanisms of adaptation in organisms to the marine environment. Special emphasis will be on the effects of pressure, temperature, salinity, oxygen, and light on the physiology and biochemistry. *Prerequisites: BIBC 102 or consent of instructor.* (F)

Genetics, Cellular and Developmental Biology of Plants and Animals

BICD 100. Genetics (4)
An introduction to the principles of heredity in diploid organisms, fungi, bacteria, and viruses. Mendelian inheritance; population genetics; quantitative genetics; linkage; sex determination; meiotic behavior of chromosome aberrations, gene structure, regulation, and replication; genetic code. Three hours of lecture and one hour of recitation. *Prerequisite: BILD 1 or the equivalent.* (F,W,S)

BICD 101. Eucaryotic Genetics Laboratory (4)
This course emphasizes the principles of Mendelian inheritance and requires the student to apply both cytological and genetic analysis to the solution of problems in transmission genetics. One hour of lecture and seven hours of laboratory. *Prerequisite: BICD 100.* Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

BICD 110. Cell Biology (4)
The structure and function of cells and cell organelles, cell growth and division, motility, cell differentiation and specialization. Three hours of lecture and one hour of recitation. *Prerequisites: BIBC 100 or BIBC 102, and BICD 100.* (F,W,S)

BICD 111. Cell Biology Laboratory (4)
A laboratory course in the application of cellular techniques to biological problems. The establishment, growth, transformation, immortalization, and senescence of mammalian cells will be studied at the molecular and the cellular level. Ten hours of laboratory. In addition to the formal lab hours listed above, there will be an average of two hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisite: BICD 110 (may be taken concurrently); BIBC 103 is strongly recommended.* (F) Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course.

BICD 118. Pathways of Intracellular Protein Trafficking and Compartmentation (4)
This course will focus on various subcellular organelles, their function, protein traffic, disulfide bond formation, protein folding, assembly of macromolecular complexes, protein quality control, and cellular responses to misfolded proteins. The emphasis will be on experimental approaches and model systems for the analysis of these problems, and on the connection of these topics to human disease. Three hours of lecture and one hour of mandatory discussion of primary publications per week. Open to upper-division students only. *Prerequisites: BICD 110 and BIMM 100.* (W)

BICD 120. Fundamentals of Plant Biology (4)
An introduction to the biology of plants. Basic principles of plant anatomy, physiology, development, and diversity are covered as well as specialized topics, including plant genetic engineering, plant disease and stress, medicinal plants, plants and the environment, and sustainable agriculture. *Prerequisites: BILD 1 and 2.*

BICD 122. Plant Cellular and Molecular Biology (4)
The cellular and molecular basis of plant development, including plant hormones, signal transduction mechanisms, light and plant growth, plant microorganism interaction, plant transformation, genetic engineering of plants. *Prerequisite: BIBC 102 required.* (W)

BICD 123. Plant Molecular Genetics and Biotechnology Laboratory (6)
Techniques in plant cell and tissue culture, plant transformation, genetic selection and screening of mutants, host pathogen interactions, gene regulation, organelle isolation, membrane transport. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least eight hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: upper-division standing; BICD 120 strongly recommended.* Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (S)

BICD 130. Embryos, Genes, and Development (4)
Developmental biology of animals at the tissue, cellular, and molecular levels. Basic processes of embryogenesis in a variety of invertebrate and vertebrate organisms. Cellular and molecular mechanisms that underlie cell fate determination and cell differentiation. More advanced topics such as pattern formation and sex determination are discussed. Open to upper-division students only. Three hours of lecture and one hour of recitation. *Prerequisites: BICD 100, upper-division standing, BIBC 100 or BIBC 102; BICD 110 strongly recommended, BIMM 100 strongly recommended.* (W)

BICD 131. Embryology Laboratory (6)
Descriptive and experimental embryology of marine invertebrates and of vertebrates. One and one-half hours of lecture and ten hours of laboratory each week. In addition to the formal lab hours, there will be at least six and a half hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: BILD 1; BILD 2 or BIPN 100.* Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (F)

BICD 132. Molecular Basis of Development (4)
Explores the molecular mechanisms that underlie cell fate determination and cell differentiation during animal development. Emphasizes the action of key regulatory networks in directing developmental events in a variety of vertebrate and invertebrate systems. This course is open to upper-division students only. Three hours of lecture and one hour of recitation. *Prerequisites: BIMM 100, upper-division standing.*

BICD 133. Developmental Biology Lab (6)
Explore fundamentals of embryonic development using advanced techniques in light and fluorescent microscopy and by analyzing developmental mutants. Course includes selecting and knocking out genes of interest followed by phenotypic analysis. Invertebrate and vertebrate organisms covered. *Prerequisites: BILD 1; BILD 2 or BIPN 100; BIMM 100 and BIMM 110 are recommended.* Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course.

BICD 134. Human Reproduction and Development (4)
This course is addressed to the development of the human sexual system, including gametogenesis, fertil-

ization, and embryo implantation. Emphasis is placed on the physiology of reproductive functions. Three hours of lecture and one hour of discussion. *Prerequisites: BIBC 102 and BICD 100.* (F)

BICD 136. AIDS Science and Society (4)
An introduction to all aspects of the AIDS epidemic. Topics will include the epidemiology, biology, and clinical aspects of HIV infection, HIV testing, education and approaches to therapy, and the social, political, and legal impacts of AIDS on the individual and society. In order to count for their major, biology majors must take the upper-division course, BICD 136. *Prerequisites: BILD 1, BILD 2 recommended.* (F)

BICD 140. Immunology (4)
Formation and function of the mammalian immune system, molecular and cellular basis of the immune response, infectious diseases and autoimmunity. *Prerequisites: BICD 100, BIMM 100. BIBC 100 recommended.* (F,W)

BICD 142. Topics in Immunology (4)
This course covers selected topics in molecular and cellular immunology at a more advanced level, and is a sequel to Immunology (BICD 140). *Prerequisites: BICD 140 and upper-division standing.* (S)

BICD 145 Laboratory in Molecular Medicine (4)
This course focuses upon a molecular and immunological approach to study problems in modern medical research. The emphasis will be on novel approaches in medicine, including lymphocyte biology, cancer biology, and gene transfer. *Prerequisites: BIBC 103, BIMM 100.* Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course.

BICD 150. Endocrinology (4)
Topics are normal function and diseases of the major hormone systems of the body including the hypothalamus/pituitary axis, the thyroid gland, reproduction and sexual development, metabolism and the pancreas, bone and calcium metabolism, and the adrenal glands. *Prerequisite: BIPN 100 (may be taken concurrently).* (F)

BICD 162. Critical Reading and Writing in the Biological Sciences (4)
Primary literature readings in the field of cell transport on how to approach a scientific paper, how to interpret results, and how to write a paper that summarizes scientific research. *Prerequisites: Chem. 140A, 140B; either BIBC 100 or BIBC 102; BIMM 100; BICD 110 is recommended; one laboratory course (BIBC 103 or BIMM 101 or BIMM 121 or BIPN 105) or other example of research experience (BISP 199 or research experience in industry).* (F)

BICD 170. Topics in Human Genetics (4)
An advanced course covering aspects of human genetics in detail and using papers from the scientific literature as the major source of information. A review of basic genetics as applied to the human species is followed by the consideration of recent genetic insights into a number of human conditions which illustrate the principles covered in the first part of the course. *Prerequisites: BICD 100 (may not be taken concurrently), BIMM 100 is strongly recommended.* (S)

BICD 180. Genetics of Model Organisms (4)
Survey of various organisms used in current biological/biomedical research. Biology faculty experts discuss organisms used in their research, outline history as genetic models, tools used for laboratory study, and contributions to the wider understanding of biological systems. *Prerequisite: BICD 100.* (S)

Ecology, Behavior, and Evolution

BIEB 100. Biometry (4)
Application of statistics in biological problems. Topics: parametric statistics, (t-test, correlation, regression, ANOVA), non-parametric statistics resampling methods, experimental design. Mandatory homework to apply theory using statistical Macintosh-based programs. Instructor conducts mandatory two-hour discussion session in computer lab. Three hours of lecture and two hours of laboratory section. *Prerequisite: BILD 3 recommended.* (F,W)

BIEB 102. Introductory Ecology-Organisms and Habitat (4)
This course emphasizes principles shaping organisms, habitats, and ecosystems. Topics covered include population regulation, physiological ecology, competition, predation, and human exploitation. This will be an empirical look at general principles in ecology and conservation with emphasis on the unique organisms and habitats of California. *Prerequisite: BILD 3 or equivalent.* (W)

BIEB 121. Ecology Laboratory (6)
A laboratory course to familiarize students with ecological problem solving and methods. Sections will use the Macintosh computer and also perform outdoor field work. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: BIEB 100.* (S)

BIEB 126. Plant Ecology (4)
This course begins with an introduction to plant population biology including whole-plant growth and physiology. We then focus on three classes of ecological interactions: plant-plant competition, plant-herbivore coevolution, and plant reproductive ecology including animal pollination and seed dispersal. *Prerequisite: BILD 3.* (S)

BIEB 128. Insect Ecology (4)
This course begins with a survey of insect diversity and phylogenetic relationships. We then address ecological issues including thermal ecology, population dynamics (including outbreaks), movement and migration, competition, predation, herbivory, parasitism, insect defense, mimicry complexes, and sociality. *Prerequisite: BILD 3 or equivalent.* (W)

BIEB 130. Introductory Marine Ecology (4)
An introduction to the marine environment–its physics and chemistry, the organisms which live there, and the ecological processes affecting the distributions and abundances of these organisms. *Prerequisites: BILD 3, high school physics, and chemistry.*

BIEB 131. Marine Invertebrate Ecology Laboratory (6)
A laboratory course introducing students to marine ecology. Students will participate in outdoor fieldwork and work in the laboratory gathering and analyzing ecological data. We will focus on ecological communities in estuary, sandy beach, and rocky intertidal habitats. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisite: BILD 3; BIEB 100.* (W)

BIEB 132. Introduction to Marine Biology (4)
Overview of marine organisms and their adaptations to sea life. Selected examples of physiological, behavioral, and evolutionary adaptations in response to the unique challenges of a maritime environment. *Prerequisite: BILD 3.* (W)

BIEB 134. Introduction to Biological Oceanography (4)
Basis for understanding the ecology of marine communities. The approach is process-oriented, focusing on major functional groups of organisms, their food-web interactions and community responses to environmental forcing, and contemporary issues in human and climate influences. *Prerequisite: upper-division standing; BILD 3 is recommended.* (S)

BIEB 140. Biodiversity (4)
An introduction to the patterns of geographic distribution and natural history of plants and animals living in terrestrial and marine ecosystems. We will explore: ecological and evolutionary processes responsible for generating and maintaining biological diversity; and the nature of extinction both in past and present ecosystem. *Prerequisite: BILD 3.* (S)

BIEB 144. Quantitative Ecology (4)
This course introduces students to the methods and mathematical and computational tools used to make quantitative predictions of outcomes for ecological systems. Subjects covered include: stage-structured population growth; population regulation; the exploitation of natural resources; predator-prey and host/parasite dynamics; competition; and metapopulation dynamics. *Prerequisite: BILD 3 or equivalent and BIEB 100.*

BIEB 150. Evolution (4)
Evolutionary processes are discussed in their genetic, historical, and ecological contexts. Microevolution, speciation, macroevolution, and the evolution of adaptations. Three hours of lecture and one hour of recitation. *Prerequisite: BILD 3 or equivalent.* (W)

BIEB 154. Molecular Evolution (4)
This course deals with the evolution of genes and the molecules they encode. The role of mutation, selection, and drift at the molecular level are discussed. Molecular phylogenies, jumping genes, viral evolution, and searches for molecular homologies are a few of the topics covered. Three hours of lecture and one hour of discussion. *Prerequisites: BIBC 102, BICD 100, and BIMM 100 recommended.* (S)

BIEB 156. Population Genetics (4)
The first two-thirds of the course will cover the basic theory of population genetics, including selection, genetic drift, mutation, and migration. The last one-third of the course provides an introduction to quantitative genetics, including measurements of heritability and selection. The theory is illustrated throughout with biological examples. *Prerequisite: BICD 100. BIEB 100 is recommended.* (F)

BIEB 164. Behavioral Ecology (4)
A survey of the patterns of social behavior in animals and a discussion of the ecological principles underlying the evolution of animal societies. Three hours of lecture and one hour of discussion. *Prerequisite: BILD 3 recommended.* (W)

BIEB 165. Behavioral Ecology Laboratory (6)
This course will deal with quantitative methods for the study of animal social behaviors. Topics include spatial patterns, mating systems, and cooperation. The course

includes both lab exercises and field trips. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: BIEB 100 and BIEB 164. (BIEB 164 may be taken concurrently.)* (W)

BIEB 166. Animal Behavior and Communication (4)
An integrated approach to animal behavior focusing on mechanisms of acoustic, visual, and olfactory communication. Course covers ethology and the genetics and neurobiology of behavior; orientation and navigation; and signal origins, properties, design, and evolution. *Prerequisite: BILD 3 recommended, but not required; Physics 1A or equivalent.* (S)

BIEB 167. Animal Communication Laboratory (6)
Laboratory exercises will introduce students to quantitative methods of visual, auditory, and olfactory signal analysis and to lab and field studies of animal signalling. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least nine hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisites: BIEB 100 and BIEB 166. (BIEB 166 may be taken concurrently.)*

BIEB 170. Applied Remote Sensing (4)
Provides a working knowledge of remote sensing with emphasis on understanding the underlying concepts involved in the interaction of the electromagnetic spectrum and the natural world. May be taken only as part of the White Mountain Research "Integrated Methods in Ecology." *Prerequisites: consent of instructor; 3.0 GPA; departmental stamp.* For more information, consult http://www.wmrs.edu

BIEB 171. Landscape Analysis (4)
Introduces perspectives on biological scales and levels of organization on how these concepts interrelate, and how they can be quantified and used for effective management. May be taken only as part of the White Mountain Research "Integrated Methods in Ecology." *Prerequisites: consent of instructor; 3.0 GPA; departmental stamp.* For more information, consult http://www.wmrs.edu

BIEB 172. Scientific Inquiry in Ecosystem Analysis (4)
Designed to integrate remote sensing and landscape analysis with policy and management of natural resources in the western U.S. to foster student professional development. May be taken only as part of the White Mountain Research "Integrated Methods in Ecology." *Prerequisites: consent of instructor; 3.0 GPA; departmental stamp.* For more information, consult http://www.wmrs.edu

BIEB 176. Conservation and the Human Predicament (4)
(Cross-listed with ANTH/BIO 132; however, biology majors must take the course as Biology 176.) An interdisciplinary discussion of the human predicament, the biodiversity crisis, and the importance of biological and environmental conservation in sustaining future societies. We explore the consequences of habitat destruction and species extinctions on the biosphere and human welfare. Three hours of lecture and one hour of discussion. *Prerequisite: upper-division standing and BILD 3 or consent of instructor.* (S)

BIEB 178. Principles of Conservation Ecology (4)
Biodiversity will ultimately be preserved in "islands" of natural habitat. The principles of community ecology, island biogeography, and metropopulation dynamics will underlay the management decisions regarding the number, size, and locations of such reserves. Case studies are emphasized. *Prerequisite: BIEB 100.*

BIEB 179. Conservation Biology Laboratory (6)
Students will utilize, modify, and create computer software to solve conservation biology management problems. Topics included are pedigree analysis, stochastic population dynamics, community structure, and island biogeography. Two hours of lecture and eight hours of laboratory each week. In addition to the formal lab hours, there will be at least seven hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. *Prerequisite: BIEB 178 or BIEB 180 (may be taken concurrently).*

BIEB 180. Principle of Conservation Genetics (4)
Species preservation depends on the maintenance of genetic diversity, which involves many aspects of population bahavior. Inbreeding, heterozygosity loss, genetic divergence, and pedigree analysis are emphasized. Case studies involve zoo and reserve managment.

Molecular Biology, Microbiology

BIMM 100. Molecular Biology (4)
Molecular basis of biological processes, emphasizing gene action in context of entire genome. Chromosomes and DNA metabolism: chromatin, DNA replication, repair, mutation, recombination, transposition. Transcription, protein synthesis, regulation of gene activity. Procaryotes and eucaryotes *Prerequisites: BIBC 100 or BIBC 102, BICD 100.* (**Note**: Students may not receive credit for both BIMM 100 and Chem. 114C.) (F,W,S)

BIMM 101. Recombinant DNA Techniques (4)
Theory and practice of DNA cloning. This course aims at providing practical knowledge in the field of genetic engineering. Techniques covered include construction of plasmid and phage DNA libraries, screening libraries for desired DNA clones by hybridization methods, plasmid and phage DNA preparation, and DNA sequencing. Two hours of lecture, one hour of discussion, and eight hours of laboratory. *Prerequisite: BIMM 100.* Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. **Note**: Students may not receive credit for both BIMM 101 and Chem. 112B. (F,W,S)

BIMM 103. Modern Techniques in Molecular Biology (4)
This course focuses upon a combined biochemical and molecular genetic approach to study current biological problems. Techniques include amplification of rare nucleic acids with the polymerase chain reaction, purification and characterization of a eukaryotic protein expressed in bacteria, in vitro mutagenesis of DNA. One hour of lecture and eleven hours of laboratory. *Prerequisites: BIBC 103, BIMM 100.* Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course.

BIMM 108. Chromatin Structure and Dynamics (4)
Chromatin is the natural state of DNA in the eukaryotic nucleus. Chromatin structure, nucleosome assembly, chromatin remodeling by ATP-dependent motor proteins, histone modifications and the histone code, heterochromatin, and the influence of chromatin upon DNA-directed processes in the nucleus will be discussed. *Prerequisite: BIMM 100.* (S)

BIMM 110. Molecular Basis of Human Disease (4)
An examination of the molecular basis of human diseases. Course emphasizes inherited human disorders, and some important diseases caused by viruses. Focus on the application of genetic, biochemical, and molecular biological principles to an understanding of the diseases. Three hours of lecture. Course restricted to upper-division biology majors. *Prerequisites: BICD 100; BIBC 102; BIMM 100.* (S)

BIMM 112. Regulation of Gene Activity in Eucaryotic Cells (4)
This course explores problems in the regulation of gene activity in eucaryotic cells approached at the molecular level. The course includes the organization, structure, transcription, and regulation of eucaryotic genes; mechanism of hormonal regulation in controlling gene activity; induction of gene expression in eucaryotic cells; role of signal transduction in controlling gene expression; and regulation of gene activity during differentiation in developing systems. Examples are taken from eucaryotic microorganisms, invertebrates, as well as mammalian and other vertebrate systems. Three hours of lecture and one hour of discussion. *Prerequisite: BIMM 100.* (S)

BIMM 114. Virology (4)
An introduction to eucaryotic virology, with emphasis on animal virus systems. Topics discussed include the molecular structure of viruses; the multiplication strategies of the major virus families; and viral latency, persistence, and oncology. Three hours of lecture and one hour of discussion. *Prerequisite: BIMM 100.* (S)

BIMM 116. Circadian Rhythms—Biological Clocks (4)
Examples and fundamental properties of the daily biological clock in humans, animals, and microbes. Experimental approaches employed to understand how organisms keep time and how this applies to human health. *Prerequisite: BILD 1 or Psych. 106 or consent of instructor.* (F)

BIMM 118. Pharmacology (4)
Basics of pharmacology such as drug absorption, distribution, metabolism, and elimination. Concepts in toxicology and pharmacognosy are used to survey the major drug categories. *Prerequisites BIBC 100 or BIBC 102; BIPN 100.* (S)

BIMM 120. Bacteriology (4)
A discussion of the structure, growth, molecular genetics, and physiology of procaryotic microorganisms, with emphasis on the diverse activities of bacteria and on the interaction of various bacterial species with their environment. Three hours of lecture and one hour recitation. *Prerequisites: organic chemistry; BIBC 100 or BIBC 102 (may be taken concurrently).* (F,W)

BIMM 121. Laboratory in Microbiology (4)
This course emphasizes fundamental principles of microbiology. Studies with bacteria include comparative morphology and physiology; pure culture techniques; bacterial growth; spore germination; and bacteriophage infection, replication, and release. Additional studies on antibiotics and the use of bioassays are included. One hour of demonstration and seven hours of laboratory. *Prerequisites: BIMM 120, may be taken concurrently, and consent of instructor.* Attendance at the first lecture/lab is required. Nonattendance will result in the student's being dropped from the course roster. It is the student's responsibility

to officially drop the course at the Registrar's Office. (F,W,S)

BIMM 122. Microbial Genetics (4)
Organization and function of procaryotic genetic systems including sex factors, transduction, transformation, phage genetics, transposons, genetic engineering. Three hours of lecture. *Prerequisites: BIMM 100, BICD 100, or consent of instructor.* (W)

BIMM 124. Medical Microbiology (4)
This course covers basic principles and detailed aspects of microbial infectious diseases. Biochemical properties underlying microbial spread, host antimicrobial and inflammatory response, immunity, and recovery are emphasized. Emphasis is placed upon viral and bacterial diseases, including molecular principles of pathogenesis, of host immune responses, of drug resistance, and of viral and plasmid replication. Three hours of lecture and one hour of discussion. *Prerequisites: BIMM 100 and 120, BICD 140 is recommended.* (W)

BIMM 126. Environmental Microbiology (4)
The role of microorganisms in environmental processes; fundamental aspects of Microbiology, interaction of microbes with plants, animals and other microbes, biogeochemical cycles, pollution, water quality, mineral recovery, biomass energy production, microbial control of pest and disease, genetic exchange. *Prerequisites: BIBC 102 (may be taken concurrently), and BIMM 120 recommended or consent of instructor.* (W)

BIMM 127. Environmental Microbiology Laboratory (4)
This course emphasizes advanced techniques and theory in environmental microbiology. Students will perform experiments concerning: (a) enrichment of diverse microbes, (b) microbial enumeration and identification, (c) metabolic and physiochemical adaptations, and (d) biotechnology, along with an independent project. *Prerequisites: BIMM 121 and BIMM 126 or consent of instructor.*

BIMM 130. Microbial Physiology (4)
Prokaryotic microbial physiology will be discussed primarily from a biochemical standpoint with emphasis on mechanism. Topics will vary from year to year but will include the following themes: Central metabolism, bioenergetics, biosynthesis, regulation, differentiation, prokaryotic structure-function relationships. *Prerequisites: BIBC 100 or BIBC 102 or equivalent.* (S)

BIMM 132. Molecular Biology of Human Retroviruses (4)
Replication cycle and gene regulation of HIV. Molecular approaches to therapy and vaccines. Three hours of lecture. *Prerequisite: BIMM 100.* (S)

BIMM 134. Biology of Cancer (4)
This course covers basic processes of transformation and tumor formation in a two-part format. The first section is focused on molecular and cellular mechanisms of carcinogenesis. The second section discusses tumor pathology and metastasis. Open to upper-division students only. *Prerequisites: BICD 110 and BIMM 100.*

BIMM 140. Introduction to Bioinformatics (4)
Introduction to basic methods used in bioinformatics and computational biology. Survey of methods used in computational analysis of DNA such as sequence assembly, sequence comparison, gene modeling, and sequence databases. Survey methods used in the computational analysis of protein sequences such as alignments, motif and pattern recognition, family classification, and protein structure prediction. Survey of organismic database methods. Emphasis is on a broad survey of current approaches with an introduction to statistical and computational techniques for analyzing, comparing, and validating methods. *Prerequisites: BIBC 100 or 102, BIMM 100, and BICD 100. (BIMM 100 may be taken concurrently.)*

BIMM 141. Bioinformatics Laboratory (4)
Laboratory course giving hands-on exposure to topics covered in BIMM 140. Survey of methods used in computational analysis of DNA such as sequence assembly, sequence comparison, gene modeling, and sequence databases. Survey of methods used in the computational analysis of protein sequences such as alignments, motif and pattern recognition, family classification, and protein structure prediction. *Prerequisites: BIBC 100 or 102, BIMM 100, BICD 100, and BIMM 140.*

BIMM 142. Advanced Bioinformatics (4)
Continuation of BIMM 140 emphasizing advanced topics in bioinformatics and computational biology. Emphasis is on computational approaches at the level needed to design and implement new approaches. Topics: computational and statistical approaches to computational biology including probablistic models, machine learning approaches, and using federated resources to develop integrated approaches to bioinformatic problems. *Prerequisites: BIBC 100 or 102, BIMM 100, BICD 100, and BIMM 140.*

BIMM 150. Post-Genomics Biology (2)
This course will focus on large-scale analysis of post-genomics biological systems. Students will be introduced to methods for analyzing changes in gene expression, identifying protein-protein interactions, screening for pathway inhibitors, characterizing multi-protein complexes, and probing protein localization and function. *Prerequisite: consent of instructor.* (W)

BIMM 181. Molecular Sequence Analysis (4)
This course covers the analysis of nucleic acid and protein sequences, with an emphasis on the application of algorithms to biological problems. Topics include sequence alignments, database searching, comparative genomics, and phylogenetic and clustering analysis. Pairwise alignment, multiple alignment, DNA sequencing, scoring functions, fast database search, comparative genomics, clustering, phylogenetic trees, gene finding/DNA statistics. This course open to bioinformatics majors only. *Prerequisites: CSE 100 or Math. 176, CSE 101 or Math. 188, BIMM 100 or Chem. 114C.*

BIMM 182. Biological Databases (4)
This course provides an introduction to the features of biological data, how that data are organized efficiently in databases, and how existing data resources can be utilized to solve a variety of biological problems. Relational databases, object oriented databases, ontologies, data modeling and description, survey of current biological database with respect to above, implementation of database focused on a biological topic. This course open to bioinformatics majors only. *Prerequisite: CSE 100 or Math 176.*

BIMM 184. Computational Molecular Biology (4)
This advanced course covers the application of machine learning and modeling techniques to biological systems. Topics include gene structure, recognition of DNA and protein sequence patterns, classification, and protein structure prediction. Pattern discovery, hidden Markov models/support vector machines/neural network/profiles, protein structure prediction, functional characterization or proteins, functional genomics/proteomics, metabolic pathways/gene networks. This course open to bioinformatics majors only. *Prerequisite: BIMM 181 or BENG 181 or CSE 181, BIMM 182 or BENG 182 or CSE 182.*

BIMM 185. Bioinformatics Laboratory (Advanced) (4)
This course emphasizes the hands-on application of bioinformatics methods to biological problems. Students will gain experience in the application of existing software, as well as in combining approaches to answer specific biological questions. Sequence alignment, fast database search, profiles and motifs, comparative genomics, gene finding, phylogenetic trees, protein structure, functional characterization of proteins, expression anaylysis, computational proteomics. This course open to bioinformatics majors only. *Prerequisite: two courses out of: BIMM 181 or BENG 181 or CSE 181, BIMM 182 or BENG 182 or CSE 182, BENG 183, BIMM 184 or BENG 184 or CSE 184.*

Animal Physiology and Neuroscience

BIPN 100. Mammalian Physiology I (4)
This course introduces the concepts of physiological regulation, controlled and integrated by the nervous and endocrine systems. It then examines the muscular, cardiovascular, and renal systems in detail and considers their control through the interaction of nervous activity and hormones. Three hours of lecture and one hour of discussion. *Prerequisites: BILD 1; BILD 2.* (F,W,S)

BIPN 102. Mammalian Physiology II (4)
This course completes a survey of organ systems begun in BIPN 100 by considering the respiratory and gastrointestinal systems. Consideration is given to interactions of these systems in weight and temperature regulation, exercise physiology, stress, and pregnancy and reproduction. Three hours of lecture and one hour of section per week. *Prerequisite: BIBC 102; BIPN 100.* (F,W,S)

BIPN 105. Animal Physiology Lab (6)
Experiments are performed on membrane physiology; nerve muscle function; cardiovascular physiology; respiratory, gastrointestinal and renal physiology. Subjects include experimental animals and humans. *Prerequisite: BIPN 100 (may be taken concurrently).* Three hours of lecture and ten hours of laboratory each week. In addition to the formal lab hours, there will be at least eight hours in which students will be required to work in the class laboratory to complete experiments and prepare for presentations. Attendance at the first lecture/lab is required. Non-attendance will result in the student's being dropped from the course roster. It is the student's responsibility to officially drop the course. (F,W,S)

BIPN 106. Comparative Physiology (4)
This course examines the physiological adaptation of animals, invertebrates and vertebrates, to their particular environmental and behavioral niches. Structural, functional, and molecular adaptions of the basic organ systems are discussed. *Prerequisites: BILD 2, Chem. 6A-B-C or Chem. 7A-B-C. BILD 3 is recommended.* (W)

BIPN 108. Integrative Biology of Exercise (4)
Course will integrate the organ system biology learned in Mammalian Physiology I and II through the study of the human body's response to exercise. Specifically, the multi-organ system reaction to both acute and chronic exercise will be studied from the functional to the basic mechanistic level. Thus, the role

of exercise in both health and disease will be addressed. *Prerequisites: BIPN 100; BIPN 102.* (S)

BIPN 140. Cellular Neurobiology (4)
This course covers the biophysics of the resting and active membranes of nerve cells. It also covers the mechanisms of sensory transduction and neuromodulation, as well as the molecular basis of nerve cell function. *Prerequisites: BILD 1, 2; BIBC 100 or 102 recommended.* (F)

BIPN 142. Systems Neurobiology (4)
This course covers integrated networks of nerve cells, including simple circuits like those involved in spinal reflexes. We will study how information and motor output is integrated and processed in the brain. We will also discuss higher-level neural processing. *Prerequisites: BILD 1, 2, and BIBC 100 or 102.* (W)

BIPN 144. Developmental Neurobiology (4)
Cellular and molecular basis of cell determination, neurite outgrowth, specificity, synaptogenesis, and cell death in the brain. *Prerequisites: BILD 1, 2, and BIBC 100 or 102, BICD 100, BIPN 142 recommended.* (S)

BIPN 145. Neurobiology Laboratory (4)
Basic principles of nerve and muscle physiology will be taught through weekly exercises and individual projects. One hour of lecture and nine hours of laboratory each week. *Prerequisite: BIPN 140 or BIPN 142 or BIPN 146 (may be taken concurrently).* (F)

BIPN 146. Computational Neurobiology (4)
An exploration of computational brain models, including biophysical models of single neurons, small neural circuits, and larger scale network models. *Prerequisite: BILD 12 or BIPN 140 or Psych. 106 or Cog. Sci. 107 recommended.* (S)

BIPN 148. Cellular Basis of Learning and Memory (4)
Cellular and molecular mechanisms that underlie learning and memory. Synapse formation and synaptic plasticity, neurotransmitter systems and their receptors, mechanisms of synaptic modification, and effect of experience on neuronal connectivity, and gene expression. *Prerequisites: BILD 1; BILD 2; BIBC 100 (may be taken concurrently).* (W)

Special Courses

BISP 190. Advanced Biology Seminars for Seniors (2)
Experts in diverse areas of biology from major universities in the U.S. and abroad will describe current research activities being conducted in their laboratories. Relevant readings will be assigned. P/NP grades only. *Prerequisites: seniors only; concurrent enrollment in BISP 199 or consent of instructor.* (F,W,S)

BISP 195. Introduction to Teaching in Biology (4)
Introduction to the teaching of the basic course in biology. A student under the direction of the instructor of the course is assigned one class section and will meet one time per week with the section. A student is required to attend the course lecture and meet with the instructor of the course at least one time per week. Limited to upper-division students who have a B average or higher. Three hours' lecture. (P/NP grades only.) *Prerequisites: consent of instructor and approval of department chair.* (**Note**: Applications for a BISP 195 are to be submitted to the Division of Biological Sciences by the end of the sixth week of the quarter preceding the quarter in which the BISP 195 will be completed.) (F,W,S) This course may be counted as one of the upper-division electives for a biology major. (F,W,S)

BISP 196. Honors Thesis in Biology (4)
Senior thesis research program. Research is conducted under the supervision of a biology faculty member. This one-year program is taken in addition to the major requirements for graduation. Upon satisfactory completion of the program, students will receive "Distinction in Biology" on their transcripts. *Prerequisites: senior standing, 3.7 GPA or above; prior selection for the program by a faculty member and approval by program coordinator. A department stamp will be used to monitor during registration.* (F,W,S)

BISP 197. Biology Internship Program (4)
Under the joint supervision of a biology faculty adviser and a selected industry mentor, the student will conduct independent research on a problem in an industrial biotech laboratory. The student will gain insight into industry research and practical biotech experience. *Prerequisites: BIBC 103 or BIMM 101, BIBC 102, BICD 100, BIMM 100, overall GPA 3.0, and consent of the biology faculty coordinator.* (W,S)

BISP 199. Independent Study for Undergraduates (4)
Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) *Prerequisites: overall UCSD GPA of at least 3.0, minimum of ninety units, consent of instructor, and approval by division chair.* (Note: Applications for a BISP 199 must be submitted to, and approved by, the Division of Biological Sciences prior to the eighth week of the quarter preceding the quarter in which the BISP 199 will be completed.) (F,W,S) This course may be counted as one of the upper-division electives for a biology major, providing that no other special studies courses have already been counted toward the major.

GRADUATE

BGGN 204. Topics in Community and Population Ecology (3)
This course teaches a different topic each quarter on the theoretical or conceptual side of community and population ecology. Students will read materials in depth, attend weekly discussions, and explore theories and models with statistical, analytical, and algorithmic tools of the trade. *Prerequisite: graduate standing or consent of instructor.* (S/U grades only) (Quarter offered varies and course is not offered every year.)

BGGN 206. Topics in Biophysics and Physical Biochemistry (4)
Selection of topics of current interest. Examples: primary processes of photosynthesis; membrane biophysics; applications of physical methods to problems in biology and chemistry, e.g., magnetic resonance, X-ray diffraction, fluctuation spectroscopy, optical techniques (fluorescence, optical rotary dispersion, circular dichroism). Topics may vary from year to year. *Prerequisite: consent of instructor.* (S/U grades permitted.) This course is cross-listed with Physics 206 and Chemistry 206. (Quarter offered varies, and course is not offered every year.)

BGGN 212. Special Topics in Microbiology (3)
Recent developments in prokaryotic and eukaryotic microbial research. Topics vary from year to year but may include the following subjects: the molecular basis of (a) sex determination, expression, and interconversion; (b) differentiation, morphogenesis, and programmed death; (c) transcriptional and metabolic regulation; and (d) chemical macromolecular and energy-mediated reception, transmission, and response processes. The main thesis of the course is that examples of complex regulatory phenomena in higher organisms can be found in single celled organisms. This course is open to enrollment by undergraduates. *Prerequisites: BIBC 102 and BICD 100.* (S/U grades permitted.)

BGGN 213. Topics in Conservation Biology (3)
Provides in depth coverage of topics in population genetics and ecology, community ecology, biogeography, human ecology, and ecosystem management relevant to conservation biology. Topics vary from year to year and have included pedigree analysis, inbreeding depression, minimum viable population size, problems of overabundance, fragmented populations, keystone species, in-situ and ex-situ conservation techniques. One two-hour meeting weekly. *Prerequisite: graduate standing or consent of instructor.* (S/U/grades only.) (S)

BGGN 215. Phylogenetics (3)
This course provides the theoretical and practical basis of phylogenetic analysis (the estimation of phylogenetic trees). Students will understand the assumptions made in phylogenetic analysis, be able to identify the strengths and weaknesses of various methods, and perform a phylogenetic analysis on DNA sequence data. *Prerequisite: one semester of calculus is recommended.* (S)

BGGN 218. Post-Genomics Biology (2)
This course will focus on large-scale analysis of post-genomics biological systems. Students will be introduced to methods for analyzing changes in gene expression, identifying protein-protein interactions, screening for pathway inhibitors, characterizing multi-protein complexes, and probing protein localization and function.

BGGN 219. Classic Papers in Genetics (3)
The course explores, through classic papers, how genetic approaches in the distant and near past have opened up novel areas of biology. The goal of the course is to teach students the type of approach that allowed these researchers to break out of old paradigms and form new ones of their own based on genetic pathfinding. (W)

BGGN 220. Graduate Molecular Biology (6)
Provides a broad, advanced-level coverage of modern molecular biology for first-year graduate students. Topics include prokaryotic and eukaryotic gene structure and regulation, chromatin structure, DNA replication, translation, mechanisms of transcription, and an introduction to viruses. OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (F)

BGGN 221. Graduate Protein Biochemistry (4)
Topics include general aspects of protein structure and biochemical approaches to the isolation and study of proteins. This course also covers the relationship between the structure and function of selected proteins. Detailed discussion of modern biophysical methods to study protein-protein interactions will be included. *BGGN 220 is a co-requisite.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) *Corequisite: BGGN 220.* (F)

BGGN 222. Graduate Cell Biology (6)
A coverage of modern cell biology for first year graduate students. There is an up-to-date discussion of topics such as: structure and function of membranes; ion pumps, ion channels, transmembrane signalling; receptor mediated endocytosis; protein targeting; the

role of RER and Golgi apparatus; the biosynthesis of intracellular organelles in animal and plant cells; the cytoskeleton, motility, molecular motors, cell-cell interactions, mitosis; and the control of cell division. Also included are extensive coverage of cell signalling mechanisms and discussions on molecular approaches to cell biology. *Prerequisites: BGGN 220 and 221.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (W)

BGGN 223. Graduate Genetics (6)
Provides a broad and extensive advanced-level coverage of molecular and formal aspects of genetics for first-year graduate students. Topics covered include: bacterial genetics, recombination in prokaryotes and eukaryotes, mammalian somatic-cell genetics, developmental genetics, sex determination, dosage compensation, and immunogenetics. Extensive coverage of the use of model systems like Drosophila and C. elegans is included. General and specific aspects of cellular signalling mechanisms will be covered. *Prerequisites: BGGN 220, 221 and 222.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (S)

BGGN 224. Graduate Neurobiology (4)
Course covers modern molecular, cellular, developmental, and physiological aspects of neurobiology. Extensive discussion of original research articles will be included. *Prerequisites: BGGN 220 and 221.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (F)

BGGN 225. Graduate Immunology (4)
The course is devoted to immunology and is organized as a combined lecture-tutorial course stressing classical as well as current literature. Each week will compose an independent section. Topics will include cellular interactions involved in the immune response and the molecular biology unique to lymphoid factor and receptors. *Prerequisites: BGGN 220 and 221.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (S)

BGGN 226. Graduate Animal Virology (4)
This course consists of a review of fundamental concepts together with an in-depth analysis of the structure, genetics, multiplication and oncogenicity of animal viruses. Particular emphasis will be given to the DNA and RNA tumor viruses. The format of this section includes lectures and discussion of selected papers. *Prerequisites: BGGN 220 and 221.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (W)

BGGN 227. Graduate Topics in Plant Biology (4)
This course covers advanced topics in plant biology in the areas of molecular genetic developmental, and physiological biology. We will discuss plant-microbe interactions, transposable elements, protein trafficking, ion transport, and organ development. The format of this section includes lectures and discussion of selected papers. *Prerequisites: BGGN 220, 221, and 222.* OPEN ONLY TO STUDENTS ENROLLED IN A GRADUATE DEGREE PROGRAM. (Letter grades only.) (W)

BGGN 228. Graduate Developmental Biology (4)
This course covers graduate level lectures on developmental biology, emphasizing the use of genetically tractable model systems. Discussion of recent research articles is an integral aspect of this course. Students are introduced to classical experiments and given detailed coverage of recent fundamental findings in developmental biology. *Prerequisites: BGGN 220 and 221.* (Letter grades only.) (S)

BGGN 229. Graduate Oncogenes (4)
This course provides detailed coverage of the cellular and molecular basis of cellular transformation and oncogenesis. There will be extensive discussion on the role of oncogenes and their cellular counterparts. The course also provides in-depth analysis of intracellular signal transduction mechanisms. *Prerequisites: BGGN 220, 221, and 222.* (Letter grades only.) (S)

BGGN 230. Graduate Signal Transduction (4)
The course will introduce students to a variety of signal transduction pathways and their function in the regulation of cellular processes. Special emphasis will be given to signaling cascades regulating immunological responses and alterations of signaling pathways during oncogenesis. (W)

BGGN 232. Human Retrovirology (3)
This course consists of both lectures and journal reviews on replication, genetic regulation and pathogenesis of HIV and TLV, and on recent developments of vaccine and therapy against AIDS. Open to upper-division students with consent of instructor. *Prerequisite: BIMM 100 or equivalent.* (S/U grades only) (S)

BGGN 233. Cellular Immunology (3)
This course covers the molecular and cellular events in the humoral and cellular response to antigen, transplantation biology, the structure and function of the major histocompatibility gene complex, the T-cell receptor, lymphokines, and the induction of immunological tolerance. It serves as the second course in a two-part sequence. May be taken by undergraduates who have taken Part 1 (BICD 140) and by graduate students (S/U grades only.) (Quarter offered varies and course is not offered every year.)

BGGN 235. Biology and Biochemistry of Cancer Cells (2)
This course covers recent advances in cell biology, biochemistry, immunology, and virology as they relate to cancer cells and their interaction with the host. Cancer research specialists from outside will be brought in to discuss the most recent evidence and interpretations in key areas of cancer research. This course meets two hours per week for lecture and discussion. It will be at an advanced graduate level but open to a limited number of seniors (with permission of instructor) on a P/NP basis. (S/U grades only) (Quarter offered varies, and course is not offered every year.)

BGGN 236. Essentials of Glycobiology (2)
Molecular glycobiology encompasses studies of the structure, biosynthesis, and biological roles of oligosaccharide units on glycoconjugates. This course provides an overview of this rapidly evolving field with an emphasis on the glycoconjugates of eukaryotic organisms in the animal kingdom. (S/U grades only.) (S) This course is cross-listed with Medicine 222.

BGGN 240. Cellular Neurobiology (2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 240), which they are encouraged to attend. These papers are presented by the students at weekly discussion sessions. *Prerequisite: consent of instructor.* (S/U grades only.) (F)

BGGN 241. Neurobiology Seminar (3)
Presentation of current research by local and visiting neurobiologists. (S/U grades only.) (F,W,S)

BGGN 242. Systems Neurobiology (2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 142), which they are encouraged to attend. These papers are presented by the students at weekly discussion sessions. *Prerequisite: consent of instructor.* (S/U grades only.) (W)

BGGN 243. Systems Neurophysiology (3)
Ways in which neurons are assembled into circuits to achieve perception and patterned movement. *Prerequisites: graduate standing or consent of instructor.* (S/U grades only.)

BGGN 244. Molecular/Developmental Neurobiology (2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 144), which they are encouraged to attend. These papers are presented by the students at weekly discussion sessions. *Prerequisite: consent of instructor.* (S/U grades only.) (S)

BGGN 246 A-B. Computational Neurobiology (2-2)
Students read classic and modern papers that form the basis of the undergraduate lectures (BIPN 146), which they are encouraged to attend. Students present these papers at weekly discussion sessions. The focus of 246A is cellular neuronal properties and the focus of 246B is properties of neuronal systems. *Prerequisites: graduate student or consent of instructor.* (S/U grades only.)

BGGN 247. Development of Neural Systems (4)
Course emphasizes current molecular and physiological approaches used to study the development of neural circuits including the processes of neuronal migration, axon pathfinding, and synapse and circuit formation in different systems. Topics include development of the visual system, olfactory system, spinal cord and cerebellum. *Prerequisite: graduate standing or consent of instructor.* (S/U grades only.)

BGGN 248. Molecular Mechanisms of Neural Development (4)
The cellular and molecular basis of neural development, focusing on primary papers. Topics include: neural induction and neurogenesis, cell patterning, neuronal and glial differentiation, neuronal migration, axon pathfinding, synapogenesis, neuronal cell death, regeneration, activity-dependent events, topographic maps, invertebrate and vertebrate model systems. *Prerequisite: graduate standing or consent of instructor.*

BGGN 249A-B-C. Basic Neuroscience (4-4-4)
These courses are designed for graduate students in the neurosciences and other departments that are part of the interdisciplinary program (i.e., Biology, Cog. Sci.). These courses have been designed to cover as much basic neuroscience as possible in three quarters of study. They will combine two three-hour meetings each week with a 1.5 hour lecture and a 1.5 hour discussion of papers. These are required courses for all first-year neurosciences graduate students. *Prerequisite: graduate student or consent of instructor.* (F,W,S)

BGGN 251. Molecular Biology (3)
The first section of this course consists of a review of fundamental concepts in molecular biology together with an in-depth analysis of molecular biological topics of medical importance. The second section covers the structure, genetics, and multiplication of animal viruses, with particular emphasis on the DNA and RNA tumor viruses. Other subjects discussed include viral persistence, latency, and approaches to viral chemotherapy. Three hours of lecture. *Prerequisite: biochemistry.* (Not open to undergraduates.) (S/U grades only) (F)

BGGN 252. Genetics (3)
Human genetics, with emphasis on basic principles. Topics covered include chromosome abnormalities, the mechanisms of dominant and recessive diseases, pedigree analysis, ascertainment of linkage, the interaction of genotype with diseases. Mechanisms of maintaining genetic diversity in human populations will be discussed along with recent approaches to genetic counseling and intervention. *Prerequisite: consent of instructor.* (Not open to undergraduates.) (S/U grades only) (F)

BGGN 253. Immunology (3)
Graduate students will explore topics in specialized areas of immunochemistry and cellular immunology, antigenic and molecular structure of immunoglobulin molecules; antigenantibody interactions; cellular events in the humoral and cellular immune responses; translation immunology. *Prerequisite: consent of instructor.* The course is similar in content to BICD 140 but is accelerated in pace. (S/U grades permitted.) This course is cross-listed with Chemistry 217.(F)

BGGN 254. Cell and Membrane Physiology (3)
This course is a survey covering current subjects in membrane biology relevant to medicine. Subjects are: 1) membrane isolation, composition, and structure; 2) consequences of membrane fluidity (mode of action of anesthetics, intercellular communication, eso- and endo-cytosis biogenesis); 3) sensory perception and response (chemo- and energy reception, cellular neurophysiology, muscle; physiology); 4) regulation of membrane function (hormone reception, intercellular adhesion, neoplastic transformation). *Prerequisites: biochemistry and genetics.* (S/U grades only)

BGGN 260. Neurodynamics (4)
Introduction to the nonlinear dynamics of neurons and simple neural systems through nonlinear dynamics, bifurcation theory, and chaotic motions. The dynamics of single cells is considered at different levels of abstraction, e.g., biophysical and "reduced" models for analysis of regularly spiking and bursting cells, their dynamical properties, and their representation in phase space. Laboratory exercises will accompany the lectures. *Prerequisites: graduate student or consent of instructor.*

BGGN 266. Advanced Laboratory in Biophysical Techniques (6)
Experiments that emphasize biophysical principles through hands-on experience, with an emphasis on the blending of physical measurements with a clearly identified biological problem. Exercises include the use of optical tweezers to measure viscous forces at the level of cellular organelles, the characterization of sensorimotor control in the fly during visually guided flight, and the use of microscopic imaging techniques to characterize cell motility and organelle transport. Includes instruction in LabView. Students are encouraged to attend the Phys. 173 undergraduate lectures. *Prerequisites: graduate student or consent of instructor. Phys. 120A, BILD 1, and Chem. 6CL for undergraduates.*

BGGN 269. Mathematics for Neurobiologists (6)
An intensive course to introduce the mathematical concepts and techniques used in modern neurobiology. Intended for beginning graduate students in the neurosciences, but is also available to advanced undergraduates, with the consent of the instructor. *Prerequisites: graduate student or consent of instructor.*

BGGN 271. Advanced Experimental Methods in Biology (4-12)
Advanced laboratory and/or field experience in contemporary biological methodology. Open only to students enrolled in the integrated Bachelor's/Master's Degree Program. *Prerequisites: consent of instructor and approval of division chair.* (F,W,S) (Undergraduate students: P/NP only. Graduate students: letter grades only.)

BGGN 297. Research Conference (1-3)
Group and individual discussion of research activities and of current literature. *Prerequisite: graduate standing.* (S/U grades only.) (F,W,S)

BGGN 298. Laboratory Projects in Biology (3-12)
An introduction to contemporary laboratory techniques and research interests through independent, original projects under the direction of individual faculty members. *Prerequisite: consent of instructor.* (Letter grades only) (F,W,S)

BGGN 299. Thesis Research in Biology (1-12)
(F,W,S)

BGGN 500. Apprentice Teaching (4)
This course involves participation in upper-division undergraduate teaching at the level of assuming responsibility for recitation sections or laboratories under the supervision of the responsible faculty member. Some experience in lecturing to upper-division classes will occasionally be provided. (S/U grades only.) (F,W,S)

BGJC 201. Journal Club in Cell Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 202. Journal Club in Developmental Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (Quarter offered is varies, and course is not offered every year.)

BGJC 203. Journal Club in HIV Molecular Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 204. Journal Club in Molecular and Cellular Immunology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 205. Journal Club in Cellular Immunology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 206. Journal Club in Microbial Physiology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (S)

BGJC 207. Journal Club in Neurobiology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 208. Journal Club in Plant Molecular Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 209. Journal Club in Molecular and Cellular Regulation in Biology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 210. Journal Club in Cell Cycle Regulation (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 211. Journal Club in Molecular Immunology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 212. Journal Club in Genetics (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGJC 213. Journal Club in Computational Neurobiology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 202. Research Discussion in Early Amphibian Neurogenesis (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 203. Research Discussion in Development of Dictyostelium (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 204. Molecular Biology of the Cell (1)
Research reports and discussions based on recent experimental results in cell biology, oncogenesis, genetics, molecular biology and development. Students are expected to present and discuss their own new data and the recent data of others. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 205. Research Discussion in Plant Membrane Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 206. Research Discussion in Metals in Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 207. Research Discussion in Neuronal Pattern Generation (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 208. Research Discussion in Mammalian Molecular Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 209. Research Discussion in AIDS (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 210. Research Discussion in Virology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 211. Research Discussion in Developmental Cellular Neurobiology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 212. Research Discussion in Behavior and Development of Simple Nervous Systems (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 213. Journal Club in Computational Neurobiology (1)
Weekly presentations and discussions pertaining to research results reported in recently published literature. *Prerequisites: none for graduate students. Under-graduates must be seniors or enrolled in BISP 199.*

BGRD 213. Research Discussion in Golgi Structure and Function (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 214. Research Discussion in Development and Function of the Immune System (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 215. Research Discussion in Lymphocyte Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 216. Research Discussion in Molecular and Cell Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 217. Research Discussion in Plant Membranes and Organelles (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 218. Research Discussion in Plant Molecular Genetics (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 219. Research Discussion in Molecular Biophysics (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 220. Research Discussion in Advanced Evolutionary Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 221. Research Discussion in Behavioral Ecology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 222. Research Discussion in Evolutionary Molecular Ecology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 223. Research Discussion in Ecology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 224. Research Discussion in Plant Population Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 225. Research Discussion in Genetic Variation (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 226. Research Discussion in Conservation Genetics (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 227. Research Discussion in Intracellular Signalling (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 228. Research Discussion in Drosophila Developmental Biology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings

each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 229. Research Discussion in Drosophila Neurobiology (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 230. Research Discussion in Cell Signalling Pathways (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 231. Research Discussion in Nuclear Transport and Function (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 232. Research Discussion in Chromatin and Transcription Regulation (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 233. Research Discussion in Cell Cycle Motility (1)
Presentations of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGRD 234. Research Discussion in Cell Signalling in Drosophila (3)
Presentation of new research results and discussions of closely related published reports. All students are expected to report on their own research findings each quarter. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGSE 200. Seminar in Biology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGSE 201. Seminar in Molecular Biology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGSE 202. Seminar in Immunology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGSE 203. Seminar in Population Biology (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.)

BGSE 204. Seminar in Developmental Genetics (1)
Invited speakers from the U.S. and abroad, who are leaders in various aspects of biological research, describe their current research. *Prerequisites: none for graduate students. Undergraduates must be seniors or enrolled in BISP 199.* (S/U grades only.) (F,W,S)

BGSE 205. Graduate Research Seminar (1)
Discussions of recent research in various aspects of biological research conducted by third- and fourth-year doctoral students in the Division of Biological Sciences. (S/U grades only.) (F,W,S)

The Graduate Program

The graduate program offered by the Group in Biomedical Sciences is designed to lead to the Ph.D. degree through a combination of didactic study, laboratory rotations, and thesis research in basic biomedical sciences. Research experiences are wide and varied, permitting students the options of selecting molecular, cellular, or organ and integrated systems approaches in their research programs. Students are encouraged to design and execute investigation in a self-critical and independent manner. Undergraduate preparation must include courses in mathematics (through calculus), chemistry (including organic, physical, and biochemistry), and if possible, participation in undergraduate research. Students whose undergraduate backgrounds are significantly different will be considered provided there is sufficient evidence of interest in cell and molecular biology, physiology, pharmacology, or eukaryotic regulatory biology, and a desire to enter a field of active research and academic excellence.

Doctoral Degree Program

During the first year, the students take basic courses in cell biology, molecular biology, pharmacology, and physiology. In a required laboratory rotation program, students develop laboratory skills and the ability to formulate scientific hypotheses and become familiar with the research activities of the faculty. Required advanced courses and electives in subsequent years are chosen to develop the students' interest and specialized knowledge in the thesis research area. The thesis laboratory is usually selected by the end of the first year of graduate study.

The graduate program is interdepartmental and interdisciplinary; it involves faculty of the Departments of Medicine, Pharmacology, Neurosciences, Reproductive Medicine, Chemistry, Pathology, Bioengineering, Cellular and Molecular Medicine, Psychiatry, Orthopedics, Anesthesiology, and the Cancer Center. Physiological studies include molecular to whole animal approaches to cardiovascular, microcirculatory, respiratory, renal, gastrointestinal and fetal physiology and their neural and hormonal control. Pharmacologic studies of drug action at the molecular and biochemical levels include studies of receptor structure and function, genetic and recombinant DNA methods to analyze ligand-receptor interactions, regulation of gene expression and signal transduction, and biophysical approaches to defining neurotransmitter and hormone action. Molecular and cell biological approaches are being applied to the study of major issues in cell biology, including the regulation of protein targeting and intracellular membrane traffic, hormone and growth factor receptors, endothelial cell biology, molecular motors, RNA splicing, and mitosis, among others. Eukaryotic regulatory biologists are using the most advanced molecular biological techniques to study developmental and homeostatic regulation of gene expression in primarily mammalian systems. As evidence of the research strength of the group, faculty within the program are the directors of four specialized centers of research at the university focusing on cancer, myocardial ischemia, hypertension, and atherosclerosis. Other faculty are directors of training grants for programs in pulmonary physiology, oncogenes, cardiovascular physiology, cellular and molecular pharmacology, hypertension, metabolic diseases, cell and molecular biology, genetics, digestive diseases, and cancer cell biology.

The graduate program in biomedical sciences is also designed to educate physician-scientists through the School of Medicine's Medical Scientist Training Program. Students already admitted to the School of Medicine are eligible for admission to our program for Ph.D. training. Such students generally apply in the first or second year of their medical studies and enter graduate studies following completion of their second year of medical school. Normative time for M.D./Ph.D. students is seven years.

Examinations

Students obtain letter grades in the program's basic courses. Candidacy for the Ph.D. degree is determined by a two-part examination. The first

part, the minor proposition examination, tests the student's competence and ability to design the approach to a pertinent research problem in an area unrelated to his or her major interest. The second part, the major proposition examination, deals with the dissertation problem and should be completed during the third year of residence in the program. After the preparation of the dissertation, an oral defense of the thesis completes the requirement for the Ph.D. degree.

COURSES

202. Carcinogenesis and Drug Metabolism (3)
This elective will explore relationships between drug metabolism and carcinogenesis at cellular, molecular and etiological levels. Guided by faculty, students will research and present key papers and principles underlying the biochemistry, genetics, biophysics, and computer-assisted aspects of several assigned topics. *Prerequisites: biology and chemistry. Cell biology, biochemistry, and molecular biology may be taken concurrently*

204. Evolution of Modern Concepts in Pharmacology (2)
This course details the evolution of modern principles of pharmacology from first evidences to the present level of knowledge. The course will be independent of but compliment general principles of pharmacology courses for medical and graduate students. *Prerequisites: prior or concurrent Principles of Pharmacology, or equivalent course.*

207. Using Internet Resources in Molecular Biology (2)
Increasing the Internet is a source both of data and analysis tools in molecular biology. A hands-on series of instructional lectures is proposed that uses these resources to work through problems found in many molecular biology research situations. Topics include: DNA and protein sequence analysis, genome analysis, constructing and using phylogenetic trees, RNA structure prediction, protein structure analysis, classification and prediction. *Prerequisites: consent of instructor.*

219. Ethics in Scientific Research (1)
Overview of ethical issues in scientific research, conflicts of interest; national, statewide and campus issues and requirement; ethical issues in publications; authorship; retention of research records; tracing of research records; attribution; plagiarism; copyright considerations; primary, archival and meeting summary publications; ethical procedures and policies; NIH, NSF, California and UCSD; case studies and precedents in ethics. *Prerequisites: permission of instructor.*

222. Essentials of Glycobiology (2)
Advanced elective for graduate/medical students who have had core courses in cell biology or biochemistry. Expert faculty will present a coordinated overview of the field of glycobiology, which explores the structure, synthesis and functions of sugar chains in biological systems.

223. Genetics, Metabolism, and Inherited Disease (2)
Detailed discussions of the molecular aspects of certain inborn errors of intermediary metabolism selected to illustrate principles of biochemical genetics applicable to a wider variety of clinically important genetic diseases. Individual sessions will include faculty presentations followed by student-led discussions of the particular principles illustrated by the disorders reviewed. (S)

224. Topics in Cancer Research (2)
Each quarter will focus on an important area of cancer research such as immunology (fall), growth regulation (winter), and cancer genetics (spring). One-hour lecture coordinated with a one-hour seminar with the opportunity to meet with the invited speaker. *Prerequisites: senior undergraduates, graduate students, medical students.* (W,S)

229. Methods in Pharmacology (3)
A combination of lecture and lab exercises presented by the faculty of the Group in Biomedical Sciences, designed to introduce biomedical science graduate students to the essential techniques employed in molecular and cellular pharmacology. *Prerequisites: BMS 212, OP, CBB, biochemistry, molecular biology, biomedical sciences or consent of instructor.* (S)

230. Receptors and Signal Transduction (3)
An examination of the molecular and biochemical bases of drug and neurotransmitter action. Topics include molecular basis of drug specificity, receptor mechanisms, neuropharmacology, signal transduction from the cell surface to the nucleus, and drug action on excitable tissues. *Prerequisite: course in biochemistry.* (F)

231. Contemporary Topics in Pharmacology (2)
A selection of short courses in the biomedical and pharmacological sciences offered by resident experts. Topics will vary annually. Each short course will last one to two weeks, meeting five hours a week. *Prerequisite: consent of instructor.* (F,W,S) (Not offered in fall 1997.)

232. In vivo Cellular and Molecular Imaging (1)
Strategies such as positron emission tomography, magnetic resonance imaging, and ultrasound for non-destructively imaging molecular and cell biological events inside living animals and eventually human patients. Emphasis on detecting angiogenesis, apoptosis, and expression of tumor-specific genes. *Prerequisites: upper-division or graduate courses in molecular and cell biology.*

233. Molecular Biology of Human Retroviruses (3)
Replication cycle and gene regulation of HIV. Molecular approaches to therapy and vaccines. *Prerequisites: undergraduates lower-division courses in BIMM 100.*

234. Practical Histopathology and Mouse Models of Human Diseases (2)
The course is designed to introduce or reintroduce histology and histopathology of the various organ systems to those who need to analyze mouse tissues as an essential part of their research. *Prerequisites: standard undergraduate biology courses.*

235. Pharmacogenomics (3)
The pharmacogenetics course is designed to introduce graduate students, medical students, and pharmacy students to this emerging area of interest, indicting how hereditary mechanisms influence drug responses in humans. The lectures, examples, discussions, and journal presentations will provide the students with a working knowledge of the domains of pharmacology, how heredity influences any response traits, and the ways that advances in genome technologies support our emerging understanding of how polymorphic genetic variants determine inter-individual differences in drug responses. The course will include lectures, discussions, and journal article presentations by students. *Prerequisites: Admission to a UCSD graduate program, School of Medicine, or School of Pharmacy and Pharmaceutical Sciences.*

240. Critical Reading in Cell Biology (3)
This course will focus on critical reading and understanding current areas in Cell and Molecular Biology. The exact topic will vary, but will include such topics as Protein Trafficking, Cell Division, Intracellular Movement, Cell Interaction, and Cell Cycle.

242. Seminar in Genetics (1)
Intended for graduate students interested in principles of classical and molecular genetics. Will attend weekly genetics seminar and participate in didactic/discussion preparatory session. *Prerequisite: consent of instructor.*

243. Human Genetics (3)
Advanced aspects of human genetics and human genetics disease, including principles of Mendelian and non-Mendelian inheritance, monogenic and polygenic traits, anticipation, penetrance, and genomics. Course will consist of alternating didactic sessions and seminars in which students will present papers.

245. Cancer Genetics (3)
Intended for graduate students interested in genetics. Course will cover genetic basis for cancer related diseases. *Prerequisites: graduate-level course in cell biology and molecular biology.*

250. Molecular and Modern Methodologies in Physiological Sciences (2)
This course emphasizes modern approaches and methodologies for investigating physiological processes in normal and pathological conditions. This includes the application of transgenic, knockout, adenovirus gene therapy, antisense, and cellular imaging technologies in animal models.

260. Immune Regulation (3)
This course will cover most of today's key aspects in the organization and dynamics of the immune system and its regulation. It will provide students with a basis for understanding the physiology and functioning of the immune system in normal and pathological states. *Prerequisites: core courses in Biomedical Sciences Ph.D. Program, or permission of instructor.*

262. Neurophysiology (4)
An overview of neurophysiological systems, emphasizing mammalian neurophysiology and related model vertebrate systems and concepts. (W)

264. Molecular and Cellular Basis of Disease (2)
Lectures on the molecular and cellular mechanisms of pathogenesis. Topics will include Alzheimer's disease, cell surface and unclear receptors in disease, signal transduction by oncogenes in cancer cells, AIDS, human diseases affecting glycosylation pathways, rheumatoid arthritis, and arteriosclerosis. *Prerequisite: graduate students.* (W)

282. Microbial Pathogenesis (3)
Topics covered in this course include molecular and cellular mechanisms of viral, bacterial, and protozoan pathogenesis. Host response and microbial mechanisms of evasion of host defense will also be discussed. Sessions will consist of faculty and student presentations of current literature. Prerequisite: graduate standing or consent of instructor. (S)

285. Statistical Inference in the Medical Sciences (2)
An introduction to basic techniques used in biomedical literature: t tests, ANOVA, chi-square, linear and nonlinear regression. Emphasis will be on understanding the appropriate use and interpretation of the tests, rather than on the calculations.

294. Pharmacology and Molecular Biology Journal Club (0-1)
Current literature in molecular pharmacology and molecular biology is reviewed. Two papers are chosen per week for oral presentation by students. Faculty critique the student presentations. *Prerequisite: enrollment in Ph.D. program at year two and above.* (F,W,S)

295. Pharmacology Research Discussions (0-1)
Student, faculty, and fellow discussion groups on research projects. Students are expected to present research findings to fellows, other Ph.D. students, and faculty. Written critiques are provided by the faculty. *Prerequisites: completion of minor proposition examination and two years of graduate work.* (F,W,S)

296. Directed Reading (1-4)
Reading of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases. *Prerequisite: consent of instructor.*

297. Progress in Signal Transduction (1)
Papers describing recent progress in signal transduction from the cell-surface to the nucleus will be chosen from recent research literature. Two papers will be discussed and criticized in detail each week for one hour. *Prerequisites: graduate level Biochemistry, Cell Biology, and Molecular Biology; registered as second year and above graduate student in Biomedical Sciences, Biology, or Chemistry.* (F,W,S)

298. Directed Study (1-12)
Reading and laboratory study of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases. (F,W,S)

299. Independent Study or Research (1-12)
Independent study or research. *Prerequisite: consent of instructor.* (F,W,S)

The Department of Physics offers an undergraduate and graduate program which prepares students for a career in biophysics and which leads to the following degrees:

B.S. in physics with specialization in biophysics

C.Phil. in physics

Ph.D. in physics (biophysics)

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. All courses (lower- and upper-division) required for the major must be taken for a letter grade. Students must receive a grade of C- or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted.

The Undergraduate Program

Physics Major with Specialization in Biophysics

This program leads to a bachelor of science degree. As a terminal degree, it is an excellent education for students who wish to work in the biotechnology industry, and provides an ideal background for students who plan to attend graduate or professional school in biological or biomedical fields.

This program is intended for students with a strong interest in bringing the concepts and technical advances from the physical sciences to bear on issues in biology. The curriculum is chosen to prepare students as rigorously trained but broad-minded generalists, so that they may attack problems in the biological, biochemical, and biomedical sciences with the tools and confidence that come from rigorous training in the physical sciences.

The curriculum for Physics Major with Specialization in Biophysics is designed to allow premedical students to complete all necessary courses for admission to medical schools.

The lower-division program for physics majors with specialization in biophysics includes basic courses in biology and chemistry as well as physics. Although the sequence Physics 4A through 4E is strongly recommended, students have the choice of petitioning the department to substitute the sequence Physics 2A through 2D.

The following courses are required for the physics major with specialization in biophysics:

Lower-Division

1. Physics 4A-B-C-D-E and 2CL-DL; or Physics 2A-B-C-D and 2CL-DL (Physics 4 sequence is strongly recommended)
2. Chemistry 6A-B-C and 6BL
3. Biology, BILD 1 and BILD 2
4. Mathematics 20A, 20B, 20C, 20D, 20E, 20F

The upper-division program includes advanced courses in physics, including two core lecture courses and one core laboratory course in biophysics, as well as organic chemistry.

Upper-Division

1. Physics 100A, 105A, 110A, 120A, 130A, 140A, 171, 172, 173
2. Chemistry 140A

Additional electives, to achieve a count of twelve upper-division courses in the major, may be selected from biology, chemistry, and physics. Three additional upper-division courses, in any subject, are required in order to satisfy UCSD requirements.

Premedical students will need to take two additional quarters of organic chemistry (Chemistry 140B and 140C), one quarter of organic chemistry laboratory (Chemistry 143A), and one quarter of an upper-division biology course. In addition, some medical schools also require a quarter of biochemistry (Biology BIBC 100 or Chemistry 114A). The premedical requirements may be used to satisfy elective requirements for upper-division courses.

As a guide to prospective students, we consider a schedule of required classes for a Muir College student.

Suggested Schedule

FALL	WINTER	SPRING
FRESHMAN YEAR		
Math. 20A	Chem. 6A	Chem. 6B
	Math. 20B	Chem. 6BL
	Phys. 4A	Math. 20C
		Phys. 4B
SOPHOMORE YEAR		
Chem. 6C	Math. 20E	Math. 20F
Math. 20D	Phys. 4D	Phys. 4E
Phys. 4C	Phys. 2CL	Phys. 2DL
JUNIOR YEAR		
Phys. 100A	BILD 1	BILD 2
Phys. 105A	Chem. 140A	Phys. 120A
Phys. 110A		Phys. 130A

SENIOR YEAR		
Phys. 140A	Phys. 172	Phys. 173
Phys. 171	Elec.	
	Elec.	

The Graduate Program

Research in biophysics is being actively pursued in several departments (e.g., physics, chemistry, and biology), which also offer courses in or relevant to biophysics.

Biophysics students will receive their M.S. and C.Phil. degrees in physics. Only their Ph.D. will be in physics (biophysics).

Doctoral Degree Program

The Ph.D. program consists of graduate courses, apprenticeship in research, teaching experience, and thesis research.

Entering students are assigned a faculty adviser to guide them in their program. Many students spend their first year as teaching assistants or fellows and begin apprentice research in their second year. When a student's association with a research area and research supervisor is well established, a faculty research progress committee is formed with the responsibility of conducting an annual review of progress and, at the appropriate time, initiating the formation of a doctoral committee. After three years of graduate study, or earlier, students complete the departmental examinations and begin thesis research. There is no foreign language requirement.

Entrance Testing

An entrance test covering undergraduate physics is given to entering students during the first week of orientation to give better guidance to students in their graduate program. The results are not entered in the student's file. Entering students are encouraged, but not obliged, to bring the results to the first meeting with their academic adviser. Entering students may elect to take the departmental examination instead of taking the entrance test.

Requirements for the Ph.D.

Students are required to pass a departmental examination, advanced graduate courses, a qualifying examination, teaching requirement, and a final defense of the thesis as described below.

1. Departmental Examination

Biophysics students are required to take a departmental examination after completing two years of graduate work at UCSD. The examination is on the level of material usually covered in upper-division courses and the graduate courses listed below:

Fall
Phys. 200A (Theoretical Mechanics)
Phys. 201 (Mathematical Physics)
Phys. 212A (Quantum Mechanics)

Winter
Phys. 200B (Theoretical Mechanics)
Phys. 203A (Adv. Classical Electrodynamics)
Phys. 212B (Quantum Mechanics)

Spring
Phys. 203B (Adv. Classical Electrodynamics)
Phys. 210A (Equilibrium Statistical Mechanics)
Phys. 212C (Quantum Mechanics)

The examination is offered twice a year, at the beginning of the fall and spring quarters, and lasts two days, four hours per day. The examination may be repeated once, the next time it is offered.

Biophysics students take the departmental examination after completing two years of graduate work.

2. Advanced Graduate Courses

Biophysics students are required to pass five courses (with a grade of C or better) from biology, biochemistry, chemistry, or physics in consultation with their adviser no later than the end of the third year of graduate work. At least three of these courses must be graduate courses. A 3.0 average in four of the five courses is required. (In lieu of the course requirement, students may petition to take an oral examination covering three areas of physics.)

3. Qualifying Examination and Advancement to Candidacy

In order to be advanced to candidacy, students must have met the departmental requirements and obtained a faculty research supervisor. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. Members of the research progress committee are usually included as members of the doctoral committee. The committee conducts the Ph.D. qualifying examination during which students must demonstrate the ability to engage in thesis research. Usually this involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and questions on general physics which it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate of Philosophy Degree.

4. Instruction in Physics Teaching

All graduate students are required to participate in the physics undergraduate teaching program as part of their career training. The main component of this requirement is an evaluated classroom-based teaching activity. All graduate student teaching accomplishments are subject to the approval of the vice chair for education. There are several ways of satisfying the teaching requirement, including: (1) leading discussions as a teaching assistant, (2) practical classroom teaching, under faculty supervision, (3) participation in an approved teaching development program offered by the Department of Physics or the campus Center for Teaching Development, or (4) transferred teaching credit from another institution or department. Students who satisfy the requirement by teaching at UCSD should enroll in Physics 500 during the quarter in which they complete it.

5. Thesis Defense

When students have completed their theses, they are asked to present and defend them before their doctoral committees.

Time Limits for Progress to the Ph.D.

In accordance with university policy, the Department of Physics has established the following time limits for progress to the Ph.D. A student's research progress committee helps ensure that these time limits are met.

	Theorists	Experimentalists
Advancement to Candidacy	4 years	5 years
Total Registered Time and Support	7 years	8 years

Joseph P. Noel, Ph.D.

Introduction

The UCSD Department of Chemistry and Biochemistry was founded in the 1950s by the late Professor Harold Urey and a group of colleagues who strove to create a department that would stress the fundamentals of chemistry and, at the same time, embrace diverse applications of those principles at the frontiers of knowledge.

Degrees offered include:

Biochemistry

B.S. Biochemistry/Chemistry
M.S. Chemistry
Ph.D. Chemistry
Ph.D. Chemistry with specialization in bioinformatics

Chemistry

B.A. Environmental Chemistry
B.S. Biochemistry
B.S. Bioinformatics from the Department of Chemistry and Biochemistry
B.S. Chemical Education
B.S. Chemical Physics
B.S. Chemistry
B.S. Chemistry/Earth Sciences
B.S. Environmental Chemistry
B.S. Molecular Synthesis
B.S. Pharmacological Chemistry
M.S. Chemistry
Ph.D. Chemistry
Ph.D. Chemistry with specialization in bioinformatics

Chemistry–Premedical Majors

Either a biochemistry/chemistry major or a chemistry major with appropriate choice of electives provides a strong background for students intending to pursue careers in the medical sciences.

Premedical students are encouraged to complete the three-quarter general chemistry series (Chem. 6A-B-C or 6AH-6BH-6CH) in their first year. Most medical schools require both a full year of general chemistry, and may not accept Advanced Placement exam scores to satisfy admissions requirements. Students with Advanced Placement exam scores of 4 or 5 who plan to attend medical school should discuss their academic plan with an academic or career adviser early in their academic career. Students should

complete the organic chemistry series (either Chem. 140A-B-C or Chem. 141A-B-C) in their sophomore year.

The lower-division biology (BILD 1-2-3) series or equivalent is also required for most medical schools, along with certain upper-division biology courses, some of which may be counted toward the major requirements in chemistry. Students should meet with the department's undergraduate adviser early in order to plan their courses and discuss their options.

General Chemistry

The General Chemistry Chem. 6 sequence (6A-B-C) is intended for science and engineering majors as well as others who need a quantitative course. It satisfies all preprofessional programs. Chem. 4 is a one-quarter preparation for 6A, which should be taken only by those whose college adviser so recommends. The Honors General Chemistry sequence (6AH-6BH-6CH) is designed for science and engineering majors with strong preparation in science and mathematics. A student intending to major in chemistry can thus begin with 4, 6A, or 6AH depending on the level of preparation. A student intending to major in a discipline other than chemistry should consult his or her adviser in the appropriate department to determine which chemistry course is recommended.

Chem. 11, 12, 13 is a terminal sequence for non-science/non-engineering majors. Chem. 15 is a one-quarter survey course suitable for non-science majors. Students should check with their college adviser to determine applicability toward general-education requirements.

General Information on Undergraduate Major Programs

The minimum passing grade is a D, though students may not graduate with more than one D grade in upper-division required course work and must maintain a minimum of a 2.0 average GPA in the major. All courses for the major, except for independent research (Chem. 199) and chemistry instruction (Chem. 195), must be taken for a letter grade. Chem. 195 and Chem. 199 must be taken on a P/NP basis. All chemistry majors, including transfer students, must complete forty-eight units of upper-division chemistry course work at UCSD and fulfill the campus senior residency requirement.

In addition to the requirements, Math. 20F (required for chemical physics majors) and a course in computer programming are also recommended.

Any departure from the requirements outlined below must be approved by petition. This applies to lower- and upper-division requirements.

The suggested programs following each of the major descriptions are only examples.

All undergraduate degree programs, unless otherwise noted, are certified by the American Chemical Society.

Biochemistry/ Chemistry Major

The Biochemistry/Chemistry major deals with the chemical processes in living organisms, including structure and function of nucleic acids and proteins. It is suitable for those planning to go to graduate school as well as medical, dental, veterinary, and other professional schools. It is also suitable at the bachelor's level for jobs in the biotechnology or pharmaceutical field.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus (Math. 20A-D, or equivalent).
3. Calculus-based physics including laboratory (Phys. 2A-B and 2D or equivalent, and either 2BL, 2CL or 2DL. Phys. 2CL is recommended and is accessible without Phys. 2C).

Upper-Division Requirements

1. Three quarters of organic chemistry (Chem. 140A-C or 141A-C).
2. Two quarters of physical chemistry (Chem. 126-127 recommended; 131–133 acceptable).
3. One quarter of inorganic chemistry (Chem. 120A).
4. Three quarters of biochemistry (Chem. 114A-C).
5. Five laboratory courses (Chem. 143AM or 143A, 143B, 105A, either 112A or 112B and one additional chemistry lab from the following: Chem. 105B, 106, 112A or 112B, 123, 143C, or 143D).
6. Two elective courses from the following list: Chem. 107, 113/213, 114D, 115/215, 124/225, 116/216, 118, 152/252, 154/254, 155/255, 156/256, 157/257.
7. One additional elective course chosen from among all of the upper-division and graduate courses offered by the Department of Chemistry and Biochemistry (except non-letter-graded courses) **or** from the following list of courses offered by the Department of Biology (some biology courses will require additional coursework to fulfill prerequisites): BICD 100, BICD 110, BICD 140, BIMM 114, BIMM 120, BIPN 100, BIPN 102, BIPN 140. Other electives may be arranged by petition.

Suggested Program for Biochemistry/Chemistry B.S. Major

Many courses have enforced prerequisites or are offered once per year.

** One of these must be Chem. 112A or 112B.

Bioinformatics Major from the Department of Chemistry and Biochemistry

Also see the program information listed under Bioinformatics in the catalog.

The Bioinformatics major offers a rigorous, interdisciplinary training in the new and rapidly evolving field of bioinformatics with a strong

focus on chemistry and biochemistry. Bioinformatics is the field of advanced computational and experimental methods that model the flow of information (genetic, metabolic, and regulatory) in living systems to provide an integrated understanding of the systems properties of model organisms. This is a new and rapidly evolving field in which large volumes of both qualitative and quantitative data will accrue at an increasing pace, and the bioinformatician must have a substantial mastery of both the sciences and engineering. This interdisciplinary specialization will be offered jointly with computer science and engineering, bioengineering, and biological sciences, each with its own set of requirements and electives. The program offered by the Department of Chemistry and Biochemistry is aimed at a student interested in applying and developing tools of bioinformatics for the study of chemical processes in biological systems.

Admission to the Bioinformatics Major

There is a fifty-student limit in all combined bioinformatics majors on campus. As a result, admission to the bioinformatics degree is not guaranteed, but is based on a screening process which evaluates potential majors based on academic excellence. Since bioinformatics is an interdisciplinary major, a steering committee involving faculty from the participating departments will select among the best candidates applying and recommended through each department, while insuring active participation of the departments and divisions offering the major. The final decision on admission to the pre-major and major will be made by the bioinformatics steering committee, in consultation with the departments.

Chemistry and Biochemistry candidates for the major should enroll as either chemistry (major code Chem. 25) or biochemistry (major code Chem. 31) majors until they have completed their screening courses in the first two years and have been admitted to the bioinformatics major.

Freshmen

Freshmen may apply to the bioinformatics pre-major after completing the initial screening courses:

- Math. 20B
- Math. 20C
- BILD 1
- Chem. 6A

Once admitted to the pre-major, students may take CSE 11 and 12. On completion of those courses, students may apply for admission to the major. Admission is based on the number of seats available and the applicant's GPA in the six screening courses (Math. 20B-C, BILD 1, Chem. 6A, CSE 11, CSE 12).

Continuing Students

Students who have not declared the bioinformatics pre-major, but who have completed the screening courses, may apply for entry to a bioinformatics program after six quarters (the end of the sophomore year). They will be admitted on a space-available basis, after pre-majors have been screened for admission to the major.

Transfer Students

Effective fall 2003, applicants seeking admission to a bioinformatics major must have completed the following courses with a strong GPA that is competitive with that of UCSD students applying for entry into this specialization:

- a year of calculus (equivalent to Math. 20A-B-C)
- a year of general chemistry, with lab (equivalent to Chem. 6A-B-C, and 6BL)
- the highest level programming course offered at the community college (equivalent to CSE 11 and 12)
- one semester of biology (equivalent to BILD 1 and BILD 2)

Those who have not completed the equivalent courses may be admitted as pre-majors, using the same criteria that apply for UCSD students, and will be allowed a maximum of three quarters to complete pre-major requirements. Transfer students are therefore encouraged to complete these requirements at the community college.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. Calculus and linear algebra (Math. 20A-C, 20F)
2. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, or 6CL).
3. Physics (Phys. 2A-B)
4. Biology (BILD 1-2)
5. Computer programming (CSE 11-12)
6. Mathematics for algorithm and systems (CSE 21/Math. 15B)
7. Bioinformatics seminar (BILD 94)

The department recommends that students complete an introductory C programming course before taking CSE 11 and CSE 12, either in their first year or during the summer between their first and second years.

Upper-Division Requirements

1. Two quarters of organic chemistry (Chem. 140A-B)
2. Organic chemistry (Chem. 140C) or structural biochemistry (Chem. 114A)
3. Metabolic biochemistry (Chem. 114B)
4. Physical chemistry (Chem. 127 accepted, Chem. 131 *and* 132 recommended)
5. Molecular and cellular biochemistry (Chem. 114D)
6. Two quarters of biochemistry laboratory (Chem. 112A-112B)
7. Genetics (BICD 100)
8. Cell biology (BICD 110)
9. Two computer science courses (CSE 100 *or* Math. 176; and CSE 101 *or* Math. 188)
10. Two additional upper-division electives offered by the Department of Chemistry and Biochemistry (each course must be at least four units) with only one quarter of credit allowed for any given course. Recommended courses are: Chem. 115, 118, and 143A.

The bioinformatics series comprising the following courses:

11. Molecular sequence analysis (BIMM 181 or CSE 181 or BENG 181)
12. Biological databases (Chem. 182 or BIMM 182 or CSE 182 or BENG 182)
13. Applied genomic technologies (BENG 183)
14. Computational molecular biology (BIMM 184 or CSE 184 or BENG 184)
15. Bioinformatics lab (BIMM 185)
16. Probability and statistics (Math. 186)

Suggested Program for the Bioinformatics B.S. from the Department of Chemistry and Biochemistry

Many courses have enforced prerequisites or are offered once per year.

Chemical Education Major

The Chemical Education major offers an excellent preparation for teaching physical science in secondary schools, including chemistry, physics, earth science, biology, and mathematics.

The chemical education program is sufficiently intensive that students with this degree should be admissible as graduate students in chemistry, biochemistry, and teacher education programs at most universities. This program is also excellent preparation for students interested in a career in science writing.

The program is basically a chemistry major with earth science and biochemistry as electives, combined with three courses in the Teacher Education Program.

If you are interested in earning a California teaching credential through UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus (Math. 20A-D, or equivalent).
3. Calculus-based physics including laboratory (Phys. 2A-B and 2D or equivalent, and either 2BL, 2CL or 2DL. Phys. 2CL is recommended and is accessible without Phys. 2C).
4. Biology (BILD 1).

Upper-Division Requirements

1. Three quarters of organic chemistry (Chem. 140A-C or 141A-C).
2. Two quarters of physical chemistry (Chem. 126-127 recommended; 131-133 acceptable).
3. One quarter of inorganic chemistry (Chem. 120A).
4. One quarter of biochemistry (Chem. 114A).
5. Five laboratory courses (Chem. 143AM or 143A, 143B, 105A, and two of the following: 105B, 106, 112A-112B, 123, 143C, or 143D).
6. One additional elective course chosen from among all of the upper-division and graduate courses offered by the Department of Chemistry and Biochemistry (except non-letter graded courses).
7. Two earth science courses (Erth. 101 and Erth. 102 or 103). Other biology or chemistry courses may be arranged by petition.
8. Chem. 195, or 196, or 199. Chem. 195 is recommended.
9. TEP 129A-B-C.

Suggested Program for Chemical Education B.S. Major

Chemical Physics Major

The Chemical Physics major applies the concepts and quantitative methods of physics to the descriptions of atoms and molecules, analyzes matter as a statistical assembly of molecular building blocks, and develops and exploits physical (largely spectroscopic) experimental tools with which to test and refine such theories.

The chemical physics major is designed as a preparation for graduate work in chemistry, physics, or other interdisciplinary areas.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus and linear algebra (Math. 20A-F, or equivalent).
3. Calculus-based physics including laboratory (Phys. 2A-D or equivalent, and either 2BL, 2CL or 2DL. Phys. 2CL is recommended).

It is recommended that the above requirements be completed by the end of the sophomore year.

Upper-Division Requirements

1. Two quarters of organic chemistry (Chem. 140A-B or 141A-B).
2. One year of physical chemistry (Chem. 131-133).
3. Two quarters of inorganic chemistry (Chem. 120A-B). Chem. 114A can substitute for Chem. 120B.
4. Five upper-division chemistry labs: Chem. 105A, 106, 143AM or 143A, 143B or

143C, and one of the following: 105B, 112A, 112B, 123, 143B, 143C, or 143D.

5. Molecular spectroscopy (Chem. 135).
6. Partial differential equations (Math. 110).
7. Two quarters of physics (Phys. 110A-B, or Phys. 100A-B).
8. One additional course in physical chemistry or related areas as approved by the department. Chem. 199 may be petitioned.

Chemistry Major

The Chemistry major provides a broad introduction for the biochemistry, organic, physical, or inorganic student as well as those who prefer not to specialize. This major will enable a student to pursue further studies in chemistry or in related fields of science, medicine, or engineering.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus (Math. 20A-D, or equivalent).
3. Calculus-based physics including laboratory (Phys. 2A-B and 2D or equivalent, and either 2BL, 2CL or 2DL. Phys. 2CL is recommended and is accessible without Phys. 2C).

