Electrostatics and dielectric materials. Uniqueness, reciprocity, and Poynting theorems. Solutions to Maxwell's equations in rectangular, cylindrical, and spherical coordinates. Waves in isotropic and anisotropic media, transmission lines, wave-guides, optical fibers, and resonant structures. Radiation, propagation, and scattering problems. Scattering matrices, microwave circuits, and antennas. *Prerequisites: ECE 107, 123, 124 or equivalent.* (F,W,S)

223. Nonlinear Waves with Dispersion (4)
This course explores nonlinear wave phenomena developing in a dispersive media. We shall investigate such phenomena as formation of solitons, collisionless shocks, nonlinear self focusing, and wave collapse. Analysis will be based on the solution of the main equations of nonlinear physics—Kortveg de Vries (KDV), Burgers, and nonlinear Schrodinger equation. Possible areas of application include nonlinear optics, fluid dynamics, plasma and space physics. *Prerequisite: ECE 222A or PHYS 203A or equivalent.* (S)

230A. Solid State Electronics (4)
This course is designed to provide a general background in solid state electronic materials and devices. Course content emphasizes the fundamental and current issues of semiconductor physics related to the ECE solid state electronics sequences. *Prerequisites: fundamentals of quantum mechanics, ECE 135A-B, or equivalent.* (F)

230B. Solid State Electronics (4)
Physics of solid-state electronic devices, including p-n diodes, Schottky diodes, field-effect transistors, bipolar transistors, pnpn structures. Computer simulation of devices, scaling characteristics, high frequency performance, and circuit models. *Prerequisite: ECE 230A.* (W)

230C. Solid State Electronics (4)
This course is designed to provide a treatise of semiconductor devices based on solid state phenomena. Band structures carrier scattering and recombination processes and their influence on transport properties will be emphasized. *Prerequisite: ECE 230A or equivalent.* (S)

232. The Field Effect and Field Effect Transistors (4)
Physics of the field effect of elemental and III-V compound semiconductors related to the technology and characteristics of Schottky barrier gate, insulated gate, and junction gate field effect transistors. *Prerequisite: consent of instructor.* (S)

234A. Imperfections in Solids (4)
Point, line, and planar defects in crystalline solids, including vacancies, self-interstitials, solute atoms, dislocation interactions, stacking faults, grain boundaries, and their effects on the properties of solids. Hardening by localized obstacles, precipitates, and dispersoids. Cross-listed with MAE 272 and MATS 205A. *Prerequisite: consent of instructor.* (F)

234B. Advanced Study of Defects in Solids (4)
Advanced topics in dislocation theory and dislocation dynamics. Defects and defects interactions. Atomistic and subatomistic effects. Physical models based on microscopic considerations. Cross-listed with MATS 205B. *Prerequisite: ECE 234A or consent of instructor.* (W)

235. Nanometer-Scale VLSI Devices (4)
This course covers modern research topics in sub-100 nm scale, state-of-the-art silicon VLSI devices. Starting with the fundamentals of CMOS scaling to nanometer dimensions, various advanced device and circuit concepts, including RF CMOS, low power CMOS, silicon memory, silicon-on-insulator, SiGe bipolar, strained silicon MOSFET's, etc. will be taught. The physics of near-ballistic transport in an ultimately scaled 10 nm MOSFET will be discussed in light of the recently developed scattering theory. *Prerequisite: graduate standing.* (F)

236A. Semiconductor Heterostructure Materials (4)
This course covers the growth, characterization, and heterojunction properties of III-IV compound semiconductors and group-IV semiconductor heterostructures for the subsequent courses on electronic and photonic device applications. Topics include epitaxial growth techniques, electrical properties of heterojunctions, transport and optical properties of quantum wells and superlattices. *Prerequisites: ECE 230A-B-C or consent of instructor.* (W)

236B. Optical Processes in Semiconductors (4)
Absorption and emission of radiation in semiconductors. Radiative transition and nonradiative recombination. Ultra-fast optical phenomena. Laser and photodetector devices will be emphasized. *Prerequisites: ECE 230A and 230C or equivalent.* (W)

236C. Heterojunction Field Effect Transistors (4)
Device physics and applications of isotype and anisotype heterojunctions and quantum wells, including band-edge discontinuities, band bending and space charge layers at heterojunction interfaces, charge transport normal and parallel to such interfaces, two-dimensional electron gas structures, modulation doping, heterojunction and insulated gate field effect transistors. *Prerequisite: consent of instructor.* (S)

236D. Heterojunction Bipolar Transistors (4)
Current flow and charge storage in bipolar transistors. Use of heterojunctions to improve bipolar structures. Transient electron velocity overshoot. Simulation of device characteristics. Circuit models of HBTs. Requirements for high-speed circuit applications. Elements of bipolar process technology, with emphasis on III-V materials. *Prerequisite: consent of instructor.* (F)

237. Modern Materials Analysis (4)
Analysis of the near surface of materials via ion, electron, and x-ray spectroscopes. Topics to be covered include particle solid interactions. Rutherford backscattering, secondary ion mass spectroscopy, electron energy loss spectroscopy, particle induced x-ray emission, Auger electron spectroscopy, extended z-ray absorption, fine structure and channeling. *Prerequisite: consent of instructor.* (F)

238A. Thermodynamics of Solids (4)
The thermodynamics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. Multiple listed with Materials Science 201A. *Prerequisite: consent of instructor.* (F)

238B. Solid State Diffusion and Reaction Kinetics (4)
Thermally activated processes. Boltzman factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick's law, diffusion mechanisms, Kirkendall effects, Boltzmann-Manato analysis, high diffusivity paths. Multiple listed with Materials Science 201B. *Prerequisite: ECE 238A.* (W)

240A. Lasers and Optics (4)
Fresnel and Fraunhofer diffraction theory. Optical resonators, interferometry. Gaussian beam propagation and transformation. Laser oscillation and amplification, Q-switching and mode locking of lasers, some specific laser systems. *Prerequisites: ECE 123, 124 or equivalent; introductory quantum mechanics or ECE183.* (F)

240B. Optical Information Processing (4)
Space-bandwidth product, superresolution, space-variant optical system, partial coherence, image processing with coherent and incoherent light, processing with feedback, real-time light modulators for hybrid processing, nonlinear processing. Optical computing and other applications. *Prerequisite: ECE 182 or equivalent.* (W)

240C. Optical Modulation and Detection (4)
Propagation of waves and rays in anisotropic media. Electro-optical switching and modulation. Acousto-optical deflection and modulation. Detection theory. Heterodyne detection, incoherent and coherent detection. *Prerequisites: ECE 181,183 or equivalent.* (S)

241A. Nonlinear Optics (4)
Second harmonic generation (color conversion), parametric amplification and oscillation, photorefractive effects and four-wave mixing, optical bistability; applications. *Prerequisites: ECE 240A, C, or consent of instructor.* (F)

241B. Optical Devices for Computing. (4)
Application of electro-optic, magneto-optic, acousto-optic, and electro-absorption effects to the design of photonic devices with emphasis on spatial light modulation and optical storage techniques. *Prerequisites: ECE 240A, C, or consent of instructor.* (F)

241C. Holographic Optical Elements (4)
Fresnel, Fraunhofer, and Fourier holography. Analysis of thin and volume holograms, reflection and transmission holograms, color and polarization holograms. Optically recorded and computer-generated holography. Applications to information storage, optical interconnects, 2-D and 3-D display, pattern recognition, and image processing. *Prerequisite: ECE 182 or equivalent, or consent of instructor.* (W)

241AL. Lasers and Holography Laboratory (2)
Laser resonator design, construction, alignment, characterizations. Operation and evaluation of molecular, gas, liquid dye, semiconductor lasers. Spatial and temporal coherance measurements. Design and fabrication of transmission, reflection, bleached, color, multiple exposure holograms. *Prerequisites: ECE 181,182,183 or consent of instructor. (This course is cojoint with ECE 184. Graduate students will choose 50 percent of the experiments and receive two units of credit.)* (F)

241BL. Optical Signal Processing Laboratory (2)
Construction and characterization of Fourier/Fresnel transform, coherent/incoherent, imaging-processing systems. Design, coding, fabrication of spatial filters, computer-generated holograms. Experiments in nonlinear photorefractive phenomena and image-processing applications. Construction of vector-matrix multipliers. Optical systems design using Code-V. *Prerequisites: ECE 181, 182, 183, or consent of instructor. (This course is cojoint with ECE 185. Graduate stduents will choose 50 percent of the experiments and receive two units of credit.)* (W)

241CL. Optoelectronics and Communications laboratory (2)
Operation and characterization of electro-optic, acousto-optic modulators. Polarization manipulation techniques. Heterodyne detection schemes. Parametrization of P-I-N and avalanche detectors, LED sources. Evaluation of optical fiber, thin film waveguide properties. Characterization of Hughes LCLV spatial light modulator. *Prerequisites: ECE 181, 182, 183, or consent of instructor.*

243B. Optical Fiber Communication (4)
Optical fibers, waveguides, laser communication system., Modulation and demodulation; detection processes and communication-receivers. *Prerequisites: ECE 240A or 240B or 240C or equivalent.* (W)

244A. Statistical Optics (4)
Introduction to statistical phenomena in optics including first order properties of light waves generated from various sources. Coherence of optical waves, high-order coherence. Partial coherence and its effects on imaging systems. Imaging in presence of randomly inhomogeneous medium. Limits in photelectric detection of light. *Prerequisite: ECE 240A-B or consent of instructor.* (F)

244B. Quantum Electronics of Femtosecond Optical Pulses (4)
Femtosecond optical pulses in linear dispersive media. Self-action of optical pulses. Parametric interaction of optical pulses. Self- and cross-phase modulation. Fast phase control, compression and shaping of optical pulses. Optical solitons. Applications of femtosecond optical pulses. *Prerequisite: ECE 240A-B-C or consent of instructor.* (W)

245A. Advanced Acoustics I (4)
Boundary value problems in vibrating systems, wave propagation in strings, bars, and plates. Fundamentals of acoustical transducers. *Prerequisite: concurrent registration in ECE 145AL recommended.* (F)

245B. Advanced Acoustics II (4)
Theory of radiation transmission and scattering of sound with special application to ocean acoustics. *Prerequisite: ECE 245A or consent of instructor. Concurrent registration in ECE 145BL recommended.* (W)

245C. Advanced Acoustics III (4)
Signal processing in underwater acoustics. Theory and hardwave embodiments. *Prerequisite: ECE 245B or consent of instructor. Concurrent registration in ECE 145CL recommended.* (S)

246A. Materials for Magnetic Recording (4)
Properties of magnetic materials utilized as magnetic recording media and heads; magnetic structure of oxides and metals; fine particle magnetism: micromagnetic analysis; hysteresis and reversal mechanisms of hard materials; dynamic processes and domain patterns of soft materials; thermal fluctuations; multilayer phenomena: giant magnetoresistance. *Prerequisites: undergraduate electromagnetism and solid state physics or consent of instructor.* (alternate years)

246B. Analysis of the Magnetic Recording Process (4)
In-depth analysis of the magnetic recording process. Magnetic fields and Fourier transforms of fields and magnetized media and heads; playback process for single and multiple transitions. Reciprocity theorem for inductive and magnetoresistive heads; record process modeling; interferences and nonlinearities; medium noise mechanisms and correlations; signal to noise ratios. *Prerequisites: undergraduate electromagnetic theory and mathematical methods or consent of instructor.* (alternate years)

246C. Magnetic Recording Laboratory (4)
Basic measurements in magnetic recording. Fields and Fourier transforms of head structures using resistance paper measurements and computer analysis; inductance and B-H loop measurements of recording heads and core materials; recording system calibration and magnetization pattern investigation utilizing spectral measurements (FFT). *Prerequisites: ECE 246B and laboratory experience.* (alternate years)

247A. Advanced BioPhotonics (4)
Basic physics and chemistry for the interaction of photons with matter, including both biological and synthetic materials; use of photonic radiation pressure for manipulation of objects and materials; advanced optoelectronic detection systems, devices and methods, including time resolved fluorescent and chemiluminescent methods, fluorescent energy transfer (FRET) techniques, quantum dots, and near-field optical techniques; underlying mechanisms of the light sensitive biological systems, including chloroplasts for photosynthetic energy conversion and the basis of vision processes. Cross-listed with BENG 247A. *Prerequisite: graduate standing.* (F)

247B. BioElectronics (4)
Topics to be covered will include photolithographic techniques for high-density DNA microarray production, incorporation of CMOS control into electronic DNA microarrays, direct electronic detection technology used in microarrays and biosensor devices, and focus on problems related to making highly integrated devices (lab-on-a-chip, in-vivo biosensors, etc.) from heterogeneous materials and components. Cross-listed with BENG 247B. *Prerequisite: graduate standing.* (W)

247C. BioNanotechnology (4)
Topics include: nanosensors and nanodevices for both clinical diagnostics and biowarfare (bioterror) agent detection; nanostructures for drug delivery; nanoarrays and nanodevices; use of nanoanalytical devices and systems; methods and techniques for modification or functionalization of nanoparticles and nanostructures with biological molecules; nanostructural aspects of fuel cells and bio-fuel cells; potential use of DNA and other biomolecules for computing and ultra-high-density data storage. Cross-listed with BENG 247C. *Prerequisite: graduate standing.* (S)

250. Random Processes (4)
Random variables, probability distributions and densities, characteristic functions. Convergence in probability and in quadratic mean, Stochastic processes, stationarity. Processes with orthogonal and independent increments. Power spectrum and power spectral density. Stochastic integrals and derivatives. Spectral representation of wide sense stationary processes, harmonizable processes, moving average representations. *Prerequisite: ECE 153 or equivalent or consent of instructor.* (F)

251AN. Digital Signal Processing I (4)
Discrete random signals; conventional (FFT based) spectral estimation. Coherence and transfer function estimation; model-based spectral estimation; linear prediction and AR modeling. Levinson-Durbin algorithm and lattice filters, minimum variance spectrum estimation. *Prerequisites: ECE 153 in addition to either ECE 161 or 161A, or consent of instructor.* (W)

251BN. Digital Signal Processing II (4)
Adaptive filter theory, estimation errors for recursive least squares and gradient algorithms, convergence and tracking analysis of LMS, RLS, and Kalman filtering algorithms, comparative performance of Weiner and adaptive filters, transversal and lattice filter implementations, performance analysis for equalization, noise cancelling, and linear prediction applications. *Prerequisite: ECE 251AN.* (S)

251CN. Filter Banks and Wavelets (4)
Fundamentals of multirate systems (noble identities, polyphase representations), maximally decimated filter banks (QMF filters for 2-channels, M-channel perfect reconstruction systems), paraunitary perfect reconstruction filter banks, the wavelet transform (multiresolution, discrete wavelet transform, filter banks and wavelet). *Prerequisite: ECE 161B or equivalent.* (F)

251DN. Array Processing (4)
The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection purposes or wavefield directionality estimation. Conventional and adaptive beamforming. Matched field processing. Sparse array design and processing techniques. Applications to acoustics, geophysics, and electromagnetics. *Prerequisite: 251AN, ECE 161 or 151A (ECE 161, 162A-B series recently renumbered to ECE 161A-B-C), or consent of instructor.* (F)

252A. Speech Compression (4)
Speech signals, production and perception, compression theory, high rate compression using waveform coding (PCM, DPCM, ADPCM,. .), DSP tools for low rate coding, LPC vocoders, sinusoidal tranform coding, multi-band coding, medium rate coding using code excited linear prediction (CELP). *Prerequisite: ECE 161A or 161.* (W)

252B. Speech Recognition (4)
Signal analysis methods for recognition, dynamic time warping, isolated word recognition, hidden markov models, connectedword, and continuous speech recognition. *Prerequisites: ECE 109, ECE 262A.* (S)

253A. Fundamentals of Digital Image Processing (4)
Image quantization and sampling, image transforms, image enhancement, image compression. *Prerequisites: ECE 109, 153, ECE 161 or ECE 161A.* (W)

253B. Digital Image Analysis (4)
Image morphology, edge detection, scene segmentation, texture analysis, registration and fusion, feature analysis, time-varying images. *Prerequisite: ECE 253A or consent of instructor.* (S)

254. Detection Theory (4)
Hypothesis testing, detection of signals in white and colored Gaussian noise; Karhunen-Loève expansion, estimation of signal parameters, maximum-likelihood detection; resolution of signals; detection and estimation of stochastic signals; applications to radar, communications, and optics. *Prerequisite: ECE 153.* (F)

255AN. Information Theory (4)
Introduction to basic concepts, source coding theorems, capacity, noisy-channel coding theorem. *Prerequisite: ECE 154A-B-C or consent of instructor.* (F)