Upper-Division Requirements

1. Three quarters of organic chemistry (Chem. 140A-C or 141A-C).
2. Three quarters of physical chemistry (Chem. 131–133).
3. Two quarters of inorganic chemistry (120A-B).
4. One quarter of biochemistry (Chem. 114A).
5. Five laboratory courses (Chem. 143AM or 143A, 143B, 105A and two of the following: Chem. 105B, 106, 112A, 112B, 123, 143C, or 143D).
6. Three additional four-unit upper-division or graduate courses in chemistry and biochemistry or related areas. One of Chem. 195 or 199 may be petitioned.

Chemistry/Earth Sciences Major

The Chemistry/Earth Sciences major is available in cooperation with UCSD's Scripps Institution of Oceanography. It requires course work for a major in chemistry, plus additional courses in geology. It will appeal to students who plan to go on to graduate school in related fields, or to those students who plan to go into professional geologic work with their undergraduate degree.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus (Math. 20A-D, or equivalent).
3. Calculus-based physics including laboratory (Phys. 2A-B and 2D or equivalent, and either 2BL, 2CL or 2DL. Phys. 2CL is recommended and is accessible without Phys. 2C). Phys. 2C is recommended as preparation for the upper-division Earth Sciences sequence, but it is not required for the major.

Upper-Division Requirements

1. Two quarters of organic chemistry (Chem. 140A-B or 141A-B).
2. Three quarters of physical chemistry (Chem. 131-133).
3. Two quarters of inorganic chemistry (Chem. 120A-B). Chem. 114A can substitute for Chem. 120B.
4. Five upper-division labs: Chem. 105A, 106, 143AM or 143A, Erth. 162L, and one of the following: Chem. 105B, 112A, 112B, 123, 143B-143C or 143D.
5. Five Earth Sciences courses (Erth. 101-103, 120 and 162A).
6. One additional course from the following list: SIO 252, 253, 259, 260, 261, Chem. 149A-149B, 170, 171, 173. Petrology is essential for geology students. SIO 253 should be taken by students planning to go on to graduate school or to do professional geologic work with their undergraduate degrees. Students are encouraged to take at least one quarter of Chem. 199.

Environmental Chemistry Major

Students have the option of earning the B.A. or the B.S. in the Environmental Chemistry major. The B.S. is ACS certified and is recommended for those who intend to apply to graduate school.

The Environmental Chemistry major requires a strong chemistry background, but also includes breadth courses from other disciplines related to environmental concerns. The elective courses allow specialization in a secondary area of interest, such as economics, political science, biology, earth sciences, or additional chemistry.

The program is designed to prepare students to enter the industrial, governmental, or legal workforce, or to continue studies in the environmental sciences. Students fulfilling their elective requirements with chemistry and biochemistry courses would be prepared to attend most graduate schools in chemical sciences.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus (Math. 20A-D, or equivalent).
3. Calculus-based physics (Phys. 2A-B and 2D or equivalent). Phys. 2CL (or Phys. 2BL or 2DL) is required for a B.S. degree.

Upper-Division Requirements

1. Two quarters of organic chemistry (Chem. 140A-B or 141A-B).
2. Two quarters of physical chemistry (Chem. 126-127 recommended; 131-133 acceptable).
3. One quarter of inorganic chemistry (Chem. 120A) or a third quarter of organic chemistry (Chem. 140C or 141C).
4. One quarter of biochemistry (Chem. 114A).
5. Two laboratory courses (Chem. 143AM or 143A, 106).
6. Two quarters of environmental chemistry (Chem. 149A-B).
7. Atmospheric chemistry (Chem. 173).

Elective Requirements

1. Four non-science elective courses chosen from the following list (at least one course must be upper-division): Econ. 1, Econ. 3, Econ. 131, Econ. 132, HIUS 154, Phil. 148, Phil. 164, Poli. SCI 160AA, Poli. SCI 160AB, Poli. SCI 162, Soc. 185, USP 2, USP 124, USP 144, USP 171. Environmental chemistry students must complete their elective requirements through coursework and cannot substitute examination scores such as Advanced Placement examinations for these courses.
2. Three science elective courses chosen from the following list (at least two courses must be upper-division): Chem. 105A, Chem. 105B, Chem. 112A, Chem. 112B, Chem. 114B, Chem. 114C, Chem. 120A, Chem. 120B, Chem. 123, Chem. 140C or 141C, Chem. 143B, Chem. 143C, Chem 143D, Chem. 170, Chem. 171, Chem. 199, Erth. 40, Erth. 101, Erth. 102, Erth. 103, BILD 1, BILD 2, BILD 3, BIEB 120, BIEB 121, BIEB 176, BIEB 178, BIEB 179, MAE 118A-B.
3. Students desiring an ACS certified B.S. Degree must take three laboratory courses: Chem. 105A, 143B or 143C, and one from the following list: Chem. 105B, 112A, 112B, 123, 143B, 143C or 143D. These courses may be used to satisfy number 2 above.

Suggested Program for Environmental Chemistry B.A. or B.S. Major (B.S. and ACS certification require additional courses)

Many courses have enforced prerequisites or are offered once per year.

Molecular Synthesis Major

The Molecular Synthesis major offers a thorough training in all aspects of the molecular synthesis of organic, inorganic, and biological substances, and with a fundamental understanding of their structure and reactivity. This major provides an excellent preparation for employment in biotechnology, diagnostic, electronic, and pharmaceutical enterprises as well as for graduate programs in organic, bioorganic, and inorganic chemistry.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1. General chemistry including laboratory (Chem. 6A-C or 6AH-CH, and 6BL, and 6CL, or equivalent).
2. Calculus (Math. 20A-D, or equivalent).
3. Calculus-based physics including laboratory (Phys. 2A-B and 2D or equivalent, and either 2BL, 2CL or 2DL. Phys. 2CL is recommended and is accessible without Phys. 2C).

Upper-Division Requirements

1. Three quarters of organic chemistry (Chem. 140A-C or 141A-C)
2. Three quarters of physical chemistry (Chem. 131-133)
3. Two quarters of inorganic chemistry (Chem. 120A-120B)
4. One quarter of biochemistry (Chem. 114A)
5. Five laboratory courses (Chem. 105A, 143A or 143AM, 143B-143C, and 123)
6. Synthetic methods (Chem. 152)
7. Structural or mechanistic organic chemistry (Chem. 154 or 156)

8. Polymer, bioorganic, or bioinorganic chemistry (Chem. 107 or 124 or 157)
9. One additional course from the following: Chem. 114B, 114C, 155, 185, or 199

Suggested Program for Molecular Synthesis B.S. Major

Many courses have enforced prerequisites or are offered once per year.

Pharmacological Chemistry Major

The Pharmacological Chemistry major provides a strong background in chemistry and includes most courses required by California pharmacy schools. The major is intended primarily to prepare students for pharmacy school (Pharm.D.). Students fulfilling their elective requirements with appropriate courses would be prepared for graduate school to obtain a Ph.D. in pharmacology, biochemistry, or other areas of science. Degree recipients would also be prepared for most jobs in the biotechnology and chemical industries.

Pharmacological chemistry students are strongly encouraged to complete a full year of general chemistry and a full year of lower-division biology. As with some medical programs, some pharmacy programs may require a full year of these courses and may not accept tests such as the Advanced Placement exam to satisfy these requirements.

The following courses must be taken for a letter grade:

Lower-Division Requirements

1 Biology (BILD 1, 2 and 3, and either BICD 101, 111, 131, or BIPN 105 or BIMM 121). Alternatively, a year of biology with laboratory at a community college may be petitioned.
2. General chemistry including laboratory (Chem. 6A-C or 6AH-CH , and Chem. 6BL, and CL, or equivalent).
3. Calculus-based physics including laboratory. (Phys. 2A-B and 2D or equivalent, and either 2BL, 2CL, or 2DL. Phys. 2CL is recommended and is usually the course required by pharmacy schools. It is accessible without Phys. 2C).
4. Calculus (Math. 20A–D, or equivalent).
5. Economics (Econ. 1 or 3 or equivalent).
6. Pharmacology seminar (Chem. 92).

Most California pharmacy schools require a course in public speaking for admission to the school. Students planning to apply to these programs should take Introduction to Speech, Theatre THGE 25, or an appropriate course at a community college.

Upper-Division Requirements

1. Two quarters of physical chemistry (Chem. 126-127 recommended; 131–133 acceptable).
2. Three quarters of organic chemistry (Chem. 140A-C or 141A-C).
3. Three quarters of biochemistry (Chem. 114A-B-C).
4. Three laboratory courses (Chem. 143AM or 143A, 143B and either 112A, 112B or 143C).
5. One quarter of pharmacology and toxicology (Chem. 118).
6. One chemistry elective course chosen from among all the upper-division and graduate courses offered by the Department of Chemistry and Biochemistry (except non-letter graded courses).

If ACS certification is desired, Chem. 120A, plus two additional laboratory courses (Chem. 105A and a lab chosen from Chem. 105B, 106, 123, or 143C/112A/112B, if not already taken), are required. Any of these courses would satisfy #6. above.

Suggested Program for Pharmacological Chemistry B.S. Major (ACS certification requires additional courses)

Many courses have enforced prerequisites or are offered once per year.

Honors Program

The Department of Chemistry and Biochemistry offers an Honors Program to those students who have demonstrated excellence in any of the nine majors. Students are eligible for Departmental Honors at graduation when they have:

1. Achieved a GPA of 3.2 overall and 3.4 in chemistry courses.
2. Completed a minimum of eight units of Chem. 199, distributed over at least two quarters. A student who registers for 199 and subsequently fails to complete the Honors Program may apply up to four units to any major that normally allows 199 as elective credit. A student who has successfully petitioned to use a Chem 199 course to fulfill elective credit may not use that course to fulfill honors requirements as well.
3. Submitted a final honors research report to three UCSD faculty members, including their research adviser, for approval.
4. Presented an oral report about their research before a group of at least three faculty. This can be at an undergraduate research

conference or at a seminar involving honors students and faculty.

Students who are interested in the Honors Program should contact the Undergraduate Coordinator in 4010 York Hall, and are invited to do so at any time.

Education Abroad

Majors are encouraged to explore the programs that allow students to study abroad or at other U.S. universities for a term or longer. See an adviser for details.

Minor Program in Chemistry and Biochemistry

A typical minor in chemistry consists of three lower-division lecture courses and at least one laboratory course, followed by a minimum of five upper-division courses, including at least one laboratory course, focused in physical, inorganic, organic, environmental chemistry, or biochemistry. Lower-division course requirements may not be satisfied by advanced placement credit, though transfer units may be used to satisfy lower-division minor requirements. Upper-division courses required by a student's major may not be applied toward a minor.

Upper-division courses for the minor must be taken at UCSD in the Department of Chemistry and Biochemistry, and must be taken for a letter grade. The minimum overall GPA requirement for the minor is a 2.0.

The Graduate Programs

Graduate students are accepted to the Department of Chemistry and Biochemistry for study toward Plan I (Thesis) and the Plan II (Comprehensive Examination) M.S. in chemistry, the Ph.D. in chemistry and the Ph.D. in chemistry with specialization in bioinformatics. Students interested in the bioinformatics specialization should contact the Student Affairs Office for more information.

Master's of Science

A Plan I (Thesis) M.S. in chemistry and a Plan II (Comprehensive Examination) M.S. in chemistry are offered.

Admissions: UCSD students are admitted for fall, winter, and spring quarter entrance; non-UCSD students are admitted for fall entrance only. Eligibility requirements for admission include a solid training in the chemical sciences based on the undergraduate record, a 3.0 GPA in chemistry courses completed, and a 3.0 overall GPA.

The GRE general test is required of all applicants. Foreign applicants must submit a TOEFL score; TWE scores are strongly recommended. Those who wish to apply to the Thesis Plan must have a letter of support from the proposed thesis adviser.

Residency and Time to Degree: Master's students must register at UCSD for a minimum of three quarters, and complete at least twenty units per academic year. Full-time Comprehensive Examination Plan students can complete the degree in three quarters. Thesis Plan students typically take eighteen to twenty-four months to graduate.

Relationship to Doctoral Program: Master's students who wish to continue their studies as doctoral students in chemistry and biochemistry must request to transfer to that program. Application materials are due mid-January and include current letters of recommendation, current UCSD transcript, and statement of purpose. Transfer is for fall quarter only.

PLAN I (THESIS)

Purpose: To prepare students for research careers or for doctoral or professional studies; the emphasis is on research.

Advancement to Candidacy: A minimum of thirty-six units with an overall GPA of 3.0 must be completed. The majority of units taken are for thesis research (Chem. 299). At least eight units of graduate level chemistry courses must be completed for a letter grade. Four units of teaching apprenticeship are required (Chem. 500; see Doctoral Program, Teaching and Language Requirement sections). Contact the Student Affairs Office for full information.

Thesis: Students must give an oral presentation and defense of their thesis project to a Thesis Committee. A student graduates after the thesis has been defended and the written dissertation approved by his or her committee, department, and OGSR, and filed with the University Archivist. The Thesis Committee consists of at least three faculty: (1) the thesis adviser, (2) a faculty member from the Department of Chemistry and Biochemistry familiar with the student's research area, and (3) a faculty member from either this or another department whose research is in an area different from that of the thesis.

PLAN II (COMPREHENSIVE EXAM)

Purpose: To prepare students for doctoral or professional studies; the emphasis is on course work.

Advancement to Candidacy: A minimum of thirty-six units with an overall GPA of 3.0 must be completed. The majority of units taken are in letter-graded graduate chemistry courses. Four units of teaching apprenticeship are required (Chem. 500; see Doctoral Program, Teaching and Language Requirement sections). Four units of nonthesis research (Chem. 297) are allowed. Contact the Student Affairs Office for full information.

Comprehensive Examination: The purpose of this requirement is to confirm that students have achieved an advanced understanding of, and a comprehensive training in, the chemical sciences. The tests cover a wide range of material, so that students will have a chance to show what they have learned. For master's students, the department administers the standardized American Chemical Society exams in biochemistry and in analytical, inorganic, organic, and physical chemistry. Students must pass three of the five exams in order to graduate. For doctoral students earning the M.S. on the way to the Ph.D., the Departmental Examination fulfills this requirement.

Doctoral Program

The goal of the Ph.D. in chemistry is to prepare students for careers in science by expanding their knowledge of chemistry while developing their ability for critical analysis, creativity, and independent study. The program is designed to encourage initiative and to stimulate enjoyment and development of the student's area of research expertise as well as the broader aspects of scientific inquiry and enlightenment.

Research

Students choose their research concentration from programs in biochemistry, biophysics, bioinformatics, inorganic, organic, physical, analytical, and theoretical chemistry, surface and materials chemistry, and atmospheric and environmental chemistry. Opportunities for scientific discovery are also abundant through the department's extensive collaborations with investigators in the physical, biological, and engineering sciences. This includes on-campus collaborations

with faculty in the Materials Science Program, School of Medicine, School of Pharmacy and Pharmaceuti-cal Sciences, and Scripps Institution of Oceanography. There are also off-campus interactions with scientists at nearby research facilities such as the Salk Institute and The Scripps Research Institute. Excellent state-of-the-art facilities and equipment support all the research programs. The department's Industrial Relations Program interfaces with national and local chemical, biotechnology, and pharmaceutical industries to encourage technology transfer and to assist postgraduates interested in industrial careers.

Research Adviser

A first-year faculty adviser guides students until a research adviser is chosen. Most of a student's efforts in graduate school are directed toward research for the doctoral dissertation, and selection of a research adviser is of utmost importance. To assist students with this critical decision, all chemistry and biochemistry faculty present research seminars in the fall quarter. Students then rotate in laboratories or consult with faculty to discuss research opportunities. Although students have until the end of the first year to join a laboratory, most start their research studies by mid-year.

Placement Examinations and Course Work

Entering students take written placement examinations in analytical, biochemistry, inorganic, organic, and physical chemistry. The purposes of these exams are to assist with advising and to assure that students have the breadth and level of competence needed for graduate studies. Deficiencies must be remedied in the first year. Three of five exams must be passed, including the one in the student's research area.

First-year students normally take at least six of the graduate courses listed below based on the results of their placement examinations, their research programs, and their specialized interests. Chem. 250 and Chem. 500 are required. Undergraduate courses and courses offered through other departments may also be taken, depending on the student's research area. By the second year, the emphasis is on thesis research, and a lighter load of courses is taken, although participation in seminars and informal study groups continues.

Departmental Examination

In the winter quarter of the second year, a student's progress in research and graduate studies is evaluated through the departmental examination, which includes presentation and critical discussion of a recent research article. Students are also evaluated on their general knowledge of their particular field of study. Students may also be asked about progress on their dissertation.

Qualifying Examination

By the end of the third year, students defend the topic, preliminary findings, and future research plans of their dissertation. Passing this defense qualifies the student to advance to candidacy for the dissertation. A dissertation committee composed of five faculty, one of whom is the research adviser, provides consultation and evaluation for the dissertation project.

Dissertation

The dissertation is normally completed in the fourth or fifth year. This body of research is expected to make an innovative contribution to the field of chemistry. Ph.D. candidates present a seminar summarizing their research accomplishments and defend their thesis in an oral examination before their dissertation committee.

Teaching

Experience in teaching is a vital and integral part of every graduate student's training, and all students participate in the instructional activities of the undergraduate curriculum. Course credit for the teaching apprenticeship is earned by enrolling in Chem. 500. Excellence in teaching is stressed, and the department provides a thorough training program covering the fundamentals of teaching as well as other useful information and techniques for effective instruction. Further training is provided by the campus's Center for Teaching Development. Faculty and the students taught evaluate the performance of teaching assistants every quarter and awards are bestowed annually for outstanding performance as a teaching assistant.

Language Requirement

Students whose native language is not English must demonstrate a mastery of English adequate to complete the teaching requirement. Deficiencies must be remedied by the end of the first year of academic residency. For native English speakers, there is no foreign-language requirement.

Time Limits

In accordance with UCSD policy, students must advance to candidacy by the end of four years. Total university support cannot exceed six and one-third years. Total registered time at UCSD cannot exceed seven and one-third years.

Seminars

Seminars by researchers from other universities, national laboratories, and industry are another basic and important aspect of the graduate curriculum. Seminars are presented weekly in biochemistry, inorganic, organic, and physical chemistry. Department colloquia are given on topics of general interest to the department. Seminars are also sponsored by many other departments and institutes.

Financial Support

The department supports all first-year students in good academic standing from a variety of sources, including teaching and research assistantships, training grants, fellowships, and awards. A stipend is paid in addition to fees and, if applicable, tuition. Continuing students who do not have fellowships or awards are normally supported on training grants or on research assistantships by their thesis advisers.

Admissions

The department seeks bright, motivated doctoral students and welcomes all such applications. To make admissions decisions, the department considers an applicant's statement of purpose and research interests, GRE scores on the general test plus either the advanced chemistry or advanced biochemistry test, undergraduate record, quality of the undergraduate university, letters of recommendation, and research experience and publications. Applicants whose native language is not English must also submit TOEFL scores; TWE scores are strongly recommended. Admissions to the doctoral program is for fall quarter. Applications received by mid-January receive priority consideration.

Students who have a master's degree with strong course records and with research experience are encouraged to apply. They normally pass the Qualifying Examination and graduate at an accelerated pace.

Joint Doctoral Program with San Diego State University

The Department of Chemistry and Biochemistry at UCSD and the Department of Chemistry at San Diego State University offer a joint program of graduate study leading to the Ph.D. degree in chemistry. More information is available in the current edition of the *Bulletin of the Graduate Division* of San Diego State University.

COURSES

LOWER-DIVISION

4. Basic Chemistry (4)
Chemistry 4 is a one-quarter course for science majors with insufficient preparation to start the Chem. 6 sequence. Emphasis is on learning how to solve quantitative problems. Topics include nomenclature, stoichiometry, and the periodic table. Includes a combined laboratory and discussion-recitation each week. *Prerequisite: Math. 4C. A materials fee is required for this course. Cannot be taken for credit after any other chemistry course.* Intended for science majors. (F)

6A. General Chemistry I (4)
First quarter of a three-quarter sequence intended for science and engineering majors. Topics include: stoichiometry, gas laws, bonding, atomic theory, quantum theory, and thermochemistry. Three hours lecture, one hour recitation. *Prerequisites: proficiency in high school chemistry or physics, Math 10A or 20A (may be taken concurrently).* (F,W,S)

6AH. Honors General Chemistry I (4)
First quarter of a three-quarter honors sequence intended for well-prepared science and engineering majors. Topics include: stoichiometry, gas laws, bonding, atomic theory, quantum theory, and thermochemistry. Three hours lecture, one hour recitation. Students may not receive credit for both Chem. 6AH and Chem. 6A. *Prerequisites: proficiency in high school chemistry, physics and mathematics. Concurrent enrollment in Math. 20A or higher level calculus required.* (F)

6B. General Chemistry II (4)
Second quarter of a three-quarter sequence intended for science and engineering majors. Topics include: molecular geometry, condensed phases and solutions, chemical equilibrium, acids and bases and thermodynamics. Three hours lecture, one hour recitation. *Prerequisites: Chem. 6A, Math. 10A or 20A.* (F,W,S)

6BH. Honors General Chemistry II (4)
Second quarter of a three-quarter honors sequence intended for well-prepared science and engineering majors. Topics include: molecular geometry, condensed phases and solutions, chemical equilibrium, acids and bases and thermodynamics. Students may not receive credit for both Chem. 6BH and Chem. 6B. Three hours lecture, one hour recitation. *Prerequisites: Chem. 6AH, Math. 20A.* (W)

6BL. Introductory Inorganic Chemistry Laboratory (3)
Introduction to experimental procedures used in synthetic, inorganic, analytical, and physical chemistry. *Prerequisites: Chem. 6A, 6B. If 6BL is a requirement for your major, it should be taken concurrently with 6C.* A materials fee is required for this course. (F,W,S)

6C. General Chemistry III (4)
Third quarter of a three-quarter sequence intended for science and engineering majors. Topics include: electrochemistry, kinetics, coordination chemistry, nuclear chemistry, and an introduction to organic and biochemistry. Three hours lecture, one hour recitation. *Prerequisite: Chem. 6B, Chem. 6BL may be taken concurrently.* (F,W,S)

6CH. Honors General Chemistry III (4)
Third quarter of a three-quarter honors sequence intended for well-prepared science and engineering majors. Topics include: electrochemistry, kinetics, coordination chemistry, nuclear chemistry, and an introduction to organic and biochemistry. Three hours lecture, one hour recitation. Students may not receive credit for both Chem. 6CH or Chem. 6C. *Prerequisites: Chem. 6BH, Math. 20B. Chem. 6BL may be taken concurrently.* (S)

6CL. Introductory Analytical Chemistry (4)
A laboratory course with emphasis on safe, accurate, and precise experimental techniques in chemistry, including quantitative analysis and instrumental methods, usually taken concurrently with Chem. 6C, but required for only certain majors. *Prerequisite: Chem. 6BL.* A materials fee is required for this course. (F,W,S)

11. The Periodic Table (4)
Introduction to the material world of atoms and small inorganic molecules. Intended for nonscience majors. Can be skipped by students with good knowledge of high school chemistry. Cannot be taken for credit after any other general chemistry course. (F)

12. Molecules and Reactions (4)
Introduction to molecular bonding and structure and chemical reactions, including organic molecules and synthetic polymers. Intended for nonscience majors. *Prerequisite: Chem. 11 or good knowledge of high school chemistry.* Cannot be taken for credit after any organic chemistry course. (W)

13. Chemistry of Life (4)
Introduction to biochemistry for nonscience majors. *Prerequisite: Chem. 12.* Cannot be taken for credit after any biochemistry course. (S)

15. Chemistry of the Universe (4)
This is a one-quarter, nonmathematical chemistry course for nonscience majors covering the origin of the universe, the elements, and the formation of the solar system. The evolution of the Earth's atmosphere, hydrosphere, geosphere, and biosphere will be covered, as well as contemporary problems in environmental chemistry. Cannot be taken for credit after any other chemistry course.

87. Freshman Seminar in Chemistry and Biochemistry (1)
This seminar will present topics in chemistry at a level appropriate for first-year students.

90. Undergraduate Seminar (1)
The seminar will focus on a variety of issues and special areas in the field of chemistry.

91. Undergraduate Honors Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by the faculty. Enrollment is limited.

92. Undergraduate Pharmacology Seminar (1)
Selected topics in pharmacology and toxicology.

99. Independent Study (2-4)
Independent literature or laboratory research by arrangement with and under the direction of a member of the Department of Chemistry and Biochemistry faculty. Students must register on a P/NP basis. *Prerequisites: lower-division standing, 3.0 minimum UCSD GPA, consent of instructor and department, completion of thirty units of undergraduate study at UCSD, completed and approved special studies form.*

UPPER-DIVISION

105A. Physical Chemistry Laboratory (5)
Laboratory course in experimental physical chemistry. *Prerequisites: Chem. 6CL and Phys. 2CL or equivalent, Chem. 126 or 127 or 131 or 133.* A materials fee is required for this course. (F,W,S)

105B. Physical Chemistry Laboratory (4)
Laboratory course in experimental physical chemistry. *Prerequisite: Chem. 105A.* A materials fee is required for this course. (F,W,S)

106. Instrumental Analysis Laboratory (4)
Instrumental methods for analytical chemistry emphasizing physical principles underlying both the instruments and the analytical methods. *Prerequisite: Chem. 105A.* A materials fee is required for this course. (W)

107. Synthetic Macromolecules (4)
The chemistry of high polymers with emphasis on synthesis, structure, characterization, and properties. Polymers as materials are important as films, fibers, and elastomers. They play an ever-increasing role in science, technology, and medicine. *Prerequisites: Chem. 140AB or 141AB.* (May not be offered every year.)

112A. Molecular Biochemistry Laboratory (6)
The application of techniques to study protein structure and function, including electrophoresis, protein purification, column chromatography, enzyme kinetics, and immunochemistry. *Prerequisites: Chem. 140A-B-C or 141A-B-C, 143A-B, 114A-B. (Some of these courses may be taken concurrently.)* (**Note**: Students may not receive credit for both Chem. 112A and BIBC 103.) A materials fee is required for this course. (W)

112B. Molecular Biochemistry Laboratory (6)
This laboratory will introduce the students to the tools of molecular biology and will involve experiments with recombinant DNA techniques. *Prerequisites: Chem. 114A-B, Chem. 114C (may be taken concurrently); Chem. 143A and 143B.* (**Note**: Students may not receive credit for both Chem. 112B and BIMM 101.) A materials fee is required for this course. (S)

113. Chemistry of Biological Macromolecules (4)
A discussion of the structural principles governing biological macromolecules, the techniques used in their study, and how their functional properties depend on three-dimensional structure. *Prerequisites:*

elementary organic and physical chemistry. (May not be offered every year.)

114A. Biochemical Structure and Function (4)
Introduction to biochemistry from a structural and functional viewpoint. *Prerequisite: elementary organic chemistry (Chem. 140A or equivalent).* (**Note**: Students may not receive credit for both Chem. 114A and BIBC 100.) (F)

114B. Biochemical Energetics and Metabolism (4)
This course is an introduction to the metabolic reactions in the cell which produce and utilize energy. The course material will include energy-producing pathways: glycolysis, Krebs cycle, oxidative phosphorylation, fatty-acid oxidation. Biosynthesis–amino acids, lipids, carbohydrates, purines, pyrimidines, proteins, nucleic acids. *Prerequisite: Chem. 114A.* (**Note**: Students may not receive credit for both Chem. 114B and BIBC 102.) (W)

114C. Biosynthesis of Macromolecules (4)
This course is a continuation of the introduction to biochemistry courses (114A and 114B). This quarter reviews the mechanisms of biosynthesis of macromolecules–particularly proteins and nucleic acids. Emphasis will be placed on how these processes are controlled and integrated with the metabolism of the cell. *Prerequisite: Chem. 114B.* (**Note**: Students may not receive credit for both Chem. 114C and BIMM 100.) (S)

114D. Molecular and Cellular Biochemistry (4)
This course represents a continuation of 114C, or an introductory course for first- and second-year graduate students, and covers topics in molecular and cellular biochemistry. Emphasis will be placed on contemporary approaches to the isolation and characterization of mammalian genes and proteins, and molecular genetic approaches to understanding eukaryotic development and human disease. *Prerequisites: Chem. 114A-C or consent of instructor.* (May not be offered every year.)

115. Modeling Biological Macromolecules (4)
Use of computer graphics and modeling methods in the study of biological macromolecules. The course will cover basic methods and techniques. The objective is to provide a good working knowledge of the critical features of the methods and to provide a foundation for further study for those who wish to pursue these methods as research topics. *Prerequisite: Chem. 114A or equivalent.* (May not be offered every year.)

116. Chemistry of Enzyme Catalyzed Reactions (4)
A discussion of the chemistry of representative enzyme catalyzed reactions is presented. Enzyme reaction mechanisms and their relation to enzyme structure are emphasized. *Prerequisites: Chem. 140A-C, 114A, and 126 or 131.* (May not be offered every year.)

118. Pharmacology and Toxicology (4)
A survey of the biochemical action of drugs and toxins as well as their absorption and excretion. *Prerequisites: Chem. 141A-B-C (or Chem. 140ABC), Chem. 114A-B-C, or consent of instructor. Priorities will be given to majors in Pharmacological Chemistry.*

120A. Inorganic Chemistry I (4)
The chemistry of the main group elements in terms of atomic structure, ionic and covalent bonding. Structural theory involving s, p, and unfilled d orbitals. Thermodynamic and spectroscopic criteria for structure and stability of compounds and chemical reactions of main group elements in terms of molecular structure and reactivity. *Prerequisite: a general chemistry course. Chem. 140A or 141A or equivalent course is recommended.* (F)

120B. Inorganic Chemistry II (4)
A continuation of the discussion of structure, bonding, and reactivity with emphasis on transition metals and other elements using filled d orbitals to form bonds. Coordination chemistry in terms of valence bond, crystal field, and molecular orbital theory. The properties and reactivities of transition metal complexes including organometallic compounds. *Prerequisite: Chem. 120A.* (W)

123. Advanced Inorganic Chemistry Laboratory (4)
Synthesis, analysis, and physical characterization of inorganic chemical compounds. A materials fee is required for this course. *Prerequisites: Chem. 120A, 120B, 143AM or 143A, and 143B. Chem. 120B and 143B may be taken concurrently.* (W,S)

124. Bioinorganic Chemistry (4)
The role of metal ions in biological systems, with emphasis on transition metal ions in enzymes that transfer electrons, bind oxygen, and fix nitrogen. Also included are metal complexes in medicine, toxicity, and metal ion storage and transport. *Prerequisites: Chem. 6A-B-C, 114A.* (May not be offered every year.)

126. Physical Chemistry (4)
An introduction to physical chemistry with emphasis on biochemical and environmental applications. Quantum mechanics and molecular structure, spectroscopy. *Prerequisites: Chem. 6C, Math. 20D, and Phys. 2D; or consent of instructor.* (F)

127. Physical Chemistry (4)
An introduction to physical chemistry with emphasis on biochemical and environmental applications. Thermodynamics, first and second laws, thermochemistry, chemical equilibrium, solutions, kinetic theory, reaction kinetics. *Prerequisite: Chem. 126 or consent of instructor.* (W)

131. Physical Chemistry (4)
Thermodynamics, chemical equilibrium, phase equilibrium, chemistry of solutions. *Prerequisites: Chem. 6C, Math. 20AB and Math. 20C and Phys. 2AB. Recommended: Math. 20D and Phys. 2D (may be taken concurrently).* (F)

132. Physical Chemistry (4)
Chemical statistics, kinetic theory, reaction kinetics. *Prerequisites: Chem. 131, Math. 20D or 21D; or consent of instructor. Recommended: Phys. 2D.* (W)

133. Physical Chemistry (4)
Quantum mechanics, atomic and molecular spectroscopy, molecular structure. *Prerequisites: Chem. 132 and Phys. 2D; or Chem. 6C, Math. 20D and Math. 20F, and Phys. 2AB; or consent of instructor.* (S)

134. Computer Programming in Chemistry (4)
Use of computer programming in the analysis and presentation of chemical data (statistical analysis, least squares fitting procedures, titration curve interpretation, analysis of radioactive decay series, chemical kinetics, organic synthesis, etc.) *Prerequisites: Math. 20A and 20B or equivalent.* (**Note**: Students may not receive credit for both Chem. 134 and BIBC 115.) (May not be offered every year.)

135. Molecular Spectroscopy (4)
Time-dependent behavior of systems; interaction of matter with light; selection rule. Radiative and nonradiative processes, coherent phenomena, and the density matrices. Instrumentation, measurement, and interpretation. *Prerequisites: Chem. 133 or equivalent. Math. 20D or Chem. 190/290.* (May not be offered every year.)

140A. Organic Chemistry I (4)
Introduction to organic chemistry, with applications to biochemistry. Bonding theory, isomerism, stereochemistry, chemical and physical properties. Introduction to substitution, addition, and elimination reactions. Students may not receive credit for both Chem. 140A and Chem. 141A. *Prerequisite: Chem. 6C or equivalent course in general chemistry. (F,W,S)*

140B. Organic Chemistry II (4)
Continuation of Organic Chemistry I, 140A. Methods of analysis, chemistry of hydrocarbons, chemistry of the carbonyl group. Introduction to the reactions of biologically important molecules. Students may not receive credit for both Chem. 141B and Chem. 140B. *Prerequisite: Chem. 140A (a grade of C or higher in Chem. 140A is strongly recommended).* (F,W,S)

140C. Organic Chemistry III (4)
Continuation of Organic Chemistry I (140A) and Organic Chemistry II (140B). Organic chemistry of biologically important molecules: carboxylic acids, carbohydrates, proteins, fatty acids, biopolymers, natural products. Students may not receive credit for both Chem. 140C and Chem. 141C. *Prerequisite: Chem. 140B (a grade of C or higher in Chem. 140B is strongly recommended).* (F,W,S)

141A. Organic Chemistry (4)
Chem. 141A introduces theoretical and experimental studies of structure and properties of covalent molecules. Both resonance and simple molecular orbital descriptions of organic compounds are introduced and spectroscopic methods for determining electronic and molecular structure are discussed. Organic reactions are introduced with synthetic and mechanistic examples. *Prerequisites: Chem. 6C (6C may be taken concurrently by good students). Prior or concurrent physics recommended.* (**Note**: Students may not receive credit for both Chem. 141A and Chem. 140A.) (F)

141B. Organic Chemistry (4)
A continuation of Chem. 141A, this course applies the structure-reactivity, spectroscopy, and electronic theories introduced in Chem. 141A to organic reactions. *Prerequisite: Chem. 141A.* (**Note**: Students may not receive credit for both Chem. 141B and Chem. 140B.) (W)

141C. Organic Chemistry (4)
A continuation of Chem. 141A-B, this course treats selected topics such as carbon-metal bonds, organometallic chemistry, electrophilic reactions, free radical reactions, alkane chemistry, polymerization, molecular orbital theory and electrocyclic reactions, photochemistry, unstable intermediates such as carbenes, benzyne, etc., and metal oxidation reactions, and an introduction to carbohydrate and protein chemistry. *Prerequisite: Chem. 141B.* (**Note**: Students may not receive credit for both Chem. 141C and Chem. 140C.) (S)

143A. Organic Chemistry Laboratory (4)
Introduction to laboratory techniques needed in organic chemistry. Stresses physical methods including separation and purification, spectroscopy, product analysis and effects of reaction conditions. *Prerequisites: Chem. 6BL, Chem. 140A or Chem. 141A.* (**Note**: Students may not receive credit for both Chem. 143A and Chem. 143AM.) A materials fee is required for this course. (F,W,S)

143AM. Advanced Organic Chemistry Laboratory (4)
An organic chemistry laboratory intended for chemistry majors only. It is similar to Chem. 143A, but with emphasis on instrumental methods of product identification, separation, and analysis. *Prerequisites: Chem. 6BL, Chem. 140A or Chem. 141A. (**Note**: Students may not receive credit for both Chem. 143AM and Chem. 143A.) This course is restricted to majors only.* A materials fee is required for this course. (W)

143B. Organic Chemistry Laboratory (4)
Continuation of Chem. 143AM or 143A, emphasizing synthetic methods of organic chemistry. *Prerequisites: Chem. 143AM or 143A, Chem. 140B (may be taken concurrently). Enrollment is limited to majors in the Department of Chemistry and Biochemistry, unless space is available.* A materials fee is required for this course. (W,S)

143C. Organic Laboratory (5)
Identification of unknown organic compounds by a combination of chemical and physical techniques. This course is intended for chemistry majors only. *Prerequisites: Chem. 6CL, 143 AM or 143A, 140C or 141C (may be taken concurrently); 143B suggested. A materials fee is required for this course.* (F)

143D. Molecular Design and Synthesis (4)
Advanced organic synthesis. Relationships between molecular structure and reactivity using modern synthetic methods and advanced instrumentation. Stresses importance of molecular design, optimized reaction conditions for development of practically useful synthesis, and problem-solving skills. *Prerequisites: Chem. 140C and Chem. 143B.* A materials fee is required for this course. (S)

149A. Environmental Chemistry (4)
The chemical basis of air and water pollution, chlorofluorocarbons and the ozone hole, the environmental impact of radioactive waste disposal, mineral resource usage, and nuclear energy. *Prerequisites: Chem. 6A-B-C.* (F)

149B. Environmental Chemistry (4)
Agricultural productivity, biological impact on the environment, deforestation, environmental disasters (fires, nuclear winter, and volcanoes), and organic waste handling. *Prerequisite: Chem. 149A.* (W)

152. Synthetic Methods in Organic Chemistry (4)
(Formerly Chem. 148) A survey of reactions of particular utility in the organic laboratory. Emphasis is on methods of preparation of carbon-carbon bonds and oxidation reduction sequences. *Prerequisites: Chem. 140C or Chem. 141C or consent of instructor.*

154. Mechanisms of Organic Reactions (4)
(Formerly Chem. 147) A qualitative approach to the mechanisms of various organic reactions; substitutions, additions, eliminations, condensations, rearrangements, oxidations, reductions, free-radical reactions, and photochemistry. Includes considerations of molecular structure and reactivity, synthetic methods, spectroscopic tools, and stereochemistry. The topics emphasized will vary from year to year. This is the first quarter of the advanced organic chemistry sequence. *Prerequisites: Chem. 140C or Chem. 141C.*

155. Synthesis of Complex Molecules (4)
(Formerly Chem. 144) This course discusses planning economic routes for the synthesis of complex organic molecules. The uses of specific reagents and protecting groups will be outlined as well as the control of stereochemistry during a synthesis. Examples will be selected from the recent literature. (May not be offered every year.) *Prerequisites: Chem. 152 or 252 or consent of instructor.*

156. Structure and Properties of Organic Molecules (4)
(Formerly Chem. 145) Introduction to the measurement and theoretical correlation of the physical properties of organic molecules. Topics covered include molecular geometry, molecular-orbital theory, orbital hybridization, aromaticity, chemical reactivity, stereochemistry, infrared and electronic spectra, photochemistry, and nuclear magnetic resonance. *Prerequisites: Chem. 140A-B-C or 141A-B-C or the equivalent.*

157. Bioorganic and Natural Products Chemistry (4)
(Formerly Chem. 142) A comprehensive survey of modern bioorganic and natural products chemistry. Topics will include biosynthesis of natural products, molecular recognition, and small molecule-biomolecule interactions. *Prerequisites: Chem. 140C or 141C or consent of the instructor.*

161. Supramolecular Coordination Chemistry (4)
An introduction and survey of modern coordination chemistry. Topics will include structure and bonding of alkali, transition, lanthanide and actinide metals, with emphasis on the first row transition metals; stereochemistry, coordination clusters, molecular solids and nanoparticles. *Prerequisites: Chem. 120A and 120B or equivalent.*

168. Bioenergetics (4)
Chemiosmotic processes in mitochondria and photosynthetic organelles, structure-function relationships of membrane protein apoptosis, a refined view of mitochondrial structure deduced from electron tomography, and the role of proteins encoded by mitochondrial DNA in oxidative phosphorylation. *Prerequisites: Chem. 114 A and Chem. 114B (or equivalents.)*

170. Cosmochemistry (4)
Composition of stars, of planets, of meteorites, and the earth and moon. Nuclear stability rules and isotopic composition of the elements. Chemical properties of solar matter. Origin of the elements and of the solar system *Prerequisite: general chemistry sequence.*

171. Nuclear and Radiochemistry (4)
Radioactive decay, stability systematics, neutron activation, nuclear reactions. Szilard-Chalmers reactions, hot-atom chemistry, radiation chemistry, effects of ionizing radiation. *Prerequisite: general chemistry sequence.*

173. Atmospheric Chemistry (4)
Chemical principles applied to the study of atmospheres. Atmospheric photochemistry, radical reactions, chemical lifetime determinations, acid rain, greenhouse effects, ozone cycle, and evolution are discussed. *Prerequisites: Chem. 6A-6C.* (S)

182. Biological Databases (4)
This course provides an introduction to the features of biological data, how those data are organized efficiently in databases, and how existing data resources can be utilized to solve a variety of biological problems. Object oriented databases, data modeling, and description. Survey of current biological database with respect to above, implementation of database on a biological topic. *Prerequisite: CSE 100 or Math. 176. Bioinformatics majors only.*

185. Introduction to Computational Chemistry (4)
Course in computational methods building on a background in mathematics and physical chemistry. Brief introduction and background in computational theory, molecular mechanics, semi-empirical methods, and ab initio-based methods of increasing elaboration. Emphasis on applications and reliability. *Prerequisites: Chem. 126 or 133 and Math. 20C.* (May not be offered every year.)

190. Mathematical Methods of Chemistry (4)
Applied mathematics useful in kinetics, spectroscopy, thermodynamics, statistical mechanics and quantum mechanics; ordinary and partial differential equations, vector spaces, operators, linear algebra, numerical analysis. *Prerequisites: general chemistry, calculus.* (May not be offered every year.)

195. Methods of Teaching Chemistry (4)
An introduction to teaching chemistry. Students are required to attend a weekly class on methods of teaching chemistry, and will teach a discussion section of one of the lower-division chemistry courses. Attendance at lecture of the lower-division course in which the student is participating is required. (P/NP grades only.) *Prerequisite: consent of instructor.* (F,W,S)

196. Reading and Research in Chemical Education (2 or 4)
Independent literature or classroom research by arrangement with, and under the direction of, a member of the Department of Chemistry and Biochemistry faculty. Students must register on a P/NP basis. *Prerequisites: upper-division standing, 2.5 minimum GPA, consent of instructor and department.* (F,W,S)

199. Reading and Research (2 or 4)
Independent literature or laboratory research by arrangement with, and under the direction of, a member of the Department of Chemistry and Biochemistry faculty. Students must register on a P/NP basis. *Prerequisites: upper-division standing, 2.5 minimum GPA, consent of instructor and department.* (F,W,S)

GRADUATE

206. Topics in Biophysics and Physical Biochemistry (4)
Selection of topics of current interest. Examples: primary processes of photosynthesis; membrane biophysics; applications of physical methods to problems in biology and chemistry, e.g., magnetic resonance, x-ray diffraction, fluctuation spectroscopy, optical techniques (fluorescence, optical rotary dispersion, circular dichroism). Topics may vary from year to year. *Prerequisite: consent of instructor.* (W)

207. Modern NMR Methods (4)
Treats varied pulse sequences, one- and two-dimensional methods, interpretation of relaxation rates, spin-decoupling, multiple quantum filtering, and solvent suppression with application to liquid crystals, membranes, small molecules, proteins, and nucleic acids. *Prerequisite: does not require extensive mathematics, but Chem. 130 recommended.* (May not be offered every year.)

208. Modern Methods in Protein NMR (4)
This course covers modern methods in protein NMR including multinuclear, multidimensional (2-, 3-, and 4D) and gradient enhanced spectroscopy. Experiments covered include, but are not limited to, 1H-15N HSQC, 15N edited Tocsy and Noesy, HCCH-Tocsy and 1H-15N-13C correlated experiments. Students will be able to write complete pulse sequences from the primary literature for implementation on a Bruker spectrometer by the end of the quarter. *Prerequisite: Chem. 207.* (May not be offered every year.)

209. Macromolecular Recognition (4)
Structures and functions of nucleic acids, folding and catalysis of nucleic acids, motifs and domains of proteins, principles of protein-interactions, chemistry of protein/DNA and protein/RNA interfaces, conformational changes in macromolecular recognition. *Prerequisites: biochemistry background and graduate standing, or approval of instructor.*

211. Metabolic Biochemistry (4)
A comprehensive course in biochemistry emphasizing metabolic and human biochemistry. *Prerequisites: physical and organic chemistry; graduate standing.* (F)

213. Chemistry of Biological Macromolecules (4)
A discussion of the structural principles governing biological macromolecules, the techniques used in their study, and how their functional properties depend on three-dimensional structure. Chem. 213 students will be required to complete additional coursework beyond that expected of students in Chem. 113. *Prerequisites: elementary physical and organic chemistry.* (May not be offered every year.)

214. Molecular and Cellular Biochemistry (4)
This course represents a continuation of 114C, or an introductory course for first- and second-year graduate students, and covers topics in molecular and cellular biochemistry. Emphasis will be placed on contemporary approaches to the isolation and characterization of mammalian genes and proteins, and molecular genetic approaches to understanding eukaryotic development and human disease. Chem. 214 students will be required to complete additional coursework beyond that expected of students in Chem. 114D. *Prerequisite: Chem. 114A-C or consent of instructor.* (May not be offered every year.)

215. Modeling Biological Macromolecules (4)
Use of computer graphics and modeling methods in the study of biological macromolecules. The course will cover basic methods and techniques. The objective is to provide a good working knowledge of the critical features of the methods and to provide a foundation for further study for those who wish to pursue these methods as research topics. Chem. 215 students will be required to complete additional coursework beyond that expected of students in Chem. 115. *Prerequisite: Chem. 114A or equivalent.* (May not be offered every year.)

216. Chemistry of Enzyme Catalyzed Reactions (4)
A discussion of the chemistry of representative enzyme catalyzed reactions is presented. Enzyme reaction mechanisms and their relation to enzyme structure are emphasized. Chem. 216 students will be required to complete additional coursework beyond that expected of students in Chem. 116. *Prerequisites: Chem. 140A-B-C, 114A and 126 or 131.* (May not be offered every year.)

218. Macromolecular Biochemistry (4)
A comprehensive course in biochemistry emphasizing structural biochemistry. *Prerequisites: physical and organic chemistry; graduate-student standing.* (F)

219A-B-C. Special Topics in Biochemistry (4-4-4)
This special topics course is designed for first-year graduate students in biochemistry. Topics presented in recent years have included protein processing, the chemical modification of proteins, the biosynthesis and function of glycoproteins, lipid biochemistry and membrane structure, and bioenergetics. *Prerequisites: undergraduate courses in biochemistry. Chem. 114A or equivalent.* (May not be offered every year.)

221. Signal Transduction (4)
The aim of this course is to develop an appreciation for a variety of topics in signal transduction. We will discuss several historical developments while the focus will be on current issues. Both experimental approaches and results will be included in our discussions. Topics may vary from year to year. *Prerequisites: biochemistry and molecular biology.* (May not be offered every year.)

222. Structure and Analysis of Solids (4)
Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/property comparisons, structure determination with X-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orbitals, bands versus bonds, free electron theory.

223. Organometallic Chemistry (4)
A survey of this field from a synthetic and mechanistic viewpoint. Reactivity patterns for both main group and transition element organometallic compounds will be discussed and organized according to periodic trends. (May not be offered every year.)

224. Spectroscopic Techniques (4)
Application of physical techniques to the elucidation of the structure of inorganic complex ions and organometallic compounds. Topics covered include group theory, and its application to vibrational, magnetic resonance and Raman spectroscopy. (May not be offered every year.)

225. Bioinorganic Chemistry (4)
The role of metal ions in biological systems, with emphasis on transition metal ions in enzymes that transfer electrons, bind oxygen, and fix nitrogen. Also included are metal complexes in medicine, toxicity, and metal ion storage and transport. Chem. 225 students will be required to complete additional coursework beyond that expected of students in Chem. 124. *Prerequisites: Chem. 6A-B-C and Chem. 114A.* (May not be offered every year.)

226. Mechanistic Aspects of Catalytic Reactions (4)
Mechanisms of substitution and electron transfer reaction of inorganic complexes will be examined from an experimental point of view. A quantitative treatment of rate laws, the steady state approximation and multistep mechanisms of reactions that are catalyzed by soluble transition metal complexes. (May not be offered every year.)

227. Seminar in Inorganic Chemistry (2)
Seminars presented by faculty and students on topics of current interest in inorganic chemistry, including areas such as bioinorganic, organometallic and physical-inorganic chemistry. The course is designed to promote a critical evaluation of the available data in specialized areas of inorganic chemistry. Each quarter three or four different topics will be discussed. *Prerequisite: graduate standing or consent of instructor.* (S/U grades only.)

228. Solid State Chemistry (4)
Survey of the chemistry of semiconductors, superconductors, molecular magnetic materials, zeolites, fast ion conductors, electronically conducting polymers and ceramics. Synethetic techniques such as molecular precursor design, the sol-gel process, electrosynthesis, and high-temperature thermolysis will be covered. (May not be offered every year.)

229. Special Topics in Inorganic Chemistry (2-4)
Selection of topics of current interest. May be repeated for credit when topics vary. (May not be offered every year.)

230. Quantum Mechanics (4)
Concepts and mathematical formalism that are useful for problems of chemical interest: states, representations, operators, eigenvalues and eigenfunctions, time evolution, observables, and measurements. Time-independent perturbation theory. *Prerequisites: Chem. 133 or equivalent; Math. 20D or equivalent; Chem. 190 may be taken concurrently.* (May not be offered every year.)

231. Chemical Kinetics and Molecular Reaction Dynamics (4)
Classical kinetics, transition state theory, unimolecular decomposition, potential energy surfaces; scattering processes and photodissociation processes. *Prerequisite: Chem. 230.* (May not be offered ever year.)

232. Statistical Mechanics of Chemical Systems (4)
Equilibrium statistical mechanics, distribution functions, and partition functions. Boltzman, Bose, and Fermi statistics. The different ensembles; ensemble averages and QM expectation values; derivation of thermodynamic properties of simple systems. *Prerequisites: Chem. 131, 132 and 133, or equivalent.* (May not be offered every year.)

235. Molecular Spectroscopy (4)
Time-dependent behavior of systems; interaction of matter with light; selection rule. Radiative and nonradiative processes, coherent phenomena and the density matrices. Instrumentation, measurement, and interpretation. Chem. 235 students will be required to complete additional coursework beyond that expected of students in Chem. 135. *Prerequisites: Chem. 133 or equivalent; Math. 20D; or Chem. 190/290.* (May not be offered every year.)

236. Atherosclerosis (2 or 4)
Multidisciplinary course integrating topics concerning the pathogenesis of arteriosclerosis, with emphasis on cholesterol and lipoprotein metabolism, and the cellular and biochemical mechanisms of lesion development. Topics include relationship of coronary heart disease to hyperlipoproteinemias, management of risk factors, and therapeutic approaches. Two-hour lectures. Same as Medicine 236. *Prerequisite: biochemistry.* (May not be offered every year.)

237. Essentials of Glycobiology (4)
Advanced elective for graduate/medical students who have had core courses in cell biology or biochemistry. Expert faculty will present a coordinated overview of the field of glycobiology, which explores the structure, synthesis, and functions of sugar chains in biological systems. (May not be offered every year.)

238. Current Topics in Physical Chemistry (4)
Critical reading of current literature; training and practice in presenting oral reports, writing scientific papers and proposals. (May not be offered every year.)

239. Special Topics in Chemical Physics (2-4)
Topics of special interest will be presented. Examples include NMR, solid-state chemistry, phase transitions, stochastic processes, scattering theory, nonequilibrium processes, tensor transformations, and advanced topics in statistical mechanics, thermodynamics, and chemical kinetics. (May not be offered every year.)

240. Electrochemistry (4)
Application of electrochemical techniques to chemistry research. Basic electrochemical theory and instrumentation: the diffusion equations, controlled potential, and current methods. Electro-chemical kinetics, Butler-Volmer, Marcus-Hush theories, preparative electrochemistry, analytical electrochemistry, solid and polymer electrolytes, semiconductor photoelectrochemistry. (May not be offered every year.)

246. Kinetics and Mechanism (4)
Methodology of mechanistic organic chemistry: integration of rate expressions, determination of rate constants, transition state theory; catalysis, kinetic orders, isotope effects, substituent effects, solvent effects, linear free energy relationship; product studies, stereochemistry; reactive intermediates; rapid reactions. (May not be offered every year.)

250. Seminar in Chemistry (2)
Regularly scheduled seminars by first-year graduate students provide opportunities for practice in seminar delivery and for the exploration of topics of general interest. (S/U grades only.) (S)

251. Research Conference (2)
Group discussion of research activities and progress of the group members. *Prerequisite: consent of instructor.* (S/U grades only.) (F,W,S)

252. Synthetic Methods in Organic Chemistry (4)
(Formerly Chem. 248) A survey of reactions of particular utility in the organic laboratory. Emphasis is on methods of preparation of carbon-carbon bonds and oxidation reduction sequences. Chem. 252 students will be required to complete additional coursework beyond that expected of students in Chem. 152. *Prerequisite: Chem. 140C or 141C or consent of instructor.*

254. Mechanisms of Organic Reactions (4)
(Formerly Chem. 247) A qualitative approach to the mechanisms of various organic reactions; substitutions, additions, eliminations, condensations, rearrangements, oxidations, reductions, free-radical reactions, and photochemistry. Includes considerations of molecular structure and reactivity, synthetic methods, spectroscopic tools, and stereochemistry. The topics emphasized will vary from year to year. This is the first quarter of the advanced organic chemistry sequence. Chem. 254 students will be required to complete additional coursework beyond that expected of students in Chem. 154. *Prerequisites: Chem. 140C or Chem. 141C or graduate standing.*

255. Synthesis of Complex Molecules (4)
(Formerly Chem. 244) This course discusses planning economic routes for the synthesis of complex organic molecules. The uses of specific reagents and protecting groups will be outlined as well as the control of stereochemistry during a synthesis. Examples will be selected from the recent literature. Chem. 255 students will be required to complete additional coursework beyond that expected of students in Chem. 155. (May not be offered every year.) *Prerequisites: Chem. 152 or 252.*

256. Structure and Properties of Organic Molecules (4)
(Formerly Chem. 245) Introduction to the measurement and theoretical correlation of the physical properties of organic molecules. Topics covered include molecular geometry, molecular-orbital theory, orbital hybridization, aromaticity, chemical reactivity, stereochemistry, infrared and electronic spectra, photochemistry, and nuclear magnetic resonance. Chem. 256 students will be required to complete additional coursework beyond that expected of students in Chem. 156. *Prerequisites: Chem. 140ABC or 141ABC or the equivalent.*

257. Biorganic and Natural Products Chemistry (4)
(Formerly Chem. 242) A comprehensive survey of modern bioorganic and natural products chemistry. Topics include biosynthesis of natural products, molecular recognition, and small molecule-biomolecule interactions. Chem. 257 students will be required to complete additional coursework beyond that expected of students in Chem. 157. *Prerequisites: Chem. 140C or 141C, 254 or consent of instructor.*

258. Applied Spectroscopy (4)
Intensive coverage of modern spectroscopic techniques used to determine the structure of organic molecules. Problem solving and interpretation of spectra will be strongly emphasized. *Prerequisites: Chem. 254 or consent of instructor.*

259. Special Topics in Organic Chemistry (2-4)
(Formerly Chem. 249) Various advanced topics in organic chemistry. Includes but is not limited to: advanced kinetics, advanced spectroscopy, computational chemistry, heterocyclic chemistry, medicinal chemistry, organotransition metal chemistry, polymers, solid-phase synthesis/combinatorial chemistry, stereochemistry, and total synthesis classics.

261. Supramolecular Coordination Chemistry (4)
An introduction and survey of modern coordination chemistry. Topics will include structure and bonding of alkali, transition, lanthanide, and actinide metals, with emphasis on the first row transition metals; stereochemistry, coordination clusters, molecular solids and nanoparticles. Chem. 261 students will be required to complete additional coursework beyond that expected of students in Chem. 161. *Prerequisites: Chem. 120A, 120B or equivalent; or graduate standing.*

262. Inorganic Chemistry and NMR (4)
A survey of inorganic chemistry to prepare for graduate research in the field, including a detailed introduction to nuclear magnetic resonance (NMR), followed by applications of NMR to structural and mechanistic problems in inorganic chemistry.

268. Bioenergetics (4)
Chemiosmotic processes in mitochondria and photosynthetic organelles, structure-function relationships of membrane protein apoptosis, a refined view of mitochondrial structure deduced from electron tomography and the role of proteins encoded by mitochondrial DNA in oxidative phosphorylation. Chem. 268 students will be required to complete additional coursework beyond that expected of students in Chem. 168. *Prerequisites: Chem. 114 A and Chem. 114B (or equivalents.)*

270A-B-C. Current Topics in Environmental Chemistry (2-2-2)
Seminar series on the current topics in the field of environmental chemistry. Emphasis is on current research topics in atmospheric, oceanic, and geological environments. *Prerequisite: consent of instructor.* (S/U grades only.) (May not be offered every year.)

285. Introduction to Computational Chemistry (4)
Course in computational methods building on a background in mathematics and physical chemistry. Brief introduction and background in computational theory, molecular mechanics, semi-empirical methods, and ab initio-based methods of increasing elaboration. Emphasis on applications and reliability. Chem. 285 students will be required to complete additional coursework beyond that expected of students in Chem. 185. *Prerequisites: Chem. 126 or 133 and Math. 20C.* (May not be offered every year.)

290. Mathematical Methods in Chemistry (4)
Applied mathematics useful in kinetics, spectroscopy, thermodynamics, statistical mechanics, and quantum mechanics; ordinary and partial differential equations, vector spaces, operators, linear algebra, numerical analysis. Chem. 290 students will be required to complete additional coursework beyond that expected of students in Chem. 190. *Prerequisites: general chemistry, calculus.* (May not be offered every year.)

293. Cosmochemistry Seminar (2)
Formal seminars or informal sessions on topics of current interest in cosmochemistry as presented by visiting lecturers, local researchers, or students. *Prerequisite: advanced graduate-student standing.* (S/U grades only.)

294. Organic Chemistry Seminar (2)
Formal seminars or informal puzzle sessions on topics of current interest in organic chemistry, as presented by visiting lecturers, local researchers, or students. *Prerequisite: advanced graduate-student standing.* (S/U grades only.) (F,W,S)

295. Biochemistry Seminar (2)
Formal seminars or informal puzzle sessions on topics of current interest in biochemistry, as presented by visiting lecturers, local researchers, or students. *Prerequisite: advanced graduate-student standing.* (S/U grades only.)

296. Chemical Physics Seminar (2)
Formal seminars or informal sessions on topics of current interest in chemical physics as presented by visiting lecturers, local researchers, or students. *Prerequisite: advanced graduate-student standing.* (S/U grades only.) (F,W,S)

297. Experimental Methods in Chemistry (4)
Experimental methods and techniques involved in chemical research are introduced. Hands-on experience provides training for careers in industrial research and for future thesis research. *Prerequisite: graduate standing.*

298. Special Study in Chemistry (1-4)
Reading and laboratory study of special topics for first-year graduate students under the direction of a faculty member. Exact subject matter to be arranged in individual cases. (S/U grades only.) *Prerequisite: first-year graduate student standing.* (F,W,S)

299. Research in Chemistry (1-12)
Prerequisites: graduate standing and consent of instructor. (S/U grades only.) (F,W,S)

500. Teaching in Chemistry (4)
A doctoral student in chemistry is required to assist in teaching undergraduate chemistry courses. One meeting per week with instructor, one or more meetings per week with assigned class sections or laboratories, and attendance at the lecture of the undergraduate course in which he or she is participating. *Prerequisites: graduate standing and consent of instructor.* (S/U grades only.) (F,W,S)

Chinese Studies is an interdisciplinary program that allows the student interested in China to utilize the university's offerings in various departments to build a major leading to a B.A. degree. In addition to coordinating courses in the various departments, the Program in Chinese Studies offers courses directly under its own auspices to round out the available offerings.

The Chinese Studies Program combines historical understanding with an emphasis on modern and contemporary China. The Chinese History Program has a strong specialization in late imperial and modern China. A full spectrum of courses on the politics, economics, society, and culture of today's China are offered. Another focal point of research interest is visual culture and cultural history in modern and pre-modern China. The interdisciplinary nature of the program (see departmental affiliation of the participating faculty) can accommodate students of a wide range of interests. In addition to our local resources, the University of California Education Abroad Program (EAP) and Opportunities Abroad Program (OAP) are affiliated with various universities and language institutes in China, Taiwan, Hong Kong, and Singapore. This, together with other academic exchange programs with a number of Chinese universities, provides the possibility of a junior year abroad, including both language courses and courses dealing with various aspects of Chinese studies. Subject to final approval by the program chair, EAP credits may be transferred back to UCSD to coordinate with on-campus offerings. However, at least six of the upper-division courses for the major must be taken at UCSD.

The Major Program

The student choosing a major in Chinese studies must meet the following requirements:

1. Two years of Mandarin Chinese (Chinese Studies 11-12-13 and 21-22-23 or equivalent).
2. History 10-11-12 (East Asian History)
3. Twelve upper-division courses in Chinese studies, including courses taken in at least three departments. At least one of these courses should be a seminar or colloquium in which students would be expected to write a substantial term paper. No more than six upper-division language courses count toward the major requirement.
4. As a rule, only courses taken for a letter grade can satisfy program requirements (major, minor). Exceptions are granted for Chinese Studies 198 and 199.

In principle, the courses included in the Program in Chinese Studies are those campus offerings dealing with China or the Chinese language. Most of the courses listed below are planned by participating departments for the 2004–2005 academic year.

Honors Program

Requirements for admission to the program are:

1. Junior standing
2. A GPA of 3.5 or better in the major
3. Overall GPA of 3.2 or better
4. Recommendation of a faculty sponsor familiar with the student's work
5. Completion of at least four upper-division courses approved by the Program in Chinese Studies
6. Completion of at least one year of Chinese language study.

Students who qualify for honors take a two-quarter sequence of directed study during which they define a research project, carry out the research, and complete a senior thesis.

The completed thesis will be evaluated by a committee consisting of the student's thesis adviser and one other faculty member appointed by the Chinese studies program chair.

The Minor Program

A minor in Chinese studies consists of at least three lower-division courses (a minimum of twelve units) and four upper-division courses (a minimum of sixteen units) taken for a letter grade. These courses should be chosen from three programs or departments. No more than three language courses may apply toward the minor requirement. Only one non-language course taken abroad may be approved for fulfillment of the minor. A list of approved courses is available quarterly from the Program in Chinese Studies.

COURSES

COMMITTEE-SPONSORED COURSES

11-12-13. First-Year Chinese (5-5-5)

21-22-23. Second-Year Chinese (4-4-4)

111-112-113. Third-Year Chinese (4-4-4)

121-122-123. Fourth-Year Chinese (4-4-4)

Each of these year-long sequences begins in the fall term. Students wishing to take more than one Chinese language class in the same quarter must obtain approval from the head of the language program *prior* to enrolling in the second course.

All Chinese language courses have A, D and E tracks for students with no Chinese language background; B track for students with some

Chinese language background; C track for students with Chinese language background other than Mandarin.

150. Intensive Summer Language and Culture Program in China (4)
Intensive language and cultural study in China. Program includes regularly scheduled language classes taught by UCSD faculty members; a cultural program of films, stage performances and lectures; and field trips to villages, urban industrial communities, and places of historical interest. All levels of language proficiency accepted. (Summer)

160/260. Late Imperial and Twentieth-Century Chinese Historical Texts (4)
This course introduces the primary sources used by historians of Late Imperial and Twentieth-Century Chinese history. Reading material includes diaries, newspaper articles, Qing documents, gazetteers, essays, speeches, popular fiction, journal articles, scholarly prose, and field surveys. May be repeated for credit. (P/NP grades only.) *Prerequisite: advanced knowledge of Chinese language and consent of instructor.*

165A-B-C. Business Chinese (4-4-4)
Basic training in oral and written communication skills for business, including introduction to modern business terminology and social conventions. *Prerequisite: two years of Chinese language or equivalent.*

170. History of Science in China (4)
This course is designed to provide a coherent picture of aspects of the development of science in Chinese civilization from ancient times through the eighteenth century. The focus (mathematics, astronomy, medicine, chemistry, etc.) will shift from year to year.

181A. Introduction to Classical Chinese (4)
Introduction to the classical language through Confucius, Mencius, and the other Great Books. The emphasis will be on comprehension and reading ability. *Prerequisite: Chinese Studies 23 or equivalent.*

181B. Introduction to Classical Chinese (4)
Continuation of Chinese Studies 181A. *Prerequisite: Chinese Studies 181A or equivalent.*

181C. Introduction to Classical Chinese (4)
This course is a continuation of 181A and B. Short passages from major historical, literary, and philosophical works are introduced. *Prerequisite: Chinese Studies 181B or equivalent.*

182A. Intermediate Classical Chinese (4)
This course is a continuation of Introduction to Classical Chinese (181A-B-C). Selections from major works written in classical Chinese, such as Laozi, Shijing, etc., will be read. The course emphasizes the structures, function words, the analysis of each sentence, and the comprehension of texts. *Prerequisite: Chinese Studies 181A-B-C or equivalent.*

182B. Intermediate Classical Chinese (4)
This course is a continuation of 182A. Selections from Zhuangzi, Shiji, etc., will be taught. The course emphasizes the structures, function words, the analysis of each sentence, and the comprehension of texts. *Prerequisite: Chinese Studies 182A or equivalent.*

182C. Intermediate Classical Chinese (4)
This course is a continuation of 182B. Selections from I Ching, Hanshu, etc., will be introduced. The course emphasizes the structures, function words, the analysis of each sentence, and the comprehension of texts. *Prerequisite: Chinese Studies 182B or equivalent.*

183. Readings in Classical Chinese (4)
Introduction to major works written in classical Chinese, including poetry and historical documents. *Prerequisite: Chinese Studies 181B or equivalent.*

186A-B-C. Readings in Chinese Economics, Politics, and Trade (4-4-4)
Introduction to the specialized vocabulary relating to Chinese politics, trade, and development. Designed for students in the social sciences or with career interests in international trade, the course will stress reading and translating documents, and the special forms of business correspondence and oral negotiation. *Prerequisite: one year of Chinese.*

196. Directed Thesis Research (4)
B.A. honors thesis under the direction of a faculty member in Chinese studies. This course requires two quarters to complete. An IP grade will be awarded at the end of the first quarter. *Prerequisite: consent of instructor.* (F,W,S)

198. Directed Group Study in Chinese Studies (2 or 4)
Study of specific aspects in Chinese civilization not covered in regular course work, under the direction of faculty members in Chinese studies. (P/NP grades only.) *Prerequisite: consent of instructor.* (F,W,S)

199. Independent Study in Chinese Studies (2 or 4)
The student will undertake a program of research or advanced reading in selected areas in Chinese studies under the supervision of a faculty member of the Program in Chinese Studies. (P/NP grades only.) *Prerequisite: consent of instructor.* (F,W,S)

269. Conversational Mandarin for Medical Students—Beginning (2)
This introductory course is designed to develop a working knowledge of medical Mandarin that will enable the student to communicate with Mandarin-speaking patients. There will be instruction in basic medical vocabulary and grammar, with a focus on taking a medical history. No previous knowledge of Mandarin is required since this is only a conversation course. For graduate and School of Medicine students. (S/U only.)

296. Directed Thesis Research (2-12)
Graduate thesis research under the guidance of a faculty member affiliated with the Program in Chinese Studies.

299. Independent Study in Chinese Studies (2-12)
Independent graduate research under the guidance of a faculty member affiliated with the Program in Chinese Studies.

500. Apprentice Teaching (1-4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty; handling of discussions, preparation and grading of exams and other written exercises, and student relations. (S/U only.)

DEPARTMENT-SPONSORED COURSES

For description of courses listed below, see appropriate departmental listing. All graduate-level courses require consent of the instructor for undergraduate students. Some departmental offerings have content that varies from year to year. In those cases, Chinese Studies approval is given only when content relates primarily to China.

LOWER-DIVISION

History HILD 10: East Asia: The Great Tradition (staff)

History HILD 11: East Asia and the West (staff)

History HILD 12: Twentieth-Century East Asia (staff)

Literature/LTWL 4C: Fiction and Film in Twentieth-Century Societies: Asian Societies (Zhang)

Music MUS 13AS: World Music: Asia and Oceania (Guy)

UPPER-DIVISION

I. CHINESE CULTURE AND SOCIETY

Anthropology ANRG 170: Traditional Chinese Society (Jordan)

Anthropology ANRG 173: Chinese Popular Religion (Jordan)

History HIEA 119: Religion and Popular Culture in East Asia (Cahill)

History HIEA 137: Women and Family in Chinese History (Hanson)

History HIRE 115: Women in Chinese Religious Traditions (Cahill)

History HITO 102: Religious Traditions: East Asian Religious Tradtions (Cahill)

Music MUS 111: Topics/World Music Traditions (Guy)

Sociology SOC/B 162R: Religion and Popular Culture in East Asia (Staff)

Sociology SOC/D 158J: Religion and Ethics in China and Japan (Staff)

Sociology SOC/D 189: Special Topics in Comparative-Historical Sociology (Madsen)

Visual Arts VIS 105D: The Aesthetics of Chinese Calligraphy

II. CONTEMPORARY CHINA

Communication COSF 145: Communication and Development in China (Staff)

History HIEA 132: History of the People's Republic of China (Pickowicz)

IR/PS IRGN 400: International Relations of the Pacific

IR/PS IRGN 404: Chinese Politics

IR/PS IRGN 461: Doing Business in China (Naughton)

Lecturers

Charles Chamberlain, Ph.D., *Classical and Comparative Literature*
Leslie Collins Edwards, Ph.D., *Classical Literature and Languages*
Eliot Wirshbo, Ph.D., *Classical Literature and Languages*

Classical studies is concerned with the cultures of ancient Greece and Rome—roughly from the time of Homer through the time of St. Augustine—in all of their aspects. This program thus offers undergraduates an opportunity to study the cultures of Greece and Rome through the combined resources of the Departments of History, Literature, Visual Arts, Theatre and Dance, and Philosophy. The study of the ancient Greek and Latin languages themselves serves as the starting point for the broader consideration of specific texts in their literary, intellectual, and historical context. In cooperation with the Judaic Studies Program, moreover, students are provided the opportunity to link the study of ancient Greece and Rome to that of the ancient Near East.

The Major Programs

The Classical Studies Program offers four different degree paths, three within classical studies and one in cooperation with Judaic studies. The majors are Greek, Latin, classics, and Greek and Hebrew. Each consists of a choice of twelve upper-division courses approved for the program and listed below. All courses used to meet requirements for a major in classical studies must be taken for a letter grade and be passed with a grade of C– or better.

GREEK

LTWL 19A-B-C are a prerequisite to the Greek major. Six of the twelve upper-division courses must be LTGK courses numbered 100 and above, but exclusive of LTGK 101. The remaining six courses may be in classical civilization (in English translation), selected from the list of approved courses from history, Lit/World, philosophy, political science, and visual arts, though additional LTGK courses numbered 100 and above (including LTGK 101) are acceptable here. These must be from at least two departments and selected in consultation with the adviser; courses dealing with Greek civilization are strongly preferred.

LATIN

LTWL 19A-B-C are a prerequisite to the Latin major. Six of the twelve upper-division courses must be LTLA courses numbered 100 and above, but exclusive of LTLA 101 and 102. The remaining six courses may be in classical civilization (in English translation), selected from the list of approved courses from history, Lit/World, philosophy, political science, and visual arts, though additional LTLA courses numbered 100 and above (including LTLA 101 and 102) are acceptable here. These must be from at least two departments and selected in consultation with the adviser; courses dealing with Roman civilization are strongly preferred.

CLASSICS

LTWL 19A-B-C are a prerequisite to the classics major. Nine of the twelve upper-division courses must be distributed between LTLA and LTGK courses numbered 100 and above (but exclusive of LTLA 101 and 102 and LTGK 101), six in one literature and three in the other according to the student's emphasis. The remaining three courses may be in classical civilization (in English translation), selected from the list of approved courses

from history, Lit/World, philosophy, political science, and visual arts, though additional LTLA or LTGK courses numbered 100 and above (including LTLA 101 and 102 and LTGK 101) are acceptable here. These must be from at least two departments and selected in consultation with the adviser to reflect the relative emphasis upon the Greek and Latin literatures, but with at least one focusing upon each culture.

GREEK AND HEBREW

Three courses from LTWL 19A-B-C and Cultural Traditions, Judaic 1A-B, to be selected in consultation with the adviser, are a prerequisite to the Greek and Hebrew major. Nine of the twelve upper-division courses must be distributed between LTGK courses numbered 100 and above (but exclusive of LTGK 101) and Judaic Studies 101-102-103 or LTNE courses numbered 100 through 112, six in one literature and three in the other according to the student's emphasis. The remaining three courses may be in ancient Greek and Judaic civilization (in English translation), selected from the list of courses approved for classical studies and from the list of courses approved for Judaic studies, though additional LTGK courses numbered 100 and above (including LTGK 101) or Judaic Studies 101-102-103 or LTNE courses numbered 100 through 112 are acceptable here. These must be from at least two departments and selected in consultation with the adviser (who is selected in accordance with the student's emphasis) to reflect the relative emphasis upon the Greek and Hebrew literatures, but with at least one course from each program.

The Minor Programs

CLASSICAL STUDIES:

A minor in classical studies consists of seven courses from those listed below, of which at least four must be upper-division. A knowledge of the ancient languages is not required. The minor will normally include LTWL 19A-B-C: the Greco-Roman World, and four other courses from the participating departments.

Greek:

See Literature: "The Minor in Literature"

Latin:

See Literature: "The Minor in Literature"

Warren College

A Warren College program of concentration in classical studies normally consists of LTWL 19A-B-C and three of the upper-division courses listed below.

Graduate courses may be taken by undergraduates with consent of the instructor. The faculty of the program welcomes qualified undergraduates in graduate courses.

Additional courses counting toward a major in classical studies are offered on a year-to-year basis, both at the undergraduate and graduate levels. As these often cannot be listed in advance, interested students should consult the program faculty for an up-to-date list.

Honors in Greek, Latin, and Classics

Honors is intended for the most talented and motivated students majoring in Greek, Latin, classics, or Greek and Hebrew. Requirements for admission to the honors program are:

1. Junior standing
2. An overall GPA of 3.5
3. A GPA in the major of 3.7

Qualified students majoring in Greek, Latin, or classics may apply at the end of their junior year to the program faculty on the basis of 1) a thesis proposal (three to four pages) worked out in advance with a classical studies faculty member and 2) a recommendation from that faculty member. It is strongly advised that the proposal be based upon a class paper or project from a course taken towards completion of the major.

The core of the honors program is an honors thesis. The research and writing of the thesis will be conducted over the winter or fall and winter terms of the senior year. Up to four hours of 196 credit to this end may be counted towards the major in place of one of the courses in English translation. A thesis completed by the end of the winter quarter of the senior year will be read and evaluated by the thesis adviser and another member of the program faculty. If the thesis is accepted and the student maintains a 3.7 GPA, departmental honors will be awarded. The level of honors–distinction, high distinction, or highest distinction–will be determined by the program faculty.

Students choosing a major in Greek and Hebrew may complete an honors major as follows: those with an emphasis on Greek must meet the requirements for honors in the Classical Studies Program and work with a thesis adviser from classical studies, but select a second adviser for the thesis from Judaic studies. Those with an emphasis on Hebrew must meet the requirements for honors in the Judaic Studies Program and work with a thesis adviser from Judaic studies, but select a second adviser for the thesis from classical studies.

COURSES

UNDERGRADUATE

Classical Studies 51. Bio-Scientific Vocabulary (Greek-Latin Roots) (4)
Intensive exposure (100 words per week) to Greek and Latin roots, prefixes, and suffixes which form the basis of bio-scientific terminology. Extensive practice in word building and analysis. No knowledge of Greek or Latin required.

Classical Studies 107. Myth, Religion, and Philosophy in Late Antiquity (4)

Classical Studies 111. Topics in Ancient Greek Drama (4)
Close reading and discussion of selected works of ancient Greek drama in translation. (Course may be repeated for credit when topic varies.) *Prerequisite: sophomore standing.*

Classical Studies 196A-B. Honors Thesis (2-4)

Cultural Traditions. Judaic 1A-B (4-4)

Humanities 1. The Foundations of Western Civilization: Israel and Greece (6)
Prerequisite: satisfaction of the Subject A requirement. (W)

Humanities 2. Rome, Christianity, and the Medieval World(6)
Prerequisite: satisfaction of the Subject A requirement. (S)

Humanities 3. Renaissance, Reformation, and Early Modern Europe (4)
Prerequisite: satisfaction of the Subject A requirement. (F)

HIEU 101. Greece in the Classical Age (4)

HIEU 102. The Roman Republic (4)

HIEU 103. The Roman Empire (4)

HIEU 160. Alexander the Great and the Hellenistic World (4)

HIEU 161. The Decline of Rome (4)

HIEU 162. Special Topics in the History of Early Christianity (4)

HIEU 199. Independent Study in Greek and Roman History (4)

LTGK 1-2-3. Beginning and Intermediate Greek (4-4-4)

LTGK 110. Archaic Period (4)

LTGK 112. Homer (4)

LTGK 113. Classical Period (4)

LTGK 120. New Testament Greek (4)

LTGK 130. Tragedy (4)

LTGK 131. Comedy (4)

LTGK 132. History (4)

LTGK 133. Prose (4)

LTGK 134. Epic Poetry (4)

LTGK 135. Lyric Poetry (4)

LTGK 198. Directed Group Study (4)

LTGK 199. Special Studies (2 or 4)

LTLA 1-2-3. Beginning and Intermediate Latin (4-4-4)

LTLA 100. Introduction to Latin Literature (4)

LTLA 111. Pre-Augustan (4)

LTLA 113. Augustan (4)

LTLA 114. Vergil (4)

LTLA 116. Silver Latin (4)

LTLA 131. Prose (4)

LTLA 132. Lyric and Elegiac Poetry (4)

LTLA 134. History (4)

LTLA 135. Drama (4)

LTLA 198. Directed Group Study (4)

LTLA 199. Special Studies (2 or 4)

LTEU 102. Women in Antiquity (4)

LTWL 19A-B-C. (4-4-4)

LTWL 100. Mythology (4)

LTWL 101. What Socrates Knew (4)

LTLW 106. Classical Tradition (4)
Previously LGTN 100, LTEU 100 (May be repeated as topics vary).

Philosophy 101. Plato (4)

Philosophy 102. Aristotle (4)

Philosophy 108. Mythology and Philosophy (4)

Philosophy 199. Independent Study (4)

Pol. Sci. 110A. Citizens and Saints: Political Thought from Plato to Augustine (4)

THHS 103. Ancient Greek Drama in Modern Versions (4)

Visual Arts 11. Western Art I: Prehistoric to Medieval (4)

Visual Arts 120A. Greek Art (4)

Visual Arts 120B. Roman Art (4)

Visual Arts 120C. Late Antique Art (4)

GRADUATE

HIGR 201. The Literature of Ancient History (4)

HIGR 298. Directed Readings in Greek and Roman History (1-12)

LTCO 202A. History of Criticism and Aesthetics (4)

LTCO 210. Classical Studies (4)
Prerequisite: working knowledge of either Greek or Latin.

LTGK 297. Directed Studies (1-12)

LTGK 298. Special Projects (4)

LTLA 297. Directed Studies (1-12)

LTLA 298. Special Projects (4)

Philosophy 201. Greek Philosophy (4)

Philosophy 202. Hellenistic and Roman Philosophy (4)

Philosophy 290. Directed Independent Study (1-4)

The University of California Tri-Campus Graduate Program in Classics

UC IRVINE, UC RIVERSIDE, AND UCSD

What is the UC Tri-Campus Program? This new graduate program joins together into a single faculty more than twenty experts in classics and related disciplines from the three southernmost University of California campuses (Irvine, Riverside, and San Diego). It features an innovative curriculum and program of study that address the practical and theoretical questions confronting the humanities and classics in particular as both enter the twenty-first century.

What are the Program's Goals? The aim of the Tri-Campus Program is to provide an educational environment for pursuing a graduate career in classics that is closely integrated into the main currents of humanistic and social scientific scholarship. The program's faculty recognizes that today and in the future teachers of the classics must possess and develop expertise beyond the standard specialties of the traditional classics Ph.D. degree. Classics programs, in both large research universities and small liberal arts colleges, increasingly feel the pressure to break down the boundaries between disciplines.

To achieve these goals, the program and curriculum are designed around five principles:

- Study the ancient texts and objects in their wider social, cultural, and historical contexts.
- Bring the culture of the ancient Greeks and Romans into the purview of contemporary literary and sociological theory.
- Examine the reception of ancient literature and culture by later cultures and the appropriation of the ancient world by the modern world.
- Pay particular attention to the intersections of Greek and Roman society and culture with each other and with the other cultures of the ancient world.
- Utilize to the fullest the potential of new computing technologies as tools for research and teaching.

These five interdisciplinary principles are embodied in the four Core Courses (Classics 200A, 200B, 200C, and 201). Graduate seminars (Classics 220) and reading courses in Greek and Latin authors (Classics 205) round out the program of studies. This curriculum has been in effect at Irvine since 1995, taught by faculty members from all three campuses.

Where do I apply? The Tri-Campus Program uniquely does not belong to a particular campus but to the University of California. Students who are accepted into the program may enroll at any of the three campuses. Because instruction and administrative functions take place on the Irvine campus, students will normally enroll at Irvine. Applications to the Tri-Campus Graduate Program will be reviewed by an admissions committee composed of members from all three campuses.

Where is the Tri-Campus Program located? UC Irvine is located five miles inland from the Pacific Ocean, fifty miles south of metropolitan Los Angeles, forty-five miles southwest of UC Riverside and seventy-four miles north of UCSD. In addition to its beaches, mountains, and deserts, Southern California offers excellent cultural amenities such as museums, theater, dance, opera, and music.

What are the requirements for admission? Applicants to the program should have a B.A. or equivalent in classics or classical civilization, which normally means that you have had at least three years of one classical language and two of the other. Majors in other disciplines (e.g., comparative literature, history, philosophy, or interdisciplinary fields such as women's studies) are welcome, provided they have sufficient background in Greek and Latin. All applicants must submit Graduate Record Exam (GRE) scores and must have a minimum GPA of 3.0 or the equivalent. If you have completed an M.A. in classics at another institution, you may be admitted with advanced standing and may have the course requirements reduced from the normal three years to two or one. The level of course reduction will be determined by progress evaluation exams administered in the spring quarter of each year.

What would my program of study be like? All students are admitted directly into a program leading to the Ph.D. degree. With the exception of those granted advanced standing because they hold the M.A. degree from another institution, students will be concurrently enrolled in the M.A./Ph.D. program.

Course requirements for the M.A. degree are two years (six quarters) of course work. Minimum course requirements are four quarters of Classics 200A-B-C and 201; four quarters of Classics 205; and four quarters of Classics 220. The normal course load is three 200 level courses each quarter, which may be reduced as determined by progress evaluation exams administered in the spring quarter of each year to students in course work. On approval by the Tri-Campus faculty students may take external graduate seminars in relevant areas outside of classics (at any of the three participating campuses). Other requirements for the M.A. degree are a special set of M.A. examinations, submission of a research paper, and demonstration of a reading knowledge of either German, French, Italian, or equivalent language, by examination or other means.

The M.A. may be a terminal degree. At the end of one's M.A. studies a positive vote of the faculty is necessary for continuation in the Ph.D. program.

For the Ph.D. degree, a third year of course work is required. The minimum course requirements for the Ph.D. degree are four quarters of Classics 200A-B-C and 201; five quarters of Classics 205; and six quarters of Classics 220 or an equivalent course. The normal course load in the third year is three graduate-level courses each quarter, for which Independent Study (Classics 280) under the supervision of a faculty member may be substituted. Students at this level are encouraged to take courses and seminars in relevant areas outside the program. Students must demonstrate reading proficiency in a second modern language by the end of the third year. In order to become a candidate for the Ph.D. and enter the dissertation stage, a student must pass an individually designed set of qualifying examinations, consisting of written examinations in Greek and Latin translation, history, history of literature, and written examinations or lengthy papers in special authors and field, and a final oral examination. These exams should be completed by the end of the fourth year. The expected time for the completion of the Ph.D. is six years. Experience in supervised teaching and/or research activity is normally required during your course of study.