255BN/CN. Source Coding I, II (4/4)
Theory and practice of lossy source coding, vector quantization, predictive and differential encoding, universal coding, source-channel coding, asymptotic theory, speech and image applications. *Prerequisite: ECE 250 and 259A or 259AN, or consent of instructor.* (W,S)

256A-B. Time Series Analysis and Applications (4-4)
Stationary processes; spectral representation; linear transformation. Recursive and nonrecursive prediction and filtering; Wiener-Hopf and Kalman-Bucy filters. Series expansions and applications. Time series analysis; probability density, covariance and spectral estimation. Inference from sampled-data, sampling theorems; equally and non-equally spaced data, applications to detection and estimation problem. *Prerequisite: ECE 153.* (F,W)

257A. Multiuser Communication Systems (4)
M/G/1, G1/M/1 queues, imbedded chains. Ergodic theory of Markov chains, classification, ergodic theorems. Multiple access systems, random access protocols, capacity, stability, delay and control, reservation and hybrid schemes. *Prerequisites: ECE 153 and 159A, or equivalent. Note: ECE 159A is an integral part of this course and should be taken in the fall quarter.* (W)

257B. Principles of Wireless Networks (4)
This course will focus on the principles, architectures, and analytical methodologies for design of multi-user wireless networks. Topics to be covered include cellular approaches, call processing, digital modulation, adaptive arrays, broadband networks, and wireless packet access for multimedia service. *Prerequisites: ECE 159B and 154B.* (S)

258A-B. Digital Communication (4-4)
Digital communication theory including performance of various modulation techniques, effects of inter-symbol interference, adaptive equalization, spread spectrum communication. *Prerequisites: ECE 154A-B-C and ECE 254 or consent of instructor.* (W,S)

259AN. Algebraic Coding (4)
Fundamentals of block codes, introduction to groups, rings and finite fields, nonbinary codes, cyclic codes such as BCH and RS codes, decoding algorithms, applications. *Prerequisite: consent of instructor.* (F)

259BN. Trellis-Coded Modulation (4)
Coding theory developed from the viewpoint of digital communications engineering, information theoretic limits for basic channel models, convolutional codes, maximum-likelihood decoding, Ungerboeck codes, codes based on lattices and cosets, rotational invariance, performance evaluation, applications of modem design. *Prerequisites: ECE 154A-B-C, ECE 259A or 259AN, or consent of instructor.* (W)

259CN. Advanced Coding and Modulation for Digital Communications (4)
Advanced coding and modulation techniques for bandwidth-efficient data transmission and recording; constellation shaping by regions, Voronoi constellations, shell mapping, coding for intersymbol-interference channels, precoding methods, multilevel coding; coding for fading channels, applications to wireline and wireless communications, digital recording. *Prerequisites: ECE 259A-B or 259AN-BN.* (S)

260A. VLSI Digital System Algorithms and Architectures (4)
Custom and semicustom VLSI design from the system designer's perspective. VLSI system algorithms, parallel processing architectures and interconnection networks, and design mapping methodologies will be emphasized. VLSI computer-aided design (CAD) tools will be introduced. Knowledge of basic semiconductor electronics and digital design is assumed. *Prerequisites: undergraduate-level semiconductor electronics and digital system design; ECE 165 or equivalent or consent of instructor.* (F)

260B. VLSI Integrated Circuits and Systems Design (4)
Computer arithmetic, control and memory structures for VLSI implementations at logic, circuit, and layout level. Computer-aided design and performance simulations, actual design projects for teams of two to three students per team. Layout done on CAD workstations for project IC chip fabrication. Design projects will be reviewed in class presentation. *Prerequisite: ECE 260A.* (W)

260C. VLSI Advanced Topics (4)
Advanced topics seminar with issues from system theory, to new technologies, to alternative design methodologies will be subject for review. Class discussion, participation and presentations of projects and special topics assignments will be emphasized. The testing results of fabricated IC chips from other VLSI design classes will be presented in class and in a final report. *Prerequisite: ECE 260B.* (S)

261A. Design of Analog and Digital GaAs Integrated Circuits I (4)
Introduction to analytical and computer-aided design (CAD) techniques for microwave integrated circuits. Design of active two-ports using scattering parameters. Monolithic realization of low-noise amplifiers using GaAs FETs and HEMTs. Design of monolithic distributed amplifiers. Design of monolithic power amplifiers and mixers. *Prerequisite: consent of instructor.* (W)

261B. Design of Analog and Digital GaAs Integrated Circuits (4)
Introduction to GaAs digital integrated circuits (IC). Design of simple digital GaAs ICs using DCFL. Design of digital building blocks for complex multipliers, FET butterfly chips, DDS, and oversampled A/D converters. *Prerequisite: consent of instructor.* (S)

264A. CMOS Analog Integrated Circuits and Systems I (4)
Frequency response of the basic CMOS gain stage and current mirror configurations. Advanced feedback and stability analysis; compensation techniques. High-Performance CMOS amplifier topologies. Switched capacitor circuits. Analysis of noise and distortion. *Prerequisites: ECE 164 and 153 or equivalent courses.* (W)

264B. CMOS Analog Integrated Circuits and Systems II (4)
Continuous-time filters: synthesis techniques and CMOS circuit topologies. Switched-capacitor filters: synthesis techniques and CMOS circuit topologies. Overview of CMOS samplers, data converters, mixers, modulators, oscillators, and PLLs. *Prerequisites: ECE 264A and 251A or 251AN.* (S)

264C. CMOS Analog Integrated Circuits and Systems III (4)
Integrated CMOS analog/digital systems: Analog to digital and digital to analog converters, Nyquist versus oversampling, linearity, jitter, randomization, calibration, speed versus resolution, pipeline, folding, interpolation, averaging. *Prerequisites: ECE 163 and 164.* (W)

264D. CMOS Analog Integrated Circuits and Systems IV (4)
PLL: Phase noise effect, VCO, phase detector, charge pump, integer/fractional-N frequency synthesizer, clock and data recovery, decision feedback. Filter: Continuous-time filter, I-Q complex filter, raised-cosine, Gaussian, delay, zero equalizers. *Prerequisites: ECE 163 and 164.* (S)

265A. Communication Circuit Design I (4)
Introduction to noise and linearity concepts. System budgeting for optimum dynamic range. Frequency plan tradeoffs. Linearity analysis techniques. Down-conversion and up-conversion techniques. Modulation and de-modulation. Microwave and RF system design communications. Current research topics in the field. *Prerequisites: consent of instructor.* (F)

265B. Communication Circuit Design II (4)
Radio frequency integrated circuits: impedance matching concepts, low-noise amplifiers, AGCs. Mixers, filters. Comparison between BJT, CMOS and GaAs technologies for radio frequency and microwave applications. Device modeling for radio frequency applications. Design tradeoffs of linearity, noise, power dissipation, and dynamic range. Current research topics in the field. *Prerequisites: ECE 164 and 265A or consent of instructor.* (W)

270A-B-C. Neurocomputing (4-4-4)
Neurocomputing is the study of biological information processing from an artificial intelligence engineering perspective. This three-quarter sequence covers neural network structures for arbitrary object (perceptual, motor, thought process, abstraction, etc.) representation, learning of pairwise object attribute descriptor antecedent support relationships, the general mechanism of thought, and situationally responsive generation of movements and thoughts. Experimental homework assignments strongly reinforce the fundamental concepts and provide experience with myriad associated technical issues. *Prerequisite: graduate standing, an understanding of mathematics through basic linear algebra and probability, or consent of instructor.* (F,W,S)

272A. Stochastic Processes in Dynamic Systems (4)
(Not offered 2001/2002.) Diffusion equations, linear and nonlinear estimation and detection, random fields, optimization of stochastic dynamic systems, applications of stochastic optimization to problems. *Prerequisites: ECE 250.* (W,S)

275A. Parameter Estimation I (4)
Linear last squares (batch, recursive, total, sparse, psuedoinverse, QR, SVD); statistical figures of merit (bias, consistency, Cramer-Rao lower-bound, efficiency); maximum likelihood estimation (MLE); sufficient statistics; algorithms for computing the MLE including the expectation maximation (EM) algorithm. The problem of missing information; the problem of outliers. *Prerequisites: ECE 109 and ECE 153 with grades of C- or better.* (F)

275B. Parameter Estimation II (4)
The Bayesian framework and the use of statistical priors; sufficient statistics and reproducing probability distributions; minimum mean square estimation (MSE); linear minimum mean square estimation; maximum a posteriori (MAP) estimation; minimax estimation; Kalman filter and extended Kalman filter (EKF) Baum-Welsh algorithm; Viterbi algorithm. Applications to identifying the parameters and states of hidden Markov models (HMMs) including ARMA, state-space, and finite-state dynamical systems.

Applications to parametric and non-parametric density estimation. *Prerequisites: ECE 153 and ECE 275A with grades of C– or better.* (W)

276A-B. Robot Kinematics, Dynamics, and Control (4-4)
Kinematics of rigid bodies and serial-chain manipulators. The forward and inverse kinematics problem. Sufficient conditions for exact solvability of the inverse kinematics problem. Joint-space versus tank-space control. Path/trajectory generation. Newton-Euler and Lagrangian formulation of manipulatory dynamics. Manipulability measures. Redundancy resolution by subtask functional optimization and side-constraint satisfaction. Pseudo-inverse kinematic control of redundant manipulators. PID and feedback-linearizing trajectory and force control. Issues in path planning and compliant assembly. *Prerequisites: ECE 171A-B, ECE 174 must be completed with grades of C– or better. (ECE 174 may be concurrent.)* (W-S)

280. Special Topics in Electronic Devices and Materials (4)
A course to be given at the discretion of the faculty at which topics of interest in electronic devices and materials will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. *Prerequisite: consent of instructor.*

282. Special Topics in Optoelectronics (4)
A course to be given at the discretion of the faculty at which topics of interest in optoelectronic materials, devices, systems, and applications will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit several times. *Prerequisite: consent of instructor.*

283. Special Topics in Electronic Circuits and Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in electronic circuits and systems will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. *Prerequisite: consent of instructor.*

284. Special Topics in Computer Engineering (4)
A course to be given at the discretion of the faculty at which topics of interest in computer engineering will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. *Prerequisite: consent of instructor.*

285. Special Topics in Robotics and Control Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in robotics and control systems will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. *Prerequisite: consent of instructor.*

287A,B. Special Topics in Communication Theory and Systems (4)
A course to be given at the discretion of the faculty at which topics of interest in information science will be presented by visiting or resident faculty members. It will not be repeated so it may be taken for credit more than once. *Prerequisite: consent of instructor.*

288. Special Topics in Applied Physics (1-8)
Topics of interest in applied physics. Topics will vary from quarter to quarter. May be repeated for credit not more than three times.

290. Graduate Seminar on Current ECE Research (2)
Weekly discussion of current research conducted in the Department of Electrical and Computer Engineering by the faculty members involved in the research projects.

291. Industry Sponsored Engineering Design Project (4)
One or two students as a group design, build, and demonstrate an engineering project that is sponsored by local industry. All students give a weekly progress report on their tasks and write a final report. The projects originate from the actual needs of industry in the general area of electrical and computer engineering. This course may count towards the fulfillment of the MEng degree. Individual final exam and final presentation. *Prerequisite: ECE 230 or 240 or 251 or 253 or 258 or equivalent.*

293. Graduate Seminar in Communication Theory and Systems (2)
Weekly discussion of current research literature.

294. Graduate Seminar in Applied Solid State Physics (2)
Research topics in applied solid state physics and quantum electronics.

296. Graduate Seminar in Optical Signal Processing (2)
Research topics of current interest in holography.

298. Independent Study (1-16)
Open to properly qualified graduate students who wish to pursue a problem through advanced study under the direction of a member of the staff. (S/U grades only.) *Prerequisite: consent of instructor.*

299. Research (1-16)
(S/U grade only.)

501. Teaching (1-4)
Teaching and tutorial activities associated with courses and seminars. Not required for candidates for the Ph.D. degree. Number of units for credit depends on number of hours devoted to class or section assistance. (S/U grade only.) *Prerequisite: consent of department chair.*

Mechanical and Aerospace Engineering (MAE)

M. Tillack, Ph.D., *Research Scientist, MAE/CER*

The Department of Mechanical and Aerospace Engineering is a re-organization of the former Applied Mechanics and Engineering Sciences (AMES) Department. The MAE Department administers the interdepartmental Chemical Engineering Program (CENG). The Structural Engineering Department (SE) is a separate department.

Entering MAE freshmen will follow the new set of course work guidelines detailed in this section. Continuing students and transfer students will continue with their current set of course work guidelines outlined in previous general catalogs. The Student Affairs Office can provide the proper curriculum tables.

All MAE, CENG and AMES students are encouraged to visit the Student Affairs Office in EBU II for any clarification. SE students will refer to the SE section of the general catalog and should visit the Student Affairs Office located on the third floor of the Science and Engineering Research Facility (SERF).

Department Focus

The instructional and research programs are grouped into two major areas: mechanical engineering and aerospace engineering. Both the undergraduate and graduate programs are characterized by strong interdisciplinary relationships with the Departments of Physics, Mathematics, Bioengineering, Chemistry, Electrical and Computer Engineering, Computer Science and Engineering, Structural Engineering, the Materials Science Program, and associated campus institutes such as the UCSD Center for Energy Research, the Institute for Nonlinear Science, Institute of Geophysics and Planetary Physics, Institute for Pure and Applied Physical Sciences, Institute for Biomedical Engineering, Center for Magnetic Recording Research, Center of Excellence for Advanced Materials, California Space Institute, and Scripps Institution of Oceanography.

The educational mission of the department is to provide an excellent education to the next generation of mechanical and aerospace engineers as one of the nation's leading and most innovative mechanical and aerospace engineering departments.

This broad mission is supported by the following specific educational goals:

- To provide our students with a strong technical education that will enable them to have successful careers as professional mechanical aerospace and chemical engineers, as educators in academia, and as members of other professions.
- To prepare our students for rapid technological change with the core knowledge central to assuring that they are able to continuously improve their skills across a range of disciplines throughout their professional careers.
- To prepare our students to communicate effectively and to deal knowledgeably and ethically with the impact of technology in our society and on global issues.

The Undergraduate Program

Degree and Program Options

The Department of Mechanical and Aerospace Engineering (MAE) offers traditional ABET accredited engineering programs leading to the B.S. degree in mechanical engineering, and aerospace engineering. MAE also offers traditional nonaccredited engineering programs leading to the B.S. degree in engineering science and environmental engineering. The B.S. programs require a minimum of 196 units. The Chemical Engineering Program (CENG) is an interdepartmental program and is described more completely under the Chemical Engineering Program section in this catalog.

All MAE programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses which include student-initiated projects, and finally by senior design project courses which often involve teams of students working to solve engineering design problems brought in from industry. The MAE programs are designed to prepare students receiving bachelor's degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in nontechnical fields such as business administration, law, or medicine.

Mechanical engineering is a traditional four-year curriculum in mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates find employment in the mechanical and aerospace industries as well as electro-mechanical or biomedical industries. Mechanical engineers are involved in material processing, manufacturing, assembling, and maintenance of life-line facilities such as power plants.

Mechanical design includes conceptual design, drafting with 3D CAD programs, stress, dynamics, heat transfer or fluid dynamics analyses, and the optimization of the total system for superior performance and customer satisfaction. In manufacturing, the objective is to enhance efficiency and economy by utilizing numerical control (NC) of machine tools, mechatronics, micro-machining, and rapid prototyping. Currently, engineers have available computers, process models, and sensors to improve the quality and productivity of the manufacturing lines. In preparation for this modern era, the mechanical engineering curriculum emphasizes CAD courses, computer courses, laboratory courses, and design courses in addition to providing a strong background in basic science.

The following educational objectives have been established for the mechanical engineering program:

1. To provide a sound introduction to the basic sciences that underlie the disciplines of mechanical and aerospace engineering
2. To provide a thorough training in methods of analysis, including problem formulation and the mathematical and computational skills required by mechanical engineers
3. To teach students the experimental and data analysis techniques required for engineering applications
4. To teach the fundamentals of the design process, including project management, the synthesis of information from different disciplinary areas, and innovation and creative problem solving in an engineering setting
5. To prepare students in the skills required for successful participation on teams and in leadership positions, including effective written and oral communication
6. To instill in our students an understanding of their professional and ethical responsibilities
7. To provide students with the opportunity to gain a range of experiences through classroom and extramural activities on campus and through partnerships and internships with industry, with primary and secondary schools, and with other organizations

Aerospace engineering is a four-year curriculum that prepares students for a career in the aeronautical and astronautical industries, related technology industries, or for graduate school.