Today, universities and colleges are demanding well-trained classical philologists who are also familiar with the recent movements in literary and sociological theory and are skilled in the use of computer technology in their teaching and research. Our requirements are carefully designed to prepare students for classical studies in the decades to come without compromising the traditional rigor of the field. The UC Tri-Campus Program is purposely small, so that every student will be assured of close personal attention in the attainment of these goals. Tri-Campus graduate students have a voice in the program through their elected graduate representative.

Financial Aid. A variety of fellowships and teaching assistantships is available on a competitive basis to qualified entrants. Among the most prestigious of these are Chancellor's Fellowships, which cover all fees and offer support for four years. Graduate and Professional Opportunity Program (GPOP) fellowships for incoming students with similar awards are also available. Regents' Fellowships are awards in varying amounts to defray fees and expenses. The Thesaurus Linguae Graecae Fellowship (TLG) offers tuition, fees, and a stipend while providing an opportunity for "hands-on" training in computer applications. In addition, the program and the TLG have available several teaching assistantships and research assistantships which also provide a stipend in addition to tuition and fees. Some fourth- and fifth-year TAships will be held at UC Riverside and UCSD. It is the purpose of the program to offer all entering students some form of financial aid. See pp. 8–9 of the UCI Application booklet.

Resources of the Tri-Campus Program. The Department of Classics at UC Irvine, which is the administrative center of the Tri-Campus Program, is housed in pleasant quarters in Humanities Office Building 2. Tri-Campus graduate students avail themselves of

- Superior library holdings in classics and related fields in the combined collections of all nine University of California research libraries, accessed to the holdings of the California Digital Library, and expeditious Interlibrary Loan Services with other U.S. and international libraries.
- The facilities of the Thesaurus Linguae Graecae Project (TLG) at UC Irvine, including the complete TLG data bank, the Classics/TLG Computing Lab, and the large collection of primary texts, commentaries, and reference materials housed in the TLG's Marianne Eirene McDonald Library. Formal (Classics 201) and informal instruction in computer-related methodologies for research and teaching are conducted at the Classics/TLG Computing Lab.
- The Consortium for Latin Lexicography (CLL) at UC Irvine, a collaborative research group whose primary goal is to create a computerized Latin dictionary based on the Thesaurus Linguae Latinae (TLL) in Munich.
- The faculty and program in comparative ancient civilizations at UC Riverside, which are dedicated to a cross-cultural and cross-disciplinary approach to the study of ancient cultures.
- Combined UCI-UCSD Ph.D. program in theater, which has a strong classics component, and the nationally renowned regional theatre at La Jolla.
- Seminars, colloquia, and lectures regularly offered by the Critical Theory Institute at UC Irvine and by the University of California Humanities Research Institute that is housed on the UC Irvine campus. Tri-Campus doctoral students may add an emphasis in critical theory under the supervision of the Committee on Critical Theory. The Tri-Campus Program also has its own colloquia series of lectures by visiting scholars on the three campuses.
- The Southern California Graduate Resource-Sharing Consortium, a cooperative association of the Tri-Campus Program and the graduate classics programs of UCLA and the University of Southern California. Every year a faculty member from each of these units offers a graduate seminar in his or her area of expertise at one of the other units. In the spring of every year faculty and graduate students conjoin at an annual consortium luncheon and lecture by a distinguished visiting scholar.

For further information and an online application to the program, please see the Tri-Campus Program's Web site at http://www.hnet.uci.edu/classics/tricampus/.

COURSES

UC TRI-CAMPUS GRADUATE PROGRAM IN CLASSICS

Classics 200A. Contemporary Literary Theory and the Classics (4)
An introduction to contemporary literary theory, focusing on important critical approaches to the literary texts. May be repeated for credit as topics vary. Some recent offerings include "Bahktin and Aristophanes" (A. Edwards, fall 1995) and "Classics and Literary Theory" (P. duBois, spring 1995)

Classics 200B. Historical Perspectives on Classical Antiquity (4)
Examines ways in which classical texts and ideas have been received and appropriated for the diverse purposes of ancient and subsequent cultures. May be repeated for credit as topics vary. Some recent offerings include "Platonism" (D. Glidden, winter 1996) and "Vergil & Milton" (D. Sutton, winter 1998).

Classics 200C. Greece and Rome in their Contemporary Cultural Contexts (4)
An introduction to the methods and perspectives of social scientific theory which can be used to study the material and social dimensions of the cultures of ancient Greece and Rome. May be repeated for credit as topics vary. Some recent offerings include "Literature & Society in the 4th Century" (M. Salzman, winter 1997) and "Homer's *Iliad* and the Greek Dark Age" (W. Donlan, spring 1999).

Classics 201. Computing in Classical Studies (4)
An introduction to the latest methods of computing for research and teaching. May be repeated for credit as topics vary.

Classics 205. Concurrent Readings (2)
Concurrent enrollment with advanced undergraduate courses (either Greek 105 or Latin 105) with enhanced readings and separate examinations. May be repeated for credit as topics vary.

Classics 220. Classics Graduate Seminar (4)
Subject matter variable; mainly but not exclusively major literary topics. May be repeated for credit as topics vary. Same as Art History 295 when topic is appropriate. Some recent offerings include "Senecan Tragedy" (W. Fitzgerald, winter 1997), "Production Criticism" (D. Sutton, spring 1997), and "Cleopatra and Egyptomania in Rome" (M. Miles, winter 1999).

Classics 280. Independent Study (4)
Supervised independent research. Subject varies.

Classics 290. Research in Classics (4–4–4)
F, W, S.

Classics 299. Dissertation Research (4–12)
F, W, S. May be repeated for credit. Satisfactory/Unsatisfactory Only.

Classics 399. University Teaching (4–4–4)
F, W, S. Required of and limited to Teaching Assistants.

UC TRI-CAMPUS CLASSICS PROGRAM FACULTY

Thomas F. Scanlon, Ph.D., Ohio State University, *Professor of Classics and Program Director,* UCR (Greek and Roman historiography, ancient athletics)

Georgios Anagnostopoulos, Ph.D., Brandeis University, *Professor of Philosophy,* UCSD (Ancient Greek Philosophy, Ethics, Metaphysics)

Luci Berkowitz, Ph.D., Ohio State University, *Professor Emerita of Classics,* UCI (Greek literary history, computer application to literature)

Theodore F. Brunner, Ph.D., Stanford University, *Professor Emeritus of Classics,* UCI (computer application to classical literature)

Charles Chamberlain, Ph.D., University of California, Berkeley, *Lecturer in Classics and Comparative Literature,* UCSD (Greek and Latin literature, Aristotle, poetics)

Cynthia L. Claxton, Ph.D., University of Washington, *Lecturer in Classics and Graduate Teaching Supervisor,* UCI (Greek prose, historiography)

Walter Donlan, Ph.D., Northwestern University, *Professor Emeritus of Classics and Graduate Adviser,* UCI (early Greek literature, Greek social history)

Page duBois, Ph.D., University of California, Berkeley, *Professor of Classics and Comparative Literature,* UCSD (Greek literature, rhetoric, critical theory, cultural studies)

Arthur Droge, Ph.D., University of Chicago, *Professor of Literature;* Director, Program for the Study of Religion, UCSD (religions of Western Antiquity)

Anthony Edwards, Ph.D., Cornell University, *Professor of Classics and Comparative Literature,* UCSD (epic, Greek comedy, critical theory)

Leslie Collins Edwards, Ph.D., Cornell University, *Lecturer in Classics and Comparative Literature,* UCSD (Homer, Greek drama, education in ancient Greece)

Richard I. Frank, Ph.D., University of California, Berkeley, *Associate Professor of History and Classics,* UCI (Roman history, Latin elegy and satire, classical tradition)

David Glidden, Ph.D., Princeton University, *Professor of Philosophy,* UCR (Greek and Roman philosophy)

Anna Gonosová, Ph.D., Harvard University, *Associate Professor of Art History,* UCI (Byzantine and Medieval art)

Susan Lape, Ph.D., Princeton University, *Assistant Professor of Classics,* UCI (Athenian law, Hellenistic Greek history, comedy, political theory)

Edward N. Lee, Ph.D., Princeton University, *Professor Emeritus of Philosophy,* UCSD (Greek philosophy, Plato)

Marianne McDonald, Ph.D., University of California, Irvine, *Professor of Theatre and Classics,* UCSD (Greek and Roman theatre, ancient drama in modern plays, film, and opera)

Margaret M. Miles, Ph.D., Princeton University, *Associate Professor of Art History,* UCI (Greek and Roman art and archaeology, ancient Sicily, Greek religion)

Alden A. Mosshammer, Ph.D., Brown University, *Professor Emeritus of History,* UCSD (early Christian thought, Greek chronography, early Greek history)

Sheldon Nodelman, Ph.D., Yale University, *Associate Professor of Visual Arts,* UCSD (classical art and architecture, Roman portraiture, critical theory)

Maria C. Pantelia, Ph.D., Ohio State University, *Associate Professor of Classics and Director Thesaurus Linguae Graecae,* UCI (Greek epic poetry, Hellenistic poetry, computer applications to classics)

Wendy Raschke, Ph.D., State University of New York, Buffalo, *Lecturer in Classics,* UCR (Roman satire, Greek art and archaeology)

B. P. Reardon, D.U. Université de Nantes, *Professor Emeritus of Classics,* UCI (Late Greek literature, ancient novel)

Dylan Sailor, Ph.D., University of California, Berkeley, *Assistant Professor of Classics and Comparative Literature,* UCSD (ancient historiography, literature and culture of the Principate, critical theory)

Michele Salzman, Ph.D., Bryn Mawr College, *Associate Professor of History,* UCR (Late antiquity; Roman history and literature, religion, women's studies)

Gerasimos Santas, Ph.D., Cornell University, *Professor of Philosophy,* UCI (ancient philosophy, history of philosophy, ethics)

Patrick Sinclair, Ph.D., Northwestern University, *Associate Professor of Classics,* UCI (Roman historiography, Latin lexicography, rhetoric)

Dana F. Sutton, Ph.D., University of Wisconsin, *Professor of Classics,* UCI (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Nicholas P. White, Ph.D., Harvard University, *Professor of Philosophy,* UCI (Greek Philosophy, Ethics, Epistemology)

Eliot Wirshbo, Ph.D., University of Pennsylvania, *Lecturer in Classics and Comparative Literature,* UCSD (Greek epic, folklore)

Andrew Zissos, Ph.D., Princeton University, *Assistant Professor of Classics,* UCI (Latin epic, medieval Latin, Roman culture)

Clinical Psychology

The Joint Doctoral Program

The interdisciplinary partnership of the Department of Psychiatry at the UCSD School of Medicine and the Department of Psychology at San Diego State University greatly extends the range of perspectives and furnishes unusual opportunities for graduate study leading to the Ph.D. degree in clinical psychology. The Joint Doctoral Group in Clinical Psychology currently consists of faculty from the UCSD Department of Psychiatry, School of Medicine, and the Departments of Neurosciences, Cognitive Science, Family and Preventive Medicine, and Psychology, and the SDSU Department of Psychology and School of Public Health.

Information regarding admission is found in the current edition of the Bulletin of the Graduate Division of San Diego State University.

The program goal is to train clinical psychologists who are accomplished both as clinicians and as research scientists. The curricula and training provide a strong foundation in clinical psychological concepts, methods, theories, and data, together with intensive concentrations in specialized areas of clinical psychology. Currently our program has three areas of specialization: behavioral medicine, neuropsychology, and experimental psychopathology.

The scientist-practitioner model on which this program is based requires that students receive ongoing supervised research experience, including planning, design, implementation, analysis, and communication of findings. Equally important is extensive supervised experience aimed at developing sound general and specialized clinical skills. Students are expected to be actively involved in all these activities throughout their tenure in the program.

The program is designed as a five-year curriculum, including a one-year clinical internship. The curriculum is based on a twelve-month academic year. The program is accredited by the American Psychological Association.

Specific courses currently required as part of the core at UCSD include: Clinical Psychology 294A,B,C, (required for neuropsychology track majors only); Clinical Psychology 296 (independent study, lab practicum); Clinical Psychology 299 (independent study project); School of Medicine 202E (Psychopathology).

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of five years. Total University support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

COURSES

Clinical Psychology 205. Neuroanatomy (6)
Fundamental anatomy/physiology of human nervous system, emphasizing higher cortical functions. Methods of clinical problem solving in neurology; background in basic neuropsychological skills.

Clinical Psychology 294. Pro-Seminar in Neuropsychology (3)
Year-long course (294A,B,C), each for three credits, offered sequentially fall, winter, spring. Provides a fundamental knowledge of brain-behavior relationships as well as strategies and methods of neuropsychological assessment and rehabilitation.

School of Medicine 202E. Social and Behavioral Sciences–Psychopathology (3)
This sequence will acquaint students with techniques of interviewing, concepts of mental illness and normality, basic research in causality of behavioral disorders, and approaches to treatment, all in the context of a bio-psycho-social frame of reference. Format combines a lecture followed by smaller group sessions with a faculty leader. The groups enable students to meet patients with behavioral disorders, to practice interviewing, to develop observational skills, and to discuss material presented in lectures and assigned readings. (S/U grades only.) *Prerequisite: SOM 202A,C,D or consent of instructor.*

Clinical Psychology 296. Independent Study (1-12)
Independent survey of basic concepts in clinical psychology using various sources of material, including scientific papers in clinical psychology and behavioral science and other sources as seem indicated.

Clinical Psychology 299. Graduate Research (1-12)
Individual study course under one or more of the joint doctoral program faculty to develop certain research questions, design a methodology to answer the questions, and then carry out actual research, data reduction, and analysis.

Program Description

The Master of Advanced Studies (MAS) in Clinical Research offers a broad-based curriculum in clinical research methodology and integrates classroom instruction with practical training to provide students with the knowledge and skills necessary to produce valid, credible research. Linking the academic and professional scientific communities, the program is appropriate for physicians, pharmacists, nurses with advanced training, psychologists, and biomedical scientists employed in biomedical firms, hospitals, and pharmacies. The program aims to accommodate the varying needs of the students through its modular approach to instruction, a part-time year-round schedule, and a choice of general electives organized by tracks.

The MAS in Clinical Research is a part-time, self-supporting degree program with a flexible course schedule designed for working professionals and academics. The UCSD graduate division confers the MAS degree and the Department of Medicine in the UCSD School of Medicine is responsible for the academic management of the curriculum. UCSD Extension administers the program and provides student advising and career counseling services.

Admission

New students are admitted in the fall, winter, spring, and summer quarter of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional letters of recommendation, and a current resume or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates possess, or currently be pursuing, a graduate degree in a scientific or healthcare related field and also have some level of experience in scientific or clinical research. In some instances candidates without an advanced degree may be admitted to the program if they have demonstrated substantial professional experience in the field at increasing levels of responsibility. The application deadlines are July 15 (fall), October 15 (winter), January 15 (spring), and April 15 (summer).

Program of Study

The part-time master's degree program is designed to be completed in two to three years, depending upon a participant's time to devote to the program. Classes are typically scheduled in the late afternoons and an occasional Saturday for seminars. The thirty-six-unit degree is comprised of sixteen units of core clinical modules, four units of seminar courses, six units of general electives, four units of advanced statistics electives, and six units of an independent study project.

COURSES

CORE CURRICULUM—CLINICAL MODULES

CLRE 250. Patient-Oriented Research I (2)
This course will develop and apply the theory of clinical trials design and analysis, discuss the practical issues of financing and implementing clinical trials, and describe issues of monitoring trials and working in cooperative groups. The scholar will design and present to a group of peers a concept sheet for a phase I/II and phase II/III clinical trial.

CLRE 251. Basic Epidemiology (2)
Scholars will recognize and understand different types of study designs, the relative strengths and limitations of each, and the proper choice of study design in conducting their own research. They will also be able to identify and calculate the correct measure of risk for each study design. Participants will recognize major sources of bias, confounding and misclassification, and understand design and analysis methods of dealing with each. They will also be familiar with criteria to differentiate association from causation.

CLRE 252. Health Services Research (2)
Scholars will evaluate relevant outcomes in patient-oriented research from the patient (quality of life) and societal (economic) perspectives and locate potential resources for assessing the relevant outcomes in a wide variety of study designs. They will also be able to describe the relative strengths of different health services research approaches to a clinical problem. Finally, they will understand the components of clinical practice guidelines, including patient preferences, and how these guidelines both depend upon as well as inform patient-oriented research.

CLRE 253. Basic Biostatistics (2)
Scholars will understand principles of measurement of clinical data, recognize data types, and correctly identify statistical methods appropriate for analysis of a given clinical data set. They will gain experience in assembling a clinical dataset in formats suitable for analysis by STATA or other comparable statistical packages. They will learn skills to conduct graphical and numerical exploratory data analysis, comparative tests of categorical, ordinal, and continuous data, linear and logistic regression analysis, and survival analysis by life table and Kaplan-Meier techniques.

CLRE 254. Advanced Biostatistics (2)
Scholars will understand and conduct advanced biostatistical analyses including: multiple linear and logistic regression, survival analysis, and Cox and extended Cox regression. The scholar will also be familiar with person-time rate analysis with Poisson regression and longitudinal data analysis in the presence of missing values and varying measurement times. *Prerequisite: Basic Biostatistics, CLRE 253.*

CLRE 255. Data Management and Informatics (2)
This course provides an orientation to database design and management and covers key issues regarding data handling for clinical research and clinical trials. Scholars will also become familiar with technology assessment and decision-making methods and analysis.

CLRE 256. Patient-Oriented Research II
This course will review the ethics and basic regulatory issues for research involving human subjects; the principles of data management for clinical research, including architecture, access and confidentiality, and integrity of databases; and skills in graphic and verbal presentation of research data. Scholars will prepare a mock submission to an IRB for peer review and practice presenting graphic and tabular data. *Prerequisite: Patient-Oriented Research I, CLRE 250.*

CLRE 257. Advanced Epidemiology
Scholars will select the appropriate sampling method and determine the sample size necessary for specific projects and adjust for confounding. Participants will be familiar with several specialized analytic techniques, including matched, cluster, and meta-analyses. They will also be familiar with methodological issues, unique to ecological, behavioral, and genetic studies. *Prerequisite: Epidemiology I, CLRE 251.*

Terrence J. Sejnowski, Ph.D., *Biological Sciences—Neurobiology, Cognitive Science, Computer Science and Engineering, and Neurosciences*

Introduction

Cognitive science is a young and diverse field which is unified and motivated by a single basic inquiry: What is cognition? How do people, animals, or computers 'think,' act, and learn? In order to understand the mind/brain, cognitive science brings together methods and discoveries from neuroscience, psychology, linguistics, philosophy, and computer science. UCSD has been at the forefront of this exciting new field and our Department of Cognitive Science was the first of its kind in the world. It is part of an exceptional scientific community and remains a dominant influence in the field it helped create.

In addition to preparing undergraduates for careers in a variety of sciences, the major also provides an excellent background for many professional fields, including medicine, clinical psychology, and information technology.

The concerns of cognitive science fall into three broad categories: the brain—the neurological anatomy and processes underlying cognitive phenomena; behavior—the cognitive activity of individuals and their interaction with each other and their sociocultural environment, including the use of language, information, and media; and computation—the capacity of mathematical and computer systems to model cognitive and neural phenomena and represent information, and the role of computers as cognitive tools.

The department collaborates closely with other academic departments and research communities, including the Center for Research in Language, the Center for Human Development, the Salk Institute for Biological Studies, the UCSD Medical Center, the San Diego Supercomputer Center, and the UCSD/Salk Institute Functional Magnetic Resonance Imaging Center, providing many outstanding resources and opportunities.

Students are encouraged to participate actively in the department by sharing their ideas about curriculum, research, and other topics with faculty and staff. Undergraduate students may join the Students in Cognitive and Neurosciences (SCANS) organization, which provides opportunities for undergraduates to meet students and faculty from UCSD and other institutes, visit research laboratories, and make job contacts. Graduate students take an especially active role in shaping the department, both academically and administratively, while they gain experience in research, teaching, and managing both labs and department affairs.

The Undergraduate Programs

The department offers both a B.A. and a B.S. degree. The B.S. requires completion of more rigorous lower-division course work and three additional courses at the upper-division level. The B.S. degree may be taken optionally with a specified area of specialization. There is also an honors program for exceptional students in both degree programs. Major Code: CG25.

Please note: Students who officially declared the major before fall 2001 may choose to follow the old major requirements or the new major requirements, but not a combination of both. See department adviser for more information.

Grade Requirements for the Major

A minimum grade-point average of 2.0 is required for admittance to and graduation from the B.A. or B.S. degree program. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. All courses must be taken for a letter grade, with the exception of Cognitive Science 195, 198, and 199, which are taken Pass/No Pass.

Four-Year Plan of Study

The four-year plan of study below assures that all prerequisites and requirements for the cognitive science major are completed. The department does enforce course prerequisites and several courses are offered only once a year,

so careful planning is important. It is recommended that lower-division courses be taken in the first two years, core courses in the third year, and electives in the final year. Check with a departmental adviser about which quarter cognitive science courses will be offered each academic year. Check with a college adviser about course planning to meet college requirements.

FRESHMAN YEAR: Twelve units of math (B.A.) or sixteen units of math (B.S.) chosen from Mathematics 10A-B-C, 20A-B-C-D, 20F, 15A or CSE 20, or 15B or CSE 21
College requirements

SOPHOMORE Cognitive Science 1. Students who officially declared the major and took COGS 17 before fall 2001 do not have to take COGS 1.

JUNIOR YEAR: Nine core courses, chosen from a list of twelve (see *Core Sequences*)

SENIOR YEAR: Electives for the major

Lower-Division Requirements

All majors must complete lower-division courses in introductory cognitive science, calculus, methods, and computer programming:

B.A. Requirements

Twelve units of math (B.A.) chosen from Mathematics 10A-B-C, 20A-B-C-D, 20F, 15A or CSE 20, or 15B or CSE 21. Note: Students should check with the math department for rules governing duplication of credit between the 10 and 20 series.
Cognitive Science 1. Students who officially declared the major and took COGS 17 before fall 2001 do not have to take COGS 1.
Cognitive Science 14
Cognitive Science 18

B.S. Requirements

Sixteen units of math (B.S.) chosen from Mathematics 10A-B-C, 20A-B-C-D, 20F, 15A or CSE 20, or 15B or CSE 21. Note: Students should check with the math department for rules governing duplication of credit between the 10 and 20 series.
Cognitive Science 1. Students who officially declared the major and took COGS 17 before fall 2001 do not have to take COGS 1.
Cognitive Science 14
Cognitive Science 18

Upper-Division Requirements

The B.A. requires completion of twelve upper-division courses, and the B.S. requires fifteen. All majors must complete nine core sequence courses. Students are advised to complete these core courses in their junior year, especially if they intend to apply to the honors program. The remainder of the upper-division requirement is fulfilled by completing electives.

Core Sequences

The B.A. and the B.S. programs require nine core courses total; students must complete all three courses in one core sequence of their choice, and two of the three courses in each of the other three core sequences. Core sequences are:

Cognitive Science 101A-B-C
(Cognitive Theory and Phenomena)

Cognitive Science 102A-B-C
(Distributed Cognition, Everyday Cognition, Cognitive Engineering)

Cognitive Science 107A-B-C
(Cognitive Neuroscience)

Cognitive Science 108D-E-F
(Computational Models of Cognition)

Please note: Students who officially declared the major before fall 2001 may choose to follow the old major requirements or the new major requirements, but not a combination of both. See department adviser for more information.

Electives

At least half of the electives for the major must be taken in the department. Courses in the Cognitive Science 19X series (190A, 190B, 190C, 198, 199) may NOT be used as an elective to satisfy the major requirements for the B.A. degree. One course in the Cognitive Science 19X series may be used as an elective to satisfy the requirements for the B.S. degree, but only with the approval of both the instructor who supervised the course and the undergraduate adviser. A course taken outside the department must meet the following criteria:

1. The course must deal with topics and issues that are clearly part of cognitive science.
2. The material must not be available in a course offered inside the department.

This policy permits students and their advisers to be responsive to changes in course offerings. Majors must obtain departmental approval for electives taken outside of the department.

Areas of Specialization

A major may elect to receive a B.S. in cognitive science with a specified area of specialization. The areas of specialization are intended to provide majors with guidance in choosing elective courses and to make the specific interests and training of a major clear to prospective employers and graduate schools. Specifying an area of specialization is optional; however, students should take into consideration when planning for their specialization that approved courses are not necessarily offered every year.

To major in cognitive science with an area of specialization, the student must fulfill the requirements for the B.S. degree and must choose four of the required six elective courses from a list of approved electives for that area of specialization. (The lists of approved electives for each area of specialization are available in the department office.)

The following areas of specialization are currently offered by the department:

Specialization in Clinical Aspects of Cognition

This area of specialization is intended for majors interested in cognitive neuropsychology, psychiatry, cognitive disorders, and the effects of drugs and brain-damage on cognitive functions. Allowed electives include courses in those topics, as well as organic chemistry, biochemistry, and physiology. Major code: CG31

Specialization in Computation

This area of specialization is intended for majors interested in software engineering or research in computational modeling of cognition. Allowed electives include advanced courses in neural networks, artificial intelligence, and computer science. Students interested in this specialization will most likely select courses from the computer science and engineering course offerings, as courses offered within the cognitive science department are limited. Major code: CG27

Specialization in Human Cognition

This area of specialization is intended for majors whose primary interests include human psychology and applications of cognitive science in design and engineering. Allowed electives

include courses in cognitive development, language, laboratory research of cognition, anthropology, and sociology. Major code: CG28

Specialization in Human Computer Interaction

This area of specialization is intended for majors interested in human computer interaction; Web; visualization; and applications of cognitive science in design and engineering. Additional electives may be petitioned from communication, computer science, computer engineering, and visual arts. Major code: CG30

Specialization in Neuroscience

This area of specialization is intended for majors interested in neuroscience research or medicine. Allowed electives include courses in cognitive neuroscience, organic chemistry, biochemistry, and physiology. Major code: CG29

Cognitive Science Honors Program

The Department of Cognitive Science offers an honors program for a limited number of majors who have demonstrated excellence, talent, and high motivation.

Eligibility Requirements

Students are eligible for admission to the program when they:

1. Complete all core courses
2. Have at least junior level standing
3. Have at least a 3.5 GPA in upper-division major courses and at least a 3.0 overall GPA

Eligible students will enroll in four units of 190A (Pre-Honors Project in Cognitive Science) under a faculty member who has agreed to advise them on a potential honors project. Students may apply the COGS 190A course as an elective toward major requirements whether or not they enter the Honors Program. At the end of the 190A course, students will submit to their faculty mentor a written project proposal. The proposal will define the question to be investigated, survey existing literature, describe the approach and methods that will be used, explain how data will be collected if it is an empirical study, detail how human subjects requirements will be met if necessary, discuss expected results, and provide a timeline for project completion.

Acceptance in Honors Program

To formally enter the Honors Program, students must meet the eligibility requirements above, receive a grade of A– or better in COGS 190A, establish an honors committee of at least two faculty and one graduate student to review the proposal and advise them during the process of completing the honors project, and have their project proposal approved by their honors committee.

The honors committee must be kept informed of any deviations from the original approved project proposal and timeline. Students who fail to make satisfactory progress may be asked to withdraw from the program at any point the adviser or the department chair deems necessary.

Successful completion of the Honors Program requires:

1. Maintenance of a 3.5 GPA in upper-division major courses, and a 3.0 overall GPA
2. Completion of one cognitive science (or related) graduate level course (may be taken P/NP). Students may use the required graduate course as one of their electives for the major whether or not they complete the honors project
3. Completion of COGS 190B and 190C with letter grades of A- or better
4. Completion of COGS 190D (Preparation for Thesis Presentation), a 1-unit seminar given each spring (P/NP)
5. Completion of a written honors thesis describing the project
6. Approval of the thesis by the honors committee and the department chair
7. Satisfactory presentation of the honors thesis to the cognitive science community at the Honors Thesis Presentation Conference, spring quarter.

Students who successfully complete all of the requirements for the Honors Program will graduate *with Distinction in Cognitive Science* recorded on their transcripts.

Minors and Programs of Concentration

Each college has specific requirements, and students should consult with an academic adviser in their provost's office as well as a cognitive science adviser to be sure they fulfill requirements of the college and of the department.

To receive a minor from the Department of Cognitive Science, a student must complete a total of seven (four unit) courses; five of which must be upper-division. Lower-division requirements are normally fulfilled by completing (one of) Cognitive Science 1, 3, 10 or 11 and (one of) Cognitive Science 14, 17 or 18. Upper-division requirements are normally fulfilled by completing two cognitive science electives and one of the following sequences:

Cognitive Science 101A-B-C

Cognitive Science 102A-B-C

Cognitive Science 107A-B-C

Cognitive Science 108D-E-F

All courses must be taken for a letter grade. No grade below C– is acceptable.

Transfer Credit

Students who wish to transfer from another institution to UCSD as cognitive science majors should work closely with university advisers to ensure that all lower-division requirements have been completed and are equivalent to those offered at UCSD. It is extremely important for students to have completed lower-division requirements by the end of their sophomore year so they are prepared for core courses in their junior year. Advanced UCSD students who wish to transfer to the department should consult with the departmental advisers about credit for courses already completed.

Education Abroad

Students majoring in cognitive science are encouraged to participate in the Education Abroad Programs (EAP), and to investigate other options of foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements. Please visit the Web site at http://orpheus.ucsd.edu/icenter/pao for further details. Financial aid is applicable and special study abroad scholarships are readily available.

The Graduate Programs

There are two Ph.D. programs, each with different admissions and graduation requirements. The *Department of Cognitive Science* offers a Ph.D. in cognitive science. Students are admitted to UCSD directly into the department and fulfill degree requirements of the department. The *Interdisciplinary Program in Cognitive Science* offers a joint Ph.D. in cognitive science and a home department (anthropology, communication, computer science and engineering, linguistics,

neurosciences, philosophy, psychology, or sociology). Students are admitted to UCSD through the home department and fulfill the requirements of both the interdisciplinary program and the home department.

Ph.D. in Cognitive Science

This program provides broad training in neurological processes and phenomena; the experimental methods, results, and theories from the study of psychology, language, and social and cultural issues; and the studies of computational mechanisms. The first year is devoted to familiarizing the student with the findings and current problems in cognitive science through courses in foundations and issues.

By the second year, basic courses and laboratory rotations are completed, with the major emphasis on the completion of a year-long research project. Future years are spent completing the advancement to candidacy requirements and doing the thesis research. Throughout the program, there are frequent faculty-student interactions, including special lectures by the faculty or invited speakers and the weekly informal research discussions and cognitive science seminar.

Admissions

The application deadline is January 7. The admissions committee reviews each applicant's statement of purpose, letters of recommendation, GRE scores, previous education and work experience, and grade-point averages, then recommends candidates for admission to the entire faculty, who make the final decision.

Advising

An interim adviser is appointed to serve as general adviser and counselor for each entering student. The adviser helps chart a set of courses that fulfill the content area requirements, taking into account the student's prior training and interests. Students may change the interim adviser at any time (as long as the new interim adviser is willing). At the time of advancement to candidacy, students choose a permanent adviser who also functions as the chair of the dissertation committee.

All entering students are assumed to have basic prerequisite knowledge, and a list of basic readings will be provided to incoming students. Students who do not have this background can acquire it through self-study in the summer preceding arrival at UCSD or by taking self-paced study courses or relevant undergraduate courses at UCSD.

Summary of Requirements

1. Foundations courses
2. Approved study plan, which includes issues courses, methods courses, and laboratory rotations
3. Second-year project
4. Language requirement
5. Advancement to candidacy
6. Teaching
7. Cognitive Science 200 seminar
8. Participation in departmental events and committees
9. Ph.D. dissertation and defense

Description of Requirements

The expectation is that graduate students in the program will maintain a 3.4 GPA, and falling below this expectation may lead to the student being put on departmental probation. No course in which the student is assigned a grade below B– will be allowed to fulfill department requirements.

1. **Foundations Courses (Cognitive Science 201, 202, 203).** Students complete foundations courses in the areas of brain, behavior, and computation by the end of the second year. The department may waive some or all courses for students who already have the required knowledge.
2. **Study Plan.** Students complete a study plan recommended by their adviser. The normal plan includes:
   a. **Issues Courses.** A minimum of six issues courses are required, at least one in each of the areas of brain, behavior, and computation. At least four of the issues courses should be taken within the department. Department recommends completion by the end of the second year. Issues courses taken outside the department require the approval of the adviser in conjunction with the Graduate Committee.
   b. **Methods Courses.** Three methods courses are required, one of which must be an approved statistics course. Students should obtain approval for all three courses from their adviser. An approved list of courses is on file with the department to assist students in selecting courses. Students may petition courses not on the approval list. Such petitions must be approved by the student's adviser and graduate committee. All three courses must be taken for a letter grade.
   c. **Laboratory Rotations (Cognitive Science 290).** A total of three quarters of laboratory rotations in at least two different faculty laboratories are required. Each rotation is for one to two full quarters as required by the faculty laboratory. All rotations should be completed by the end of fall quarter of the second year.

   Students can meet this requirement in the following ways:

   - Three one-quarter rotations in three different laboratories, or
   - One one-quarter rotation and one two-quarter rotation in two different laboratories, or
   - Two two-quarter rotations in two different laboratories for a total of four quarters enrolled in COGS 290.

   Department recommends that student and adviser negotiate a topic and activity, then put the agreement in writing, sign, and give to the graduate coordinator.
3. **Second-Year Research Project (Cognitive Science 210A-B-C and 211A-B-C).** In the summer between the first and second year, students work with their adviser and a faculty committee to develop a prospectus for a research project. The year-long project culminates with written and oral presentations to the faculty at the end of spring quarter. During the second year, concurrent enrollment in Cognitive Science 210A-B-C and Cognitive Science 211A-B-C is required as part of the Second Year Project.
4. **Language Requirement.** The main goal of the language requirement is to give all students firsthand experience with some of the differences in structure and usage of languages and the several issues involved in the

learning of second languages. This requirement can be satisfied by demonstrating satisfactory proficiency, by prior study in a language (e.g., two years of high school study), or by satisfactory completion of one quarter of study in a language course approved by the department.

5. **Advancement to Candidacy/Qualifying Paper and Oral Exam.** There are three components to advancement to candidacy:
   a. Competency. This requirement is met by satisfactorily completing items 1-4 above.
   b. Depth. This requirement is met by satisfactorily completing a talk to the entire department on their thesis topic by the end of the third year. A first draft of the thesis proposal must be submitted to the student's adviser by the end of the third year. Students enroll in COGS 205 during winter and/or spring quarter of the third year.
   c. Dissertation Topic/Advancement Exam. The student prepares a proposal of the dissertation topic that must be approved by the student's doctoral committee. A written proposal is submitted to the committee at least two weeks prior to an oral defense of the proposal. The doctoral committee consists of at least five faculty members: three from the department and two from outside the department; one of the outside members must be tenured.
6. **Teaching (Cognitive Science 500).** All graduate students must serve as a teaching assistant at least one quarter of each academic year in residence. The undergraduate program offers a special challenge to instructor and student alike, and experience with the teaching of that program can provide a valuable part of the education of a cognitive scientist. Teaching assistantships performed in other departments must be approved by formal petition to the graduate committee to count toward the requirement. The department works closely with the Center for Teaching Development to design effective training and development programs for its teaching assistants. At the end of each quarter, instructors prepare written evaluations of all teaching assistants.
7. **Cognitive Science 200 Seminar.** Students must enroll in this seminar for at least three quarters while in residence; frequent participation is encouraged.
8. **Participation in Departmental Events and Committees.** Students participate in departmental special events and committees and serve as student representatives for faculty meetings and the campus-wide Graduate Student Association. Students present their research in the undergraduate SCANS series.
9. **Completion of the Ph.D. Dissertation and Defense.** Candidates prepare a written dissertation demonstrating a substantive contribution to our understanding of cognition. An oral defense follows.

Master's Degree

The Department of Cognitive Science does not offer admissions to a master's program. However, candidates for the Ph.D. who do not hold a master's degree from another institution may be granted the M.S. degree after fulfilling the first three requirements listed above. This is usually at the end of the second year. Duplication of advanced academic degrees, e.g., one at the same level, is not permitted at UCSD. Likewise, a professional degree at the master's or doctoral level, e.g., M.Ed., M.P.I.A., M.D., or Pharm.D., is not regarded as a duplicate of an academic degree.

Evaluation of Performance and Progress

A formal evaluation of performance and progress for all students takes place at the end of spring quarter every year, with special attention given to the first and second years of study and at the time of qualification. The first-year evaluation is based in large part on the performance in foundations and issues courses. The second-year evaluation is based on the student's total performance, with heavy weight given to the student's second-year research project. The third-year evaluation focuses on the competency and depth requirements, and the following years on the progress made toward completion of the dissertation.

Special Events

The department intends to enhance student-faculty interaction and current awareness of active research issues by special "events":

- Lectures by invited speakers or faculty members.
- A full day of faculty/student overview and information at the start of each year, with emphasis on ongoing research activity.
- Presentations of second-year research projects and third-year thesis topics to the entire faculty at the end of each year.
- Final defense of the dissertation accompanied by a public lecture and celebration.

Time Limits to Ph.D.

Students must be advanced to candidacy by the end of spring quarter of their fourth year. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

Financial Aid

Financial support is available to qualified students in the form of fellowships, loans, and assistantships. Students are encouraged to seek fellowships and research awards from outside the university. Please refer to the Graduate Studies section for more information.

The Interdisciplinary Ph.D. Program

FACULTY

Professors

Farrell Ackerman, Ph.D., *Linguistics*
Richard C. Atkinson, Ph.D., *UC President, Emeritus, Cognitive Science and Psychology*
Richard K. Belew, Ph.,D., *Cognitive Science*
Ursula Bellugi, Ph.D., *Adjunct/Psychology*
Geoffrey Bowker, Ph.D., *Communication*
Gregory Brown, Ph.D., *In-Residence, Psychiatry*
Patricia S. Churchland, B.Phil., *Philosophy*
Paul M. Churchland, Ph.D., *Philosophy*
Aaron V. Cicourel, Ph.D., *Emeritus, Cognitive Science and Sociology*
Michael Cole, Ph.D., *Communication*
Garrison W. Cottrell, Ph.D., *Program Director, Computer Science and Engineering*
Eric Courchesne, Ph.D., *Neurosciences*
Karen R. Dobkins, Ph.D., *Psychology*
Jeffrey L. Elman, Ph.D., *Cognitive Science*
Yrjö Engeström, Ph.D., *Communication*
Gilles R. Fauconnier, Ph.D., *Cognitive Science*
Philip M. Groves, Ph.D., *Psychiatry and Neurosciences*

Steven A. Hillyard, Ph.D., *Neurosciences*
James D. Hollan, Ph.D., *Cognitive Science*
Edwin Hutchins, Ph.D., *Cognitive Science*
Edward S. Klima, Ph.D., *Emeritus, Linguistics*
Marta Kutas, Ph.D., *Cognitive Science*
Ronald W. Langacker, Ph.D., *Emeritus, Linguistics*
George Mandler, Ph.D., *Emeritus, Psychology*
Jean M. Mandler, Ph.D., *Emeritus, Cognitive Science*
Hugh B. Mehan, Ph.D., *Sociology*
Donald A. Norman, Ph.D., *Emeritus, Cognitive Science*
Dennis D. M. O'Leary, Ph.D., *Adjunct/ Neurosciences and Biological Sciences*
Carol Padden, Ph.D., *Communication*
Harold E. Pashler, Ph.D., *Psychology*
David M. Perlmutter, Ph.D., *Linguistics*
Maria Polinsky, Ph.D., *Linguistics*
Vilayanur S. Ramachandran, Ph.D., *Psychology*
David P. Salmon, Ph.D., *In-Residence, Neurosciences*
Walter J. Savitch, Ph.D., *Emeritus, Computer Science and Engineering*
Terrence J. Sejnowski, Ph.D., *Biological Sciences—Neurobiology*
Martin I. Sereno, Ph.D., *Cognitive Science*
Larry R. Squire, Ph.D., *In-Residence, Psychiatry, Psychology, and Neurosciences*
Susan Leigh Star, Ph.D., *Communication*
Joan Stiles, Ph.D., *Cognitive Science*
Shirley Strum, Ph.D., *Anthropology*
David A. Swinney, Ph.D., *Psychology*
Doris Trauner, M.D., *Neurosciences and Pediatrics*
David Zipser, Ph.D., *Emeritus, Cognitive Science*

Associate Professors

Gerald J. Balzano, Ph.D., *Music*
Chris Barker, Ph.D., *Linguistics*
John D. Batali, Ph.D., *Cognitive Science*
Charles P. Elkan, Ph.D., *Computer Science and Engineering*
Rick Grush, Ph.D., *Philosophy*
Andrew Kehler, Ph.D., *Linguistics*
David J. Kirsh, D.Phil., *Cognitive Science*
Robert E. Kluender, Ph.D., *Linguistics*
James J. Moore, Ph.D., *Anthropology*
John C. Moore, Ph.D., *Linguistics*
Jaime A. Pineda, Ph.D., *Cognitive Science*

Assistant Professors

Eric Bakovic, Ph.D., *Linguistics*
Serge Belongie, Ph.D., *Computer Science and Engineering*
Andrea A. Chiba, Ph.D., *Cognitive Science*
Seana Coulson, Ph.D., *Cognitive Science*
Gedeon O. Deák, Ph.D., *Cognitive Science*
Virginia de Sa, Ph.D., *Cognitive Science*
Rafael Nuñez, Ph.D., *Cognitive Science*
Katerina Semendeferi, Ph.D., *Anthropology*
Emanuel Todorov, Ph.D., *Cognitive Science*
Jochen Triesch, Ph.D., *Cognitive Science*

The interdisciplinary Ph.D. program is distinct from the departmental Ph.D. program (see previous section) both in admissions and graduation requirements. There are four aspects to graduate study in the interdisciplinary program: (a) a primary specialization in one of the established disciplines of cognitive science; (b) a secondary specialization in a second field of study; (c) familiarity with general issues in the field and the various approaches taken to these issues by scholars in different disciplines; and (d) an original dissertation project of an interdisciplinary character. The degree itself reflects the interdisciplinary nature of the program, being awarded jointly to the student for studies in cognitive science and the home department. Thus, students in linguistics or psychology will have degrees that read "Ph.D. in Linguistics and Cognitive Science" or "Ph.D. in Psychology and Cognitive Science."

Admission to the Program

Students enter UCSD through admission to one of the affiliated departments, which then serves as their home department, and which specifies their primary specialization. The affiliated departments are anthropology, communication, computer science and engineering, linguistics, neurosciences, philosophy, psychology, and sociology. Students may apply for admission to the interdisciplinary program anytime after entering UCSD, typically in the second or third year. Students must have an adviser from their home department who is a member of the interdisciplinary program faculty. If a student does not have such an adviser, a member of the Instructional Advisory Committee will be appointed as interim adviser. The Instructional Advisory Committee is made up of one interdisciplinary program faculty person from each of the home departments. The committee member that will serve as interim adviser for a student will come from the same home department as the student.

Note: Admission to the interdisciplinary Ph.D. program is contingent upon applying to and being accepted in a home department.

Primary Specialization

Primary specialization is accomplished through the home department. Students are expected to maintain good standing within their home departments and to complete all requirements of their home departments through qualification for candidacy for the Ph.D. degree.

Secondary Specialization

The power of an interdisciplinary graduate training program lies in large measure in its ability to provide the student the tools of inquiry of more than one discipline. Students in the cognitive science interdisciplinary program are expected to gain significant expertise in areas of study outside of those covered by their home departments. Such expertise can be defined in several ways. The second area might coincide with that of an established discipline, and study within that discipline would be appropriate. Alternatively, the area could be based upon a substantive issue of cognitive science that spans several of the existing disciplines, and study within several departments would be involved. In either case, students work with their adviser and the Instructional Advisory Committee to develop an individual study plan designed to give them this secondary specialization. A list of courses in cognitive studies at UCSD is available. This requirement takes the equivalent of a full year of study, possibly spread out over several years. Often it is valuable to perform an individual research project sponsored by a faculty member in a department other than the student's home department.

The following list demonstrates some ways to fulfill the secondary specialization requirement. It should be emphasized that these programs are only examples. Students will devise individual plans by working with their advisers and the advisory committee. Ideally, students who elect to do research in their areas of secondary interest will be able to accomplish a substantive piece of work, either one of publishable quality or one that will be of significant assistance in their dissertation projects.

Cognitive Psychology. Get a basic introduction to cognitive psychology through the Cognitive Psychology Seminar (Psychology 218A-B) and acquire or demonstrate knowledge of statistical tools and experimental design (this can be done either by taking the graduate sequence in statistics, Psychology 201A-B, or through the standard "testing out" option offered to all

psychology graduate students). Finally, and, perhaps of most importance, the student should do a year-long project of empirical research in psychology with the guidance of a member of the Department of Psychology.

Cognitive Social Sciences. A course sequence from sociology and anthropology, including one or two courses in field methods and a research project under the direction of a cognitive social sciences faculty member. The course sequence and project should be worked out with the advisory committee to reflect the interests and background of the student. Examples of courses include Distributed Cognition (Cognitive Science 234) and Text and Discourse Analysis (Sociology 204). In addition, courses on field methods are offered by both anthropology and sociology.

Computer Science and Artificial Language. This specialization requires a thorough background in computer science. For those who enter the program without much formal training in this area, the secondary specialization in computer science includes some upper-division undergraduate courses (CSE 100, 102, 105) and a minimum of two graduate courses (CSE 250AB). (Note that these courses require basic knowledge of programming and discrete mathematics areas that may require some additional undergraduate courses for those who lack these skills.) Students with stronger backgrounds in computer science may go straight to graduate courses. For all students interested in this specialization, the course sequences and any projects should be worked out on an individual basis with the student's adviser.

Discourse Structure and Processing. This specialization is highly interdisciplinary, spanning linguistics, computer science, psychology, sociology, philosophy, and anthropology. Research within this specialization depends upon which discipline is given emphasis. Therefore, the specialization will have to be developed according to the interests of the student. All students will have to demonstrate awareness and knowledge of relevant studies and the approaches of the various disciplines.

Linguistics. Students who elect a secondary specialization in linguistics should specialize either in the general area of syntax/semantics or in the general area of phonetics/phonology. Those who specialize in syntax/semantics should plan to take three courses in this area and one course in phonetics/phonology. Conversely, those who specialize in phonetics/phonology should plan to take three courses in this area and one course in syntax/semantics. The specific courses recommended will depend on the individual student's interests and should be arranged in conjunction with the Department of Linguistics faculty liaison to the Cognitive Science Interdisciplinary Program.

In addition, students will prepare a research paper (preferably originating in one of the above courses) that demonstrates control of the methodology and knowledge of important issues in their area of specialization.

Neurosciences. A student specializing in neurosciences would take a program of courses emphasizing brain-behavior relationships, including Behavioral Neuroscience (Neurosciences 264) and the Physiological Basis of Human Information (Neurosciences 243). In addition, depending upon the student's individual interests, one or more of the neurosciences core courses would be taken in the areas of Mammalian Neuroanatomy (Neurosciences 256), Neuropsychopharmacology (Neurosciences 277), and/or Neurochemistry (Neurosciences 234). In most cases, the student would also take a research rotation in the laboratory of a member of the neurosciences faculty.

Philosophy. Students who elect a secondary specialization in philosophy will focus on philosophy of science, philosophy of mind, philosophy of psychology, philosophy of neuroscience, or philosophy of language, depending on their area of primary specialization. Courses suitable for this program include Contemporary Topics in the Philosophy of Language (Philosophy 234), Philosophy of Mind (Philosophy 236), and Seminar on Special Topics (Philosophy 285), which will frequently focus on issues relevant to cognitive science. The course sequence should be worked out with the student's adviser.

Acquisition of Perspective on the Field

The cognitive science faculty offers a special seminar, Cognitive Science 200, that emphasizes the interdisciplinary approach to the field and that covers a variety of different problems, each from the perspective of several disciplines. All students are required to enroll in this seminar a total of six quarters while in residence; most students regularly attend the seminar even after fulfilling the requirement. Students may substitute a Cognitive Science Foundations course for a Cognitive Science 200. A maximum of two quarters may be substituted.

Prequalifying Examinations

Students must complete any prequalifying and field requirements of their home department.

Qualifying Examinations

The Dissertation Advisory Committee. As soon as possible, students form a dissertation committee consisting of:

At least three members from the student's home department, including the student's adviser; and at least three members of the Cognitive Science Program, at least two of whom are not members of the student's home department.

University regulations require that at least one of the faculty members of the committee from outside the home department must be tenured. The committee must be approved by the interdisciplinary program, the home department, and by the dean of Graduate Studies. The dissertation committee is expected to play an active role in supervising the student and to meet with the student at regular intervals to review progress and plans.

In the qualifying examination, the student must demonstrate familiarity with the approaches and findings from several disciplines relevant to the proposed dissertation research and must satisfy the committee of the quality, soundness, originality, and interdisciplinary character of the proposed research.

Interdisciplinary Dissertation

It is expected that the dissertation will draw on both the primary and secondary areas of expertise, combining methodologies and viewpoints from two or more perspectives, and that the dissertation will make a substantive contribution to the field of cognitive science.

Overview

The program can be summarized in this way: In the first years, basic training within the student's primary specialization, provided by the home departments;

In the middle years, acquisition of secondary specialization and participation in the Cognitive Science Seminar;

In the final years, dissertation research on a topic in cognitive science, supervised by faculty from the program.

Time Limits. Time limits for precandidacy, financial support, and registration are those established for the home department. Normative time is six years.

COURSES

LOWER-DIVISION

1. Introduction to Cognitive Science (4)
A team-taught course highlighting development of the field and the broad range of topics covered in the major. Example topics include addiction, analogy, animal cognition, artificial life, brain damage, cognitive development, distributed cognition, human-computer interaction, language, neuroimaging, neural networks, reasoning, robots, and real-world applications.

3. An Introduction to Computing (4)
A practical introduction to computers and how you can use their power. Designed for undergraduates in the social sciences. Topics include: basic operations of personal computers (MAC, PC), UNIX, word processing, email, spreadsheets, and creating web pages using the World Wide Web. *No previous background in computing required. Prerequisites: open to lower-division students only and all HDP majors; all others require department stamps.*

8. Hands-on Computing (4)
Introductory-level course that will give students insight into the fundamental concepts of algorithmic thinking and design. The course will provide the students with first-person, hands-on experience programming a Web crawler and simple physical robots.

10. Cognitive Consequences of Technology (4)
The role of cognition and computation in the development of state-of-the art technologies such as human computational interaction in aviation, air traffic control, medical diagnosis, robotics and telerobotics, and the design and engineering of cognitive artifacts.

11. Introduction to Cognitive Science: Minds and Brains (4)
How damaged and normal brains influence the way humans solve problems, remember or forget, pay attention to things; how they affect our emotions; and the way we use language in daily life.

14. Design and Analysis of Experiments (4)
Design, statistical analysis, and interpretation of experiments in the main areas of cognitive science: brain, behavior, and computation. Introduction to mathematical foundations of probability and statistical decision theory. Decision theory is applied to the problem of designing and analyzing experiments. Students will participate in a group project in which they must design scientific experiments, collect data and analyze results. May fulfill general education requirements; ask a college adviser.

17. Neurobiology of Cognition (4)
Introduction to the organization and functions of the nervous system. Topics include molecular, cellular, developmental, systems, and behavioral neurobiology. Specifically, structure and function of neurons, peripheral and central nervous systems, sensory, motor, and control systems, learning and memory mechanisms. (Students may not receive credit for both Biology 12 and Cognitive Science 17. This course fulfills general-education requirements for Marshall and Roosevelt Colleges as well as Warren by petition.)

18. Introduction to C Programming for Cognitive Modeling (4)
Fundamentals of computer programming are introduced. Topics include: fundamentals of computer architecture, variables, functions, and control structures; writing, testing, and debugging programs; programming style and basic software design. Examples and exercises focus on cognitive science applications. *Prerequisite: Mathematics 10A or 20A.*

25. Introduction to Web Programming (4)
Introduction to Web programming languages and their real-world applications. Concepts and languages covered include document structure (XHTML). A basic background in computing is required, but no prior programming experience.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

91. SCANS Presents (1)
The department faculty and the Students for Cognitive and Neurosciences (SCANS) offer this seminar exploring issues in cognitive science. It includes informal faculty research presentations, investigations of topics not covered in the curriculum, and discussions on graduate school and careers. (May be repeated when topics vary.)

99. Independent Study (2 or 4)
Independent literature or laboratory research by arrangement with and under direction of a Department of Cognitive Science faculty member. *Prerequisites: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved "Special Studies" form.*

UPPER-DIVISION

101A. Sensation and Perception (4)
An introduction to the experimental study of cognition with a focus on sensation and perception. *Prerequisite: Cognitive Science 1.*

101B. Learning, Memory, and Attention (4)
A survey of the experimental study of learning, memory, and attention. Topics include conditioning, automaticity, divided attention, memory systems, and the nature of mental representation. *Prerequisites: Cognitive Science 1. Recommended: Cognitive Science 101A.*

101C. Language (4)
An introduction to structure of natural language, and to the cognitive processes that underline its acquisition, comprehension, and production. This course covers findings from linguistics, computer science, psychology, and cognitive neuroscience to provide an integrated perspective on human language abilities. *Prerequisite: Cognitive Science 1. Recommended: Cognitive Science 101A.*

102A. Distributed Cognition (4)
Distributed cognition extends beyond the boundaries of the person to include the environment, artifacts, social interactions, and culture. Major themes are the study of socially distributed cognition and the role of artifacts in human cognition. *Prerequisite: Cognitive Science 1.*

102B. Cognitive Ethnography (4)
This course examines memory, reasoning, language understanding, learning, and planning directly in everyday, real-world settings. The coursework will include discussions of both the findings and the methodology of naturalistic studies of cognition. *Prerequisite: Cognitive Science 102A.*

102C. Cognitive Engineering (4)
Applications of cognitive science for the design of human-centered systems are explored. An extensive project analyzing an existing system or product or designing a new prototype application is required. *Prerequisites: Cognitive Science 102A and 102B recommended.*

107A. Neuroanatomy and Physiology (4)
This first course in the sequence focuses on principles of brain organization, from neurons to circuits to functional networks. It explores developmental plasticity, neuronal connectivity, cellular communication, complex signaling, and how these various dimensions form functional brain systems. *Prerequisite: Cognitive Science 1.*

107B. Systems Neuroscience (4)
This course is a rigorous introduction to the neurophysiological and neuroanatomical basis of human and animal cognition, covering cellular neurophysiology and circuit modeling, development, visual, somatosensory, auditory, motor, and limbic systems; neuroimaging and language. *Prerequisite: Cognitive Science 107A.*

107C. Cognitive Neuroscience (4)
This course studies brain systems implicated in attention, language, object recognition, and memory. Neurobiological evidence for functional subsystems within these processes and the way specialized systems develop are considered using findings from animal studies, human development, and behavioral and brain imaging. *Prerequisites: Cognitive Science 107B and its prerequisites.*

108D. Programming Methods for Cognitive Science (4)
(Course previously offered as COGS 108A fall 2001)
The design, implementation, and analysis of algorithms and data structures. Applications include: symbolic artificial intelligence, neural networks, genetic algorithms, computer graphics, and human computer interaction. *Prerequisites: Cognitive Science 1 and Cognitive Science 18 or CSE 9A or CSE 10, or permission of instructor.*

108E. Neural Network Models of Cognition I (4)
(Course previously offered as COGS 108B winter 2002)
This course is an elementary introduction to neural networks and their use in cognitive science. Students will learn how to construct and train neural networks to solve problems at both the psychological and neurological levels of cognition. *Prerequisite: Cognitive Science 108D.*

108F. Advanced Programming Methods for Cognitive Science (4)
(Course previously offered as COGS 108C spring 2002) This course focuses on providing students with additional programming experience in the design of cognitive science applications and modeling. Each time it is offered a specific application or modeling area will be covered. *Prerequisites: Cognitive Science 108E and Math 20F.*

113. Cognitive Development (4)
This course examines the foundations and growth of mind, discussing the development of perception, imagery, concept formation, memory, and thinking. Emphasis is placed on the representation of knowledge in infancy and early childhood. (Credit may not be received for both Psychology 136 and Cognitive Science 113.) *Prerequisite: Cognitive Science 101B or Psychology 105 or Psychology 101.* Course not offered in 2004–2005.

115. Neurological Development and Cognitive Change (4)
This course provides an overview of neurological development and explores the relations between physiological change and the experience of the child from the prenatal period through adolescence. *Prerequisite: Cognitive Science 17 or equivalent.*

120. Human Computer Interaction (4)
This course is an introduction to the field of human computer interaction (HCI). It provides an overview of HCI from the perspective of cognitive science. *Prerequisites: Cognitive Science 10 and an introductory programming course, or consent of instructor.*

121. Human Computer Interaction Programming (4)
This course is an introduction to human computer interaction (HCI) programming. It focuses on architectures, implementation techniques, and cognitive issues involved in designing interactive interfaces. *Prerequisite: Cognitive Science 120 or consent of instructor.*

143. Animal Cognition (4)
Review of historical perspectives: introspectionist, behaviorist, and cognitivist models. Examination of how perceptual and motor constraints and ecological demands yield species-specific differences in cognitive repertoire. Contemporary issues in the comparative study of the evolution of human cognition. *Prerequisite: upper-division standing.*

151. Analogy and Conceptual Systems (4)
Human thought and meaning are deeply tied to the capacity for mapping conceptual domains onto each other, inducing common schemas and performing mental simulation. This course examines major aspects of this cognitive activity including metaphor, conceptual blending and embodied cognition. *Prerequisite: upper-division standing.*

154. Communication Disorders in Children and Adults (4)
Neural bases of language use in normal adults, and neural bases of language and communication development in normal children. Evidence on the language and communication deficits in adults (especially aphasia and dementia) and children (specific language impairment, focal brain injury, retardation, and autism). *Prerequisites: upper-division standing.* Course not offered in 2004–2005.

156. Language Development (4)
A comprehensive survey of theory, method and research findings on language development in children ranging from the earliest stages of speech perception and communication at birth to refinements in narrative discourse and conversational fluency through middle childhood and adolescence. *Prerequisites: upper-division standing and background in developmental psychology and/or linguistics is recommended.* Course not offered in 2004–2005.

160. Upper-Division Seminar on Special Topics (1-4)
Special topics in cognitive science are discussed. (May be repeated when topics vary.) *Prerequisite: department approval.*

170. Natural and Artificial Symbolic Representational Systems (4)
This course develops a detailed analogy between the evolution and architecture of language comprehension in human primates and symbol processing at the level of individual cells, contrasting this with the analogy between cognition and computation. *Prerequisites: Cognitive Science 17 or Biology 12; Cognitive Science 18 or Computer Science and Engineering 62AB recommended.*

172. Brain Disorders and Cognition (4)
A review of the patterns of impaired and intact cognitive abilities present in brain-damaged patients in terms of damage to one or more components of a model of normal cognitive functioning. (Cognitive science majors may not receive elective credit for both Psychology 139 and Cognitive Science 172.) *Prerequisite: Cognitive Science 107A.*

174. Drugs: Brain, Mind and Culture (4)
This course explores how drugs interact with the brain/mind and culture. It covers evolutionary and historical perspectives, brain chemistry, pharmacology, expectancies and placebo effects, and models of addiction. It also provides a biopsychosocial survey of commonly used and abused substances. *Prerequisite: upper-division standing.* Midterm, final, paper.

175. The Neuropsychological Basis of Alternate States of Consciousness (4)
This course will review the literature that correlates brain rhythms in the human EEG with aspects of cognition, behavioral states, neuropsycho-pharmacology, and psychopathology in order to understand the psychological and neurophysiological underpinnings of these experiences. *Prerequisites: Cognitive Science 101A or Cognitive Science 107A.*

179. Electrophysiology of Cognition (4)
This course surveys the theory and practice of using recordings of electrical and magnetic activity of the brain to study cognition and behavior. It explores what brain waves reveal about normal and abnormal perception, processing, decision making, memory, preparation, and comprehension. *Prerequisites: Cognitive Science 107A or Psychology 106; Cognitive Science 101A or Psychology 105.*

181. Neural Network Models of Cognition II (4)
This course is a continuation of the study of neural models of cognitive systems with an emphasis on applications and a term-long student project. *Prerequisites: Cognitive Science 108E and its prerequisites.* Course not offered in 2004–2005.

183. Artificial Life (4)
This class will explore models of life as it could be, in artificial as well as biological contexts. An attempt will be made to understand the characteristics which distinguish living from nonliving systems. Coursework includes computer simulations of artificial lifeforms. *Prerequisites: Cognitive Science 18, CSE 5A and 5B, or CSE 11, or equivalent.* Course not offered in 2004–2005.

184. Modeling the Evolution of Cognition (4)
Mathematical and computational modeling of the evolution and mechanisms of simple cognitive functions. Theoretical background, including topics in population genetics, behavioral ecology, evolutionary game theory, dynamical systems theory, genetic algorithms and neural networks will be applied to questions concerning the evolution of behavioral strategies, the relation between evolution and learning, and the evolution of cooperation, communication and other aspects of social behavior. *Prerequisites: Cognitive Science 18, Mathematics 20ABC.*

187A. Cognitive Aspects of Multimedia Design (4)
This course will examine the cognitive basis of successful multimedia designs. We will be interested in what makes an interactive system effective: what makes images easy to understand, animations clear and helpful, and why some sequences of images, text, and sounds make more sense than others. Students will learn Web design, how to evaluate CD ROMs and assess their usability, and gain firsthand experience with the problems of visualization. No programming skills are presupposed but we do assume a strong familiarity with computer software. *Prerequisite: open to cognitive science majors with upper-division standing only.*

187B. Cognitive Aspects of Multimedia Design II (4)
This course follows up on the basics of multimedia design taught in Cognitive Science 187A. Students will probe more deeply into selective topics, such as animation, navigation, graphical display of information, and narrative coherence. A large fraction of time will be spent on group projects. *Prerequisites: COGS 187A; open to cognitive science majors with upper-division standing only.*

188. Representation, Search, and the Web (4)
Computational methods for finding and exploiting structure across vast data corpora, from personal email collections to the entire WWW. Implementation and evaluation of algorithms used as part of modern search engines, and how these are connected to models of shared cognition. *Prerequisites: Cognitive Science 108D or Computer Science and Engineering 12. Recommended: Cognitive Science 108F.*

190A. Pre-Honors Project in Cognitive Science (4)
This independent study course is for advanced students who wish to prepare for and apply to the Cognitive Science Honors Program. After completing this course, students may be admitted to the Honors Program contingent upon significant progress made during the course. (See "Cognitive Science Honors Program" section for more information.) Students should contact faculty whose research interests them to discuss possible projects. *Prerequisite: upper-division standing; instructor and department approval.*

190B. Honors Studies in Cognitive Science (4)
This course will allow cognitive science honors students to explore advanced issues in the field of cognitive science. It will also provide honors students the opportunity to develop an honors thesis on the topic of their choice and begin preliminary work under faculty supervision. Students will receive an "IP" grade in 190B and the grade assigned for 190C, when completed, will replace the "IP" in 190B. *Prerequisites:* Cognitive *Science 190A with grade of A- or better and formal admittance to the Cognitive Science Honors*

Program. (See "Cognitive Science Honors Program" section for more information.)

190C. Honors Thesis in Cognitive Science (4)
This course will provide honors candidates an opportunity to complete the research on and preparation of an honors thesis under close faculty supervision. Oral presentation of student's thesis is required to receive honors; additionally, student must receive grade of A- or better in 190B and 190C to receive honors. *Prerequisite: Cognitive Science 190B with grade of A- or better and formal admittance to the Cognitive Science Honors Program.* (See "Cognitive Science Honors Program" section for more information.)

190D. Preparation for Thesis Presentation (1)
This course is affiliated with the honors program (190A-B-C) and is required of honors students during spring quarter. Its aim is to prepare students to present research results to an audience. Emphasis will be on the oral presentation (organization, wording, graphics), but there will also be some discussion about written research reports. Seminar style format with occasional short lectures wherein students will practice oral presentations and provide constructive criticism to each other. *Prerequisite: must be concurrently enrolled in 190B or 190C.*

191. Laboratory Research (1-4)
Students engage in discussions of reading of recent research in an area designated and directed by the instructor and also participate in design and execution of original research. Assignments include both oral and written presentations and demonstrating the ability to pursue research objectives. *Prerequisites: consent of the instructor and department approval.* (May be repeated for credit, but not to exceed 8 units).

195. Instructional Apprenticeship in Cognitive Science (4)
Students, under the direction of the instructor, lead laboratory or discussion sections, attend lectures, and meet regularly with the instructor to help prepare course materials. Applications must be submitted to and approved by the department. *Prerequisites: upper-division standing; 3.0 GPA; instructor and department approval.* P/NP only.

198. Directed Group Study (4)
This independent study course is for small groups of advanced students who wish to complete a one-quarter reading or research project under the mentorship of a faculty member. Students should contact faculty whose research interests them to discuss possible projects. *Prerequisites: upper-division standing; 2.5 GPA; consent of instructor and department approval.*

199. Special Project (2 or 4)
This independent study course is for individual, advanced students who wish to complete a one-quarter reading or research project under the mentorship of a faculty member. Students should contact faculty whose research interests them to discuss possible projects. *Prerequisites: upper-division standing; 2.5 GPA; consent of instructor and department approval.*

GRADUATE

200. Cognitive Science Seminar (4)
This seminar emphasizes the conceptual basis of cognitive science, including representation, processing mechanisms, language, and the role of interaction among individuals, culture, and the environment. Current developments in each field are considered as they relate to issues in cognitive science. (May be repeated for credit.)

201. Systems Neuroscience (4)
This course is a rigorous introduction to the neurophysiological and neuroanatomical basis of human and animal cognition, covering cellular neurophysiology and circuit modeling; development; visual, somatosensory, auditory, motor, and limbic systems; neuroimaging and language.

202. Cognitive Science Foundations: Computational Modeling of Cognition (4)
This course surveys the development of symbolic and connectionist models of cognition. Selected readings from the late 1940s to the present are covered. Topics include: Turing machines, information theory, computational complexity, search, learning, symbolic artificial intelligence, and neural networks.

203. Cognitive Science Foundations: Theories and Methods in the Study of Cognitive Phenomena (4)
Surveys a variety of theoretical and methodological approaches to the study of human cognition. Topics include language structure, language processing, concepts and categories, knowledge representation, analogy and metaphor, reasoning, planning and action, problem solving, learning and expertise, and emotion.

205. Introduction to Thesis Research (4)
This course is taken to focus the students' development of a thesis topic and research proposal. Students prepare an outline of thesis proposal and make an oral public presentation of the proposed topic prior to the end of the third year. S/U only.

210A-B-C. Introduction to Research (4-4-4)
This sequence is an intensive research project. Students under faculty mentorship perform a thorough analysis of the problem and the literature, carry out original studies, and prepare oral and written presentations. Students should aim for a report of publishable quality. *Letter grade required.*

211A-B-C. Research Methods in Cognitive Science (2-2-2)
Issues in design, implementation, and evaluation of research in cognitive science are discussed. Students will present and comment on their own research projects in progress. Discussions also include presentations of research to various audiences, abstracts, reviews, grant process, and scientific ethics. *Letter grade required.*

213. Issues in Cognitive Development (4)
This course examines current issues in human development of interest to cognitive scientists. An emphasis is placed on the foundations of mind and how information is represented at various stages of learning and development. (May be repeated once, when topics vary.)

215. Neurological and Cognitive Development (3)
This course is presented in two sections. The first part of the course focuses on early neurological development. The second part addresses questions concerned with the relations between cognitive brain development, and linguistic and affective development.

220. Information Visualization (4)
This seminar surveys current research in information visualization with the goal of preparing students to do original research. The focus is on the cognitive aspects of information design, dynamic representations, and computational techniques. Topics vary each time course is offered.

234. Distributed Cognition (4)
This course focuses on aspects of individual and socially distributed cognition. Empirical examples are drawn from natural and experimental settings which presuppose, tacitly or explicitly, socially distributed knowledge among participants. The class examines the way locally managed, pragmatic conditions influence how decisions are framed. Course not offered in 2004–2005.

238. Topics in Cognitive Linguistics (1–4)
(Same as Linguistics 238) Basic concepts, empirical findings, and recent developments in cognitive and functional linguistics. Language viewed dynamically in relation to conceptualization, discourse, meaning construction, and cognitive processing. (As topics vary, may be repeated for credit.) Course not offered in 2004–2005.

241. Ethics and Survival Skills in Academia (3)
(Same as Neurosciences 241) This course will cover ethical issues which arise in academia, including: dishonesty, plagiarism, attribution, sexual misconduct, etc. We will also discuss 'survival' issues, including job hunting, grant preparation, journal reviews, writing letters of recommendation, mentoring, etc.

243. Statistical Inference and Data Analysis (4)
This course provides a rigorous treatment of hypothesis testing, statistical inference, model fitting, and exploratory data analysis techniques used in the cognitive and neural sciences. Students will acquire an understanding of mathematical foundations and hands-on experience in applying these methods using Matlab.

245. Introduction to Probability Theory (4)
This is a one quarter introductory course on probability theory and applications. The target audience is researchers in the cognitive, computational and neural sciences. The course also introduces scientific programming in MatLab. The grade is based on homework, project, or a combination of both. Course not offered in 2004–2005.

250. Connectionist Models of Language (4)
This course covers topics in computational psycholinguistics. The primary focus will be on connectionist models, but will also include work in statistical natural language processing as well as experimental psycholinguistics. Course not offered in 2004–2005.

251. Aphasia (4)
Research and theory on language breakdown in brain-damaged adults is surveyed. Topics include an historical overview from linguistics, psycholinguistics, and neuroscience (especially brain imaging techniques). Credit may not be received for both Psychology 245 and Cognitive Science 251. Course not offered in 2004–2005.

253. Semantics and Cognition (4)
This course explores current issues in the study of meaning and its interaction with other areas of cognitive science. The focus is on cognitive semantics, pragmatics, and meaning construction in general.

254. Pragmatics and Common Sense Reasoning (4)
A study of the pragmatic principles involved in language comprehension and the logic of everyday life. Cognitive, linguistic, cultural, and sociological aspects will be covered.

256. Language Acquisition (4)
Discussion of the acquisition of language by young children, including such topics as its stages, mechanisms, and relation to nonlinguistic development. Course not offered in 2004–2005.

260. Seminar on Special Topics (1-4)
Specific topics in cognitive science are discussed. (May be repeated when topics vary.)

271. Cognitive Neuropharmacology (4)
This course provides a review of the neurochemistry of cognition. Topics include functional anatomy of neurotransmitter circuitry, computational properties of neuromodulation, interaction of psychoactive substances with brain and behavior, neuropharmacological accounts of cognitive disorders (e.g., addiction, depression, schizophrenia). Course not offered in 2004–2005.

272. Topics in Theoretical Neurobiology (4)
The main focus of this course is the relationship between nervous system function and cognition. It covers broad theoretical issues and specific topics. Material comes from lectures, papers, and the text. Topic varies each time the course is offered. (May be repeated for credit.)

273. Biological Basis of Attention (4)
A survey of the research and theories of attention with special emphasis on the current anatomical, physiological, and biochemical basis of attention.

275. Visual Modeling (4)
Visual system neurophysiology and neuroanatomy, and neurally realistic and artificial intelligence modeling approaches are covered. Topics are: dendrites, orientation and edges, motion, stereo, shading and color, eye movements, and pattern recognition. Students prepare computer modeling projects or research papers.

276. Foundations of Neuroimaging (4)
Foundations of neuroimaging: (1) MRI/fMRI: RF excitation, relaxation, echos, image formation, BOLD and flow, DTi, EPI, time and series analysis, (2) cortical surface reconstruction, morphing, mapping, and data display, (3) physiological basis of MEG and EEG, forward and inverse solutions.

279. Electrophysiology of Cognition (4)
This course surveys the theory and practice of using recordings of electrical and magnetic activity of the brain to study cognition and behavior. It explores what brain waves reveal about normal and abnormal perception, processing, decision making, memory, preparation, and comprehension. Graduate students will be required to do additional readings for the material each week (different for each grad) and to present orally (as well as in a written page) a critical analysis of the readings. *Prerequisites: COGS 107A or PSYC 106; COGS 101A or PSYC 105.*

290. Cognitive Science Laboratory Rotation (2)
Laboratory rotations provide students with experience in the various experimental methods used in cognitive science. *Prerequisite: consent of instructor.* S/U only.

291. Laboratory Research (1-4)
Students engage in discussions of reading of recent research in an area designated and directed by the instructor and also participate in the design and execution of original research. Students are expected to demonstrate oral and written competence in presenting original research. *Prerequisite: consent of the instructor and departmental approval.* (May be repeated for credit.)

298. Directed Independent Study (1-12)
Students study and research selected topics under the direction of a member of the faculty.

299. Thesis Research (1-12)
Students are provided directed research on their dissertation topic by faculty advisers.

500. Teaching Apprenticeship (1-4)
This practicum for graduate students provides experience in teaching undergraduate cognitive science courses. S/U only.

Associated Faculty

Jane Rhodes, Ph.D., *Associate Professor, Ethnic Studies*

Lecturers with Security of Employment

Claudio Fenner-Lopez, M.A., *Emeritus*
Tom Humphries, Ph.D.

Communication at UCSD is a field of study which emphasizes the role of different technologies of communication, from language, to television, to the Internet, in mediating human experience. It draws from such social science disciplines as anthropology, psychology, sociology, and political science, and from the humanities and fine arts, including theatre, literature, and visual arts. Communication students will develop a critical awareness of the communicative forces which affect their everyday lives.

The communication major is not designed as a training program in advertising, journalism, production, or public relations. It provides students with a solid liberal arts background necessary for graduate studies in communication and other disciplines, and for professional work in a number of communication-related fields, including primary and secondary education.

Though the emphasis of the major is not a technical one, the faculty in the Department of Communication believe that students will develop a deeper understanding of how communication works by exploring firsthand the capabilities and limitations of a variety of media; students, therefore, will have the opportunity to conduct part of their studies in video, writing, theatre performance, or computer communication.

Within the Department of Communication curriculum are three broadly defined areas of study: Communication as a Social Force, Communication and Culture, and Communication and Human Information processing. Students take courses in each of these areas.

Communication as a Social Force

How are social systems affected by communication technology? What is the social organization of the communication industries? How is the information presented by the media related to the characteristics of the intended audiences? How do media fit into the power structure of societies? Courses in this area address such questions. Students analyze mass communications, the development of telecommunication and information technologies, and the political economy of communication institutions both at home and abroad.

Communication and Culture

Film, music, advertising, art, theater, ritual, literature, and language are forms of communication which embody cultural beliefs of the societies

from which they come. These media can influence and bring about changes in social behavior, styles, and traditions. At the same time, individuals and groups can reshape the media. Students will study the social production of cultural objects, the cultural traditions that shape their form and content, and various approaches to interpreting or "reading" television, film, newspapers, language, rituals, and other forms.

Communication and Human Information Processing

How do people turn concepts and ideas into messages? What is the process by which people receive and respond to those messages? Each medium—whether it is language, writing, or electronic media—has different properties that change the way people create and comprehend messages. The impact of television on the individual, the effect of literacy on individuals and on cultures, the ways that concepts are transmitted in film, and the means by which computers expand communication potentials are examples of topics investigated in this area.

The Communication Major

Degree offered: Bachelor of Arts

The major consists of two lower-division courses and fourteen upper-division courses. None of the major courses may be taken on a Pass/No Pass basis.

Lower-Division

*COGN 20: Introduction to Communication
COGN 21: Methods of Media Production

Upper-Division

*COSF 100: Introduction to Communication as a Social Force
*COCU 100: Introduction to Communication and Culture
*COHI 100: Introduction to Communication and Human Information Processing
*COGN 150: Senior Seminar in Communication

One media methods course

Three courses beyond the introductory courses: (one must be chosen from each of the categories: COSF, COCU, and COHI)

Six upper-division communication electives

* These courses must be taken at UCSD.

Note: If students choose to do a 198, 199, or 197 note the following. COGN 198, 199, 197 grading option is Pass/No Pass and only ONE may be applied to the major to satisfy an upper-division elective. AIP 197 must be petitioned for approval for the major.

Residency Requirement

Students are required to complete at least ten classes of their overall work in the major at UCSD. Following are the communication classes required to be taken at UCSD. See your college adviser for further residency requirements.

COGN 20: Introduction to Communication
COGN 21: Methods of Media Production
COSF 100: Introduction to Communication as a Social Force
COCU 100: Introduction to Communication and Culture
COHI 100: Introduction to Communication and Human Information Processing
COGN 150: Senior Seminar
One COCU elective
One COHI elective
One COSF elective
One COMT elective

Requirements for the Communication Minor

(Effective fall 1998)

The communication minor at UCSD is a social science minor. None of the courses may be taken on a Pass/Not Pass basis. Students are required to take seven courses in communication as follows:

*COGN 20 (Introduction to Communication)

Two courses of your choice from the following 100's:
*COSF 100 (Introduction to Communication as a Social Force)
*COCU 100 (Introduction to Communication and Culture)
*COHI 100 (Introduction to Communication and Human Information Processing)
*Four upper-division communication electives within the areas of the chosen 100 classes.

*These courses must be taken at UCSD within the communication department.

Note: COGN 100, COGN 150, 197, 198, and 199 Media Methods, and courses outside of the department may not be used as electives within the minor.

The Honors Program

The Department of Communication offers an honors program to those students who have demonstrated excellence in the communication major. Successful completion of the honors program enables the student to graduate "With Highest Distinction," "With High Distinction," or With Distinction," depending on performance in the program. The honors program requires an application. Students wishing to be considered need to include the following in their application: one faculty adviser who supports their admission to the program, a verified overall GPA of 3.0 and a major GPA of 3.5, and a brief but detailed description of the proposed research or creative project.

Applications will be reviewed by a faculty committee, accepting students who meet this criteria. Students who do not meet this criteria but who have promising projects may be admitted by special dispensation with strong faculty endorsement and a letter of recommendation. Once accepted into the Honors Program, students are required to complete a two-quarter course sequence, COGN 191A/191B in the fall and winter quarters of their senior year. At the end of the fall quarter, students will receive an IP grade report. This grade will change to the final letter grade at the completion of the course sequence in the winter quarter. This grade is based on attendance in the seminars and successful completion of the research paper or creative production.

The Graduate Program

The Department of Communication offers a program of study leading to the Doctor of Philosophy degree. Communication at UCSD seeks to combine modes of analysis from the humanities and social sciences to explore the history, structure, and process of communication. The graduate program is conceived as a blending of the tradition of critical communication research with the empirical tradition of American scholarship. The program does not closely resemble any other communication department in this country. It is related by sympathy and interest to mass communication programs, but not by kinship. Historically, this department grew out of an interdisciplinary program jointly sponsored by the Departments of

Drama (currently, Theatre and Dance), Political Science, Psychology, and Sociology. The department retains strong ties to the departments and disciplines from which it developed.

The study of communication at UCSD places major emphasis on historical and comparative approaches to symbolically mediated human activity. The graduate curriculum is organized around three perspectives: 1. Communication as a Social Force, 2. Communication and Culture, and 3. Communication and the Individual. Communication as a Social Force deals with the history and political economy of mediated communication and the study of the media as social institutions. The department is particularly strong in the areas of telecommunications, regulation, and information studies. Special interests include the increasing importance of information and information technologies in American society and the global consequences of media practices. Communication and Culture involves the analysis of culture, using traditions from literature, folklore, history, sociology, and anthropology to focus on the social construction of interpretation and meaning. Special interests include the study of broadcast news, print journalism, commercial entertainment, and live performances as communicative systems. The department is particularly strong in the areas of popular culture, political culture, and the relationship of nature to culture. Communication and the individual involves examination of the individual as socially constituted through language and other media. Special interests include computer-mediated interaction, the effects of specified media practices on individual consciousness, and the language and culture of the deaf community. The program also emphasizes a production component in which students test theory in practical implementations. Some faculty and student interests bridge the components of the curriculum. Faculty research interests that do so include concepts of person and mind, communication and collective memory; relations of language, power and culture; gender and cultural forms; telecommunications and information studies and communication and technology in the work place.

Ph.D. Requirements

1. 200A-B-C (Introduction to the Theory of Communication as a Social Force, Communication and Culture, and Communication and the Individual).
2. 294, The History of Communication Research.
3. At least three methods courses from the 201 sequence (see course listings).
4. Four courses in communication history and theory (see course listings).
5. 280, Advanced Workshop in Communication Media.
6. 296, Communication Research as an Interdisciplinary Activity.
7. First-Year Exam and Evaluation: At the end of the spring quarter of the student's first year, the student must pass a comprehensive written examination based on course work completed during the first year.
8. Language Requirement: All students are required to demonstrate proficiency in one language other than their native language.
9. Qualifying Examinations: Before the end of the fourth year the student must take and pass an oral qualifying examination. The exam will be based on two papers concerning two of the subfields covered in the program. The student will also present a separate dissertation proposal at the examination. At this time, the faculty will examine the proposal for appropriateness and feasibility.
10. Teaching Requirement: In order to acquire teaching experience, all students are required to participate in the teaching activities of the university for three academic quarters.
11. Dissertation: Acceptance of the dissertation by the university librarian represents the final step in completing all requirements for a Ph.D. The dissertation committee must be approved by the department chair and the dean of Graduate Studies.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

Student Advising

Lisa Cartwright, Ph.D.

Faculty Undergraduate Adviser:
Valerie Hartouni, Ph.D.

Undergraduate Student Affairs Advisers:
Bea Velasco
Jamie Lloyd

Graduate Coordinator:
Gayle Aruta

COURSES

LOWER-DIVISION

General Communication

COGN 20. Introduction to Communication (4)
An historical introduction to the development of the means of human communication, from language and early symbols through the introduction of writing, printing, and electronic media, to today's digital and multimedia revolution. Examines the effect of communications media on human activity, and the historical forces that shape their development and use. Offered fall and spring quarters.

COGN 21. Methods of Media Production (4)
This course explores fundamental technical and social constraints shaping media production: light, optics, electricity, news media technology, camera techniques, basic editing languages, and aesthetic standards affecting production decisions. Satisfactory completion of COGN 21 is required to obtain a "media card." Offered winter and spring quarters.

UPPER-DIVISION

Communication as a Social Force

COSF 100. Introduction to Communication as a Social Force (4)
A critical overview of areas of macro communication and analysis, with special emphasis on the development of communication institutions, including broadcasting, common carriers, and information industries. Questions regarding power, ideology, and the public interest are addressed. *Prerequisite: COGN 20.* Offered fall quarter.

COSF 123. Communication, Dissent, and Social Movements (4)
Emergence of dissent in different societies, and the relationship of dissent to movements of protest and social change. Movements studied include media concentration, antiwar, antiglobalization, death penalty, national liberation, and labor. Survey of dissenting voices from Tolstoy and Naomi Klein seeking to explain the relationship of ideas to collective action and its outcomes. *Prerequisite: COSF 100 or consent of instructor.*

COSF 125A-B. Civic Participation (4)
What are the sources of political apathy and political engagement? What are the variety of ways Americans express civic involvement and political concern? Primary focus will be on the contemporary United States, but with substantial attention to comparative and historical perspectives. COSF 125B is a continuation of COSF 125A. This will be run as a research seminar. Students will write library-based or fieldwork-based empirical research papers of 25-40 pages. *Prerequisites: COSF 100 or consent of instructor for COSF 125A. COSF 125A and instructor consent for COSF 125B.*

COSF 126. The Information Age in Fact and Fiction (4)
Analysis of the forces propelling the "Information Age." An examination of the differential benefits and costs, and a discussion of the presentation in the general media of the "Information Age." *Prerequisite: COSF 100 or consent of instructor.*

COSF 127. The Internet Industry (4)
The political economy of the emergent Internet industry, charted through analysis of its hardware, software, and services components. The course specifies leading trends and changing institutional outcomes by relating the Internet industry to the adjoining media, telecommunications, and computer industries. *Prerequisite: COSF 100 or consent of instructor.*

COSF 134. Communication, Politics, and Citizenship in America (4)
(Formerly COCU 134.) Selected topics, both historical and contemporary, on the public sphere, political participation, and the meaning of citizenship. Topics may include: voting practices, the role of political parties, social and cultural dimensions of citizenship, and shifts in public understanding of what counts as "political." The course may require five to ten hours of internship work, arranged through the AIP office. See instructor for further information. *Prerequisite: COSF 100 or consent of instructor.*

COSF 139A-B. Law, Communication, and Freedom of Expression (4-4)
An examination of the legal framework of the freedom of expression in the United States. 139A covers the fundamentals of First Amendment law through the consideration of key cases in historical context. Prior restraint, incitement, obscenity, libel, fighting words, public forum, commercial speech, and hate speech are some of the topics covered. 139B focuses on the law of mass communication, examining the different legal treatments accorded print, broadcasting, cable, and common carriers. The decline of broadcast regulation, the breakup of AT&T, the rise of new forms of mass communication, and the question of the public interest are of central concern. *Prerequisites: 139A-COSF 100 or PS 40 or consent of instructor. 139B-COSF 100 or PS 40, COSF 139A preferred.*

COSF 140B. Comparative Media Systems: Europe (4)
The development of media systems and policies in Europe. Differences between European and American journalism. Debates over the commercialization of television. The role of media in post-communist societies in Eastern Europe. *Prerequisite: COSF 100 or consent of instructor.*

COSF 140C. Comparative Media Systems: Latin America and the Caribbean (4)
The development of media systems and policies in Latin America and the Caribbean. Debates over dependency and cultural imperialism. The news media and the process of democratization. Development of the regional television industry. *Prerequisite: COSF 100 or consent of instructor.*

COSF 14CXL. Foreign Language Discussion (1)
Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered communication language foreign area course. This section is taught by the course instructor, has no final exam, and does not affect the grade in the core course, COSF 140C. *Prerequisite: concurrent enrollment in COSF 140C.*

COSF 141. History of U.S. Telecommunications (4)
This course provides a sustained historical focus on the developing social form and industry structure of U.S. telecommunications, beginning with the Post Office. Policy issues are regularly incorporated into readings and discussions. Emphasis is placed on the emergence, around the turn of the century, of the regulated, national telephone network system dominated by AT&T and its extension. *Prerequisite: COSF 100 or consent of instructor.*

COSF 145. Communication and Development in China (4)
Communication is playing an increasingly important role in the political, economic, and social transformations in China. This course explores the interconnections between communication and China's pursuit of a specific mode of development in the context of globalization. Theoretical discussions will be combined with concrete analysis of media products and the changing structure of Chinese communication industries. *Prerequisite: COSF 100 or consent of instructor.*

COSF 159. Work and Industry in the New Information Economy (4)
This course, a research seminar, examines the evolution of the so-called new information economy and analyzes the transformation of patterns of work and industrial organization. Students will be expected to write a research paper, typically on some aspect of the new economy in the San Diego-Tijuana region. *Prerequisite: upper-division standing or consent of instructor.*

COSF 160. Political Economy/Global Consumer Culture (4)
This course critically examines social and economic forces that shape the making of this new global consumer culture by following the flows of consumption and production between the 'developed' and 'developing' worlds in the 1990s. We will consider how consumers, workers, and citizens participate in a new globalized consumer culture that challenges older distinctions between the 'First' and the 'Third World.' In this course, we will focus on the flows between the U.S., Asia, Latin America. *Prerequisite: COSF 100 or consent of instructor.*

COSF 167. Emerging Global High-Tech Regions: Labor and National Development (4)
This course will pose critical questions about the nature of work, the role of labor unions, and national development goals in high-tech regions in the 1980s, 1990s. Case studies will consist of a number of common issues in the following regions from Silicon Valley to Asia, Europe, and Latin America: How do these regions fit in the overall development goals of different national economies? What terms of work predominate in the global 'information economy'? What is, and can be the role of the organized labor within and across national borders? What are the implications for labor rights? *Prerequisite: upper-division standing or consent of instructor.*

COSF 171A. American News Media (4)
(Same as Soc 165A.) History, politics, social organization, and ideology of the American news media. SF 171A surveys the development of the news media as an institution, from earliest new newspapers to modern mass news media. SF 171B deals with special topics, including the nature of television news, and with methods of news media research, and requires a research paper. *Prerequisite: COSF 100 for COSF 171A; COSF 171A is required for COSF 171B.*

COSF 175. Advanced Topics in Communication: Social Force (4)
Specialized study in communication as a social force with topics to be determined by the instructor for any given quarter. Past topics include information as a commodity and book publishing. May be repeated for credit three times. *Prerequisite: COSF 100 or consent of instructor.*

COSF 180. Political Economy of Mass Communications (4)
The social, legal, and economic forces affecting the evolution of mass communications institutions and structure in the industrialized world. The character and the dynamics of mass communications in the United States today. *Prerequisite: COSF 100 or consent of instructor.*

COSF 181. Political Economy of International Communications (4)
The character and forms of international communications. Emerging structures of international communications. The United States as the foremost international communicator. Differential impacts of the free flow of information and the unequal roles and needs of developed and developing economies in international communications. *Prerequisite: COSF 100 or consent of instructor.*

COSF 183. The Politics of World Music (4)
What is "world music?" How, where, and why did it come into being? Is it a naturally occurring category of music? What makes it distinct from other music? We critically examine history of world music, analyzing how it is produced, circulated, and consumed. *Prerequisite: COSF 100 or consent of instructor.*

COSF 184. The Mass Media and Politics in Africa (4)
This course will critically examine the role of the mass media in Sub-Saharan Africa in the areas of colonial rule, nationalist struggles, authoritarianism, and popular movements. It will examine general trends regionally and internationally, as well as individual national cases, from the early twentieth century to the Internet news services of the information age.

COSF 185. Gender, Labor, and Culture in the Global Economy (4)
Course examines the ways in which women participate in the global economy as the producers of consumer products and of cultural goods like entertainment and information. It also examines power as it relates to women's labor in producing such material and cultural goods. *Prerequisite: COSF 100 or consent of instructor.*

COSF 186. Film Industry (4)
A study of the social organization of the film industry throughout its history, addressing such questions as who makes films, by what criteria, and for what audience. The changing relationships between studios, producers, directors, writers, actors, editors, censors, distributors, audience, and subject matter of the films will be explored. *Prerequisite: COSF 100 or consent of instructor.*

Communication and Culture

COCU 100. Introduction to Communication and Culture (4)
Processes of communication shape and are shaped by the cultures within which they occur. This course emphasizes the ways in which cultural understandings are constructed and transmitted via the variety of communication media available to members. A wide range of cultural contexts are sampled, and the different ways that available communication technologies

(language, writing, electronic media) influence the cultural organization of people's lives are analyzed. *Prerequisite: COGN 20, or HDP 1, or consent of instructor. Offered winter quarter.*

COCU 110. Cinema in Latin America (4)
Analysis of the changing content and sociopolitical role in Latin America of contemporary media, including the "new cinema" movement, recent developments in film, and popular television programming, including the telenovela. Examples drawn from Mexico, Brazil, Cuba, and other countries. *Prerequisite: COCU 100 or consent of instructor.*

COCU 110XL. Foreign Language Discussion (1)
Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered communication language foreign area course. This section is taught by the course instructor, has no final exam and does not affect the grade in the core course, COCU 110. Concurrent enrollment in COCU 110 required.

COCU 120. The Problem of Voice (4)
This course will explore the problem of self-expression for members of various ethnic and cultural groups. Of special interest is how writers find ways of describing themselves in the face of others' sometimes overwhelming predilection to describe them. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 123. Black Women Filmmakers (4)
Students examine film and video media produced by black women filmmakers worldwide. This course will use readings from the writings of the filmmakers themselves as well as from film studies, women's studies, literature, sociology, and history. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 124. Documentary History and Theory (4)
Lecture and discussion course in the history of nonfiction film and video. Through film and written texts we survey the nonfiction film genre, considering technological innovations, ethical issues, and formal movements related to these representations of the "real." Students write a research paper in lieu of a final. *Prerequisite: COCU 100 or consent of instructor.*

COCU 125. How to Read a Film (4)
The purpose of this course is to increase our awareness of the ways we commonly interpret or make understandings from movies and to enrich and increase the means by which one can enjoy and comprehend movies. We will talk about movies and we will explore a range of methods and approaches to film interpretation. Readings will emphasize major and diverse theorists, including: Bazin, Eisenstein, Cavell, and Mulvey. *Prerequisite: COCU 100 or consent of instructor.*

COCU 127. Folklore and Communication (4)
Folklore is an important variety of noncommercial communication in societies dominated by commercial media. A source of alternative understandings, folklore is characterized by particular styles, forms, and settings. This course introduces a wide range of folklore genres from different cultures and historical periods, including oral narrative, material folk arts, dramas, and rituals. We will pay special attention to the relation between expressive form and social context. Sources include folklore texts, ethnographies, performances on film and videotape, novels, autobiographies, and student observations and experiences. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 128. Folklore and Mass Media (4)
Local personal, vernacular, and oral traditions coexist with and influence the mass-produced, mass-mediated culture of the late twentieth century. This course examines the history of this influence, using materials such as oral histories, life stories, urban legends, and soap operas to explore the conjunctions of folklore and commercially produced entertainments in everyday social life. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 130. Tourism: Global Industry and Cultural Form (4)
The largest industry in the world has far-reaching cultural ramifications. We will explore tourism's history and its contemporary cultural effects, taking the perspective of the "toured" as well as that of the tourist. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 132. Gender and Media (4)
This course examines the work of women artists and the history of the representation of women in the media, from the beginnings of cinema to the present, and offers a basic introduction to feminist media theory. It focuses on the representation of gender, and narrative and experimental strategies used by women media makers, and the role of the female spectator. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 135. Public Relations in Society (4)
Using modules, this course introduces students to public relations and allows them to analyze its place in our increasingly complex society. The three modules are designed and structured to go from an understanding of what public relations is to allowing you the opportunity to identify and analyze its role in society. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 136. Concepts of Freedom (4)
This course examines some of the changing cultural, social, technological, and political meanings, practices, and aspirations that together constitute what is, and has been, called Freedom. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 137. The Politics of Bodies (4)
This course will explore the construction of gendered bodies and gendered sexuality in the late twentieth century, postindustrial culture(s). Through the use of fiction, film and theory as well as political, historical and media analysis, we will examine the contested terrain, including the race and class coding, of such issues as abortion, infertility, eating disorders, gender identity, and AIDS. *Prerequisite: COCU 100 or Women's Studies 2A, B, or C.*

COCU 138. Feminist Theory (4)
This class is designed to initiate students into the pleasures, pains, and perplexities of critical thinking about gender. We will survey a wide variety of thinkers and issues, consider some of the historical as well as contemporary debates within western feminist thought, and develop tools of analysis for future work. *Prerequisite: upper-division standing. Recommended: Women's Studies/Cultural Traditions 2A, B, or C.*

COCU 139. Reproductive Discourse and Gender (4)
In this course we will examine as a problem of discourse and culture the controversies surrounding the development and use of the new technologies of human genetics and reproduction. Of particular interest will be the way in which these new technological practices and processes test, erode, or undermine traditional understanding of "human nature" and relationship while enforcing traditional understanding of gender. *Prerequisite: COCU 137 or Women's Studies 2A, B, or C.*

COCU 140. Television, Culture, and the Public (4)
How and what does television communicate? Emphasis will be on contemporary U.S. television programming, placed in comparative and historical context. Special topics may include: TV genres; TV and politics; TV and other media. Frequent in-class screenings. *Prerequisite: COGN 20 or consent of the instructor.*

COCU 141A. Media and Technology: Global Nature, Global Culture (4)
Considers globalization's impact on concepts of nature in and through media texts, information systems, circulation of consumer goods and services, the emergence of global brands, science, health initiatives, environmental media activism, technology transfer in the twentieth and early twenty-first centuries. *Prerequisite: COSF 100 or COCU 100 or COHI 100 or consent of instructor.*

COCU 141B. Media and Technology: Gender and Biomedicine (4)
From historical and cultural aspects of media, information, imaging technology use in biomedical research, clinical care, health communication to constructions of gender, and identity. We approach the subject through audiovisual texts and writings from fields including science and technology studies and cultural studies. *Prerequisite: COSF 100 or COCU 100 or COHI 100 or consent of instructor.*

COCU 141C. Media and Technology: Disability (4)
Cultural and historical ways of defining and understanding disability relative to communication and assistive technologies, including the impact of digital technologies and the Americans with Disabilities Act. Use of audiovisual texts and writings from fields including science and technology studies, and cultural studies. *Prerequisite: COSF 100 or COCU 100 or COHI 100 or consent of instructor.*

COCU 142. Holocaust Discourse (4)
Legal, visual, historical, cultural discourses and debates that contribute to represent the Holocaust as a coherent and cohesive event, and as a touchstone of moral and political discourse in the U.S., entailing powerful stories about pluralism, tolerance, democracy, human rights, and justice. *Prerequisite: COCU 100 or consent of instructor.*

COCU 148. Communication and the Environment (4)
Survey of the communication practices found in environment controversies. The sociological aspects of environmental issues will provide background for the investigation of environmental disputes in particular contested areas, such as scientific institutions, communities, work-places, governments, popular culture, and the media. *Prerequisite: COCU 100 or consent of instructor.*

COCU 149. Youth, Culture and Media (4)
The interrelationship of youth and modern media in the "American century," youth culture and how it is closely tied to various media, the 60s growth of rock culture and mass media's ambivalence toward the young as social threats, and as a lucrative market for pop products. Other topics include: violence, sex and gender relations, ethnic subcultures, activism, advertising, video games, and the Internet. *Prerequisite: COCU 100 or consent of instructor.*

COCU 161. Material Culture: Design and Social Process (4)
An investigation of the connections between material culture and the technical and social forces affecting its production and use. Analytic topics include dress, gardening, and urban planning. *Prerequisite: COGN 20 or consent of instructor.*

COCU 162. Popular Culture (4)
An overview of the historical development of popular culture from the early modern period to the present. Also a review of major theories explaining how popular culture reflects and/or affects patterns of social behavior. *Prerequisite: COGN 20 and COCU 100 or consent of instructor.*

COCU 163. Popular Culture in Contemporary Life (4)
Treats the products of the modern culture industries and theories of their social and political importance. We will look at a wide range of cultural forms, including music, television, fashion, food, and landscapes. Special attention will be paid to questions of how popular culture is consumed, what it means to its audiences, and to gender, racial and ethnic differences among producers and consumers. *Prerequisite: upper-division standing.*

COCU 165. History, Memory and Popular Culture (4)
What role does popular culture play in shaping and creating our shared memory of the past? The course examines diverse sources such as school text books, monuments, holidays and commemorations, museums, films, music, and tourist attractions. *Prerequisite: COCU 100 or consent of the instructor.*

COCU 166. Cartoons (4)
This class relates cartoon programming for children to the history of western childhood and the contemporary American culture of the child. While other classes may deal with the effects of television on children, this one is designed to encourage students to review the long-standing western traditions of hope and fear associated with children that shape these concerns. *Prerequisites: COGN 20 and COCU 100 or consent of the instructor.*

COCU 170. Advertising and Society (4)
Advertising in historical and cross-cultural perspectives. Topics will include the ideology and organization of the advertising industry; the meaning of material goods and gifts in capitalist, socialist, and nonindustrial societies; the natures of needs and desires and whether advertising creates needs and desires; and approaches to decoding the messages of advertising. *Prerequisite: COCU 100 or consent of instructor.*

COCU 175. Advanced Topics in Communication: Culture (4)
Specialized study in communication and culture with topics to be determined by the instructor for any given quarter. Past topics include critical theory, rituals and spectacles. May be repeated for credit three times. *Prerequisite: COCU 100 or consent of instructor.*

COCU 179. Colonialism and Culture (4)
This course examines colonial narratives, slave accounts, essays, and stories by both colonizers and colonized. It also explores the issue of nationalism in determining the limits of colonialism among minority groups in the United States and in the Third World. *Prerequisite: upper-division standing.*

Communication and Human Information Processing

COHI 100. Introduction to Communication and the Individual (4)
An introduction to theories of human mental processes which emphasizes the central role of mediation. The course covers methods of research that permit the study of mind in relation to different media and contexts of use. The traditional notion of media effects is critically examined in a number of important domains, including television, film, writing, and oral language. *Prerequisite: COGN 20 or HDP 1, or consent of instructor.* Offered spring quarter.

COHI 108. The Development of Communication in Children (4)
(Same as HDP 130.) The course serves as an introduction to research methods in the study of child development. The special focus of the course will be on how children acquire competence in symbolic communication, including language, drawing, writing, and number systems. Observation of children in their interactions with each others and adults will be required. *Prerequisite: COHI 100 or HDP 1.*

COHI 114. Bilingual Communication (4)
This course is designed to introduce students to the multiple settings in which bilingualism is the mode of communication. Students will examine how such settings are socially constructed and culturally-based. Readings on language policy, bilingual education, and linguistic minorities, as well as field activities will constitute the bulk of the course. *Prerequisite: COHI 100 or consent of instructor.*

COHI 115. Education and Global Citizenship (4)
The course introduces students to concepts, possibilities, and dilemmas inherent in the notion of global citizenship. Students will formulate goals and instructional strategies for global education and the expected competence of an individual within a global society—able to focus simultaneously upon many diverse elements, issues, and contexts. It will examine the role that communication and curriculum can play in the formation of identity, language use, and civic responsibility of a global citizen. *Prerequisite: COHI 100 or consent of instructor.*

COHI 117. Language, Thought, and the Media (4)
This course examines the ways in which various communicative channels mediate human action and thought. A basic premise of the course is that human thought is shaped in important ways by the communicative devices used to communicate. There is a particular emphasis on how thought develops, both historically and in the individual. *Prerequisite: COHI 100 or consent of instructor.*

COHI 119. Learning to Read (4)
This course explores learning to read as a process involving individual, cultural, and social resources. Reading difficulty is understood as induced by lack of resources, such as access to books or access to strategies for decoding, comprehension, and analysis of written text. Activities of reading are taken as a basic context for understanding patterns of chronic and pervasive reading difficulty in their populations. *Prerequisite: COHI 100 or consent of instructor.*

COHI 120. Reading the Web (4)
This course explores how networked computing has helped change many aspects of modern life, from how we manage illness to how we see ourselves culturally. The focus of the class is the online venue—how has the Web become part of daily life? What is different about goods, services, and events that transpire online? What theories of communication and social interaction are useful in understanding online behavior? *Prerequisite: COHI 100 or consent of instructor.*

COHI 121. Literacy, Social Organization, and the Individual (4)
This course will examine the historical growth of literacy from its earliest precursors in the Near East. The interrelation between literate technology and social organization and the impact of literacy on the individual will be twin foci of the course. Arriving at the modern era, the course will examine such questions as the impediments to teaching reading and writing skills to all normal children in technological societies and the relation between literacy and national development in the Third World. *Prerequisite: COHI 100 or COCU 100 or HDP 1 or consent of instructor.*

COHI 123. Children and Media (4)
A course which analyzes the influence of media on children's lives. The course adopts an historical as well as social perspective on childhood within which media plays a role. Among media studied are books, films for children, video games, computer games, and television. *Prerequisite: COGN 20 or HDP 1 or consent of instructor.*

COHI 124. Voice: Deaf People in America (4)
The relationship between small groups and dominant culture is studied by exploring the world of deaf people who have for the past twenty years begun to speak as a cultural group. Issues of language, communication, self-representation, and social structure are examined. *Prerequisite: COHI 100 or consent of instructor.*

COHI 125. Communication in Organizations (4)
Organizations are analyzed as historically-evolving discursive systems of activity mediated by talk, text, and artifacts. The class covers sense making, coordinating, symbolizing, talking, negotiating, reading and writing, story-telling, joking, and visualizing in organizations. Exemplary case studies, employing several complementary theoretical frameworks, are used to analyze these communicative processes. *Prerequisite: COHI 100 or consent of instructor.*

COHI 126. Toys and the Material Life of Children (4)
This course reviews a history of toys and those used by children. Toys will be studied from the view of their imagery and market popularity, including dolls, action figures, blocks, trains, cars, computer games, and "educational toys." Students will analyze the toy industry and its impact on childhood, leisure, and family life. *Prerequisite: COHI 100 or consent of instructor.*

COHI 127. Biography and Life Stories (4)
Course examines several different ways of telling stories as a form of communication: our own life and about the lives of others. There are also the occasions that the life stories of ordinary people are told at and celebrated: for example, funerals, festschrifts, retirement dinners, fiftieth-anniversary parties, and retrospective art shows. *Prerequisite: COHI 100 or consent of instructor.*

COHI 129. Borderlands (4)
Communicative and identity aspects of "marginality"—belonging to more than one race, community, or nationality, and on the literature about insiders and outsiders. Considers contemporary race-critical and feminist theory, including cyborg anthropology, the

historical concept of race in America, and the problematics of multiple memberships of various sorts. *Prerequisite: COHI 100 or content of instructor.*

COHI 134. Language and Human Communication (4)
This course looks at the interaction of technology, culture, and language, with a focus on narrative styles. Theories on the role of technology in shaping and transforming talk are examined. Cultural properties such as physical space and work traditions are studied as they bear on styles of talking and talking about the world. Storytelling, humor, and talk of children are used as examples of styles of talking. *Prerequisite: COHI 100 or consent of instructor.*

COHI 135. Language and Globalization (4)
The interaction of language and culture in human communication. New and old languages, standard and dialect, dominant and endangered, are the special focus. Selected languages as examples of how languages exist in contemporary contexts. *Prerequisite: COHI 100 or consent of instructor.*

COHI 143. The Psychology of the Filmic Text (4)
The course will examine a variety of films using different perspectives and methods of psychology to analyze the types of problems raised by the nature of cinematic communication. Topics will include an introduction to basic elements of cinematography, theoretical and technical bases of film's "grammar," perception of moving pictures, the function and status of sound, the influence of film on behavior and culture (and vice versa), the representation of psychological and social interaction, the communication of narrative and spatial information formation, the generation and translation of film's conventions, and the parameters which the medium and the culture impose upon the attempt to express various forms of abstraction in the concrete visual language of film. *Prerequisite: COHI 100 or consent of instructor.*

COHI 175. Advanced Topics in Communication: Human Information Processing (4)
Specialized study in communication: human information processing with topics to be determined by the instructor for any given quarter. May be repeated for credit three times. *Prerequisite: COHI 100 or consent of the instructor.*

Communication Media Methods

COMT 100. Nonlinear/Digital Editing (4)
Prepare students to edit on nonlinear editing facilities and introduce aesthetic theories of editing: time code editing, time line editing on the Media 100, digital storage and digitization of audio and video, compression, resolution, and draft mode editing. *Prerequisites: communication majors, COGN 21.*

COMT 101. Television Analysis and Production (6)
An introduction to the techniques and conventions common to the production of news, discussion, and variety-format television programs. Particular emphasis will be placed on the choice of camera "point of view" and its influence on program content. Laboratory sessions provide students the opportunity to experiment with production elements influencing the interpretation of program content. Concentration on lighting, camera movement, composition, and audio support. *Prerequisite: COGN 21 or consent of instructor.*

COMT 102. Introduction to Media Use in Communication (4)
Students will engage in projects, using media, to address theories of communication. Students can use film, video, computers, pen and paper, photography, posters, or performances for their projects. *Prerequisites: COGN 20 and COGN 21.*

COMT 103. Television Documentary (6)
An advanced television course which examines the history, form, and function of the television documentary in American society. Experimentation with documentary techniques and styles requires prior knowledge of television or film production. Laboratory sessions apply theory and methods in the documentary genre via technological process. Integrates research, studio and field experience of various media components. *Prerequisite: COMT 101 or COGN 21 or consent of instructor.*

COMT 105. Media Stereotypes (4)
An examination of how the media present society's members and activities in stereotypical formats. Reasons for and consequences of this presentation are examined. Student responsibilities will be: (a) participation in measurement and analysis of stereotype presentations; (b) investigating techniques for assessing both cognitive and behavioral effects of such scripted presentations on the users of media. Course can be taken to meet COCU major requirement. *Prerequisite: COCU 100 or consent of instructor.*

COMT 107. Internet Journalism (4)
This course focuses on writing for Internet publications and using the Internet for research and hypertext bibliography. Students will be required to learn and use a web-programming language. News writing for the Internet will be compared to news writing in other media, including print journalism. *Prerequisites: communication major, COGN 20 or consent of instructor.*

COMT 109. Digital Media Pedagogy (4)
This course teaches techniques for teaching digital media: such as Word, Photoshop, PageMaker, digital cameras, digital video, non-linear editing. What are the special challenges digital media present to teachers and students? How do digital media compare to older technologies such as typewriters, film cameras, and analog video? How do gender, class, and age affect the way students and teachers respond to digital media? At least six hours of fieldwork at a computer lab of their choice or at Seiter's project at Adams Elementary will be required. Experience with computers and/or digital imaging recommended. *Prerequisite: communication majors only.*

COMT 110. News Media Workshop (4)
Designed for students working in student news organizations or off-campus internships or jobs in news, public relations, or public information. A workshop in news writing and news analysis. *Prerequisites: COCU 100 and COSF 171 (may be taken concurrently) or consent of instructor.*

COMT 111A-B. Communicating and Computers (4-4)
This course introduces students to computers as media of communication. Each quarter students participate in a variety of networking activities designed to show the interactive potential of the medium. Field work designed to teach basic methods is combined with readings designed to build a deeper theoretical understanding of computer-based communication. Courses can be taken to meet COHI major requirement. *Prerequisites: COHI 100 and communication major or consent of instructor.*

COMT 112. Ethnographic Studies of the Media (4)
This is a practical course on ethnographic fieldwork—obtaining informed consent interviewing, negotiating, formulating a research topic, finding relevant literature, writing a research paper, and assisting others with their research. Course can be taken to meet COHI major requirement. *Prerequisite: COHI 100 or consent of instructor.*

COMT 115. Media and Design of Social Learning Contexts (6)
(Same as HDP 115). A combined lecture/lab course cross listed in Communication and Human Development. Students attend lecture, write fieldnotes, and spend 3 hours per week in specially designed after-school settings working with children and designing new educational media and producing special projects. *Prerequisite: COHI 100 or HDP 1.*

COMT 116. Practicum in Child Development (6)
(Same as Psych 128, HDP 135.) A combined lecture and laboratory course for juniors and seniors in psychology and communication. Students should have a solid foundation in general psychology and communication as human information processing. Students will be expected to spend four hours a week in a supervised practical after-school setting at one of the community field sites involving children. Additional time will be devoted to readings and class prep, as well as, six hours a week transcribing field notes and writing a paper on some aspect of the field work experience as it relates to class lectures and readings. Please note that the enrollment size for each site/section is limited. See department course listing for site/section descriptions. *Prerequisite: COHI 100 or consent of instructor.*

COMT 120. Documentary Sketchbook (4)
Digital video is the medium used in this class both as a production technology and as a device to explore the theory and practice of documentary production. Technical demonstrations, lectures, production exercises, and readings will emphasize the interrelation between production values and ethics, problems of representation, and documentary history. *Prerequisite: COGN 21 or consent of instructor*

COMT 121. Sound Production and Manipulation (4)
Advanced seminar in sound production, design, editing. Students create projects by recording original sounds, editing on a Pro-Tools system. We consider the potential of sound in film, radio, TV, and the Web by reviewing work and reading sound theory. *Prerequisites: communication majors only and COGN 21.*

COMT 175. Advanced Topics in Communication, Media Methods (4)
Specialized "practice" in communication: media methods with topics to be determined by the instructor in any given quarter. May be repeated for credit three times. *Prerequisite: communication majors only.*

General Communication

COGN 150. Senior Seminar in Communication (4)
This course examines in detail some topic in the field of communication, bringing to bear several of the approaches and perspectives introduced in the basic communication curriculum. Seminars will be limited to 25 students and class participation is stressed. A research paper is required. *Prerequisite: senior standing or consent of instructor.*

COGN 175. Advanced Topics in Communication: General (2)
Specialized study in general communication with topics to be determined by the instructor, for any given quarter. May be repeated for credit. *Prerequisite: must be taken with AIP 197.*

COGN 191A-B. Honors Seminar in Communication (4)
Preparation of an honors thesis, which can be either a research paper or a media production project. Open to students who have been admitted to the honors program. Grades will be awarded upon completion of the two-quarter sequence. *Prerequisite: admission to the honors program.*

COGN 194. Research Seminar in Washington, D.C. (4)
(Same as PS 194, USP 194, Hist 193, SocE 194, Erth 194.) Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistants and a substantial research paper. *Prerequisite: participation in UCDC program.*

COGN 198. Directed Group Study in Communication (4)
Directed group study on a topic or in a field not included in the regular curriculum by special arrangement with a faculty member. (P/NP grades only.) May be taken three times for credit. *Prerequisite: consent of instructor.*

COGN 199. Independent Study (4)
Independent study and research under the direction of a member of the staff. (P/NP grades only.) *Prerequisite: consent of instructor.*

GRADUATE

COGR 200A. Introduction to the Study of Communication as Social Force (4)
This course focuses on the political economy of communication and the social organization of key media institutions. There will be both descriptive and analytical concerns. The descriptive concern will emphasize the complex structure of communication industries and organizations, both historically and cross-nationally. The analytic focus will examine causal relationships between the economic and political structure of societies, the character of their media institutions, public opinion, and public attitudes and behaviors expressed in patterns of voting, consuming, and public participation. The nature of evidence and theoretical basis for such relationships will be critically explored.

COGR 200B. Introduction to Study of Communication: Communication and Culture (4)
This course focuses on questions of interpretation and meaning. This course will examine how people use texts to interpret the world and coordinate their activities in social groups. Students will study both theories of interpretation in the conventional sense and theories about the act of interpreting.

COGR 200C. Introduction to the Study of Communication: Communication and the Individual (4)
This course will draw on theorists who examine human nature as constituted by social, material, and historical circumstances. This course considers the media in relation to the ontogenetic and historical development of the human being and an examination of the individual as socially constituted in a language-using medium. The role of new communication technologies as part of research methodologies is explored in lecture-seminar.

COGR 201B. Ethnographic Methods for Communication Research (4)
A supervised and coordinated group project will allow students to develop competence in a variety of ethnographic approaches to communication. Subjects covered include choosing a field-work site, setting or process for participation; entry and development of relationships; techniques of observation, interviewing, notetaking, and transcription. Course may also include photography and video as research tools. All participant observation and interviewing strategies fall under the review of the Committee on Human Subjects.

COGR 201C. Discourse Analysis (4)
Review and critique of studies employing discourse analysis, focusing on the ways that "discourse" is identified, recorded, and reported. A working notion of "discourse" will develop from works representing diverse disciplinary approaches. Students will record, transcribe, and report on segments of talk in an everyday setting. All participant observation and interviewing strategies fall under the review of the Committee on Human Subjects.

COGR 201D. Historical Methods for Communication Research (4)
Different approaches to conducting historical research in communication. Such approaches may include the social history of communication technology; structuralist and poststructuralist accounts of language, media, and collective memory; and new historicist treatments of cultural history. Sources, documentation, and the nature of argument from historical evidence are emphasized.

COGR 201E. Political Economic Methods for Communication Research (4)
Combines methodological critique of classic political-economic studies of communication agencies and institutions with an in-depth research project. The project serves to familiarize students with approaches to documentation and to methodological issues associated with an overarching process or trend, such as social effects of communications technologies, economic concentration in the communications industry, the information economy, transnationalization of networks, deregulation of telecommunications, or causes and impacts of increasing television programming costs.

COGR 201H. Qualitative Methods in Audience Research (4)
This course explores the social and economic definitions of media audiences and the various qualitative methodologies for studying media use. Includes audiences for television, video, and motion pictures, as well as users of telephones, computers, and electronic mail.

COGR 201I. Ethnography of Information Systems (4)
This course will survey the rapidly growing body of ethnographic analyses of information systems, to extend the basic principles of ethnographic research and to lead students in the development of projects modifying these principles for the emerging electronic environment. Students may approach the course in one (or both) of two ways—either preparing for and carrying out a pilot ethnographic study or studying the theoretical literature in depth.

COGR 201J. Comparative Analysis (4)
The logic of comparative analysis and its role in communication research. Scientific inference in qualitative research. Selection of cases. Problems of translation across cultures.

COGR 201K. Sociological Analysis (4)
This course will introduce students to selected sociological perspectives, concepts, and methods for the study of mass communication. It will explore the implications of taking social relations and social institutions, rather than individuals or cultural texts of discourses, as the chief units of analysis.

COGR 201L. Qualitative Analysis of Information Systems (4)
Historical and ethnographic studies of information systems—the design and use of information and communication technologies in their social, ethical, political, and organizational dimensions. Objects of study range from the invention of file folders to email use and distributed databases as communication systems. *Prerequisite: graduate standing or consent of instructor.*

COGR 201M. Content Analysis (4)
History uses methodology of quantitative analysis of media content. Includes conceptual issues concerning the quantification of meaning and practical procedures for coding and data analysis. Students read examples of studies using content analysis and carry out their own pilot analyses. *Prerequisite: graduate standing or consent of instructor.*

COGR 209. International Communications (4)
This course will examine the material infrastructure of communication flows internationally, focusing on the major transmitters and categories of the messages and imagery. Emphasis will be placed on the impact of international communication on national sovereignty and the character of economic development.

COGR 210. Information and Society (4)
The social, legal, and economic forces affecting the evolution of mass communication institutions and structure in the industrialized world. Differential impacts of the free flow of information and unequal roles and needs of developed and developing economies.

COGR 215. Regulation of Telecommunications (4)
The course will look at the history of, and rationales for, the regulation of mass communications in the United States. The course will cover both broadcasting and common carrier regulation. We will analyze telecommunications regulatory structures as they were constituted historically with the 1934 Communications Act and examine their breakdown in the late 1970s. In a larger vein, the course will examine the rise and functions of regulatory agencies in modern American history.

COGR 220. The News Media (4)
History, politics, social organization, and ideology of the American news media. Special attention will be paid to historical origins of journalism as a profession and "objective reporting" as ideology; empirical studies of print and TV journalism as social institutions; news coverage of Vietnam and its implications for theories of the news media.

COGR 222. Childhood and Culture (4)
This course explores the social construction of childhood as organized by the institutions of school and family. Of particular interest are media consumption and leisure as they interact with the emergence of taste, preference, and identity in children. Modern adolescence is also explored as it bears on the social nature of childhood.

COGR 225A. Introduction to Science Studies (4)
Study and discussion of classics work in history of science, sociology of science, philosophy of science, and communication of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. *Prerequisite: enrollment in the Science Studies Program or approval of instructor.*

COGR 225B. Seminar in Science Studies (4)
Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. *Prerequisite: enrollment in the Science Studies Program or approval of instructor.*

COGR 225C. Colloquium in Science Studies (4)
A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. *Prerequisite: enrollment in the Science Studies Program or approval of instructor.*

COGR 236. Popular Culture (4)
This class will be an opportunity for students to review major contributions to the field from the disciplines of anthropology, history, literature, sociology and American studies, and to experiment with some of the recently developed methods for studying popular forms. They will then be able to consider more precisely the potential and actual contribution of studies of popular culture to the discipline of communication.

COGR 240. The Culture of Consumption (4)
(Cross-listed with HIGR 273.) This course will explore the development and cultural manifestations of consumerism in the nineteenth and twentieth centuries. Topics will include the rise of museums, the development of mass market journalism and literature, advertising, and the growth of commercial amusements. Readings will focus primarily, but not exclusively, on the United States. Students will be encouraged to think comparatively.

COGR 245. Performance and Audience (4)
This course will explore the history and nature of audience as a concept and phenomenon. The first half of the term will be spent surveying the historical nature of the relations of audience to performance and to social groups. The second half of the course will address modern and contemporary aspects of audience, taking into consideration the effects of radio, film, and television on audience and nature of audience in contrasting cultures such as that of contemporary China and the United States.

COGR 261. Mediational Approaches to Culture/Mind (4)
This course will examine theories of mind in which cultural mediation is given a leading role. The work of anthropologists, psychologists, and communication scholars will be studied in depth. Emphasis will be placed on the methodological implication of cultural theories of mind for empirical research.

COGR 265. Literacy (4)
This course will examine the historical growth of literacy from its earliest precursors in the Near East. The interrelation between literate technology and social organization and the impact of literacy on the individual will be twin foci of the course. Arriving at the modern era, the course will examine such questions as the impediments to teaching reading and writing skills to all normal children in technological societies and the relation between literacy and national development in the Third World.

COGR 266. Ethnography of Information Systems (4)
In this course students will survey the rapidly growing body of ethnographic analyses of information systems, extend basic principles of ethnographic research, and lead students in the development of projects modifying these principles for the emerging electronic environment. Students will carry out a series of fieldwork exercises and discuss notes and results in class.

COGR 275. Topics in Communication (4)
Specialized study in communication, with topics to be determined by the instructor for any given quarter.

COGR 280. Advanced Workshop in Communication Media (4)
This course is a project course in which students prepare a production or experiment using one of the forms of media. The course is designed to allow students to experiment in a communication form other than the usual oral presentation in class or a term paper. Students can do a video production, a coordinated photographic essay or exhibit, a computer insructional game, a published newspaper or magazine article directed at a special audience, a theatrical presentation, or some form other than those listed. *Prerequisite: graduate standing or consent of instructor.*

COGR 294. The History of Communication Research (4)
Intellectual history of the field of communication studies from Robert Park to the present. Explication and assessment of major research approaches and classic studies representing both empirical and critical traditions.

COGR 296. Communication Research as an Interdisciplinary Activity (4)
A course that introduces students to the interdisciplinary nature of the field of communication research as represented by the work of faculty in the Department of Communication. Through faculty research, students are presented with concrete examples of communication reseaarch theory and practice that can provide them with insights for conducting their own research projects. *Prerequisite: graduate standing or consent of instructor.*

COGR 298. Directed Group Study (1-12)
The study and analysis of specific topics to be developed by a small group of graduate students under the guidance of an interested faculty member. COGR 500. Practice Teaching in Communication (4)

COGR 299. Graduate Research (1-12)
Advanced independent study in communication under the guidance of Department of Communication faculty.

COGR 500. Practice Teaching in Communication (4)
A doctoral student in communication is required to assist in teaching undergraduate Department of Communication courses for a total of six quarters. One meeting per week with the instructor, one meeting per week with the assigned sections, and attendance at the lecture of the undergraduate course in which he or she is participating are part of this requirement.

Comparative Studies in Language, Society, and Culture

OFFICE: 3354 Literature Building
(858) 534-3826/(858) 534-3217
http://www.literature.ucsd.edu

Program Faculty

Michael Meeker, Ph.D. *Department of Anthropology*
Jann Pasler, Ph.D. *Department of Music*
Don E. Wayne, Ph.D. *Department of Literature*

Graduate students in the humanities, social sciences, and arts in this program are provided the opportunity to design curricula, conduct research, and write dissertations under the guidance of interdepartmental and/or intercampus Ph.D. committees. The student who participates in the program must be admitted, satisfy all requirements for advancement to candidacy, and pass the qualifying examination in one department. The student must also undertake advanced study in an integrally related area of research specialization. The student advances to candidacy in the program upon successfully defending a written dissertation proposal before the interdepartment and/or intercampus Ph.D. committee. In the instance of some departments and programs, the defense will be identical with completion of the departmental qualifying examination.

Application to the program in Comparative Studies may be made at the earliest during the student's third quarter of residency in his or her primary department. From the point of acceptance into the program, the student's preparation for dissertation research will be under the supervision of the interdepartment or intercampus Ph.D. committee. The degree granted may indicate in its title the precise nature of the student's studies and research when appropriate and desirable—e.g., Ph.D. in comparative literature and ethnopoetics, in linguistics and literary studies, in economics and Chinese studies, in philosophy and the history of ideas. When an additional degree title is contemplated, the student's Ph.D. committee must forward a program of study and research, as well as the dissertation proposal, to the supervising committee for initial approval and to the Graduate Council for final approval.

Students applying for admission to UCSD and interested in applying for admission to the program should direct their inquiries to a primary department. Students already admitted to a primary department should, after the required quarters of residence and with the advice of a department adviser, direct inquiries to the chairperson of the program.

Faculty Research Groups

Beginning with the academic year 1997–1998, the program sponsors a series of faculty research

groups. These groups consist of faculty who have announced their intention to supervise graduate students wishing to work on topics involving the comparative study of language, society, and culture. Each faculty research group is expected to be composed of faculty in the humanities, social sciences, and arts from different departments and/or campuses. For a list of current faculty research groups and the topics which they support, contact the chairperson of the program.

The Anthropology of Modern Society

The Anthropology of Modern Society is a project of graduate training and research dedicated to the study of modernity and its counterpoints in the late twentieth century. The group sees the social life of cities as making manifest this problem in issues of citizenship and democracy, social formations in tension with the nation-state, modern subjectivities, social and religious movements, transnational markets and migrations, and relations of local to global processes. Participants are committed to reorienting anthropological theory and ethnographic practice towards such contemporary social and political problems.

Director: James Holston,
Department of Anthropology, (858) 534-0111

Co-Director: Martha Lampland,
Department of Sociology, (858) 534-5640

Ph.D. Time Limit Policies

A student admitted to this interdisciplinary program is subject to the same time limit policies as those of the student's primary department.

Contemporary Black Arts Program

OFFICE: Thurgood Marshall College
Administration Building, Room 120

Director

Provost, Thurgood Marshall College

Faculty

Ken Anderson, *Visiting Lecturer, Music*
Robert Cancel, *Associate Professor, Literature*
Floyd Gaffney, Ph.D., *Professor Emeritus, Theatre*
Sandra Foster-King, M.F.A., *Visiting Lecturer, Theatre*
George Lewis, *Professor, Music*
Cecil Lytle, B.A., *Professor, Music*
Faith Ringgold, M.A., *Professor, Visual Arts*

The Minor

The Contemporary Black Arts Program is an interdisciplinary minor which provides a broad introduction to an appreciation of Afro-American performing arts through lecture, studio courses, and public performance. Students complete twenty-eight units, with a minimum of twenty upper-division units. Students who complete the minor must meet the following requirements:

1. A required core of four lecture courses chosen from:

Theatre	THHS 101 (Topics: African American Theatre)
Music	Music 127A (Music of Black Americans)
Visual Arts	VA 126DN (African and African American Arts)
Literature	LTEN 17 (Intro to African American Lit)
History	HIUS 135a (Origins of the Atlantic World, c. 1450–1650) or HIUS 135b (Slavery and the Atlantic World)

2. A fifth lecture course selected from the following approved list:

Literature/English 185. Themes in Afro-American Literature (4)

Literature/English 188. Contemporary Caribbean Literature (4)

Literature/English 148. Genres in American Lit (4)

Literature/English 183. African American Prose (4)

Literature/English 184. African American Poetry (4)

Literature/Writing 100. Beginning Fiction (4)

Literature/Writing 102. Poetry (4)

Literature/Writing 120. Personal Narrative (4)

Music 126. Introduction to Oral Music (4)

Music 127B. Music of Black Americans (4)

VA 1. Introduction to Art Making (4)

3. A total of eight units of performance courses selected from the following approved list:

Music 95G. Gospel Choir (2)

Music 95J. Jazz Ensemble (2)

Music 131. Jazz Improvisation (4)

Theatre/Dance 132. Dances of the World (4)

Theatre/Acting 120. Ensemble (4)

Students interested in either taking Contemporary Black Arts Program courses or completing the minor are encouraged to discuss their interests and develop a course of study with a faculty member of the program at their earliest convenience. See the Marshall College Provost's Office for further information.

Contemporary Issues

OFFICE: 2073 Humanities and Social Sciences Building, Muir College, (858) 534-3589

Acting Director

Susan Kirkpatrick, Ph.D.

COURSES

LOWER-DIVISION

22. Human Sexuality (4)
A survey of the nature and problems of human sexuality in the development of the individual, in cultural traditions and values, and in social roles and organizations, particularly with regard to contemporary America. L. Ross

40. Contemporary Issues: The AIDS Epidemic (4)
Using current information, this course will deal with the worldwide spread of AIDS, particularly into communities, colleges, and unversities. Discussion topics: origin, infection, biology, clinical expression, risks, vaccines, epidemiology, and the social, ethical, economic, and legal aspects of this epidemic.

50. Information and Academic Libraries (2)
An introduction to research strategies directed at satisfying the information needs of the student using the academic library, with emphasis on the UCSD library system. Library techniques will be acquired through lectures and discussion, problem sets, and a term project. Students will learn to extend these techniques to independent research.

UPPER-DIVISION

136. The Anthropology of Medicine (4)
(Same as ANGN 128.) Theoretical approaches to and cross-cultural analyses of the role of the medical profession, the sick and the healers, and culture as com-

munication in the medical event. The theoretical anthropological aspects of medical practice and medical research will include a consideration of the "Great Traditions" of medicine as well as primitive and peasant systems. Western medicine will be considered in the foregoing framework, with issues of contemporary concern by way of introduction. *Prerequisite: upper-division standing.* L. Ross

195. Discussion Leading in Contemporary Issues (4)
Students will lead groups of ten to twenty students in discussions of contemporary concern. Students will meet with the professor to plan and prepare for their discussions to be held weekly. Students will also consult with another faculty member specializing in their topics for further check on reading materials and course of discussion. (P/NP grades only.) *Prerequisite: Contem-porary Issues 196 and consent of the director of Interdisciplinary Sequences.*

196. Contemporary Issues Workshop (2)
A workshop for potential discussion leaders in the Contemporary Issues Program. Students will investigate topics for discussion and methods of presentation and inquiry. Participating in the workshop does not guarantee selection as discussion leader. (P/NP grades only.)

198. Group Studies in Contemporary Issues (4)
Group studies, readings, projects, and discussions in areas of contemporary concern. Course is set up so that students may work together as a group with a professor in an area of contemporary concern whereby the group emphasis would be more beneficial and constructive than individual special studies. *Prerequisite: consent of instructor. (P/NP grades only.)*

199. Special Studies in Contemporary Issues (2-4)
To be offered during fall, winter, and spring quarters. Permission of the director of Interdisciplinary Sequences is required. The 199 course is to be made up of individual reading and projects in the areas of contemporary concern. Term paper and/or completed project is required. This class is given under special circumstances, e.g., student abroad. (P/NP grades only.)

500. Apprentice Teaching in Contemporary Issues (4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. *Prerequisite: graduate standing.*

Critical Gender Studies

The UCSD Critical Gender Studies Program, formerly Women's Studies, is an interdisciplinary academic program, offering students the opportunity to study gender, race, class, sexuality, and nationalism as intersecting categories of analysis and experience. Some basic questions that anchor the program's core curriculum include asking how these categories become institutionalized and yet change over time? How do they work together to shape individual identity?; contribute to the organization of social life?; become essential to the production of many different kinds of knowledge about that life?

The program's core curriculum builds upon feminist scholarship of the last decade, incorporating the new interdisciplinary agendas, intellectual debates, changing methodological practices, and major scholarly shifts that have reshaped the field of women's studies. Informed by the insights of critical race feminism, feminist critiques of conventional domains of knowledge, and gay and

lesbian inquiries challenging traditional understandings and assumptions about sexuality, this new core curriculum is designed to move students beyond simple binary descriptions and contemporary, popularized accounts of gender. Instead, gender is analyzed in the full complexity of its construction over time and in a variety of cultural, scholarly, and global arenas.

Students can expect to encounter a rich spectrum of approaches in studying these complex constructions—the majority of a student's advanced work in the program consists of upper division courses from history, communication, literature, ethnic studies, sociology, anthropology, philosophy, and political science. However, despite their important differences, what these approaches share is a *critical* stance with respect to the subject of gender. This stance, reflected in the program's name "*Critical Gender Studies*," refuses easy answers when exploring the social relations of gender and reaches, instead, for detailed accounts of the intricacies and paradoxes of power through which these relations are and have been made and maintained.

Critical gender studies prepares undergraduates for a variety of careers through the study of social, political, economic, historical, and cultural contexts. For example, the interdisciplinary and multi-disciplinary course work that students complete as part of a major in critical gender studies provides an excellent foundation for those students with career aspirations in law, medicine and health sciences, public administration, and social services. Students wishing to pursue doctoral work will also find that interdisciplinary training in critical gender studies equips them with theoretical and methodological strengths in most disciplines and applied research fields. Specialists in gender studies are increasingly being used as consultants in industry, higher education, insurance companies, and personnel firms. State and federal government agencies require people who have special training in analyzing gender relations. Finally, educational institutions need specialists to develop and administer women's centers and gay and lesbian centers as well as other institutional structures and programs.

The Critical Gender Studies Program offers two options of study: an undergraduate major and an undergraduate minor (or program of concentration). To declare a major, a department stamp is required. Because critical gender studies is an interdisciplinary major, it is important to work closely with a faculty adviser in the planning of your program.

Preparation for the Major and Minor

All critical gender studies majors and minors are required to take the Introduction to Critical Gender Studies sequence: Critical Gender Studies 2A-B, 100, and 101.

Major Program

Students are required to concentrate in one of five cluster areas: culture and representation; sexualities; work, migration, and globalization; science, technology, and medicine; history, society, and inequalities. Concentrating in a cluster area entails taking five upper-division courses (twenty units) in that area. To complete the major, students are required to complete five additional upper-division courses (twenty units) in cluster areas outside their chosen area of concentration. At least one of the five upper-division courses a student takes outside their chosen area of concentration must be selected from the program's upper-division course list.

CONCENTRATION IN CULTURE AND REPRESENTATION

Group A. **Five upper-division courses (twenty units) in the culture and representation cluster area** from the critical gender studies approved course list.

Group B. **Five upper-division courses (twenty units) in cluster areas other than culture and representation** to be selected from the critical gender studies approved and petitionable course list. At least one of these courses must be chosen from Critical Gender Studies 102-103-104. All five courses may be chosen from Critical Gender Studies 102-103-104 (i.e., each course may be repeated once, provided the course content is different). A maximum of three courses (twelve units) may be selected in any one cluster area.

CONCENTRATION IN SEXUALITIES

Group A. **Five upper-division courses (twenty units) in the sexualities cluster area,** from the critical gender studies approved course list.

Group B. **Five upper-division courses (twenty units) in cluster areas other than sexualities** to be selected from the critical gender studies approved and petitionable course list. At least one of these courses must be chosen from Critical Gender Studies 102-103- 104. All five courses may be chosen from Critical Gender Studies 102-103-104 (i.e., each course may be repeated once, provided the course content is different). A maximum of three courses (twelve units) may be selected in any one cluster area.

CONCENTRATION IN WORK, MIGRATION, AND GLOBALIZATION

Group A. **Five upper-division courses (twenty units) in the work, migration, and globalization cluster area,** from the critical gender studies approved course list.

Group B. **Five upper-division courses (twenty units) in cluster areas other than work, migration, and globalization** to be selected from the critical gender studies approved and petitionable course list. At least one of these courses must be chosen from Critical Gender Studies 102-103-104. All five courses may be chosen from Critical Gender Studies 102-103-104 (i.e., each course may be repeated once, provided the course content is different). A maximum of three courses (twelve units) may be selected in any one cluster area.

CONCENTRATION IN SCIENCE, TECHNOLOGY, AND MEDICINE

Group A. **Five upper-division courses (twenty units) in the science, technology, and medicine cluster area,** from the critical gender studies approved course list.

Group B. **Five upper-division courses (twenty units) in cluster areas other than science, technology, and medicine** to be selected from the critical gender studies approved and petitionable course list. At least one of these courses must be chosen from Critical Gender Studies 102-103-104. All five courses may be chosen from Critical Gender Studies 102-103-104 (i.e., each course may be repeated once, provided the course content is different). A maximum of three courses (twelve units) may be selected in any one cluster area.

CONCENTRATION IN HISTORY, SOCIETY, AND INEQUALITIES

Group A. **Five upper-division courses (twenty units) in the history, society, and inequalities cluster area,** from the critical gender studies approved course list.

Group B. **Five upper-division courses (twenty units) in cluster areas other than history, society, and inequalities** to be selected from the critical gender studies approved and petitionable

course list. At least one of these courses must be chosen from Critical Gender Studies 102-103-104. All five courses may be chosen from Critical Gender Studies 102-103-104 (i.e., each course may be repeated once, provided the course content is different). A maximum of three courses (twelve units) may be selected in any one cluster area.

Honors Program

The Critical Gender Studies Honors Program allows advanced critical gender studies majors to pursue individual projects in the context of collective intellectual exchange with their peers and advising faculty. Students are eligible if they a) have senior standing at the time they begin the program, b) are approved by the critical gender studies faculty director and steering committee. Normally, students eligible for honors will have a 3.5 grade-point average in upper-division courses taken for the major, but highly motivated students who do not meet this criterion may be admitted to the program at the discretion of the director and the critical gender studies steering committee.

In the fall quarter of their senior year, students take the Honors Seminar (CGS 190), taught by a member of the critical gender studies faculty. The first half of the quarter is devoted to intensive analysis and discussion of recent publications in the fields of gender and sexuality. During the second half of the quarter, each student develops a short thesis proposal and presents it for group discussion. While taking the Honors Seminar, each student also registers for CGS 196A: The Honors Thesis, 4 units of independent study with a faculty member associated with critical gender studies. With the guidance of this adviser, the student carries out background research for the thesis prospectus and selects a thesis director. In the winter quarter, students complete the thesis under the supervision of their thesis director in the Honors Thesis course, CGS 196B.

In the spring quarter, each student who has successfully completed a thesis will present it in the CGS 90 undergraduate seminar.

Students who complete the Honors Seminar and the thesis with a combined grade of B+ or above and make the required oral presentation of the thesis in CGS 90 have the words "with distinction" added to the notation of the major on their diplomas and transcripts.

Double Major in Critical Gender Studies and Another Department or Program

Students who wish to major both in critical gender studies and in another department or program must fulfill all requirements for the critical gender studies major as described above. Students must submit a double major petition for approval by the participating departments and the student's provost. Critical gender studies will accept up to two upper-division courses which overlap requirements for the two majors.

Minor Program (and Program of Concentration)

Critical gender studies minors are required to complete the Introduction to Critical Gender Studies sequence: Critical Gender Studies 2A-B, 100, and 101 and three additional upper-division courses (twelve units) applicable to the critical gender studies major and minor. Students may take all three required upper-division courses in the same cluster area or three upper-division courses in three different cluster areas. Students who petition the critical gender studies minor (or program of concentration) with junior or senior standing may petition to substitute two comparable upper-division critical gender studies courses for Critical Gender Studies 2A or 2B. Critical gender studies permits one lower-division course and one upper-division course to be taken P/NP. College grading options vary. Please see college academic advisers and critical gender studies advisers.

Special Studies, Internships, and Grade Options

Many critical gender studies majors and minors elect to do gender research under the rubrics of Directed Group Study (198), Independent Study (199), internships, and mentor programs. Because these courses can be taken only with a P/NP grade option, the number of such courses to be applied to the major should be carefully discussed with a critical gender studies adviser. Some graduate and professional schools will consider it easier to evaluate a student's transcript if there are more letter grades. College guidelines and requirements for grade options also vary. Please see college academic advisers and critical gender studies advisers.

COURSES

LOWER-DIVISION

CGS 2A. Introduction to Critical Gender Studies: Social Movements (4)
The role of social movements in contesting rights and representation in comparative and historical contexts. Historical examples in the U.S. and other locations including: civil rights, men's movements, antiracist feminism, women's movements, AIDS activism, transgenderism, immigrant rights, and the labor movement in the U.S.

CGS 2B. Introduction to Critical Gender Studies: Gender and Institutions (4)
This course examines how gender organizes and is organized by institutions. Domains of inquiry may include family, education, medicine, technology, law, media, the workplace, immigration, and citizenship.

CGS 90. Undergraduate Seminar (1)
This seminar will introduce students to current interdisciplinary research topics and methods in the study of gender and sexuality. UCSD Faculty members, as well as distinguished outside visitors, will be invited to present their work.

UPPER-DIVISION

CGS 100. Conceptualizing Gender: Theories and Methods (4)
This course will compare the uses of gender as a category of analysis across academic disciplines in the Humanities, Social Sciences, and Natural Sciences with particular attention to research methodologies.

CGS 101. Gender, Modernity, and Globalization (4)
The global effects of modernity, modernization, and globalization on men and women. Topics: international consumer culture; international divisions of labor; construction of sexuality and gender within global movements; the migrations of people, capital, and culture. *Prerequisite: upper-division standing or consent of instructor.*

CGS 102. Selected Topics in Critical Gender Studies (4)
An interdisciplinary course focusing on one of a variety of topics in gender studies, such as gender and science, the body, reproductive technologies, public policy. May be taken for credit three times when topics vary. *Prerequisites: upper-division standing or consent of instructor.*

CGS 103. Feminist Theory (4)
An interdisciplinary course in feminist theory. Topics may range from a general survey of feminist theory in a variety of disciplines to a more focused interdisciplinary theoretical topic such as postmodernism and feminism. May be taken for credit three times when topics vary. *Prerequisites: upper-division standing or consent of instructor.*

CGS 104. Advanced Topics in Comparative Perspectives (4)
Focuses on the relationship between gender and culture from a multiplicity of perspectives. Possible topics could include gender and ethnicity, gender across class, and other topics to be examined in a cross cultural framework. May be taken for credit two times when topics vary. *Prerequisites: upper-division standing or consent of instructor.*

CGS 105. Queer Theory (4)
Examines the different methodologies and disciplinary histories that together constitute the interdisciplinary project called *queer studies*. Of particular interest will be how these different methodologies and history construe and construct the relations between gender, race, class, and nation. *Prerequisites: upper-division standing or consent of instructor.*

CGS 106. Gender Equality and the Law (4)
Explores the legal treatment of discrimination on the basis of gender, including equal protection doctrine and some statutory law such as Title VII. Topics include the meaning of gender equality in such areas as single-sex education, military service, sexual harassment, discrimination on the basis of pregnancy, and other current issues. *Prerequisites: upper-division standing or consent of instructor.*

CGS 107. Gender and Reproductive Rights (4)
Legal treatment of gender, reproductive rights, and the family, particularly as evolving law, primarily in the U.S., has created conflicting rights, roles, and responsibilities. Topics include abortion, fetal rights, surrogacy, marriage, and child custody issues. *Prerequisites: upper-division standing or consent of instructor.*

CGS 109A. Gender, Science, Technology (4)
Examines impact of gender and racialized gender on the production and uses of science and technology. Issues include (but are not limited to): racism and biotechnology, biological determinism, eugenics, plagiarism and invisible work, information technologies and access, and the politics of museums. *Prerequisites: upper-division standing or consent of instructor.*

CGS 109B. Gender and Information Technology (4)
Explores how gender and racialized gender affect and are affected by information technology. Through the use of feminist and race-critical approaches, the course examines the impact of information technology on workplaces, the family, gender identity, and the environment. *Prerequisites: upper-division standing or consent of instructor.*

CGS 110A. Women and Sport (4)
Examines the history of women and sport in the U.S. and changes since the passage of Title IX (federal equity legislation) in 1972. Explores the evolution of women in sport from historical, social, racial, psychological, political, and legal perspectives. *Prerequisites: upper-division standing or consent of instructor.*

CGS 110B. Title IX and Gender Equity in Sports and Education (4)
Comprehensive review of Title IX (federal equity legislation) and its impact on gender equity in U.S. sports and education. Explores policy interpretations, changes in educational opportunities and sports programs resulting from legislation and related court cases. *Prerequisites: upper-division standing or consent of instructor.*

CGS 111. Gender and the Body (4)
Various approaches to the study of gendered bodies. Possible topics to include masculinities/feminities; lifecycles; biology, culture, and identity; medical discourses and health issues. May be taken for credit three times when topics vary. *Prerequisites: upper-division standing or consent of instructor.*

CGS 112. Sexuality and Nation (4)
(Cross-listed with ETHN 127.) This course explores the nexus of sex, race, ethnicity, gender, and nation and considers their influence on identity, sexuality, migration movement and borders, and other social, cultural, and political issues that these constructs affect. *Prerequisites: upper-division standing or consent of instructor.*

CGS 190. Honors Seminar (4)
Interdisciplinary readings in feminist theory and research methodology to prepare students for writing an honors thesis. Open to Critical Gender Studies majors who have been admitted to Critical Gender Studies Honors Program. May be applied toward primary concentration in Critical Gender Studies major. *Prerequisites: admission to Critical Gender Studies Honors Program and department stamp required.*

CGS 196A. Critical Gender Studies Honors Research (4)
A program of independent study providing candidates for Critical Gender Studies honors to develop, in consultation with an adviser, a preliminary proposal for the honors thesis. An IP grade will be awarded at the end of this quarter. A final grade for both quarters will be given upon completion of Critical Gender Studies 196B. *Prerequisites: consent of instructor and department stamp required.*

CGS 196B. Honors Thesis (4)
Honors thesis research and writing for students who have completed Critical Gender Studies 190 and 196A. A letter grade for both Critical Gender Studies 196A and 196B will be given at the completion of this quarter. *Prerequisites: consent of instructor and department stamp required.*

CGS 198. Directed Group Study (4)
Directed group study on a topic not generally included in the Critical Gender Studies curriculum. *Prerequisites: consent of instructor and director of Critical Gender Studies Program and department stamp required.*

CGS 199. Independent Study (4)
Tutorial; independent study on a topic not generally included in the curriculum. *Prerequisites: consent of instructor and director of Critical Gender Studies Program and department stamp required.*

CGS 500. Apprentice Teaching in Critical Gender Studies (4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Critical Gender Studies courses under supervision of instructor of course. Instructor will define apprentice's responsibilities in preparing class presentations, directing student discussions, evaluating and grading students' work, and maintaining productive association with students.

APPLICABLE AND PETITIONABLE COURSES

Gender-based courses offered by UCSD departments fall into two categories: applicable and petitionable. Applicable courses are those which have been approved as always applying to the CGS major and minor. Petitionable courses are either new and therefore not yet approved as applicable or are "topics" courses which focus on gender only in particular quarters. Petitionable courses may be approved by petition to the major/minor during the quarters in which they appear in the CGS quarterly lists.

QUARTERLY LISTS

Each quarter, when the upcoming quarter's *Schedule of Classes* is published, the Critical Gender Studies quarterly list is available in the CGS office and at the Web site. It is an important, comprehensive source of information about CGS course offerings as well as those from departments throughout the campus. It identifies by cluster areas both applicable as well as petitionable courses for a given quarter. For reference, the office and the Web site maintain archives of quarterly lists.

CRITICAL GENDER STUDIES CLUSTER AREAS

(**NOTE:** Only applicable courses are listed here. For petitionable courses, please see the quarterly lists mentioned above.)

1. Culture and Representation:

ANRG 117. Gender Across Cultures

COCU 132. Gender and Media

COCU 137. Politics of Bodies

COCU 138. Feminist Theory

COMT 106. Feminist Video Workshop

ETHN 165. Sex and Gender in African American Communities

ETHN 183. Gender, Race, Ethnicity and Class

HIEU 133. Gender in Antiquity and the Early Medieval Mediterranean

HIEU 147. The History of Women in Europe: Middle Ages to the Early Modern Era

HIEU 148. European Women: The Enlightenment to the Victorian Era

HIEU 149. History of Women in Europe: 1870 to Present

HIEU 180. Topics in European Women's History

HILA 117. Indians, Blacks, and Whites: Family Relations in Latin America

HIUS 130. Cultural History from 1607 to the Civil War

HIUS 131. Cultural History from the Civil War to the Present

HIUS 156. American Women, American Womanhood

HIUS 157. American Women, American Womanhood 1870 to Present

HIUS 172. Feminist Tradition in America

HIUS 176. Race and Sexual Politics

LTCS 130. Gender, Race/Ethnicity, Class and Culture

LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgendered Studies

LTEN 120E. Women in the Eighteenth Century

LTEN 146. Women and English/American Literature

LTEN 150. Gender, Text, and Culture

LTEN 185. Themes in African American Literature

LTEU 102. Women in Antiquity (was LTGN 101)

LTEU 147. Women in Italy

LTTH 101. Issues in Feminist Theory

LTWL 155. Gender Studies (was LTGN 189)

LTWL 160. Women and Literature (was LTGN 187)

MUSIC 115. Women in Music

PHIL 169. Feminism and Philosophy

POLI 116A. Feminist Theory

SOC/B 118. Sociology of Gender and Roles

SOC/B 118A. (Crosslisted with LIGN 174) Gender and Language in Society

SOC/B 119. Sociology of Sexuality and Sexual Identities

SOC/B 130. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgendered Studies

SOC/C 129. The Family

VIS 121C. Art and Gender

2. Sexualities

COCU 137. Politics of Bodies

COCU 138. Feminist Theory

ETHN 165. Sex and Gender in African American Communities

HIUS 176. Race and Sexual Politics

LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgendered Studies

LTEN 120E. Women in Eighteenth Century

LTEN 150. Gender, Text, and Culture

LTEU 102. Women in Antiquity (was LTGN 101)

LTWL 155. Gender Studies (was LTGN 189)

LTTH 101. Issues in Feminist Theory

POLI 107A. Gay and Lesbian Politics

POLI 116A. Feminist Theory

PSYCH 147. Gender

SOC/B 119. Sociology of Sexuality and Sexual Identities

SOC/B 130. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgendered Studies

3. Work, Migration, and Globalization

ANRG 117. Gender Across Cultures

COCU 138. Feminist Theory

HIEA 137. Women and Family in Chinese History

HILA 161. History of Women in Latin America

LTCS 130. Gender, Race/Ethnicity, Class and Culture

LTTH 101. Issues in Feminist Theory

POLI 134P. Organizing Women in Latin America

SOC/A 103F. Feminist Criticism and Social Theory

SOC/C 132. Gender and Work

4. Science, Technology, Medicine

COCU 137. Politics of Bodies

COCU 138. Feminist Theory

HISC 103. Gender and Science in Historical Perspective

PSYCH 147. Gender

5. History, Society, and Inequalities

COCU 137. Politics of Bodies

COCU 138. Feminist Theory

ETHN 165. Sex and Gender in African American Communities

ETHN 183. Gender, Race, Ethnicity and Class

HIEA 137. Women and Family in Chinese History

HIEU 133. Gender in Antiquity and the Early Medieval Mediterranean

HIEU 147. History of Women in Europe: Middle Ages to Early Modern Era

HIEU 148. History of Women in Europe: Early Enlightenment to Victorian Era

HIEU 149. History of Women in Europe: 1870 to the Present

HIEU 180. Topics in European Women's History

HILA 117. Indians, Blacks, and Whites: Family Relations in Latin America

HILA 161. History of Women in Latin America

HITO 164. Gender Differences in Historical Perspective

HIUS 130. Cultural History from 1607 to the Civil War

HIUS 131. Cultural History from the Civil War to the Present

HIUS 156. American Women, American Womanhood

HIUS 157. American Women, American Womanhood: 1870 to Present

HIUS 172. Feminist Traditions in America

HIUS 173. Topics in American Women's History

HIUS 176. Race and Sexual Politics

LTCS 130. Gender, Race/Ethnicity, Class, and Culture

LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgendered Studies

LTEN 185. Themes in African American Literature

LTEU 102. Women in Antiquity

LTTH 101. Issues in Feminist Theory

LTWL 155. Gender Studies (was LTGN 189)

POLI 107A. Gay and Lesbian Politics

POLI 115A. Gender and Politics

POLI 116A. Feminist Theory

POLI 116B. Advanced Feminist Theory

POLI 166F. The American Welfare State

SOC/A 103F. Feminist Criticism and Social Theory

SOC/B 118. Sociology of Gender

SOC1B 118A. (Crosslisted with LIGN 174) Gender and Language in Society

SOC/B 130. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgendered Studies

Culture, Art, and Technology

OFFICE: Multi-Purpose Building, second floor
http://sixth.ucsd.edu/

Program Director

Linda Strauss, Ph.D.

The theme of Sixth College was prompted by the rich intellectual challenges at the intersection of technology and the arts as historically imbedded within diverse cultures. The academic plan develops the college theme through a curriculum that prepares students for a future that demands an aptitude for thinking analytically and moving fluently between worlds of theory and practice; the ability to adapt to rapid change; skill at teamwork; competence and enthusiasm in searching out, assessing, and integrating text, image, and sound; a critical understanding of media and the forms in which new information may be presented or underrepresented; proficiency at communicating across disciplinary boundaries; and, throughout, probity and integrity. To achieve these goals, Sixth College is creating a learning environment inside and beyond the classroom that emphasizes collaborative learning, pattern recognition, close reasoning, and creative approaches to well-defined problems through consistent exposure to methods and models from diverse fields, including the expressive and kinetic arts. Sixth College will provide the tools and momentum necessary for lifelong learning in the twenty-first century: information literacy, familiarity with digital media, the habit of seeking out and learning from those at the forefront of their fields, and the equally valuable habit of pausing to reflect upon the wider ethical and cultural implications of new theories or discoveries.

On campus and off, students will be linked in many ways—by social and local engagement, by cultural and intellectual projects—so that Sixth College becomes an identifiable, sustaining community that is always reaching out to others. More than an ethical obligation to service, the engagement with the outlying community is integral to the mission of the college to engage our students in the process of learning to listen across cultures.

COURSES

LOWER-DIVISION

CAT 1. Culture, Art, and Technology 1 (4)
A global historical overview of principles and patterns of human development, with emphasis on technology and the arts. Traces causes and consequences of cultural variation. Explores interactions of regional environments (geographic, climatic, biological) with social and cultural forces. *Prerequisites: Sixth College students only; may be taken concurrently with SDCC 1.*

CAT 2. Culture, Art, and Technology 2 (6)
Fundamental shifts in one area of endeavor can have a profound impact on whole cultures. Examines select events, technologies, and works of art that revolutionized ways of inhabiting the world. Intensive instruction in university-level writing; featured sections on information literacy. *Prerequisites: completion of Subject A requirement; Sixth College students only.*

CAT 3. Culture, Art, and Technology 3 (6)
Students engage with various interdisciplinary modes of apprehending the near future. Working in teams on community projects, they are challenged to listen and communicate across cultures and develop cogent technological and artistic responses to local problems. Writing and information literacy instruction. *Prerequisites: completion of Subject A requirement; Sixth College students only.*

CAT 4. Culture, Art, and Technology 4 (2)
Students will work in project teams to explore the prudent and appropriate use of software applications to gather, process, shape, and communicate information. Topics may include critical examinations of computer-based technology, impact on privacy, ethical problems in computing, etc. *Prerequisites: Sixth College students only; lab attendance is not required.* Not offered 2004–2005.

Dimensions of Culture

OFFICE: 132 Sequoyah Hall, Marshall College
http://marshall.ucsd.edu/DOC

Program Director

Fraser Cocks, Ph.D.

Assistant Program Director

Pamela S. Wright, Ph.D.

The Dimensions of Culture Program is a three-course sequence taught by faculty from the Departments of History, Political Science, Communication, Ethnic Studies, Philosophy, Literature, Sociology, and the Teacher Education Program. This program provides an interdisciplinary issues-oriented exploration of nineteenth- and twentieth-century American culture, and illustrates Marshall College's commitment to exploring the meaning of social justice and investigating the means by which it might be achieved in contemporary American society.

The first quarter, Diversity, introduces students to the study of basic distinctions in social differences and commonalities among human individuals and groups. This course surveys a range of social differences and stratifications that shape the nature of human attachment to self, work, community, and a sense of nation. The second quarter, Justice, introduces basic concepts of political and social theory and moral philosophy. Readings are drawn from nineteenth- and twentieth-century American history and legal case studies. The third quarter, Imagination, introduces students to the study of the arts as the cultural expression of the issues presented in the first two quarters. Materials focus on the interdisciplinary study of twentieth-century American culture, including music, literature, art, film, and photography.

Written assignments are required in each quarter of the Dimensions of Culture sequence. In the second and third quarters, students receive intensive instruction in university-level writing in small sections. Frequent writing assignments and revisions are required in connection with the material presented in class. At the conclusion of the course, students are expected to be able to construct deductive arguments regarding contemporary social issues and inductive arguments interpreting cultural representations.

The Marshall College core course and writing requirements are met by completion of this sequence. Students must have satisfied the university's Subject A requirement before enrolling in Justice or Imagination. All Marshall College first-year students must complete this three-course sequence. Transfer students should see their college academic adviser regarding the appropriate course requirements.

For further details on Marshall College requirements, see "Marshall College, General-Education Requirements."

COURSES

LOWER-DIVISION

1. Dimensions of Culture: Diversity (4)
This course focuses on sociocultural diversity in examining class, ethnicity, race, gender, and sexuality as significant markers of differences among persons. Emphasizing American society, it explores the cultural understandings of diversity and its economic, moral, and political consequences. Three hours of lecture, one hour of discussion. Open to Marshall College students only. (Letter grade only.) (F)

2. Dimensions of Culture: Justice (6)
This course considers the nature of justice in philosophical, historical, and legal terms. Topics include racial justice, political representation, economic justice, gender and justice, the rights of cultural minorities, and crime and punishment. The course offers intensive instruction in writing university-level expository prose. Three hours of lecture, two hours of discussion and writing instruction. Open to Marshall College students only. (Letter grade only.) *Prerequisite: completion of Subject A requirement.* (W)

3. Dimensions of Culture: Imagination (6)
Using the arts, this course examines the evolution of pluralistic culture to the modern period. There is a special emphasis on the interdisciplinary study of twentieth-century American culture, including music, literature, art, film, and photography. The course offers intensive instruction in writing university-level expository prose. Three hours of lecture, two hours of discussion and writing instruction. Open to Marshall College students only. (Letter grade only.) *Prerequisite: completion of Subject A requirement.* (S)

Earth Sciences

OFFICE: Galbraith Hall, room 188
Revelle College

Professors

Jeffrey L. Bada, *Marine Chemistry*
Kevin M. Brown, *Geology*
Catherine G. Constable, *Geophysics*
Neal W. Driscoll, *Geosciences*
James W. Hawkins, *Geology*
Myrl C. Hendershott, *Oceanography*
Nicholas D. Holland, *Marine Biology*
Jeremy B. Jackson, *Paleontology*
Miriam Kastner, *Earth Sciences*
Devendra Lal, *Nuclear Geophysics*
J. Douglas Macdougall, *Earth Sciences*
T. Guy Masters, *Geophysics*
Jean-Bernard H. Minster, *Geophysics*
David T. Sandwell, *Marine Geophysics*
John G. Sclater, *Marine Geophysics*
Richard C.J. Somerville, *Meteorology*
Lisa Tauxe, *Geophysics, (Program Director)*
Mark Thiemens, *Chemistry*
Martin Wahlen, *Geochemistry*

Professors-in-Residence

Steven C. Constable, *Geophysics*
Jeffrey S. Gee, *Geophysics*

Associate Professors

Paterno R. Castillo, *Geology*
Christopher D. Charles, *Oceanography*
David R. Hilton, *Geochemistry*
Catherine L. Johnson, *Geophysics*
Kaustuv Roy, *Biology*
Jeffrey P. Severinghaus, *Geoscience*

Research Scientist/Senior Lecturer

Alistair J. Harding, *Research Geophysics*

The *UCSD Interdisciplinary Earth Sciences Undergraduate Program* offers an earth sciences major leading to a B.S. degree, with emphasis on the quantitative aspects of the field. As a guiding concept, the focus of the earth sciences curriculum is the physical and chemical evolution of the earth system and the energetics and dynamics of this evolution. The program takes advantage of the unique opportunities offered by UCSD, in particular through the Scripps Institution of Oceanography and the California Space Institute. The major can be complemented by various minors ranging from mathematics, physics or chemistry, to biology, environmental science, or public policy, and political science. Chemistry and physics majors may also specialize in earth sciences by taking a series of courses offered through this program (see the "Chemistry" and "Physics" sections of the catalog for details). In addition, the program offers a broad choice of courses, including general-education courses in the earth sciences and related topics from which to select a minor in the earth sciences.

The Undergraduate Earth Science Program was initiated in the fall of 1992, and most of the faculty are members of the Scripps Institution of Oceanography. Students, especially earth science majors, are encouraged to consult with these instructors about incorporating appropriate Scripps Institution of Oceanography courses into their programs.

Majors in Earth Sciences

Three tracks with slightly different course requirements are presently offered through the UCSD Interdisciplinary Earth Sciences Undergraduate Program. These are the General ERTH major, and the *ERTH/Chemistry* and *ERTH/Physics* majors.

Lower-division requirements are the same for all majors and are designed to provide the foundations in mathematics, physics, chemistry, and biology that are essential in modern quantitative earth sciences disciplines. In addition, three upper-division courses introducing the basic concepts of geology and geochemistry, ERTH 101, ERTH 102, and if schedule permits, ERTH 104, should be taken during the sophomore year to provide the appropriate background for other upper-division courses.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted. All courses (lower- and upper-division) required for the major must be taken for a letter grade.

Special Studies Courses

Special studies in the earth sciences are offered as the courses ERTH 198 and ERTH 199. These courses are subject to consent of the instructor and approval by the Earth Sciences faculty adviser. They are open to students who have accrued at least ninety quarter-units and have a GPA of at least 3.0. No more than two quarters of earth sciences special studies may be counted toward any earth sciences major.

Lower-Division Requirements (common for all earth science majors)

The following courses must be taken for a letter grade:

1. Mathematics 20A, 20B, 20C, 20D, or equivalent
2. Physics 2A, 2B, 2C
3. Chemistry 6A, 6B, 6C, 6BL
4. Biology 3 (BILD 3)

Note: Physics 2CL is a required prerequisite for various upper-division chemistry electives.

5. Earth Sciences courses which should be taken in the sophomore year:

   ERTH 101. Introduction to Earth and Environmental Science
   ERTH 102. Introduction to Geochemistry
   ERTH 104. Geobiology

A possible schedule yields:

FALL	WINTER	SPRING
FRESHMAN YEAR		
Chem. 6A	Chem. 6B	Chem. 6C
Math. 20A	Chem. 6BL	Math. 20C
	Math. 20B	
SOPHOMORE YEAR		
Phys. 2A	Phys. 2B	Phys. 2C
Math. 20D	ERTH 102	BILD 3
ERTH 101		

ERTH/Chemistry Major

This specialization focuses on the Earth as a chemical system, and on its evolution. Emphasis is placed on the fundamental observations that allow geoscientists to understand better the past history of the planet, the energetics of its evolution, and the major "cycles" (e.g., water, carbon) that characterize and control planetary-scale changes on a broad range of time scales. The major is appropriate for students interested in modern geochemistry, in "global change" studies, and in global and local environmental problems, including biochemical and anthropogenic effects.

Upper-Division Requirements

In addition to ERTH 101 and ERTH 102 (see lower-division requirements), the following courses must be taken for a letter grade:

1. Earth Sciences requirements:

   ERTH 103. Introduction to Geophysics
   ERTH 120. Mineralogy
   ERTH 162A. Introduction to Field Geology
   ERTH 162L. Structural Analysis for Field Geology

2. Chemistry requirements:

   Chemistry 120A. Inorganic Chemistry
   Chemistry 131. Physical Chemistry or Chemistry 127
   Chemistry 140A. Organic Chemistry

3. Chemistry restricted electives. (Total of sixteen units required), at least eight units from:

   Chemistry 140B-C. Organic Chemistry
   Chemistry 143A-B. Organic Chemistry Lab
   Chemistry 132-133. Physical Chemistry
   *Chemistry 105A-B. Physical Chemistry Lab
   Chemistry 106. Instrumental Analysis Lab

eight units from:
Chemistry 120B-C. Inorganic Chemistry
Chemistry 122. Biochemical Evolution
Chemistry 149A-B. Environmental Chemistry
Chemistry 170. Cosmochemistry
Chemistry 171. Nuclear Chemistry
Chemistry 173. Atmospheric Chemistry

4. Earth Sciences restricted electives: at least sixteen units selected from among the following courses must be passed with a 2.0 grade-point average and grades of C– or better:

ERTH 104. Geobiology
ERTH 105. Sedimentology and Stratigraphy
ERTH 110. Introduction to GIS for Earth and Environmental Scientists
ERTH 130. Geodynamics of Terrestrial Planets
ERTH 135. Satellite Remote Sensing
ERTH 142. Atmospheric Chemistry
ERTH 143. Marine Paleoecology
ERTH 144. Introduction to Isotope Geochemistry
ERTH 152. Petrology and Petrography
ERTH 155. Petrology and Geochemistry of the Solid Earth
ERTH 160. Introduction to Tectonics
ERTH 197. Earth Science Internship
SIO 226. Introduction to Marine Geophysics
SIO 240. Marine Geology
SIO 247. Rock Magnetism and Paleomagnetism
SIO 260. Marine Chemistry

Students may wish to incorporate a small portion of the major program into their lower-division course load, for example, Chemistry 120A, Chemistry 140A.

* Requires prerequisite other than earth science requirements.

A possible schedule yields:

FALL	WINTER	SPRING
JUNIOR YEAR		
Chem. 140A	Chem. Elect.	ERTH Elect.
Chem. 120A	Chem. Elect.	ERTH Elect.
ERTH 103	ERTH 120	Chem. Elect.
SENIOR YEAR		
ERTH Elect.	Chem. 131	ERTH Elect.
ERTH 162A		Chem. Elect.
ERTH 162L		

ERTH/Physics Major

This specialization focuses on the mechanical, dynamical, and thermodynamical aspects of the Earth. Emphasis is placed on a solid background of fundamental physics, from mechanics and electromagnetism to continuum- and quantum mechanics, and on the necessary mathematical skills. The major introduces basic techniques used to investigate the internal structure of the Earth, from seismology to the study of potential fields, and space geodesy. Elementary geodynamics, including the physics of simple convective systems, introductory rock mechanics, and plate kinematics are among topics introduced. At the same time, a "hands on" exposure to field problems and techniques will be accessible through a Natural Resources and Field Geophysics sequence.

Upper-Division Requirements

In addition to ERTH 101 and ERTH 102 (see lower-division requirement), the following courses must be taken for a letter grade:

1. Earth Sciences requirements:

ERTH 103. Introduction to Geophysics

2. Physics requirements:

Physics 100A-B-C. Electromagnetism
Physics 110A-B. Mechanics

3. Physics restricted electives: minimum of four units selected from:

Physics 121. Experimental Techniques
Physics 140A-B. Statistical and Thermal Physics
Physics 105. Computational Physics
MAE 131A. Solid Mechanics I
MAE 180A. Space Science and Engineering

4. Mathematics restricted electives: minimum of eight units selected from:
Mathematics 110. Partial Differential Equations or equivalent
Mathematics 102. Linear Algebra or equivalent
Mathematics 120A-B. Complex Analysis or equivalent
Mathematics 183. Statistical Methods or equivalent

5. Earth Sciences restricted electives: at least sixteen units selected from among the following courses must be passed with a 2.0 grade-point average and grades of C– or better:

ERTH 104. Geobiology
ERTH 105. Sedimentology and Stratigraphy
ERTH 120. Mineralogy
ERTH 130. Geodynamics of Terrestrial Planets
ERTH 135. Satellite Remote Sensing
ERTH 143. Marine Paleoecology
ERTH 155. Petrology and Geochemistry of the Solid Earth
ERTH 160. Introduction to Tectonics
ERTH 162A. Introduction to Field Geology
ERTH 162L. Structural Analysis for Field Geology
ERTH 170. Introduction to Volcanology (summer session)
ERTH 180. Geophysics of Natural Resources
ERTH 182. Field Geophysics
ERTH 197. Earth Science Internship
SIO 223. Geophysical Data Analysis
SIO 224. Physics of the Earth Interior
SIO 226. Introduction to Marine Geophysics
SIO 227. Advanced Seismology
SIO 247. Rock Magnetism & Paleomagnetism

Students may wish to incorporate a small portion of the major program into their lower-division course load, for example, Physics 105, Mathematics 110, or equivalent. Students intending to do graduate work in geophysics are encouraged to take the Physics 4 sequence rather than the Physics 2 sequence. Students are also strongly encouraged to participate in a field geology course.

An example schedule is outlined below.

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys. 100A	Phys. 100B	Phys. 100C
Phys. 110A	Phys. 110B	Math. Elect.
ERTH 103	—	—
SENIOR YEAR		
—	Phys. Elect.	ERTH Elect.
Math. Elect.	—	—
ERTH Elect.	ERTH Elect.	ERTH Elect.

ERTH/General

The general ERTH major is designed to allow students maximum flexibility in tailoring the curriculum to their interests, within the constraints of obtaining the necessary background in physical, biological, and earth sciences. Compared to the ERTH/Chemistry and ERTH/Physics tracks, it

requires more earth science and fewer non-earth science courses.

Upper-Division Requirements

In addition to ERTH 101 and ERTH 102 (see lower-division requirements), the following courses must be taken for a letter grade:

1. Earth Sciences requirements:

   ERTH 103. Introduction to Geophysics
   ERTH 104. Geobiology
   ERTH 120. Mineralogy
   ERTH 152. Petrology and Petrography
   ERTH 160. Introduction to Tectonics
   ERTH 162A. Introduction to Field Geology
   ERTH 162L. Structural Analysis for Field Geology
   ERTH 180. Geophysics of Natural Resources
   ERTH 182. Field Geophysics

2. Chemistry requirements:

   Chemistry 131. Physical Chemistry or Chemistry 127

3. Upper-division restricted electives: at least eight units from earth sciences and at least twelve units from non-earth science courses.