The mission of the aerospace engineering program is to prepare students to be outstanding scientists and engineering leaders by emphasizing engineering fundamentals, principles of professional practices, and their integration into the design/development of advanced aeronautical and astronautical systems. The primary goals are:

- to provide our students with a strong technical education that will enable them to have successful careers as professional aerospace engineers, as educators in academia, and as members of other professions
- to prepare our students for rapid technological change with the core knowledge central to assuring that they are able to continuously improve their skills across a range of disciplines throughout their professional careers
- to prepare our students to communicate effectively and to deal knowledgeably and ethically with the impact of technology in our society and on global issues

The curriculum was developed to emphasize engineering fundamentals, aerospace topics, and the integration of these fundamentals and topics into the design of an aerospace system. Courses in engineering fundamentals include materials, solid and fluid mechanics, thermodynamics, computer modeling, computer-aided-design, numerical analysis, and controls. Courses covering the aerospace engineering topics include aerodynamics, aerospace structures, flight mechanics, dynamics and control of aerospace vehicles, and propulsion. Students complete the program by taking a two-quarter capstone design course that integrates all of their aerospace education into the design, development, and testing of an aeronautical or astronautical vehicle or component. Throughout the program, students take laboratory courses that expose them to modern testing techniques and enhance their understanding of complex engineering topics. The program's main objectives are:

1. to provide students with a strong foundation in engineering fundamentals; in-depth knowledge of key topics in aerospace engineering including aerodynamics, propulsion, flight mechanics, orbital mechanics, aerospace structures and materials, and design and control of aerospace systems; and an awareness of the value of life-long learning
2. to provide thorough training in methods of analysis and problem-solving including mathematical and computational skills and use of contemporary software and information technology tools
3. to teach students the experimental and data analysis techniques required for aerospace engineering applications
4. to teach the fundamentals of the openended design process, including project management, synthesis and integration of information from fundamental and interdisciplinary areas, manufacturing and incorporation of non-technical issues, and innovation and creative problem solving in an engineering environment
5. to prepare students with the skills required for successful participation on teams and for leadership positions, including effective written and oral communication skills and professionalism
6. to instill in our students an understanding of the role and importance of professional responsibility and engineering ethics
7. to provide students with the opportunity to gain a range of experiences through classroom and extramural activities on campus and through participation and internships with industry and other organizations

Further discussion of the degree requirements and policies are provided in the Aerospace Engineering Undergraduate Student Handbook.

The **engineering science** program resembles the Mechanical Engineering Program, except the amount of mechanical design is reduced and control theory is not required. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisers to develop a sound course of study to fulfill the technical elective of this program. Although a sequence in non-sciences may be permitted, the faculty advisers may insist on a substantial number of MAE or other science courses as technical electives.

Environmental engineering is a four-year curriculum that resembles the chemical engi-

neering curriculum in its first two years, with fundamental engineering courses in mechanics, thermodynamics, physics, chemistry, and mathematics. In the third and fourth year, the programs diverge: an environmental engineering sequence is offered, as well as further specialization in fluid mechanics, and a wide choice of technical electives, both from within MAE and other departments. The environmental engineering major focuses on conveying an understanding and awareness of the fundamental processes associated with human industrial activity that have environmental implications, and on equipping the next generation of engineers with the tools to develop technologies that enable sustainable economic growth.

The following educational objectives have been established for the environmental engineering program:

1. to provide a sound introduction to the basic sciences that underlie the disciplines of environmental engineering
2. to provide a thorough training in methods of analysis, including problem formulation and the mathematical and computational skills required by environmental engineers
3. to teach students the experimental and data analysis techniques required for engineering applications
4. to teach the fundamentals of the design process, including project management, the synthesis of information from different disciplinary areas, and innovation and creative problem solving in an engineering setting
5. to prepare students in the skills required for successful participation on teams and in leadership positions, including effective written and oral communication
6. to instill in our students an understanding of their professional and ethical responsibilities
7. to provide students with the opportunity to gain a range of experiences through classroom and extramural activities on campus and through partnerships and internships with industry, with primary and secondary schools, and with other organizations

Other Undergraduate Programs of Study in MAE

The **engineering mechanics minor** involves successful completion of seven MAE courses, including at least five upper-division courses open to students who meet the course prerequisites: one must be MAE 130A; one must be 101A (or CENG 101A) or 131A (or both may be taken); and the balance must be selected from MAE 3, 9 or 10, 20, 110A, CENG 102, 130B, and 160. This set of courses provides a good introduction to engineering analysis and would be useful to nonengineering majors desiring a background that could be used in professional communication with engineers.

Other minor options are restricted. Students wishing to arrange a sequence of MAE courses to satisfy minor requirements, or to meet particular academic interests, must consult the MAE Student Affairs Office for referral to the appropriate MAE faculty member.

Program Accreditation

The B.S. programs in mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET/EAC).

Major Requirements

Specific course requirements for each major program are outlined in tables in this section of the catalog. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C– grade in each course required for the major.

Deviations from these programs of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In addition, technical elective (TE) course selections must have departmental approval *prior* to taking the courses. In the accredited programs, TE courses are restricted to meet ABET standards. Courses such as MAE 195, 197, and 198 are not allowed as a technical elective in meeting the upper-division major requirements. MAE 199 can be used as a technical elective only under restrictive conditions. Policy regarding these conditions may be obtained from the department's Student Affairs Office.

Students with different academic preparation may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department. Deviations in scheduling MAE upper-division courses is discouraged and requires prior approval. Most lower-division courses are offered more than once each year to permit students some flexibility in their program scheduling. However, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, MAE does offer large enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

General-Education/ College Requirements

For graduation each student must satisfy general-education course requirements determined by the student's college as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

Each MAE program allows for humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges require more than the nine or ten HSS courses indicated in the curriculum tables. Accordingly, students in these colleges could take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.

Professional Licensing

After graduation, all students are encouraged to take the Fundamentals of Engineering (FE) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after FE certification and two years of work experience; students graduating from a nonaccredited program can take the PE

examination after FE certification and four years of work experience.

For further information please contact your local Board of Registration for Professional Engineers and Land Surveyors.

Four-Year Programs in Engineering

Two computer languages, C/C++ (MAE 9) and FORTRAN (MAE 10) are offered to MAE students but only one course is required. FORTRAN (MAE 10) is recommended for students interested in software development of large-scale computer codes for calculation of the response of structures and machines, and for the simulation of new products and manufacturing processes. C/C++ (MAE 9) is recommended for students who plan to be involved in data acquisition, parallel processing over the network, and use of CAD software for design and graphics.

Mechanical Engineering

The Mechanical Engineering Program has a traditional ABET accredited four-year curriculum involving mechanics, vibrations, thermodynamics, fluid flow, heat transfer, materials, control theory, and mechanical design. Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. An ability to apply knowledge of mathematics, science, and engineering to mechanical engineering problems
2. An ability to design and conduct experiments, as well as to analyze and interpret data
3. An ability to design mechanical and thermal systems, components, or processes to meet desired needs
4. An ability to function on multi-disciplinary teams
5. An ability to identify, formulate, and solve engineering problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively with written, oral, and visual means
8. The broad education necessary to understand the impact of engineering solutions in a global and societal context
9. A recognition of the need for, and an ability to engage in life-long learning
10. A knowledge of contemporary issues
11. An ability to use modern engineering techniques, skills, and computing tools necessary for engineering practice.
12. A familiarity with chemistry, calculus-based physics, and advanced mathematics
13. Familiarity with probability theory, statistics, and linear algebra

Recommended Course Sequence—Mechanical Engineering for Students entering fall 2004

FALL	WINTER	SPRING
FRESHMAN YEAR		
Math. 20A	Math. 20B	Math. 20C
MAE 1	Phys. 2A	Phys. 2B & 2BL
Chem. 6A	Chem. 6B	MAE 3
HSS	HSS	HSS
SOPHOMORE YEAR		
Math. 20D	Math. 20F	Math. 20E
Phys. 2C & 2CL	MAE 9 or 10	MAE 130B
MAE 20	MAE 130A	or SE 101B
HSS	or SE 101A	MAE 131A
	HSS	HSS
JUNIOR YEAR		
MAE 110A	MAE 101A	MAE 101B
MAE 105	MAE 143A	MAE 143B
MAE 140	MAE 130C	MAE 170
MAE 107	MAE 160	HSS
SENIOR YEAR		
MAE 101C	MAE 171A	MAE 171B
MAE 156A	MAE 156B	TE
MAE 150	TE	HSS
TE	HSS	HSS

* Students entering the mechanical engineering major prior to fall 2001 should see the MAE Student Affairs Office for the recommended course sequence.

- Chem. 6AH-6BH sequence may be taken in place of Chem. 6A-B.
- In fulfilling the humanities and social science requirements (HSS), students must take a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. Ten HSS courses are listed here; individual college requirements may be higher.
- Technical electives (TE) must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics.
- MAE 141A has been re-numbered to MAE 143B.
- Students entering fall 2001 and later are required to take MAE 143A and should not take ECE 101.

See the MAE Student Affairs Office for a complete list of Technical Electives.

Engineering Science

The engineering science program resembles the mechanical engineering program, except that the course load of mechanical design is reduced, and control theory is not required. In addition to core courses in dynamics, vibrations structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility, permitting specialization and in-depth study in one area of the engineering sciences or development of a sequence of courses emerging from the current research interests of the faculty of MAE and/or other departments, e.g., sequences in the earth sciences, transportation, or energy-related studies. Students intending to pursue postgraduate professional careers in non-technical fields such as business administration, law, or medicine may develop an appropriate sequence of courses. Although a sequence in the non-sciences may be permitted, the faculty adviser may insist on a substantial number of MAE or other science courses as technical electives. Students must consult their advisers to develop a balanced course of study to fulfill the technical elective requirements of this program. This curriculum also allows the highest number of humanities and social science courses (HSS) to meet college general-education requirements.

Recommended Course Sequence—Engineering Science for Students entering fall 2004*

FALL	WINTER	SPRING
FRESHMAN YEAR		
Math. 20A	Math. 20B	Math. 20C
MAE 1	Phys. 2A	Phys. 2B & 2BL
Chem. 6A	Chem. 6B	MAE 3

MAE 150	MAE 171A	MAE 171B
MAE 101C	TE	TE
TE	TE	HSS
HSS	HSS	HSS

- Chem. 6AH-6BH sequence may be taken in place of Chem. 6A-B.
- Humanities and social science (HSS) courses should be selected to meet general-education requirements of the colleges. Individual college requirements may be higher or lower than what is listed here.

- Four technical elective (TE) courses must be upper-division or graduate courses in the engineering sciences, natural sciences or mathematics selected with prior approval of the department. A sequence of non-science courses may also be selected with prior approval (see program description).

See the Student Affairs Office for a complete list of Technical Electives.

Aerospace Engineering

Aerospace engineering is an Abet-accredited four-year curriculum that begins with fundamental engineering courses in mechanics, thermodynamics, materials, solid mechanics, fluid mechanics, and heat transfer. Additional courses are required in aerospace structures, aerodynamics, flight mechanics, propulsion, controls, and aerospace design. Graduates of this program enter graduate school or enter the aerospace industry to develop aircraft and spacecraft, but also they find employment in other areas that use similar technologies, such as mechanical and energy-related fields. Examples include automobile, naval, and sporting equipment manufacturing.

Graduates of this program are expected to have the following skills, knowledge, and abilities:

1. an ability to apply knowledge of mathematics, science, and engineering to aerospace engineering problems
2. an ability to design and conduct experments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs
4. an ability to function on multi-disciplinary teams
5. an ability to identify, formulate, and solve engineering problems
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively with written, oral, and visual means
8. the broad education necessary to understand the impact of engineering solutions in a global and societal context
9. a recognition of the need for, and an ability to engage in life-long learning
10. a knowledge of contemporary issues
11. an ability to use modern engineering techniques, skills, and computing tools necessary for engineering practice
12. knowledge of key topics in aeronautical engineering including aerodynamics, aerospace materials, structures, propsion, flight mechanics, and stability and control
13. knowledge of topics in astronautical engineering including attitude determination and control, space structures, orbital mechanics, and rocket propulsion
14. an ability to integrate knowledge of the fundamental topics in the design of an aerospace system

- Humanities and social science (HSS) courses should be selected to meet general-education requirements of the colleges. Individual college requirements may be higher or lower than what is listed here.
- Technical electives (6): at least 2 must be from MAE and 2 must be upper-division courses.
- See MAE Student Affairs Office for a complete list of TE's.

Policies and Procedures for MAE Undergraduate Students

Application for Admission to the Major

Admission to the department as an MAE major or minor, or to fulfill a major in another department which requires MAE courses, is in accordance with the general requirements established by the Jacobs School of Engineering. The admission requirements and procedures are described in detail in the section on "Admission to the Jacobs School of Engineering" in this catalog. Applicants who have demonstrated excellent academic performance prior to being admitted to UCSD will be admitted directly to the engineering major of their choice. These directly admitted students and all students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

Transfer Students

Requirements for admission as an MAE major or minor, or into MAE courses, are the same for transfer students as they are for continuing students (see section on "Admission to the Jacobs School of Engineering" in this catalog). Accordingly, when planning their program, transfer students should be mindful of lower-division prerequisite course requirements, as well as for meeting collegiate requirements.

Students who have taken equivalent courses elsewhere may request to have transfer credit apply toward the department's major requirements. To receive transfer credit, complete a MAE Student Petition form and submit it to MAE Student Affairs. For mathematics, chemistry and physics, transfer equivalencies are *determined by the respective departments.* An Undergraduate Student Petition must be submitted to each department from which you are requesting tranfer credit.

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

Academic Advising

Upon admission to the major, students should consult the catalog or MAE Web site (http://maeweb.ucsd.edu) for their program of study or their undergraduate adviser if they have questions. The program plan may be revised in subsequent years, but revisions involving curricular requirements require approval by the undergraduate adviser or the Undergraduate Affairs Committee. Because some course and/or curricular changes may be made every year, it is imperative that students consult with the department's undergraduate adviser on an annual basis.

Many MAE courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in courses as desired or needed. If this occurs, students should seek immediate departmental advice. When a student deviates from the sequence of courses specified for each curriculum in this catalog, it may be impossible to complete an MAE major within the normal four-year period.

In addition to the advising available through the Student Affairs Office, programmatic or technical advice may be obtained from MAE faculty members. A specific MAE faculty mentor is assigned to each MAE student. All MAE students are required to meet with their faculty mentor at least once a quarter.

Program Alterations/ Exceptions to Requirements

Variations from or exceptions to any program or course requirements are possible only if a petition is approved by the MAE Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the MAE Student Affairs Office and must be processed through this office.

Independent Study

MAE students may take MAE 199, Independent Study for Undergraduates, under the guidance of an MAE faculty member. This course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify an MAE faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member's concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and an MAE 199 as Technical Elective Contract form to the Undergraduate Affairs Committee. These forms must be completed, approved, and processed prior to the add/drop deadline. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

Teaching

Students interested in participating in the instructional activities of the department may take MAE 195, Undergraduate Teaching. Normally, this course is taken as an elective on a P/NP basis. Under very restrictive conditions, it may be used to satisfy upper-division technical elective course requirements for the major. Policy in this regard and the appropriate forms may be obtained from the Student Affairs Office.

Integrated Bachelor's/Master's Degree Program

An integrated program leading to a bachelor of science and a master of science degree in engineering is offered to undergraduate students who are enrolled in any of the major programs offered by the Department of MAE. Contact the MAE Graduate Student Affairs Office for details.

The program is open only to UCSD undergraduates. The Department of MAE does not have financial assistance available for students enrolled in this program.

The Graduate Program

The Department of Mechanical and Aerospace Engineering offers graduate instruction leading to the **M.S. and Ph.D. degrees in engineering sciences** with a designated specialization in each of the following areas: aerospace engineering, applied mechanics, applied ocean sciences, engineering physics, and mechanical engineering.

Admission is in accordance with the general requirements of the graduate division, which requires a B.S. and/or M.S. degree in some branch of engineering, the physical sciences, or mathematics; an overall GPA of 3.0; and three letters of recommendation from individuals who can attest to the academic or professional competence and to the depth of their interest in pursuing graduate study. In addition, all applicants are required to submit GRE General Test scores. A minimum score of 550 on the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the TOEFL examination are strongly encouraged to enroll in an English as a second language program before beginning graduate work. (UCSD Extension offers an excellent English language program during the summer as well as the academic year.) Applicants are judged competitively. Based on the candidate's background, qualifications, and goals, admission to the program is in one of three categories: M.S. *only*, M.S., or Ph.D. Admission to the M.S. *only* category is reserved for students for whom the MS degree is likely to be the terminal graduate degree. The M.S. designation is reserved for students currently interested in obtaining an M.S. degree but who at a later time may wish to continue in the doctoral degree program. Admission to the Ph.D. program is reserved for qualified students whose final aim is a doctoral degree. Policies for possible changes in status are given under the "Master's Degree Program" below.