   ERTH 105. Sedimentology and Stratigraphy
   ERTH 130. Geodynamics of Terrestrial Planets
   ERTH 135. Satellite Remote Sensing
   ERTH 142. Atmospheric Chemistry
   ERTH 143. Marine Paleoecology
   ERTH 144. Introduction to Isotope Geochemistry
   ERTH 197. Earth Science Internship
   ERTH 155. Petrology and Geochemistry of the Solid Earth
   SIO 223. Geophysical Data Analysis
   SIO 224. Physics of the Earth Interior
   SIO 226. Introduction to Marine Geophysics
   SIO 227A. Advanced Seismology
   SIO 234. Introduction to Geodynamics
   SIO 240. Marine Geology
   SIO 242. Controversies in Geomorphology
   SIO 245A. Interpretation of the Sedimentary Record
   SIO 247. Rock Magnetism & Paleomagnetism
   SIO 249. Hydrogeological Modeling
   SIO 253. Igneous and Metamorphic Petrology
   SIO 260. Marine Chemistry
   MAE 131A. Solid Mechanics
   MAE 180A. Space Science and Engineering
   BIBC 100. Structural Biochemistry
   BIEB 120. General Ecology
   BIBC 130. Marine Biochemistry
   BIEB 130. Introductory Marine Ecology
   BIEB 150. Evolution
   Chemistry 105A-B. Physical Chemistry Lab
   Chemistry 120A-B-C. Inorganic Chemistry
   Chemistry 122. Biochemical Evolution
   Chemistry 132-133. Physical Chemistry
   Chemistry 140A-B-C. Organic Chemistry
   Chemistry 143A-B. Organic Chemistry Lab
   Chemistry 149A-B. Environmental Geochemistry
   Chemistry 170. Cosmochemistry
   Chemistry 171. Nuclear and Radiochemistry
   Chemistry 173. Atmospheric Chemistry
   Mathematics 102. Linear Algebra
   Mathematics 110. Partial Differential Equations or equivalent
   Mathematics 120A-B. Complex Analysis
   Mathematics 183. Statistical Methods
   Physics 100A-B-C. Electromagnetism
   Physics 105. Computational Physics
   Physics 110A-B. Mechanics
   Physics 121. Experimental Techniques
   Physics 140A-B. Statistical and Thermal Physics

A possible schedule yields :

FALL	WINTER	SPRING
FRESHMAN YEAR		
Chem. 6A	Chem. 6B	Chem. 6C
Math. 20A	Chem. 6BL	Math. 20C
	Math. 20B	
SOPHOMORE YEAR		
Phys. 2A	Phys. 2B	Phys. 2C
Math. 20D	ERTH 102	BILD 3
ERTH 101		ERTH 104
JUNIOR YEAR		
Chem. 131	ERTH 120	—
ERTH 103	Elect.	ERTH 152
	Elect.	ERTH 160
SENIOR YEAR		
Elect.	Elect.	ERTH 180
ERTH 162A	Elect.	ERTH 182
ERTH 162L		

Earth Sciences Minor

A minor in earth sciences consists of twenty-eight units of earth science courses, at least twenty of which must be upper-division, focused on geology, geochemistry, or geophysics. Courses required by a student's major may not be applied toward a minor and neither can ERTH 198 nor ERTH 199. Courses for the minor may be taken on a Pass/Not Pass basis if the student's college permits.

Honors Program

The Earth Sciences Program offers an Honors Program for a limited number of students who have demonstrated excellence in the major. Students are eligible for admission to the program when they have:

1. Completed ninety units of courses including twelve units of earth science courses.
2. Achieved a GPA of 3.3 overall and 3.5 in earth science courses.
3. Submitted to the Earth Science Steering Committee, and had approved, an honors thesis research proposal.

Successful completion of the Honors Program requires:

1. Maintenance of a GPA of 3.3 overall and 3.5 in earth science courses.
2. Completion, with a B grade or higher, of a minimum of eight units of ERTH 196 related to the honors thesis research, distributed over at least two quarters. These units must be in addition to the ordinary major requirements. However, students who subsequently fail to complete the Honors Program may apply up to four of these 196 units to their major.
3. Acceptance of a written honors thesis report by a committee of not fewer than three faculty members.
4. Satisfactory presentation of an oral report on the thesis research, preferably at a public undergraduate research conference on campus, or at an earth science conference. Alternatively, the oral report may be given at a seminar involving honors students and at least three faculty members.

Students who successfully complete the Honors Program will graduate with "high distinction."

Students who are interested in the Honors Program should contact the program adviser in Galbraith Hall, room 188, Revelle College.

Study Abroad

Study abroad through the **Education Abroad Program** or **Opportunities Abroad Program** can enhance a student's major, particularly as an opportunity for diverse field experiences. How-ever, careful planning is important to meet all major requirements. Please contact the Earth

Sciences Office as early as possible if you are planning to study abroad.

Careers in Education

Students interested in a teaching career should be aware that the earth sciences major, because of its broad course requirements in the sciences, fulfills many of the subject requirements for obtaining a California Teaching Credential through UCSD's Teacher Education Program (TEP). The projected high demand over the next decade for well-trained teachers, particularly in the sciences, makes this an attractive option for many students. Students who wish to take advantage of this opportunity may wish to complete a minor in education. Please contact the TEP office directly for further details.

Contiguous Bachelor's/ Master's Degree Program

The integrated program leading to a bachelor of science and a master of science degree in Earth Sciences is offered to undergraduate students who are enrolled in the Earth Sciences major, and to qualified students who are completing a specialization or minor in Earth Sciences. It is open only to UCSD undergraduates, and entails participation in research in an area of the earth sciences to be determined jointly by the student and a committee of faculty members from the Earth Sciences Program. Applications will only be accepted during the final quarter of the applicant's junior year, or the first or second quarter of the senior year. A minimum undergraduate GPA of 3.0 overall and 3.3 in upper-division Earth Sciences courses is required for admission. Applications must include a written statement of purpose, a summary of the research proposal, and a letter of support from the potential M.S. thesis adviser. Students must complete requirements for the B.S. degree before they are enrolled in the M.S. program, and are expected to meet the requirements for the M.S. degree within three consecutive academic quarters after obtaining the B.S. Students may be dropped from the program if breaks in enrollment occur. The Earth Sciences Program does not have financial aid available for students enrolled in the program. Please contact the Earth Sciences Office in Galbraith Hall, room 188, Revelle College for information.

Earth Sciences Graduate Program

Other graduate degrees in the earth sciences are offered through the graduate department of the Scripps Institution of Oceanography. See listings under "Scripps Institution of Oceanography" for detailed information.

COURSES

NOTE: The program will endeavor to offer the courses outlined below. However, unforeseen circumstances (particularly changes in ship schedules) sometimes mandate a change of scheduled offerings, especially the quarter offered (F,W,S). Students are strongly advised to check the Schedule of Classes or to contact the Earth Sciences Program Office (Galbraith Hall, room 188, Revelle College, (858) 534-8157) to obtain up-to-date information.

LOWER-DIVISION

ERTH 1. The Planets
Space exploration has revealed an astonishing diversity among the planets and moons in our solar system. The planets and their histories will be compared to gain insight and a new perspective on planet Earth. *Prerequisite: none.* (S)

ERTH 10. The Earth (4)
A basic introduction to geology for students with little previous science background. The course stresses understanding of the concepts of the structure of the Earth and the processes which have formed it and continue to modify it. The course emphasizes material which every educated citizen should know for appreciation and enjoyment of the world around us, for understanding geological events as reported in the news, and for participating in making intelligent decisions regarding the future of our environment. Three-hour lecture plus optional local field trips. *Prerequisite: none.* (W)

ERTH 12. History of the Earth and Evolution (4)
Evolution of the Earth from its origin in the early solar system to formation of continents and ocean basins, and how the planet became habitable. It examines the geologic record of evolution, extinction, plate tectonics, and climate changes through time. Three-hour lecture. *Prerequisite: none.* (S)

ERTH 15. Natural Disasters
An introduction to environmental perils and their impact on everyday life. Geological and meteorological processes are explored, including earthquakes, volcanic activity, large storms, global climate change, mass extinctions throughout Earth's history, and human activity that causes and prevents natural disasters. *Prerequisite: none.* (F)

ERTH 20. The Atmosphere (4)
Descriptive introduction to meteorology and climate studies. Topics include global and continental wind and precipitation patterns, weather forecasting, present climate and past climate changes (including droughts, El Ni–o events), man-made modification of climate, including CO_2 and other "greenhouse" gases effects, ozone destruction, "little ice ages," acid rain. Three-hour lecture. *Prerequisites: some high school physics and chemistry background recommended.* (W)

ERTH 30. The Oceans (4)
Presents modern ideas and descriptions of the physical, chemical, biological, and geological aspects of oceanography, and considers the interactions between these aspects. Intended for students interested in the oceans, but who do not necessarily intend to become professional scientists. Three-hour lecture, one-hour discussion. *Prerequisite: some background in high school chemistry recommended.* (F)

ERTH 35. Water (4)
This course will examine the properties of water that make it unique and vital to living things. Origin of water on Earth and neighboring planets will be explored. Socially relevant issues concerning water use and contamination will be covered. *Prerequisite: none.* (S)

ERTH 96. Frontiers in the Earth Sciences (2)
An introduction to current research in the earth sciences. Background in science not required, but may be useful for some topics. Areas covered vary from year to year. (S)

UPPER-DIVISION

ERTH 101. Introduction to Earth and Environmental Science (5)
This course is an introduction to how our planet works, focusing on the formation and evolution of the solid earth, and the processes affecting both its surface and interior. Laboratories and field trips complement and extend the lecture material. *Prerequisites: one year each of college-level math, and chemistry, or consent of instructor.* (F)

ERTH 102. Introduction to Geochemistry (4)
A broad introduction to the chemical composition and evolution of the Earth and the solar system. This course explores applications of chemical methods to elucidate the origin and geologic history of the Earth and the planets, the evolution of the oceans and atmosphere, and the impact of humankind on the environment. *Prerequisites: ERTH 101, Chemistry 6A-B-C or equivalent, first-year, mathematics, and physics, or consent of instructor.* (W)

ERTH 103. Introduction to Geophysics (4)
An introduction to the structure and composition of the solid earth. Topics include seismology, the gravity and magnetic fields, high-pressure geophysics, and concepts in geodynamics. Emphasis is on global geophysics, i.e., on the structure and evolution of the planet. *Prerequisites: Math. 20A-B-C-D and Physics 2 sequence or equivalent, ERTH 101, or consent of instructor. ERTH 160 recommended.* (F)

ERTH 104. Geobiology (5)
Introduction to the major biological transitions in earth history from the origins of metabolism and cells to the evolution of complex societies. The nature and limitations of the fossil record, patterns of adaptation and diversity, and the tempo and mode of biological and environmental change. Laboratories and field trips complement and extend the lecture material. *Prerequisites: ERTH 101, BILD 3 or equivalent, or consent of instructor.* (S)

ERTH 105. Sedimentology and Stratigraphy (4)
This course will examine sedimentary environments from the mountain tops to the deep sea across a variety of time scales. The focus will be to understand how depositional processes form the stratigraphic record. The central goal of the course is to develop the skills to interpret stratigraphy and read the history of the earth that it records. *Prerequisite: Erth 101.* (F)

ERTH 110. Introduction to GIS for Earth and Environmental Scientists (4)
A hands-on introduction to geological and environmental applications of geographic information systems (GIS). Students acquire data through field surveys and digitization, design and construct GIS using ESRI's ArcGIS software, analyze spatial data, and present the finished products as maps. Prerequisites: ERTH 101 or ESYS 102 or the equivalent, or consent of instructor. (S)

ERTH 120. Introduction to Mineralogy (4)
This course focuses on the symmetry, crystal structure, chemical, and physical properties of minerals with special emphasis on the common rock-forming minerals, and highlights the applications of mineralogical and X-ray crystallographic techniques to a spectrum of important problems in the earth sciences. The laboratory will introduce the students to the polarizing microscope and X-ray powder diffraction methods for the study of rock-forming minerals. *Prerequisites: ERTH 101, ERTH 102 (may be taken concurrently with ERTH 102).* (W)

ERTH 130. Geodynamics of Terrestrial Planets (4)
Planetary differentiation through geodynamical processes is the fundamental agent controlling the evolution of the planet on geological time scales. Similarities and differences between the Earth, Venus, Mars, and other terrestrial planets and satellites teach us about the processes which shape a planet's formation and evolution. The course includes a computer-oriented lab. *Prerequisites: Math. 20A-B-C-D and Physics 2 sequence, or consent of instructors.* (S)

ERTH 135. Satellite Remote Sensing (4)
Satellite remote sensing provides global observations of Earth to monitor changes in the environment of land, oceans, and ice. This course is an overview of the physical principles of remote sensing including orbits, electromagnetic radiation, diffraction, electro-optical, and microwave systems. Prerequisites: Physics 2A-B or Physics 4A-B-C. (W)

ERTH 142. Atmospheric Chemistry and the Biochemical Cycles of Atmospheric Trace Gases (4)
Evolution of the Earth's atmosphere, from the earliest days of the planet to the present, and into the future. The atmospheres of other terrestrial planets are discussed to provide a planetary perspective. Discussions will include effects of "greenhouse" gases such as H_2O, CO_2, and CH_4 in climate modification, and other influences of civilization's byproducts on atmospheric chemistry, e.g., the destruction of the ozone layer. The biogeochemical cycles of the radioactively important trace gases will be examined. *Prerequisites: Chemistry 6 sequence or equivalent.* Offered in alternate years (offered winter 2004). SIO staff. (W)

ERTH 143. Marine Paleoecology (4)
Paleoecology of marine plankton, nekton, and benthos. Patterns and changes in marine communities and ecosystems over geological time in relation to changes in the physical, chemical, and geological environment and biotic interactions. The preservation filter and inference of ecological processes from fossils and biogeochemical proxies. Biotic interchanges, incumbency, escalation and trends, mass extinctions, and recovery. Lectures, seminar discussion, and field trips. *Prerequisites: Bachelor's degree in science or consent of instructor; open to undergraduates with completion of ERTH 104 and either BIEB 130 or BIEB 140 or equivalent.* (S)

ERTH 144. Introduction to Isotope Geochemistry (4)
Isotopic ratios of various elements serve as natural tracers, as chronometers, and as geothermometers. Thus isotope measurements have become an indispensable tool for earth scientists. This course introduces students to the theory of radioactivity, geochronology, and stable isotope fractionation and shows how these principles are used to investigate important geochemical problems. *Prerequisites: ERTH 101, ERTH 102, ERTH 120.* (F)

ERTH 150. Environmental Perils (4)
An advanced field-oriented course for engineering and science students stressing the geologic basis for environmental perils such as earthquakes, erosion flooding, and waste disposal. Two one-hour lectures and a two-hour lab/field trip each week. One Saturday field trip. *Prerequisites: Math. 20A-B-C-D, sequence and Physics 2A-B-C sequence or equivalent.* (S)

ERTH 152. Petrology and Petrography (4)
Mineralogic, chemical, textural, and structural properties of igneous, metamorphic, and sedimentary rocks; their origin and relations to evolution of the Earth's crust and mantle. Includes rocks of both the continents and ocean basins. The laboratory emphasizes both hand specimens and microscopic studies of rocks in thin sections. *Prerequisites: ERTH 101, ERTH 102, and ERTH 120 or their equivalents.* (S)

ERTH 155. Petrology and Geochemistry of the Solid Earth (4)
This course provides an overview of the Earth from a geochemical and petrogenetic point of view. Topics include the formation and chemical differentiation of material in the solar system, the formation and differentiation of the Earth into core, mantle, crust and atmosphere/hydrosphere, the generation of magma in a variety of plate tectonic settings, and isotope and trace element geochemistry of igneous and metamorphic rocks. Literature readings will be assigned for most topics and discussion is expected of everyone. *Prerequisite: ERTH 152 or consent of instructors.* (W)

ERTH 160. Introduction to Tectonics (4)
The theory of plate tectonics attempts to explain how forces within the earth give rise to continents, ocean basins, mountain ranges, earthquake belts and most volcanoes. In this course we will learn how plate tectonics works. *Prerequisites: ERTH 101 or consent of instructor.* (F)

ERTH 162A. Introduction to Field Geology (4)
Mapping and interpretation of geologic units and structures in the field. Field observations at the surface are related to theory and extrapolated to three dimensions. Field work is done on weekends in local areas; field data are discussed and evaluated through applicable geologic principles in the laboratory. *Prerequisites: ERTH 101, ERTH 120 or consent of instructor. To be taken concurrently with ERTH 162L.* (F)

ERTH 162L. Structural Analysis for Field Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. *Prerequisites: ERTH 101, ERTH 120, or consent of instructor. To be taken concurrently with ERTH 162A.* (F)

ERTH 170. Introduction to Volcanology (4)
This course teaches fundamental aspects of physical and chemical volcanology with a major field study component on an active volcano on Hawaii. Subjects are introduced in lectures and reinforced and expanded in field exercises. Prerequisites: ERTH 101, Chem. 6A, upper-division standing or consent of instructor; eighteen years or older and ability to walk up to fifteen miles a day over rough terrain. (Offered summer session only)

ERTH 180. Geophysics of Natural Resources (4)
Introduction to seismic, gravity, magnetic, and electrical methods used in exploration geophysics on scales of hundreds of kilometers to tens of meters. These are the principal means of discovering energy and mineral resources such as oil, gas, and ore deposits. Emphasis is on the underlying physical principles of the methods, instrumentation, and data interpretation. *Prerequisites: Math. 20A-B-C-D and Physics 2 sequence. ERTH 182 must be taken concurrently.* (S)

ERTH 182. Field Geophysics (4)
Introduction to design and execution of simple geophysical field experiments, including seismic, gravimetric, geoelectrical, and geodetic techniques. The focus is on a simple geological problem that can be solved by geophysical experiments. Computer-aided data analysis and interpretation. *Prerequisites: ERTH 180 (must be taken concurrently) or consent of instructor.* (S)

ERTH 190. Special Topics in Earth Sciences (2-4)
A seminar course designed to treat emerging or topical subjects in the earth sciences. Involved reading from the literature and student participation in discussion. Topics vary from year to year.

ERTH 194. Research Seminar in Washington, D.C. (4)
Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and substantial research paper. *Prerequisites: departmental approval. Participating in UCDC Program.*

ERTH 196. Honors Thesis Research (4)
Independent reading or research on a problem. By special arrangement with a faculty member. (Letter grade only.)

ERTH 197. Earth Science Internship (2-4)
The Earth Science Internship program is designed to complement the program's academic curriculum with practical field experience. *Prerequisites: consent of instructor, upper-division standing, minimum GPA of 2.0, department stamp.*

ERTH 198. Directed Group Study (2-4)
This course covers a variety of directed group studies in areas not covered by formal ERTH courses (P/NP grades only.) *Prerequisite: consent of instructor.*

ERTH 199. Independent Study for Undergraduates (4)
Independent reading or research on a problem. By special arrangement with a faculty member. (P/NP grades only.)

ERTH 211. Research Seminar (2)
A three quarter required sequence for BS/MS Earth Sciences students to prepare students for thesis writing. (F,W,S)

Introduction

Economics is the study of how individuals, organizations, and societies deal with scarcity—the fact that resources are not sufficient to satisfy everyone's wants. Because scarcity requires choice among alternative uses of resources, economists study both the technology by which resources are turned into the products people want and the preferences through which people choose among alternatives. Further, since society is composed of many individuals and groups, economists study markets, governments, and other institutions through which a society might gain the advantages of cooperation and resolve the conflicts due to competing goals. The economics curriculum develops tools and uses them to analyze a wide range of societal problems, and also to study the role of the government in solving these problems.

Economics is a different discipline from business administration. However, there are substantial overlaps. Both disciplines study the behavior of people and firms within the context of market, legal, and other institutions. In evaluating economic institutions, economists tend to emphasize the viewpoint of the larger society, and business scholars tend to emphasize the viewpoint of firms. A more complete discussion is available in the department *Undergraduate Handbook*, which contains a comparison between the economics major at UCSD and a business administration major at UC Berkeley.

The department *Undergraduate Handbook* is available on the Internet at the department Web site at http://www.econ.ucsd.edu/ugradprog. The handbook contains answers to frequently asked questions, gives practical tips for avoiding problems, and provides a more detailed discussion of the department's majors than is possible in the general catalog. It is important for students contemplating a major in the department to be familiar with the handbook and the prerequisite requirements listed therein. Time-sensitive information, job and internship announcements, and other important information are sent to all declared majors and minors through campus email.

Students interested in the Education Abroad Program (EAP) are encouraged to check out the brochure "Opportunities in Business and Economics" that is available at the EAP office.

The Undergraduate Program

Lower-Division Economic Courses

MICROECONOMICS AND MACROECONOMICS—ECONOMICS 1-2-3

The department offers three lower-division economics classes, Economics 1-2-3. Economics 1 introduces microeconomics: supply and demand, markets, income distribution, perfect and imperfect competition, and the role of government. Modern economics is somewhat mathematical, and calculus is the standard working tool. Economics 2, therefore, introduces basic mathematical concepts used in conjunction with basic micro and macro principles to expose students to standard tools of economic analysis: mathematical foundations of marginal analysis, basics of graphical, algebraic and statistical modeling, policy analysis, discounting, and strategic interaction. Economics 3 introduces macroeconomics: unemployment, inflation, business cycles, and monetary and fiscal policy.

The courses are to be taken in sequential order.

Accounting Course

The department offers an accounting course, Economics 4. Economics 4 is a lower-division requirement for the B.S. in management science and the management science minor. The course is a prerequisite for Economics 173, Corporate Finance. Economics 4 can be used as an optional part of an economics major or minor; and the course is open to students who take no other courses from the department.

Upper-Division Economics Courses

The upper-division economics core courses are offered according to the following academic schedule:

Fall—100A, 110A, 120A-B-C, 170A, 171, 172A, and 172C;

Winter—100A-B, 110A-B, 120A-B-C, 170A-B, and 172A-B;

Spring—100B, 110B, 120A-B-C, 170B, 171, and 172B-C.

The 100, 110, 120 and 170 core courses are sequential. That is, "A" must be taken before "B" before "C". Economics 172A must be taken first, but 172B and 172C may be taken in either order or concurrently.

Entry to the Majors

Any student in good standing may declare a major in the department by filling out a form at the Office of the Registrar. The major codes are as follows: Economics, EN 25; Management Science, EN 26; and Joint Mathematics-Economics, EN 28.

The Economics Major (B.A.)

The economics B.A. program is designed to provide a broad understanding of resource-allocation and income-determination mechanisms. Both the development of the tools of economic analysis and their application to contemporary problems and public policy are stressed.

A student majoring in economics must meet the following requirements:

1. Calculus. Mathematics 10A-B-C or Mathematics 20A-B and 20C/21C.
2. Lower-division economics. Economics 1-2-3.
3. Upper-division core. Economics 100A-B (microeconomics), Economics 110A-B (macroeconomics), and Economics 120A-B-C (econometrics).
4. Upper-division electives. Five more economics courses at the upper-division level.

Majors are strongly encouraged to complete the lower-division requirements (1 and 2) before beginning the upper-division requirements (3 and 4). Further, majors are strongly encouraged to take Economics 100A-B and either 110A-B or 120A-B-C prior to the senior year, since numerous upper-division electives have core-course prerequisites.

The following schedule, though not the only possibility, is a well-constructed one for majoring in economics.

FRESHMAN YEAR
Economics 1-2-3
Mathematics 10A-B-C or
Mathematics 20A-B and 20C/21C

SOPHOMORE YEAR
Economics 100A-B
Economics 120A-B-C

JUNIOR YEAR
Economics 110A-B
Economics Electives

SENIOR YEAR
Remaining Economics Electives

A detailed description of the economics major is contained in the *Undergraduate Handbook*, available in the Undergraduate Program section of the department Web site.

The Management Science Major (B.Sc.)

Management science builds on a set of related quantitative methods commonly used to solve problems arising in the private (business and finance) and public (government) sectors. While students will gain some familiarity with the traditional functional fields of business management, this program is more tightly focused and more quantitative than a traditional business administration major. It is not, however, a program in applied mathematics or operational research, since the economic interpretation and application of the tools are continually stressed. Rather, it is a quantitative major in applied economics with a management focus. Before beginning upper-division work, a major must complete Economics 1-2-3, Mathematics 20A-B and 20C/21C, and Mathematics 20F. These courses provide both the understanding of basic principles and the mathematical maturity needed to understand the quantitative techniques of management science.

The management science major requires a total of 15 upper-division courses. Nine of these are specified: Economics 170A-B (Management Science Microeconomics), Economics 120A-B-C (Econometrics), Economics 171 (Decisions Under Uncertainty), and Economics 172A-B-C (Introduction to Operations Research). The 170 sequence concerns the nature and interdependence of managerial resource allocation decisions. Economics 120A-B-C teaches the theory and use of statistics and econometrics. The 172 sequence provides a general survey of optimization and problem-solving techniques employed by management scientists.

Of the six management science electives, three from the following "restricted" list must be taken: Economics 109 (Game Theory), Economics 121 (Applied Econometrics), Economics 125 (Economics of Population Growth), Economics 173 (Corporate Finance), Economics 174 (Insurance, Economics, and Finance), Economics 175 (Financial Investments), Economics 176 (Marketing), Economics 178 (Economic and Business Forecasting), or Economics 179 (Decisions in the Public Sector). At least one restricted elective must be either Economics 173 or 175. Each of these courses focuses on an important set of managerial problems. The remaining three electives may be chosen from among other upper-division economics courses.. Each of these courses focuses on an important set of managerial problems. The remaining three electives may be chosen from among other upper-division economics courses.

The following schedule, though not the only possibility, is a well-constructed one for a student majoring in Management Science.

FRESHMAN YEAR
Economics 1-2-3
Mathematics 20A-B and 20C/21C

SOPHOMORE YEAR
Economics 120A-B-C
Economics 170A-B
Mathematics 20F

JUNIOR YEAR
Economics 4 (taken in quarter prior to Econ 173)
Economics 171
Economics 172A-B-C
Economics Electives

SENIOR YEAR
Remaining Economics Electives

A detailed description of the management science major is contained in the *Undergraduate Handbook*, available on the department Web site.

Joint Major in Mathematics and Economics (B.A.)

Majors in mathematics and the natural sciences often feel the need for a more formal introduction to issues involving business applications of science and mathematics. Extending their studies into economics provides this application and can provide a bridge to successful

careers or advanced study. Majors in economics generally recognize the importance of mathematics to their discipline. Undergraduate students who plan to pursue doctoral study in economics or business need the more advanced mathematics training prescribed in this major.

This major is considered to be excellent preparation for Ph.D. study in economics and business administration, as well as for graduate studies for professional management degrees, including the MBA. The major provides a formal framework making it easier to combine study in the two fields.

Course requirements of the Joint Major in Mathematics and Economics consist principally of the required courses of the mathematics major and the economics/management science majors:

Lower-Division Requirements:

1. Calculus and Linear Algebra. Mathematics 20A-B, 20C/21C, 20D, and 20F
2. Introductory Economics. Economics 1-2-3

Upper-Division Requirements:

Fifteen upper-division courses in mathematics and economics, with a minimum of seven courses in each department, chosen from the courses listed below (prerequisites are strictly enforced):

1. Mathematical Reasoning. Mathematics 109 (formerly Math. 89)
2. One of the following:
   a. Applied Linear Algebra. Mathematics 102
   b. Numerical Linear Algebra. Mathematics 170A
   c. Linear Algebra. Mathematics 100A and B
3. One of the following:
   a. Foundations of Analysis. Mathematics 140A
   b. Advanced Calculus. Mathematics 142A
4. One of the following:
   a. Ordinary Differential Equations. Mathematics 130A
   b. Foundations of Analysis. Mathematics 140B
   c. Advanced Calculus. Mathematics 142B
5. One of the following:
   a. Microeconomics. Economics 100AB
   b. Management Science Microeconomics. Economics 170AB
6. Econometrics/Statistics. One of the following:
   a. Economics 120A-B-C
   b. Mathematics 180A and Economics 120B-C
   c. Mathematics 180A and 181A and Economics 120C
7. One of the following:
   a. Macroeconomics. Economics 110AB
   b. Mathematical Programming: Numerical Optimization. Mathematics 171AB

   or

   Two of the following:
   a. Decisions Under Uncertainty. Economics 171
   b. Introduction to Operations Research. Economics 172A-B-C (**Note**: 172A is a prerequisite for 172B and C)

Other courses which are strongly recommended are: Mathematics 130B, 131, 181B, 190, and 193A-B and Economics 109, 113,175, and 178.

Further information may be obtained in the mathematics and economics undergraduate offices.

Honors

Currently, honors programs exist for the economics major and for the management science major. There are two levels of honors. For the lower level, indicated by the phrase "with distinction" on the diploma, you must satisfy the first two of the following three requirements. For the higher level, indicated by the phrase "with highest distinction" on the diploma, you must satisfy all three requirements. There is no application to the honors program. Register for either major under the regular major code (EN25 for economics, EN26 for management science). Your final degree check will indicate which level of honors you receive.

1. Complete either a management science major or the honors track of the economics major, both of which require fifteen upper-division courses. The honors track of the economics major consists of the course work of a regular economics major (twelve upper-division courses) plus one advanced microeconomics course (Economics 105, 107, 109, 113, 117, 150, 151, 155, or 179), one advanced macroeconomics course (Economics 103 or 146), and one advanced econometrics course (Economics 121, 125, 174, 175, 176, or 178). Typically, a course will qualify as "advanced" if it has the corresponding core courses as prerequisites. As an example, a course with an Economics 100A-B prerequisite will typically qualify as an advanced microeconomics course.
2. Have an upper division GPA in your major greater than or equal to 3.5. Typically, the upper-division major GPA will exclude grades for courses taken at universities other than those in the UC system.
3. Take the honors versions of at least two upper-division courses (Economics 100AH-BH, 110AH-AH, 120AH-BH-CH, and 170AH-BH), and take the senior essay seminar (Economics 191A-B). The GPA across these four or more courses must be 3.5 or above. Admission to these courses is by special permission; check with the undergraduate adviser in the Economics Student Services Office.

Grade Rules for Majors

All courses used in meeting requirements for a departmental major must be taken on a letter-grade basis, and must be passed with a grade of C– (C minus) or better. These rules apply to lower-division as well as upper-division courses, and to courses taken from other departments (such as required mathematics courses). Exceptions are courses such as Economics 195 and Economics 199, for which P/NP grading is mandatory. However, no more than twelve units taken P/NP may be counted toward a major.

Advanced Placement Credits

Because no high school economics course provides the kind of background needed for upper-division economics and management science, we are strict on allowance of credits. The policy is as follows: If the AP score is 5, accept AP Micro (AP Macro) as equivalent to Economics 1 (Economics 3) in meeting major or minor requirements. If the score is 3 or 4, the student is required to take Economics 1 (3) for the major or minor. There is not an advanced placement exam equivalent to Economics 2.

Minors and Programs of Concentration

The economics minor or program of concentration consists of eight courses: introductory microeconomics (Economics 1); microeconomic applications (Economics 2); introductory macroeconomics (Economics 3); and five upper-division

economics courses, which are otherwise not restricted.

The management science minor, paralleling the economics minor, consists of nine courses: introductory microeconomics (Economics 1); microeconomics applications (Economics 2); introductory macroeconomics (Economics 3); financial accounting (Economics 4), and any five from the following list (Caution: some courses have prerequisites):

Economics 170A	Managerial Microeconomics
Economics 170B	Managerial Microeconomics
Economics 120A	Econometrics
Economics 120B	Econometrics
Economics 120C	Econometrics
Economics 171	Decisions Under Uncertainty
Economics 172A	Operations Research
Economics 172B	Operations Research
Economics 172C	Operations Research
Economics 173	Corporate Finance
Economics 174	Insurance, Economics and Finance
Economics 175	Financial Investments
Economics 176	Marketing
Economics 178	Economic and Business Forecasting
Economics 179	Decisions in the Public Sector

Grades of P/NP are acceptable for minor courses. If courses are taken for a letter grade, passing is considered with a "D" or better. To declare a minor or program of concentration, obtain a minor declaration form, fill it out, and turn it in to Sequoyah Hall 245. Students should check with their colleges regarding area of focus, programs of concentration, and project minors.

The Graduate Program

The department offers the M.A., C.Phil., and Ph.D. degrees in economics. However, a student must be admitted to the Ph.D. program in order to be eligible for an M.A. or C.Phil. The department also offers the Ph.D. degree in economics and international affairs jointly with the Graduate School of International Relations and Pacific Studies.

The main Ph.D. requirements are that a student pass qualifying exams in microeconomics, macroeconomics, econometrics, select courses of specialization, and prepare an acceptable dissertation. The Ph.D. degree in economics and international affairs also requires successful completion of a language requirement and additional electives offered by IR/PS.

Detailed descriptions of the Ph.D. programs are available by writing to the Graduate Admissions Officer in care of the Department of Economics. Information is also available on the Internet at the department Web site at http://www.econ.ucsd.edu. Residence and other campus wide regulations are described in the graduate studies section of this catalog.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of five years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years. Students will not be permitted to continue beyond the pre-candidacy and total registered time limits. Students will not be permitted to receive UCSD administered financial support beyond the support limit.

COURSES

LOWER-DIVISION

1. Elements of Economics I (4)
Introduction to the study of the economic system from the micro, or individual decision maker's, perspective. Analysis of the allocation of resources and distribution of income in perfectly competitive markets. Courses must be taken in 1-2-3 order.

2. Elements of Economics II (4)
Continuation of study of microeconomics: analysis of monopoly and imperfectly competitive markets, the role of government, and cost/benefit analysis. Courses must be taken in 1-2-3 order. *Prerequisite: Economics 1.*

3. Elements of Economics III (4)
Introductory macroeconomics: unemployment, inflation, business cycles, monetary and fiscal policy. Courses must be taken in 1-2-3 order. *Prerequisites: Economics 1 and 2.*

4. Financial Accounting (4)
Recording, organizing, and communicating economic information relating to business entities. *No prerequisites.*

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. May be repeated when course topics vary. (P/NP grades only.)

90. Undergraduate Seminar (1)
Selected topics in economics. May be repeated twice (total of three units) when course topic varies. (P/NP grades only.)

UPPER-DIVISION

100A. Microeconomics A (4)
Economic analysis of household determination of the demand for goods and services, consumption/saving decisions, and the supply of labor. Analysis of firms' determination of output and the demand for factors of production. Analysis of perfectly competitive markets. Economics 100A must be taken before Economics 100B. Credit not allowed for both Economics 100A and Economics 170A. *Prerequisites: Economics 1A-B or Economics 1-2-3; and Mathematics 10A or 20A, Mathematics 10B or 20B, and Mathematics 10C or 20C or 21C.*

100B. Microeconomics B (4)
Analysis of the effects of market structure (perfect competition, imperfect competition, and monopoly) and strategic interaction among firms, the distribution of income, and welfare economics. Economics 100A must be taken before Economics 100B. Credit not allowed for both Economics 100B and Economics 170B. *Prerequisite: Economics 100A.*

100AH-BH. Honors Microeconomics (1-1)
Honors sequence covering the material of Economics 100A-B. *Prerequisites: GPA of 3.5 or better. Department stamp required. Economics 100A must be taken with 100AH, and 100B must be taken with 100BH.*

101. International Trade (4)
Determinants of trade in goods and services, international flows of labor and capital, and the effects of trade policy on welfare and income distribution. Issues such as competitiveness, immigration policy, trading blocs, and industrial policy. *Prerequisites: Economics 1A-B or 1-2-3. Recommended: Economics 100A-B or 170A-B.*

103. International Monetary Relations (4)
Balance of payments, international capital movements, and foreign exchange examined in light of current theories, policies, and problems. *Prerequisites: Economics 110A-B.*

105. Industrial Organization and Antitrust Policy (4)
Structure and performance of U.S. industry. Pricing, advertising, product strategies, cartel behavior, and strategic entry barriers. Detailed treatment of antitrust policy. *Prerequisites: Economics 100A-B or 170A-B.*

107. Economic Regulation (4)
Theory and application of economic regulation. Natural monopoly, nonlinear pricing, Ramsey pricing, franchise bidding. Discussion of U.S. electric utilities, gas utilities, broadcasting, surface transportation, and air transportation. *Prerequisites: Economics 100A or 170A.*

109. Game Theory (4)
Introduction to game theory. Analysis of people's decisions when the consequences of the decisions depend on what other people do. Applications to economic, political, and social interactions. *Prerequisites: Economics 100A-B or 170A-B.*

110A. Macroeconomics A (4)
Analysis of the determination of long run growth and models of the determination of output, interest rates, and the price level. Analysis of inflation, unemployment, and monetary and fiscal policy. Economics 110A must be taken before Economics 110B. *Prerequisites: Economics 1A-B or 1-2-3; and Mathematics 10C or 20C or 21C.*

110B. Macroeconomics B (4)
Analysis of the determination of consumption spending at the aggregate level; extension of the basic macro model to include exchange rates and international trade; the aggregate money supply, and the business cycle. Economics 110A must be taken before Economics 110B. *Prerequisites: Economics 110A.*

110AH-BH. Honors Macroeconomics (1-1)
Honors sequence covering the material of Economics 110A-B. *Prerequisites: GPA of 3.5 or better. Department stamp required. Economics 110A must be taken with 110AH, and 110B must be taken with 110BH.*

111. Monetary Economics (4)
Financial structure of the U.S. economy. Bank behavior. Monetary control. *Prerequisites: Economics 1A-B or 1-2-3 and Mathematics 10A or 20A.*

113. Mathematical Economics (4)
Mathematical concepts and techniques used in advanced economic analysis; applications to selected aspects of economic theory. *Prerequisites: Economics 100A-B, or Economics 170A-B; or Mathematics 140A; or Mathematics 142A.*

114. Economics of Immigration (4)
Examination of the economic causes and consequences of international migration. Economic reasons that motivate people to migrate, the labor market and fiscal impacts of immigration on sending and receiving countries, the economic consequences of current immigration policies. Emphasis on mid-twentieth century immigration to the U.S. from Asia and Latin America with some consideration given to aspects of other international migrations. *Prerequisites: Economics 1A-B or 1-2-3.*

116. Economic Development (4)
Analysis of current economic problems of less-developed areas and conditions for increasing their income, employment, and welfare; case studies of specific less-developed countries. *Prerequisite: Economics 1A-B or 1-2-3.*

117. Economic Growth (4)
Models of the economic growth of developed economies. *Prerequisites: Economics 100A or 170A.*

118A. Law and Economics A (4)
Course uses economic theory as the basis for evaluating the economic efficiency of both actual and theoretical legal doctrines in several legal fields. Basic principles of law and economic theory applied to questions posed by the law: torts (accidents), product liability law, property law, criminal law (law enforcement), and litigation. Issues of risk bearing and why people buy insurance. Economics 118B may be taken before 118A. *Prerequisites: Economics 1A-B or 1-2; and Mathematics 10A or 20A.*

118B. Law and Economics B (4)
Course uses economic theory as the basis for evaluating the economic efficiency of both actual and theoretical legal doctrines. Basic principles of law and economic theory applied to questions posed by the law: contract law, the law of corporate organization (how firms are legally structured), bankruptcy law, and debtor-creditor law. Economics 118B may be taken before Economics 118A. *Prerequisites: Economics 1A-B or 1-2; and Mathematics 10A or 20A.*

120A. Econometrics A (4)
Probability and statistics used in economics. Probability and sampling theory, statistical inference, and use of spreadsheets. Courses must be taken in A-B-C order. Credit not allowed for Economics 120A and any of the following: ECE 109; Mathematics 180A; or Mathematics 183. *Prerequisites: Economics 1A-B or 1-2-3; and Mathematics 10A or 20A, Mathematics 10B or 20B, and Mathematics 10C or 20C or 21C.*

120B. Econometrics B (4)
Basic econometric methods, including the linear regression model, heteroskedasticity, serial correlation, hypothesis testing, forecasting, and identification. Courses must be taken in A-B-C order. Credit not allowed for Economics 120A and Mathematics 181A. *Prerequisite: Economics 120A or ECE 109 or Mathematics 180A or Mathematics 183.*

120C. Econometrics C (4)
Advanced econometric methods: time series analysis, estimation in the presence of autocorrelated and heteroskedastic errors, estimation of simultaneous equations models, estimation of discrete choice models, and econometric methods designed for panel data sets. *Prerequisite: Economics 120B.*

120AH-BH-CH. Honors Econometrics (1-1-1)
Honors sequence covering the material of Economics 120A-B-C. *Prerequisites: GPA of 3.5 or better. Department stamp required. Economics 120A must be taken with 120AH, 120B must be taken with 120BH, and 120C must be taken with 120CH.*

121. Applied Econometrics (4)
Application of econometric methods to such areas as labor supply, human capital, and financial time series. *Prerequisites: Economics 120A-B-C. Concurrent enrollment in Economics 120C is permitted.*

125. Economics of Population Growth (4)
Economics of population growth, family size, age profiles, birth and death rates, growth of cities. *Prerequisites: Economics 120A-B-C. Concurrent enrollment in Economics 120C is permitted. Economics 178 is recommended.*

130. Public Policy (4)
Role of economics in public policy. Topics such as funding health care, drug policy, incentives for high technology industries, mass transit versus highway construction, and agriculture subsidies. Term paper usually required. *Prerequisites: Economics 1A-B or 1-2.*

131. Economics of the Environment (4)
Environmental issues from an economic perspective. Relation of the environment to economic growth. Management of natural resources, such as forest and fresh water. Policies on air, water, and toxic waste pollution. International issues such as ozone depletion and sustainable development. *Prerequisites: Economics 1A-B or 1-2.*

132. Energy Economics (4)
Energy from an economic perspective. Fuel cycles for coal, hydro, nuclear, oil, and solar energy. Emphasis on efficiency and control of pollution. Comparison of energy use across sectors and across countries. Global warming. Role of energy in the international economy. *Prerequisites: Economics 1A-B or 1-2.*

135. Urban Economics (4)
(Same as USP 102.) Economic analysis of why and where cities develop, problems they cause, and public policies to deal with these problems. Determination of urban land rent/use, reasons for suburbanization. Transportation and congestion in cities, zoning, poverty and housing, urban local government. *Prerequisites: Economics 1A-B or 1-2 and Mathematics 10A or 20A.*

136. Human Resources (4)
Theoretical and empirical analysis of public and private investment in people, emphasizing the contribution to productivity of education. *Prerequisites: Economics 1A-B or 1-2-3 and Mathematics 10A-B-C, or 20A-B and 20C/21C.*

137. Inequality and Poverty (4)
Analysis of inequality in the distribution of income, education, and wealth; causes of poverty and public policies to combat it. *Prerequisites: Economics 1A-B-C, 120A, or Mathematics 180A or Mathematics 183 or ECE 109.*

138A. Economics of Health A (4)
The application of economic analysis to the health field. Issues related to the production of health services and the demand for health care, including the role of insurance. *Prerequisites: Economics 1A-B or 1-2-3.*

138B. Economics of Health B (4)
Current health policy issues. Includes benefit-cost analysis of potential policy changes and health care options, the role of changing technology, private, nonprofit and government provision of health care, regulation of health care entities such as drug companies, HMOs, and nursing homes. Economics 138A must be taken before Economics 138B. *Prerequisites: Economics 138A.*

139. Labor Economics (4)
Operation of labor markets. Such topics as labor force participation, unemployment, labor mobility, wage inflation, the impact of unions, human capital investments, internal labor markets, and labor market discrimination. *Prerequisites: Economics 1A-B or 1-2-3.*

145. Economics of Ocean Resources (4)
Economic issues associated with oceans. Economics of managing renewable resources in the oceans, with an emphasis on fisheries, economics of conservation and biodiversity preservation for living marine resources, with an emphasis on whales, dolphins, sea-turtles, and coral reefs.

146. Economic Stabilization (4)
Theory of business cycles and techniques used by governments to stabilize an economy. Discussion of recent economic experience. *Prerequisites: Economics 110A-B.*

147. Economics of Education (4)
Examination of issues in education using theoretical and empirical approaches from economics. Analysis of decisions to invest in education. Consideration of various market structures in education, including school choice and school finance programs. *Prerequisites: Economics 1A-B or 1-2-3 and Economics 120A or ECE 109 or Mathematics 180A or Mathematics 183.*

150. Economics of the Public Sector: Taxation (4)
Overview of the public sector in the U.S. and the scope of government intervention in economic life. Basic principles of taxation, tax incidence, and tax efficiency. Analysis of the U.S. tax system before and after the Tax Reform Act of 1986. *Prerequisites: Economics 100A or 170A.*

151. Economics of the Public Sector: Expenditures (4)
Overview of the public sector in the U.S. and the scope of government intervention in economic life. Theory of public goods and externalities. Introduction to the basic forms of government intervention. Evaluation of specific expenditure programs such as education and national defense. *Prerequisites: Economics 100A or 170A.*

153. Economics of the Public Sector: Income Maintenance and Insurance (4)
Overview of the public sector in the U.S. and the scope of government intervention in economic life. Theory of income redistribution and social insurance. Applications to current policy in such areas as welfare, unemployment insurance, and Social Security. *Prerequisites: Economics 100A or Economics 170A.*

155. Economics of Voting and Public Choice (4)
An economic analysis of social decision making, including such topics as the desirable scope and size of the public sector, the efficiency of collective decision-making procedures, voting theory and collective vs. market resource allocation. *Prerequisite: Economics 100A-B or 170A-B.*

158A-B. Economic History of the United States (4-4)
(Same as History HIUS 140–141.) 158A: The United States as a raw materials producer, as an agrarian society, and as an industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and nineteenth- and early twentieth-century transformations of American capitalism. 158B: The United States as a modern industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and twentieth-century transformations of American capitalism.

161. Latin American Economic Development (4)
Development issues facing Latin American countries. Economic policy. Emphasis on Argentina, Brazil, Chile, and Mexico. *Prerequisite: Economics 1*A-B or 1-2-3.

163. Japanese Economy (4)
Survey of Japanese economy. Topics such as economic growth, business cycles, saving-investment balance, financial markets, fiscal and monetary policy, labor markets, industrial structure, international trade, and agricultural policy. *Prerequisite: Economics 1A-B or 1-2-3.*

165. Middle East Economics (4)
Internal economies of radical religious groups and terrorist organizations, oil economics, Ottoman economic history, Islamic banking, economic development and peace in Palestine, economic demography and migration. Prerequisites: *Economics 1A-B or 1-2-3.*

170A. Management Science Microeconomics A (4)
Intermediate microeconomics, including techniques of marginal analysis, demand theory and optimal pricing, estimation of demand function, forecasting, production theory, cost analysis and transfer pricing, and competitive and monopolistic market structure. Credit not allowed for both Economics 100A and Economics 170A. *Prerequisites: Economics 1A-B or 1-2-3; and Mathematics 20A, 20B, and 20C or 21C.*

170B. Management Science Microeconomics B (4)
Intermediate microeconomics, including oligopoly theory, game theory and competitive strategy, externalities and public goods, and information economics (adverse selection, signing, and principal-agent problems), with emphasis on the theory of the firm. Economics 170A must be taken before 170B. Credit not allowed for both Economics 100B and Economics 170B. *Prerequisite: Economics 170A.*

170AH-BH. Honors Management Science Microeconomics (1-1)
Honors sequence covering the material of Economics 170A-B. *Prerequisite: GPA of 3.5 or better. Department stamp required. Economics 170A must be taken with 170AH, and 170B must be taken with 170BH.*

171. Decisions Under Uncertainty (4)
Decision-making when the consequences are uncertain. Decision trees, payoff tables, decision criteria, expected utility theory, risk aversion, sample information. *Prerequisites: Economics 120A and Mathematics 20F.*

172A-B-C. Introduction to Operations Research (4-4-4)
Linear, nonlinear, and integer programming. Elements of game theory. Deterministic and stochastic dynamic programming. *Prerequisites: Economics 120A and Mathematics 20F. Economics 172A may be taken concurrently with 120A. Economics 172A must be taken first, but Economics 172B may be taken before or concurrently with 172C.* A student may not receive credit for both Economics 172A-172B and Mathematics 171A-171B.

173. Corporate Finance (4)
Corporate financial management, cash flow analysis, capital budgeting and capital structure. Institutional issues in project analysis, performance evaluation, and financial planning. *Prerequisite: Economics 4.*

174. Financial Insurance (4)
Insurance markets, law, and terminology. Demand for insurance and for lotteries. Contingent claims theory. Reserves management and efficient risk sharing. Financial theories for regulating insurance rates. Options and insurance. Moral hazard. Adverse selection. Current controversies in insurance. *Prerequisites: Economics 120A-B-C and either 100A or Economics 170A. Concurrent enrollment in Economics 120C is permitted. Economics 171 and Economics 175 are recommended.*

175. Financial Investments (4)
Valuation of assets including stocks, bonds, options, and futures contracts. Optimal portfolio selection and risk management. *Prerequisites: Economics 120A.*

176. Marketing (4)
Role of marketing in the economy. Topics such as buyer behavior, marketing mix, promotion, product selection, pricing, and distribution. *Prerequisites: Economics 120A-B-C. Concurrent enrollment in Economics 120C is permitted.*

178. Economic and Business Forecasting (4)
Survey of theoretical and practical aspects of statistical and economic forecasting. Such topics as long-run and short-run horizons, leading indicator analysis, econometric models, technological and population forecasts, forecast evaluation, and the use of forecasts for public policy. *Prerequisites: Economics 120A-B-C. Concurrent enrollment in Economics 120C is permitted.*

179. Decisions in the Public Sector (4)
Decision making in the public sector. Topics such as program evaluation, budgeting, financial management, and expenditure decisions. *Prerequisites: Economics 100A-B or 170A-B.*

181. Topics in Finance (4)
Selected topics in finance. *Prerequisite: consent of department.*

182. Topics in Microeconomics (4)
Selected topics in microeconomics. *Prerequisite: consent of department.*

183. Topics in Macroeconomics (4)
Selected topics in macroeconomics. *Prerequisite: consent of department.*

191A-B. Senior Essay Seminar (4-4)
Senior essay seminar for students with superior records in department majors. *Prerequisite: department stamp required.*

195A-B-C. Introduction to Teaching Economics (4-4-4)
Introduction to teaching economics. Each student will be responsible for a class section in one of the lower-division economics courses. Limited to advanced economics majors with at least a 3.5 GPA in upper-division economics work. (P/NP grades only.) *Prerequisite: consent of the department. May not use more than eight units for credit.*

198. Directed Group Study (2 or 4)
Directed study on a topic or in a group field not included in regular department curriculum by special arrangement with a faculty member. *Prerequisites: upper-division standing and consent of instructor. May be repeated up to three times when course topics vary.* (P/NP grades only.)

199. Independent Study (2 or 4)
Independent reading or research under the direction of and by special arrangement with a Department of Economics faculty member. (P/NP grades only.) *Prerequisites: consent of instructor and departmental approval.*

GRADUATE

200A-B-C. Microeconomics (4-4-4)
Background mathematical techniques, static and intertemporal consumer and producer theory, partial and general equilibrium, modern producer and consumer theory, risk, time, and interdependence, modern welfare economics.

201. Advanced Economic Theory (4)
An intensive examination of selected topics in economic theory. Course topic nonrepetitive in a three-year cycle. *Prerequisites: Economics 207 and 213.*

202A-B-C. Workshop in Economic Theory (0-4/0-4/0-4)
An examination of recent research in economic theory, including topics in general equilibrium, welfare economics, duality, and social choice; development of related research topics by both graduate students and faculty. Course may be repeated an unlimited number of times. (S/U grades only.) *Prerequisite: Economics 207 or consent of instructor.*

205. Mathematics for Economists (4)
Advanced calculus review for new graduate students.

206. Decisions (4)
Further topics in consumer and producer theory, intertemporal optimization, and decision-making under uncertainty. (Previously numbered Economics 200D.) *Prerequisites: Economics 200A-B-C or consent of instructor.*

207. Markets and Welfare (4)
Further topics in general equilibrium, welfare analysis, and social choice theory. (Previously numbered Economics 200E.) *Prerequisite: Economics 200A-B-C or consent of instructor.*

208. Games and Information (4)
Further topics in game theory and the economics of information. (Previously numbered Economics 200F.) *Prerequisite: Economics 200A-B-C or consent of instructor.*

210A-B-C. Macroeconomics (4-4-4)
Neoclassical and Keynesian theories of employment, income, interest rate, price level, and other aggregate variables; macroeconomic policy; balance of payments and exchange rates; conflicts between external and internal balance; disequilibrium theory; growth theory.

211. Advanced Macroeconomics (4-4-4)
Selected theoretical and empirical issues in macroeconomics. *Prerequisite: Economics 213 or consent of instructor.*

212A-B-C. Workshop in Macroeconomics (4-4-4)
Examination of recent research in macroeconomics; development of own research by graduate students and faculty. *Prerequisite: Economics 210C.*

213. Advanced Macroeconomic Theory (4)
Dynamic analysis, multiple equilibria, modern growth theory, computational methods. (Previously numbered Economics 210D.) *Prerequisites: Economics 210A-B-C or consent of instructor.*

214. Applied Macroeconomics (4)
Monetary policy, business cycles, factor utilization, investment, heterogeneity. (Previously numbered Economics 210E.) *Prerequisites: Economics 210A-B-C or consent of instructor.*

220. A-B-C-D-E-F. Econometrics (4-4-4-4-4-4)
The construction and application of stochastic models in economics. This includes both single and simultaneous equations models. Matrix algebra and basic statistics are covered. Also covered (in 220F) are empirical applications to micro and macroeconomics. These require the completion of an empirical project.

221. Advanced Econometrics (4)
Extensions of the theory of the linear model; Bayesian analysis; principal components, discriminant analysis, spectral analysis of time series; insufficient data problems and the use of generalized inverse matrices; experimental design; formulation and evaluation of economic models, including the interpretation and testing of causality. *Prerequisite: Economics 220F or consent of instructor.*

222A-B-C. Workshop in Econometrics (4-4-4)
Examination of recent econometric research; development of own research by students and faculty. Course may be repeated an unlimited number of times. (S/U grades only.)

224. Readings in Econometrics (1)
Examination of recent research in econometrics to facilitate the development of thesis research by graduate students.

230. Public Economics: Taxation (4)
Theoretical and empirical issues in public economics. (Previously numbered Economics 230A.) *Prerequisite: consent of instructor.*

231. Public Economics: National Government Expenditures (4)
Theoretical and empirical issues in public economics. (Previously numbered Economics 230B.) *Prerequisite: consent of instructor.*

232. Public Economics: Fiscal Federalism (4)
Theoretical and empirical issues in public economics. (Previously numbered Economics 230C.) *Prerequisite: consent of instructor.*

235A-B-C. Workshop in Applied Microeconomics and Industrial Organization (0-4/0-4/0-4)
Examination of recent research in applied economics; development of own research by graduate students and faculty. Course may be repeated an unlimited number of times. (S/U grades only.)

240. Economic Development (4)
Theoretical and empirical issues in economic development. *Prerequisite: consent of instructor.*

245. International Economics (4)
Theory of international trade, finance, and monetary relations. Growth, disturbances, capital movements, and balance of payments adjustment. International economic policy and welfare. (Previously numbered Economics 232A-B-C.) *Prerequisite: consent of instructor.*

250. Labor Economics (4)
Theoretical and empirical issues in human resource economics. (Previously numbered Economics 236A-B.) *Prerequisite: consent of instructor.*

260. Industrial Organization (4)
Theoretical and empirical issues in industrial organization. (Previously numbered Economics 234.) *Prerequisite: Economics 220F or consent of instructor.*

264. Experimental Economics (4)
Design and interpretation of controlled experiments using human subjects. (Previously numbered Economics 207.) *Prerequisite: consent of instructor.*

266. Economics of Natural Resources (4)
Theoretical and empirical issues in natural resource economics. (Previously numbered Economics 242.) *Prerequisite: consent of instructor.*

270. Finance—Core Asset Pricing (4)
Theoretical and empirical issues in finance. (Previously numbered Economics 214A.)

271. Finance—Market Micro Structure and Volatility Modeling (4)
Theoretical and empirical issues in finance. (Previously numbered Economics 214B.)

272. Finance—Theory and Testing of Intertemporal Asset Pricing Models (4)
Theoretical and empirical issues in finance. (Previously numbered Economics 214C.)

279. Readings in Finance (1)
Examination of recent research in finance to facilitate the development of thesis research by graduate students. *Prerequisite: consent of instructor.*

280. Computation (2)
Introduction to econometric computing. (S/U grades only.)

281. Special Topics in Economics (4)
A lecture course at an advanced level on a special topic (or set of related topics) in economics. May be repeated for credit if topic differs. (Previously numbered Economics 267.) *Prerequisite: consent of instructor.*

282. Third-Year Paper (4)
Written project, such as a critical review of a body of literature, including a proposal for an original research paper. For third-year students in winter quarter. (Previously numbered Economics 272.)

283. Third-Year Paper Presentations (4)
Workshop for students writing third-year papers. All papers will be formally presented in the workshop. (Previously numbered Economics 273.)

284. Third-Year Original Paper (4)
Original research paper. For third-year students. (Previously numbered Economics 274.)

285. Third-Year Original Paper Presentations (4)
Workshop for students writing third-year original papers. All papers will be formally presented in the workshop. (Previously numbered Economics 275.)

290A-B-C. Colloquium in Economics (0-0-0)
Lectures presented by visiting speakers on research in a variety of topics in both Theoretical and Applied Economics.

291. Advanced Field Advising (4)
Controlled reading and discussion with adviser; literature survey. May be repeated for credit. (S/U grades only.)

297. Independent Study (1-5)
(S/U grades only.)

299. Research in Economics for Dissertation (1-9)
(S/U grades only.)

500A-B-C. Teaching Methods in Economics (4-4-4)
The study and development of effective pedagogical materials and techniques in economics. Students who hold appointments as teaching assistants must enroll in this course, but it is open to other students as well. (S/U grades only.)

Education Abroad Program (EAP)

OFFICE: Programs Abroad Office in the International Center (corner of Gilman Drive and Library Walk)
(858) 534-1123
http://www.ucsd.edu/icenter/pao

David Mares, Political Science, *Faculty Director*
Ramon Piñon, Biology, *Faculty Director*
Mary Dhooge, *Dean of International Education*
Kimberly Burton, *Director for Programs Abroad*
Molly Ann McCarren, *EAP Coordinator*
Bill Clabby, *EAP Adviser*
Joan Adamo, *EAP Adviser*
Tonia Luo, *EAP Adviser*

Administered by the University of California, the Education Abroad Program (EAP) has established study centers in Australia, Barbados, Brazil, Canada, Chile, China, Costa Rica, Czech Republic, Denmark, Egypt, France, Germany, Ghana, Hong

Kong (S.A.R.), Hungary, India, Ireland, Israel, Italy, Japan, Korea, Mexico, Netherlands, New Zealand, the Philippines, Russia, Singapore, South Africa, Spain, Sweden, Taiwan, Thailand, Turkey, the United Kingdom, and Vietnam. EAP offers full-year and short-term programs in a wide range of academic disciplines. Please see the EAP Web site (http://eap.ucop.edu) for the most up-to-date information about all aspects of the program. Students may use the EAP Program Wizard (http://eap.ucop.edu/programwizard) to search for programs by country, specific areas of study, language of instruction, etc. EAP participants are eligible for financial aid and many scholarships. Other non-EAP study-abroad opportunities at UCSD are described at the end of this section.

Purpose

The Education Abroad Program offers undergraduate (sophomores, juniors, and seniors) and graduate students opportunities to integrate into the academic and social life of select foreign universities while continuing to work in major fields of study or otherwise fulfilling UC requirements. EAP provides students access to distinguished academic programs that complement those of the UC campuses and where students can make normal progress toward their degrees at a cost as close as possible to that of education on a UC campus. EAP helps students acquire the knowledge and skills necessary to function confidently and compete successfully in our global environment.

The program stimulates the intellectual development of the participants, broadening their general education, and giving a new depth to their particular academic interests. Most gain fluency in a language other than their own, and all grow in their ability to engage in independent study. Perhaps most valuable of all are increased self-understanding, clarified life purposes, and a broadening and deepening of personal values.

The Academic Program

The Education Abroad Program places students at the finest universities abroad. In most cases students take courses side by side with local students in a wide range of academic fields. In some programs EAP students pursue language study and take special courses designed for foreign students. In others, they pursue specialized studies in their major, take courses to add breadth to their general education, concentrate on language or area studies, and conduct research.

Each student is concurrently enrolled on the home campus of the University of California and at the host university. Full academic credit is received for courses satisfactorily completed. The selection of courses is such that, by advance planning and wise choice, most students can make normal progress toward completion of major, minor, and/or general-education requirements for their UCSD degree.

Academic Planning and Advising

Students who wish to make normal progress toward graduation should counsel in advance with departmental advisers and an academic adviser in their college provost's office in order to ascertain how participation will affect their academic program. Descriptions of individual courses currently approved for UC credit may be found in the Programs Abroad Resource Library and on the EAP Web site (http://eap/ucop/edu/coursefinder). Many of the same or similar courses will be available in future years, but students should plan programs that are sufficiently flexible to allow them to take alternate courses. Each year new courses taken by UC students are added to a center's approved offerings. Although courses approved by the University of California carry full credit, each department retains the right to determine the extent to which it will accept specific courses to fulfill requirements for its own majors.

In order to facilitate the academic work of the students, University of California professors serve as directors and associate directors of the study centers. They work with their counterparts in the host university in developing the academic program and advise students on their coursework. In addition, the directors are responsible for all aspects of student welfare and conduct.

Cost, Financial Aid, and Scholarships

The regents endeavor to bring the program within the reach of all students, regardless of their financial resources. The cost of studying abroad is usually comparable to the cost of studying on a UC campus. The only additional costs directly related to the program are for round-trip transportation, on-site orientation, and personal expenses beyond what normally would be spent at home. Programs in some countries actually cost less than a comparable period of study at a UC campus.

Many forms of financial assistance are available to EAP students. Those already receiving UC financial aid maintain their eligibility for grants, loans, and scholarships while studying on EAP. Financial aid is based on the cost of studying at each EAP location and on individual need. Students who might not normally be eligible for financial aid may qualify for the period they are on EAP. In addition to UC financial aid, scholarships are also available from EAP, the Friends of the International Center, various campus offices and departments, and outside organizations. Annually, UCSD students access more than $500,000 in special scholarships available only for study abroad. Information about some of these scholarships is available on the student financial services web site (http://www.ucsd.edu/finaid).

Prospective participants who require financial assistance should counsel early with the Student Financial Services Office. Study abroad scholarship information is available in the Programs Abroad Office.

Applications

Applications for admission to the Education Abroad Program are given to students following a discussion of various aspects of the program with an EAP adviser in the Programs Abroad Office. Information on deadlines and related matters such as course offerings, selection, schedules of departures, and payment of fees may be obtained from the Programs Abroad Office.

It is not too early to begin planning for an experience abroad prior to or during one's freshman year. Students are then able to take the language classes needed for certain programs, as well as plan which degree requirements to fulfill at UCSD and which to take abroad. Early planning also allows students to apply for the many programs now open to sophomores. General group information sessions about the programs are held during Welcome Week and in October and January.

Selection

Undergraduate selection is generally open to students with the following qualifications: 3.0 cumulative grade-point average at the time of

For program details see your Campus EAP Office and visit the EAP Web site at **http://eap.ucop.edu**

departure (some programs are available to students with at least a 2.5 GPA); at least sophomore or junior standing by time of departure, depending on the specific program; support of the UCSD EAP Selection Committee; and completion of university-level language courses when required (one, two, or three years, depending on the host institution) with a 3.0 grade-point average in language. Exceptions to these requirements can be made on a case by case basis, in consultation with the EAP adviser.

In addition to academic criteria for selection, the faculty committee looks for indications of the student's seriousness of purpose, maturity, and capacity to adapt to the experience of study abroad. As part of the planning process, students are required to consult with their college academic and department advisers.

Graduate Students

Graduate students can be accommodated at most EAP-affiliated host universities. Graduate students may take courses, conduct research, and participate in short-term language programs for a semester or year. Students must meet EAP minimum requirements, including language prerequisites, have completed at least one year of graduate work, and have the support of their academic department and graduate dean.

Transfer Students

Transfer students from other colleges and universities are eligible for EAP. Applications may be submitted prior to their first quarter at UCSD if appropriate for the specific program. Please contact the Programs Abroad Office for further information.

Safety, Student Conduct, and Parental Approval

EAP considers student health and safety while abroad one of its top priorities. All participants in EAP are covered by a mandatory health insurance policy while abroad. While no one can guarantee student security either in the U.S. or abroad, the program makes every reasonable effort to assure a safe environment in its programs abroad, and to counsel students on potential risks and necessary precautions. In return, participants have a responsibility to pay careful attention to safety and health information provided in pre-departure materials and at orientations in the U.S. and abroad.

It is anticipated that the students selected for the Education Abroad Program will be of high caliber, committed to profiting from both the intellectual and social aspects of the experience. Since they will be guests in another country and another university, their conduct will reflect on both the University of California and the United States.

Participation in the program by students who are minors must be approved by their parents or guardians. In approving such participation, parents and guardians should be aware that a greater degree of personal freedom is afforded to students in the foreign university and that the University of California cannot take responsibility for closely supervising the activities of individual students. The directors of the centers will be available to students with problems and will maintain close contact with the student group as a whole. The university provides for comprehensive medical and hospitalization coverage for all participants.

UCSD Opportunities Abroad Program

Tonia Luo, *OAP Adviser*

Students interested in going abroad should also investigate possibilities through the Opportunities Abroad Program which can assist with placement in a wide range of other academic programs. These programs include study for an academic year, semester, quarter, or summer. They may be sponsored by other U.S. universities, or include direct enrollment in foreign institutions. Academic credit may also be earned on a number of overseas internship programs which combine work experience and courses.

Students going abroad through the Opportunities Abroad Program earn transfer credit from the sponsoring institution. Courses taken abroad may satisfy general-education, major or minor requirements, depending on department or college approval. Federal and state financial aid for approved plans of study abroad is available. Special study abroad scholarships are also available.

In addition to these academic programs, the Programs Abroad Office and its extensive resource library can assist students in selecting a wide range of volunteer, paid work, and educational travel programs.

Eleanor Roosevelt College

The Making of the Modern World/Writing Program

OFFICE: Eleanor Roosevelt College Writing Program, ERC Administration Building

See "The Making of the Modern World" program for Eleanor Roosevelt Writing.

Eleanor Roosevelt College Honors Program

OFFICE: Provost, Eleanor Roosevelt College, ERC Administration Building

Honors programs at Eleanor Roosevelt College have been established to provide exceptionally motivated and capable students with enhanced educational experiences through close interaction with faculty and other honors students. There are two main components to the program: the Freshman Honors Program and the Sophomore Honors Research Project. Participation in either is by invitation.

In the fall quarter of their freshman year, selected students are invited to enroll in the Freshman Honors Seminar, a two- to three-quarter course. During the fall quarter, students meet with a variety of faculty members to learn more about their research, and about academic enrichment opportunities at UCSD. The seminar continues during the winter quarter, focusing on an international theme with faculty speakers.

Honors students may receive opportunities for particular cultural and social events. Second-year students with GPAs of 3.5 or higher have the opportunity to pursue independent study with individual faculty.

Additional honors opportunities are offered in the Making of the Modern World (MMW) sequence. Students with excellent grades in MMW 1, 2, and 3 and high cumulative grade-point averages are eligible to take MMW 4H, 5H, and 6H. Students attend regular course lectures, but meet in separate honors sections. They may also be invited to special guest lectures and enrichment activities connected with MMW.

There are also opportunities for university-wide honors, including provost's honors. Students who maintain a GPA of 3.5 for a full academic year are awarded certificates of merit by the college. UCSD's reputation for excellence is also reflected in the numbers of students who enroll in departmental senior honors programs and who earn college or university honors or election to Phi Beta Kappa.

10. ERC Freshman Honors Seminar (0)
Weekly seminar with faculty members from a variety of disciplines. This seminar provides students with the opportunity to learn more about research and scholarly activities available to them, and acquaints them with UCSD faculty members. *Prerequisite: by invitation only.* Pass/Not Pass grades only.

20. Freshman Honors Seminar: International Themes (1)
This weekly seminar focuses on a chosen international theme with faculty speakers. The structure of the seminar is informal, giving students the opportunity to participate in interactive discussions. *Prerequisite: by invitation only.* Pass/Not Pass only. May be taken for credit two times.

92. Honors Project (2)
Individual project on a topic chosen by the student, done under direction of a faculty member. *Prerequisite: by invitation only.* Pass/Not Pass only. Repeatable for credit twice, up to a total of six units overthree quarters.

196. Honors Project (4)
Senior thesis research project for students who have been accepted into the Eleanor Roosevelt College Individual Studies major. Project will be carried out under supervision of one or more faculty members. Depending on scope of the project, may be taken for four or eight units of credit in a single quarter, or eight units distributed over two quarters. *Prerequisite: admission to Eleanor Roosevelt Individual Studies major.*

199. ERC Independent Studies (4)
The content of this independent study course, which may not duplicate any existing course on campus, will be determined by a supervising faculty member and tailored to fit specific content needs of students pursuing the Eleanor Roosevelt College Individual Studies major. *Prerequisite: admission to ERC Individual Studies major.*

Eleanor Roosevelt Seminar

OFFICE: Provost, Eleanor Roosevelt College, ERC Administration Building

90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by the faculty. *Prerequisite: none.* Pass/Not Pass only.

Engineering, Jacobs School of

OFFICE: 7310 Engineering Building Unit 1, Warren Mall
http://www.jacobsschool.ucsd.edu

The Irwin and Joan Jacobs School of Engineering at UCSD comprises the Departments of Bioengineering (BE), Computer Science and Engineering (CSE), Electrical and Computer Engineering (ECE), Mechanical and Aerospace Engineering (MAE), and Structural Engineering (SE). The Jacobs School is directed by the dean of engineering. The departments offer seventeen undergraduate programs that fall into three categories: impacted, pre-major, and open major programs as well as many graduate degree programs. For a complete list of engineering undergraduate and graduate programs, please visit our Web site at http://www.jacobsschool.ucsd.edu. Students interested in engineering should consult the Web site and the individual department listings which follow this section of the catalog.

UCSD's six undergraduate colleges differ in their general-education requirements. Prospective students should review the general-education requirements and take them into account when planning their college curriculum.

Acceptance to the Jacobs School of Engineering

Student demand exceeds program capacity in several of the undergraduate majors. Owing to limited departmental resources, major programs to which more students apply than can be accepted have been declared impacted majors. Acceptance into an impacted engineering major is based on academic excellence demonstrated in high school or at a community college. Acceptance will be granted to the maximum number of students in each of these impacted major programs consistent with maintaining acceptable program quality and in compliance with admissions procedures and criteria approved by the Academic Senate's Committee on Educational Policy.

Remember that admission to the university and to a college does not guarantee acceptance to an impacted major.

FRESHMAN

Freshmen are admitted to engineering majors in one of three ways: open majors, pre-majors and impacted majors.

Open Majors

The following seven majors are open to all admitted UCSD students: aerospace engineering, chemical engineering (offered through the Chemical Engineering Program), engineering science (offered through MAE department), engineering sciences (offered through SE department), environmental engineering, mechanical engineering, and structural engineering. All applicants who have been accepted to UCSD and indicated a pre-major or open engineering major on their application are placed directly into that major.

Pre-major Programs

There are two engineering pre-major programs offered: (1) bioengineering: pre-medical and (2) engineering physics. Incoming freshmen who identified either of these pre-majors as their first choice on their UCSD admissions application are accepted directly into these pre-majors upon admission to UCSD. Subsequent acceptance to the major is dependent on performance in selected mathematics, science, and engineering screening courses as well as competitive grade-point average in the pre-major screening courses.

Pre-major engineering students are expected to apply for acceptance to the major during the spring quarter of their freshman year. Acceptance to the major is based on the grade-point average in the screening courses only. The grade-point average required for acceptance to the major by pre-majors is set

individually by each engineering program. Pre-majors should consult their departments concerning the appropriate screening courses and the current grade-point average standards for acceptance. In addition to the courses required by the departments, it is expected that all pre-major students will take twelve to eighteen units of general-education college requirements during their first year.

Pre-major engineering students who are not able to apply before the end of their third quarter, or who wish to reapply following an unsuccessful application, must contact their department as soon as possible for further advising as **acceptance to any engineering major will not be considered after six quarters of enrollment.**

Impacted Majors

The following six engineering majors are impacted: bioengineering, bioengineering: biotechnology, computer engineering, computer science, and electrical engineering. Applicants must indicate one of these impacted majors as their first choice on their UC application in order to be considered for acceptance to the major by the Jacobs School. The Jacobs School will subsequently notify all engineering students admitted to UCSD of their acceptance status.

Effective fall 2001, this selection is based on the freshman review criteria (Comprehensive Review) administered by the UCSD Office of Admissions and Relations with Schools.

It is strongly suggested that all students accepted into engineering programs consult their department's academic adviser at an early stage to plan their lower-division engineering courses, and that they consult with a college academic counselor to arrange general-education courses around the required screening courses. Students admitted fall quarter should attend the engineering department's orientation meetings during Welcome Week.

Bioinformatics Programs

Students interested in applying to either the bioengineering: bioinformatics major (offered by the bioengineering department), or the computer science major with a specialization in bioinformatics (offered by the computer science and engineering department) should consult individual department listings which follow this section of the catalog.

TRANSFERS

Following California's Master Plan for Higher Education, The Jacobs School of Engineering gives high priority to students transferring from California community colleges.

Transfer students are admitted to engineering majors in one of three ways: open majors, pre-majors, and impacted majors. All applicants who have been accepted to UCSD and indicated a **pre-major** or open engineering major on their application are placed directly into that major.

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

Open Majors

The following seven majors are open to all admitted UCSD students: aerospace engineering, chemical engineering (offered through the Chemical Engineering Program), engineering science (offered through MAE), engineering sciences (offered through SE), environmental engineering, mechanical engineering, and structural engineering. All transfer applicants who have been admitted to UCSD and indicated an open engineering major on their application are placed directly into that major.

Pre-major Programs

There are two engineering pre-major programs offered: (1) bioengineering: pre-medical and (2) engineering physics. Subsequent acceptance to the major is dependent on performance in selected mathematics, science, and engineering screening courses as well as competitive grade-point average in the pre-major screening courses.

Pre-major transfer engineering students are expected to apply for acceptance to the major during their third quarter of their first year at UCSD. Acceptance to the major is based on the grade-point average in the screening courses only. The grade-point average required for acceptance to the major by pre-majors is set individually by each engineering program. Pre-majors should consult their departments concerning the appropriate screening courses and the current grade-point average standards for acceptance. In addition to the courses required by the departments, it is expected that all pre-major students will take twelve to eighteen units of general-education college requirements during their first year.

Pre-major transfer engineering students must apply to the major before the end of their third quarter as acceptance to any engineering major by a transfer student will not be considered after the end the of third quarter of enrollment.

Impacted Majors

Since acceptance to impacted engineering majors is quite competitive for freshman and transfer applicants alike, academic standards are high. Transferring students must demonstrate both the completion of most of their lower-division courses at the community college, and a high level of academic competence (GPA) in these courses.

The Jacobs School evaluates transfer students who choose impacted engineering major programs as their first choice major on their UC application. Those seeking acceptance to the following impacted engineering majors: bioengineering and bioengineering: biotechnology, computer science, computer engineering, and electrical engineering will have their community college work evaluated by the Jacobs School of Engineering.

Acceptance to impacted majors may be limited to the best transfer applicants, e.g., those

who have been admitted to UCSD with the most complete lower-division preparation and the highest college grade-point averages. Since acceptance is restricted to these majors, **transfer students are encouraged to apply to more than one major degree program.**

It is strongly suggested that all students accepted into engineering programs consult their department's academic adviser at an early stage to plan their lower-division engineering courses, and that they consult with a college academic counselor to arrange general-education courses around the required screening courses. Students admitted fall quarter should attend the engineering department's orientation meetings during Welcome Week.

For specific program requirements for transfer students, please refer to the appropriate department's listing which follow this section of the catalog.

Bioinformatics Programs

Students interested in applying to either the bioengineering: bioinformatics major (offered by the bioengineering department), or the computer science major with a specialization in bioinformatics (offered by the computer science and engineering department) should consult individual department listings which follow this section of the catalog.

CONTINUING UCSD STUDENTS

UCSD undergraduate students who were not accepted into an engineering major as entering students may, *with engineering departmental approval*, change their major to any **non-impacted engineering major**. Interested students should make an appointment to speak with the departmental undergraduate adviser prior to changing their major.

EXCEPTIONAL ADMISSION PROGRAM (CSE AND ECE IMPACTED MAJORS)

Space permitting and at their sole discretion, the Departments of Computer Science and Engineering and Electrical and Computer Engineering may periodically grant admission to the computer engineering (CE), computer science (CS), or electrical engineering (EE) majors to a small number of academically exceptional UCSD undergraduate students who were not admitted to these majors as entering students. Refer to the department section in this catalog for program requirements and information. At this time, the Department of Bioengineering does not participate in the Exceptional Admission Program for its impacted major programs.

Access of Non-Engineering Majors to the Jacobs School of Engineering Courses

The number of students enrolled in some courses offered by the Jacobs School of Engineering must be restricted to meet the resources available. Students who have successfully completed all prerequisite courses will be enrolled in these restricted courses in the following order:

1. students accepted by the department to a major curriculum
2. students accepted by the department to a minor curriculum
3. students fulfilling a requirement for another major
4. all others, with permission of the department and instructor

Students should check with the departments concerning the limitations on specific courses and the requirements needed prior to attempting to enroll.

Double Majors and Minors

It is the policy of the Jacobs School of Engineering not to approve double majors within engineering. Students who qualify for admission to graduate school and who have the extra time are encouraged to consider co-terminal B.S./M.S. degrees in one or two engineering disciplines. Engineering minors may be taken only by non-engineering majors.

Engineering Student Services (ESS)

The Jacobs School of Engineering supports several programs that promote academic and professional development for undergraduate students across all engineering departments. **ESS** programs are coordinated with the faculty and departments and include the undergraduate Triton Engineering Student Council (TESC) and engineering student professional organizations, Career Connections, the Internship Assistance Program, and Pre-College Outreach.

The Jacobs School also offers activities and services to support economically and educationally disadvantaged students as they begin engineering studies at UCSD and facilitate their retention and graduation in engineering disciplines.

All engineering students are encouraged to become involved with ESS programs. Further information can be obtained at the ESS office in Room 1400, Engineering Building Unit I, or via email at ess@soe.ucsd.edu.

COURSES

101. Team Engineering (4)
Fundamental principles of team engineering practice. Team formation and leadership, project creation and management, statistical tools for quality improvement, engineering business economics, law, and ethics. Interdisciplinary student teams will research, refine, and propose the design, manufacture, and marketing of a novel engineering product. Four hours of lecture. *Prerequisite: a course in probability of statistics.*

201. Venture Mechanics (4)
Examines the engineering/entrepreneurism interface. Discovery, development, and implementation of new product ideas. Understanding markets, competitors, and selling innovations. Cultivating effective working relationships between research, engineering, manufacturing, and marketing elements of an organization. Priority enrollment given to engineering majors.

202. Enterprise Dynamics (4)
Case studies of start-ups, strategic technology management, practice in use of industrial decision-making tools, and speakers from successful firms combined with experience in making management decisions dynamically in a competitive computer-simulated enterprise. Field study of ongoing processes in a local high technology company. Priority enrollment given to engineering majors.

203. Applied Innovations (4)
Course includes the examination of business plans developed by early stage technology businesses. Students expected to work on the development of business plans for real, innovative business organizations. Will explore all of the business research and analysis that needs to be undertaken in order to develop a complete business plan. Completion of ENG 201 or ENG 202 preferred.

204. Theory and Practice of University Teaching (2)
Teaching and learning at the college/university level. Readings in engineering and cognitive science, plus opportunities for teaching and evaluating college level students. Covers theoretical underpinnings and the practice of teaching. Participation in some practicum teaching experience will be required.

Applied Mechanics and Engineering Sciences (AMES)

Program name changed to *Mechanical and Aerospace Engineering (MAE).*

Bioengineering

A. G. Tsai, Ph.D., *Associate Research Scientist*
S. Usami, M.D., Ph.D., *Research Scientist*
T. Usyk, Ph.D., *Assistant Project Scientist*
N. Wang, M.D., *Assistant Research Scientist*
Y. H. Zhao, Ph.D., *Assistant Project Scientist*

Departmental Focus

Bioengineering is an interdisciplinary major in which the principles and tools of traditional engineering fields, such as mechanical, materials, electrical, and chemical engineering, are applied to biomedical problems. Engineering plays an increasingly important role in medicine in projects that range from basic research in physiology to advances in biotechnology and the improvement of health care delivery. By its very nature, bioengineering is broad and requires a foundation in the engineering sciences as well as in physiology and other biological sciences.

The overall mission of the Department of Bioengineering is to provide students with an education that enables successful, innovative, and lifelong careers in bioengineering industries and professions, including

- depth, breadth, and creativity in the central areas of bioengineering, its underlying mathematical, physical and biological sciences, and related technologies
- effective communication, learning, and teamwork skills that facilitate bioengineering practice, continued professional advancement, and adaptation
- a recognition of professional and social responsibilities, including sensitivity to ethical and health-related issues

At the undergraduate level, the department offers several four-year engineering majors. One leads to a **B.S. degree in Bioengineering**. This major prepares students for careers in the biomedical industry and for further education in graduate school. Students completing the B.S. degree in Bioengineering have sufficient preparation to be employed in traditional engineering areas other than the biomedical industry, if they wish. This program addresses the bioengineering topics of biomechanics, biotransport, bioinstrumentation, bioelectricity, biosystems, and biomaterials, and the complementary fields of systems and organ-level physiology. Education in these areas allows application of bioengineering and scientific principles to the development of medical devices and technologies that benefit human health by advancing methods for effective diagnosis and treatment of disease. The bioengineering program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (EAC/ABET).

The department also offers a **B.S. degree in Bioengineering: Biotechnology**. This is a four-year engineering curriculum that prepares students for careers in the biotechnology industry and for further education in graduate school. The curriculum has a strong engineering foundation with emphasis on biochemical process applications. This program addresses the bioengineering topics of biochemistry and metabolism, kinetics, biotransport, biosystems, bioreactors, bioseparations, tissue engineering, and the complementary fields of cellular physiology. Education in these areas allows application of bioengineering and

physicochemical principles to cellular and molecular biology, with the applications that benefit human health. The Bioengineering: Biotechnology program is accredited by EAC/ABET.

In addition, the department offers a four-year major leading to a **B.S. degree in Bioengineering: Premedical.** This curriculum is designed to meet the requirements for admission to medical schools and is also suitable for those planning to enter graduate school in bioengineering, physiology, neurosciences, or related fields. This program provides a quantitative understanding of the engineering design of the body, as well as certain technologies used in medical practice. It has less engineering content but more biological sciences and is one of many majors that can serve as preparation for further training in medical, veterinary, or allied health professions. Some graduates of this program also go on to work in industry.

The department also offers a major leading to a **B.S. degree in Bioengineering: Bioinformatics.** Bioinformatics is the study of the flow of information (genetic, metabolic, and regulatory) in living systems to provide an understanding of the properties of cells and organisms. This major has been developed by the Departments of Bioengineering, Chemistry and Biochemistry, Computer Science and Engineering, and the Division of Biology. Students wishing to major in bioinformatics may apply through any of these departments or the division. The Bioinformatics major in Bioengineering emphasizes systems engineering and model-based approaches to interpreting and integrating bioinformatics data. The Bioinformatics major prepares students for careers in the pharmaceutical, biotechnology, and biomedical software industries, and for further studies in graduate school.

The programs and curricula of bioengineering emphasize education in the fundamentals of engineering sciences that form the common basis of all engineering subspecialties. Education with this emphasis is intended to provide students with a solid engineering foundation for a career in which engineering practice may change rapidly. In addition, elements of bioengineering design are incorporated at every level in the curricula. This is accomplished by integration of laboratory experimentation, computer applications, and exposure to real bioengineering problems throughout the program. Students also work as teams in senior design project courses to solve multidisciplinary bioengineering problems suggested by industrial and clinical experience.