Non-matriculated students are welcome to seek enrollment in MAE courses via UC Extension's concurrent registration program, but an extension student's enrollment in an MAE graduate course must be approved by the instructor.

Master's Degree Program

The M.S. program is intended to extend and broaden an undergraduate background and/or equip practicing engineers with fundamental knowledge in their particular fields. The degree may be terminal, or obtained on the way to the Ph.D. The degree is offered under both the Thesis Plan I and the Comprehensive Examination Plan II (see "Graduate Studies: Master's Degree"). A strong effort is made to schedule M.S.-level course offerings so that students may obtain their M.S. degree in one year of full-time study or two years of part-time study.

M.S. Time Limit Policy: Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Course requirements are flexible in the applied mechanics and engineering physics programs. Specific departmental requirements for the M.S. degree are as follows:

Thesis Plan I: This plan of study involves both course work and research, culminating in the preparation of a thesis. A total of forty-eight units of credit is required: thirty-six units (nine courses) must be in course work, and twelve units must be in research. The student's program is arranged, with prior approval of the faculty adviser, according to the following policies:

1. Course work must include sixteen units (four courses) of MAE 200-level courses.
2. Units obtained in MAE 205, 259, or 299 may not be applied toward the course work requirement.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the course work requirement.
4. No more than twelve units of upper-division 100-level courses may be applied toward the course work requirement.
5. Twelve units of MAE 299 must be taken to fulfill the research requirement.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. A thesis based on the research is written and subsequently reviewed by the thesis adviser and two other faculty members appointed by the dean of Graduate Studies. The review is normally an oral defense of the thesis.

Comprehensive Examination Plan II: This plan of study involves course work only and culminates in a comprehensive examination. A total of forty-eight units of credit (twelve courses) is required. The student's program is arranged, with prior approval of the faculty adviser, according to the following policies:

1. At least sixteen units (four courses) must be MAE 200-level courses.
2. Units obtained in MAE 205, 259, or 299 may not be applied toward the degree requirements.
3. No more than a total of eight units of MAE 296 and 298 may be applied toward the degree requirements.
4. No more than twelve units of upper-division 100-level courses may be applied toward the degree requirements.

Students must maintain at least a B average in the courses taken to fulfill the degree requirements. The comprehensive examination is conducted by the adviser and at least two other faculty members. The examination committee normally conducts an oral examination in two areas of specialization covered by course work taken by the student. A student working toward the Ph.D. degree who has successfully passed two areas of the department's Ph.D. examination need not take the comprehensive examination for the M.S. degree.

Change of Degree. Upon completion of the requirements for the M.S. degree, students admitted as M.S. *only* or M.S. candidates are not automatically eligible for admission to the Ph.D. program.

M.S. *only* candidates who subsequently wish to pursue a doctorate must submit an application for a change in status to their examining committee. If the recommendation is positive and the request approved, the student must

submit a general petition for graduate students to effect the change of status. In addition, the examining committee may recommend that the examination satisfy one of the three topics required in the departmental qualifying examination for the doctorate.

M.S. candidates who subsequently wish to pursue a doctorate must also submit an application for a change in status to their examining committee. In this case, a special examination is not required. The application, however, must be approved and signed by an MAE faculty member who expects to serve as the student's Ph.D. adviser. When the request is approved, the student must submit a general petition for graduate students to effect the change of status. If the student elects the comprehensive examination plan for the M.S. degree, this examination may be used not only to fulfill the requirement for the M.S. degree but also to satisfy one of the three topics required in the departmental qualifying examination for the doctorate. In fact, the M.S. examination may be part of the doctoral examination.

M.S. Program

To complete an M.S. degree with specialization in aerospace engineering, engineering physics, mechanical engineering, applied mechanics, or applied ocean sciences, students must complete a sequence of courses unique to their area. Students should consult with their faculty adviser, as well as the MAE Graduate Student Affairs Office, when choosing their courses.

Doctoral Degree Program

The MAE Ph.D. program is intended to prepare students for a variety of careers in research and teaching. Therefore, depending on the student's background and ability, research is initiated as soon as possible. In general, there are no formal course requirements for the Ph.D. All students, in consultation with their advisers, develop course programs that will prepare them for the MAE Departmental Qualifying Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Examination may take any course for an S/U grade with the exception of any course that the student's Departmental or Ph.D. Qualifying Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all MAE graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Qualifying Examination. Specific details in this regard can be obtained from the MAE Student Affairs Office.

Doctoral Examinations: An MAE Ph.D. student is required to pass three examinations. The first is a **Departmental Qualifying Examination (DQE)** which is intended to determine the candidate's ability to successfully pursue a research project level appropriate for the doctorate. This first exam must be taken within the first six quarters of registration as a graduate student. The DQE is an oral examination by a committee of four persons (two of which must be in the MAE department) and is based on material taught over 36 units in three areas of study: a major area (four courses), a minor area (two introductory courses), and a study in mathematics or basic science (three courses). Students must submit a plan of study, approved by their adviser, to the Graduate Affairs Committee for final approval by the end of their second quarter of graduate study.

The Teaching Experience is required of all MAE Ph.D. students prior to taking the Ph.D. Qualifying Exam. The teaching experience is defined as lecturing one hour per week in either a problem-solving section or regular lecture for one quarter in a course designated by the department. The requirement can be fulfilled by teaching assistant service or taken as a course for academic credit (MAE 501). Students must contact the Student Affairs Office to plan for completion of this requirement.

The **Ph.D. Qualifying Examination** is the second examination required of MAE Ph.D. students. In preparation for the Ph.D. Qualifying Examination, students must have completed the Departmental Qualifying Examination and the Departmental Teaching Experience requirement, obtained a faculty research adviser, and have identified a topic for their dissertation research and have made initial progress. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. The committee conducts the Ph.D. Qualifying Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. The committee may ask questions directly or indirectly related to the project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate in Philosophy degree (see "Graduate Studies" section in this catalog).

The **Dissertation Defense** is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee approximately four weeks before the defense. It is understood that this copy of the dissertation given to committee members will not be the final copy, and that the committee members may suggest changes in the text at the time of the defense. This examination may not be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and Research and the university librarian represents the final step in completion of all requirements for the Ph.D.

There is no formal foreign language requirement for doctoral candidates. Students are expected to master whatever language is needed for the pursuit of their own research.

Ph.D. Time Limit Policy. Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years (engineering physics, seven years). The defense and submission of the doctoral dissertation must be within seven years (engineering physics, eight years).

Evaluations. In the spring of each year, the faculty evaluate each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

Joint Doctoral Program with San Diego State University

The Department of Mechanical and Aerospace Engineering at UCSD participates in a joint doctoral

program with the Graduate Group in Applied Mechanics at SDSU. The program leads to the degree of doctor of philosophy in engineering sciences (applied mechanics). Participants in the program are required to spend one year enrolled at UCSD; their dissertation research is carried out under the supervision of an SDSU faculty member.

Information regarding admission may be obtained from the departmental Student Affairs Office.

The Graduate Curriculum in Chemical Engineering

The Chemical Engineering (CENG) graduate program is an interdepartmental program and is described more completely under the Chemical Engineering Program in this catalog.

COURSES

All students enrolled in MAE courses or admitted to an MAE program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any MAE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C– or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the Jacobs School of Engineering in this catalog. Furthermore, the majority of MAE courses have enrollment restrictions which give priority to or are open only to declared pre-engineering students and/or to students who have been admitted to an MAE major. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards. The department expects that students will adhere to these policies of their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites and/or performance standards have not been met.

While most lower-division courses are offered more than once each year, many MAE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, MAE does offer selected large enrollment courses more than once each year.

LOWER-DIVISION

MAE 01. Introduction to Mechanical and Aerospace Engineering (4)
A general introduction to the various specialties in mechanical engineering using analysis of a specified system. Performance prediction using engineering analysis. Performance testing and post-test evaluation. A discussion of the role of engineers in research, design and development, testing, management, teaching. Professional ethics. *Prerequisite: MAE majors only.*

MAE 02. Introduction to Aerospace Engineering (4)
An introduction to topics in aeronautical and astronautical engineering including aerodynamics, propulsion, flight mechanics, structures, materials, orbital mechanics, design, mission planning, and environments. General topics include historical background, career opportunities, engineering ethics, and professionalism. *Prerequisite: none.*

MAE 03. Introduction to Engineering Graphics and Design (4)
Introduction to design process through a hands-on design project performed in teams. Topics include problem identification, concept generation, project management, risk reduction. Engineering graphics and communication skills are introduced in the areas of: Computer-Aided Design (CAD), hand sketching, and technical communication. *Prerequisite: grade of C– or better in Physics 2A or 4A (or concurrent enrollment).* Priority enrollment given to engineering majors.

MAE 05. Quantitative Computer Skills (4)
Introductory course for non-engineering majors. Use of computers in solving problems; applications from life sciences, physical sciences, and engineering. Students run existing computer programs and complete some programming in BASIC. *Prerequisite: none.*

MAE 09. C/C++ Programming (4)
C/C++ computer programming under the UNIX environment with applications to numerical problems fundamental to computational mechanics. Arithmetic operations, branches, arrays, data structures, and use of pointers are introduced. Programming ethics are discussed. Priority enrollment given to pre-engineering and engineering majors.

MAE 10. FORTRAN for Engineers (4)
FORTRAN 90 computer programming under UNIX environment with applications to numerical problems relevant to engineering applications. Arithmetic operations, control constructs, subprograms, arrays and array processing. Input/Output handling and some advanced features of FORTRAN 90 are introduced. Programming ethics. Priority enrollment given to pre-engineering and engineering majors.

MAE 20. Elements of Materials Science (4)
The structure of materials: metals, ceramics, glasses, semiconductors, superconductors and polymers. Control of internal structure to produce desired properties. Mechanical, rheological, electrical, optical, superconducting and magnetic properties and classification. *Prerequisites: Phys. 2A or 4A, Chem. 6A, Math. 21C or 20D (or concurrent registration).*

MAE 87. Freshman Seminar (1)
The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. *Prerequisite: none.*

MAE 90. Undergraduate Seminar (1)
Selected topics of interest to the faculty will be used to introduce students to engineering science. *Prerequisite: none.* Not open to upper-division students.

UPPER-DIVISION

MAE 101A. Introductory Fluid Mechanics (4)
Fluid statics; fluid kinematics; integral and differential forms of the conservation laws for mass, momentum and energy; Bernoulli equation; potential flows; dimensial analysis and similitude. *Prerequisites: admission to an engineering major and grades of C– or better in Phys. 2A, Math. 20D, 20E.*

MAE 101B. Advanced Fluid Mechanics (4)
Laminar and turbulent flow. Pipe flow including friction factor. Boundary layers, separation, drag, and lift. Compressible flow including shock waves. Professional ethics will be discussed. *Prerequisite: admission to an engineering major and grade of C– or better in MAE 101A and MAE 110A.*

MAE 101C. Heat Transfer (4)
Extension of fluid mechanics in MAE 101A-B to viscous, heat-conducting flows. Application of the energy conservation equation to heat transfer in ducts and external boundary layers. Heat conduction and radiation transfer. Heat transfer coefficients in forced and free convection. Design applications. *Prerequisite: admission to an engineering major and grade of C– or better in MAE 101A-B.*

MAE 104. Aerodynamics (4)
Basic relations describing flow field around wings and bodies at subsonic and supersonic speed. Thin-wing theory. Slender-body theory. Formulation of theories for evaluating forces and moments on airplane geometries. Application to the design of high-speed airplanes. *Prerequisites: admission to the engineering major and grade of C– or better in MAE 101A-B.*

MAE 105. Introduction to Mathematical Physics (4)
Fourier series, Sturm Liouville theory, elementary partial differential equations, integral transforms with applications to problems in vibration, wave motion, and heat conduction. *Prerequisites: admission to engineering major or and grades of C– or better in Phys. 2A-B and Math. 20D or Math. 21D.*

MAE 107. Computational Methods in Engineering (4)
Introduction to scientific computing and algorithms; iterative methods, systems of linear equations with applications; nonlinear algebraic equations; function interpolation and differentiation and optimal procedures; data fitting and least-squares; numerical solution of ordinary differential equations. *Prerequisites: engineering majors only and grades of C– or better in MAE 9 or MAE 10 and Math. 20F.*

MAE. 110A. Thermodynamics (4)
Fundamentals of engineering thermodynamics: energy, work, heat, properties of pure substances, first and second laws for closed systems and control volumes, gas mixtures. Application to engineering systems, power and refrigeration cycles, combustion. *Prerequisites: grades of C- or better in Phys. 2C and Chem 6A.* Enrollment restricted to engineering majors only.

MAE 110B. Thermodynamic Systems (4)
Thermodynamic analysis of power cycles with application to combustion driven engines: internal combustion, diesel, and gas turbines. Thermodynamics of mixtures and chemical and phase equilibrium. Computational methods for calculating chemical equilibrium. *Prerequisite: grade of C– or better in MAE 110A.*

MAE 113. Fundamentals of Propulsion (4)
Compressible flow, thermodynamics, and combustion relevant to aircraft and space vehicle propulsion. Analysis and design of components for gas turbines, including turbines, inlets, combustion chambers and nozzles. Fundamentals of rocket propulsion. *Prerequisites: admission to engineering major and grades of C– or better in MAE 110A or CENG 102 and MAE 101A-B-C or CENG 101A-B-C (formerly CENG 103A-B-C).*

MAE 117A. Elementary Plasma Physics (4)
(Cross-listed with Physics 151.) Particle motions, plasmas as fluids, waves, diffusion, equilibrium and stability, nonlinear effects, controlled fusion. *Prerequisites: MAE 117A. Math. 21D or consent of instructor. Phys. 100B-C or ECE 107 are suggested.*

MAE 117B. Industrial Plasma Applications (4)
Charged particle motion in DC and RF electro-magnetic; atomic processes in plasmas; ionization, excitation, dissociation, rate constants, electron energy balance electric breakdown of the gases; debye length, plasmas quasi-neutrality, sheath; DC, capacitive, inductive, and wave-heated discharges; etching, deposition, and implantation. *Prerequisites: Phys. 100B-C or ECE 107 or consent of instructor; Math. 21D.*

MAE 117L. Elements of Experimental Plasma Physics (4)
Measurements of electron density and temperature with the lengmuire probes, emission spectroscopy measurements of neutrals and ions in plasmas; electric breakdown of the gases; plasmas etching of materials. *Prerequisites: none.*

MAE 118A. Energy: Non-Nuclear Energy Technologies (4)
Oil recovery from tar sands and oil shale. Coal production, gasification, liquefaction. The hydrogen economy. Energy storage systems. Techniques for direct energy conversion. Solar energy utilization. Hydroelectric power generation. Hydrothermal energy. Geothermal energy from hot rocks. Electrical power production, transmission, and distribution. *Prerequisite: consent of instructor.*

MAE 118B. Energy: Nuclear Energy Technologies (4)
A brief survey of energy demands and resources. Available nuclear energy, background in atomic and nuclear physics; fission and fusion processes, physics of fission reactions—engineering aspects—safety and environmental effects, fusion-including laser fusion and magnetic confinement, and nuclear power economics. *Prerequisite: consent of instructor.*

MAE 118C. Introduction to Fusion Science and Technologies (4)
Overview of basic fusion processes, high-temperature plasma characteristics, and fusion power plant features. Reaction rates and energy balance for burning fusion plasmas. Survey of the enabling technologies for practical fusion and related applications outside of fusion, such as plasma-material interactions, plasma heating, high heat flux engineering, superconductivity, advanced materials, and nuclear technology. *Prerequisites: MAE 101A or CENG 103A or CENG 101A and either Physics 100B, 100C, ECE 107, or their equivalent.*

MAE 120. Dynamics of Natural Flows (4)
Description of atmosphere and oceans; hydrological cycle. Dynamics of stratified and rotating flows. Surface and interfacial waves; the solitary wave, hydraulic flows. Flow over topography. Gravity currents. Stratified withdrawal. Applications to river flow, estuaries, atmosphere-ocean system, water treatment, reservoir management. *Prerequisites: MAE 101B and MAE 105 with a grade of C– or better.*