At the graduate level, specialized curricula lead to the **M.S., M.Eng. (Master of Engineering),** and **Ph.D.** degrees, as well as an integrated **B.S./M.S.** degree. In addition to the Ph.D. degree, the department offers a **Ph.D. degree with a specialization in Bioinformatics.** It is intended for students who have an interdisciplinary persuasion to work across computers, biology, medicine, and engineering. Bioinformatics characterizes the flow of information in living systems. For further information on the specialization please consult with the Student Affairs Office. There are also **M.D./M.S., M.D./M.Eng.** and **M.D./Ph.D.** degrees offered in conjunction with UCSD Medical School, pending independent admission to the Medical School. The M.Eng. degree is a terminal professional degree whereas the M.S. and Ph.D. degrees are research programs. *(See section on master's degree programs.)* The graduate programs are characterized by strong interdisciplinary relationships with the other engineering departments and Departments of Physics, Mathematics, Biology, Chemistry and Biochemistry, Medicine, and others, as well as with campus organizations such as the Whitaker Institute for Biomedical Engineering, Institute for Mechanics and Materials, and the School of Medicine.

The Undergraduate Program

Major Requirements

Specific course requirements for each of the majors are outlined in tables below. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are included in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and obtain at least a C– grade in each course required for the major. All courses required for the major must be taken for a letter grade.

Deviations from the required programs of study must be approved by the Undergraduate Studies Committee *prior* to taking alternative courses. In addition, students must obtain departmental approval of technical elective (TE) course selections *prior* to taking the course. In the ABET-accredited programs, TE courses are restricted to those that meet ABET standards. Courses such as Bioengineering 196, 197, and 198 are encouraged, but they do not count as upper-division technical electives. Bioengineering 195 and 199 can be used as technical electives under certain conditions. Policy information may be obtained from the Student Affairs Office.

Students with accelerated academic preparation at admission to the university may vary the scheduling of lower-division courses such as mathematics, physics, and chemistry, but must first consult the department. Most lower-division courses are offered more than once each year to permit students some flexibility in their program scheduling. However, most Bioengineering upper-division courses are taught only once each year. **Deviations in the scheduling of upper-division bioengineering courses are strongly discouraged, as such changes usually lead to a delay in graduation.** The curricula shown in the tables below are consistent with the current scheduling of classes.

Minors are not offered in bioengineering, and double major options are restricted. Students interested in double majors should consult the Student Affairs Office as early as possible.

General-Education/ College Requirements

For graduation, each student must satisfy general-education course requirements determined by the student's college, as well as the major requirements determined by the department. The six colleges at UCSD require different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the curriculum and the breadth of general education.

The bioengineering programs allow for humanities and social science (HSS) courses so that students can fulfill their college requirements. In the bioengineering ABET-accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges require more than the ten HSS courses indicated in the *Bioengineering, Bioengineering: Biotechnology, and Bioengineering: Bioinformatics* curriculum tables. Accordingly, students in these colleges may take longer to graduate than the four years, indicated in the schedule. Students

must consult with their colleges to determine which HSS courses to take.

Policies and Procedures

Transfer Student Admission into Bioengineering, Bioengineering: Biotechnology, Bioengineering: Premedical, or Bioengineering: Bioinformatics

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)

- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

ADMISSION TO BIOENGINEERING OR BIOENGINEERING: BIOTECHNOLOGY

Because of heavy student interest in the Bioengineering and Bioengineering: Biotechnology majors, and the limited resources available to accommodate this demand, maintenance of a high quality program makes it necessary to limit enrollments to the most qualified students.

Freshman Students

Freshman students who have excelled in high school and have declared Bioengineering or Bioengineering: Biotechnology on their UCSD application are eligible for direct admission into those majors. These students will be notified directly by the Jacobs School of Engineering whether they have been admitted into their chosen major, based on admissions criteria and their ranking in the applicant pool. The only way for a student to become a Bioengineering or Bioengineering: Biotechnology major after enrolling as a freshman at UCSD is to be directly admitted at the time of entrance into UCSD.

Transfer Students

Admission of transfer applicants into Bioengineering or Bioengineering: Biotechnology is limited to those who have demonstrated a high level of achievement commensurate with the prospect of success in these majors. Successful applicants must have completed substantial training at the community college and must have achieved a high level of academic performance there. The required minimum of ninety quarter transfer units must include eighteen quarter-units of calculus, twelve quarter-units of calculus-based physics, and the highest level computer science course offered at their community college. Beginning fall 2006, ten quarter units of general chemistry (including laboratory), will be part of the required transfer units.

Applicants seeking admission as transfer students will be considered for direct admission into the Bioengineering and Bioengineering: Biotechnology majors in the Department of Bioengineering. The only way to become a Bioengineering or Bioengineering: Biotechnology major is to be directly admitted as an entering transfer student. Although the actual required GPA cutoff depends on the number of openings, at least a 3.2 GPA in the community college transfer courses, and a 3.4 GPA in math, physics, and computer science courses, are likely to be needed to gain admission.

ADMISSION TO BIOENGINEERING: PREMEDICAL

Freshman Students

Students intending to complete a Bioengineering: Premedical major are initially identified as Pre-Bioengineering: Premedical majors and admitted into a pre-major status. Pre-Bioengineering: Premedical majors who have achieved a GPA of 3.0 or better in the eight required premajor courses (Mathematics 20A-B-C; Physics 2A-B; Chemistry 6A; MAE 9 or 10, and one other pre-bioengineering course by the end of the freshman year) are assured of admission into the Bioengineering: Premedical major. Students who have not completed the pre-major courses or achieved the necessary GPA for entry into the Bioengineering: Premedical major by the end of the freshman year may still enter the Bioengineering: Premedical major if these requirements have been satisfied before the end of the sixth quarter of study at UCSD. Students need to contact the Student Affairs Office at the end of the appropriate quarter to check on their status and complete an Undergraduate Change of Major Request form. Pre-Bioengineering: Premedical majors not admitted into the Bioengineering: Premedical major by the end of the sixth quarter of study at UCSD will automatically have their major converted from "Pre-Bioengineering: Premedical" to "Undeclared" by the department.

Transfer Students

Students are initially identified as "pre-majors", and will be admitted to the Bioengine-ering: Premedical major based on academic performance in ten prerequisite courses. It is expected that students will have completed or have in progress all ten prerequisite courses when applying to UCSD. Students are required to achieve a GPA of 3.0 or better in the ten prerequisite premajor courses (Mathematics 20A-B-C; Physics 2A-B; Chemistry 6A; MAE 9 or 10, and three other courses required by the major) by the end of the third quarter of study at UCSD. **Note**: *Two of the prerequisite courses must be taken at UCSD, one of which must be an upper-division course.* Students need to contact the Student Affairs Office at the end of their third quarter at UCSD to check on their status and complete an Undergraduate Change of Major Request form.

ADMISSION TO BIOENGINEERING: BIOINFORMATICS

As the number of pre-majors and majors will be limited as described in the catalog section on Bioinformatics, student demand may exceed program capacity. Therefore, admission to the major is not guaranteed and will be based on academic excellence, as described below. Since Bioinformatics is an interdisciplinary major, a Steering Committee involving faculty from the participating departments will select among the best candidates applying and recommended through each department, while insuring active participation of the departments and division offering the major.

Freshman Students

Bioengineering: Bioinformatics has been recently developed, and there is a multi-step process into this major for students entering UCSD as freshmen. First, high school students should apply to UCSD for direct admission into the Bioengineering, Bioengineering: Biotechnology, or Pre-Bioengineering: Premedical major. Those admitted should then complete the freshman courses, prescribed in the preceding Table for the Bioengineering: Bioinformatics major. After completing BILD 1, Chem. 6A, Math. 20B, and Math. 20C during the freshman year, such students can apply to Pre-Bioengineering: Bioinformatics. Admission will be based primarily on the GPA in the four preceding courses, but also on a written statement, completion of the other listed requirements, and overall academic excellence. Students approved for Pre-Bioengineering: Bioinformatics should then continue with the sophomore courses, prescribed in the preceding Table, including CSE 11 and 12 which serve as two additional screening courses. By the end of the sophomore year, these students can then apply to major in Bioengineering:

Bioinformatics. Admission to the Bioengineering: Bioinformatics major will be based on the GPA in all six screening courses. The final decision on admission to the pre-major and major will be made by the Bioinformatics Steering Committee, in consultation with the departments. Those students who are not selected for the Bioengineering: Bioinformatics major, will be eligible to remain in the Department of Bioengineering in the status in which they were originally admitted.

Continuing Students

Students who have not declared the Pre-Bioengineering: Bioinformatics major, but who have completed the screening courses for the Bioengineering: Bioinformatics major, may apply for entry to the program after six quarters (the end of sophomore year). Students will be admitted on a space-available basis, after pre-majors have been screened for admission to the major.

Transfer Students

As Bioengineering: Bioinformatics has been recently developed, there is a multi-step process into this major for transfer students. First, such students should complete at their community colleges as many of the following courses as possible, with a strong GPA that is competitive with that of UCSD students applying for entry into this major. The required courses include a year of calculus (equivalent to Math. 20A, 20B, and 20C), two quarters of biology (equivalent to BILD 1 and 2), a year of general chemistry with laboratory (equivalent to Chem. 6A, 6B, 6C, and 6BL), and the highest level programming courses (equivalent to CSE 11 and 12). Next, such students should apply to UCSD for direct admission into the Bioengineering, Bioengineering: Bio-technology, or Pre-Bioengineering: Premedi-cal major. After completing the necessary screening requirements equivalent to those that apply for students entering UCSD as freshmen, such students can apply to Pre-Bioengineering: Bioinformatics and subsequently apply to major in Bioengineering: Bioinformatics. Admission will be based primarily on the GPA in the required screening courses, but also on a written statement, completion of the other listed requirements and overall academic excellence. The final decision on admission to the pre-major and major will be made by the Bioinformatics Steering Committee, in consultation with the departments. Those who are not selected for the Bioengineering: Bioinformatics major, will be eligible to remain in the Department of Bioengineering in the status in which they were originally admitted.

ACADEMIC ADVISING

Upon admission to the major, students are encouraged to seek advice from departmental staff in the Bioengineering Student Affairs Office, Room 141, Powell-Focht Bioengineering Hall, to plan a program of study. Students are expected to chart their progress within their major. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval of the undergraduate adviser and the Undergraduate Studies Committee. As the department may make a small number of course and/or curricular changes every year, it is imperative that students consult the undergraduate adviser on an annual basis.

To enroll in any courses required for a bioengineering major, a student must have satisfied prerequisite courses with a C– or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Furthermore, the majority of bioengineering courses have enrollment restrictions and are open only to students who have been admitted to a bioengineering pre-major or major. Where these restrictions apply, the registrar will not enroll other students except by department approval. The department expects students to adhere to these policies and enroll in courses accordingly. Students are advised that they may be dropped from course rosters if prerequisites and/or performance standards have not been met.

Bioengineering courses are typically offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed for timely graduation. If this occurs, students should seek immediate departmental advice.

Programmatic advice may be obtained from the Student Affairs Office. In addition, technical advice may be obtained from a specific bioengineering faculty adviser assigned to each student upon admission to the major.

PROGRAM ALTERATIONS, EXCEPTIONS TO REQUIREMENTS, AND SPECIAL PROGRAMS

Exceptions to any program or course requirements are possible if approved by the Undergraduate Studies Committee *before* the courses in question are taken. Petitions may be obtained from the Bioengineering Student Affairs Office.

Independent Study for Undergraduates

Under the guidance of a bioengineering faculty member, lower- and upper-division level bioengineering students have opportunities to participate in independent study and research.

Upper-division bioengineering students may take Bioengineering 199, Independent Study for Undergraduates. Lower-division bioengineering students may enroll in Bioengineering 99 which is similar to Bioengineering 199, except that less background in the curriculum is needed. These courses are taken as electives on a P/NP basis. Under certain conditions, however, a Bioengineering 199 course may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify a faculty member with whom they wish to work and propose a two-quarter research or study topic for *Bioengineering* (the other technical elective must be an engineering course) and *Bioengineering: Biotechnology* majors, and a one-quarter research topic for *Bioengineering: Premedical* majors. After obtaining the faculty adviser's concurrence on the topic and scope of the study, the student must submit a *Special Studies* course form (each quarter) and a *Bioengineering 199 as Technical Elective Contract* to the Undergraduate Studies Committee. These forms must be completed, approved, and processed prior to the beginning of the quarter in which the course is to be taken.

Teaching

Students interested in participating in the instructional activities of the department may take Bioengineering 195, Undergraduate Teaching as an elective on a P/NP basis. Under certain conditions, it may be used to satisfy upper-division technical elective course requirements for the *Bioengineering: Premedical* major. Policy in this regard may be obtained from the Student Affairs Office.

Integrated Bachelor's/ Master's Degree Program

An integrated program leading to a bachelor of science and a master of science degree in bioengineering is offered to undergraduate students who are enrolled in any of the major programs offered by the Department of Bioengineering. Students interested in obtaining the

M.S. degree within one year following completion of the B.S. degree may apply to the department for admission to the program during the fourth quarter *prior* to the receipt of the B.S. degree. The program is open only to UCSD undergraduates.

To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and have an upper-division GPA of 3.5 or better and a 3.0 overall UC GPA. Twelve units of bioengineering graduate level courses must be completed during the student's senior undergraduate year, *in addition* to the requirements for the bachelor's degree; these twelve units will count toward the requirements for the master's degree only and must be taken for a letter grade. It is the responsibility of the prospective B.S./M.S. student to select a bioengineering faculty member who is willing to serve as the student's adviser. The student will also arrange (with their faculty adviser's approval) a schedule of courses for the senior year that will fulfill the requirements for the B.S. degree while also serving the program planned for the M.S. degree. Students are expected to meet the requirements for the M.S. degree in one year (three consecutive academic quarters) from the date of the receipt of the B.S. degree.

Industrial Internship Program and Graduate Industrial Training Program

The Department of Bioengineering offers two industrial programs: the **Industrial Internship Program** for undergraduates and the **Graduate Industrial Training Program** for graduate students. Both industrial programs are designed to complement the department's academic curriculum with practical industry experience. Students interested in these programs should contact the Bioengineering Industrial Internship Office (125 Powell-Focht Bioengineering Hall) well in advance of the quarter in which they would like to start their internship.

The Industrial Internship Program is available to undergraduate students who have completed all lower-division course requirements. Academic credit under Bioengineering 196, Bioengineering Industrial Internship can be earned by spending ten weeks or more as interns in an industrial setting. The intern may be involved in a range of activities including design, analysis, manufacturing, testing, regulatory affairs, etc., under the direction of a mentor in the workplace. At the completion of the internship experience, students are required to submit a brief report to the mentor and faculty adviser describing their activities.

The Graduate Industrial Training Program is designed for students in the Master of Engineering Degree Program. This program serves to significantly enhance the professional development of M.Eng. students in preparation for leadership in the bioengineering industry. Students will complete an independent industrial bioengineering project in the setting of a company under the direction of an industrial and faculty adviser.

The Graduate Program

Admission to the M.Eng. M.S., and Ph.D., as well as to the Ph.D. with a specialization in bioinformatics programs, is in accordance with the general requirements of the graduate division. Applicants are required to have completed a B.S. and/or M.S. degree by time of admission in a branch of engineering, natural sciences, mathematics, or quantitative life sciences. M.S. and Ph.D. applicants must have a GPA of 3.4 or better in technical courses. M.Eng. applicants should have competitive grades (greater than a 3.0 GPA). All applicants must submit GRE General Test scores, as well as three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study. Attention will be paid to the background and statement of purpose to ensure that they are consistent with the goals of the program. For example, whereas undergraduate research experience and the intention to pursue a research career or advanced studies are qualifications and interests typically well-suited to the M.S. program, industrial experience and the intention to pursue a professional career are better suited to the M.Eng. program.

A minimum score of 550 (paperbased) or 213 (computer based) on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the TOEFL examination are strongly encouraged to enroll in an English as a Second Language program before beginning graduate work. (UCSD Extension offers an English language program during the summer as well as the academic year.) Admission to the M.S. or Ph.D. is designated when the applicants are judged to be appropriately qualified to pursue the degree requested at the time of application. Applicants are considered for admission for the fall quarter only.

A new graduate student who does not meet the prerequisites of required courses in the M.Eng., M.S., or Ph.D. curricula may have to take some basic courses to make up the deficiency. Thus, a student deficient in mathematics and mechanics may have to take Math. 110, CENG 103B or Bioengineering 103B, Bioengineering 110, 122A-B in the first year and Bioengineering 250A-B, 253 in the second year. A student deficient in biology and chemistry may have to take Chemistry 131 or Bioengineering 130 and BIPN 100, 102 in the first year and Bioengineering 230A-B-C in the second year.

Non-matriculated students are welcome to seek enrollment in bioengineering courses via UCSD Extension's concurrent registration program, but such enrollment in a bioengineering graduate course must be approved by the instructor.

Master of Science Degree Programs

The Master of Science **(M.S.) program** is intended to extend and broaden an undergraduate background and equip the graduates with fundamental knowledge in bioengineering. It is intended for those students wishing to gain experience in academic research, especially those considering continuing graduate studies at the doctoral level. The M.S. degree may be terminal or may be obtained on the way to the Ph.D. or by completing the course requirements of the M.S. degree and by passing the Ph.D. departmental examination.

An individualized program is agreed upon by the student and a faculty adviser. The plan of study must involve both course work and research, culminating in the preparation of a thesis.

A total of **forty-eight units** of credit is required:

- **Thirty-six units in course work**
  Nine courses, of which six are core courses, described below, and three are elective courses which can be drawn from Bioengineering course offerings, other engineering/science course offerings, and School

of Medicine courses. *The faculty adviser must approve the three elective courses.*

- **Twelve units in research**
  Bioengineering Research (BENG 299) under the direction of the chosen faculty research adviser.

A thesis based on the research is written and subsequently reviewed by the thesis adviser and two other faculty members appointed by the dean of Graduate Studies. The oral defense of the thesis constitutes the departmental master's exam.

REQUIRED CORE COURSES FOR M.S. DEGREE PROGRAM

Integrative Bioengineering

- BENG 250A. Biomechanics
- BENG 253. Biomedical Transport Phenomena
- A third required course chosen from a list of approved courses that satisfy the Integrative Bioengineering requirement i.e., Advanced Biomechanics 250B, Biomedical Imaging BENG 280B, Bioinformatics III—Genomic Analysis BENG 203, or other core Bioengineering graduate courses that satisfy the Integrative Bioengineering requirement as approved by the Graduate Studies Committee. A list of applicable approved courses is available from the Department of Bioengineering Student Affairs Office.

Life Science

- BENG 230A. Biochemistry
- BENG 230B. Cell and Molecular Biology
- BENG 230C. Cardiovascular Physiology

Restrictions to core course work requirements are as follows:

1. Units obtained in Bioengineering 281, or 299 or 501 may not be applied toward the course work requirement.
2. No more than a total of eight units of Bioengineering 296 and 298 may be applied toward the course work requirement.
3. No more than twelve units of upper-division 100-level Bioengineering courses may be applied toward the course work requirement.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements.

MASTER'S TIME LIMIT POLICY

Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to set individual deadlines if necessary.

A strong effort is made to schedule M.S.–level course offerings so that students may obtain their M.S. degree in one year of full-time study or two years of part-time study *(see regulations on part-time study under "Graduate Studies")*. Entering students who do not meet the prerequisites of these core courses may have to take some basic courses to make up the deficiency.

A candidate admitted for the M.S. degree who wishes to transfer to the Ph.D. program must consult the Student Affairs Office for the transfer before completion of the M.S. program.

CHANGE OF DEGREE AIM

Upon completion of the requirements for the M.S. degree, students are not automatically eligible for admission to the Ph.D. program.

M.S. candidates who wish to pursue a doctorate must submit an application for a change in status to the Graduate Studies Committee. The application must be approved and signed by a bioengineering faculty member who expects to serve as the student's Ph.D. adviser. Applications will be reviewed by an ad hoc faculty committee. If the committee recommends that the student has good potential for success in the doctoral program, the student will be given the opportunity to take an oral examination equivalent to the Ph.D. Departmental Qualifying Examination. At the time of that exam, an assessment will be made on admission to the Ph.D. program.

A change of status from a master's program to the doctoral program requires that the student meet the minimal grade-point average required by the department of doctoral candidates.

Master of Engineering Degree Program

The department offers a Master of Engineering **(M.Eng.) degree**. The purpose of this degree is to prepare design and project engineers for careers in the biomedical and biotechnology industries within the framework of the graduate program of the Department of Bioengineering. It is a terminal professional degree in engineering which includes a recognition of the importance of breadth in technical knowledge, sufficient electives to address job-specific interests and professional skills such as economics, management, and business. It is intended for students who are primarily interested in engineering design, development, manufacturing, and management within an industrial setting.

The M.Eng. program is a flexible, course-intensive terminal professional degree, designed to be completed in one academic year of full-time study. It does not require a research project, a thesis, or a comprehensive exam. However, students do have the option in enrolling for technical credit in BENG 295 *Bioengineering Design Project and Industrial Training* under the direction of a faculty adviser. This is done by participating in the Graduate Industrial Training Program which allows students to work in an industrial setting on bioengineering projects in order to gain practical experience. *(See section on **Industrial Internship Program** and **Graduate Industrial Training Program**.)* Students who may be interested in continuing to the Ph.D. program should apply to the M.S. program and not the terminal M.Eng. degree.

Students must select **six** courses from approved core areas, **three** additional approved technical elective courses from any graduate engineering program, and **three** general elective courses which may be drawn from the Bioengineering core areas, engineering technical electives or other non-technical courses. Such core courses and technical and general electives are described below. In selecting breadth courses, students must be mindful of the prerequisite requirements for some of the courses in the lists. The lists below are based on the current graduate course offerings of the bioengineering and other engineering departments. The Graduate Studies Committee will review the M.Eng. course lists annually and update them as course offerings change. Students must maintain at least a B average in the courses taken to fulfill the degree requirements.

Required Core Courses for M.Eng. Program (Six Required)

- Biomechanics and Transport Phenomena—BENG 250A-B, 253
- Tissue Engineering—BENG 241A-B-C
- Life Science—BENG 230A-B-C
- Other approved core graduate courses taught by Bioengineering faculty that satisfy the depth requirement of the M. Eng. degree as approved by the Graduate Studies Committee. A list of applicable approved courses is

available from the Department of Bioengineering Student Affairs Office.

Examples of Technical Electives for M.Eng. (Three Required)

BENG 295. Bioengineering Design Project (two-quarters, four units each)
MAE 231A-B-C. Solid Mechanics
MAE 210A-B-C. Fluid Mechanics
MAE 221A-B-C. Heat and Mass Transfer
MAE 229A. Mechanical Properties
CSE 202. Algorithm Design and Analysis
CSE 210. Principles of Software Engineering
CSE 250A. Artificial Intelligence
ECE 239. Nanometer-Scale Probes and Devices
ECE 251AN, BN. Digital Image Processing and Analysis

Examples of General Electives for M.Eng. (Three Required)

BENG 161A-B-C. Biochemical Engineering
BENG 186A-B-C. Principles of Biomaterials, Bioinstrumentation and Bioengineering Design.
IR/PS Management: IRGN 438, 439, 442, 444, 445, 420, 434, IRCO 420, 421
IR/PS International Issues: IRCO 401, IRGN 407, 411, 413, 418
MAE 133. Finite Element Method
Phys. 206. Biophysics

Sample M.Eng. Program of Study

FALL	WINTER	SPRING
BENG 230A	BENG 230B	BENG 230C
Tech Elec	BENG 250A	BENG 250C
Gen Elec	BENG 253	Tech Elec
Gen Elec	Tech Elec	Gen Elec

Doctoral Degree Program

The Bioengineering Ph.D. Program is intended to prepare students for a variety of careers in research and teaching. Therefore, depending on the student's background and ability, research is initiated as soon as possible. Bioengineering students have specific course requirements and must maintain a minimum grade-point average of 3.4 in these courses. Students, in consultation with their advisers, develop course programs that will prepare them for the Departmental Qualifying Examination and for their dissertation research. These programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Qualifying Examination may take any course for an S/U grade with the exception of courses required by the Departmental or Senate Qualifying Examination Committee. It is recommended that all bioengineering graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Qualifying Examination. Details can be obtained from the Student Affairs Office.

Doctoral Examinations

A bioengineering Ph.D. student is required to pass three examinations. The first is a Departmental Qualifying Examination which must be taken immediately following the candidate's first academic year of enrollment. The exam is designed to ensure that all successful candidates possess a firm command of the engineering and life science subjects that form the foundations of bioengineering research and their integration at a level appropriate for the doctorate. It is administered by a committee designated by the department, consisting of departmental faculty members and, in some cases, one other faculty member from a related academic department (e.g., MAE, ECE, Medicine). The scope of the oral examination includes the three broad areas that form the core first-year Ph.D. curriculum, namely engineering foundations, life science, and integrative bioengineering. The purpose of the exam is not merely to recapitulate the content of first-year courses, but rather to establish that students are able to synthesize this knowledge and apply it to solve problems in contemporary bioengineering research.

1. **Engineering Foundations**

Defined by the content of three graduate engineering courses drawn from the following:

BENG 202/CSE 257A. Bioinformatics II: Sequence and Structure Analysis
BENG 203. Bioinformatics III:Genomic Analysis
BENG 209/MAE 209. Continuum Mechanics Applied to Medicine/Biology
BENG 275. Computational Biomechanics
BENG 280A. Principles of Biomedical Imaging
CSE 202. Algorithm Design and Analysis
ECE 222A. Applied Electromagnetic Theory
ECE 238A. Thermodynamics of Solids
ECE 247A/BENG 247A. Advanced Biophotonics
ECE 247B/BENG 247B. Bioelectronics
ECE 247C/BENG 247C. Bionanotechnology
ECE 251AN. Digital Signal Processing
ECE 270A-B-C. Neurocomputing
MAE 210A. Fluid Mechanics (best suited to students with some undergraduate background in mechanics or mechanical engineering)
MAE 221A. Heat and Mass Transfer
MAE 223. Computational Fluid Dynamics
MAE 231A. Foundations of Solid Mechanics (best suited to students with some undergraduate background in mechanics or mechanical engineering)
MAE 233A. Fracture Mechanics
MAE 252. Chemical Reaction Engineering
MAE 280A. Linear Systems Theory
MAE 281A. Nonlinear Systems
MAE 290A. Numerical Methods in Science and Engineering
MATS 201B. Solid State Diffusion and Reaction Kinetics

Other topics may be approved by the Graduate Studies Committee

2. **Integrative Bioengineering**

Defined by the content of the following three bioengineering courses:

- BENG 250A. Biomechanics
- BENG 253. Biomedical Transport Phenomena
- A third required course chosen from a list of approved courses that satisfy the Integrative Bioengineering requirement i.e., Advanced Biomechanics BENG 250B, Biomedical Imaging BENG 280B, Systems Biology and Bioengineering: Building-In-Silico models BENG 213, or other core Bioengineering graduate courses that satisfy the Integrative Bioengineering requirement as approved by the Graduate Studies Committee. A list of applicable approved courses is available from the Department of Bioengineering Student Affairs Office.

3. **Life Science**

The life science subject area consists of the following topics: biochemistry, cell and molecular biology, organ physiology, and tissue engineering. These subject areas are defined by the contents of the following four courses:

- BENG 230B. Cell and Molecular Biology

- BENG 230C. Cardiovascular Physiology or BENG 230D. Respiratory and Renal Physiology
- BENG 241A. Foundations of Tissue Engineering
- BENG 230A. Biochemistry or CHEM 211. Metabolic Biochemistry

In addition to the above mentioned breadth requirements, students must complete the following courses in their second and subsequent years of study:

- At least two courses from an approved list that includes the continuation of Bioengineering Foundations course sequences, BENG 230D, Pharm. 201, Math. 283, and other bioengineering graduate course sequences.
- One quarter of BENG 501, Teaching Experience
- BENG 281, Seminar in Bioengineering (F,W,S)

Courses comprising subject areas as well as subsequent requirements, and composition of the examination committee must be approved by the Graduate Studies Committee. Students are advised to seek such approval well in advance of their expected examination date, preferably while planning graduate studies.

Teaching Experience is required of all bioengineering Ph.D. students prior to taking the Senate Qualifying Exam described below. Teaching experience is defined as service as a graduate student instructor in a course designated by the department. The total teaching requirement for new Ph.D. students is four quarters at 25 percent effort (ten hours per week). At least one quarter of teaching experience is required during the first year (prior to the departmental qualifying examination) and at least one quarter in the second year. Teaching experience can be fulfilled as a requirement for student support or taken as a course for academic credit (Bioengineering 501). Students must contact the Student Affairs Office to plan for completion of this requirement.

The **Senate Qualifying Examination** is the second examination required of bioengineering Ph.D. students. In preparation for this examination, students must have completed the Departmental Qualifying Examination and the departmental teaching experience requirement, obtained a faculty research adviser, and identified a topic for their dissertation research and made initial progress. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. The committee conducts the Senate Qualifying Examination, during which students must demonstrate the ability to engage in thesis research. This involves the presentation and defense of a plan for the thesis research project. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate in Philosophy degree *(see "Graduate Studies" section in this catalog)*.

The **Dissertation Defense** is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must be successfully defended in a public presentation and oral examination conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee approximately four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may suggest changes in the text at the time of the defense. This examination must be conducted after at least three quarters of the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and Research and the university librarian represents the final step in completion of all requirements for the Ph.D.

There is no formal foreign language requirement for doctoral candidates. Students are expected to master whatever language is needed for the pursuit of their own research.

Ph.D. Time Limit Policy

Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Evaluations

In the spring of each year, the faculty evaluate each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

COURSES

Note: The department will endeavor to offer the courses as outlined below; however, unforeseen circumstances sometimes mandate a change of scheduled offerings. Students are strongly advised to check with the department's Student Affairs Office. This is of particular importance in planning schedules for graduation requirements. The following schedule is tentative for the academic year 2004–2005 only.

It should not be assumed that the same schedule will continue after this academic year. It is the student's responsibility to contact the Student Affairs Office to determine the specific quarter that courses will be offered.

Prerequisites are enforced when adding courses. Students who have satisfied prerequisites at another institution or by AP credit need to be pre-authorized to register in these courses. Please contact the Student Affairs Office before your scheduled registration time to be pre-authorized.

LOWER-DIVISION

1. Introduction to Bioengineering (1)
An introduction to the central topics of bioengineering in a seminar format. The principles of problem definition, team design, engineering inventiveness, information access, communication, ethics, and social responsibility will be emphasized. P/NP grading only. *Prerequisite: none.* (W).

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. (F,W,S)

90. Undergraduate Seminar (1)
Selected topics of interest to the faculty will be used to introduce students to bioengineering science and design concepts. (Not open to upper-division bioengineering students.) (F,W,S)

97. Internship/Field Studies (1-4)
An enrichment program available to a limited number of lower-division undergraduate students, which provides work experience with industry, government offices, and hospitals. The internship is coordinated through UCSD's Academic Internship Program under the supervision of a faculty member and an industrial, government, or hospital employee. Prerequisites: lower-division standing, completion of thirty units of UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved "Special Studies" form, "UCSD Application for Enrollment Special Studies Courses 97, 98, 99." (F,W,S)

98. Directed Group Study (1-4)
Directed group study on a topic or in a field not included in the regular department curriculum. (P/NP

grades only.) Prerequisites: lower-division standing, completion of thirty units of undergraduate study at UCSD with a UCSD GPA of at least 3.0 and consent of a bioengineering faculty member; completed and approved Special Studies form.

99. Independent Study for Undergraduates (4)
Independent reading or research by arrangement with a bioengineering faculty member. (P/NP grades only.) Prerequisites: lower-division standing, completion of thirty units of undergraduate study at UCSD with a UCSD GPA of at least 3.0 and consent of a bioengineering faculty member; completed and approved Special Studies form.

UPPER-DIVISION

100. Introduction to Bioengineering Design (4)
A general introduction to bioengineering design, including examples of engineering analysis and design applied to representative topics in biomechanics, bioinstrumentation, biomaterials, biotechnology, and related areas. A review of technological needs, design methodology, testing procedures, statistical analysis, governmental regulation, evaluation of costs and benefits, quality of life, and ethical issues. *Prerequisites: BENG 1; grade of C– or better in Math. 21C or Math. 20C and Math. 21D or Math. 20D, and Physics 2C; majors only.* (S)

101. Foundations of Biomedical Imaging (4)
An introduction to the principles and applications of biomedical imaging, with emphasis on the acquisition, processing, display of imagery, and design of imaging systems. Filtering, convolution, and Fourier methods. Microscopy, radiography, computed tomography, magnetic resonance, ultrasound, and nuclear imaging. *Prerequisites: Grade of C- or better in BENG 100; majors only or consent of department.* (F)

103B. Bioengineering Mass Transfer (4)
Mass transfer in solids, liquids, and gases with application to biological systems. Free and facilitated diffusion. Convective mass transfer. Diffusion-reaction phenomena. Active transport. Biological mass transfer coefficients. Steady and unsteady state. Flux-force relationships. (Students may not receive credit for both CENG 101C and BENG 103B.) *Prerequisites: grade of C– or better in BENG 112A; majors only.* (S)

106B. Bioengineering Dynamics (4)
Kinematics and kinetics of particles and rigid bodies. Muscle and joint loads. Musculoskeletal dynamics, locomotion, and clinical applications. Bodies in contact: friction, momentum, and impulse; impact and injury. Work, power, and energy relationships; conservation laws of dynamics. Bioengineering design problems, problem formulation, and problem solutions. (Students may receive credit for one of the following: MAE 130B, SE 101B, or BENG 106B.) *Prerequisites: grade of C– or better in Math. 21D or Math 20D and MAE 130A/SE 101A; majors only.* (W)

110. Continuum Mechanics (4)
An introduction to continuum mechanics of both living and non living bodies. The laws of motion and free-body diagrams. Stresses. Deformation. Compatibility conditions. Constitutive equations. Properties of common fluids and solids. Derivation of field equations and boundary conditions. Applications to bioengineering design. *Prerequisites: grades of C– or better in Physics 2A, 2B, 2C; majors only.* (F)

112A. Biomechanics (4)
Introduction to physiological systems, with emphasis on structure and function of major tissues and organs. Application of mechanics to understand the behavior of these tissues and organs at gross and microscopic levels. Bioelastic solids. Rigid body biomechanics. Biofluids. Bioengineering and medical design. *Prerequisites: grade of C– or better in BENG 110; majors only.* (W)

112B. Biomechanics (4)
Biomechanics of living tissues with emphasis on continuum analysis of problems in biofluid and cell mechanics. Engineering design and problem solving in the biomechanics of mammalian tissues, especially those of the cardiovascular system. *Prerequisites: grade of C– or better in BENG 112A; majors only.* (S)

122A. Biosystems and Control (4)
Systems and control theory applied to bioengineering. Modeling, linearization, transfer functions, Laplace transforms, closed-loop systems, design and simulation of controllers. Dynamic behavior and controls of first and second order processes. PID controllers. Stability. Bode design. Features of biological controls systems. A simulation term project using MATLAB and an oral presentation are required. *Prerequisites: grade of C– or better in MAE 140; majors only or consent of department.* (W)

122B. Biomedical Electronics (4)
Analog and digital circuits in bioinstrumentation. Biomedical signals in continuous and discrete systems. Sampling and digital signal processing. MRI. CT. Ultrasound. Bioelectromagnetics. Electrokinetics. *Prerequisites: grade of C– or better in BENG 122A and BENG 186B; majors only or permission of instructor.* (S)

123. Systems Biology and Bioengineering (4)
Systems biology and bioengineering is comprised of (1) enumeration of biological components participating in a biological process, (2) reconstruction of interactions to form a network, (3) mathematical representation for analysis, interpretation, and prediction, (4) model validation and use in prospective design. Prerequisites: grade of C– or better in BIBC 100; majors only. (W)

125. Modeling and Computation in Bioengineering (4)
Computational modeling of molecular bioengineering phenomena: excitable cells, regulatory networks, and transport. Application of ordinary, stochastic, and partial differential equations. Introduction to data analysis techniques: power spectra, wavelets, and nonlinear time series analysis. Prerequisites: grade of C– or better in BENG 122A or BENG 123; majors only or consent of instructor. (S)

130. Molecular Physical Chemistry (4)
An introduction to physical principles that govern biological matter and processes. Thermodynamic principles and their molecular origin, structural basis of life and physical and conceptual models to illustrate life phenomena. (Students may receive credit for one of the following: Chem. 126, Chem. 127, Chem. 131, or BENG 130.) *Prerequisites: grade of C– or better in Chem 6B, Math. 20A, 20B, Physics 2A, 2B, 2C. (Physics 2C may be taken concurrently.); majors only.* (W)

140A. Bioengineering Physiology (4)
Introductory mammalian physiology for bioengineering students, with emphasis on control mechanisms and engineering principles. Basic cell functions; biological control systems; muscle; neural; endocrine, and circulatory systems. Not intended for premedical bioengineering students. (Students may not receive credit for both BIPN 100 and BENG 140A.) *Prerequisites: grade of C– or better in Chem. 6A, 6B, Physics 2A, 2B, 2C, BILD 1; majors only.* (W).

140B. Bioengineering Physiology (4)
Introductory mammalian physiology for bioengineering students, with emphasis on control mechanisms and engineering principles. Digestive, respiratory, renal, and reproductive systems; regulation of metabolism, and defense mechanisms. (Students may not receive credit for both BIPN 102 and BENG 140B.) *Prerequisite: grade of C– or better in BENG 140A; majors only.* (S).

161A. Bioreactor Engineering (4)
Introduction to the principles and practices of biochemical engineering. Important engineering, biochemical and physiological considerations in the design of bioreactor processes: enzyme kinetics, mass transfer limitations, microbial growth, and product formation kinetics. Fermentation reactor selection, design, scale-up, and control. *Prerequisites: grade of C– or better in Chem 114B or BIBC 102 (may be taken concurrently), BENG 122A and admission to the major.* (F)

161B. Biochemical Engineering (4)
Commercial production of biochemical commodity products. Application of genetic control systems and mutant populations. Recombinant DNA and eucaryotic proteins in E. coli and other host organisms. Product recovery operations, including the design of bioseparation processes of filtration, adsorption, chromatography, and crystallization. Bioprocess economics. Human recombinant erythropoietin as an example, from genomic cloning to CHO cell expression, to bioreactor manufacturing and purification of medical products for clinical application. *Prerequisite: grade of C– or better in BENG 161A; majors only.* (W)

161C. Metabolic Engineering (4)
Engineering systems analysis of metabolic and regulatory processes. Use of high-throughput data for network reconstruction. Formulation of the stoichiometric matrix and its uses to determine steady state flux distributions. Kinetics of individual enzymatic reactions. Computer simulations of metabolic networks, systemic sensitivity coefficients, bifurcations to study dynamic network functions. Temporal decomposition of metabolic processes into multiple time scales and the physiologic roles of metabolic events in each scale. *Prerequisite: grade of C– or better in BENG 161B; majors only.* (S)

162. Biotechnology Laboratory (4)
Laboratory practices and design principles for biotechnology. Culture of microorganisms and mammalian cells, recombinant DNA bioreactor design and operation. Design and implementation of biosensors. A team design-based term project and oral presentation required. *Prerequisites: admission to the major; MAE 170, BENG 166A, BENG 161B (must be taken concurrently).* (W)

164. Bioengineering of Biochemical Techniques (1)
Quantitative bioengineering analysis and design of biochemical processes and experiments on biological molecules. Centrifugation, electrophoresis, chromatography. Radioactive tracers. Enzyme activity. Immunoassay. *Prerequisites: admission to the major; grade of C– or better in BENG 161B and BIBC 103 (may be taken concurrently).* (S)

166A. Cell and Tissue Engineering (4)
Engineering analysis of physico-chemical rate processes that affect, limit, and govern the function of

cells and tissues. Cell migration, mitosis, apoptosis, and differentiation. Dynamic and structural interactions between mesenchyme and parenchyme. The role of the tissue microenvironment including cell-cell interactions, extracellular matrix, and growth factor communication. The design of functional tissue substitutes including cell and material sourcing, scale-up and manufacturability, efficacy and safety, regulatory, and ethical topics. Clinical Applications. *Prerequisite: admission to the major or consent of department; senior standing and (BENG 103B OR BENG 112B).* (F)

168. Biomolecular Engineering (4)
Basic molecular biology; recombinant DNA technologies; design and manufacture of recombinant proteins and genetically engineered cells; architecture and mechanism of molecular nano-machineries that perform gene regulation, energy conversion, enzymatic catalysis, and active transport. Prerequisites: BILD 1 and BENG 100; majors only or consent of instructor. (S)

172. Bioengineering Laboratory (4)
A laboratory course which demonstrates basic concepts of bioengineering design through experimental procedures involving humans and animals. Statistical principles of experimental design. Study of possible errors. Experiments include nerve action, electrocardiography, mechanics of muscle, membranes, and noninvasive diagnostics in humans. *Prerequisites: grade of C– or better in MAE 170 and junior or senior standing in the major.* (S)

181/BIMM 181/CSE 181. Molecular Sequence Analysis (4)
(Cross-listed as BIMM 181 and CSE 181.) This course covers the analysis of nucleic acid and protein sequences, with an emphasis on the application of algorithms to biological problems. Topics include sequence alignments, database searching, comparative genomics, and phylogenetic and clustering analyses. Pairwise alignment, multiple alignment, DNA sequencing, scoring functions, fast database search, comparative genomics, clustering, phylogenetic trees, gene finding/DNA statistics. *Prerequisites: CSE 100 or Math. 176, CSE 101 or Math. 188, BIMM 100 or Chem. 114C; Bioinformatics majors only.* (S)

182/BIMM 182/CSE 182/CHEM182. Biological Databases (4)
(Cross-listed as BIMM 182, CSE 182, and Chem. 182.) This course provides an introduction to the features of biological data, how those data are organized efficiently in databases, and how existing data resources can be utilized to solve a variety of biological problems. Object oriented databases, data modeling and description. Survey of current biological database with respect to above, implementation of database focused on a biological topic. *Prerequisite: CSE 100 or Math. 176; Bioinformatics majors only.* (F)

183. Applied Genomic Technologies (4)
Principles and technologies for using genomic information for biomedical applications. Technologies will be introduced progressively, from DNA to RNA to protein to whole cell systems. The integration of biology, chemistry, engineering, and computation will be stressed. Topics include: Technology for the Genome, DNA Chips, RNA Technologies, Proteomic Technologies, Physiomic and Phenomic Technologies, Analysis of Cell Function. *Prerequisite: grade of C– or better in BIMM 100 or Chem 114C; BICD 110; Bioinformatics majors only.* (F)

184/BIMM 184/CSE 184. Computational Molecular Biology (4)
(Cross-listed as BIMM 184 and CSE 184.) This advanced course covers the application of machine learning and modeling techniques to biological systems. Topics include gene structure, recognition of DNA and protein sequence patterns, classification, and protein structure prediction. Pattern discovery, hidden Markov models/support vector machines/neural network/profiles, protein structure prediction, functional characterization of proteins, functional genomics/proteomics, metabolic pathways/gene networks. *Prerequisites: BENG 181 or BIMM 181 or CSE 181; BENG 182 or BIMM 182 or CSE 182 or CHEM 182; Bioinformatics majors only.* (W)

186A. Principles of Biomaterials Design (4)
Fundamentals of materials science as applied to bioengineering design. Natural and synthetic polymeric materials. Materials characterization and design. Wound repair, blood clotting, foreign body response, transplantation biology, biocompatibility of materials, tissue engineering. Artificial organs and medical devices. Government regulations. Patenting. Economic impact. Ethical issues. A term project and oral presentation are required. *Prerequisite: grade of C– or better in BENG 112B or senior standing in Bioengineering: Biotechnology major; majors only or consent of department.* (F)

186B. Principles of Bioinstrumentation Design (4)
Biophysical phenomena, transducers, and electronics as related to the design of biomedical instrumentation. Potentiometric and amperometric signals and amplifiers. Biopotentials, membrane potentials, chemical sensors. Electrical safety. Mechanical transducers for displacement, force, and pressure. Temperature sensors. Flow sensors. Light-based instrumentation. *Prerequisites: grade of C– or better in MAE 140 and MAE 170.* (W)

186C. Bioengineering Design (4)
Development of an original bioengineering design described in a formal engineering report, leading to a major and complete design experience. Emphasis on engineering analysis and application of methodology from various branches of applied mechanics. Includes analysis of economic, environmental, manufacturability, ethical, health and safety, social, political issues, and application of governmental regulations. A term project and oral presentation are required. *Prerequisites: grades of C– or better in BENG 103B, BENG 106B, BENG 112B, and BENG 186B; CENG 101A, MAE 107 and MAE 130A; majors only.* (S)

191. Senior Seminar I: Professional Issues in Bioengineering (2)
Role of bioengineers in industry. Professional identity. Structure of bioengineering industries and product development process. Job market analysis. Current employment opportunities. Recruiting process and interview. Analysis of the employer. Marketing vs. engineering. Management by objective. Role of higher degrees. *Prerequisite: consent of instructor.* (W)

195. Teaching (2-4)
Teaching and tutorial assistance in a bioengineering course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. (P/NP grades only.) *Prerequisites: B average in the major and departmental approval.* (F,W,S)

196. Bioengineering Industrial Internship (1-4)
Under the joint supervision of a faculty adviser and industry mentor, the student will work at a bioengineering industrial site to gain practical bioengineering experience. No more than twelve units may be used to satisfy graduation unit requirements. (P/NP grades only) *Prerequisites: consent of department and completion of all lower-division course requirements, including general-science requirements. Some laboratory experience is needed. Completion of ninety units with a 2.5 GPA and consent of a bioengineering faculty coordinator.* (F,W,S,Su)

197. Engineering Internship (1-4)
An enrichment program, available to a limited number of undergraduate students, which provides work experience with industry, government offices, hospitals, and their practices. Subject to the availability of positions, students will work in a local industry or hospital (on a salaried or unsalaried basis) under the supervision of a faculty member and industrial supervisor. Coordination of the Engineering Internship is conducted through UCSD's Academic Internship Program. Time and effort to be arranged. Final report required. *Prerequisites: completion of ninety units with a 2.5 GPA and consent of a bioengineering faculty coordinator.* (F,W,S,Su)

198. Directed Group Study (1-4)
Directed group study, on a topic or in a field not included in the regular department curriculum, by arrangement with a bioengineering faculty member. (P/NP grades only.) *Prerequisites: consent of instructor; upper-division standing, completion of ninety units of UCSD undergraduate study, a minimum UCSD GPA of 2.5, and a completed and approved "Special Studies" form, "Application for UCSD Special Studies Course Enrollment."* (F,W,S)

199. Independent Study for Undergraduates (4)
Independent reading or research by arrangement with a bioengineering faculty member. (P/NP grades only.) *Prerequisites: consent of instructor; upper-division standing, completion of ninety units of UCSD undergraduate study, a minimum UCSD GPA of 2.5, and a completed and approved "Special Studies" form, "Application for UCSD Special Studies Course Enrollment."* (F,W,S,Su)

GRADUATE

202/CSE 257A. Bioinformatics II: Sequence and Structure Analysis—Methods and Applications (4)
Introduction to methods for sequence analysis. Applications to genome and proteome sequences. Protein Structure, sequence-structure analysis. *Prerequisite: Pharm. 201 or consent of instructor.* (W)

203. Bioinformatics III: Genomes Analysis (4)
Annotating genomes, characterizing functional genes, profiling, reconstructing pathways. *Prerequisites: Pharm. 201, BENG 202/CSE 257A or consent of instructor.* (S)

207. Topics in Bioengineering (4)
Course given at the discretion of the faculty on current topics of interest in bioengineering. (F,W,S)

208. Topics in Bioengineering with Lab (2 or 4)
A course to be given at the discretion of the faculty on topics of current interest in engineering science. This course is intended to be a lecture and lab companion topics course. *Prerequisite: consent of instructor.* (S)

BENG 209. Continuum Mechanics Applied to Medicine/Biology
Introduction to the basic definitions of Continuum Mechanics and their mathematical formulation at the

graduate level with applications to problems in medicine and biology. This course is intended for students with little or no background in mechanics; it is an introduction to the Biomechanics courses BENG 250 A-B in the Department of Bioengineering and to Solid and Fluid Mechanics courses MAE 210A and MAE 231A in the Department of Mechanical and Aerospace Engineering. This course should NOT be taken concurrently with MAE 210A or MAE 231A. *Prerequisite: consent of instructor.* (F)

BENG 211. Systems Biology and Bioengineering I: Biological Components
Components of biological systems, their biochemical properties and function. The technology used for obtaining component lists. Relationship within and integration of component lists. Structured vocabularies and component ontologies. Algorithms for comparative approaches in deciphering and mining component lists. *Prerequisite: BENG 230A or BIMM 100 or consent of instructor.* (F)

BENG 212. Systems Biology and Bioengineering II: Network Reconstruction
This course will cover the process of reconstructing complex biological reaction networks. Reconstruction of metabolic networks, regulatory networks and signaling networks. Bottom-up and top-down approaches. The use of collections of historical data. The principles underlying high-throughput experimental technologies and examples given on how this data is used for network reconstruction, consistency checking, and validation. *Prerequisite: BENG 211 or consent of instructor.* (W)

BENG 213. Systems Biology and Bioengineering III: Building and Simulating Large-scale In Silico Models
Mathematical models of reconstructed reaction networks and simulation of their emergent properties. Classical kinetic theory, stochastic simulation methods and constraints-based models. Methods that are scalable and integrate multiple cellular processes will be emphasized. Existing genome-scale models will be described and computations performed. Emphasis will be on studying the genotype-phenotype relationship in an in silico model driven fashion. Comparisons with phenotypic data will be emphasized. *Prerequisite: BENG 212 or consent of instructor.* (S)

220. Project Design and Development (4)
The design of a research/development project for an industrial setting. Project objectives and organization, funding sources, review of previous developments in the area, proposal writing and review, project management, intellectual property, regulatory issues. The term project will involve preparing a small business proposal for development of a medical device. *Prerequisite: open to students with graduate standing in bioengineering.* (W)

225. BioBusiness: Starting, Growing, and Harvesting a Biotech Company
Biotech is a special breed of business, especially in the start-up and early phases. Whether you are considering joining a biotech start-up or want to be successful in a life science organization, it pays to understand this unique business model. In this course, you will study and analyze (1) start-up proposals (2) the genesis of the biotech industry (3) biotech categories and growth strategies (4) the process of spinning out viable product concepts from academia (5) financing techniques (6) business development (7) acquisition/IPO valuation methods (8) potentially disruptive technologies. The format is highly interactive and learning is enhanced by means of exercises, team presentations, and case studies. Prerequisites: for bioengineering MEng degree students or consent of instructor. (F,W)

230A. Biochemistry (4)
A graduate course in biochemistry especially tailored to the requirements and background of bioengineering graduate students. It will cover the important macro- and small molecules in cells that are the major constituents, or that function as signaling molecules or molecular machineries. The structures, pathways, interactions, methodologies, and molecular designs using recombinant DNA technology will be covered. *Prerequisites: BIPN 100 and 102, or consent of instructor.* (F)

230B. Cell and Molecular Biology (4)
A general survey of structure-function relationships at the molecular and cellular levels. Emphasis on basic genetic mechanisms; control of gene expression; membrane structure, transport and traffic; cell signaling; cell adhesion; mechanics of cell division; and cytoskeleton. *Prerequisites: BIPN 100 and 102, and BENG 230A, or consent of instructor.* (W)

230C. Cardiovascular Physiology (4)
Physical concepts of behavior of heart, large blood vessels, vascular beds in major organs and the microcirculation. Physical and physiological principles of blood flow, blood pressure, cardiac work, electrophysiology of the heart. Special vascular beds, including their biological and hemodynamic importance. Integration through nervous and humoral controls. *Prerequisites: BIPN 100 ,102 , and BENG 230B, or consent of instructor.* (S)

230D. Respiratory and Renal Physiology (4)
Mechanics of breathing. Gas diffusion. Pulmonary blood flow. Stress distribution. Gas transport by blood. Kinetics of oxygen and carbon dioxide exchange. VA/Q relations. Control of ventilation. Glomerular and proximal tubule functions. Water metabolism. Control of sodium and potassium in the kidney. *Prerequisites: BIPN 100 ,102 , and BENG 230C, or consent of instructor.* (F,W,S)

238. Molecular Biology of the Cardiovascular System (4)
This course will give an overview of heart and vascular development and disease from a molecular biological perspective. Current approaches for generating mouse models of cardiovascular disease and recently developed technologies for physiological assessment in small animal models will be presented. (S)

241A. Foundations of Tissue Engineering Science (4)
Molecular and cell biological basis of tissue engineering science. Paracrine control of tissue growth and differentiation. Biomechanics and the molecular basis of cell-cell and cell-matrix interactions. Cell motility, mechanics of tissue growth and assembly, tissue repair. Mass transfer in tissues. Microcirculation of blood and lymph. *Prerequisite: BENG 230A or consent of instructor.* (S)

241B. Methods in Tissue Engineering Science (4)
Isolation of cells, cell and tissue culture systems. Fluorescence and confocal microscopy. Intracellular imaging. Mechanical testing of tissues. Micromechanical measurement and analysis of cell deformability and cell interaction. Methods in microcirculation and angiogenesis. *Prerequisite: BENG 241A or consent of instructor.* (F)

241C. Applications of Tissue Engineering Science (4)
A lecture/seminar series featuring speakers from academia and industry emphasizing principles of tissue engineering science as applied to clinical medicine and industrial production. Topics include skin replacement, guide tubes for nerve regeneration, blood substitutes, pancreatic islet replacement, and drug delivery devices, among others. Ethics of tissue replacement. *Prerequisite: BENG 241B or consent of instructor.* (W)

BENG 247A. Advanced BioPhotonics
Basic physics and chemistry for the interaction of photons with matter, including both biological and synthetic materials; use of photonic radiation pressure for manipulation of objects and materials; advanced optoelectronic detection systems, devices and methods, including time resolved fluorescent and chemiluminescent methods, fluorescent energy transfer (FRET) techniques, quantum dots, and near-field optical techniques; underlying mechanisms of the light sensitive biological systems, including chloroplasts for photosynthetic energy conversion and the basis of vision processes. *Prerequisite: graduate standing.* (F)

BENG 247B. BioElectronics
Topics to be covered will include photolithographic techniques for high-density DNA microarray production, incorporation of CMOS control into electronic DNA microarrays, direct electronic detection technology used in microarrays and biosensor devices, and focus on problems related to making highly integrated devices (lab-on-a-chip, *in vivo* biosensors, etc.) form heterogeneous materials and components. *Prerequisite: graduate standing.* (W)

BENG 247C. Bionanotechnology
Topics include: nanosensors and nanodevices for both clinical diagnostics and biowarfare (bioterror) agent aetection; nanostructures for drug delivery; nanoarrays and nanodevices; use of nanoanalytical devices and systems; methods and techniques for modification or functionalization of nanoparticles and nanostructures with biological molecules; nanostructural aspects of fuel cells and biofuel cells; potential use of DNA and other biomolecules for computing and ultra-high-density data storage. *Prerequisite: graduate standing.* (S)

250A. Biomechanics (4)
An introduction to biomechanics and transport phenomena in biological systems at the graduate level. Biorheology, biosolid mechanics, muscle mechanics, mass transfer, momentum transfer, energy transfer. *Prerequisites: CENG 103B and BENG 112B, or consent of instructor.* (W)

250B. Advanced Biomechanics (4)
Modern development of biomechanics at an advanced mathematical level. Selected topics in the dynamics of heart, pulsatile, blood flow, microcirculation, and muscle mechanics. *Prerequisite: BENG 253 or consent of instructor.* (S)

253. Biomedical Transport Phenomena (4)
Nonequilibrium thermodynamic analysis of transport phenomena. The osmotic effect. Diffusion and exchange in biological systems. *Prerequisite: consent of instructor.* (W)

264. Advanced Biomedical Transport Phenomena (4)
Applications of heat, mass, and momentum transfer in biomedical systems. Extension of the principles encountered in BENG 252B-C to practical biomedical systems. *Prerequisite: BENG 252B-C.*

267. Microcirculation in Health and Disease (4)
Structural and functional aspects of transport and blood-tissue exchange in key organs during circulatory shock, bacterial toxemia, hypertension. Physical and ultrastructural techniques used to analyze small-vessel dynamics. *Prerequisite: consent of instructor.*

275. Computational Biomechanics (4)
Finite element methods for anatomical modeling and boundary value problems in the biomechanics of tissues and biomedical devices. Nonlinear biodynamics, heat flow, cardiac impulse propagation, anatomic modeling, and biomechanics. *Prerequisite: consent of instructor.* (F)

BENG 280A. Principles of Biomedical Imaging
Fundamentals of Fourier transform and linear systems theory including convolution, sampling, noise, filtering, image reconstruction and visualization with an emphasis on applications to biomedical imaging. Examples from optical imaging, CT, MR, ultrasound, nuclear, PET, and radiography. *Prerequisite: consent of instructor.* (F)

BENG 280B. Comparative Biomedical Imaging
Application of biomedical imaging to the measurement of structure, function, and dynamics of organ systems from the microscopic to the organ level. Emphasis on detailed evaluation and comparison of specific imaging modalities. *Prerequisite: consent of instructor.* (W,S)

281. Seminar in Bioengineering (1)
Weekly seminars by faculty, visitors, postdoctoral research fellows, and graduate students concerning research topics in bioengineering and related subjects. May be repeated for credit. This course does not apply toward the M.S. graduation requirements. (S/U grades only.) (F,W,S)

290. Bioengineering Special Graduate Seminar (1-2)
Seminars by faculty, visitors, post-doctoral research fellows, and/or graduate students in selected topic(s) in bioengineering and/or related subjects. This course does not apply toward M.S. graduation requirements.

295. Bioengineering Design Project and Industrial Training (4)
Independent work by graduate students focused on design, applied research, and professional experience. *Prerequisite: consent of department and bioengineering faculty adviser.* (F,W,S)

296. Independent Study (4)
Prerequisite: consent of instructor.

298. Directed Group Study (1-4)
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. *Prerequisite: consent of instructor.* (S/U grade only.)

299. Graduate Research (1-12)
(S/U grades only.)

501. Teaching Experience (2)
Teaching experience in an appropriate bioengineering undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. (S/U grade only.) *Prerequisites: consent of instructor and departmental approval.* (F,W,S)

Program Mission and Objectives

The Chemical Engineering Program has affiliated faculty from the Department of Mechanical and Aerospace Engineering, Department of Chemistry and Biochemistry, and the Department of Bioengineering. The program is administered by the Department of Mechanical and Aerospace Engineering. The curricula at both the undergraduate and graduate levels are designed to support and foster chemical engineering as a profession that interfaces engineering and all aspects of basic sciences (physics, chemistry, and biology).

The mission of the Chemical Engineering Program is to provide the next generation of chemical engineers with an excellent and innovative chemical engineering education. The primary goals are:

- To provide chemical engineering students with a strong technical education and communication skills that will enable them to have successful careers in a wide range of industrial and professional environments.
- To prepare chemical engineering students for rapidly changing technological environments with the core knowledge central to multidisciplinary development and personal improvement throughout their professional careers.
- To instill in chemical engineering students a strong sense of humanistic values and professionalism such that they can conduct ethically and knowledgeably regarding technological impact in societal issues.

The curriculum is designed to prepare chemical engineering graduates for further education and personal development through their entire professional career. We strive to accomplish these goals by providing a rigorous and demanding curriculum that incorporates lectures, discussions, laboratory and project development experiences in basic sciences, mathematics, engineering sciences, and design as well as the humanities and social sciences. The main objectives are:

1. To enable students to understand and apply scientific principles and engineering and computational tools to analyze and solve problems of importance to society.
2. To enable students to apply appropriate experimental and statistical techniques in engineering analysis and applications.
3. To enable students to incorporate engineering economics and information from multiple disciplines in the analysis, synthesis, and design of engineering systems under realistic settings.
4. To enable students to acquire effective technical writing and oral communication skills necessary for successful participation on teams and in leadership positions.
5. To enable students to acquire the basic knowledge of chemical and process safety.
6. To instill in our students an understanding of their professional and ethical responsibilities.

Unless otherwise stated, the requirements and policies follow those of the Department

of Mechanical and Aerospace Engineering. Only features unique to Chemical Engineering are provided in this section.

The Undergraduate Program

The B.S. program in Chemical Engineering is accredited by the Engineering Accreditation Commission of the Accreditation Board of Engineering and Technology (ABET/EAC). The curriculum is tailored to provide breadth and flexibility by taking advantage of the strength of basic sciences and other engineering disciplines at UCSD. The intention is to graduate chemical engineers who are multidisciplinary and can work in a broad spectrum of industries rather than solely traditional chemical and petrochemical industries.

Areas of specialization are available whereby a graduate can be in a position for a career in environmental technology, microelectronic device fabrication, materials and polymer processing, pharmaceutical and biotechnology, biomedical engineering, energy and thermal systems, control and system engineering, and so forth.

For students who aspire to pursue a graduate degree and a career in research and development, the units in an area of specialization can be allocated to more fundamental science and engineering courses. These students are also encouraged to perform independent projects in one of the faculty research laboratories or groups.

Whether the career goal is industry, or graduate or professional school, the curriculum has a strong emphasis on developing problem-solving skills and the ability to think and learn independently. The capstone courses in this respect are the two senior design courses and the two very unique senior process laboratory courses where the environment is not unlike product development in either an industrial or academic setting. In each process development lab, students work in groups of three, on one project where they carry through the entire stages of project planning, experimental design and setup, execution, analysis, modification and improvement, and final project evaluation.

Major Requirements

For policies in general education requirements, professional licensing, academic advising, and application for admission to the major, please refer to the section under Mechanical and Aerospace Engineering.

To receive a B.S. in Chemical Engineering, students must complete 194 units for graduation, which includes 44 units of general education (HSS) requirements of their Colleges and the ABET requirements in the arts, humanities, and social sciences. The balance consists of basic sciences (53 units), chemistry core (24 units), chemical engineering core (32 units), process laboratory and design (16 units), general engineering (12 units), and an area of specialization (12 units). Beyond the 53 units of basic sciences, the science and engineering courses total to 96 units. A one-unit introductory seminar (CENG1) is required of all incoming freshmen. The specific breakdown is as follows:

Basic sciences (53 units): This lower-division requirement includes 24 units of mathematics (Math. 20A-F), 14 units of physics (Phys. 2A-C, 2CL), and 15 units of chemistry (Chem. 6A-C, 6CL).

Chemistry core (24 units): This requirement must include two physical and one organic chemistry courses (Chem. 131, 132, 140A). Three additional advanced chemistry courses must be chosen among biochemistry, physical, organic, and inorganic chemistries. Two courses must be selected among Chem. 133, 135, 140B or 141B, 114A-B, 120A-B, and the third must be a laboratory course selected among Chem. 105, 106, and 143A.

Chemical engineering core (32 units): This requirement covers chemical process modeling, solution thermodynamics, transport phenomena, chemical reaction engineering, process control, and unit operations (CENG 100, 101A-C, 102, 113, 120, 122).

Process laboratory and design (16 units): This requirement is crucial to fulfill the ABET design content (CENG 124A-B, 176A-B).

General engineering (12 units): This requirement covers basics in computer programming, probability and statistics, and instrumentation. The computer programming requirement can be satisfied with a course in either Fortran (MAE 10), C (MAE 9), or Java (CSE 8B or 11). If you have no programming experience, you need CSE 8A before 8B, but no credit is given for 8A alone. Probability and statistics can be satisfied with ECE 109 or a course with equivalent content. Instrumentation is satisfied with MAE 170.

Electives in an area of specialization (12 units): Electives are intended to broaden and enhance professional goals. They may be chosen to achieve either breadth or depth in one's education. These electives must be upper-division courses in either science or engineering. Suggestions are listed below. To ensure that your selections have proper engineering content, you must have faculty approval before you take these electives.

Biotechnology/Biochemical Engineering: Both Chem. 114A-B (or BIBC 100,102) must be taken as part of the advanced chemistry requirement. These two classes are prerequisites to the following courses: BIMM 100, BIMM 120, BIBC 110, Chem. 115, BE 160A-B-C.

Electronic Materials: Chem. 133 must be taken as part of the advanced chemistry requirement. This course is a prerequisite to the following courses: ECE 103, 134, 135A, 136, 136L.

Engineering Mechanics : MAE 130A-B, 131A, 160.

Engineering Science : MAE 105, 107, 140; Chem. 135, 136; Phys. 152 (requires Chem. 133).

Environmental Engineering: Chem. 149A-B, 173; MAE 120, 121, 122, 124, 125A-B.

Materials Science: Chem. 133 must be taken as part of the advanced chemistry requirement. This course is a prerequisite to the following courses: Chem. 107; Phys. 152; ECE 137; MS 201A-B-C, 205A, 227.

Process Control: ECE 101, 171A-B or MAE 140, 143A-B.

Thermal Engineering and Systems: MAE 118A-B-C, 110B, 113.

Independent Research: CENG 199 as equivalent to a senior thesis can be approved as equivalent to two elective courses (8 units). Consult department Student Affairs Office for details.

FALL	WINTER	SPRING
FRESHMAN YEAR		
Math. 20A	Math. 20B	Math. 20C
Chem. 6A	Phys. 2A	Phys. 2B
MAE 9[1]	Chem. 6B	Chem. 6C/6CL
HSS2	CENG 1	HSS
	HSS	

SOPHOMORE YEAR		
Math. 20D	Math. 20F	Math. 20E
Phys. 2C/2CL	Chem. 132	Chem. 140A[3] or Chem 141A
Chem. 131	CENG 100	CENG 102
HSS	HSS	HSS
JUNIOR YEAR		
CENG 101A	CENG 101B	CENG 101C
Adv. Chem.[5]	CENG 113	Adv. Chem.
MAE 170	Adv. Chem.	ECE 109
HSS	HSS	HSS
SENIOR YEAR		
CENG 120[4]	CENG 124A	CENG 124B
CENG 122	CENG 176A	CENG 176B
AS[6]	AS	AS
HSS	HSS[7]	HSS

[1] MAE 9 can be replaced by MAE 10, CSE 8B or 11.

[2] Humanities and social sciences (HSS).

[3] Chem. 141A is offered only in the fall quarter. Chem133, 105, or 106 may fit in the spring quarter schedule.

[4] If a student chooses process control as the area of specialization, CENG 120 can be replaced by a relevant course within the approved set of courses for specialization in process control.

[5] Two advanced chemistry electives must be selected among Chem. 133, 135, 140B or 141B, 114A-B, and 120 A-B, and the third laboratory elective must be selected among Chem. 105, 106, and 143A. Students who choose Chem 105 must take Chem 6CL.

[6] The electives in an area of specialization (AS) must be upper-division or graduate courses in engineering, natural sciences or mathematics based on the pre-approved sequences. Otherwise, the selections must receive prior approval of the department to meet ABET standards.

[7] If students do not require these additional HSS courses to meet their College requirements, they may substitute an unrestricted elective in order to meet the minimum 194 unit graduation requirement. The twelfth HSS course is intended only for students who have additional College requirements to fulfill. To meet ABET requirements, students must have a total of twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance or personnel administration.

Transfer Students

The Chemical Engineering curriculum is designed to integrate four years of college educational experience. It is not easy for transfer students to complete the major requirements in only two additional years beyond their junior college work. However, if transfer students seek a College for which they already satisfy the general education requirements, have taken the lower-division science and mathematics, and have completed the organic chemistry requirement, then the rigorous first-year schedule below will permit them to graduate in two years. Other students should consult their adviser for a transition program compatible with their junior college preparation.

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

FALL	WINTER	SPRING
JUNIOR YEAR		
Chem. 131	Chem. 132	Adv. Chem.
CENG 101A	CENG 100	CENG 102
MAE 170	CENG 101B	CENG 101C
		ECE 109[1]

[1] Transfer students can petition with an equivalent course in probability and statistics if it is available at a junior college.

Integrated BS/MS Requirements

An integrated co-terminal program leading to a bachelor of science and a master of science degree in chemical engineering is offered to a student with junior standing who has an upper-division GPA of 3.5 or better and a 3.0 overall UCSD GPA. Details of the program are available from the MAE Graduate Student Affairs Office.

Program Accreditation

The B.S. program in chemical engineering is accredited by the Accreditation Board of Engineering and Technology (ABET/EAC).

Graduate Program

The Chemical Engineering Program offers graduate instruction leading to the **M.S. and Ph.D. degrees in engineering sciences** with a designated specialization in chemical engineering.

Admission is in accordance with the general requirements of the graduate division, which requires at least a B.S. in some branch of engineering, sciences, or mathematics; an overall GPA of 3.0; and three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study.

In addition, all applicants are required to submit GRE General Test Scores. A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English. Students who score below 600 on the TOEFL are strongly encouraged to enroll in an English as a second language program before beginning graduate work. UCSD Extension offers an excellent English language program during the summers as well as the academic year.

Applicants are judged competitively. Based on the candidate's background, qualifications, and goals, admission to the program is in one of three categories: M.S. only, M.S., or Ph.D. Admission to the M.S. only category is reserved for students for whom the M.S. degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. program is reserved for qualified students whose final aim is a doctoral degree.

Non-matriculated students are welcome to seek enrollment in graduate level courses via UC Extension's concurrent registration program, but an extension student's enrollment in a graduate course must be approved by the instructor.

Master's Degree Program

The M.S. program is intended to extend and broaden an undergraduate education with fundamental knowledge in different fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there is no written time limit for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements: All M.S. students must complete a total of 48 units which include a core of *five* courses (20 units) chosen among fluid dynamics (CENG 210A, MAE 210B), heat and mass transfer (CENG 221AB), kinetics (CENG 252), and mathematics. To maintain a certain balance in the core, no more than two mathematics courses should be chosen among the choices of applied mathematics (MAE 294AB or Math. 210AB), and numerical mathematics (MAE 290AB or Math. 270AB).

No more than three courses (12 units) of upper-division courses may be applied toward the total course work requirement. No more than a total of 8 units of CENG 296 and 298 may be applied toward the course work requirement. Units in seminars (CENG 259) may not be applied toward the degree requirement.

Thesis Plan I: Completion of the research thesis (CENG 299) fulfills 12 units toward the total graduation requirement. The balance is made up of the five core courses (20 units) and additional four elective courses (16 units) subject to the restrictions described above.

Comprehensive Examination Plan II: This plan involves course work only and culminates in an oral comprehensive examination based on topics selected from the core courses. In addition to the five core courses (20 units), one must choose an additional seven electives (28 units) subject to the restrictions of CENG 259, 296, and 298 described above. Sample electives are listed in the table below. A student should consult their academic adviser to choose an appropriate course schedule, including alternatives in bioengineering, electrical and computer engineering, materials science, basic sciences, and mathematics.

FALL	WINTER	SPRING
CORE SELECTIONS		
CENG 210A	CENG 221A	CENG 221B
MAE 290A or 294A	MAE 210B	CENG 252
	MAE 290B or 294B	
SUGGESTED ELECTIVES		
MS 201A	MS 201B	MS 201C
MAE 211	MAE 212	MAE 213
Math. 270A	Math. 270B	Math. 270C
Chem. 211	Chem. 212	Chem. 213

Change of Degree: Upon completion of the requirements for the M.S. degree, students admitted as M.S. *only* or M.S. candidates are not automatically eligible for admission to the Ph.D. program.

M.S. *only* and M.S. candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. The application, if approved by the committee, must be signed by a faculty member who expects to serve as the student's Ph.D. adviser. The student must also submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive examination plan for the M.S. degree, the examining committee may recommend that the comprehensive examination may replace the preliminary qualifying examination expected of Ph.D. students.

Doctoral Degree Program

The Ph.D. program is intended to prepare students for a variety of careers in research and teaching. The emphasis is on research. In general, there are no formal course requirements. All students, in consultation with their advisers, develop appropriate course programs that will prepare them for the Preliminary Qualifying Examination and for their dissertation research. These programs must be planned to meet the time limits established to advance to candidacy and to complete the requirements of the degree.

All Ph.D. students are required to pass three examinations. The first is a Preliminary Qualifying Examination which should be taken within three to four quarters of full-time graduate study. The second is the Ph.D. Qualifying Examination. The last is the Dissertation Defense.

Preliminary Qualifying Examination: The examination is intended to determine a candidate's basic understanding of engineering fundamentals and the candidate's ability to pursue successfully a research project at a level appropriate for the doctorate. The scope of the examination is based on topics selected from the core curriculum as listed under the M.S. degree program. A candidate is expected to demonstrate knowledge equivalent to these courses and formal enrollment record is not a prerequisite. The format is an oral examination administered by a committee of three faculty members in the Chemical Engineering Program. The candidate should present to the committee, prior to the examination, the five core courses that will constitute the basis of the examination.

Depth Requirement: A candidate must have the ability to perform in-depth analysis in the dissertation topic. A candidate should consult with the thesis adviser to develop a proper course program if it is deemed necessary. Depending on an individual's background and the nature of the research problem, a candidate should either complete a set of a minimum of four courses or demonstrate to the thesis adviser the equivalent knowledge and ability.

Ph.D. Qualifying Examination: Prior to taking this examination, the candidate must have completed the departmental qualifying examination, obtained a faculty research adviser, and must have made initial progress on a chosen dissertation project. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council under the policy listed in the Graduate Studies section of the General Catalog. The committee conducts the Ph.D. Qualifying Examina-tion, during which the student must demonstrate the ability to engage in thesis research. The process involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon successful completion of the examination, subject to the UCSD time limit policy, the student is advanced to candidacy and is awarded the candidate in Philosophy degree (see "Graduate Studies" section in this Catalog).

Teaching Experience: Prior to the dissertation defense, the candidate must serve at least once as a teaching assistant with the responsibility to hold a problem-solving section one hour a week.

Dissertation Defense: This is the final Ph.D. examination. Upon completion of the dissertation research project, the candidate writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may request changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and Research and the University Librarian represents the final step in completion of all requirements for the Ph.D. degree.

Ph.D. Time Limit Policy: Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Annual Evaluation: In the spring of each year, the faculty adviser evaluates each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

COURSES

All students enrolled in CENG courses or admitted to the CENG program (including pre-majors) are expected to meet prerequisite and performance standards, i.e., students may not enroll in any CENG courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The program does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the program outline, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog.

LOWER-DIVISION

1. The Scope of Chemical Engineering (1)
Demonstrations and discussions of basic knowledge and the opportunities in chemical engineering for professional development. Introduction to campus library and computer resources. Use of personal software tools such as spreadsheeting and student edition of MATLAB. *Prerequisites: none. (P/NP grading only.)*

UPPER-DIVISION

CENG 100. Process Modeling and Computation in Chemical Engineering (4)
Introduction to elementary numerical methods with applications to chemical engineering problems using a variety of problem solving strategies. Error analysis. Concepts of mathematical modeling, material and energy balances and probability and statistics with applications to design problems. *Prerequisites: admission to the chemical engineering or bioengineering major only and grades of C– or better in MAE 9 or 10, and Chem. 6C.*

CENG 101A. Introductory Fluid Mechanics (4)
(Formerly CENG 103A) Kinematics and equation of motion; hydrostatics; Bernoulli's equation; viscous flows; turbulence, pipe flow; boundary layers and drag in external flows; applications to chemical engineering, bioengineering, and structural engineering. Students may not receive credit for both MAE 101A and CENG 101A-103A. *Prerequisites: admission to the major and grades of C– or better in Phys. 2A and Math. 21D or 20D, and 20E.*

CENG 101B. Heat Transfer (4)
(Formerly CENG 103C) Conduction, convection, radiation heat transfer; design of heat exchangers. Students may not receive credit for both MAE 101C and CENG 101B-103C. *Prerequisites: admission to the major and a grade of C– or better in CENG 103A-B or 101A.*

CENG 101C. Mass Transfer (4)
(Formerly CENG 103B) Diffusive and convective mass transfer in solids, liquids, and gases; steady and unsteady state; mass transfer coefficients; applications to chemical engineering and bioengineering. *Prerequisites: admission to the major and grade of C– or better in CENG 103A or 101A.*

CENG 102. Chemical Engineering Thermodynamics (4)
Thermodynamic behavior of pure substances and mixtures. Properties of solutions, phase equilibria. Thermodynamic cycles. Chemical equilibria for homogeneous and heterogeneous systems. *Prerequisites: grade of C– or better in CENG 100 and Chem. 131.* Enrollment restricted to chemical engineering pre-majors and majors only.

CENG 113. Chemical Reaction Engineering (4)
Principles of chemical reactor analysis and design. Experimental determination of rate equations, design of batch and continuous reactors, optimization of selectivity in multiple reactions, consideration of thermal effects and residence time distribution. Introduction to multi-phase reactors. *Prerequisites: grade of C– or better in CENG 100 and Chem. 6B.* (Chem. 132 may be taken concurrently)

CENG 120. Chemical Process Dynamics and Control (4)
Examination of dynamic linear and linearized models of chemical processes. Stability analysis. Design of PID controllers. Selection of control and manipulated variables. Root locus, Bode and Nyquist plots. Cascade, feed- forward and ratio controls. *Prerequisites: admission to the major and grades of C– or better in Math. 21D or Math. 20D.* (Students may not receive credit for both MAE 141A or MAE 143B and CENG 120).

CENG 122. Separation Processes (4)
Principles of analysis and design of systems for separation of components from a mixture. Topics will include staged operations (distillation, liquid-liquid extraction), and continuous operations (gas absorption, membrane separation) under equilibrium and nonequilibrium conditions. *Prerequisites: admission to the major and grades of C– or better in CENG 102 and CENG 103 or CENG 101C.*

CENG 124A. Chemical Plant and Process Design I (4)
Principles of chemical process design and economics. Process flow diagrams and cost estimation. Computer-aided design and analysis. Representation of the structure of complex, interconnected chemical processes with recycle streams. Ethics and professionalism. Health, safety, and the environmental issues. *Prerequisites: admission to chemical engineering major and grades of C– or better in CENG 122.*

CENG 124B Chemical Plant and Process Design II (4)
Engineering and economic analysis of integrated chemical processes, equipment, and systems. Cost estimation, heat and mass transfer equipment design and costs. Comprehensive integrated plant design. Optimal design. Profitability. *Prerequisites: admission to chemical engineering major and grade of C– or better in CENG 124A.*

CENG 176A. Chemical Engineering Process Laboratory I
Laboratory projects in the areas of applied chemical research and unit operations. Emphasis on applications of engineering concepts and fundamentals to solution of practical and research problems. *Prerequisites: admission to the major and grades of C– or better in CENG 122 and MAE 170.*

CENG 176B. Chemical Engineering Process Laboratory II
Training in planning research projects, execution of experimental work and articulation (both oral and written) of the research plan and results in the areas of applied chemical technology and engineering operations related to mass, momentum, and heat transfer. *Prerequisites: admission to the major and grade of C– or better in CENG 176A.*

CENG 199. Independent Study for Undergraduates (4-4)
Independent reading or research on a problem by special arrangement with a faculty member. *Prerequisite: consent of instructor.* (P/NP Only).

CHEMICAL ENGINEERING GRADUATE COURSES

CENG 205. Graduate Seminar in Chemical Engineering (1)
Each graduate student in CENG is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in chemical engineering. Topics will vary. *Prerequisites: none.*

CENG 210A. Fluid Mechanics I (4)
Basic conservation laws, flow kinematics. The Navier-Stokes equations and some of its exact solutions, non-dimensional parameters and different flow regimes, vorticity dynamics. Cross-listed with MAE 210A. *Prerequisites: MAE 101AB and MAE 110A or consent of instructor.*

CENG 221A Heat Transfer (4)
Conduction, convection, and radiation heat transfer development of energy conservation equations. Analytical and numerical solutions to heat transport problems. Specific topics and applications vary. Cross-listed with MAE 221A. *Prerequisites: MAE 101ABC or CENG 103ABC or consent of instructor.*

CENG 221B Mass Transfer (4)
Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transport problems. Specific topics and applications will vary. Cross-listed with MAE 221B. *Prerequisites: MAE 101ABC or CENG 103ABC or consent of instructor.*

CENG 251. Thermodynamics (4)
Principles of thermodynamics of single and multi-component systems. Phase equilibria. Estimation, calculation, and correlation of properties of liquids and gases. *Prerequisite: consent of instructor.*

CENG 252. Chemical Reaction Engineering (4)
Analysis of chemical rate processes; complex kinetic systms. Chemical reactor properties in steady state and transient operations; optimal design policies. The interaction of chemical and physical transport processes in affecting reactor design and operating characteristics. Uniqueness/multiplicity and stability in reactor systems. Applications of the heterogeneous reactor systems. *Prerequisite: consent of instructor.*

CENG 253. Heterogeneous Catalysis (4)
Physics and chemistry of heterogeneous catalysis. Adsorption/desorption kinetics, chemical bonding, isotherms, kinetic models, selection of catalysts, poisoning, experimental techniques. *Prerequisite: consent of instructor.*

CENG 254. Biochemical Engineering Fundamentals (4)
Introduction to microbiology as relevant to the main topic, biological reactor analysis. Fermentation and enzyme technology. *Prerequisite: consent of instructor.*

CENG 255. Electrochemical Engineering (4)
Fundamentals of electyrochemistry and electrochemical engineering. Structure of the double layer, cell potential and electrochemical thermodynamics, charge transfer kinetics, electrochemical transport phenomena, and introduction to colloidal chemistry. Applications such as corrosion prevention, electroplating, reacgtor design, batteries and fuel cells. *Prerequisite: consent of instructor.*

CENG 258. Special Topics in Chemical Engineering (4)
Directed studies in chemical engineering using topics not covered in regular course offerings. *Prerequisites: consent of instructor.*

CENG 259. Seminar in Chemical Engineering (4)
Presentations on research progress by graduate students and by visitors from industrial and academic research laboratories. (May be repeated for credt. S/U grades only). *Prerequisite: consent of instructor.*

CENG 296. Independent Study in Chemical Engineering (4)
Independent reading or research on a problem as arranged by a faculty member. Must be taken for a letter grade only. *Prerequisite: consent of instructor.*

CENG 299. Graduate Research in Chemical Engineering (1-12)
S/U grades only. *Prerequisite: consent of instructor.*

The Undergraduate Programs

The Department of Computer Science and Engineering offers computer science and computer engineering curricula leading to the degrees in B.S. in Computer Science, B.S. in Computer Engineering, B.A. in Computer Science, and B.S. in Computer Science with a specialization in Bioinformatics. The courses of study prepare students for graduate study in these fields as well as immediate employment. The B.A. degree is intended to provide a more flexible program of study allowing significant studies beyond computer science and engineering.

These degrees are four-year endeavors. Students in the B.S. programs need to enroll in no more than sixteen units per quarter during their junior and senior years to meet their major requirements. The B.A. program has fewer major requirements. In addition, each student must satisfy general-education course requirements determined by the student's college.

B.S. Computer Science Program

The lower-division B.S. computer science program is designed to provide a strong foundation in mathematics, physics, electrical engineering, programming methodology and skills, and computer organization. Upper-division core courses deal with the theory and design of algorithms, hardware, and software. Students can gain additional breadth and/or depth in computer science and engineering by an appropriate selection of technical electives.

Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer program-

ming, although helpful, are not required for admission to the program.

The department requires a total of 135 units for the B.S. computer science program (not including the general-education requirements). There are three varieties of requirements: lower-division, upper-division, and technical electives.

1. LOWER-DIVISION REQUIREMENTS

Students are expected to complete the following seventy units by the end of their sophomore year.

Computer Science and Engineering: CSE 8B or 11, 12, 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, and CSE 91; twenty-one units.

Note: Students without any programming experience are advised to take CSE 8A and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B, and requires experience in programming with a compiled language.

Mathematics: Math. 20A-B-C-D and 20F; twenty units.

Physics: Phys. 2A-B-C; 12 units. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the Department of Mathematics placement test permits them to start with Math. 20B or a higher course may take Phys. 2A in the fall quarter of the freshman year; all others will take Phys. 2A in the winter quarter of the freshman year. Students who received high grades in both calculus and Physics in high school may substitute the major's sequence, Phys. 4A-B-C for Phys. 2A-B-C.

Physics Lab: Phys. 2BL or 2CL or 2DL; two units. The lab course should be taken concurrently with the Phys. 2 or Phys. 4 sequence.

Introduction to Electrical Engineering: ECE 53A-B; eight units. ECE 53A-B are courses that give a comprehensive introduction to electrical engineering.

Probability and Statistics: Math.183; four units.