MAE 121. Convective Flows in the Environment (4)
Convection and the Rayleigh number. Plumes and thermals relation to atmospheric boundary layer and ocean mixed layer. Effects of rotation. Katabatic flows. Fires and clouds. Double-diffusive convection with oceanographic and industrial applications; solar ponds. *Prerequisites: MAE 101B and MAE 105 with a grade of C– or better.*

MAE 122. Air Pollution Modeling (4)
Fickian diffusion; advection-diffusion equation. Turbulent dispersion and eddy diffusivities. Gaussian plume models for passive scalars; entrainment. Concepts of buoyancy and momentum fluxes. Similarity theory of the atmospheric boundary layer. Current practices and regulations. Experience with air dispersion software. *Prerequisites: MAE 101B and MAE 105 with a grade of C– or better.*

MAE 123. Fluid-Solid Interactions in Environmental Engineering (4)
Fundamentals of adsorption and surface reactions, and processes in porous media and packed beds (diffusion/dispersion/flow coupled with adsorption/reaction). Examples include reactions on atmospheric particulates, reactions on ice crystals in the polar atmosphere and effect on ozone, transport of contaminant plumes in groundwater, and remediation processes such as catalytic destruction of air pollutants. *Prerequisite: consent of instructor.*

MAE 124. The Human Earth: An Introduction to Environmental Engineering and Policy (4)
(Cross-listed with ESYS 103.) This course explores the impacts of human social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation and governmental regulation on local, national, and global scales. *Prerequisites: grade of C– or better in Math. 20B or Math. 10A-C; Phys. 2B or Phys. 1A-C; and Chem. 6B or by consent of instructor.*

MAE 125A. Flow and Transport in the Environment (4)
Study of river flow and hydraulic control; surface waves; applications to reservoirs and estuaries. Introduction to stratification and buoyancy; applications to atmospheric surface layer and the ocean mixed layer. Ideas behind turbulent dispersion. Turbulent and scaling laws. Gravity currents and katabatic flows. *Prerequisites: engineering majors and students receiving a grade of C– or better in MAE 101A or CENG 103A or CENG 101A.*

MAE 125B. Fluid-Solid Interactions in Environment Engineering (4)
Introduction to groundwater flow. Pollution transport through the water table. Chemical processes in ozone hole. Fundamentals of flow. Darcy flow. Diffusion and dispersion. Gravity currents and plumes in porous media. Mushy layers. Chemistry of fluid-solid interactions. Fundamentals of adsorption and surface reactions. *Prerequisites: engineering majors and students receiving a grade of C– or better in MAE 125A.*

MAE 125C. Case Studies In Environmental Engineering (4)
This course is project-oriented. Students will conduct research in small groups, give oral presentations and write reports. Topics reflect material in MAE 125A and MAE 125B. Possible topics: air pollution modeling, building ventilation, wetland preservation. *Prerequisites: engineering majors and student receiving a grade of C– or better in MAE 125A-B.*

MAE 126A. Environmental Engineering Laboratory I (4)
Design and analysis of experiments in environmental engineering. Experiments in wind tunnel, water tunnel, and other equipment. Use of instrumentation. Laboratory report writing; error analysis; engineering ethics. *Prerequisites: grade of C– or better in MAE 101A, MAE 125A-B.*

MAE 126B. Environmental Engineering Laboratory II (4)
Design and analysis of original studies in environmental engineering. Students work on environmental projects and use computational and laboratory facilities. Students propose and design studies, collect and analyze data, and prepare a major report. *Prerequisite: grade of C– or better in MAE 126A.*

MAE 130A. Mechanics I: Statics (4)
(Cross-listed with SE 101A) Principles of statics using vectors; two and three-d equilibrium of statically determinate structures under discrete and distributed loading including hydrostatics; internal forces and concepts of stress; free body diagrams; moment, product of inertia; analysis of trusses and beams. *Prerequisites: Math. 21C and Phys. 2A with grades of C– or better.* Students cannot also receive credit for SE 101A.

MAE 130B. Mechanics II: Dynamics (4)
(Cross-listed with SE101B) Kinematics and kinetics of particles in 2-D and 3-D motion by using vector representation. Orbital mechanics. Work, energy, and power. Conservative forces, conservation principles. Momentum, impulsive motion and impact. Rigid body kinetics and kinematics; Coriolis acceleration, eulerian angles. Undamped vibrating systems. *Prerequisites: Math. 20D and MAE 130A or SE 101A with grades of C– or better.* Student cannot also receive credit for SE 101B.

MAE 130C. Mechanics III: Vibrations (4)
Free and forced vibrations of damped one-degree of freedom systems. Matrix representation of discrete multiple degree of freedom systems. Use of Matlab for both modal analyses and response analyses of systems subjected to impulse and step loading. Lagrange's equations. Modal superposition for analysis of continuous vibrating systems with applications to structures. *Prerequisites: admission to the engineering major and grades of C– or better in Math. 20F and MAE 130B or SE 101B.*

MAE 131A. Fundamentals of Solid Mechanics I (4)
Stress and strain, generalized Hooke's law. Mechanics of deformable bodies under torsional, shearing and bending loads. Deflection of beams. Stability of columns. St. Venant's semi-inverse torsion analysis. Strain energy and energy principles. Design of statically indeterminate rods, shafts, beams and columns. Professional ethics. *Prerequisites: admission to the engineering major and Grades of C– or better in Math. 20D or 21D, 20F; and MAE 130A or SE 101A.*

MAE 131B. Fundamentals of Solid Mechanics II (4)
Continuum mechanics of solids and its application to the mechanical response of machine and structural elements. Stress and strain in indicial notation; field equations and constitutive relations. Linear elastic

stress analysis in torsion, plane stress and plane strain; stress concentrations; fracture mechanics. Extremum principles and structural stability. Viscoelasticity, plasticity, and failure criteria. Theorems of plastic limit analysis. *Prerequisites: admission to the engineering major and grades of C– or better in MAE 131A, and MAE 105 (or concurrent enrollment).*

MAE 131C. Solid Mechanics III (4)
Small deflection theory of plates. Solutions for rectangular and circular plates. Buckling of rectangular plates. Large deflections and shear deformations. Energy methods and finite element method of analysis. *Prerequisites: admission to the engineering major and grade of C– or better in MAE 131A.*

MAE 133. Finite Element Methods in Mechanical and Aerospace Engineering (4)
Development of stiffness and mass matrices based upon variational principles and application to static, dynamic, and stability design problems in structural and solid mechanics. Architecture of computer codes for linear and nonlinear finite element analysis and basic computer implementation. The use of general purpose finite element structural analysis computer codes. *Prerequisites: admission to the engineering major and grades of C– or better in MAE 131AB and MAE 107.*

MAE 135. Computational Mechanics (4)
Mathematical modeling in terms of systems of algebraic and differential equations. Overview of numerical methods. Problem statement, boundary, and initial conditions. Overview of commerical packages for solving the equations of Mathematical and Engineering Physics. Numerical solutions of selected examples drawn from real-life applications of fluid flow, solid mechanics, and heat transfer with emphasis on design. *Prerequisite: consent of instructor.*

MAE 137. Technical Writing for Engineers (2)
Writing techniques for clear and effective presentation of technical information and ideas. Fundamentals of editing through peer review under instructor guidance. Several short papers on technical topics will be assigned. Students must complete college writing requirement(s) prior to taking this course. *Prerequisites: completion of College Writing Program with a grade of C– or better (HUM 5 or MCWP 50 or DOC 3 or WARR 10B or MMW 6 or 6H).*

MAE 140. Linear Circuits (4)
Steady-state and dynamic behavior of linear, lumped-parameter electrical circuits. Kirchoff's laws. RLC circuits. Node and mesh analysis. Operational amplifiers. Signal acquisition and conditioning. Electric motors. Design applications in engineering. *Prerequisites: admission to the engineering major and grades of C– or better in Math. 20D, and Phys. 2B.*

MAE 142. Dynamics and Control of Aerospace Vehicles (4)
The dynamics of vehicles in space or air are derived for analysis of the stability properties of spacecraft and aircraft. The theory of flight, lift, drag, dutch roll and phugoid modes of aircraft are discussed. Optimal state space control theory for the design of analog and digital controllers (autopilots). *Prerequisites: admission to the engineering major and grades of C– or better in MAE 104 and MAE 141A or MAE 143B or ECE 171A.*

MAE 143A. Signals and Systems (4)
First-order vector ordinary differential equations, concepts of state, input and output. Linearity and linearization concepts introduced with solutions. Laplace and Fourier transforms are defined for signals. Transfer functions and frequency responses for systems. Spectra and filtering for deterministic signals, probability and statistics of random signals and treatment. *Prerequisites: admission to MAE or bioengineering major and grade of C– or better in Math. 20E, 20F, and 20D.*

MAE 143B. Linear Control (4)
Analysis and design of feedback systems in the frequency domain. Transfer functions. Time response specifications. PID controllers and Ziegler-Nichols tuning. Stability via Routh-Hurwitz test. Root locus method. Frequence response: Bode and Nyquist diagrams. Dynamic compensators, phase-lead and phase-lag. Actuator saturation and integrator wind-up. *Prerequisite: grade of C– or better in MAE 143A.*

MAE 143C. Digital Control Systems (4)
Discrete time systems: sampling. aliasing, stability, Z-transform, discrete time signals, state space models; state equations, canonical forms, observability, controllability. Pole placement design, observer design, output feedback, linear quadratic regulator design. Implementation: digital approximation, computational and numerical issues. *Prerequisite: grade of C– or better in MAE 143B.*

MAE 149. Sensor Networks (4)
(Cross-listed with ECE 156 and SIO 238.) Focus on the characteristics of chemical, biological, seismic, and other physical sensors; signal-processing techniques supporting disbtributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Undergraduates will be given a final exam. Graduates will be required to complete a term-paper or formal project. *Prerequisites: upper-division standing and consent of instructor, or graduate student in science or engineering.*

MAE 150. Computer-Aided Design (4)
Computer-Aided Analysis and Design. Design methodology, tolerance analysis, Monte Carlo analysis, kinematics and computer-aided design of linkages, numerical calculations of moments of inertia, design of cams and cam dynamics; finite element analysis, design using Pro-E, Mechanica Motion and Mechanica Structures. *Prerequisites: grade of C– or better in MAE 130A or SE 101A; BENG 110, and MAE 107.*

MAE 152. Computer Graphics for Engineers and Scientists (4)
Computer graphics algorithms using C programming and Ironcad. Applications in engineering and science. Line-drawing algorithms. Area fill algorithms, color, CAD user interface, spline curves and surfaces, 2-D and 3-D transformations, wireframe and solid models. Hidden-surface elimination. *Prerequisities: grade of C– or better in MAE 3 and MAE 9 or 10.*

MAE 155A. Aerospace Engineering Design I (4)
Fundamental principles of aerospace design. Application of engineering mechanics to the design of aerospace components. Design and analysis of aerospace components and assemblies. *Prerequisites: grade of C– or better in MAE 104, 113, 130C, 142, 150, SE 2 and SE 160B. Students may enroll concurrently with MAE 113 and 142.*

MAE 155B. Aerospace Engineering Design II (4)
Fundamental principles of aerospace design. Application of engineering mechanics to the design of aerospace components. Design, manufacture and assemble projects involving preliminary design for a realistic engineering application. *Prerequisites: grade of C– or better in MAE 130C, 150, 155A.*

MAE 156A. Fundamental Principles of Mechanical Design I (4)
Fundamental principles of mechanical design and the design process. Application of engineering science to the design and analysis of mechanical components. Initiation of team design projects that culminate in MAE 156B with a working prototype designed for a real engineering application. *Prerequisite: grade of C– or better in MAE 101C, MAE 130C, MAE 131A, MAE 150, MAE 160, and MAE 170.*

MAE 156B. Fundamental Principles of Mechanical Design II (4)
Fundamental principles of mechanical design and the design process. Culmina-tion of a team design project initiated in MAE 156A which results in a working prototype designed for a real engineering application. *Prerequisite: grade of C– or better in 156A in the immediately preceding quarter, MAE 101C, MAE 150.*

MAE 160. Mechanical Behavior of Materials (4)
Elasticity and anelasticity, dislocations and plasticity of crystals, creep, and strengthening mechanisms. Mechanical behavior of ceramics, composites, and polymers. Fracture: mechanical and microstructural. Fatigue. Laboratory demonstrations of selected topics. *Prerequisites: grades of C– or better in MAE 20, MAE 130A (or SE 101A) and MAE 131A.*

MAE 161. Electronic, Magnetic, and Photonic Materials (4)
Introduction to the worlds of electronic, magnetic/photonic materials, the unique properties of advance engineering materials in relation to processing, fabrication, and microstructure. Semiconductors, metals, alloys, ceramics, polymers, and composite materials and their practical applications. *Prerequisite: consent of instructor.*

MAE 162. Advanced Materials: Processing, Selection and Design (4)
Introduction to various techniques used in fabricating useful bodies with optimal structural, magnetic, optical, or electronic properties. Influence of the type of raw material, densification techniques and methods to tailor composition and microstructure. Ceramics, metals, semiconductors, and composites will be discussed. *Prerequisite: MAE 160 or consent of instructor.*

MAE 163. Mechanics of Porous Materials (4)
Powder packing structures. Fundamentals of the continuum mechanics of powder deformation, plasticity of porous materials. Micromechanical models. Review of main methods of powder shaping, synthesis and manufacturing of high density structures: cold consolidation, forging, rolling, sintering, uniaxial hot pressing, hot isostatic compaction (HIP), extrusion, injection molding. *Prerequisite: consent of instructor.*

MAE 165. Fatigue and Failure Analysis of Engineering Components (4)
The engineering and scientific aspects of crack nucleation, slow crack growth, and unstable fracture in crystalline and amorphous solids. Microstructural effects on crack initiation, fatigue crack growth and fracture toughness. Methods of fatigue testing and fracture toughness testing. Fractography and microfractography. Design safe methodologies and failure prevention. Failure analysis of real engineering structures. *Prerequisite: consent of instructor.*

MAE 166. Nanomaterials (4)
Basic principles of synthesis techniques, processing, microstructural control and unique physical properties of materials in nano-dimensions. Nanowires, quantum

dots, thin films, electrical transport, optical behavior, mechanical behavior, and technical applications of nanomaterials. *Prerequisite: consent of instructor.*

MAE 167. Wave Dynamics in Materials (4)
Pressure and shear waves in infinite solids. Reflection and diffraction. Rayleigh and Love waves in semi-infinite space. Impulse load on a half space. Waveguides and group velocity. *Prerequisite: consent of instructor.*

MAE 168. MEME Materials, Fabrication, and Applications (4)
The principles of micro-electro-mechanical systems (MEMS) fabrication, materials involved, actuation principles utilized, and the fundamentals of MEMS operation in relation to stresses and deformation. Novel device applications, future trends, and nano-electro-mechanical (NEMS) systems. *Prerequisite: consent of instructor.*

MAE 170. Experimental Techniques (4)
Principles and practice of measurement and control and the design and conduct of experiments. Technical report writing. Lectures relate to dimensional analysis, error analysis, signal-to-noise problems, filtering, data acquisition and data reduction, as well as background of experiments and statistical analysis. Experiments relate to the use of electronic devices and sensors. *Prerequisite: Grade of C– or better in Phys. 2CL and admission to any engineering major.*

MAE 171A. Mechanical Engineering Laboratory I (4)
Design and analysis of experiments in fluid mechanics, solid mechanics, and control engineering. Experiments in wind tunnel, water tunnel, vibration table and material testing machines, and refined electromechanical systems. Laboratory report writing; error analysis; engineering ethics. *Prerequisites: grade of C– or better in MAE 101C (or CENG 103C); MAE 160, MAE 143B, MAE 170, and senior standing in engineering major.*

MAE 171B. Mechanical Engineering Laboratory II (4)
Design and analysis of original experiments in mechanical engineering. Students research projects using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, and testing machine and control systems. Students propose and design experiments, obtain data, complete engineering analysis and write a major report. *Prerequisite: requires a grade of C– or better in MAE 171A.*

MAE 175A. Aerospace Engineering Laboratory I (4)
Analysis of aerospace engineering systems using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, and testing machine. Students operate facilities, obtain data, complete engineering analysis and write major reports. *Prerequisites: senior standing in engineering major and grade of C– or better in MAE 101C or CENG 103C or CENG 101C; MAE 141A or MAE 143B, MAE 170.*

MAE 175B. Aerospace Engineering Laboratory II (4)
Design and analysis of original experiments in aerospace engineering. Students research projects using experimental facilities in undergraduate laboratories: wind tunnel, water channel, vibration table, testing machine and control systems. Students propose and design experiments, obtain data, complete engineering analysis and write a major report. *Prerequisite: requires a grade of C– or better in MAE 175A.*

MAE 180A. Space Science and Engineering I (4)
Introduction to space science. Earth, planetary atmospheres, especially upper atmospheres. Magnetospheres, energetic particles. Electro-magnetic spectrum. Atmospheric attenuation, windows. Detection methods, instruments. Imaging systems, image processing. Observations from space. Newtonian mechanics of bound orbits. Science on manned, unmanned missions. *Prerequisite: upper-division standing in physics, chemistry, or engineering department.*

MAE 180B. Space Science and Engineering II (4)
Introduction to space engineering. Kinematics of rockets. Types of rocket engines. Relation of engine performance and rocket characteristics to mission phases—takeoff, on-orbit maneuvers, reentry, and landing. Space structures and materials, with emphasis on new developments. Fabrication of structures from materials obtained in space. Communication systems: design characteristics, requirements, performance. Robotics and control. Tethers. Astrodynamics. *Prerequisite: upper-division standing in physics, chemistry or engineering department.*

MAE 191. Topics in Engineering Science (4)
Course to be given at the discretion of the faculty in which topics of current interest in engineering will be presented by visiting or resident faculty members. *Prerequisite: consent of instructor.*

MAE 195. Teaching (2-4)
Teaching and tutorial assistance in an MAE course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. P/NP grades only. *Prerequisites: junior status and a B average in major and consent of department chair.*

MAE 197. Engineering Internship (1-4)
Coordinated through UCSD Academic Internship Program, this course provides work experience through industry, government offices, hospitals and their practices. Students will work in local industry or hospital under faculty supervision. Units may not be applied toward major graduation requirements. Internship is unsalaried. *Prerequisites: completion of ninety units with 2.5 GPA and consent of faculty adviser.*

MAE 198. Directed Group Study (1-4)
Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. May be taken P/NP only. *Prerequisite: consent of instructor.*

MAE 199. Independent Study for Undergraduates (4)
Independent reading or research on a problem by special arrangement with a faculty member. P/NP grades only. *Prerequisite: consent of instructor.*

GRADUATE COURSES

205. Graduate Seminar (1)
Each graduate student in MAE is expected to attend one seminar per quarter, of his or her choice, dealing with current topics in fluid mechanics, solid mechanics, applied plasma physics and fusion, chemical engineering, applied ocean sciences, energy and combustion, environmental engineering, or materials science, and dynamics and controls. Topics will vary. (S/U grades only)

207. Topics in Engineering Science (4)
A course to be given at the discretion of the faculty in which topics of current interest in engineering will be presented. *Prerequisite: consent of instructor.*

209. Continuum Mechanics Applied to Medicine/Biology (4)
(Cross-listed with BENG 209.) Introduction to the basic definitions of continuum mechanics and their mathematical formulation at the graduate level with applications to problems in medicine and biology. This course is intended for students with little or no background in mechanics; it is an introduction to the Biomechanics courses BENG 250 A-B in the Department of Bioengineering and to Solid and Fluid Mechanics courses MAE 210A and MAE 231A in the Department of Mechanical and Aerospace Engineering. This course should NOT be taken concurrently with MAE 210 or MAE 231A. *Prerequisite: consent of instructor.*

210A. Fluid Mechanics I (4)
(Cross-listed with CENG 210A.) Basic conservation laws. Flow kinematics. The Navier-Stokes equations and some of its exact solutions. Non-dimensional parameters and different flow regimes, vorticity dynamics. *Prerequisites: MAE 101A-B and MAE 110A, or consent of instructor.*

210B. Fluid Mechanics II (4)
Potential flows, boundary layers, low-Reynolds number flows. *Prerequisites: MAE 210A, MAE 101A-B, and MAE 110A, or consent of instructor.*

210C. Fluid Mechanics III (4)
Flow instabilities, linear stability theory; introduction to turbulent flows. *Prerequisites: MAE 210A-B, MAE 101A-B, and MAE 110A, or consent of instructor.*

211. Introduction to Combustion (4)
Fundamental aspects of flows of reactive gases, with emphasis on processes of combustion, including the relevant thermodynamics, chemical kinetics, fluid mechanics, and transport processes. Topics may include deflagrations, detonations, diffusion flames, ignition, extinction, and propellant combustion. *Prerequisites: MAE 101A-B-C or CENG 103A-B-C, MAE 110A, or consent of instructor.*

212. Introductory Compressible Flow (4)
Equations of motion for compressible fluids; one-dimensional gas dynamics and wave motion, waves in supersonic flow, including oblique shock waves; flow in ducts, nozzles, and wind tunnels; methods of characteristics. *Prerequisites: MAE 101A-B-C or CENG 103A-B-C, MAE 110A, or consent of instructor.*

213. Mechanics of Propulsion (4)
Fluid mechanics, thermodynamics and combustion processes involved in propulsion of aircraft and rockets by air breathing engines, and solid and liquid propellant rocket engines characteristics and matching of engine components; diffusers, compressors, combustors, turbines, pumps, nozzles. *Prerequisites: MAE 101A-B-C, MAE 110A, or consent of instructor.*

214A. Introduction to Turbulence and Turbulent Mixing (4)
Basic features of turbulent flows. Analytical description of turbulence: random variables, correlations, spectra, Reynolds-averaging, coherent structures. Length and time scales. Kolomogorov similarity theory. Turbulence transport equations. Free shear flows. Homogeneous turbulence. Wall-bounded flows. Mixing of velocity and scalar fields. *Prerequisites: MAE 210A, MAE 101A,B or equivalent or consent of instructor.*

214B. Ocean Turbulence and Mixing (4)
(Cross-listed with SIO 213.) Mixing mechanisms, their identification, description and modeling. Introduction to turbulence, semi-empirical theories, importance of coherent structures, effects of stratification and rotation on turbulent structure, entrainment and mixing. S/U grades permitted.

215. Hydrodynamic Stability (4)
Kelvin-Helmholtz instability of shear layers, the Orr-Sommerfeld equation and its solution for inviscid and viscous flows. Taylor instability of circular Couette flows; finite amplitude stability; chaos; transition to turbulence. *Prerequisite: MAE 210A-C or equivalent.*

217. Introduction to Plasma Equilibria, Waves, and Instabilities (4)
Plasma kinetic theory. Two fluid and MHD descriptions of plasmas. Plasma equilibrium configurations and macroscopic stability. Waves in plasmas, collisional and landau damping. Microscopic plasma instabilities. Amomalous cross field plasma transport. Nonlinear wave processes; parametric instabilities, self focusing, solitons. *Prerequisite: none*

218A. Physics of Gas Discharge Plasmas and Appplications (4)
Charged particle motion in electro-magnetic field. Atomic processes in plasmas. Electric breakdown of the gases, plasma quasineutrality, weakly ionized plasma particle and energy fluxes, sheath. Electron kinetics, DC and RF driven discharges, plasma instabilities. Etching, deposition, implantation, and surface modification. *Prerequisite: Physics 100 (B-C) or ECE 107 or equivalent.*

220A. Physics of Gases (4)
Thermodynamics of gases for use in gasdynamics. Derivation of thermodynamic functions from statistical mechanics. Applications of classical and quantum statistical mechanics to chemical, thermal, and radiative properties of gases. Equilibrium and nonequilibrium radiation, chemical equilibrium, and elements of chemical kinetics. Laser and reacting-flow applications. *Prerequisite: MAE 110A or consent of instructor.*

220B. Physical Gasdynamics (4)
Velocity distribution functions, the Boltzmann equation, moment equations and the Navier-Stokes equations. The dynamics of molecular collisions. The Chapman-Enskog expansion and transport coefficients: shear and bulk viscosity, heat conduction, molecular and thermal diffusion. Linearizations about equilibrium: applications to acoustics and supersonic flows with relaxation. *Prerequisite: MAE 101A-B-C or CENG 103A-B-C or CENG 101A-B-C, MAE 220A, or consent of instructor.*

221A. Heat Transfer (4)
(Cross-listed with CENG 221A.) Conduction, convection, and radiation heat transfer. Development of energy conservation equations. Analytical and numerical solutions to transport problems. Specific topics and applications vary. *Prerequisite: MAE 101A-B-C or CENG 103A-B-C or CENG 101A-B-C, or consent of instructor.*

221B. Mass Transfer (4)
(Cross-listed with CENG 221B.) Fundamentals of diffusive and convective mass transfer and mass transfer with chemical reaction. Development of mass conservation equations. Analytical and numerical solutions to mass transport problems. Specific topics and applications will vary. *Prerequisite: MAE 101A-B-C or CENG 103A-B-C or CENG 101A-B-C, or consent of instructor.*

222A-B-C. Advanced Fluid Mechanics (4-4-4)
Contemporary problems in broad areas of fluid mechanics, e.g., turbulent flows, hydrodynamic stability, geophysical fluid dynamics, transport phenomena, acoustics, boundary layers, etc. (Not necessarily taught as a sequence nor offered every quarter.) *Prerequisite: MAE 210A-B-C or consent of instructor.*

223. Computational Fluid Dynamics (4)
Numerical methods in fluid dynamics and convective transport processes. Numerical solution of the Euler and Navier-Stokes equation. Additional topics will vary according to instructor. Examples include eigenvalue problems in hydrodynamic stability, vortex methods, spectral and panel methods. *Prerequisite: MAE 210A, 290A-B or equivalent, MAE 107, or consent of instructor.*

224. Environmental Fluid Dynamics (4)
(Cross-listed with SIO 214B.) Single-layer flows with a free surface, two layer flows including exchange flows in harbors, estuaries, seas, and buildings. Continuously stratified flows with meteorological and oceanographic applications. Topographic effects, plumes, jets, and thermals. Planetary boundary layers. *Prerequisites: introductory level graduate course in fluid mechanics.*

227A. Fundamentals of Fusion Plasma Physics (4)
Magnetic and inertial confinement fusion concepts. Magnetic equilibrium configurations and limitations. Classical and anomalous transport of magnetically confined plasmas. Plasma-wall interactions. Rayleigh-Taylor and Richter-Meshkov instabilities. Direct and indirect drive, laser and particle beams. Emerging and alternative concepts. *Prerequisite: none*

227B. Fundamentals of Modern Plasma Physics (4)
Fusion plasma turbulence, magnetic reconnection, strong electromagnetic wave/plasma I interactions, numerical simulations of nonlinear plasma phenomena, issues of plasma astrophysics and space plasmas, plasma based propulsion, plasma boundary layers in fusion devices, plasma chemistry. *Prerequisite: MAE 227A or consent of instructor*

229A. Mechanical Properties (4)
(Cross-listed with MATS 211A.) Review of basic concepts in mechanics of deformation: elasticity, plasticity, viscoelasticity and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. *Prerequisite: consent of instructor.*

229B. Advanced Mechanical Behavior (4)
(Cross-listed with MATS 211B.) Rate mechanisms in crystaline solids, kinetics and dynamics of plastic flow by slip at low and high strain rates. Mechanisms of inelasticity in non-metals, metals, and polymeric materials. Mechanisms of failure and effects of strain rates. *Prerequisite: MAE 229A or consent of instructor.*

231A. Foundations of Solid Mechanics (4)
Specification of stress and strain; infinitesimal and finite deformation; conservation equations; typical constitutive equations; minimum potential energy principle. *Prerequisite: MAE 131B or consent of instructor.*

231B. Elasticity (4)
Basic field equations. Typical boundary value problems of classical linear elasticity. Problems of plane stress and plane strain. Variational principles. *Prerequisite: MAE 231A or consent of instructor.*

231C. Anelasticity (4)
Mechanical models of viscoelastic, plastic, and viscoplastic behavior in simple shear or uniaxial stress. Constitutive relations for three-dimensional states of stress and strain. Application to selected technological problems. *Prerequisite: MAE 231B or consent of instructor.*

232A. Finite Element Methods in Solid Mechanics I (4)
Finite element methods for linear problems in solid mechanics. Emphasis on the principle of virtual work, finite element stiffness matrices, various finite element formulations and their accuracy and the numerical implementation required to solve problems in small strain, isotropic elasticity in solid mechanics. *Prerequisite: graduate standing.*

232B. Finite Element Methods in Solid Mechanics II (4)
Finite element methods for linear problems in structural dynamics. Beam, plate, and doubly curved shell elements are derived. Strategies for eliminating shear locking problems are introducted. Formulation and numerical solution of the equations of motion for structural dynamics are introduced and the effect of different mass matrix formulations on the solution accuracy is explored. *Prerequisites: graduate standing and MAE 230 or MAE 232A.*

233B. Micromechanics (4)
General theory of transformation strains and corresponding elastic fields; Green's functions and other solution methods; dislocations; inclusions and inhomogeneities; micromechanics of plastic flow, microcracking, cavitation, and damage in crystalline and other solids. *Prerequisite: MAE 231A-B-C or consent of instructor.*

233C. Advanced Mechanics of Composite Materials (4)
Three-dimensional anisotropic constitutive theories, anisotropic fracture mechanics, composite micromechanics, edge effects and interlaminar shear stresses, impact damage and energy absorbing mechanisms, and surface wave. *Prerequiste: MAE 131A-B-C, 231A-B or consent of instructor.*

236. Structural Stability (4)
Static, dynamic, and energy-based techniques and predicting elastic stability. Linear and nonlinear analysis of classical and shear deformable beams and plates. Ritz, Galerkin, and finite element approaches for frames and reinforced shells. Nonconservative aerodynamic (divergence flutter) and follower forces. *Prerequisite: MAE 131B or consent of instructor.*

237. Structural Dynamics (4)
Matrix analysis of the free and forced vibrations of discrete linear systems; response to periodic and transient excitations. Frequency response and generalized normal mode methods. Dynamics of continuous systems. *Prerequisite: MAE 231A-B or consent of instructor.*

238. Stress Waves in Solids (4)
Linear wave propagation; plane waves; reflection and refraction; dispersion induced by geometry and by material properties. Application of integral transform methods. Selected topics in nonlinear elastic, anelastic, and anisotropic wave propagation. *Prerequisite: MAE 231A-B-C or consent of instructor.*

241. Advances in Control Applications (4)
Study of problems of control design, identification, and optimization for flexible and smart structures, fluid flows, propulsion, power generation, vehicle dynamics (aerospace, ocean, and automotive), magnetic recording, semiconductor manufacturing, biological systems, robot manipulations, and other applications. *Prerequisites: MAE 141A or equivalent.*

243. Advances in Two-Phase Flow (4)
Modern developments in understanding of two-phase flows will be reviewed. New experimental methods and new theoretical concepts will be covered, as will potential future practical applications. *Prerequisites: MAE 210A-B-C.*

244. Advanced Simulation and Modeling of Turbulent Flows (4)
Progress in the area of simulation and modeling of turbulent flows will be reviewed. Methods to be covered include: direct simulations, large-eddy simulation, and Reynolds averaged turbulence models. *Prerequisites: MAE 210ABC; MAE 214; MAE 290AB.*

245. Advances in Combustion Theory (4)
Asymptotic analyses of flame structure. Combustion in two phase flows. Turbulent combustion. *Prerequisites: MAE 210AB; MAE 211; MAE 213.*

246. Advances in Engine Combustion (4)
Mathematical models of combustion in diesel engines and spark-ignition engines. Mechanisms of soot formation. *Prerequisites: MAE 210AB; MAE 211; MAE 213.*

247. Advances in Experimental and Theoretical Mechanics of Materials (4)
The focus will be on coordinated experimental evaluation and theoretical modeling of thermal mechanical properties of a broad class of materials. Using state-of-the-art techniques, students will gain hands-on experience with modern experimental tools in the area of mechanics and materials. *Prerequisites: consent of the instructor.*

248. Advances in Magnetic Recording (4)
This course will address recent advances in mechanics, tribology, and materials problems of magnetic recording technology. Of special interest will be the treatment of the head/disk and head/tape interface, the numerical schemes used to model the head/medium interface and advanced tribological phenomena needed to understand this fast developing and changing technology. Additional (guest) lecturers on magnetic recording theory and signal processing will be part of the class. *Prerequisite: none.*

249. Advances in Materials Computations (4)
This course will cover nonlinear finite element methods in large deformations and nonlinear materials. Particular emphasis will be placed on material models that are appropriate for high strain rates, high pressures, and phase transformations. *Prerequisites: MAE 231A, 232A.*

250. Fatigue, Fracture, and Failure Analysis in Engineering Materials (4)
(Cross-listed with MATS 218.) This course will cover the engineering and scientific aspects of fatigue crack initiation, stable crack growth, fatigue life predictions, selection of materials for fatigue applications, fractography, and failure analysis, including case studies. *Prequisite: MAE 160 or consent of instructor.*