Science/Mathematics Elective: Students are required to take one of the following four-unit science/mathematics courses: Phys. 2D, Math. 20E(2F), Chem. 6A, BILD 1, 10, 12, 14, 30.

2. UPPER-DIVISION REQUIREMENTS

All B.S. computer science students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 120, 130, 131A-B, 140, 140L, 141 and 141L; forty units.

Students are expected to complete almost all of these courses by the end of their junior year. If students want to accelerate their program, they should consider taking CSE 100 or Math. 176, CSE 105, and/or CSE 140 and 140L in the sophomore year.

3. TECHNICAL ELECTIVES

B.S. computer science students are required to take six technical electives for a total of twenty-four units. Four electives must be computer science and engineering upper-division or graduate courses.

The remaining two technical electives can be chosen from the wider set of courses that includes computer science and engineering upper-division courses, graduate courses, and other electives as listed under the section titled **Electives**. Other restrictions in the selection of technical electives are also given in the section **Electives**.

B.S. Computer Engineering Program

(Curriculum is the same in both the CSE and ECE departments.)

The B.S. computer engineering program is jointly administered by the Departments of Computer Science and Engineering and Electrical and Computer Engineering. Students wishing to take the computer engineering program must be admitted to one of the departments.

The lower-division computer engineering program is designed to provide a strong foundation in mathematics, physics, electrical engineering, programming methodology and skills, and computer organization. Upper-division core courses deal with the theory and design of algorithms, hardware and software, as well as electronic systems. Students can gain additional breadth and/or depth in computer science and engineering by an appropriate selection of technical electives.

Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer programming, although helpful, are not required for admission to the program.

B.S. computer engineering program requires a total of 147 units (not including the general-education requirements). There are three varieties of requirements: lower-division, upper-division, and technical electives.

1. LOWER-DIVISION REQUIREMENTS

Students are expected to complete the following seventy units by the end of their sophomore year.

Computer Science and Engineering: CSE 8B or 11, 12, 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, and CSE 91; twenty-one units.

Note: Students without any programming experience are advised to take CSE 8A and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B, and requires experience in programming with a compiled language.

Mathematics: Math. 20A-B-C-D and 20F; twenty units.

Physics: Phys. 2A-B-C-D; sixteen units. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the Department of Mathematics placement test permits them to start with Math. 20B or a higher course may take Phys. 2A in the fall quarter of the freshman year; all others will take Phys. 2A in the winter quarter of the freshman year. Students who received high grades in both calculus and physics in high school may substitute the major's sequence, Phys. 4A-B-C-D for Phys. 2A-B-C-D.

Physics Lab: Phys. 2BL or 2CL or 2DL; two units. The lab courses should be taken concurrently with the Phys. 2 or Phys. 4 sequence.

Introduction to Electrical Engineering: ECE 53A-B; eight units. ECE 53A-B are courses that give a comprehensive introduction to electrical engineering.

Probability and Statistics: ECE 109; four units. This course can be taken in the sophomore year.

2. UPPER-DIVISION REQUIREMENTS

All B.S. computer engineering students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 120, 131A-B, 140, 140L, 141, and 141L; thirty-six units.

In addition, all B.S. computer engineering students have to fulfill the following upper-division ECE requirements.

Linear Systems: ECE 101, ECE 171A or 161A; eight units. The department recommends that these courses be taken in the junior year.

Electronic Circuits and Systems: ECE 102, ECE 108; eight units. The department recommends that these courses be taken in the junior year.

If students want to accelerate their program, they should consider taking CSE 100 or Math. 176, CSE 105 or Math. 166, and/or CSE 140 and 140L in the sophomore year.

3. TECHNICAL ELECTIVES

All B.S. computer engineering students are required to take six technical electives for a total of twenty-four units. One of these courses must be either ECE 111 or ECE 118. Of the remaining five courses, four must be computer science and engineering or electrical and computer engineering upper-division or graduate courses.

The remaining course can be any computer science and engineering or electrical and computer engineering upper-division or graduate course, or any other course listed under the section titled **Electives**. Other restrictions in the selection of technical electives are also given in the section **Electives**.

B.S. Computer Science with a specialization in Bioinformatics

The explosion in biological knowledge spawned by the various genome projects has created entirely new fields and industries, and a need for trained computational biologists who are familiar with biology, mathematics, and computer sciences. The Computer Science and Engineering Department offers rigorous, interdisciplinary training in the new and rapidly evolving field of bioinformatics. Bioinformatics refers to advanced computational and experimental methods that model the flow of information (genetic, metabolic, and regulatory) in living systems to provide an integrated understanding of the system properties of organisms. This interdisciplinary major will be offered by three other programs (Division of Biology, Department of Chemistry and Biochemistry, and Department of Bioengineering). The computer science and engineering requirements comprise of 152 units to be taken from the divisions of physical sciences, biology, and engineering.

1. LOWER-DIVISION REQUIREMENTS

Lower-division requirements, 64 units: Students are expected to complete all lower-division requirements by the end of their sophomore year.

1. Math. 20A, 20B, 20C, 20F, (16 units)
2. Chemistry 6A, 6B, 6C, and one lab (15 units)
3. BILD 1, BILD 2, and BILD 94 (9 units)
4. CSE 11, CSE 12, and CSE 21 or Math. 15B (12 units)
5. Physics 2A, 2B, 2C (12 units)

2. UPPER-DIVISION REQUIREMENTS

Upper-division requirements, 88 units (includes five CSE technical electives)

1. CSE 100 or Math. 176 (Data Structures), (4 units)
2. CSE 101 or Math. 188 (Algorithms), (4 units)
3. Chemistry 140A–140B (Organic Chemistry), (8 units)
4. Chemistry 114B (Biochemical Energetics and Metabolism) or BIBC 102 (Structural and Metabolic Biochemistry) (4 units)
5. BIBC 103 (Biochemical Techniques), (4 units)
6. BICD 100 (Genetics), (4 units)
7. BIMM 100 (Molecular Biology) or Chemistry 114D (Molecular and Cellular Biochemistry), (4 units)
8. BIMM 101 (Recombinant DNA Lab), (4 units)
9. BICD 110 (Cell Biology), (4 units)
10. BIBC 110 (Physical Biochemistry) or Chemistry 127 (Physical Chemistry), (4 units)
11. Five additional CSE upper-division electives (electives 1, 2, 3, 4, and 5).

    At least one course from each of the three groups for a total of five electives:

    Group I: CSE 30, 111, 131A, 131B, 134A

    Group II: CSE 105, 150, 151, Math. 184A

    Group III: CSE 132A, 132B, 133

The bioinformatics series comprised of the following six courses, 24 units:

12. CSE 181 or BIMM 181 or BENG 181 (Molecular Sequence Analysis), (4 units)
13. CSE 182 or BIMM 182 or BENG 182 or Chem. 182 (Biological Databases), (4 units)
14. BENG 183 (Applied Genomic Technologies), (4 units)
15. CSE 184 or BIMM 184 or BENG 184 (Computational Molecular Biology), (4 units)
16. BIMM 185 (Bioinformatics lab), (4 units)
17. Math. 186 (Probability and Statistics), (4 units)

3. B.S. COMPUTER SCIENCE WITH A SPECIALIZATION IN BIOFORMATICS, SAMPLE PROGRAM

FALL	WINTER	SPRING

BENG 183	Elec. 2	Elec. 4
Elec. 1[5]	Elec. 3	Elec. 5
GE 9	GE 10	GE 11

[1] Students may take the slower paced version, CSE 8A + CSE 8B, instead of CSE 11.

[2] BILD 94 (1 unit seminar) is recommended in students first spring quarter of study at UCSD. This course gives an overview of issues and topics in bioinformatics.

[3] CSE 30 prerequisite will be waived.

[4] New courses for the bioinformatics program: CSE 181 is cross-listed with BIMM 181 and BENG 181; CSE 182 is cross-listed with BIMM 182, Chem 182, and BENG 182; CSE 184 is cross-listed with BIMM 184 and BENG 184; and (BENG 183, BIMM 185, and Math. 186 are also new courses but they are not cross-listed with any other courses).

[5] Students must complete five CSE technical electives from the approved list.

B.A. Computer Science Program

The B.A. computer science program gives students more latitude in designing their course of study. The lower-division program is designed to provide a strong foundation in mathematics, physics, programming methodology and skills, and computer organization. Upper-division core courses deal with the theory and design of algorithms, hardware, and software. Students can gain additional breadth and/or depth in computer science and engineering by an appropriate selection of technical electives. By requiring fewer technical electives, the B.A. computer science program serves those students desiring more time for undergraduate studies outside their major subject.

The department requires a total of 105 units for the B.A. computer science program (not including the general-education requirements). There are three varieties of requirements: lower-division, upper-division, and technical electives.

1. LOWER-DIVISION REQUIREMENTS

Students are expected to complete the following fifty-two units by the end of their sophomore year.

Computer Science and Engineering: CSE 8B or 11, 12, 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, and CSE 91; twenty-one units.

Note: Students without any programming experience are advised to take CSE 8A and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B, and requires experience in programming with a compiled language.

Mathematics: Math. 20A-B-C-D and 20F; twenty units.

Physics: Phys. 2A-B-C; twelve units. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the Department of Mathematics placement test permits them to start with Math. 20B or a higher course may take Phys. 2A in the fall quarter of the freshman year; all others will take Phys. 2A in the winter quarter of the freshman year. Students who received high grades in both calculus and physics in high school may substitute the major's sequence, Phys. 4A-B-C for Phys. 2A-B-C.

2. UPPER-DIVISION REQUIREMENTS

All B.A. computer science students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 120, 131A, 131B, 140, 140L, 141, and 141L; thirty-six units.

Students are expected to complete almost all of these courses by the end of their junior year. If students want to accelerate their program, they should consider taking CSE 100 or Math. 176, CSE 105 or Math. 166, and/or CSE 140 and 140L in the sophomore year.

3. TECHNICAL ELECTIVES

B.A. computer science students are required to take four technical electives for a total of sixteen units. Of these four electives, at least two must be computer science and engineering upper-division or graduate courses.

The remaining two technical electives can be chosen from a wider set of courses that includes computer science and engineering upper-division courses, graduate courses, and other electives as listed under the section titled **Electives**. Other restrictions in the selection of technical electives are also given in the section **Electives**.

Electives

The discipline of computer science and engineering interacts with a number of other disciplines in a mutually beneficial way. These disciplines include mathematics, electrical engineering, and cognitive science. The following is a list of upper-division courses from these and other disciplines that can be counted as technical electives.

At most four units of CSE 197, 198, or 199 may be used towards technical elective requirements. CSE 195 cannot be used towards course requirements. Undergraduate students must get instructor's permission and departmental stamp to enroll in a graduate course.

Students may not get duplicate credit for equivalent courses. The *UCSD General Catalog* should be consulted for equivalency information and any restrictions placed on the courses. Additional restrictions are noted below. Any deviation from this list must be petitioned.

Mathematics: All upper-division courses except Math. 168A-B, 179A-B (Math. 183—Computer Engineering majors only), 184A-B, 189A-B, and 195–199.

If a student has completed CSE 167, then he or she cannot get elective credit for Math. 155A. Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. No credit for any of these courses will be given if Math. 170A-B-C is taken. Students may receive credit for either one of the following: Math. 166 or

CSE 105 (but not both), Math. 188 or CSE 101 (but not both), Math. 176 or CSE 100 (but not both).

Credit will be given for only one of the following: ECE 109 or Math. 183 or Econ. 120A.

Electrical and Computer Engineering: All ECE upper-division courses except 195-199.

Students may not get credit for both CSE 123A and ECE 158A or CSE 143 and ECE 165. Credit will be given for only one of the following: ECE 109 or Math. 183 or Econ. 120A.

Cognitive Science: Sensation and Perception 101A; Learning, Memory, and Attention 101B, Language 101C, Distributed Cognition 102A, Cognitive Ethnography 102B, Cognitive Engineering 102C, Neuroanatomy and Physiology 107A, Systems Neuroscience 107B, Cognitive Neuroscience 107C, Programming Methods for Cognitive Science 108D, Neural Network Models of Cognitive I 108E, Advanced Programming Methods for Cognitive Science 108F, Human Computer Interaction 120, Human Computer Interaction Programming 121, Semantics 150, Language Comprehension 153, Natural and Artificial Symbolic Representational Systems 170, Neural Network Models of Cognition II 181, Artificial Intelligence Modeling II 182, Representation, Search, and the Web 188.

Students may not get credit for both CSE 150 and Advanced Programming Methods for Cognitive Science 108F or for both CSE 151 and Artificial Intelligence Modeling II 182.

Mechanical and Aerospace Engineering: All upper-division MAE courses except MAE 140 (**ONLY** Computer Science majors may take MAE 140) and 195-199.

Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. Students may only get credit for one of the two courses, CSE 167 or MAE 152.

Economics: Microeconomics 100A-B, Game Theory 109, Macroeconomics 110A-B, Mathematical Economics 113, Econometrics 120A-B-C, Applied Econometrics 121, Management Science Microeconomics 170A-B, Decisions Under Uncertainty 171, Introduction to Operations Research 172A-B-C, Economic and Business Forecasting 178.

Credit will be given for only one of the following: ECE 109 or Math. 183 or Econ. 120A.

Linguistics: Phonetics 110, Phonology I 111, Phonology II 115, Morphology 120, Syntax I 121, Syntax II 125, Semantics 130, Mathematical Analysis of Language 160, Computers and Language 163, Computational Linguistics 165, Principles of Discourse and Dialog 169, Psycholinguistics 170, Language and the Brain 172, and Sociolinguistics 175.

Engineering: Team Engineering 101.

Music: Computer Music II 172, Audio Production: Mixing and Editing 173.

Psychology: Engineering Psychology 161

Minor and Program of Concentration

The CSE minor requires successful completion of a total of nine CSE courses. To be admitted into the minor, students must have a 2.5 GPA and a C– or better in CSE 8B or 11, 12, 20, 21, 30. The remaining four CSE courses are CSE 100, CSE 101, and two additional CSE upper-division courses subject to enforcement of prerequisites. In order for the minor to be awarded students must receive an average 2.0 GPA in the upper-division courses.

Note: Students without any programming experience are advised to take CSE 8A and then CSE 8B, instead of CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B, and requires experience in programming with a compiled language.

Students should consult their college provost's office concerning the rules for the minor or program of concentration. Because our undergraduate program is highly impacted, winter or spring enrollment is recommended for CSE 8A or CSE 8B or CSE 11.

Effective Fall 2000, Mathematics/Computer Science Majors will not be allowed the Minor in Computer Science.

Computing Courses for Non-Majors

The department offers a slow-pace course providing a practical introduction to computers, computation, and programming: CSE 5A—an introduction to structured programming using the C/Java programming language. We also offer an introduction in "fluency in information technology": CSE 3—an introduction to basic information students need to deal with information technology. It is more of a concepts course than a programming course, but some simple programming will be done as part of the teaching of concepts.

Admission to Major

FRESHMEN STUDENTS

Freshman students who have excelled in high school and have declared CSE on their application will be directly admitted by the dean of the School of Engineering into their major. The only way to become a computer science (CS) or computer engineering (CE) major is to be directly admitted as an entering freshman (transfer students see TRANSFER STUDENTS section below) These students will be notified directly of their status.

Because of heavy student interest in departmental programs, and the limited resources available to accommodate this demand, maintenance of a high quality program makes it necessary to limit enrollments to the most qualified students.

Admission to the department as a major, transfer, or minor is in accordance with the general requirements established by the School of Engineering.

TRANSFER STUDENTS

The B.S. or B.A. in Computer Science and the B.S. in Computer Engineering are heavily impacted majors and admission is limited to applicants who have demonstrated a high level of achievement commensurate with the prospect of success in these majors. Successful applicants must have completed substantial training at the community college and must have achieved a high level of academic performance there. For example, the required minimum of 90 quarter transfer units must include 18 quarter units of calculus, 12 quarter units of calculus-based physics, and the highest level computer science course offered at their community college.

Effective fall 2001 applicants seeking admission as transfer students will be considered for direct admission into the Computer Science (CS) or Computer Engineering (CE) majors in the Department of Computer Science & Engineering (CSE). The only way to become a computer science (CS) or computer engineering (CE) major is to be directly admitted as an entering transfer student. Although the actual required GPA cutoff depends on the number of openings, at least a 3.2 GPA in the community college transfer courses, and a 3.4 GPA in math, physics and computer science courses, are likely to be needed to gain admission. Transfer students who have declared pre-CSE will be considered for direct admission to the major.

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)

- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

CONTINUING UCSD STUDENTS
Exceptional Admission Program

Space permitting and in its sole discretion, the computer science and engineering department may periodically grant admission to the Computer Science (CS) or Computer Engineering (CE) majors to a small number of academically exceptional UCSD undergraduate students who were not admitted to these majors as entering students. Exceptional admission will be considered for students having an overall UCSD GPA of 3.5 or better who have taken at least two CSE, math, or science courses demonstrating special aptitude for the CS or CE curriculum. Applications for exceptional admission must include submission of a course plan demonstrating ability to satisfy graduation requirements and a personal statement addressing the applicant's motivation to join the CS or CE major, in addition to other criteria established by the department. (For admission into the B.S. in Computer Science with specialization in Bioinformatics, please see the following section: Admission into B.S. in Computer Science with specialization in Bioinformatics).

Admission into B.S. in Computer Science with a specialization in Bioinformatics

Since the number of pre-majors and majors will be limited as described in the section on bioinformatics, student demand may exceed capacity. Therefore, admission to the specialization is not guaranteed and will be based on academic excellence, as described below. Since bioinformatics is an interdisciplinary major, a steering committee involving faculty from the participating departments will select among the best candidates applying and recommended through each department, while insuring active participation of the departments and divisions offering the major. The final decision on admission to the pre-major and major will be made by the Bioinformatics Steering Committee, in consultation with the departments. The application is found at http://www.cse.ucsd.edu/undergrad/admissions/admissionshome.html, or see the CSE department at AP&M 3402.

FRESHMEN AND CONTINUING STUDENTS

Students (freshmen or continuing UCSD students) will be admitted into one of our existing undergraduate majors (B.A. Computer Science, B.S. Computer Science, and B.S. Computer Engineering) through the direct admission process or through the exceptional admission program. Students will then have the option of trying to enter the bioinformatics program by applying for the bioinformatics pre-major (while still retaining their current major status) once they complete the first four screening courses (Math 20B, Math 21C, BILD 1, Chem 6A). Students will then formally apply to the bioinformatics major upon completion of the remaining screening courses CSE 11 and CSE 12. If admitted, students will become bioinformatics majors in CSE. If not, they can continue in their current CSE major.

TRANSFER STUDENTS

Transfer students will be admitted into one of our existing undergraduate majors (B.A. Computer Science, B.S. Computer Science, and B.S. Computer Engineering) through the direct admission process or through the exceptional admission program. Effective fall 2003, CSE transfer students can directly apply to the bioinformatics major if they completed the following courses prior to transferring to UCSD.

- A year of calculus (equivalent to Math 20A-B-C at UCSD)
- A year of general chemistry, with lab (equivalent to Chem 6A, 6B/6BL and Chem 6C at UCSD)
- The highest level programming course offered at the community college (equivalent to CSE 11 and CSE 12 at UCSD)
- One semester of cell biology (equivalent to BILD 1 and BILD 2 at UCSD)

Those who have not completed the above courses may be admitted as bioinformatics pre-majors and will be allowed a maximum of three quarters to complete pre-major requirements. Students will then formally apply to the bioinformatics major upon completion of the remaining screening courses CSE 11 and CSE 12. If admitted, students will become bioinformatics majors in CSE. If not, they can continue in their current CSE major. Transfer students are encouraged to complete these requirements at the community college.

Enrollment in CSE courses

Student demands exceed capacity in many CSE courses. Accordingly, many CSE courses may have enrollment restrictions which give priority to students in the following order:

1. CSE majors, CSE M.S., and CSE Ph.D. students.
2. CSE pre-majors, and ECE CE majors and pre-majors, and Math-CS majors. CSE pre-major status is conferred to transfer students and to those students admitted prior to fall 1998.
3. Students fulfilling a non-elective requirement in another program.
4. CSE minors.
5. All other majors or pre-majors in other SOE departments.
6. All others, with permission of the department of Computer Science and Engineering.

Where these restrictions apply, the registrar will not enroll low-priority students in the course.

ENROLLING IN UPPER-DIVISION COURSES

The Department of Computer Science and Engineering will attempt to provide sufficient sections of all lower-division courses. Students will, however, be screened to ensure that they meet all course enrollment restrictions.

Admission to upper-division courses will be restricted to students having completed all prerequisites with a C- or better (or consent of the instructor.) Courses have enrollment restrictions which give priority in the following order: students admitted by the department to a major or minor curriculum; students fulfilling a requirement for another major; all others. Within these categories, priority is determined on the basis of graduation date and/or credits completed.

Where these restrictions apply, the registrar will not enroll nonmajors except by department approval. Students who are undeclared will not be admitted to upper-division computer science and engineering courses.

Those students not in compliance with the above restrictions should be forewarned that they will automatically be dropped from course rosters (at any time during the quarter) when it comes to the attention of the department that a student is enrolled in a course without being eligible because of restrictions and/or the performance standards have not been met. Admission to all computer science and engineering courses will require obtaining either authorization through StudentLink or department stamps on an add/drop card, and it will be given only by the student affairs personnel.

Graduation Requirements

All major requirements and technical electives except CSE 197, 198, or 199 must be taken for a letter grade. To graduate, a grade-point average of 2.0 will be required in upper-division courses in the major, including technical electives. In addition, each student must satisfy general-education course requirements determined by the student's college, as well as major requirements determined by the department. The five colleges at UCSD require widely different numbers of general-education courses. Each student should choose his or her college carefully, considering the special nature of the college and breadth of education, realizing that some colleges require considerably more courses than others.

Five-year Bachelor's—Master's Program

Undergraduate students in the Department of Computer Science and Engineering who are enrolled in the B.S. or B.A. computer science or B.S. computer engineering degree programs, and who have a cumulative GPA of a 3.4 and also a GPA of 3.4 in at least seven core courses, are eligible to apply for the Five Year Bachelor's-Master's Degree Program. The deadline to apply is the fourth week of the fourth quarter before graduation. Acceptance into this program is an honor which carries with it practical benefits—the graduate application process is simplified (no GREs required), students accepted into this program can be admitted fall, winter, and spring quarter, based upon availability of openings in the program. Advanced students are given access to graduate level courses and have the opportunity to do graduate level research earlier under the direct supervision of UCSD's faculty, and students are able to complete the B.A., B.S., and M.S. degree within a five-year time period. Courses taken can be used toward either the B.A., B.S., or M.S. degree, but not counted toward both degrees. Additional information and applications can be obtained by contacting the CSE Student Affairs Office, APM 3402.

The Graduate Program

The graduate program offers master of science and doctor of philosophy degrees in computer science and computer engineering. To be accepted into either course of study, a student must have a B.A./B.S. degree in computer science, computer engineering, or a related area.

The graduate program is concerned with fundamental aspects of computation; emphasis is divided among the areas of theory, hardware, software systems, and artificial intelligence. The computer engineering specialization places a greater emphasis on hardware and the design of computer systems.

Admission to the graduate program is done through the Office of Graduate Admissions, Department of CSE. Deadline for application is January 3. Admissions are always effective the following fall quarter. For admission requirements, please refer to the departmental Web page: http://www-cse.ucsd.edu/graduate/

Admission decisions for the M.S. and Ph.D. programs are made separately. An M.S. student who wishes to enter the Ph.D. program must submit a new application to the CSE admissions committee.

Computer Science Program

Master of Science Program

The department offers the master of science degree in computer science. The degree can be pursued under either the Thesis Plan I or the Comprehensive Examination Plan II. Each plan requires forty-nine units of work. For full-time students, all the requirements must be completed within two years. Students with an adequate background in computer science can complete the M.S. program within four to five quarters of full-time study.

THESIS OR COMPREHENSIVE EXAM

There are two plans of study for the master's degree: Plan I, in which the student writes a thesis, and Plan II, in which the student takes a set of comprehensive exams.

Plan I: Thesis Option, No Comprehensive Exam

This plan involves both course work and research, culminating in the preparation of a thesis. The student must take twelve units of CSE 298 (Independent Study) to fulfill the research requirement, and a thesis based on research must be written and subsequently reviewed by the thesis committee. This committee, which is appointed by the dean of Graduate Studies and Research, consists of three faculty members, with at least two members from within the CSE department.

Plan II: Comprehensive Examination, No Thesis

Under this plan, the student must pass a written comprehensive examination designed to test the student's knowledge in basic computer science material. The examination can normally be passed with a thorough knowledge of topics covered in the undergraduate and first-year graduate computer science programs. It is offered every year in the first few weeks of the fall quarter and in the first few weeks of the spring quarter. Each student is allowed three attempts to pass the examination. The student must secure at least a master's-level pass in the written comprehensive examination. More information regarding the comprehensive examination can be found in a separate document provided by the CSE graduate office.

In particular, the written examination is structured around the three CSE core areas: algorithms and data structures; operating systems; and computer architecture and digital logic design.

Required Courses

Students entering the M.S. Program in Computer Science will choose an area of concentration from among fourteen areas. Each concentration is an area in which the faculty has significant research expertise.

The typical concentration is a collection of three courses which are designed to give the student in-depth training in the chosen field.

Additionally, to ensure breadth, all students are required to take four core courses.

Core courses must be completed with an average grade of B and no grade below B–. The four core courses required of all students are as follows:

CSE 202. Algorithms Design and Analysis
CSE 221. Operating Systems
CSE 240A. Principles of Computer Architecture
CSE 292. Faculty Research Seminar

The department expects to offer concentrations in the following areas:

Artificial Intelligence
Communication Networks
Computer Architecture and Compilers
Computer Graphics and Vision
Cryptography and Security
Databases
Design Automation for Microelectronic Designs
Distributed and Fault-Tolerant Computing
Embedded Systems and Software
Multimedia Systems
Parallel and Scientific Computing
Software Engineering
Storage Systems
Ph.D. Preparation

The specific courses involved in each of the concentrations are detailed in a separate bulletin which is available in the Graduate Student Affairs Office, 3402 AP&M.

Project

Students electing Plan II are required to execute a project while enrolled in four units of CSE 293.

Electives

In addition to completing the required core courses and fulfilling either the thesis or comprehensive examination requirements described above, the student must also complete additional approved courses to bring the total number of units to forty-nine. The number of units of electives depends upon whether the student chooses Plan I or Plan II. The electives consist of other CSE graduate courses or courses from a list of approved electives. Units obtained in the courses CSE 293, 298, 299, 500, 501, 599, and any of the seminar courses CSE 209, 229, 259, 269, 290, and 294 do not count toward the elective requirement.

Computer Engineering Program

Computer engineering, jointly administered between the CSE and ECE departments, offers the master of science and doctoral degrees with the degree title computer science and engineering (computer engineering). Computer engineering explores the engineering analysis and design aspects of algorithms and technology. Specific research areas include computer systems, signal processing systems, architecture, networks, computer-aided design, fault tolerance, and data storage systems.

Master of Science Program

The degree can be pursued under either the Thesis Plan I or the Comprehensive Examination Plan II. Each plan requires forty-nine units of work. For full-time students, all the requirements must be completed within two years. Students with an adequate background in computer engineering can complete the M.S. program within four to five quarters of full-time study.

PLAN I: THESIS OPTION, NO COMPREHENSIVE EXAM

This plan of study involves both course work and research, culminating in the preparation of a thesis. A total of forty-nine units of credit is required, as follows:

Core Courses

The following core courses must be completed with an average grade of B and no grade below B–:

Three Software Courses:
CSE 202
CSE 221
CSE 231

Three Hardware Courses:
CSE 240A
ECE 260A
CSE 243A or ECE 251A or ECE 263A

Two Analysis Courses:
CSE 200
CSE 222A or ECE 257A

and:
CSE 292

Electives

Students must elect at least four technical units among graduate courses within the Departments of AMES, CSE, ECE, Mathematics, and Physics.

Thesis

Twelve units of CSE 298 must be taken with a faculty member in CSE or ECE who agrees to act as adviser for the thesis to fulfill the research requirement.

A thesis based on research must be written and subsequently reviewed by a committee, consisting of three faculty members, with at least two members from within the CSE department. The committee is appointed by the dean of Graduate Studies.

PLAN II: COMPREHENSIVE EXAMINATION, NO THESIS

In order to receive the M.S. degree in computer engineering under this plan, a student must complete the course requirements listed below and pass a written comprehensive examination.

The written examination is structured around the following three CSE core areas: algorithms and data structures; operating systems; and computer architecture and digital logic design.

Core Courses

Three Software Courses:
CSE 202
CSE 221
CSE 231

Three Hardware Courses:
CSE 240A
ECE 260A
CSE 243A or ECE 251A or ECE 263A

Two Analysis Courses:
CSE 200
CSE 222A or CSE 257A

and
CSE 292

Electives

Students must elect at least twelve technical units among graduate courses within the Departments of MAE, CSE, ECE, Mathematics, and Physics.

Project

Four units of CSE 293.

Comprehensive Examination

The comprehensive examination is designed to test the student's knowledge in basic computer science and engineering material. The

examination can normally be passed with a thorough knowledge of topics covered in the undergraduate and the first-year graduate computer science or computer engineering programs.

It is offered every year in the first few weeks of the fall quarter and in the first few weeks of the spring quarter. If fewer than seven people sign up, then the department may cancel the examination in the spring quarter. Each student is allowed three attempts to pass the examination. The student must secure at least a master's-level pass in the written comprehensive examination.

This examination is the same for both the computer science and the computer engineering graduate programs. More information about the comprehensive examination can be obtained in a separate document from the CSE graduate office.

Doctoral Programs

Ph.D. Degree Programs in Computer Science and Computer Engineering

CSE offers doctor of philosophy degrees in computer science and in computer engineering, providing a research-oriented education in preparation for a research, industrial, or entrepreneurial career. These programs explore both the fundamental aspects and application of computation, spanning theory, software, hardware, and applications. Our particular areas of research expertise include:

- algorithms
- artificial intelligence
- bioinformatics
- complexity theory
- computer architecture/compilers
- VLSI/CAD and embedded systems
- databases and information management
- distributed systems and networking
- graphics and vision
- high performance computing
- mobile computing
- security and cryptography
- software engineering

COMPETENCY REQUIREMENT

We consider command of the materials covered in the following courses to be an adequate background for the Ph.D. program. The competency requirement is intended to ensure that Ph.D. students already have or acquire this undergraduate background. Students, who do not have this background at the time of entry, may be asked to either enroll in the following undergraduate class or to study it independently and demonstrate their knowledge by obtaining a B+ or better in the class or in the final exam.

CSE 101 (Algorithms)

CSE 105 (Theory of Computation)

CSE 120 (Principles of Computer Operating Systems)

Two of the following three courses:

CSE 130, 131A-B (Programming Languages/Compilers)

CSE 141 (Introduction to Computer Architecture)

CSE 221 (Operating Systems)

CSE 240A (Architecture)

CSE 200 (Complexity) for Computer Science

or CSE 241A (Introduction to Computing Circuitry) for Computer Engineering

CSE 292 (Faculty Research Seminar)

COURSE REQUIREMENTS

The course requirement is intended to ensure that students are exposed to fundamental concepts and tools (core requirement), a deep up-to-date view of their research area (depth requirement), and advanced, up-to-date view of the some topics outside their area (breadth requirement). Ph.D. students are expected to complete the core, depth, and breadth requirements in the first two years of the program. All required coursework must be taken for a letter grade except for CSE 291 (Topics in CSE), CSE 292 (Faculty Research Seminar), CSE 299 (Research), and CSE 500 or CSE 501 (Teaching Assistantship) for which only S/U grades are allowed.

Units obtained from a single course cannot count more than once towards satisfying the requirement in each of the core, depth, breadth, and elective areas. Ph.D. students who have taken similar courses elsewhere may petition for a waiver of the required courses or for substitution by alternative courses.

Core Requirements

The core requirements ensure that the Ph.D. students share knowledge of fundamental concepts and tools. Each Ph.D. student must take these courses for letter grade and maintain an overall core course GPA of 3.4 with no grade lower than a B- (except for CSE 292, for which a letter grade is not assigned). A student will typically complete all the core courses within the first year of graduate study, and must complete all core courses within two years of entry.

CSE 202 (Algorithms)

Depth Requirements

The depth requirement ensures that a Ph.D. student has, early on in his or her career, acquired some depth of knowledge in a general research area. Each Ph.D. student must select one of the following areas as his or her major area. The student must take three courses (12 units) from this major area. The student must take these courses for letter grade and maintain an overall depth course GPA of 3.4 with no grade lower than B- in these courses. One of these three courses can be Topics in CSE (CSE 291) or Independent Study (CSE 299), which are not taken for a letter grade. The department will maintain a list of appropriate courses for each major area.

The major areas are:

Theoretical Computer Science

Programming Languages, Compilers, and Software Engineering

Computer Systems

Database Systems

Computer Engineering

Artificial Intelligence

Breadth Requirements

Research in computer science and engineering is increasingly interdisciplinary, and acquiring a broader view of the field in general is important. Each Ph.D. student must take three courses (12 units) from at least two other areas different from the major area. Courses must be taken for letter grade and students must maintain an overall breadth course GPA of 3.0 with no grade lower than B- in these courses. Units obtained in CSE 209 series, 229 series, 239 series, 249 series, 259 series, 269 series, 279 series, 289 series, 290, 292, 293, 294, 298, 291, 299, 500, 501, and 599 do not count toward the breadth requirement.

Electives

In addition to the above required course work, each student is expected to take two additional courses (8 units). Students must obtain

no grade lower than C- in these courses. Undergraduate upper-division courses, CSE 291, and CSE 299 may fulfill this requirement. Units obtained in CSE 209 series, 229 series, 239 series, 249 series, 259 series, 269 series, 279 series, 289 series, 290, 292, 293, 294, 298, 500, 501, and 599 do not count toward the elective requirement.

RESEARCH EXAM REQUIREMENT

The research exam is intended to verify three components of the student's preparation for Ph.D. research: (1) breadth of comprehension sufficient to enable computer science research in areas beyond the topic(s) of the research exam and thesis; (2) ability to perform critical study, analysis, and writing in a focused area; and (3) research experience.

The research exam has both an oral part and a written part. The oral part of the research exam is distinct from, and cannot be combined with the University Qualifying Exam. Grading criteria for each part, and standards for passing, are available from the CSE department graduate office.

The research exam is conducted by a committee of three faculty members approved by the Graduate Committee and the chair of the department. At least two committee members must be CSE senate faculty, and the student's adviser must be a member of the committee. The normative time for passing the research exam is by the end of the second year of study; the exam must be passed by the end of the third year if the student is to continue in the Ph.D. program. Passing the research exam enables a Ph.D. student to receive the M.S. degree. Ph.D. students who do not pass the exam after two attempts will be given the opportunity to write a thesis in order to receive a terminal M.S. degree. The M.S. degree is only granted to those students who do not already hold an M.S. degree prior to entering the CSE department at UCSD.

TEACHING ASSISTANT REQUIREMENT

All students enrolled in the Ph.D. program must have one quarter of training as a teaching assistant. This is a formal degree requirement and must be completed before the student is permitted to graduate. The requirement is met by serving as a 50 percent teaching assistant and taking either CSE 500 or CSE 501(Teaching Assistantship).

QUALIFYING EXAMINATION AND ADVANCEMENT TO CANDIDACY

The qualifying examination is a requirement for advancement to candidacy. Prior to taking the qualifying examination a student must have satisfied the departmental competency, course, and research exam requirements and must have been accepted by a CSE faculty member as a Ph.D. thesis candidate. All doctoral students are expected to advance to candidacy by the end of their third year, and advancement is mandatory by the end of the fourth year. The examination is administered by a doctoral committee appointed by the dean of Graduate Studies and Research and consists of faculty from CSE and other departments. More information on the composition of the committee can be obtained from the CSE graduate office. The examination is taken after the student and his or her adviser have identified a topic for the dissertation and an initial demonstration of feasible progress has been made. The candidate is expected to describe his or her accomplishments to date as well as future work.

DISSERTATION

The dissertation defense is the final Ph.D. examination. A candidate for the Ph.D. is expected to write a dissertation and defend it in an oral examination conducted by the doctoral committee.

DEPARTMENTAL PH.D. TIME LIMIT POLICIES

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

FINANCIAL AID

Financial support is available to qualified graduate students in the form of fellowships, loans, and assistantships. Anticipated stipends for half-time research assistantships are $1573 per month, with the possibility of full-time employment during the summer months. For a half-time teaching assistantship, the anticipated stipend will be $1571 per month. Requests for application forms for admission and financial support should be directed to the Department of Computer Science and Engineering.

COURSES

Student demand exceeds capacity in many CSE courses. Accordingly, many CSE undergraduate courses may have enrollment restrictions which give priority to students in the following order:

- CSE majors, CSE M.S., and CSE Ph.D. students
- CSE pre-majors, ECE CE majors and pre-majors, and Math-CS majors
- students fulfilling a non-elective requirement in another program
- CSE minors
- all other majors or pre-majors in other SOE departments
- all others, with permission of the Department of Computer Science and Engineering

Where these restrictions apply, the registrar will not enroll low-priority students in the course.

A tentative schedule of course offerings is available from the department, APM 3402, each spring for the following academic year. The tentative schedule for 2002–2003 is also found at http://www-cse.ucsd.edu/ugrad/offerings02-03.html.

LOWER-DIVISION

CSE 3. Fluency in Information Technology (4)
Introduces the concepts and skills necessary to effectively use information technology. Includes basic concepts and some practical skills with computer and networks. *Prerequisite: none.*

CSE 5A. Introduction to Programming I (4)
(Formerly CSE 62A) Introduction to algorithms and top-down problem solving. Introduction to the C language including functions, arrays, and standard libraries. Basic skills for using a PC graphical user interface operating system environment. File maintenance utilities are covered. (A student may not receive credit for CSE 5A after receiving credit for CSE 10 or CSE 11 or CSE 8B or CSE 9B or CSE 62B or CSE 65.) *Prerequisite: A familiarity with high-school level algebra is expected, but this course assumes no prior programming knowledge.*

CSE 8A. Introduction to Computer Science: Java (4)
Basic UNIX. Basics of Java language. Classes, methods, and parameters. Modularity and abstraction. Documentation techniques. Testing and verification techniques. Basic Inheritance. Event driven programming. Programming with AWT library or other similar library. CSE 8A-B is a slower paced version of CSE 11 with more programming practice. (Students who have taken CSE 9A or CSE 9B or CSE 10 or CSE 11 may not take CSE 8A.) *Prerequisite: high school algebra.* Majors only.

CSE 8B. Introduction to Computer Science: Java (4)
Continuation of the Java language. Continuation of programming techniques. More on Inheritance. Exception handling. CSE 8A-B is a slower paced version of CSE 11 with more programming practice. (Students who have taken CSE 9A or CSE 9B or CSE 10 or CSE 11 may not take CSE 8B.) *Prerequisite: high school algebra.* Majors only.

CSE 11. Introduction to Computer Science and Object-Oriented Programming: Java (4)
Introduction to computer science and programming using the Java language. Basic UNIX. Modularity and

abstraction. Documentation, testing and verification techniques. Basic object-oriented programming including inheritance and dynamic bind. Exception handling. Event-driven programming. Experience with AWT library or other similar library. *Prerequisites: high-school algebra and a course in programming in a compiled language.* Majors only.

CSE 12. Basic Data Structures and Object-Oriented Design (4)
Basic data structures including stacks, queues, lists, binary trees, hash tables. Basic object-oriented design including encapsulation, polymorphism, classes as the implementation of abstract data types. Memory management, pointers, recursion, and big-o notation. Uses the C/C++ and Java programming language. *Prerequisite: CSE 8B or CSE 11.*

CSE 20. Introduction to Discrete Mathematics (4)
Basic discrete mathematical structure: sets, relations, functions, sequences, equivalence relations, partial orders, and number systems. Methods of reasoning and proofs: propositional logic, predicate logic, induction, recursion, and pigeonhole principle. Infinite sets and diagonalization. Basic counting techniques; permutation and combinations. Applications will be given to digital logic design, elementary number theory, design of programs, and proofs of program correctness. Credit not offered for both Math. 15A and CSE 20. Equivalent to Math 15A. *Prerequisites: CSE 8A or CSE 8B or CSE 11. CSE 8B or CSE 11 may be taken concurrently with CSE 20/ Math. 15A.*

CSE 21. Mathematics for Algorithms and Systems (4)
This course will provide an introduction to the discrete mathematical tools needed to analyze algorithms and systems. Enumerative combinatorics: basic counting principles, inclusion-exclusion, and generating functions. Matrix notation. Applied discrete probability. Finite automata. Credit not offered for both Math.15B and CSE 21. Equivalent to Math 15B. *Prerequisites: CSE 20 or Math. 15A.*

CSE 30. Computer Organization and Systems Programming (4)
(Formerly CSE 70.) Introduction to organization of modern digital computers—understanding the various components of a computer and their interrelationships. Study of a specific architecture/machine with emphasis on systems programming in C and Assembly languages in a UNIX environment. *Prerequisites: CSE 12 and CSE 20 or Math. 15A; or consent of the instructor.*

CSE 80. UNIX Lab (2)
The objective of the course is to help the programmers create a productive UNIX environment. Topics include customizing the shell, file system, shell programming, process management, and UNIX tools. (P/NP grades only.) *Prerequisite: CSE 8B or CSE 9B or CSE 10 or CSE 11.*

CSE 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. *Prerequisite: none.*

CSE 99. Independent Study in Computer Science and Engineering (4)
Independent reading or research by special arrangement with a faculty member. *Prerequisites: lower-division standing. Completion of 30 units at UCSD with a UCSD GPA of 3.0. Special Studies form required. Department stamp required. Consent of instructor and approval of the department. Majors only.*

UPPER-DIVISION

CSE 100. Advanced Data Structures (4)
Descriptive and analytical presentation of data structures and algorithms. Lists, tables, priority queues, disjoint subsets, and dictionaries data types. Data structuring techniques include linked lists, arrays, hashing, and trees. Performance evaluation involving worst case, average and expected case, and amortized analysis. Credit not offered for both Math. 176 and CSE 100. Equivalent to Math. 176. *Prerequisites: CSE 12, CSE 21 or Math. 15B, and CSE 30, or consent of the instructor.* Majors only.

CSE 101. Design and Analysis of Algorithms (4)
Design and analysis of efficient algorithms with emphasis on non-numerical algorithms such as sorting, searching, pattern matching, and graph and network algorithms. Measuring complexity of algorithms, time and storage. NP-complete problems. Credit not offered for both Math. 188 and CSE 101. Equivalent to Math 188. *Prerequisites: CSE 12, CSE 21 or Math. 15B or Math. 100A or Math. 103A and CSE 100 or Math. 176.* Majors only.

CSE 102. Storage System Architectures (4)
Descriptive and analytic introduction to disk drive storage media, external data structures, and their algorithms. Disk drives, external sorting, index structures, disk arrays, reliability, data declustering, and video servers. Merge sort, B+trees, linear hashing, improved RAID data organizations, and SID data layout. *Prerequisite: CSE 100 or Math. 176, CSE 120, CSE 123A, or consent of the instructor.* Majors only.

CSE 105. Theory of Computability (4)
An introduction to the mathematical theory of computability. Formal languages. Finite automata and regular expression. Push-down automata and context-free languages. Computable or recursive functions: Turing machines, the halting problem. Undecidability. Credit not offered for both Math. 166 and CSE 105. Equivalent to Math 166. *Prerequisites: CSE 12, CSE 21 or Math. 15B or Math. 100A or Math. 103A.* Majors only.

CSE 107. Introduction to Modern Cryptography (4)
Topics include private and public-key cryptography, block ciphers, data encryption, authentication, key distribution and certification, pseudorandom number generators, design and analysis of protocols, zero-knowledge proofs, and advanced protocols. Emphasizes rigorous mathematical approach including formal definitions of security goals and proofs of protocol security. *Prerequisites: CSE 21 or Math. 15B, CSE 101 or Math. 188, CSE 105 or Math. 166.* Majors only.

CSE 111. Object Oriented Software Design (4)
Introduction to object-oriented analysis and design. Object-oriented modeling methods for analysis and design, object-oriented general design paradigms, object-oriented design techniques. Cyclic development of object-oriented systems. *Prerequisites: CSE 8B or CSE 9B or CSE 10 or CSE 11, CSE 12, and CSE 100 or Math. 176.* Majors only.

CSE 112. Software Engineering (4)
(Formerly CSE 110.) This course will cover software engineering topics associated with large systems development such as requirements and specifications, testing and maintenance, and design. *Prerequisites: CSE 111.* Majors only.

CSE 118. Ubiquitous Computing (4)
Explores emerging opportunities enabled by cheap sensors and networked computing devices, and is organized as a preparatory course for graduate school. Students read, present, and discuss research papers. Small research projects will be conducted in teams, culminating in project presentations at the end of the term. The weekly discussion section will cover material relevant to the project on research methods, software engineering, teamwork, and project management. *Prerequisites: successful completion of a major project course, including: CSE 131B, CSE 132B, Cog Sci 102C, Cog Sci 121, Cog Sci 184, ECE 111, ECE 118, ECE 191, ECE 192, COMT 111B, COMT 115, or ICAM 160B. Other project courses, experience, or accomplishments may be petitioned. Majors only.*

CSE 120. Principles of Computer Operating Systems (4)
(Formerly CSE 171A.) This course introduces the basic concepts used to structure computer operating systems. Examples of notions introduced and discussed are batch processing, multiprogramming, input/output, pooling, interrupt handling, processes, descriptors, process synchronization, interprocess communication, memory management, virtual memory, caching, buffers, naming, files, interactive command interpre-ters, and processor scheduling. *Prerequisites: CSE 100 or Math. 176, CSE 101 or Math. 188, and CSE 141.* Majors only.

CSE 121. Operating Systems: Architecture and Implementation (4)
(Formerly CSE 171B.) Case study of architecture and implementation of a selected modern operating system. In-depth analysis through a detailed study of source code. Topics include process creation, context-switching, memory allocation, synchronization mechanisms, interprocess communication, I/O buffering, device drivers, and file systems. *Prerequisite: CSE 120.*

CSE 123A. Computer Networks (4)
Introduction to concepts, principles, and practice of computer communication networks with examples from existing architectures, protocols, and standards with special emphasis on the Internet protocols. Layering and the OSI model; physical and data link layers; local and wide area networks; datagrams and virtual circuits; routing and congestion control; internetworking. Transport protocols. *Prerequisite: CSE 141.* Majors only.

CSE 123B. Communications Software (4)
Protocol software structuring, The Internet protocol suite, Inter-process communication, Protocols for real-time and multimedia (digital audio and video) communication, multicast, bridging, and group communication protocols, protocols for mobile and personal communication networks, application-level protocols, secure communication. *Prerequisite: CSE 120 or consent of the instructor. CSE 123A is strongly recommended.* Majors only.

CSE 125. Software System Design and Implementation (4)
Design and implementation of large, complex software systems involving multiple aspects of CSE curriculum. Emphasis is on software system design

applied to a single, large group project with close interaction with instructor. *Prerequisites: senior standing with substantial programming experience, and consent of instructor.* Majors only.

CSE 126. Multimedia Systems (4)
Multimedia technologies; multimedia storage models and structures; data models and interfaces; multimedia information systems; video/audio networking; media synchronization; image computing and information assimilation; conferencing paradigms and structured interaction support. *Prerequisite: CSE 120 or consent of the instructor.*

CSE 127. Introduction to Computer Security (4)
Topics include basic cryptography, security/threat analysis, access control, auditing, security models, distributed systems security, and theory behind common attack and defense techniques. The class will go over formal models as well as the bits and bytes of security exploits. *Prerequisite: CSE 21 or Math. 15B, and CSE 120.* Majors only.

CSE 128. Concurrency (4)
Specification of concurrent programs safety, liveness, and fairness: producer-consumer; mutual exclusion; atomic read/writes; semaphores; monitors; distributed algorithms and memory coherency; programming with threads; concurrency in popular programming languages and operating systems. *Prerequisite: CSE 120.* Majors only.

CSE 130. Programming Languages: Principles and Paradigms (4)
(Formerly CSE 173.) Introduction to programming languages and paradigms, the components that comprise them, and the principles of language design, all through the analysis and comparison of a variety of languages (e.g., Pascal, Ada, C++, PROLOG, ML.) Will involve programming in most languages studied. *Prerequisites: CSE 12 and CSE 100 or Math. 176.* Majors only.

CSE 131A. Compiler Construction I (4)
(Formerly CSE 163A.) Introduction to the compilation of programming languages, principles and practice of lexical and syntactic analysis, error analysis, syntax-directed translation, and type checking. *Prerequisites: CSE 30, CSE 100 or Math. 176, and CSE 105 or Math. 166.* Majors only.

CSE 131B. Compiler Construction II (4)
(Formerly CSE 163B.) Principles and practice for the design and implementation for the back-end of translators for programming languages, symbol tables, syntax-directed translation, code generation, optimization, and compiler structure. *Prerequisites: CSE 30, CSE 100 or Math. 176, CSE 105 or Math. 166, and CSE 131A.* Majors only.

CSE 132A. Database System Principles (4)
Basic concepts of databases, including data modeling, relational databases, query languages, optimization, dependencies, schema design, and concurrency control. Exposure to one or several commercial database systems. Advanced topics such as deductive and object-oriented databases, time allowing. *Prerequisite: CSE 100 or Math. 176.* Majors only.

CSE 132B. Database Systems Applications (4)
Design of databases, transactions, use of trigger facilities and datablades. Performance measuring, organization of index structures. *Prerequisite: CSE 132 or CSE 132A or equivalent.*

CSE 133. Information Retrieval (4)
(Formerly CSE 181.) How to find "relevant" documents (e.g., an electronic mail message or a book) from very large corpora (e.g., all the world's electronic mail or the library.) Students will construct and experimentally evaluate a complete IR system for a modest textual corpus. *Prerequisite: CSE 100 or Math. 176.* Majors only.

CSE 134A. Web Server Languages (4)
Design and implementation of interactive World Wide Web documentation using server-side programs. Languages covered include HTML, Perl, and JavaScript. Other languages as time allows. *Prerequisite: CSE 100 or Math. 176.* Majors only.

CSE 134B. Web Client Languages (4)
Design and implementation of interactive World Wide Web clients using helper applications and plug-ins. The main language covered will be Java. *Prerequisite: CSE 100 or Math. 176.* Majors only.

CSE 135. Server-side Web Applications (4)
Design and implementation of dynamic web-based applications. Multi-tier architecture, scripting languages, SQL, XML, session handling, non-browser clients, Web services, and scalability, security, and usability in the Web context. *Prerequisites: CSE 100 or Math. 176.* Majors only.

CSE 136. Enterprise-class Web Applications (4)
Design and implementation of large scale web-based applications. Modeling organizational needs, design and revision management, J2EE or similar software platforms, Web and application server functionality, reuse of object-oriented components, model-view-controller and other design patterns, clustering, load-balancing, fault-tolerance, authentication, usage accounting. *Prerequisite: CSE 135.* Majors only.

CSE 140. Components and Design Techniques for Digital Systems (4)
(Formerly CSE 170A) Design of Boolean logic and finite state machines; two-level, multi-level combinational logic design, combinational modules and modular networks, Mealy and Moore machines, analysis and synthesis of canonical forms, sequential modules. *Prerequisites: CSE 20 or Math. 15A, CSE 30. CSE 140L must be taken concurrently.* Majors only.

CSE 140L. Digital Systems Laboratory (2)
(Formerly CSE 175B) Implementation with computer-aided design tools for combinational logic minimization and state machine synthesis. Hardware construction of a small digital system. *Prerequisites: CSE 20, CSE 30. CSE 140 must be taken concurrently.*

CSE 141. Introduction to Computer Architecture (4)
Introduction to computer architecture. Computer system design. Processor design. Control design. Memory systems. *Prerequisites: CSE 140, CSE 140L, or consent of the instructor. CSE 141L should be taken concurrently.* Majors only.

CSE 141L. Project in Computer Architecture (2)
Hands-on computer architecture project aiming to familiarize students with instruction set architecture, and design of process. Control and memory systems. *Prerequisites: CSE 140, CSE 140L, or consent of the instructor. CSE 141 should be taken concurrently.* Majors only.

CSE 142. Advanced Digital Logic Design (4)
(Formerly CSE 170C) Digital logic optimization; functional decomposition and symmetric functions; reliable design and fault diagnosis; structure of sequential machines; asynchronous circuit design. Assignments using logic synthesis tools. *Prerequisites: CSE 140, CSE 140L*

CSE 144. Computer-Aided Design of VLSI Circuits (4)
(Formerly CSE 172B) Introduction to Computer-Aided Design. Placement, assignment and floor planning techniques. Routing. Symbolic layout and compaction. Module generation and silicon compilation. *Prerequisites: CSE 140 and CSE 140L, or consent of the instructor.*

CSE 150. Programming Languages for Artificial Intelligence (4)
Note: CSE 150 is pending CEP approval. (Formerly CSE 162) Experience using two very different approaches to artificial intelligence programming. Symbolic manipulation using LISP, with examples drawn from heuristic search, inference, and/or resolution theorem proving. Pattern recognition and transformation using neural networks with perception and back propagation learning algorithms, applied to problems such as face recognition, English past tense formation, etc. *Prerequisites: CSE 8B or CSE 9B or CSE 10 or CSE 11, CSE 12, and CSE 100 or Math. 176.* Majors only.

CSE 151. Introduction to Artificial Intelligence (4)
An introduction to theoretical issues and computational techniques arising from a comparison of human and machine intelligences. Knowledge representation languages; problem-solving heuristics; machine learning and application areas including vision, robotics, and natural language understanding will be reviewed. *Prerequisite: CSE 150 or consent of the instructor.* Majors only.

CSE 152. Introduction to Computer Vision (4)
The goal of computer vision is to compute scene and object properties from images and video. This introductory course includes feature detection, image segmentation, motion estimation, object recognition, and 3-D shape reconstruction through stereo, photometric stereo, and structure from motion. *Prerequisites: Math. 20F, CSE 100 or Math. 176, CSE 101 or Math. 188. Knowledge of C, C++ or Matlab programming.* Majors only.

CSE 160. Introduction to High Performance Parallel Computation (4)
Introduction to HPPC: parallel architecture, algorithms, software and problem-solving techniques. Areas covered: Flynn's taxonomy, processor-memory organizations, shared and non-shared memory models; message passing and multithreading, data parallelism; speedup, efficiency, and Amdahl's law, communication and synchronization, isoefficiency, and scalability. Topics: run time software techniques, compilers, and grid computing. Assignments given to provide practical experience. *Prerequisite: CSE 100 or Math. 176.* Majors only.

CSE 166. Image Processing (4)
Principles of image formation, analysis, and representation. Image enhancement, restoration, and segmentation; stochastic image models. Filter design, sampling, Fourier and wavelet transforms. Selected applications in computer graphics and machine vision. *Prerequisites: Math. 20F, CSE 100 or Math. 176.* Majors only.

CSE 167. Computer Graphics (4)
(Formerly CSE 177) Representation and manipulation of pictorial data. Two-dimensional and three-dimensional transformations, curves, surfaces. Projection, illumination, and shading models. Raster and vector graphic I/O devices; retained-mode and immediate-

mode graphics software systems and applications. *Prerequisites: Math. 2EA/20F and CSE 100 or Math. 176.* Majors only.

CSE 168. Computer Graphics II: Rendering (4)
Weekly programming assignments that will cover graphics rendering algorithms. During the course the students will learn about ray tracing, geometry, tessellation, acceleration structures, sampling, filtering, shading models, and advanced topics such as global illumination and programmable graphics hardware. *Prerequisites: CSE 167 or concurrent enrollment.* Majors only.

CSE 169. Computer Animation (4)
Advanced graphics focusing on the programming techniques involved in computer animation. Algorithms and approaches for both character animation and physically based animation. Particular subjects may include skeletons, skinning, key framing, facial animation, inverse kinematics, locomotion, motion capture, video game animation, particle systems, rigid bodies, clothing, and hair. *Prerequisites: a good understanding of linear algebra. CSE 167 or consent of instructor.* Majors only.

CSE 171. User Interface Design (4)
Explores usability, representation and coordination issues in user interface design with some focus on distributed cooperative work, semiotics, and the interplay between socio-cognitive and technical issues. Most examples and homework involve the Web. *Prerequisites: CSE 8B or 11, CSE 20 or Math. 15A, and CSE 100 or Math. 176.* Majors only.

CSE 175. Social and Ethical Issues in Information Technology (4)
Social aspects of information technology, with an emphasis on ethical issues. Topics include ethical theories, privacy and security, spam, e-commerce, the digital divide, open source software, medical informatics, actor-network theory, and some neo-classical economics. *Prerequisites: CSE 100 or Math. 176.* Majors only.

CSE 181. Molecular Sequence Analysis (4)
This course covers the analysis of nucleic acid and protein sequences, with an emphasis on the application of algorithms to biological problems. Topics include sequence alignments, database searching, comparative genomics, and phylogenetic and clustering analyses. Pairwise alignment, multiple alignment, DNS sequencing, scoring functions, fast database search, comparative genomics, clustering, phylogenetic trees, gene finding/DNA statistics. *Prerequisites: CSE 100 or Math. 176, CSE 101 or Math. 188, BIMM 100 or Chem. 114D.* Bioinformatics majors only. CSE 181 is crosslisted with BIMM 181 and BENG 181.

CSE 182. Biological Databases (4)
This course provides an introduction to the features of biological data, how that data are organized efficiently in databases, and how existing data resources can be utilized to solve a variety of biological problems. Relational databases, object oriented databases, ontologies, data modeling and description, survey of current biological database with respect to above, implementation of a database focused on a biological topic. *Prerequisites: CSE 100 or Math. 176.* Bioinformatics majors only. CSE 182 is crosslisted with BIMM 182, Chem 182, and BENG 182.

CSE 184. Computational Molecular Biology (4)
This advanced course covers the application of machine learning and modeling techniques to biological systems. Topics include gene structure, recognition of DNA and protein sequence patterns, classification, and protein structure prediction. Pattern discovery, hidden markov models/support vector machines/neural network/profiles, protein structure prediction, functional characterization of proteins, functional genomics/proteomics, metabolic pathways/gene networks. *Prerequisites: BIMM 181 or BENG 181 or CSE 181, BIMM 182 or BENG 182 or CSE 182.* Bioinformatics majors only. CSE 184 is crosslisted with BIMM 184 and BENG 184.

CSE 190. Topics in CSE (4)
Topics of special interest in computer science and engineering. Topics may vary from quarter to quarter. May be repeated for credit with the consent of instructor and department stamp required. *Prerequisite: department stamp required.*

CSE 191. Seminar in CSE (1–4)
A seminar course on topics of current interest. Students, as well as, the instructor will be actively involved in running the course/class. This course cannot be counted toward a technical elective. *Prerequisites: consent of instructor. Department stamp required.* Majors only.

CSE 195. Teaching (4)
Teaching and tutorial assistance in a CSE course under the supervision of the instructor. (P/NP grades only.) *Prerequisite: consent of the department chair. Department stamp required.*

CSE 197. Field Study in Computer Science and Engineering (4, 8, 12, or 16)
Directed study and research at laboratories away from the campus. (P/NP grades only.) *Prerequisite: consent of the instructor and approval of the department. Department stamp required.*

CSE 198. Directed Group Study (2 or 4)
Computer science and engineering topics whose study involves reading and discussion by a small group of students under the supervision of a faculty member. (P/NP grades only.) *Prerequisite: consent of the instructor. Department stamp required.*

CSE 199. Independent Study for Undergraduates (2 or 4)
Independent reading or research by special arrangement with a faculty member. (P/NP grades only.) *Prerequisite: consent of the instructor. Department stamp required.*

GRADUATE

CSE 200. Computability and Complexity (4)
Computability review, including halting problem, decidable sets, r.e. sets, many-one reductions; TIME(t(n)), SPACE(s(n)) and general relations between these classes; L, P, PSPACE, NP; NP—completeness; hierarchy theorems; RP, BPP. *Prerequisite: CSE 105 or equivalent.*

CSE 201A. Advanced Complexity (4)
Polynomial-time hierarchy (PH); BPP in second level of PH; Savitch's theorem; NL=coNL; non-uniform and circuit complexity; some circuit lower bounds; IP=PSPACE; probabilistic proof checking (PCP); Application of PCP to approximation hardness; Complexity of proof systems; Parallel complexity classes NC and AC; P-completeness. *Prerequisite: CSE 200.*

CSE 202. Algorithm Design and Analysis (4)
The basic techniques for the design and analysis of algorithms. Divide-and-conquer, dynamic programming, data structures, graph search, algebraic problems, randomized algorithms, lower bounds, probabilistic analysis, parallel algorithms. *Prerequisite: CSE 101 or equivalent.*

CSE 203A. Advanced Algorithms (4)
Modern advances in design and analysis of algorithms. Exact syllabus varies. Topics include approximation, randomized algorithms, probabilistic analysis, heuristics, online algorithms, competitive analysis, models of memory hierarchy, parallel algorithms, number-theoretic algorithms, cryptanalysis, computational geometry, computational biology, network algorithms, VLSI CAD algorithms. *Prerequisite: CSE 202.*

CSE 204A. Combinatorial Optimization (4)
Linear programming, simplex method, duality, and column generating technique. Integer programming introduced via the Knapsack problem. The periodic nature of all integer programs. Why the round-off technique cannot work in general. The solution of the Knapsack problem in polonominal time since nonbasic columns form a group. *Prerequisites: CSE 202 or Linear Algebra or consent of instructor.*

CSE 205A. Logic in Computer Science (4)
(Formerly CSE 208D) Mathematical logic as a tool in computer science. Propositional logic, resolution, first-order logic, completeness and incompleteness theorems with computational viewpoint, finite model theory, descriptive complexity, logic programming, nonmonotonic reasoning, temporal logic. Applications to databases, automatic theorem proving, program verification, and distributed systems. *Prerequisite: CSE 200 or consent of instructor.*

CSE 206A. Lattice Algorithms and Applications (4)
(Formerly CSE 207C) Introduction to the algorithmic theory of point lattices (A.K.A. algorithmic geometry of numbers), and some of its most important applications in cryptography and cryptanalysis. Topics usually include: LLL basis reduction algorithm, cryptanalysis of broadcast RSA, hardness of approximating lattice problems. *Prerequisites: CSE 202, CSE 200, or concurrent.*

CSE 206B. Algorithms in Computational Biology (4)
(Formerly CSE 257B) The course focuses on algorithmic aspects of modern bioinformatics and covers the following topics: computational gene hunting, sequencing, DNA arrays, sequence comparison, pattern discovery in DNA, genome rearrangements, molecular evolution, computational proteomics, and others. *Prerequisite: CSE 202 or consent of instructor.*

CSE 207. Modern Cryptography (4)
Private and public key cryptography, introduction to reduction based proofs of security, concrete security, block ciphers, pseudorandom functions and generators, symmetric encryption, asymmetric encryption, computational number theory, RSA and discrete log systems, message authentication, digital signatures, key distribution and key management. *Prerequisites: CSE 202 or consent of instgructor.*

CSE 207C. Lattices and Cryptology (4)
Renumbered to CSE 206A (see above).

CSE 208. Advanced Cryptography (4)
Zero-knowledge, secure computation, session-key distribution, protocols, electronic payment, one-way functions, trapdoor permutations, pseudorandom bit generators, hardcore bits. *Prerequisites: CSE 202, CSE 200, and CSE 207 or consent of instructor.*

CSE 208D. Logic in Computer Science (4)
Renumbered to CSE 205A (see above).

CSE 209A. Topics/Seminar in Algorithms, Complexity, and Logic (1-4)
Topics of special interest in algorithms, complexity, and logic to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisites: consent of instructor.*

CSE 209B. Topics/Seminar in Cryptography (1-4)
Topics of special interest in cryptography to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 210. Principles of Software Engineering (4)
(Formerly CSE 264A.) General principles in modern software engineering. Both theoretical and practical topics are covered. Theoretical topics include proofs of correctness, programming language semantics, and theory of testing. Practical topics include structured programming, modularization techniques, design of languages for reliable programming, and software tools. *Prerequisites: CSE 100, 131A, 120, or consent of instructor.*

CSE 211. Software Testing and Analysis (4)
Survey of testing and analysis methods. Introduction to advanced topics in area as well as traditional production methods. Topics include inspections and reviews, formal analysis, verification and validation standards, non-statistical testing, statistical-testing and reliability models, coverage methods, testing and analysis tools, and organization management and planning. Methods special to special development approaches such as object-oriented testing will also be described. *Prerequisite: undergraduate major in computer science or extensive industrial experience.*

CSE 218. Advanced Topics in Software Engineering (4)
This course will cover a current topic in software engineering in depth. Topics in the past have included software tools, impacts of programming language design, and software system structure. (S/U grades permitted.) *Prerequisite: none.*

CSE 221. Operating Systems (4)
Operating system structures, concurrent computation models, scheduling, synchronization mechanisms, address spaces, memory management protection and security, buffering, streams, data-copying reduction techniques, file systems, naming, caching, disk organization, mapped files, remote file systems, case studies of major operating systems. *Prerequisites: CSE 120 and 121, or consent of instructor.*

CSE 222. Communication Networks (4)
Renumbered to CSE 222A (see below).

CSE 222A. Computer Communication Networks (4)
(Formerly CSE 222.) Computer communication network concepts, protocols, and architectures, with an emphasis on an analysis of algorithms, protocols, and design methodologies. Topics will include layering, error control, flow control, congestion control, switching and routing, quality of service management, mobility, naming, security, and selected contemporary topics. *Prerequisite: CSE 123A or consent of instructor.*

CSE 222B. Internet Algorithmics (4)
(Formerly CSE 228H.) Techniques for speeding up Internet implementations including system restructuring, new algorithms, and hardware innovations. Topics include: models for protocols, systems and hardware; efficiency principles; applying these principles to deriving techniques for efficient implementation of common endnode and router functions. *Prerequisites: CSE 123A or CSE 222A or consent of instructor.*

CSE 223. Distributed Systems (4)
Renumbered to CSE 223A (see below).

CSE 223A. Principles of Distributed Computing (4)
(Formerly CSE 223) Logical and physical time, snapshot protocols, failure models, replication strategies, consensus and reliable broadcast, self-stabilization, atomic commit. *Prerequisites: CSE 221 or consent of instructor.*

CSE 223B. Distributed Computing and Systems (4)
Efficient primitives for distributed operating systems and high-performance network servers, including concurrent and event-driven server architectures, remote procedure calls, and load shedding. Distributed naming, directory, and storage services, replication for fault tolerance, and security in distributed systems. *Prerequisites: CSE 221, CSE 222A, or consent of instructor.*

CSE 225. High Performance Distributed Computing (and Computational Grids) (4)
Architecture of high performance distributed systems (e.g., frameworks and middleware). High performance distributed objects (DCOM, Corba, Java Beans) and networking with crosscut issues for performance, availability, and performance predictability. Scalable servers, metacomputing, and scientific computing. *Prerequisites: CSE 121 and CSE 123A or consent of instructor.*

CSE 226. Storage Systems (4)
(Formerly CSE 228B.) Secondary and tertiary storage systems, optical and magnetic media, performance analysis, modeling, reliability, redundant arrays of inexpensive disks, striping, log and maximum distance separable data organizations, sparing. *Prerequisite: CSE 221 or consent of instructor.*

CSE 227. Computer Security (4)
Security and threat models, risk analysis, authentication and authorization, auditing, operating systems security, access control mechanisms, protection mechanisms, distributed systems/network security, security architecture, electronic commerce security mechanisms, security evaluation. *Prerequisite: CSE 221 or consent of instructor.*

CSE 228. Multimedia Systems (4)
(Formerly 228F) Emerging multimedia technologies; multimedia storage models and structures; video/audio networking; intra-media continuity; inter-media synchronization; admission control and support for real time; distributed multimedia systems; structured interaction support (collaboration and teamwork); multimedia encoding. *Prerequisite: consent of instructor.*

CSE 228B. Storage Systems (4)
Renumbered to CSE 226 (see above).

CSE 228F. Multimedia Systems (4)
Renumbered to CSE 228 (see above).

CSE 228H. Internet Algorithmics (4)
Renumbered to CSE 222B (see above).

CSE 229A. Topics/Seminar in Computer Systems (1-4)
Discussion on problems of current research interest in computer systems. Possible areas of focus include: distributed computing, computational grid, operating systems, fault-tolerant computing, storage systems, system services for the World Wide Web. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 229B. Topics/Seminar in Networks and Communication (1-4)
Discussion on problems of current research interest in computer networks and communication. Possible areas of focus include: wide-area networking, wireless networks, the Internet, computational grid, operating systems, fault-tolerant computing, storage systems. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 229C. Topics/Seminar in Computer Security (1-4)
Discussion on problems of current research interest in computer security. Topics to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 230. Principles of Programming Languages (4)
(Formerly CSE 273.) Functional versus imperative programming. Type systems and polymorphism; the ML language. Higher order functions, lazy evaluation. Abstract versus concrete syntax, structural and well-founded induction. The lambda calculus, reduction strategies, combinators. Denotational semantics, elementary domain theory. *Prerequisite: CSE 130 or equivalent, or consent of instructor.*

CSE 231. Advanced Compiler Design (4)
(Formerly CSE 264C.) Advanced material in programming languages and translator systems. Topics include compilers, code optimization, and debugging interpreters. *Prerequisites: CSE 100, 131A-B, or consent of instructor.*

CSE 232. Principles of Database Systems (4)
(Formerly CSE 264D.) Database models including relational, hierarchic, and network approaches. Implementation of databases including query languages and system architectures. *Prerequisite: CSE 100 or consent of instructor.*

CSE 232B. Database System Implementation (4)
A hands-on approach to the principles of databases implementation. Algebraic rewriters/optimizers, query processors, triggers. Beyond centralized relational databases. *Prerequisites: CSE 232.*

CSE 233. Database Theory (4)
Theory of databases. Theory of query languages, dependency theory, deductive databases, incomplete information, complex objects, object-oriented databases, and more. Connections to logic and complexity theory including finite model theory and descriptive complexity. *Prerequisite: CSE 200.*

CSE 237A. Introduction to Embedded Computing (4)
Embedded system technologies including processors, DSP, memory, and software. System interfacing basics, communication strategies, sensors, and actuators. Mobile and wireless technology in embedded systems. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains. *Prerequisites: basic courses in digital hardware, algorithms and data structures, elementary calculus, and probability; or consent of instructor.*

CSE 237B. Software for Embedded Systems (4)
Embedded computing elements, device interfaces, time-critical IO handling. Embedded software design under size, performance, and reliability constraints. Software timing and functional validation. Programming methods and compilation for embeddable software. Embedded runtime systems. Case studies of real-time software systems. *Prerequisites: CSE 237A; or basic courses in programming, algorithms and data structures, elementary calculus, discrete math, computer architecture; or consent of instructor.*

CSE 237C. Validation and Testing of Embedded Systems (4)
Embedded system building blocks including IP cores. Co-simulation. Formal verification using mdel checking. Verification environments. Test challenges in core integration: compliance, feature, random, and collision testing. Core access and test integration. Interface-based verification and standards. *Prerequisites: CSE 237A; or basic courses in algorithms and data structures, elementary calculus, discrete math, symbolic logic, computer architecture; or consent of instructor.*

CSE 237D. Design Automation and Prototyping for Embedded Systems (4)
System representation and modeling. Abstract and language models. Simulation as a modeling activity. Computational and hw/sw system prototypes. System analysis using models. Constraint and interface modeling. Behavioral compilation and synthesis. *Prerequisites: CSE 237A; or basic courses in digital logic design, algorithms and data structures, elementary calculus, discrete math, symbolic logic, computer architecture; or consent of instructor.*

CSE 240. Principles in Computer Architecture I (4)
Renumbered to CSE 240A (see below).

CSE 240A. Principles of Computer Architecture (4)
(Formerly CSE 240.) This course will cover fundamental concepts in computer architecture. Topics include instruction set architecture, pipelining, pipeline hazards, bypassing, dynamic scheduling, branch prediction, superscalar issue, memory-hierarchy design, advanced cache architectures, and multiprocessor architecture issues. *Prerequisite: CSE 141 or consent of instructor.*

CSE 241. Advanced Computer Architecture (4)
Renumbered to CSE 240B (see below).

CSE 240B. Advanced Computer Architecture (4)
(Formerly CSE 241.) This course covers advanced topics in computer architecture, including multiprocessor architecture, interconnection networks, cache coherence, cache consistency. It incorporates the latest research and development on topics such as branch prediction, instruction-level parallelism, multithreading, and cache hierarchy design. *Prerequisite: CSE 240A or consent of instructor.*

CSE 241A. Introduction to Computing Circuitry (4)
Integrated-circuit building blocks of computing systems, and impact on system implementation choices. Devices and interconnects, clocking, basic circuit types, power/ground distribution, arithmetic modules, memories. Design methods covering combinational logic networks, sequential machines, and basic subsystems. Tradeoffs in system implementation. *Prerequisite: CSE 140 or consent of instructor.*

CSE 242A. Integrated Circuit Layout Automation (4)
Couplings among timing, circuits and spatial embedding in nanometer-scale CMOS design. The role, and key problems, of physical layout in IC implementation. Example topics: RTL-to-GDSII methodologies, analyses and estimations, partitioning, floor planning, placement, routing, special net routing, cell generation, compaction. *Prerequisite: CSE 241A or consent of instructor.*

CSE 243A. Introduction to Synthesis Methodologies in VLSI CAD (4)
Hardware software co-design, architectural level synthesis, control synthesis and optimization, scheduling, binding, register and bus sharing, interconnect design, module selection, combinational logic optimization, state minimization, state encoding, and retiming. *Prerequisite: CSE 241A or consent of instructor.*

CSE 244A. VLSI Test (4)
Design for test, testing economics, defects, failures and faults, fault models, fault simulation, automatic test pattern generation, functional testing, memory, PLA, FPGA, microprocessor test, and fault diagnosis. *Prerequisite: CSE 241A or consent of instructor.*

CSE 244B. Testable and Fault Tolerant Hardware Design (4)
Scan path design, BIST architectures, test point insertion, self-checking circuits, test and fault tolerance in architectural synthesis, reconfigurable fault tolerant hardware, and SOC test design. *Prerequisite: CSE 244A or consent of instructor.*

CSE 245. Computer Aided Circuit Simulation and Verification (4)
This course is about the computer algorithms, techniques, and theory used in the simulation and verification of electrical circuits. *Prerequisite: CSE 241A or consent of instructor.*

CSE 246. Computer Arithmetic Algorithms and Hardware Design (4)
Number representation, fixed point adders, subtracters, and multipliers; modified booth's recoding, high-radix multiplication, (non)restoring dividers, SRT division, high-radix dividers, division by convergence, square-rooting, floating point arithmetic, rounding schemes, errors and error control, and floating point adders, subtracters, multipliers, dividers. *Prerequisite: CSE 241A or consent of instructor.*

CSE 247. Application Specific and Reconfigurable Computer Architecture (4)
This course covers architecture concepts used to tailor processors to a specific application or sets of applications. It covers Field-Programmable Gate Arrays (FPGAs), various forms of Application Specific Integrated Circuit (ASIC) designs, Application Specific Integrated Processors (ASIP), and augmenting customizable VHDL cores. *Prerequisite: CSE 241A or consent of instructor.*

CSE 248. Algorithmic and Optimization Foundations for VLSI CAD (4)
Algorithmic techniques and optimization frameworks for large-scale, difficult optimizations. Primal-dual multicommodity flow approximations, approximations for geometric and graph Steiner formulations, continuous placement optimization, heuristics for Boolean satisfiability, multilevel methods, semidefinite programming, and application to other formulations (e.g., scheduling). *Prerequisites: CSE 241A or CSE 242A or consent of instructor.*

CSE 249A. Topics/Seminar in Computer Architecture (1-4)
Topics of special interest in computer architecture to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 249B. Topics/Seminar in VLSI (1-4)
Topics of special interest in VLSI to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 249C. Topics/Seminar in CAD (1-4)
Topics of special interest in CAD to be presented by faculty and students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.*

CSE 250A. Artificial Intelligence I (4)
(Formerly CSE 278A.) Issues in knowledge representation (using logic, semantic networks, production systems, and connectionist representations) will be the focus of this course. A discussion of logic programming languages (like PROLOG) and automatic theorem proving will then lead to a discussion of heuristic search. *Prerequisite: CSE 151 or equivalent.*

CSE 250B. Artificial Intelligence II (4)
(Formerly CSE 278B.) This course will discuss knowledge representations used to search for solutions, make deductions, plan, and problem solve. The application of these techniques to expert systems will be mentioned. Machine learning will also be a major topic of this course. *Prerequisite: CSE 250A.*

CSE 252A. Computer Vision I (4)
Comprehensive introduction to computer vision providing broad coverage including low-level vision (image formation, photometry, color, image feature detection), inferring 3-D properties from images (shape-from shading, stereo vision, motion interpretation) and object recognition. Companion to CSE 252B covering complementary topics. *Prerequisites: Math. 10D and Math. 20A-F or equivalent.*

CSE 252B. Computer Vision II (4)
Comprehensive introduction to computer vision providing focused coverage of multiview geometry, structure from motion, image segmentation, motion segmentation, texture analysis and recognition, object detection, and image-based rendering. Companion to CSE 252A covering complementary topics. *Prerequisites: Math. 10D and Math. 20A-F or equivalent.*

CSE 252C. Selected Topics in Vision and Learning (4)
Selected topics in computer vision and statistical pattern recognition, with an emphasis on recent developments. Possible topics include: grouping and segmentation, object recognition and tracking, multiple view geometry, kernel-based methods, dimensionality reduction, and mixture models. *Prerequisite: CSE 252 or equivalent and CSE 250B or equivalent.*

CSE 253. Neural Networks (4)
This course covers Hopfield networks, application to optimization problems, layered perceptrons, recurrent networks, and unsupervised learning. Programming exercises explore model behavior, with a final project on a cognitive science, artificial intelligence, or optimization problem of the student's choice. *Prerequisites: knowledge of C and consent of instructor.* (S/U grades permitted.)

CSE 254. Machine Learning (4)
(Formerly CSE 281T.) This course will discuss a wide range of techniques used to allow computers to learn directly from experience with their environment rather than requiring programming by humans. The

survey will span both high- and low-level learning techniques as well as theoretical models that allow these various techniques to be compared. (S/U grades permitted.) *Prerequisite: 250B.*

CSE 256. Statistical Natural Language Processing (4)
An introduction to modern statistical approaches to natural language processing: part of speech tagging, work sense disambiguation and parsing, using Markov models, hidden Markov models and probabilistic context free grammars. *Prerequisite: CSE 250B or equivalent experience.*

CSE 257. Computational Biology (4)
Computational methods are indispensable to an understanding of the vast datasets emerging from human and other organisms' genomes. This course surveys algorithms underlying genome analysis, sequence alignment, phylogenetic trees, protein folding, gene expression, metabolic pathways, and biological knowledge base design. *Prerequisite: Pharm 201 or consent of instructor.*

CSE 257A. Bioinformatics II: Sequence and Structure Analysis—Methods and Applications (4)
Introduction to methods for sequence analysis. Applications to genome and proteome sequences. Protein Structure, sequence-structure analysis.

CSE 257B. Algorithms in Computational Biology (4)
Renumbered to CSE 206B (see above).

CSE 258A. Connectionists Natural Language Processing (4)
(Formerly CSE 281P.) This course will explore connectionist (or parallel distributed processing) models and their relation to cognitive processes. The course will cover various learning algorithms and the application of the paradigm to models of language processing, memory, sequential processes, and vision. (S/U grades permitted.) *Prerequisite: CSE 250B or equivalent experience.*

CSE 259. Seminar in Artificial Intelligence (1)
A weekly meeting featuring local (and occasional external) speakers discussing their current research in Artificial Intelligence Neural Networks, and Genetic Algorithms. (S/U grades only.) *Prerequisite: none.*

CSE 260. Parallel Computation (4)
(Formerly CSE 274A.) This course provides an overview of parallel hardware, algorithms, models, and software. Topics include Flynn's taxonomy, interconnection networks, memory organization, a survey of commercially available multiprocessors, parallel algorithm paradigms and complexity criteria, parallel programming environments and tools for parallel debugging, language specification, mapping, performance, etc. *Prerequisite: graduate standing or consent of instructor.*

CSE 262. System Support for Applications of Parallel Computation (4)
This course will explore design of software support for applications of parallel computation. Topics include: programming languages, run time support, portability, and load balancing. The course will terminate in a project. *Prerequisite: consent of instructor.*

CSE 268A. Topics in Parallel Computation (4)
(Formerly CSE 281Y.) Current topics of interest in parallel computation will be discussed such as heterogeneous computing, advanced topics in parallel programming environments, parallel programming models, performance criteria, etc. (S/U grades permitted.) *Prerequisite: graduate standing or consent of instructor.*

CSE 268C. Topics in High-Performance Programming (4)
A systematic approach to the design, writing, and tuning of programs to sustain near-peak performance with particular emphasis on RISC processors and massively parallel computers. A project will involve measuring and improving the performance of a computational kernel. *Prerequisite: CSE 141 or consent of instructor.*

CSE 269. Seminar in Parallel Computation (1-4)
A seminar course in which topics of special interest in parallel computation will be presented by staff members and graduate students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. *Prerequisite: consent of instructor.* (S/U grades only.)

CSE 271. User Interface Design: Social and Technical Issues (4)
Web technologies (HTML, Java, JavaScript, etc.) can quickly build superb new systems, as well as phenomenally ugly systems that still fully meet their performance and functional requirements. This course explores interface usability and representation issues, with some focus on hypermedia and cooperative work. *Prerequisites: CSE 20, CSE 100, or equivalent.*

CSE 272. Advanced Appearance Modeling (4)
Computer graphics algorithms for creating a given appearance. The course will cover algorithms and physics necessary to simulate light transport, light scattering, reflection models, subsurface scattering, participating media, and procedural modeling and texturing. *Prerequisites: CSE 168 or equivalent, or consent of instructor.*

CSE 275. Social Aspects of Technology and Science (4)
Note: CSE 275 is pending CEP approval. Explores approaches to the sociology of technology and science, especially information technology. Topics include requirements engineering, actor-network theory, post-modernism, the Web, user interface design, and public policy. *Prerequisites: CSE 8B or CSE 11, and background in the humanities.*

CSE 290. Seminar in Computer Science and Engineering (1-4)
(Formerly CSE 280A.) A seminar course in which topics of special interest in computer science and engineering will be presented by staff members and graduate students under faculty direction. Topics vary from quarter to quarter. May be repeated for credit. (S/U grades only.) *Prerequisite: consent of instructor.* (Offered as faculty resources permit.)

CSE 291. Topics in Computer Science and Engineering (1-8)
(Formerly CSE 281A). Topics of interest in computer science and engineering. Topics may vary from quarter to quarter. May be repeated for credit with the consent of instructor. (S/U grades permitted.) *Prerequisite: consent of instructor.* (Offered as faculty resources permit.)

CSE 292. Faculty Research Seminar (1)
(Formerly CSE 282.) Computer science and engineering faculty will present one hour seminars of the current research work in their areas of interest. *Prerequisite: CSE graduate status.*

CSE 293. Special Project in Computer Science and Engineering (1-8)
(Formerly CSE 269.) The student will conceive, design, and execute a project in computer science under the direction of a faculty member. The project will typically include a large programming or hardware design task, but other types of projects are possible. One-six units may be repeated to a total of nine units. *Prerequisite: CSE graduate student status.* (S/U grades only.)

CSE 294. Research Meeting in CSE (2)
Advanced study and analysis of active research in computer science and computer engineering. Discussion of current research and literature in the research specialty of the staff member teaching the course. *Prerequisite: consent of instructor.*

CSE 298. Independent Study (1-16)
Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the staff. (S/U grades only.) *Prerequisite: consent of instructor.*

CSE 299. Research (1-16)
Research. *Prerequisite: consent of faculty.*

CSE 500. Teaching Assistantship (2-4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. May be used to meet teaching experience requirement for candidates for the Ph.D. degree. Number of units for credit depends on number of hours devoted to class or section assistance. *Prerequisites: graduate standing and consent of instructor.*

CSE 501. Teaching Assistantship (2-4)
Renumbered to CSE 500 (see above).

CSE 599. Teaching Methods in Computer Science (2)
Training in teaching methods in the field of computer science. This course examines theoretical and practical communication and teaching techniques particularly appropriate to computer science. *Prerequisite: consent of faculty.*

John Proakis, Ph.D., *Northeastern University*
Jin-Joo Song, Ph.D.

Associated Faculty

Gustaf O. S. Arrhenius, Ph.D., *Professor, Marine Research Division, Scripps Institution of Oceanography*
George Tynan, Ph.D., *Associate Professor, Mechanical and Aerospace Engineering*

Program Mission Statement

To educate tomorrow's technology leaders.

Program Educational Objectives

- To provide our students with training in the fundamental science and mathematics that underlie engineering, and with a general breadth and depth in engineering and in engineering design so that they are prepared for graduate school and for engineering careers. Students should have both proficiency in a specific technical area, and the flexibility and broad knowledge base needed for life-long engineering careers in a changing technical environment.
- To ensure that our students are educated in the classical sense. In particular, that they are broadly aware of social and environmental issues and of the impact of their profession on these issues.
- To assist our students in preparing themselves to work effectively in their profession. Specifically, to develop communications, teamwork, and leadership skills.

Program Outcomes and Assessment

Program outcomes have been established based on the Program Educational Objectives. Graduates of the ECE Program in Electrical Engineering are expected to have:

1. An understanding of the underlying principles of, and an ability to apply knowledge of mathematics, science, and engineering to electrical engineering problems
2. An ability to design and conduct experiments, as well as to analyze and interpret data
3. A knowledge of electrical engineering safety issues
4. An ability to design a system, component, or process to meet desired needs

5a. An ability to collaborate effectively with others

5b. An ability to function on multidisciplinary teams

6. An ability to identify, formulate, and solve engineering problems
7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice, including familiarity with computer programming and information technology
8. An understanding of professional and ethical responsibility

9a. An ability to communicate effectively in writing

9b. An ability to communicate effectively in speech

9c. An ability to communicate effectively with visual means

10. The broad education necessary to understand the impact of engineering solutions in a global and societal context
11. A recognition of the need for, and the ability to engage in, life-long learning
12. A knowledge of contemporary issues

The Undergraduate Programs

The Department of Electrical and Computer Engineering offers undergraduate programs leading to the B.S. degree in **electrical engineering, engineering physics,** and **computer engineering**. Each of these programs can be tailored to provide preparation for graduate study or employment in a wide range of fields. The Electrical Engineering Program is accredited by the Accreditation Board for Engineering and Technology (ABET).

The Electrical Engineering Program has a common lower-division and a very flexible structure in the upper-division. After the lower-division core, all students take six breadth courses during the junior year. They must then satisfy a depth requirement which can be met with five courses focused on some speciality, and a design requirement of at least one project course. The remainder of the program consists of six electives which may range as widely or as narrowly as needed.

The Engineering Physics Program is conducted in cooperation with the Department of Physics. Its structure is very similar to that of electrical engineering except the depth requirement includes seven courses and there are only four electives.

The Computer Engineering Program is conducted jointly with the Department of Computer Science and Engineering. It has a more prescribed structure. The program encompasses the study of hardware design, data storage, computer architecture, assembly languages, and the design of computers for engineering, information retrieval, and scientific research.

For information about admission to the program and about academic advising, students are referred to the section on ECE departmental regulations. In order to complete the programs in a timely fashion, students must plan their courses carefully, starting in their freshman year. Students should have sufficient background in high school mathematics so that they can take freshman calculus in the first quarter.

For graduation, each student must also satisfy general-education requirements determined by the student's college. The six colleges at UCSD require widely different numbers of general-education courses. Students should choose their college carefully, considering the special nature of the college and the breadth of education required. They should realize that some colleges require considerably more courses than others. Students wishing to transfer to another college should see their college adviser.

Graduates of community colleges may enter ECE programs in the junior year. However, transfer students should be particularly mindful of the freshman and sophomore course requirements when planning their programs.

These programs have strong components in laboratory experiments and in the use of computers throughout the curricula. In addition, the department is committed to exposing students to the nature of engineering design. This is accomplished throughout the curricula by use of open-ended homework problems, by exposure to engineering problems in lectures, by courses which emphasize student-initiated projects in both laboratory and computer courses, and finally by senior design-project courses in which teams of students work to solve an engineering design problem, often brought in from industry.

IT IS IMPERATIVE THAT STUDENTS DISCUSS THEIR CURRICULUM WITH THE APPROPRIATE DEPARTMENTAL ADVISER IMMEDIATELY UPON ENTRANCE TO UCSD, AND THEN AT LEAST ONCE A YEAR UNTIL GRADUATION.

B.S. Electrical Engineering Program

Students must complete 180 units for graduation, including the general-education requirements (GER). Note that 144 units (excluding GER) are required.

LOWER-DIVISION REQUIREMENTS (total of 72 units)

Mathematics (24 units): Math. 20A-B-C-D-E-F.

Physics (16 units): Phys. 2A-B-C-D or Phys. 4A-B-C-D-E. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

Chemistry (4 units): Chem. 6A.

Programming Course (4 units): MAE 9 or (CSE 11 or 8A-B)

Electrical engineering (24 units): ECE 20A-B, ECE 30, ECE 60A-B, and ECE 60L.

Additional Notes:

1. Students can take either MAE 9 or (CSE 11 or 8A-B) Students interested in the computer design or software systems depths should enroll in CSE 11 or 8A-B.
2. Please note that electrical engineering students cannot take CSE 11 or 8A in the fall quarter of the freshman year. The fall quarter enrollment in CSE courses is reserved for computer science and computer engineering majors. CSE 8A and CSE 8B are not required if a student completes CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B. Students will self-select which course they wish to take. Students without programming experience in a compiled language are advised to take CSE 8A and then CSE 8B instead of CSE 11.
3. ECE 20A and 20B are offered every quarter; therefore, some students will be able to take ECE 20A in the fall quarter (*enrollment limited and priority for transfer students*). Other students will postpone taking ECE 20A until the winter or spring quarter of their freshman year.
4. Students taking CSE 8A-B may take ECE 20A in the spring quarter and ECE 20B in the fall quarter of their sophmore year. ECE 30 will be postponed to the spring quarter of the sophmore year.
5. Students with AP math credit are strongly advised to take Math. 20B in the fall quarter, leaving room for a GER in the winter quarter.
6. The ECE undergraduate Web site shows several scheduling options. Please refer to the Web site and consult with the staff advisers in the undergraduate offices, rooms 2705 and 2706 in EBU1.

UPPER-DIVISION REQUIREMENTS (total of 72 units)

a. Electrical Engineering BREADTH Courses (24 units)

Courses required of all electrical engineering majors:

The six courses, ECE 101, 102, 103, 107, 108, and 109 are required of all electrical engineering majors and they are an assumed prerequisite for senior-level courses, even if they are not explicitly required. Although the courses are largely independent, there are some prerequisites. ECE 102 is a prerequisite for ECE 108. Students who delay some of the breadth courses into the spring should be careful that it does not delay their depth sequence.

b. Electrical Engineering DESIGN Course (4 units)

Note: *In order to fulfill the design requirement, students must complete one of the following courses with a grade C– or better.* ***Graduation will not***

be approved until a written copy of the design project is submitted to the ECE undergraduate office.

The electrical engineering design requirement can be fulfilled in any of the following three ways:

1. Take ECE 191: Engineering Group Design Project
2. Take ECE 192: Engineering Design
   This course requires the department stamp. Specifications and enrollment forms are available in the undergraduate office.
3. Take one of the following courses:
   - ECE 111: Advanced Digital Design Project
   - ECE 118: Computer Interfacing
   - ECE 155B or 155C: Digital Recording Projects
   - Phys. 121: Experimental Techniques

   Students who wish to take one of these courses to satisfy the design requirement must fill out an enrollment form and have departmental approval for the design credit prior to taking the course. The project must meet the same specifications as ECE 192.

c. Electrical Engineering ELECTIVES (24 units)

- Three upper-division engineering, mathematics, or physics courses.
- Three additional electives which students may use to broaden their professional goals.

  (For additional information, please refer to the section on "Elective Policy for Electrical Engineering and Engineering Physics Majors.")

d. Electrical Engineering Depth Requirement (20 units)

Students must complete a "depth requirement" of at least five quarter courses to provide a focus for their studies. This set must include a clear chain of study of at least three courses which depend on the "breadth" courses. Students may choose one of the approved depth sequences listed below, or propose another with the approval of their faculty adviser. Some of the approved sequences have lower-division prerequisites and thus list six courses. Students choosing one of these sequences will have to complete only two "professional" electives. Guidelines for meeting the depth requirement can be obtained from the undergraduate office.

Electronics Circuits and Systems:
ECE 163, 164, 165, and any two of ECE 111, 118, 161A, 161B, 161C, and 166.

Electronic Devices and Materials:
ECE 135A, ECE 135B, 136L, 139, and 183.

Controls and Systems Theory:
ECE 171A, 171B, 174, 118, and 173.

Machine Intelligence:
ECE 173, 174, 172A and any two of ECE 175, 161A, 187, 253A, 285, and COGS 108F.

Photonics:
ECE 181, 182, 183, 184, and 185.

Communications Systems:
ECE 161A, 153, 154A-B-C.

Networks:
ECE 153, 159A, 159B, 158A-B.

Queuing Systems:
ECE 171A, 174, 159A-B, and Math. 181A.

Signal and Image Processing:
ECE 161A, 161B, 161C, 153, and ECE 172A or 174.

Computer Design:
CSE 12, 21, and 141, ECE 158A, 111 or 118, and 165.

Software Systems:
CSE 12, 21, 100, 101, 141, and 120.

B.S. Engineering Physics

Students must complete a total of 180 units for graduation, including the general-education requirements. Note that 146 units (excluding GER) are required.

All students will initially be placed in pre-major status. Upon successful completion of the following courses (with a minimum 2.0 GPA by the end of the first three quarters if a transfer student, six quarters if an incoming freshman), students will be admitted into full Engineering-Physics major status.

1. Math. 20A-B-C
2. Physics 2A-B
3. ECE 20A-B
4. CSE 11 or 8B, or MAE 9

To initiate the change from pre-major status to full major status, transfer students must see the ECE undergraduate adviser by the end of their third quarter at UCSD; incoming freshmen by the end of their sixth quarter.

Please refer to the sections "Undergraduate Regulations and Requirements" and "Acceptance to the Jacobs School of Engineering" for important details.

LOWER-DIVISION REQUIREMENTS (total of 74 units)

Mathematics (24 units): Math. 20A-B-C-D-E-F.

Physics (16 units): Phys. 2A-B-C-D or Phys. 4A-B-C-D-E. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

Physics Lab (2 units): Phys. 2DL is required.

Chemistry (4 units): Chem. 6A.

Programming Course (4 units): MAE 9 or (CSE 11 or 8A-B)

Electrical engineering (24 units): ECE 20A-B, ECE 30, ECE 60A-B, and ECE 60L.

Additional Notes:

1. Students can take either MAE 9 or (CSE 11 or 8A-B) Students interested in the computer design or software systems depths should enroll in CSE 11 or 8A-B.
2. Please note that electrical engineering students cannot take CSE 11 or 8A in the fall quarter of the freshman year. The fall quarter enrollment in CSE courses is reserved for computer science and computer engineering majors. CSE 8A and CSE 8B are not required if a student completes CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B. Students will self-select which course they wish to take. Students without programming experience in a compiled language are advised to take CSE 8A and then CSE 8B instead of CSE 11.
3. ECE 20A and 20B are offered every quarter; therefore, some students will be able to take ECE 20A in the fall quarter (*enrollment limited and priority for transfer students*). Other students will postpone taking ECE 20A until the winter or spring quarter of their freshman year.
4. Students taking CSE 8A-B may take ECE 20A in the spring quarter and ECE 20B in the fall quarter of their sophmore year. ECE 30 will be postponed to the spring quarter of the sophmore year.
5. Students with AP math credit are strongly advised to take Math. 20B in the fall quarter, leaving room for a GER in the winter quarter.
6. The ECE undergraduate Web site shows several scheduling options. Please refer to the Web site

and consult with the staff advisers in the undergraduate offices, rooms 2705 and 2706 in EBU1.

UPPER-DIVISION REQUIREMENTS (72 units)

a. Engineering Physics BREADTH Courses (24 units)

The electrical engineering breadth courses ECE 101, 102, 103, 107, 108, and 109, are also required of engineering physics majors. However, because of the scheduling of Math. 110, Phys. 110A and 130A, they can only be taken in a specific order (please consult the ECE Web site).

b. Engineering Physics DESIGN Course (4 units)

Note:** In order to fulfill the design requirement, students must complete one of the following courses with a grade C– or better.* ***Graduation will not be approved until a written copy of the design project is submitted to the ECE undergraduate office.

The engineering physics design requirement can be fulfilled in any of the following three ways:

1. Take ECE 191: Engineering Group Design Project
2. Take ECE 192: Engineering Design
   This course requires the department stamp. Specifications and enrollment forms are available in the undergraduate office.
3. Take one of the following courses:
   - ECE 111: Advanced Digital Design Project
   - ECE 118: Computer Interfacing
   - ECE 155B or 155C: Digital Recording Projects
   - Physics 121: Experimental Techniques

   Students who wish to take one of these courses to satisfy the design requirement must fill out an enrollment form and have departmental approval for the design credit prior to taking the course. The project must meet the same specifications as ECE 192.

c. Engineering Physics ELECTIVES (16 units)

- One upper-division engineering, mathematics, or physics course.
- Three additional electives which students may use to broaden their professional goals.

  (For additional information, please refer to the section on Elective Policy for Electrical Engineering and Engineering Physics Majors.)

d. Engineering Physics DEPTH Courses (28 Units)

All B.S. engineering physics students are required to take Phys. 110A, 130A-B, 140A, Math. 110, ECE 123 and 166; or ECE 135A and 135B; or ECE 182 and (181 or 183).

Elective Policy for Electrical Engineering and Engineering Physics Majors

1. Technical Electives:

Technical electives must be upper-division engineering, math or physics courses (except for the bioengineering track). Certain courses listed below are not allowed as electives because of overlap with ECE courses.

Physics: Students may not receive upper-division elective credit for any lower-division physics courses. Students may not receive credit for both Phys. 100A and ECE 107, Phys. 100B and ECE 107, Phys. 100C and ECE 123.

Mathematics: Math. 180A-B overlap ECE 109 and 153, and therefore will not qualify for elective credit of either type. Math. 183 will not be allowed as an elective. Math. 163 will only be allowed as a professional elective. All lower-division mathematics is excluded from elective credit of either type.

Bioengineering: The following series of courses will provide "core" preparation in bioengineering and will satisfy five of the ECE technical elective requirements:

- BILD 1, BILD 2, BE 100, BE 140A-B.

The bioengineering department will guarantee admission to these courses for ECE students on a space available basis.

CSE: The following courses are excluded as electives: CSE 1, 2, 5A-B, 8A-B, 11, 140 (duplicates ECE 20B), 140L (duplicates ECE 20B), 143 (duplicates ECE 165). CSE 12, 20, and 21 will count toward the three professional electives *ONLY*.

Mechanical and Aerospace Engineering (MAE): Credit will not be allowed for MAE 105, 139, 140, 143B, or 170.

Special Studies Courses 195–199: At most four units of 195–199 may be used for elective credit.

2. Professional Electives:

Normally these will be upper-division courses in engineering, mathematics, or physics. Students may also choose upper-division courses from other departments provided that they fit into a coherent professional program. In such cases, a lower-division prerequisite may be included in the electives. Courses other than upper-division engineering, mathematics, or physics must be justified in terms of such a program, and must be approved by a faculty adviser.

Biology and Chemistry: Of the three electives intended to allow for the professional diversity, one lower-division biology or chemistry course from BILD 1, 2, Chem. 6B-C may be counted for credit. Furthermore, this will count only if the student can demonstrate to a faculty adviser that they constitute part of a coherent plan for professional/career development.

Upper-division biology and chemistry courses will count toward the three professional electives but not the three math/physics/engineering electives.

Economics: Suitable electives would include:

Economics 1 followed by courses in one of the following tracks:

- Public and Environmental Economics: Select 2—Economics 118A-B, 130, 131, 132, 137.
- Labor and Human Resources: Select 2—Economics 136, 137, 138A-B, 139.
- Microeconomics: Economics 100A-B or 170A-B.
- Finance Track (MBA) I: Must complete all 3—Economics 4, 173, and another upper-division Economics elective.
- Finance Track (MBA) II: Economics 1A, 100A or 170A, and 175.
- Operations Research: Must complete 172 A—Economics 172A and (172B or 172C).

Economics 3 followed by courses in one of the following tracks:

- Monetary Economics: Economics 111 and another upper-division Economics Elective.
- Macroeconomics: Economics 110A-B.

***Note:** Economics 120A, and 158A-B will not be allowed as professional electives.*

B.S. Computer Engineering

Students wishing to pursue the computer engineering curriculum must be admitted to either the ECE or CSE department. **The set of required courses and allowed electives is the same in both departments;** please note that the curriculum requires twenty upper-division courses. The Computer Engineering Program requires a total of 147 units (not including the general-education requirements).

The Computer Engineering Program offers a strong emphasis on engineering mathematics and other basic engineering science as well as a firm grounding in computer science. Students should have sufficient background in high school mathematics so that they can take freshman calculus in their first quarter. Courses in high school physics and computer programming, although helpful, are not required for admission to the program.

LOWER-DIVISION REQUIREMENTS (total of 70 units)

Mathematics (20 units): Math. 20A-B-C-D-F.

Physics (16 units): Phys. 2A-B-C-D, or Phys. 4A-B-C-D. Math. 20A is a prerequisite for Phys. 2A. Students whose performance on the mathematics placement test permits them to start with Math. 20B or higher may take Phys. 2A in the fall quarter of the freshman year.

Physics lab (2 units): Phys. 2BL or 2CL or 2DL. The lab course should be taken concurrently with the Phys. 2 or Phys. 4 sequence.

Computer Science (21 units): CSE 11 or 8B*, 12, CSE 20 or Math. 15A, CSE 21 or Math. 15B, CSE 30, and CSE 91.

* CSE 8A and CSE 8B are not required if a student completes CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B. Students will self-select which course they wish to take. Students without programming experience in a compiled language are advised to take CSE 8A and then CSE 8B instead of CSE 11.

Electrical Engineering (12 units): ECE 53A-B, ECE 109.

UPPER-DIVISION REQUIREMENTS (total of 76 units)

a. All B.S. computer engineering students are required to take CSE 100 or Math. 176, CSE 101 or Math. 188, CSE 105 or Math. 166, CSE 120, 131A-B, 140, 140L (CSE 140 and 140L must be taken concurrently), 141, 141L (CSE 141 and 141L must be taken concurrently).

b. In addition, all B.S. computer engineering students must fulfill the following upper-division ECE requirements:

- Engineering Probability and Statistics ECE 109. This course can be taken in the sophomore year.
- Electronic Circuits and Systems ECE 102 and 108. The department recommends that these courses be taken in the junior year.
- Linear systems ECE 101 and 171A or 161A.

c. Technical electives: All B.S. computer engineering majors are required to take six technical electives.

- One technical elective must be either ECE 111 or ECE 118.
- Of the remaining five technical electives, four must be ECE or CSE upper-division or graduate courses.
- The remaining course can be any upper-division course listed under the non-CSE/ECE electives. (See the section on electives below.)

Electives

The discipline of computer engineering interacts with a number of other disciplines in a mutually beneficial way. These disciplines include mathematics, computer science, and cognitive science. The following is a list of upper-division courses from these and other disciplines that can be counted as technical electives.

At most four units of 197, 198, or 199 may be used towards technical elective requirements. ECE/CSE 195 cannot be used towards course requirements. Undergraduate students must get instructor's permission and departmental stamp to enroll in a graduate course.

Students may not get duplicate credit for equivalent courses. The *UCSD General Catalog* should be consulted for equivalency information and any restrictions placed on the courses. Additional restrictions are noted below. Any deviation from this list must be petitioned.

Mathematics: All upper-division courses except Math. 168A-B, 179A-B, 183, 184A-B, 189A-B, and 195–199. If a student has completed CSE 167, then he or she cannot get elective credit for Math. 155A. Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, MAE 107, CENG 100. No credit for any of these courses will be given if Math. 170A-B-C is taken. Students will receive credit for either Math. 166 or CSE 105 (but not both), either Math. 188 or CSE 101 (but not both), and either Math. 176 or CSE 100 (but not both).

Computer Science and Engineering: All CSE upper-division courses except CSE 195. Students will receive credit for either CSE 123A or ECE 158A (but not both) and CSE 143 or ECE 165 (but not both).

Cognitive Science: Sensation and Perception 101A, Learning, Memory, and Attention 101B, Language 101C, Distributed Cognition 102A, Cognitive Ethnography 102B, Cognitive Engineering 102C, Neuroanatomy and Physiology 107A, Systems Neuroscience 107B, Cognitive Neuroscience 107C, Programming Methods for Cognitive Science 108D, Neural Networks Models of Cognitive I 108E, Advanced Programming Methods for Cognitive Science 108F, Human Computer Interaction 120, Human Computer Interaction Programming 121, Semantics 150, Language Comprehension 153, Natural and Artificial Symbolic Representational Systems 170, Neural Network Models of Cognition II 181, Artificial Intelligence Modeling II 182.

Students may not get credit for both CSE 150 and Advanced Programming Methods for Cognitive Science 108F or for both CSE 151 and Artificial Intelligence Modeling II 182.

Mechanical and Aerospace Engineering (MAE): All upper-division MAE courses except MAE 140, and MAE 195-199.

Students may receive elective credit for only one of the following courses: CSE 164A, Math. 174, Math. 173, Phys. 105A-B, CENG 100, MAE 107. Students may only get credit for one of the two courses, CSE 167 or MAE 152.

Economics: Microeconomics 100A-B, Game Theory 109, Macroeconomics 110A-B, Mathematical Economics 113, Econometrics 120B-C, Applied Econometrics 121, Management Science Microeconomics 170A-B, Decisions Under Uncertainty 171, Introduction to Operations Research 172A-B-C, Economic and Business Forecasting 178.

Students cannot take Economics 120A since it duplicates ECE 109.

Linguistics: Phonetics 110, Phonology I 111, Phonology II 115, Morphology 120, Syntax I 121, Syntax II 125, Semantics 130, Mathematical Analysis of Languages 160, Computers and Language 163, Computational Linguistics 165, Psycholinguistics 170, Language and the Brain 172, and Sociolinguistics 175.

Engineering: Team Engineering 101 (see course description under the Jacobs School of Engineering section).

Music: Computer Music II 172, Audio Production: Mixing and Editing 173.

Psyschology: Engineering Psychology 161.

Minor Curricula

ECE offers three minors in accord with the general university policy that a minor requires five upper-division courses. ***Students must realize that***

these upper-division courses have extensive lower-division prerequisites (please consult the ECE undergraduate office). Students should also consult their college provost's office concerning the rules governing minors and programs of concentration.

Electrical Engineering: 20 units chosen from the breadth courses ECE 101, 102, 103, 107, 108, 109.

Engineering Physics: 20 units chosen from the junior year courses Phys. 110A, 130A, Math. 110, ECE 101, 102, 103, 107, 108, 109.

Computer Engineering: 20 units chosen from the junior year courses ECE 102, 108, CSE 100, 101, 105, 120, 140, 140L, 141, 141L.

The department will consider other mixtures of upper-division ECE, CSE, physics, and mathematics courses by petition.

Undergraduate Admissions, Policies, and Procedures

Freshman eligibility

1. **Computer Engineering majors:**

   Admission to the computer engineering major is currently restricted as described in the section "Admission to the School of Engineering." The only way to become a computer engineering (CE) major is to be directly admitted as an entering freshman or as an entering transfer (Transfer students, see TRANSFER STUDENTS section below).

   Space permitting and at its sole discretion, the electrical and computer engineering department may periodically grant admission to the computer engineering (CE) major to a small number of academically exceptional UCSD undergraduate students who were not admitted to this major as entering students. Exceptional admission will be considered for students having an overall UCSD GPA of 3.5 or better who have taken at least two CSE, math, or science courses demonstrating special aptitude for the CE curriculum. Applications for exceptional admission must include submission of a course plan demonstrating ability to satisfy graduation requirements and a personal statement addressing the applicant's motivation to join the CE major, in addition to other criteria established by the department.

2. **Electrical Engineering:**

   Freshmen students who have excelled in high school and have declared electrical engineering on their application will be directly admitted by the dean of the School of Engineering into their major. The only way to become an electrical engineering major is to be directly admitted as an entering freshman (transfer students see *Transfer Students* section below). These students will be notified directly of their status.

   Because of heavy student interest in departmental programs and the limited resources available to accommodate this demand, maintenance of a high quality program makes it necessary to limit enrollment to the most qualified students.

   Admission to the department as a major, transfer, or minor is in accordance with the general requirements established by the School of Engineering.

   Space permitting and at its sole discretion, the electrical and computer engineering department may periodically grant admission to the electrical engineering (EE) major to a small number of academically exceptional UCSD undergraduate students who were not admitted to this major as entering students. Exceptional admission will be considered for students having an overall UCSD GPA of 3.5 or better who have taken at least two CSE, math, or science courses demonstrating special aptitude for the EE curriculum. Applications for exceptional admission must include submission of a course plan demonstrating ability to satisfy graduation requirements and a personal statement addressing the applicant's motivation to join the EE major, in addition to other criteria established by the department.

3. **Engineering Physics:**

All students will initially be placed in pre-major status. Upon successful completion of the following courses (with a minimum 2.0 GPA by the end of the first three quarters if a transfer student, six quarters if an incoming freshman), students will be admitted into full Engineering-Physics major status.

1. Math. 20A-B-C
2. Physics 2A-B
3. ECE 20A-B
4. CSE 11 or 8B, or MAE 9

To initiate the change from pre-major status to full major status, transfer students must see the ECE undergraduate adviser by the end of their third quarter at UCSD; incoming freshmen by the end of their sixth quarter.

Please refer to the sections "Undergraduate Regulations and Requirements" and "Acceptance to the Jacobs School of Engineering" for important details.

Transfer Students Eligibility

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

1. **Computer Engineering:**

   The B.S. in Computer Engineering is a heavily impacted major and admission is limited to applicants who have demonstrated a high level of achievement commensurate with the prospect of success in this major. Successful applicants must have completed substantial training at the community college and must have achieved a high level of academic performance there. For example, the required minimum of ninety quarter transfer units must include eighteen quarter units of calculus, twelve quarter units of calculus-based physics, and the highest level computer science course offered at their community college. Although the actual required GPA cutoff depends on the number of

openings, at least a 3.2 GPA in the community college transfer courses, and a 3.4 GPA in math, physics and computer science courses, are likely to be needed to gain admission.

When planning their programs, students should be mindful of lower-division prerequisites necessary for admission to upper-division courses.

Effective fall 2004 applicants seeking admission as transfer students will be considered for direct admission into the Computer Engineering (CE) major in the Department of Electrical and Computer Engineering (ECE). The only way to become a Computer Engineering (CE) major is to be directly admitted as an entering transfer student.

2. **Electrical Engineering:**

The B.S. in Electrical Engineering is heavily impacted and admission is limited to applicants who have demonstrated a high level of achievement commensurate with the prospect of success in these majors. Successful applicants must have completed substantial training at the community college and must have achieved high level of academic performance there. For example, the required minimum of 90 quarter transfer units must include 18 quarter units of calculus, 12 quarter units of calculus-based physics, and the highest level computer science course offered at their community college.

Effective fall 2004, applicants seeking admission as transfer students will be considered for direct admission into the electrical engineering major in the Department of Electrical Engineering. The only way to become an electrical engineering major is to be directly admitted as an entering transfer student. Although the actual required GPA cutoff depends on the number of openings, at least a 3.2 GPA in the community college transfer courses, and a 3.4 GPA in math, physics, and computer science courses, are likely to be needed to gain admission. Transfer students who have declared pre-electrical engineering will be considered for direct admission to the major.

There will be no pre-major admissions to Electrical Engineering.

Space permitting and in its sole discretion, the electrical engineering department may periodically grant admissionto the electrical engineering major to a small number of academically exceptional UCSD undergraduate students who were not admitted to these majors as entering students. Exceptional admission will be considered for students having an overall UCSD GPA of 3.5 or better who have taken at least two ECE, math, or science courses demonstrating special aptitude for the EE curriculum. Applications for exceptional admission must include submission of a course plan demonstrating ability to satisfy graduation requirements and a personal statement addressing the applicant's motivation to join the electrical engineering major, in addition to other criteria established by the department.

3. **Engineering Physics:**

Students are accepted into the pre-major and must complete the following courses in order to be accepted into the engineering physics major: Math. 20A-B-C, Phys. 2A-B, ECE 20A-B, CSE 11 or 8B or MAE 9. Students who wish to enter in the engineering physics major must contact the department before the beginning of the fall quarter, submitting course descriptions and transcripts for courses used to satisfy their lower-division requirements. Normally, admission will be for the fall quarter; students entering in the winter or spring quarter should be aware that scheduling difficulties may occur because upper-division sequences normally begin in the fall quarter.

Grade Requirement in the Major

Courses required for the major must be taken for a letter grade.

A GPA of 2.0 is required in all upper-division courses in the major, including technical electives. The grade of D will not be considered an adequate prerequisite for any ECE course and will not be allowed for graduation. The engineering design requirement must be completed with a grade of C– or better.

Advising

Students are required to complete an academic planning form and to discuss their curriculum with the appropriate departmental adviser immediately upon entrance to UCSD, and then every year until graduation. This is intended to help students in: a) their choice of depth sequence, b) their choice of electives, c) keeping up with changes in departmental requirements. A faculty adviser will be assigned by the ECE department undergraduate office.

New Transfer Students in Electrical Engineering and Engineering Physics

The entire curriculum is predicated on the idea of actively involving students in engineering from the time they enter as freshmen. The freshman course "Introduction to Engineering" has been carefully crafted to provide an overview of the engineering mindset with its interrelationships among physics, mathematics, problem solving, and computation. All later courses are specifically designed to build on this foundation. All transfer students should understand that the lower-division curriculum is demanding. **Transfer students will be required to take all lower-division requirements or their equivalent.**

- Transfer students should start with ECE 20A in the fall quarter. Transfer students will be allowed to take ECE 20B and 60A concurrently. The recommended schedule for the lower-division ECE course is as follows:

Recommended Schedule

FALL	WINTER	SPRING
ECE 20A	ECE 20B	ECE 60B
MAE 9 or (CSE 11 or 8B)*	ECE 60A	ECE 60L

* Please note that engineering physics students cannot take CSE 11 or 8A in the fall quarter of the freshman year. (The fall quarter enrollment in CSE courses is reserved for computer science and computer engineering majors.) CSE 8A and CSE 8B are not required if a student completes CSE 11. CSE 11 is a faster paced version of CSE 8A and CSE 8B. Students will self-select which course they wish to take. Students without programming experience in a compiled language are advised to take CSE 8A and the CSE 8B instead of CSE 11.

Note: ECE 30 requires MAE 9 or (CSE 11 or 8B) and ECE 20B as a prerequisite and thus should be taken in the spring quarter of the sophomore year, or in the fall quarter of the junior year, concurrently with two upper-division breadth courses.

New Transfer Students in Computer Engineering

Recommended Schedules

FALL	WINTER	SPRING
FIRST YEAR*		
CSE 11	CSE 12	CSE 30
CSE 20 (or Math. 15A)	CSE 21 (or Math. 15B)	ECE 109
CSE 91	ECE 53A	ECE 53B

FIRST YEAR**		
CSE 8A	CSE 8B	CSE 20 (or
ECE 53A	ECE 53B	Math. 15A)
	CSE 12	CSE 30
		ECE 109

* Recommended schedule for students with programming experience. This schedule will require students to get clearance from the CSE department to take CSE 8B and CSE 20 concurrently

** Recommended schedule for students with no programming experience. This schedule will require students to get clearance from the CSE department to take CSE 8B and CSE 12 in the winter quarter, and CSE 20 and CSE 30 concurrently in the spring quarter. CSE 21 should then be taken during the summer sessions or the following fall quarter.

Students who do not have any programming experience are encouraged to take the CSE 8A-B sequence instead of CSE 11. Experience has shown that most students who are not familiar with programming and take CSE 11 have to retake the class because the accelerated pace makes it difficult to learn the new material.

Note: *Transfer students are encouraged to consult with the ECE undergraduate office for academic planning upon entrance to UCSD.*

ECE Honors Program

The ECE Undergraduate Honors Program is intended to give eligible students the opportunity to work closely with faculty in a project, and to honor the top graduating undergraduate students.

Eligibility for Admission to the Honors Program:

1. Students with a minimum GPA of 3.5 in the major and 3.25 overall will be eligible to apply. Students may apply at the end of the winter quarter of their junior year and no later than the end of the second week of fall quarter of their senior year. No late applications will be accepted.
2. Students must submit a project proposal (sponsored by an ECE faculty member) to the honors program committee at the time of application.
3. The major GPA will include ALL lower-division required for the major and all upper-division required for the major that are completed at the time of application (a minimum of twenty-four units of upper-division course work).

Requirements for Award of Honors:

1. Completion of all ECE requirements with a minimum GPA of 3.5 in the major based on grades through winter quarter of the senior year.
2. Formal participation (i.e., registration and attendance) in the ECE 290 graduate seminar program in the fall quarter of their senior year.
3. Completion of an eight-unit approved honors project (ECE 193H: Honors Project) and submission of a written report **by the first day of spring quarter** of the senior year. This project must contain enough design to satisfy the ECE BS four-unit design requirement.
4. The ECE honors committee will review each project final report and certify the projects which have been successfully completed at the honors level.

Procedure for Application to the Honors Program:

Between the end of the winter quarter of their junior year and the second week of the fall quarter of their senior year, interested students must advise the department of their intention to participate by submitting a proposal for the honors project sponsored by an ECE faculty member. Admission to the honors program will be formally approved by the ECE honors committee based on GPA and the proposal.

Unit Considerations

Except for the two-unit graduate seminar, this honors program does not increase a participant's total unit requirements. The honors project will satisfy the departmental design requirement and students may use four units of their honors project course as a technical elective.

Five-Year B.S./M. Eng. Program

Undergraduates in the ECE department who have maintained a good academic record in both departmental and overall course work are encouraged to participate in the five-year B.S./M. Eng. program offered by the department. Participation in the program will permit students to complete the requirements for the M. Eng. degree within one year following receipt of the B.S. degree. Complete details regarding admission to and participation in the program are available from the ECE Undergraduate Affairs office.

Admission to the Program

Students should submit an application for the B.S./M. Eng. program, including three letters of recommendation, by the program deadline during the spring quarter of their junior year. Applications are available from the ECE Undergraduate Affairs office. No GRE's are required for application to the B.S./M. Eng. program. A GPA of at least 3.0 both overall and in the major and strong letters of recommendation are required to be considered for program admission.

In the winter quarter of the senior year, applications of students admitted to the program will be forwarded by the department to the UCSD Office of Graduate Studies and Research. Each student must submit the regular graduate application fee *prior to the application deadline* for their application to be processed. Students who have been accepted into the B.S./M. Eng. program will automatically be admitted for graduate study beginning the following fall provided they maintain an overall GPA through the winter quarter of the senior year of at least 3.0. Upper-division (up to twelve units) or graduate courses taken during the senior year that are not used to satisfy undergraduate course requirements may be counted towards the forty-eight units required for the M. Eng. degree.

Continuation in the Program

Once admitted to the B.S./M. Eng. program, students must maintain a 3.0 cumulative GPA in all courses through the winter quarter of the senior year and in addition must at all times maintain a 3.0 cumulative GPA in their graduate course work. Students not satisfying these requirements may be re-evaluated for continuation in the program.

Admission for graduate study through the B.S./M. Eng. program will be for the M. Eng. degree only. Undergraduate students wishing to continue towards the Ph.D. degree must apply and be evaluated according to the usual procedures and criteria for admission to the Ph.D. program.

Curriculum

Students in the five-year B.S./M. Eng. program must complete the same requirements as those in the regular M. Eng. program. Completion of the M. Eng. degree requirements within one year following receipt of the B.S. degree will generally require that students begin graduate course work in their senior year. All requirements for the B.S.

degree should be completed by the end of the senior (fourth) year, and the B.S. degree awarded prior to the start of the fifth year. Courses taken in the senior year may be counted toward the B.S. requirements or the M. Eng. degree requirements, but not both. *Students must have received their B.S. degree before they will be eligible to enroll as graduate students in the department.*

The Graduate Programs

The department offers two distinct graduate programs, the Ph.D. and the M. Eng. The Ph.D. program is strongly research oriented and is for students whose final degree objective is the Ph.D. If a student with a B.S. is admitted to this program, he or she will be expected to complete the requirements for the M.S. degree (outlined below) before beginning doctoral research. By contrast, the M. Eng. is intended to be a terminal professional degree, for those not planning to pursue the Ph.D. The M. Eng. has only a coursework requirement. Graduate applicants are admitted directly into the M. Eng. or the Ph.D. programs only.

In addition, the department offers M.S. and Ph.D. Programs in Computer Engineering jointly with CSE, and a Ph.D. Program in Applied Ocean Science jointly with MAE and Scripps Institution of Oceanography.

Admission to an ECE graduate program is in accordance with the general requirements of the UCSD graduate division, and requires at least a B.S. degree in engineering, physical sciences, or mathematics with a minimum upper division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE General Test scores. TOEFL scores are required from international applicants whose native language is not English. Applicants should be aware that the University does not permit duplication of degrees.

Support: The department makes every effort to provide financial support for Ph.D. students who are making satisfactory progress. Support may take the form of a fellowship, teaching assistantship, research assistantship, or some combination thereof. International students will not be admitted unless there is reasonable assurance that support can be provided for the duration of their Ph.D. program. Students in the M.Eng. programs may also obtain support through teaching or research assistantships, but this is less certain.

Advising: Students should seek advice on requirements and procedures from the departmental graduate office and/or the departmental Web site http://www.ece.ucsd.edu. All students will be assigned a faculty academic adviser upon admission and are strongly encouraged to discuss their academic program with their adviser immediately upon arrival and subsequently at least once per academic year.

Master of Engineering

The Master of Engineering (M. Eng.) program is intended primarily for engineers who desire Master's level work but do not intend to continue with Ph.D. level research. Salient features of the M. Eng. program include the following: It can be completed in four quarters at full-time or eight quarters at half time; it does not require a thesis, a research project, or a comprehensive exam; and it has an option of three courses in business, management, and finance.

Course Requirements:

The total course requirements are forty-eight units (twelve quarter courses). The choice of courses is subject to general focus and breadth requirements. Students will be assigned a faculty adviser who will help select courses.

1. **The Focus Requirement: (five courses)** The M. Eng. Program should reflect, among other things, a continuity and focus in one subject area. The course selection must therefore include at least twenty units (five quarter courses) in closely related courses leading to the state of the art in that area. The requirement may be met by selecting five courses from within one of the focus areas listed below. In some cases it may be appropriate to select five closely related courses from two of the areas listed below. Such cases must be approved by a faculty adviser and the ECE Graduate Curriculum Committee.
2. **The Breadth Requirement: (two courses)** A graduate student often cannot be certain of his or her future professional career activities and may benefit from exposure to interesting opportunities in other subject areas. The breadth requirement is intended to provide protection against technical obsolescence, open up new areas of interest, and provide for future self-education. The minimum breadth requirement is eight units (two quarter courses) of ECE/CSE graduate courses selected from among the courses listed below, in an area distinctly different from that of the focus requirement.
3. **Technical Electives: (two courses)** Two technical electives may be any graduate courses in ECE, CSE, Physics, or Mathematics. Other technical courses may be selected with the approval of the faculty adviser and the ECE Graduate Curriculum Committee. Technical electives may include a maximum of four units of ECE 298 (Independent Study), or ECE 299 (Research).
4. **Professional Electives: (three courses)** The three professional electives may be used in several ways: for the IP/Core 401, 420, 421 series in business, management, and finance; for upper-division undergraduate technical courses specified as prerequisites for graduate-level focus, breadth, or technical elective courses taken to satisfy the M.Eng. degree requirements; or for additional graduate technical electives. Use of other courses to satisfy the Professional Elective requirement must be approved by the faculty adviser.

Scholarship Requirement: The forty-eight units of required course work must be taken for a letter grade (A-F), except for ECE 298 or 299, for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

Master of Engineering Program Focus Courses

Please consult the ECE graduate office or the ECE Web site http://www.ece.ucsd.edu for the current list of focus areas and courses.

1. **Applied Physics**

   Allied Ph.D. research areas: Applied Physics—Applied Optics, Applied Physics—Electronic Devices and Materials, Photonics, Radio Space Science, and Magnetic Recording.

   ECE 222A-B-C. Electromagnetic Theory

   ECE 230A-B-C. Solid State Electronics

   ECE 236A-B-C-D. Semiconductors

   ECE 238A-B. Materials Science

   MS 201A-B-C. Materials Science

   ECE 240A-B-C. Optics

   ECE 241A-B-C. Optics

2. Communications and Signal Analysis

Allied Ph.D. research areas: Communication Theory and Systems, Intelligent Systems, Robotics, and Control, Magnetic Recording, Signal and Image Processing.

ECE 153. Random Processes

ECE 250. Random Processes

ECE 251AN-BN-CN-DN. Digital Signal Processing

ECE 252A-B. Speech Compression and Recognition

ECE 253A-B. Digital Image Analysis

ECE 254. Detection Theory

ECE 255A. Information Theory

ECE 255B-C. Source Coding

ECE 256A-B. Time Series Analysis

ECE 257A-B. Wireless Communications

ECE 258A-B. Digital Communications

ECE 259AN-BN-CN. Channel Coding

ECE 273A-B-C. Optimization in Linear Vector Spaces

ECE 275A-B. Statistical Parameter Estimation

ECE 285. Special Topic: Computer Vision; Pattern Recognition (offerings vary annually)

3. Electronic Circuits and Systems

Allied Ph.D. Research areas: Computer Engineering, Electronic Circuits and Systems.

ECE 222A-B-C. Applied Electromagnetic Theory

ECE 230A-B-C. Solid State Electronics

ECE 236A-B-C. Semiconductor Heterostructure Materials

ECE 250. Random Processes

ECE 260A-B-C. VLSI Circuits

ECE 263A-B-C. Fault Tolerant Computing

ECE 264A-B-C. Analog IC Design

ECE 265A-B. Wireless Circuit Design

CSE 240A, 240B. Computer Architecture

CSE 242A, 243A. Computer Aided Design

Transferring to the Ph.D. program

Although the M. Eng. is intended as a terminal degree, the department recognizes that degree goals can change, including the possibility that a student admitted to the M. Eng. may wish to obtain a Ph.D. To this end, we outline below the procedure that must be followed to effect such a change. At the outset, however, we stress that this option should not be used in an attempt to circumvent the normal Ph.D. admissions process. Students who fail to meet the standards for the Ph.D. program at the time of admission have little chance of being allowed into the Ph.D. program at a later date.

Students in the M. Eng. program wishing to be considered for admission to the Ph.D. program should consult their academic adviser as soon as possible. Transfer from M. Eng. to the Ph.D. program is possible provided that the student satisfies the following requirements:

- Satisfy all requirements for initial admission to the Ph.D program, including submission of GRE General Test Scores, and be approved for consideration for transfer to the Ph.D program by the ECE Graduate Curriculum Committee.
- Identify a faculty member who agrees, in writing, to serve as that student's academic and Ph.D. research adviser.
- In consultation with the academic adviser, design and complete a program of coursework that satisfies all course requirements and constraints for a Ph.D. discipline appropriate to their research. All students in the Ph.D. programs are required to satisfy all Ph.D. degree requirements as described below. Should the student not be admitted to the Ph.D. program, this program of coursework will serve, with the approval of the academic adviser and the ECE Graduate Curriculum Committee, to satisfy the coursework requirements for the M. Eng. degree.
- Pass the comprehensive examination (Ph.D. Preliminary) at the level required for continuation in the Ph.D. program. A student failing to pass the comprehensive exam at this required level will not be admitted to the Ph.D. program, and will instead continue in the M. Eng. degree program.
- Maintain a GPA of at least 3.4 in the appropriate core graduate courses.

A student who has fulfilled all of the above requirements should, after passing the departmental comprehensive exam, submit a petition to change their degree objective from M. Eng. to Ph.D.

Master of Science

The ECE department offers an M.S. programs in electrical and computer engineering. The M.S. program in computer engineering is jointly administered with the Department of Computer Science and Engineering. The M.S. programs are research oriented, are intended to provide the intensive technical preparation necessary for subsequent pursuit of a Ph.D. It is stressed that the M.S. degree is offered only to students who have been admitted to the Ph.D. program. The M.S. degree may be earned either with a thesis (Plan 1) or with a research project followed by a comprehensive examination (Plan 2). However, continuation in the Ph.D. program requires a comprehensive examination so most students opt for Plan 2.

Course Requirements:

The total course requirements for the master of science degrees in electrical engineering and in computer engineering are forty-eight units (twelve quarter courses) and forty-nine units, respectively, of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the department graduate office or the official Web site of the department. Students in interdisciplinary programs may select other core courses with the approval of their academic adviser. The course requirements must be completed within two years of full-time study. Students will be assigned a faculty adviser who will help select courses and approve their overall academic curriculum.

Scholarship Requirement: The forty-eight units of required course work must be taken for a letter grade (A-F), except for graduate research (e.g. ECE 298, 299) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall.

Thesis and Comprehensive Requirements: The department offers both M.S. Plan 1 (thesis) and M.S. Plan 2 (comprehensive exam). Students in the M.S. program may elect either Plan 1 or Plan 2 any time. Students in the M.S. Plan 1 (thesis) must take twelve units of ECE 299 (Research) and must submit a thesis as described in the

general requirements of the university. Students in the M.S. Plan 2 (comprehensive exam) must find a faculty member who will agree to supervise the student in a research project. This should be done before the start of the second year of study. They should complete at least four units of ECE 299 (Research) and must pass the departmental comprehensive examination by the end of their second year of study. This is an oral exam in which the student presents his or her research to a committee of three ECE faculty members, and is examined orally on a two-quarter core sequence in ECE. The outcome of the exam is based on the student's research presentation, proficiency demonstrated in the student's area of specialization, and overall academic record and performance in the graduate program.

Students in the computer engineering discipline may elect to take two written examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the oral examination on a two-quarter sequence in ECE. They are then required to give a thirty- to forty-five minute research presentation in the ECE department.

The Doctoral Programs

The ECE department offers graduate programs leading to the Ph.D. degree in ten disciplines within electrical and computer engineering, as described in detail below. The Ph.D. is a research degree requiring completion of the Ph.D. program course requirements, satisfactory performance on the comprehensive (Ph.D. Preliminary) examination and University Qualifying Examination, and submission and defense of a doctoral thesis (as described under the "Graduate Studies" section of this catalog). Students in the Ph.D. program must pass the comprehensive exam (Ph.D. Preliminary) before the beginning of the third year of graduate study. To ensure timely progress in their research, students are strongly encouraged to identify a faculty member willing to supervise their doctoral research by the end of their first year of study.

Students should begin defining and preparing for their thesis research as soon as they have passed the comprehensive exam (Ph.D. Preliminary). They should plan on taking the University Qualifying Examination about one year later. The University does not permit students to continue in graduate study for more than four years without passing this examination. At the Qualifying Examination the student will give an oral presentation of the thesis proposal to a campus-wide committee. The committee will decide if the proposal has adequate content and reasonable chance for success. They may require that the student modify the proposal and may require a further review.

The final Ph.D. requirements are the submission of a dissertation and the dissertation defense (as described under the "Graduate Studies" section of this catalog).

Course Requirements: The total course requirements for the Ph.D. degree in electrical engineering are forty-eight units (twelve quarter courses), of which at least thirty-six units must be in graduate courses. Note that this is greater than the minimum requirements of the university. The department maintains a list of core courses for each disciplinary area from which the thirty-six graduate course units must be selected. The current list may be obtained from the ECE department graduate office or the official Web site of the department. Students in the interdisciplinary programs may select other core courses with the approval of their academic adviser. The course requirements must be completed within two years of full-time study.

Students in the Ph.D programs may count no more than eight units of ECE 299 towards their course requirements.

Students who already hold an M.S. degree in electrical engineering must nevertheless satisfy the requirements for the core courses. However, graduate courses taken else where can be substituted for specific courses with the approval of the academic adviser.

Scholarship Requirement: The forty-eight units of required courses must be taken for a letter grade (A-F), except for eight units of ECE 299 (Research) for which only S/U grades are allowed. Courses for which a D or F is received may not be counted. Students must maintain a GPA of 3.0 overall. In addition, a GPA of 3.4 in the core graduate courses is generally expected.

Comprehensive Exam (Ph.D. Preliminary): Ph.D. students must find a faculty member who will agree to supervise their thesis research. This should be done before the start of the second year of study. They should then devote at least half their time to research and must pass the comprehensive examination (Ph.D. Preliminary) by the end of their second year of study.* This is an oral exam in which the student presents his or her research to a committee of three ECE faculty members, and is examined orally for proficiency in his or her area of specialization. The outcome of the exam is based on the student's research presentation, proficiency demonstrated in the student's area of specialization, and overall academic record and performance in the graduate program. Successful completion of the comprehensive examination (Ph.D. Preliminary) will also satisfy the M.S. Plan 2 comprehensive exam requirement.

* Students in the computer engineering discipline may elect to take two written examinations in the Department of Computer Science and Engineering, in accordance with the CSE guidelines, in place of the oral examination on a two-quarter sequence in ECE. They are then required to give a thirty to forty-five minute research presentation in the ECE department.

University Qualifying Exam: Students who have passed the comprehensive exam (Ph.D. Preliminary) should plan to take the University Qualifying Examination approximately a year after passing the comprehensive exam (Ph.D. Preliminary). The University does not permit students to continue in graduate study for more than four years without passing this examination. The University Qualifying Examination is an oral exam in which the student presents his or her thesis proposal to a university-wide committee. After passing this exam the student is "advanced to candidacy."

Dissertation Defense: The final Ph.D. requirements are the submission of a dissertation, and the dissertation defense (as described under the Graduate Studies section of this catalog). Students who are advanced to candidacy may register for any ECE course on an S/U basis.

Departmental Time Limits: Students who enter the Ph.D. program with an M.S. degree from another institution are expected to complete their Ph.D. requirements a year earlier than B.S. entrants. They must discuss their program with an academic adviser in their first quarter of residence. If their Ph.D. program overlaps significantly with their earlier M.S. work, the time limits for the comprehensive and qualifying exams will also be reduced by one year. Specific time limits for the Ph.D. program, assuming entry with a B.S. degree, are as follows:

1. **The Comprehensive Exam (Ph.D. Preliminary)** must be completed before the start of the third year of full-time study.
2. **The University Qualifying Exam** must be completed before the start of the fifth year of full-time study.

3. **Support Limit:** Students may not receive financial support through the University for more than seven years of full-time study (six years with an M.S. degree).
4. **Registered Time Limit:** Students may not register as graduate students for more than eight years of full-time study (seven years with an M.S. degree).

Half-Time Study: Time limits are extended by one quarter for every two quarters on approved half-time status. Students on half-time status may not take more than 6 units each quarter.

Ph.D. Research Programs:

1. **Applied Ocean Sciences:** This program in applied science related to the oceans is interdepartmental with the Graduate Department of the Scripps Institution of Oceanography (SIO) and the Department of Mechanical and Aerospace Engineering (MAE). It is administered by SIO. All aspects of man's purposeful and unusual intervention into the sea are included. The M.S. degree is not offered in this program.
2. **Applied Physics—Applied Optics and Photonics:** These programs encompass a broad range of interdisciplinary activities involving optical science and engineering, optical and optoelectronic materials and device technology, communications, computer engineering, and photonic systems engineering. Specific topics of interest include ultrafast optical processes, nonlinear optics, quantum cryptography and communications, optical image science, multidimensional optoelectronic I/O devices, spatial light modulators and photodetectors, artificial dielectrics, multifunctional diffractive and micro-optics, volume and computer-generated holography, optoelectronic and micromechanical devices and packaging, wave modulators and detectors, semiconductor-based optoelectronics, injection lasers, and photodetectors. Current research projects are focused on applications such as optical interconnects in high-speed digital systems, optical multidimensional signal and image processing, ultrahigh-speed optical networks, 3D optical memories and memory interfaces, 3D imaging and displays, and biophotonic systems. Facilities available for research in these areas include electron-beam and optical lithography, material growth, microfabrication, assembly, and packaging facilities, cw and femtosecond pulse laser systems, detection systems, optical and electro-optic components and devices, and electronic and optical characterization and testing equipment.
3. **Communication Theory and Systems** Communications theory and systems concerns the transmission, processing, and storage of information. Topics covered by the group include wireless and wireline communications, spread-spectrum communication, multi-user communication, network protocols, error-correcting codes for transmission and magnetic recording, data compression, time-series analysis, and image and voice processing.
4. **Computer Engineering** consists of balanced programs of studies in both hardware and software, the premise being that knowledge and skill in both areas are essential both for the modern-day computer engineer to make the proper unbiased trade-offs in design, and for researchers to consider all paths towards the solution of research questions and problems. Toward these ends, the programs emphasize studies (course work) and competency (comprehensive examinations, and dissertations or projects) in the areas of VLSI and logic design, and reliable computer and communication systems. Specific research areas include: computer systems, signal processing systems, multiprocessing and parallel and distributed computing, computer communications and networks, computer architecture, computer-aided design, fault-tolerance and reliability, and neurocomputing. The faculty is composed of interested members of the Departments of Electrical and Computer Engineering (ECE), Computer Science and Engineering (CSE), and related areas. The specialization is administered by both departments; the requirements are similar in both departments, with students taking the comprehensive exam, if necessary, given by the student's respective department.
5. **Electronic Circuits and Systems:** This program involves the study and design of analog, mixed-signal (combined analog and digital), and digital electronic circuits and systems. Emphasis is on the development, analysis, and implementation of integrated circuits that perform analog and digital signal processing for applications such as wireless and wireline communication systems, test and measurement systems, and interfaces between computers and sensors. Particular areas of study currently include radio frequency (RF) power amplifiers, RF low noise amplifiers, RF mixers, fractional-N phase-locked loops (PLLs) for modulated and continuous-wave frequency synthesis, pipelined analog-to-digital converters (ADCs), delta-sigma ADCs and digital-to-analog converters (DACs), PLLs for clock recovery, adaptive and fixed continuous-time, switched-capacitor, and digital filters, echo cancellation circuits, adaptive equalization circuits, wireless receiver and transmitter linearization circuits, mixed-signal baseband processing circuits for wireless transmitters and receivers, high-speed digital circuits, and high-speed clock distribution circuits.
6. **Applied Physics—Electronic Devices and Materials:** This program addresses the synthesis and characterization of advanced electronic materials, including semiconductors, metals, and dielectrics, and their application in novel electronic, optoelectronic, and photonic devices. Emphasis is placed on exploration of techniques for high-quality epitaxial growth of semiconductors, including both molecular-beam epitaxy (MBE) and metalorganic chemical vapor deposition (MOCVD); fabrication and characterization of materials and devices at the nanoscale; development of novel materials processing and integration techniques; and high-performance electronic devices based on both Group IV (Si/SiGe) and III-V compound semiconductor materials. Areas of current interest include novel materials and high-speed devices for wireless communications; electronic and optoelectronic devices for high-speed optical networks; high-power microwave-frequency devices; nanoscale CMOS devices and circuits; heterogeneous materials integration; novel device structures for biological and chemical sensing; advanced tools for nanoscale characterization and metrology; and novel nanoscale electronic, optoelectronic, and photonic devices. Extensive facilities are available for research in this area, including several MBE and MOCVD systems; a complete microfabrication facility; electron-beam lithography and associated process tools for nanoscale fabrication; a Rutherford backscattering system; x-ray diffractometers; electron microscopy facilities;

extensive scanning-probe instrumentation; cryogenic systems; and comprehensive facilities for DC to RF electrical device characterization and optical characterization of materials and devices.

7. **Intelligent Systems, Robotics, and Control:** This information sciences-based field is concerned with the design of human-interactive intelligent systems that can sense the world (defined as some specified domain of interest); represent or model the world; detect and identify states and events in the world; reason about and make decisions about the world; and/or act on the world, perhaps all in real-time. A sense of the type of systems and applications encountered in this discipline can be obtained by viewing the projects shown at the Web site http://swiftlet.ucsd.edu.

   The development of such sophisticated systems is necessarily an interdiscipinary activity. To sense and succinctly represent events in the world requires knowledge of signal processing, computer vision, information theory, coding theory, and data-basing; to detect and reason about states of the world utilizes concepts from statistical detection theory, hypothesis testing, pattern recognition, time series analysis, and artificial intelligence; to make good decisions about highly complex systems requires knowledge of traditional mathematical optimization theory and contemporary near-optimal approaches such as evolutionary computation; and to act upon the world requires familiarity with concepts of control theory and robotics. Very often learning and adaptation are required as either critical aspects of the world are poorly known at the outset, and must be refined online, or the world is non-stationary and our system must constantly adapt to it as it evolves. In addition to the theoretical information and computer science aspects, many important hardware and software issues must be addressed in order to obtain an effective fusion of a complicated suite of sensors, computers, and problem dynamics into one integrated system.

   Faculty affiliated with the ISRC subarea are involved in virtually all aspects of the field, including applications to intelligent communications systems; advanced human-computer interfacing; statistical signal- and image-processing; intelligent tracking and guidance systems; biomedical system identification and control; and control of teleoperated and autonomous multiagent robotic systems.

8. **Magnetic Recording** is an interdisciplinary field involving physics, material science, communications, and mechanical engineering. The physics of magnetic recording involves studying magnetic heads, recording media, and the process of transferring information between the heads and the medium. General areas of investigation include: nonlinear behavior of magnetic heads, very high frequency loss mechanisms in head materials, characterization of recording media by micromagnetic and many body interaction analysis, response of the medium to the application of spatially varying vectorial head fields, fundamental analysis of medium nonuniformities leading to media noise, and experimental studies of the channel transfer function emphasizing nonlinearities, interferences, and noise. Current projects include numerical simulations of high density digital recording in metallic thin films, micromagnetic analysis of magnetic reversal in individual magnetic particles, theory of recorded transition phase noise and magnetization induced nonlinear bit shift in thin metallic films, and analysis of the thermal-temporal stability of interacting fine particles.

   Research laboratories are housed in the Center for Magnetic Recording Research, a national center devoted to multi-disciplinary teaching and research in the field.

9. **Radio and Space Science:** The Radio Science Program focuses on the study of radio waves propagating through turbulent media. The primary objectives are probing of otherwise inaccessible media such as the solar wind and interstellar plasma. Techniques for removing the effects of the turbulent medium to restore the intrinsic signals are also studied.

   The Space Science Program is concerned with the nature of the sun, its ionized and supersonic outer atmosphere (the solar wind), and the interaction of the solar wind with various bodies in the solar system. Theoretical studies include: the interaction of the solar wind with the earth, planets, and comets; cosmic dusty-plasmas; waves in the ionosphere; and the physics of shocks. A major theoretical effort involves the use of supercomputers for modeling and simulation studies of both fluid and kinetic processes in space plasmas.

   Students in radio science will take measurements at various radio observatories in the U.S. and elsewhere. This work involves a great deal of digital signal processing and statistical analysis. All students will need to become familiar with electromagnetic theory, plasma physics, and numerical analysis.

10. **The Signal and Image Processing** Program explores engineering issues related to the modeling of signals starting from the physics of the problem, developing and evaluating algorithms for extracting the necessary information from the signal, and the implementation of these algorithms on electronic and opto-electronic systems. Specific research areas include filter design, fast transforms, adaptive filters, spectrum estimation and modeling, sensor array processing, image processing, motion estimation from images, and the implementation of signal processing algorithms using appropriate technologies with applications in sonar, radar, speech, geophysics, computer-aided tomography, image restoration, robotic vision, and pattern recognition.

Research Facilities

Most of the research laboratories of the department are associated with individual faculty members or small informal groups of faculty. Larger instruments and facilities, such as those for electron microscopy and e-beam lithography are operated jointly. In addition the department operates several research centers and participates in various university wide organized research units.

The department-operated research centers are the NSF Industrial/University Cooperative Research Center (I/UCRC) for Ultra-High Speed Integrated Circuits and Systems (ICAS); Opto-electronics Technology Center (OTC) sponsored by the Advanced Project Research Agency; the Center for Wireless Communications which is a university-industry partnership; the Center for Information Engineering; and the Institute for Neural Computation.

Department research is associated with the Center for Astronomy and Space Science, the Center for Magnetic Recording Research, the California Space Institute, and the Institute for Nonlinear Science. Departmental researchers also use various national and international laboratories, such as the National Nanofabrication Facility and the National Radio Astronomy Laboratory.

The department emphasizes computational capability and maintains numerous computer laboratories for instruction and research. One of the NSF national supercomputer centers is located on the campus. This is particularly useful for those whose work requires high data bandwidths.

COURSES

The department will endeavor to offer the courses as out lined below; however, unforeseen circumstances sometimes require a change of scheduled offerings. Students are strongly advised to check the *Schedule of Classes* or the department before relying on the schedule below. The names appearing below the course descriptions are those of faculty members in charge of the course. For the names of the instructors who will teach the course, please refer to the quarterly *Schedule of Classes*. The departmental Web site http://www.ece.ucsd.edut includes the present best estimate of the schedule of classes for the entire academic year.

LOWER-DIVISION

1A-B-C. Mesa Orientation Course (1-1-1)
Students will be given an introduction to the engineering profession and our undergraduate program. Exercises and practicums will develop the problem-solving skills needed to succeed in engineering. *Prerequisite: none.* (F,W,S)

20A. Introduction to Electrical Engineering I (4)
Areas of electrical engineering from Ohm's Law to semiconductor physics to engineering ethics are discussed, demonstrated, and experienced. Principles introduced in lectures are put to use as student lab teams build a working system. The first quarter emphasizes analog electronics. (Lab fee: $25) *Prerequisite: Math. 20A must be taken concurrently.* (F,W,S)

20B. Introduction to Electrical Engineering II (4)
This continuation of ECE 20A emphasizes semiconductor devices and digital electronics. Lab teams complete their system as they learn engineering design methods. Students are prepared for proceeding toward their choice of an electrical engineering profession. (Lab fee: $25) *Prerequisites: ECE 20A with a grade of C- or better.* (F,W,S)

30. Introduction to Computer Engineering (4)
The fundamentals of both the hardware and software in a computer system. Topics include: representation of information, computer organization and design, assembly and microprogramming, current technology in logic design. (Students who have taken CSE 30 may not take ECE 30 for credit.) *Prerequisite: ECE 20B and (CSE 11 or 8A-B) or MAE 9 with grades of C- or better.* (F,S)

53A. Fundamentals of Electrical Engineering I (4)
This is a coordinated lecture and laboratory course for students majoring in other branches of science and engineering. It covers analysis and design of passive and active circuits. The course emphasizes problem-solving and laboratory work on passive circuits. *Prerequisites: Math. 21C, Math. 21D must be concurrent, Phys. 2B or BS or 4C with grades of C– or better.* (F,W)

53B. Fundamentals of Electrical Engineering II (4)
This is a coordinated lecture and laboratory course for students majoring in other branches of science and engineering. It covers analog and digital systems and active circuit design. Laboratory work will include operational amplifiers, diodes and transistors. *Prerequisites: ECE 53A with a grade of C– or better.* (W,S)

60A. Circuits and Systems I (4)
Voltage-current relationships for circuit elements, Kirchhoff's voltage and current laws, source transformations, loop and node analysis, initial conditions, the Laplace transform, inverse transforms, partial fraction expansions. *Prerequisites: Math 20B, 21C, 21D, and ECE 20A with grades of C- or better.* (F,W)

60B. Circuits and Systems II (4)
Solution of network equations using Laplace transforms; convolution integral; the concept of impedance; Thevenin's and Norton's theorems; transfer functions; poles and zeros; two-port networks, steady state sinusoidal response; Bode plots. *Prerequisite: ECE 60A and Math. 21D with grades of C– or better.* (W,S)

60L. Circuits and Systems Laboratory (4)
In this course, students learn to model, simulate, and design practical circuits using idealized circuit models to account for the interactions among various parts of a circuit, the concept of feedback, etc. Topics include first and second order filters, operational amplifiers (linear amplifiers, active filters, differentiators, integrators, comparators, triggers, oscillators), and transistor circuits (amplifiers, digital circuits). (Lab fee: $15) *Prerequisites: ECE 60A with a grade of C– or better. ECE 60B must be taken concurrently or already completed with a grade of C– or better.* (W,S)

87. Freshman Seminar (1)
The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. *Prerequisite: none.*

90. Undergraduate Seminar (1)
This seminar class will provide a broad review of current research topics in both electrical engineering and computer engineering. Typical subject areas are signal processing, VLSI design, electronic materials and devices, radio astronomy, communications, and optical computing. *Prerequisite: none.* (F,W,S)

UPPER-DIVISION

101. Linear Systems Fundamentals (4)
Complex variables. Singularities and residues. Signal and system analysis in continuous and discrete time. Fourier series and transforms. Laplace and z-transforms. Linear Time Invariant Systems. Impulse response, frequency response, and transfer functions. Poles and zeros. Stability. Convolution. Sampling. Aliasing. *Prerequisites: ECE 60B or ECE 53B with grades of C– or better.* (F,W)

102. Introduction to Active Circuit Design (4)
Nonlinear active circuits design. Nonlinear device models for diodes, bipolar and field-effect transistors. Linearization of device models and small signal equivalent circuits. Circuit designs will be simulated by computer and tested in the laboratory. (Lab fee: $15) *Prerequisites: ECE 60B and 60L or ECE 53B with grades of C– or better.* (F,W)

103. Fundamentals of Devices and Materials (4)
Introduction to semiconductor materials and devices. Semiconductor crystal structure, energy bands, doping, carrier statistics, drift and diffusion. p-n junctions, metal-semiconductor junctions. Bipolar junction transistors: current flow, amplification, switching, nonideal behavior Metal-oxide-semiconductor structures, MOSFETs, device scaling. *Prerequisites: Phys. 2D or Phys. 4D and 4E with grades of C– or better.* (F,W)

107. Electromagnetism (4)
Electrostatics and magnetostatics; electrodynamics; Maxwell's equations; plane waves; skin effect. Electromagnetics of transmission lines: reflection and transmission at discontinuities, Smith chart, pulse propagation, dispersion. Rectangular waveguides. Dielectric and magnetic properties of materials. Electromagnetics of circuits. *Prerequisites: Phys. 2A-D or 4A-E and ECE 60B or 53B with grades of C– or better.* (F,W)

108. Digital Circuits (4)
Digital integrated electronic circuits for processing technologies. Analytical methods for static and dynamic characteristics. MOS field-effect transistors and bipolar junction transistors, circuits for logic gates, flip-flop, data paths, programmable logic arrays, memory elements. (Lab fee: $15) *Prerequisites: Math 20A-B, 21C-D, 20F-E; Phys. 2A-D or 4A-E; (ECE 20A-B, 30, ECE 60A-B-L) or (ECE 53A and 53B); ECE 30 or CSE 30; ECE 102 with grades of C– or better.* (W,S)

109. Engineering Probability and Statistics (4)
Axioms of probability, conditional probability, theorem of total probability, random variables, densities, expected values, characteristic functions, transformation of random variables, central limit theorem. Random number generation, engineering reliability, elements of estimation, random sampling, sampling distributions, tests for hypothesis. Students who completed Math. 180A-B, Math. 183, or Economics 120A will not receive credit for ECE 109. *Prerequisites: Math. 20A-B-C or 21C, 20D or 21D, 20F, with grades of C– or better. (ECE 101 recommended).* (F,W,S)

111. Advanced Digital Design Project (4)
Advanced topics in digital circuits and systems. Use of computers and design automation tools. Hazard elimination, synchronous/asnychronous FSM synthesis, synchronization and arbitration, pipelining and timing issues. Problem sets and design exercises. A large-scale design project. Simulation and/or rapid prototyping. *Prerequisite: ECE 108 or CSE 140 with grades of C– or better.* (F,W,S)

118. Computer Interfacing (4)
Interfacing computers and embedded controllers to the real world: busses, interrupts, DMA, memory mapping, concurrency, digital I/O, standards for serial and parallel communications, A/D, D/A, sensors, signal conditioning, video, and closed loop control. Students design and construct an interfacing project. (Lab fee: $20) *Prerequisites: ECE 30 or CSE 30 and ECE 60A-B-L or ECE 53A-B.* (S)

120. Solar System Physics (4)
General introduction to planetary bodies, the overall structure of the solar system, and space plasma physics. Course emphasis will be on the solar atmosphere, how the solar wind is produced, and its interaction with both magnetized and unmagnitized planets (and comets). *Prerequisites: Phys. 2A-C or 4A-D, Math. 20A-B, 20C or 21C with grades of C- or better.* (S)

123. Antenna Systems Engineering (4)
The electromagnetic and systems engineering of radio antennas for terrestrial wireless and satellite communications. Antenna impedance, beam pattern, gain, and polarization. Dipoles, monopoles, paraboloids, phased arrays. Power and noise budgets for communication links. Atmospheric propagation and multipath. *Prerequisite: ECE 107 with a grade of C- or better.* (F)

134. Electronic Materials Science of Integrated Circuits (4)
Electronic materials science with emphasis on topics pertinent to microelectronics and VLSI technology. Concept of the course is to use components in integrated circuits to discuss structure, thermodynamics, reaction kinetics, and electrical properties of materials. *Prerequisites: Phys. 2C-D with grades of C- or better.* (S)

135A. Semiconductor Physics (4)
Crystal structure and quantum theory of solids; electronic band structure; review of carrier statistics, drift and diffusion, p-n junctions; nonequilibrium carriers, imrefs, traps, recombination, etc; metal-semiconductor junctions and heterojunctions. *Prerequisite: ECE 103 with a grade of C- or better.* (F)

135B. Electronic Devices (4)
Structure and operation of bipolar junction transistors, junction field-effect transistors, metal-oxide-semiconductor diodes and transistors. Analysis of dc and ac characteristics. Charge control model of dynamic behavior. *Prerequisite: ECE 135A with a grade of C- or better.* (W)

136. Fundamentals of Semiconductor Device Fabrication (4)
Crystal growth, controlled diffusion, determination of junction-depth and impurity profile, epitaxy, ion-implantation, oxidation, lithography, chemical vapor deposition, etching, process simulation and robust design for fabrication. *Prerequisite: ECE 103 with a grade of C- or better.* (S)

136L. Microelectronics Laboratory (4)
Laboratory fabrication of diodes and field effect transistors covering photolithography, oxidation, diffusion, thin film deposition, etching and evaluation of devices. (Lab fee: $35) *Prerequisite: ECE 103 with a grade of C- or better.* (F,S)

138L. Microstructuring Processing Technology Laboratory (4)
A laboratory course covering the concept and practice of microstructuring science and technology in fabricating devices relevant to sensors, lab-chips and related devices. (Lab fee: $40) *Prerequisite: upper-division standing for science and engineering students.* (W)

139. Semiconductor Device Design and Modeling (4)
Device physics of modern field effect transistors and bipolar transistors, including behavior of submicron structures. Relationship between structure and circuit models of transistors. CMOS and BiCMOS technologies. Emphasis on computer simulation of transistor operation and application in integrated circuits. *Prerequisites: ECE 135A-B with grades of C- or better.* (S)

145AL-BL-CL. Acoustics Laboratory (4-4-4)
Automated laboratory based on H-P GPIB controlled instruments. Software controlled data collection and analysis. Vibrations and waves in strings and bars of electromechanical systems and transducers. Transmissions, reflection, and scattering of sound waves in air and water. Aural and visual detection. *Prerequisite: ECE 107 with a grade of C- or better or consent of instructor.* (F-W-S)

146. Introduction to Magnetic Recording (4)
A laboratory introduction to the writing and reading of digital information in a disk drive. Basic magnetic recording measurements on state-of-art disk drives to evaluate signals, noise, erasure, and non-linearities that characterize this channel. Lectures on the recording process will allow comparison of measurements with basic voltage expressions. E/M FEM software utilized to study geometric effects on the record and play transducers. *Prerequisite: ECE 107 with a grade of C- or better.* (W)

153. Probability and Random Processes for Engineers (4)
Random processes. Stationary processes: correlation, power spectral density. Gaussian processes and linear transformation of Gaussian processes. Point processes. Random noise in linear systems. *Prerequisite: ECE 109 with a grade of C- or better.* (F,S)

154A. Communications Systems I (4)
Study of analog modulation systems including AM, SSB, DSB, VSB, FM, and PM. Performance analysis of both coherent and noncoherent receivers, including threshold effects in FM. *Prerequisite: ECE 101 and 153 with a grade of C- or better.* (F)

154B. Communications Systems II (4)
Design and performance analysis of digital modulation techniques, including probability of error results for PSK, DPSK, and FSK. Introduction to effects of intersymbol interference and fading. Detection and estimation theory, including optimal receiver design and maximum-likelihood parameter estimation. *Prerequisite: ECE 154A with a grade of C- or better.* (W)

154C. Communications Systems III (4)
Introduction to information theory and coding, including entropy, average mutual information, channel capacity, block codes and convolutional codes. *Prere-quisite: ECE 154B with a grade of C- or better.* (S)

155A. Digital Recording Systems (4)
This course will be concerned with modulation and coding techniques for digital recording channels. *Prerequisites: ECE 109 and 153 with grades of C- or better and concurrent registration in ECE 154A required. Department stamp required.* (F)

155B-C. Digital Recording Projects (4-4)
These courses will be concerned with modulation and coding techniques for digital recording channels. In winter and spring quarters, students will perform experiments and/or computer simulations. *Prerequisites: ECE 109 and 153 with grades of C- or better and concurrent registration in ECE 154B-C required. Department stamp required.* (W,S)

156 Sensor Networks (4)
Characteristics of chemical, biological, seismic, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Undergraduate students must take a final exam; graduate students must write a term paper or complete a final project. Cross-listed with MAE 149 and SIO 238. *Prerequisite: upper-division standing and consent of instructor, or graduate student in science and engineering.*

158A. Data Networks I (4)
Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. *Prerequisite: ECE 109 with a grade of C- or better. ECE 159A recommended.* (W)

158B. Data Networks II (4)
Layered network architectures, data link control protocols and multiple-access systems, performance analysis. Flow control; prevention of deadlock and throughput degradation. Routing, centralized and decentralized schemes, static dynamic algorithms. Shortest path and minimum average delay algorithms. Comparisons. *Prerequisite: ECE 158A with a grade of C- or better.* (S)

159A. Queuing Systems: Fundamentals (4)
Analysis of single and multiserver queuing systems; queue size and waiting times. Modeling of telephone systems, interactive computer systems and the machine repair problems. *Prerequisite: ECE 109 with a grade of C- or better.* (F)

159B. Queuing Systems: Computer Systems and Data Networks (4)
M/G/1 queuing systems. Computer systems applications: priority scheduling; time-sharing scheduling. Open and closed queuing networks; modeling and performance of interactive computer systems. Elements of computer-communication networks: stability and delay analysis; optimal design issues. *Prerequisite: ECE 159A with a grade of C- or better.* (W)

161A. Introduction to Digital Signal Processing (4)
Review of discrete-time systems and signals, Discrete-Time Fourier Transform and its properties, the Fast Fourier Transform, design of Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) filters, implementation of digital filters. *Prerequisite: ECE 101 and 109 with grades of C- or better.* (F,S)

161B. Digital Signal Processing I (4)
Sampling and quantization of baseband signals; A/D and D/A conversion, quantization noise, oversampling and noise shaping. Sampling of bandpass signals, undersampling downconversion, and Hilbert transforms. Coefficient quantization, roundoff noise, limit cycles and overflow oscillations. Insensitive filter structures, lattice and wave digital filters. Systems will be designed and tested with Matlab, implemented with DSP procesors and tested in the laboratory. (Lab fee: $15) *Prerequisite: ECE 161A with a grade of C- or better.* (W)

161C. Applications of Digital Signal Processing (4)
This course discusses several applications of DSP. Topics covered will include: speech analysis and coding; image and video compression and processing. A class project is required, algorithms simulated by MATLAB. (Lab fee: $15) *Prerequisite: ECE 161A with a grade of C- or better.* (S)

163. Electronic Circuits and Systems (4)
Analysis and design of analog circuits and systems. Feedback systems with applications to operational amplifier circuits. Stability, sensitivity, bandwidth, compensation. Design of active filters. Switched capacitor circuits. Phase-locked loops. Analog-to-digital and digital-to-analog conversion. (Lab fee: $10) *Prerequisites: ECE 101 and 102 with grades of C– or better.* (S)

164. Analog Integrated Circuit Design (4)
Design of linear and non-linear analog integrated circuits including operational amplifiers, voltage regulators, drivers, power stages, oscillators, and multipliers. Use of feedback and evaluation of noise performance. Parasitic effects of integrated circuit technology. Laboratory simulation and testing of circuits. *Prerequisite: ECE 102 with a grade of C– or better. ECE 163 recommended.* (F)

165. Digital Integrated Circuit Design (4)
VLSI digital systems. Circuit characterization, performance estimation, and optimization. Circuits for alternative logic styles and clocking schemes. Subsystems include ALUs, memory, processor arrays, and PLAs. Techniques for gate arrays, standard cell, and custom design. Design and simulation using CAD tools. (Students who have taken CSE 143 may not take ECE 165 for credit.) *Prerequisite: ECE 108 with a grade of C– or better.* (W)

166. Microwave Systems and Circuits (4)
Waves, distributed circuits, and scattering matrix-methods. Passive microwave elements. Impedance matching. Detection and frequency conversion using microwave diodes. Design of transistor amplifiers including noise performance. Circuits designs will be simulated by computer and tested in the laboratory. *Prerequisites: ECE 102 and 107 with grades of C– or better.* (S)

171A. Linear Control System Theory (4)
Stability of continous- and discrete-time single-input/single-output linear time-invariant control systems emphasizing frequency domain methods. Transient and steady-state behavior. Stability analysis by root locus, Bode, Nyquist, and Nichols plots. Compensator design. *Prerequisite: ECE 60B or ECE 53A-B or MAE 140 with a grade of C– or better.* (S)

171B. Linear Control System Theory (4)
Time-domain, state-variable formulation of the control problem for both discrete-time and continous-time linear systems. State-space realizations from transfer function system description. Internal and input-output stability, controllability/observability, minimal realizations, and pole-placement by full-state feedback. *Prerequisite: ECE 171A with a grade of C– or better.* (F)

172A. Introduction to Intelligent Systems: Robotics and Machine Intelligence (4)
This course will introduce basic concepts in machine perception. Topics covered will include: edge detection, segmentation, texture analysis, image registration, and compression. *Prerequisite: ECE 101 with a grade of C– or better, ECE 109 recommended.* (F)

173. Theory and Applications of Neural Networks and Fuzzy Logic (4)
Theory of fuzzy logic, reasoning and control; mathematical aspects of neural architectures for pattern classification, functional approximation, and adaptive estimation and control; theory of computer-assisted learning (supervised, unsupervised and hybrid); theory and practice of recurrent networks (stability, placement of equilibria); computer-aided design of fuzzy and neural systems, Bayes and minimax design. *Prerequisite: Math. 20F with a grade of C– or better.* (S)

174. Introduction to Linear and Nonlinear Optimization with Applications (4)
The linear least squares problem, including constrained and unconstrained quadratic optimization and the relationship to the geometry of linear transformations. Introduction to nonlinear optimization. Applications to signal processing, system identification, robotics, and circuit design. *Prerequisite: Math. 20F with a grade of C– or better.* (S)

175. Elements of Machine Intelligence: Pattern Recognition and Machine Learning (4)
Decision functions. Pattern classification by distance and likelihood functions; deterministic and statistical trainable pattern classifiers; feature selection; issues in machine learning. *Prerequisites: ECE 109 and ECE 174 with grades of C– or better.* (W)

181. Physical Optics and Fourier Optics (4)
Ray optics, wave optics, beam optics, Fourier optics, and electromagnetic optics. Ray transfer matrix, matrices of cascaded optics, numerical apertures of step and graded index fibers. Fresnel and Fraunhofer diffractions, interference of waves. Gaussian and Bessel beams, the ABCD law for transmissions through arbitrary optical systems. Spatial frequency, impulse response and transfer function of optical systems, Fourier transform and imaging properties of lenses, holography. Wave propagation in various (inhomogeneous, dispersive, anisotropic or nonlinear) media. *Prerequisites: ECE 103 and 107 with grades of C– or better.* (S)

182. Electromagnetic Optics, Guided-wave, and Fiber Optics (4)
Polarization optics: crystal optics, birefringence. Guided-wave optics: modes, losses, dispersion, coupling, switching. Fiber optics: step and graded index, single and multimode operation, attenuation, dispersion, fiber optic communications. Resonator optics. *Prerequisites: ECE 103 and 107 with grades of C– or better.* (F)

183. Optical Electronics (4)
Quantum electronics, interaction of light and matter in atomic systems, semiconductors. Laser amplifiers and laser systems. Photodetection. Electrooptics and acoustooptics, photonic switching. Fiber optic communication systems. Labs: semiconductor lasers, semiconductor photodetectors. (Lab fee: $35) *Prerequisites: ECE 103 and 107 with grades of C– or better.* (S)

184. Optical Information Processing and Holography (4)
Labs: optical holography, photorefractive effect, spatial filtering, computer generated holography. (Lab fee: $35) *Prerequisite: ECE 182 with a grade of C– or better.* (W)

185. Lasers and Modulators (4)
Labs: CO2 laser, HeNe laser, electrooptic modulation, acoustooptic modulation, spatial light modulators. (Lab fee: $35) *Prerequisite: ECE 183 with a grade of C– or better.* (S)

186L. Optical Information Systems (4)
Lab covering concepts in optical data systems including free-space communications, remote sensing and wavelength-multiplexed optical fiber transmission. (Lab fee: $35.00) *Prerequisites: ECE 181 and 182 or 183 with grades of C– or better, or consent of instructor.*

187. Introduction to Biomedical Imaging and Sensing (4)
Image processing fundamentals: imaging theory, image processing, pattern recognition; digital radiography, computerized tomography, nuclear medicine imaging, nuclear magnetic resonance imaging, ultrasound imaging, microscopy imaging. *Prerequisite: Math. 20A-B-F, 20C or 21C, 20D or 21D, Phys. 2A-D, ECE 101 (may be taken concurrently) with grades of C– or better.* (F)

191. Engineering Group Design Project (4)
Groups of students work to design, build, demonstrate, and document an engineering project. All students give weekly progress reports of their tasks and contribute a section to the final project report. *Prerequisites: Completion of all of the breadth courses and one depth course.* (W)

192. Engineering Design (4)
Students complete a project comprising at least 50 percent or more engineering design to satisfy the following features: student creativity, open-ended formulation of a problem statement/specifications, consideration of alternative solutions/realistic constraints. Written final report required. *Prerequisites: Students enrolling in this course must have completed all of the breadth courses and one depth course. The department stamp is required to enroll in ECE 192.* (Specifications and enrollment forms are available in the undergraduate office.)

193H. Honors Project (4-8)
An advanced reading or research project performed under the direction of an ECE faculty member. Must contain enough design to satisfy the ECE program's four-unit design requirement. Must be taken for a letter grade. May extend over two quarters with a grade assigned at completion for both quarters. *Prerequisite: admission to the ECE departmental honors program.*

195. Teaching (2 or 4)
Teaching and tutorial activities associated with courses and seminars. Not more than four units of ECE 195 may be used for satisfying graduation requirements. (P/NP grades only.) *Prerequisite: consent of the department chair.*

197. Field Study in Electrical and Computer Engineering (4, 8, 12, or 16)
Directed study and research at laboratories and observatories away from the campus. (P/NP grades only.) *Prerequisites: consent of instructor and approval of the department.*

198. Directed Group Study (2 or 4)
Topics in electrical and computer engineering whose study involves reading and discussion by a small group of students under direction of a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor.*

199. Independent Study for Undergraduates (2 or 4)
Independent reading or research by special arrangement with a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor.*

GRADUATE

200. Research Conference (2)
Group discussion of research activities and progress of group members. (S/U grades only.) *Prerequisite: consent of instructor.* (F,W,S)

210. Information Systems in Manufacturing (4)
Basic problem solving and search techniques. Knowledge based and expert systems. Planning and decision support systems. Fuzzy logic and neural nets. Topics covered will include data models, query processing, distributed systems, enterprise computing and intelligent agents, fuzzy logic, neural nets. *Prerequisite: basic engineering and introduction to computers.* (W)

211. Manufacturing Engineering Seminar and Laboratory (2)
Combination of seminars, laboratory activities, and field trips. Seminars by top manufacturing engineers, managers, and student interns. Visits to manufacturing facilities. Techniques in accessing international technical and patent databases. *Prerequisite: none..*

222A-B-C. Applied Electromagnetic Theory (4)