251. Structure and Analysis of Solids (4)
(Cross-listed with MATS 227 and Chem. 222.) Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/property comparisons, structure determination with x-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orgitals, bands vs. bonds, free electron theory. *Prerequisite: consent of instructor.*

252AB. Processing and Synthesis of Advanced Materials (4)
(Cross-listed with MATS 233A-B.) Introduction to various materials processing techniques used in fabricating dense bodies with optimal structure and properties. Solidification processing, chemical synthesis of ceramics, theory of densification, composite fabrication, superconductor synthesis, electronic and optical materials processing, and techniques to generate amorphons solids. *Prerequisite: consent of instructor.*

253. Ceramic and Glass Materials (4)
(Cross-listed with MATS 236.) Powder synthesis, powder compaction and densification via different processing routes. Phase equilibria and crystallography in ceramic materials. Sintering, liquid and vapor phase processing, and single crystal growth. Control of the microstructural development and interfacial properties optimize properties for structural, thermal, electrical, or magnetic use. Topics in processing and use of advanced ceramic materials. Glass formation and structure, phase separation, viscous flow and relaxation. *Prerequisite: consent of instructor.*

256. Rheology of Fluids (4)
Continuum mechanics of fluids; definition of material functions for viscous and viscoelastic liquids; principles of rheological measurement; relationship to molecular structure. *Prerequisite: consent of instructor.*

261. Sensors and Measurements (4)
Manufacturing sensors and measurement systems, measurement techniques, modern metrology, statistical methods, and experiment design. *Prerequisite: consent of instructor.*

265. Structure and Properties of Electronic, Magnetic, and Photomic Materials (4)
(Cross-listed with MATS 251.) Explores the interplay between the electronic, magnetic and photonic properties of advanced engineering materials in relation to processing, fabrication, and microstructure. Semiconductors, metals, alloys, ceramics, polymers, and composite materials will be studies along with their practical applications. *Prerequisite: consent of instructor.*

266. Biomaterials (4)
(Cross-listed with MATS 252.) This class will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility/degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic materials will also be discussed. *Prerequisite: consent of instructor.*

267. Nanomaterials and Properties (4)
(Cross-listed with MATS 253.) This course discusses synthesis techniques, processing, microstructural control and unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. *Prerequisite: consent of instructor.*

268. MEMS Materials, Fabrication, and Applications (4)
(Cross-listed with MATS 254.) Fabrication of Micro-Electro Mechanical Systems (MEMS) by bulk and surface micromachining of single crystal, polycrystal and amorphous silicon and other materials. Performance issues including electrostatic, magnetic, piezoelectric actuations, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. *Prerequisite: consent of instructor.*

269. Presentations, Inventions and Patents (4)
(Cross-listed with MATS 255.) This course covers methodology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. *Prerequisite: consent of instructor.*

270. Mechanics of Powder Processing (4)
Powder packing structures. Methods of powder manufacturing, rapid prototyping. Fundamentals of the continuum mechanics of powder deformation, densification in non-uniform temperature fields. Micro-mechanical models of cold powder yielding. Hot consolidation fundamentals, micromechanical models of plastic yielding, power-law creep, diffusion. *Prerequisite: MAE 231A-C, 233B, or consent of instructor.*

271A. Thermodynamics of Solids (4)
(Cross-listed with MATS 201A and ECE 238A.) The thermodynamics and statistical mechanics of solids. Basic concepts, equilibrium properties of alloy systems, thermodynamic information from phase diagrams, surfaces and interfaces, crystalline defects. *Prerequisite: consent of instructor.*

271B. Solid State Diffusion and Reaction Kinetics (4)
(Cross-listed with MATS 201B and ECE 238B.) Thermally activated processes, Boltzmann factor, homogenous and heterogenous reactions, solid state diffusion, Fick's laws, diffusion mechanisms, Kirkendall effect, Boltzmann-Matano analysis, high diffusivity paths. *Prerequisite: consent of instructor.*

271C. Phase Transformations (4)
(Cross-listed with MATS 201C and ECE 238C.) Classification of phase transformations; displacive and reconstructive transformations; classical and non-classical theories of nucleation; Becker-Doering, Volmer-Weber, lattice instabilities, spinodal decomposition. Growth theories; interface migration, stress effects, terrace-ledge mechanisms, epitaxial growth, kinetics and mechanics. Precipitation. Order-disorder transformations. Solidification. Amorphization. *Prerequisites: consent of instructor.*

272. Imperfections in Solids (4)
(Cross-listed with MATS 205A and ECE 234A.) Point, line, and planar defects in crystalline solids, including vacancies, self interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements. *Prerequisite: MAE 141A or consent of instructor.*

273A. Dynamic Behavior of Materials (4)
(Cross-listed with MATS 213A.) Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves, Rankine-Hugoniot relations. Method of characteristics, differential and difference form of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. *Prerequisite: consent of instructor.*

280A. Linear Systems Theory (4)
Linear algebra: inner products, outer products, vector norms, matrix norms, least squares problems, Jordan forms, coordinate transformations, positive definite matrices, etc. Properties of linear dynamic systems described by ODEs: observability, controllability, detectability, stabilizability, trackability, optimality. Control systems design: state estimation, pole assignment, linear quadratic control. *Prerequisite: MAE 141A or 143B, or consent of instructor.*

280B. Linear Control Design (4)
Parametrization of all stabilizing output feedback controllers, covariance controllers, H-infinity controllers, and L-2 to L-infinity controllers. Continuous and discrete-time treatment. Alternating projection algorithms for solving output feedback problems. Model reduction. All control design problems reduced to one critical theorem in linear algebra. *Prerequisite: MAE 280A.*

281A. Nonlinear Systems (4)
Existence and uniqueness of solutions of EDE's, sensitivity equations. Stability, direct and converse Lyapunov theorems, LaSalle's theorem, linearization, invariance theorems. Center manifold theorem. Stability of perturbed systems with vanishing and non-vanishing perturbations, input-to-state ability, comparison method. Input-output stability. Perturbation theory and averaging. Singular perturbations. Circle and Popov criteria. *Prerequisite: MAE 280A.*

281B. Nonlinear Control (4)
Small gain theorem, passivity. Describing functions. Nonlinear controllability, feedback linearization, input-state and input-output linearization, zero dynamics. Stabilization, Brockett's necessary conditions (local), control Lyapunov functions, Sontag's formula (global). Integrator back stepping, forwarding. Inverse optimality, stability margins. Disturbance attenuation, deterministic and stochastic, nonlinear H-infinity. Nonlinear observers. *Prerequisite: MAE 281A.*

282. Adaptive Control (4)
Parametric models. Parameter identtifiers and algorithms, Spr-Lyapunov, gradient, least-squares, persistence of excitation, adaptive observers. Model reference adaptive control, certainity equivalence. Pole placement, polynomial, LQR, indirect. Robustification, parameter drift, leakage, projection, dead zone, dynamic normalization. Adaptive nonlinear control, tuning functions, modular design. Extremum seeking. *Prerequisites: MAE 281A or consent of instructor.*

283A. Parametric Identification: Theory and Methods (4)
Constructing dynamical models from experimental data. Deterministic and stochastic discrete time signals. Discrete time systems. Non-parametric identification: correlation and spectral analysis. Parametric identification: realization and prediction error methods, least squares estimation, approximate modeling. Experiment design. Frequency domain identification. *Prerequisite: MAE 141B or MAE 143C recommended.*

283B. Approximate Identification and Control (4)
Identification for control: approximate identification, estimation of models via closed-loop experiments. Closed-loop identification techniques. Estimation of model uncertainty. Model invalidation techniques. Iterative techniques for model estimation and control design. *Prerequisite: MAE 283A.*

284. Robust and Multi-Variable Control (4)
Multivariable feedback systems: transfer function matrices, Smith-McMillan form, poles, zeros, principal gains, operator norms, limits on performance. Model uncertainties, stability and performance robustness. Design of robust controllers, H_inf and mu synthesis. Controller reduction. *Prerequisite: MAE 141B or MAE 143C, or MAE 280A.*

285. Optimal Control and Estimation (4)
Functional optimization, Bellman's principle of optimality, optimal control and the Pontriagin maximal principle, matrix maximum principle, two-point boundary value problems, Hamilton's principle in dynamics, quadratic costs and linear systems, LQG and optimal estimation, Stochastic processes, case studies. *Prerequisite: MAE 280A*

286. Optimization and Control of Fluid-Mechanical Systems (4)
Model-based control approaches for systems governed by the Navier-Stokes equation are presented. Topics discussed include: transition delay, stabilization of convection, turbulence mitigation and enhancement, noise reduction, weather forecasting, and aerodynamic shape optimization. A general mathematical framework is developed and discussed for robust control in such systems. Techniques for determination of effective control approaches by large-scale simulation are discussed. Gradient-based techniques and reduced-storage inverse-Hessein techniques (BFGS, DFP, SQP) are presented. A class project is required. *Prerequisite: consent of instructor.*

287. Control of Distributed Parameter Systems (4)
Strongly continuous semigroups, infinitesimal generators, unbounded closed linear operators, Hille-Yosida theorem, Riesz-spectral operators. Existence and uniqueness of solutions of abstract evolution equations, pertubation and composite systems. Boundary control systems. Controllability, exact and approximate, Hilbert uniqueness method, fixed point method. Input-output maps, transfer functions. Exponential stability, stabilizability, Lyapunov equation. Controllability via stabiliability. Compensator design. *Prerequisite: MAE 280A or consent of instructor.*

290A. Numerical Methods in Science and Engineering (4)
A general introductory course to numerical methods. Introduction to linear calculus, solution of systems of linear and nonlinear algebraic equations, the algebraic eigenvalue problem, polynomial and trigonometric function interpolation, function differentiation and integration, function approximation. *Prerequisite: MAE 107 or consent of instructor.*

290B. Numerical Methods for Differential Equations (4)
Numerical solution of differential equations in mathematical physics and engineering, ordinary and partial differential equations. Linear and nonlinear hyperbolic parabolic, and elliptic equations, with emphasis on prototypical cases, the convection-diffusion equation, Laplace's and Poisson equation. Finite difference methods will be considered in depth, and additional topics. *Prerequisite: MAE 290A or consent of instructor.*

291. Design and Mechanics in Computer Technology (4)
Design and mechanics problems inherent in computer peripherals such as disk files, tape drives, and printers. Formulation and solution of problems involving mechanics, fluid mechanics, and materials; Reynolds equation, slider bearings; friction and wear; actuator design, impact printing; silicon fluid jets. *Prerequisite: consent of instructor.*

292. Computer-Aided Design and Analysis (4)
Introduction to 2-D and 3-D computer-aided design. Design problems may include: ball bearing kinematics, Weibull statistics, non-repeatable spindle run-out, four bar linkages, beam deflection and vibration, design of magnetic head suspension, hydrodynamic theory of lubrication, air bearings, heat transfer, optical servo, design of ink jet print head. *Prerequisite: consent of instructor.*

293. Advanced Computer Graphics for Engineers and Scientists (4)
Advanced topics used to enhance scientific and engineering visualization. C programming assignments and the use of advanced graphics software. Continuation of topics from MAE 152, including color, computational geometry, 3-D contouring, volume visualization, and hardware architectures. *Prerequisite: MAE 152 or consent of instructor.*

294A. Methods in Applied Mechanics I (4)
Linear algebra and linear spaces. Applications to linear transformations and equations, tensor analysis, linear programming and network analysis. Linear ordinary differential equations and difference equations, integral and discrete transforms, and spectral theory. Applications to linear stability, stochastic processes and numerical methods. *Prerequisite: Math. 110, Math.120A ,or consent of instructor.*

294B. Methods in Applied Mechanics II (4)
Nonlinear ordinary differential and difference equations, applications to dynamical systems, stability, bifurcation and chaos. Regular and singular perturbations, asymptotic expansions and multiscale analyses. Applications to the dynamics of mechanical, chemical and biological systems. *Prerequisite: MAE 294A or consent of instructor.*

294C. Methods in Applied Mechanics III (4)
Partial differential equations and boundary-value problems, classification of PDE's and transform methods. Green's functions and spectral theory. Non- linear PDE's, variational methods and the methods of characteristics. Non- linear waves and shocks. Asymptotic methods: WKB and stationary phase. Galerkin methods and numerical analysis of PDE's. Applications to continuum mechanics and transport phenomena. *Prerequisite: MAE 294B or consent of instructor.*

296. Independent Study (4)
Independent reading or research on a problem as arranged by a designated faculty member. Must be taken for a letter grade only. *Prerequisite: consent of instructor.*

298. Directed Group Study (1-4)
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. *Prerequisite: consent of instructor.* (S/U grades permitted.)

299. Graduate Research (1-12)
(S/U grades only.)

501. Teaching Experience (2)
Teaching experience in an appropriate MAE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. (S/U grade only.) *Prerequisites: consent of instructor and the MAE department.*

Structural Engineering (SE)

S. Youakim, Ph.D., *Assistant Project Scientist*

Structural Engineering is the branch of engineering concerned with the design and analysis of civil, mechanical, aerospace, marine, naval and offshore structures. It requires knowledge and competence in the areas of materials, response of individual structural components and the behavior of entire structural systems.

Department Focus

The instructional and research programs of the department are grouped into four programmatic focus areas: civil structures, aerospace and composite structures, renewal of structures, and earthquake engineering. Both the undergraduate and graduate programs are characterized by strong interdisciplinary relationships with the Departments of Mechanical and Aerospace Engineering, Physics, Mathematics, Bioengineering, Chemistry, Electrical and Computer Engineering, Computer Science and Engineering, the Materials Science Program, and associated campus institutes such as the Institute of Geophysics and Planetary Physics, Institute for Pure and Applied Physical Sciences, Institute for Biomedical Engineering, Center of Excellence for Advanced Materials, California Space Institute, Cal(IT)^2, and Scripps Institution of Oceanography.

The programs and curricula of the Department of Structural Engineering will educate and train engineers in a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures in materials, mechanics, analysis and design across the engineering disciplines of civil, aerospace, marine and mechanical engineering.

Although structural engineering is traditionally viewed as an activity within civil engineering, in actuality many other engineering disciplines such as aerospace, marine (naval, offshore), and mechanical engineering contain well established discipline-specific structural systems and components. In all of the various engineering disciplines there exists a large commonality in the structural materials used, in the general principles of structural mechanics, in the overall design philosophy and criteria, and in the modeling and analysis tools employed for the numerical quantification and visualization of structural response. Particularly, small disciplinary differences in materials and computational tools are rapidly disappearing with the civil engineering community opening up to new structural materials developed and used to date primarily in the aerospace industry, and with computational developments which are less product specific but more geared towards a holistic structural systems design approach with interactive graphics, object-oriented database management and concurrent visualization and data processing. Developments in overall structural systems design are increasingly cross-disciplinary over many traditional engineering areas.

The Undergraduate Program

Degree and Program Options

The Department of Structural Engineering offers an unique engineering program leading to the B.S. degree in structural engineering which is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (EAC/ABET). The Department of Structural Engineering also offers a nonaccredited B.S. degree in engineering sciences. The B.S. programs require a minimum of 148 units, plus college requirements in humanities and social sciences.

All Structural Engineering programs of study have strong components in laboratory experimentation, numerical computation, and engineering design. Design is emphasized throughout the curricula by open-ended homework problems, by laboratory and computer courses which include student-initiated projects, and finally, by senior design project courses which involve teams of students working to solve engineering design problems brought in from industry. The Structural Engineering programs are designed to prepare students receiving bachelor's degrees for professional careers or for graduate education in their area of specialization. In addition, the programs can also be taken by students who intend to use their undergraduate engineering education as preparation for postgraduate professional training in non-technical fields such as business administration, law or medicine.

Structural Engineering is concerned with the design and analysis of civil, mechanical, aerospace, marine, naval, and offshore structures. Examples include bridges, dams, buildings, aircraft, spacecraft, ships, oil platforms, automobiles, and other transportation vehicles. This field requires a thorough knowledge of the behavior of solids (concrete, soils, rock, metals, plastics, and composite materials), fluid mechanics as it relates to structural loads, dynamics as it relates to structural response, mathematics for the generation of theoretical structural models and numerical analysis, and computer science for simulation purposes associated with computer-aided design, response analyses, and data acquisition. Basic understanding of materials behavior

and structural performance is enhanced by laboratory courses involving static and dynamic stress failure tests of structural models, and response of structural systems. Within this area, students can specialize in (a) civil structures, (b) aerospace structures, (c) renewal of structures, or (d) earthquake engineering.

The **engineering sciences** program follows the overall Structural Engineering program except that the number of required design courses are reduced. In addition to core courses in dynamics, vibrations, structures, fluid mechanics, thermodynamics, heat transfer, and laboratory experimentation, a large number of technical electives are scheduled. This aspect of the curriculum allows flexibility by permitting specialization and in-depth study in one area of the engineering sciences or through a sequence of courses on various emerging technologies. Students must consult their advisers to develop a sound course of study to fulfill the technical elective requirements of this program.

Major Requirements

Specific course requirements for the major are outlined in a table herein. In addition to the required technical courses specifically indicated, a suggested scheduling of humanities and social science courses (HSS) are distributed in the curricula for students to use to meet college general-education requirements. To graduate, students must maintain an overall GPA of at least 2.0, and the department requires at least a C– grade in each course required for the major.

Deviations from the program of study must be approved by the Undergraduate Affairs Committee prior to taking alternative courses. In cases where a student needs to take a course outside UCSD, prior departmental approval is essential. In addition, technical elective (TE) course selections must have departmental approval prior to taking the courses. In the accredited program, TE courses are restricted to meet ABET standards. Courses such as SE 195, SE 197 and SE 198 are not allowed as technical electives in meeting the upper-division major requirements. SE 199 can be used as a technical elective only under restrictive conditions. Policies regarding these conditions may be obtained from the department's Student Affairs Office. Graduate level courses may be petitioned for technical elective credit.

Students with different academic preparations may vary the scheduling of lower-division courses such as math, physics and chemistry, but should consult the department prior to doing so. Deviations in scheduling lower-division Structural Engineering courses are discouraged due to scheduling constraints. A tentative schedule of course offerings is available from the department each spring quarter for the following academic year.

General-Education/College Requirement

For graduation, each student must satisfy general-education course requirements determined by the student's college, as well as the major requirements determined by the department. The six colleges at UCSD require widely different general-education courses, and the number of such courses differs from one college to another. Each student should choose his or her college carefully, considering the special nature of the college and the breadth of general education.

The Structural Engineering program allows for twelve humanities and social science (HSS) courses so that students can fulfill their college requirements. In the ABET accredited programs, students must develop a program that includes a total of at least twenty-four units in the arts, humanities, and social sciences, not including subjects such as accounting, industrial management, finance, or personnel administration. It should be noted, however, that some colleges may require more than twelve HSS courses indicated in the curriculum tables. Accordingly, students in these colleges may take longer to graduate than the indicated four-year schedule. Students must consult with their college to determine which HSS courses to take.

Professional Licensing

All students are encouraged to take the Engineering-in-Training (EIT) examination as the first step in becoming licensed as a professional engineer (PE). Students graduating from an accredited program can take the PE examination after EIT certification and two years of work experience; students graduating from a nonaccredited program can take the PE examination after EIT certification and four years of work experience.

For further information please contact the Student Affairs Office or your local Board of Registration for Professional Engineers and Land Surveyors.

STRUCTURAL ENGINEERING (ABET Accredited Program)

Mission Statement

To provide a comprehensive education and training to engineers using a holistic approach to structural systems engineering by emphasizing and building on the commonality of engineering structures at the levels of materials, mechanics, analysis, and design.

GOALS

1. To provide our students with a strong technical education that will prepare students receiving Bachelor's degrees for professional careers in industry, or for continued graduate education in their area of specialization.
2. To provide our students with cross-disciplinary technical education to adequately prepare them for a rapidly changing technological world based on the commonality of knowledge across structural engineering disciplines thereby ensuring that they are able to continuously meet professional objectives throughout their careers.
3. To provide our students with a firm foundation for professional advancement not just through technical expertise, but also through communication skills, team and group activities, and ethical/professional responsibility as designers and engineers.

OBJECTIVES

- To provide a sound basis in the general sciences and mathematics that underlie the cross-disciplinary field of structural engineering.
- To provide a thorough training in the design principles and structural action as related to components and systems over a broad range of application areas.
- To provide a thorough training in the methods of analysis, including problem formulation and the use of current mathematical and computational tools.
- To provide an understanding of structural action at the component and systems level through design, analysis, and experimentation.
- To provide through structure and flexibility in the curriculum the opportunity for students to have both specialization (through focus sequences) and breadth (through technical electives) in the area of structural engineering.

- To instill in students the ability of critical and innovative thinking, and ability to formulate solutions based on sound principles of structural mechanics and materials.
- To teach students techniques of experimentation and data analysis, including the use of statistics and reliability methods required for structural applications.
- To teach the fundamentals of the design process initiating in conceptual design and culminating in final design including the use of appropriate codes of practice.
- To prepare students in the skills needs for successful professional practice as related to team participation, and effective verbal and written communication.
- To instill in our students an understanding and acceptance of their professional and ethical responsibilities.

[2] Technical elective (TE) course must be an upper-division or graduate course in the engineering sciences, natural sciences or mathematics, selected with prior approval of the department to meet ABET standards.

Policies and Procedures for Structural Engineering Undergraduate Students

Admission to the Major

Admission to the department as a Structural Engineering major, or to fulfill a major in another department which requires Structural Engineering courses, is in accordance with the general requirements established by the School of Engineering. The admission requirements and procedures are described in detail in the section on "Admiss-ion to the School of Engineering" in this catalog. All students are expected to complete lower- and upper-division courses, as suggested in the curriculum tables, in a timely fashion in the sequences outlined.

Transfer Students

Requirements for admission as a Structural Engineering major, or into Structural Engineering courses, are the same for transfer students as they are for continuing students (see section on "Admission to the School of Engineering" in this general catalog). Accordingly, when planning their program, transfer students should be mindful of lower-division prerequisite course requirements, as well as for meeting collegiate requirements.

Students who have taken equivalent courses elsewhere may request to have transfer credits apply toward the department's major requirements. This is accomplished by submitting a petition for transfer credits together with a transcript and catalog course description from the institution where the course(s) were taken. These documents are reviewed for approval by the Structural Engineering Undergraduate Affairs Committee.

Effective **fall 2004**, it is **strongly recommended** that transfer students complete the following preparation for engineering majors*:

- Calculus I—for Science and Engineering (Math. 20A)
- Calculus II—for Science and Engineering (Math. 20B)
- Calculus and Analytic Geometry (Math. 20C)
- Differential Equations (Math. 20D)
- Linear Algebra (Math. 20F)
- Complete calculus-based physics series with lab experience (Physics 2A-B-C)
- Chemistry 6A (except Computer Science and Computer Engineering majors)
- Highest level of introductory computer programming language course offerings at the community college**

*Effective **fall 2006**, these courses will be **required** preparation for all engineering transfer students.

**Refer to the *UCSD General Catalog* to select major prerequisite requirement for computer language courses.

No transfer credit will be given for courses similar to SE 1 and SE 2. SE 1 and SE 2 must be taken by all students majoring in Structural Engineering.

Transfer petitions are available from the Structural Engineering Student Affairs Office.

Academic Advising

Upon arrival, students must make an appointment with the undergraduate adviser in the Structural Engineering Student Affairs Office to plan a program of study. The program plan may be revised in subsequent years, but revisions

involving curricular requirements require approval by the undergraduate adviser or the Undergraduate Affairs Committee. Because some courses and/or curricular changes may be made every year, it is imperative that students consult with the department's undergraduate adviser and their assigned faculty adviser on an annual basis.

Many Structural Engineering courses are offered only once a year and therefore should be taken in the recommended sequence. If courses are taken out of sequence, it may not always be possible to enroll in subsequent courses as desired or needed. If this occurs, students should seek immediate department advice. When a student deviates from the sequence of courses specified for the curriculum in this catalog, it may be impossible to complete the Structural Engineering major within the normal four-year period. Structural Engineering advisers will be monitoring the progress of students in order for them to remain on track.

In addition to the advise available through the Structural Engineering Student Affairs Office, programmatic or technical advice may be obtained from Structural Engineering faculty members. A specific Structural Engineering faculty adviser is assigned to each Structural Engineering student. All Structural Engineering students are required to meet with their faculty adviser at least once a year, preferably before the beginning of fall quarter.

Program Alterations/Exceptions to Requirements

Variations from, or exceptions to, any program or course requirements are possible only if a petition is approved by the Structural Engineering Undergraduate Affairs Committee before the courses in question are taken. Petition forms may be obtained from the Structural Engineering Student Affairs Office and must be processed through this office.

Independent Study

Structural Engineering students may take SE 199, Independent Study for Undergraduates, under the guidance of a Structural Engineering faculty member. Normally, this course is taken as an elective on a P/NP basis. Under very restrictive conditions, however, it may be used to satisfy upper-division technical elective course requirements for the major. Students interested in this alternative must identify a faculty member with whom they wish to work and propose a two-quarter research or study topic. After obtaining the faculty member's concurrence on the topic and scope of the study, the student must submit a Special Studies Course form (each quarter) and the "SE 199 as Technical Elective Contract" form to the Structural Engineering Undergraduate Affairs Committee. These forms must be completed, approved, and processed **prior** to the beginning of the quarter in which the course is to be taken. This should not be done during the add/drop period. Detailed policy in this regard and the requisite forms may be obtained from the Student Affairs Office.

Teaching

Students interested in participating in the instructional activities of the department may take SE 195, Undergraduate Teaching. Policy in this regard and the appropriate forms may be obtained from the Structural Engineering Student Affairs Office.

Bachelor's/Master's Program

The department offers a bachelor's/master's degree program to enable students to complete both the B.S. and M.S. degrees in an accelerated timeframe. Undergraduate students in the Department of Structural Engineering who have at least 148 quarter units with a cumulative 3.5 M.W. GPA are eligible to apply. Admission to the bachelor's/master's degree program is not automatic. Student applications are reviewed and the final decision is made by the Department of Structural Engineering. Acceptance into this program is an honor which carries with it practical benefits—the graduate application process is simplified (no GREs required) and advanced students are given access to graduate level courses. Upon acceptance as an undergraduate into the program, a faculty member will be assigned who will serve as the student's adviser. Interested students should contact the Structural Engineering Student Affairs Office. Students must fulfill all requirements for the B.S. degree prior to being formally admitted to graduate status.

The Graduate Program

The Department of Structural Engineering offers instruction leading to the degrees of Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) in Structural Engineering (SE). The graduate program is aimed at training a select number of highly skilled professionals in structural engineering with the academic and engineering credentials to assume leadership roles in industry and academia.

The M.S. degree program is intended to provide students with additional fundamental knowledge as well as specialized advanced knowledge in selected structural engineering aspects over and above the undergraduate degree course work.

The Doctor of Philosophy (Ph.D.) degree program is intended to prepare students for careers in teaching, research, and/or in their chosen professional specialties. The Ph.D. program requires a departmental comprehensive examination, a Ph.D. candidacy examination, a Ph.D. dissertation based on new and unique research, and a dissertation defense.

Both degrees offer opportunities for training in one or more of the four primary research thrusts within the SE department which are in (1) Earthquake Engineering, (2) Advanced Composites and Aerospace Structural Systems, (3) Renewal Engineering, and (4) Damage Prognosis and Validated Simulations.

Admission to the UCSD graduate division requires at least a B.S. degree in engineering, physical sciences, or mathematics with an overall upper-division GPA of 3.0. Applicants must provide three letters of recommendation and recent GRE general test scores. A minimum TOEFL score of 550 (213 computer-based) is required from international applicants whose native language is not English. Based on the candidate's background, qualifications, and career objectives, admission to the program is in one of two categories: M.S. or Ph.D.

Applicants seeking enrollment in SE courses via UC Extension's concurrent registration program are advised to refer to the ***Graduate Studies Transferring Credit*** section of the *UCSD General Catalog* for clarification.

Master's Degree Program

The M.S. degree program is intended to provide the student with additional fundamental knowledge as well as specialized advanced knowledge in selected structural engineering aspects over and above the undergraduate degree course work. Two plans, the M.S. Thesis Plan and the M.S. Comprehensive Examination Plan, are offered. The M.S. Thesis Plan is designed

for those students with an interest in research prior to entering the structural engineering profession or prior to entering a doctoral degree program. The M.S. Thesis Plan involves course work and research culminating with the preparation and defense of a master's thesis. The M.S. Comprehensive Examination Plan involves course work and culminates with a public oral presentation related to the courses the student has taken. The topic is selected by the student's adviser. This presentation is evaluated by a committee of three faculty and must take place in the final quarter of courses.

M.S. students must complete forty-eight units of credit for graduation. For the M.S. Comprehensive Examination Plan all forty-eight units of credit must consist of regular courses (twelve courses). For the M.S. Thesis Plan, thirty-six units (nine courses) from regular courses are required, in addition to twelve units of graduate research for the master's thesis. For both M.S. plans, students are required to complete a minimum of two sequences from the following focus areas:

1. Structural Analysis
2. Structural Design
3. Earthquake Engineering
4. Advanced Composites
5. Solid Mechanics
6. Advanced Structural Behavior

A sequence is composed of three regular courses from the same focus area. The courses comprising the focus sequences are listed in the table in this section. To meet the specific needs of some students, other focus areas may be developed by a student in consultation with his or her adviser, but these must be approved by the SE Graduate Affairs Committee. To allow for greater flexibility in the program, the remaining credits required from courses may be earned by completing additional focus sequences, parts of focus sequences, graduate seminars, or other appropriate courses. Students may elect to take other appropriate technical electives (with the approval of their adviser and the SE Graduate Affairs Committee). Up to twelve units of upper-division undergraduate (100-level) courses will be allowed in the M.S. program.

The department also offers two seminar courses each quarter dealing with current research topics in Earthquake Engineering (SE 290) and Advanced Composites (SE 291). All master's students are required to take one of these two seminar courses each quarter they are registered.

Focus Sequences

FOCUS SEQUENCE	COURSES
Structural Analysis	Advanced Structural Analysis Structural Stability Dynamics of Structure
Structural Design	Advanced RC/PC Design Advanced Structural Steel Design Bridge Design
Earthquake Engineering	Structural Dynamics Earthquake Engineering Geotechnical Earthquake Engineering Advanced Seismic Design of Structures
Advanced Composites	Design of Composite Structures Processing Science of Composites Experimental Mechanics and NDE Mechanics of Laminated Composite Structures
Solid Mechanics	Solid Mechanics for Structural and Aerospace Engineering Theory of Elasticity Theory of Plasticity and Viscoelasticity Experimental Mechanics and Nondestructive Evaluation
Advanced Structural Behavior	Nonlinear Mechanical Vibrations Structural Reliability and Risk Analysis Random Vibrations Experimental Mechanics and Nondestructive Evaluation

The thesis defense is the final examination for students enrolled in the M.S. thesis plan and must be conducted after completion of all course work. Upon completion of the research project, the student writes a thesis that must be successfully defended in an oral examination and public presentation conducted by a committee composed of three faculty. A complete copy of the student's thesis must be submitted to each member of the M.S. thesis committee (comprised of a minimum of three faculty) at least two weeks before the defense.

Doctoral Degree Program

The Ph.D. program is intended to prepare students for a variety of careers in research, teaching and advanced professional practice in the broad sense of structural engineering, encompassing civil and aerospace structures, earthquake and geotechnical engineering, composites, and engineering mechanics. Depending on the student's background and ability, research is initiated as soon as possible. All students, in consultation with their advisers, develop course programs that will prepare them for the Departmental Comprehensive Examination and for their dissertation research. However, these programs of study and research must be planned to meet the time limits established to advance to candidacy and to complete the requirements for the degree. Doctoral students who have passed the Departmental Comprehensive Examination may take any course for an S/U grade, with the exception of any course that the student's Departmental Comprehensive or Ph.D. Candidacy Examination Committee stipulates must be taken in order to remove a deficiency. It is strongly recommended that all Structural Engineering graduate students take a minimum of two courses (other than research) per academic year after passing the Departmental Comprehensive Examination.

The department also offers two seminar courses each quarter dealing with current research topics in Earthquake Engineering (SE 290) and in Advanced Composite Materials (SE 291). All Ph.D. students are required to take one of these two seminar courses each quarter they are registered.

Doctoral Examinations: A Structural Engineering Ph.D. student is required to pass three examinations. The first is a **Departmental Comprehensive Examination** which should be taken within three to six quarters of full-time graduate study and requires a 3.5 GPA. This examination is intended to determine the student's ability to successfully pursue a research project at a level appropriate for the doctoral degree. It is administered by at least four faculty, three of whom must be in Structural Engineering. The student is responsible for material pertaining to four focus areas. In order to insure appropriate breadth, the focus areas should consist of the following: (a) two focus areas within Structural Engineering which are closely related to the student's research interests, (b) one focus area within Structural Engineering that is not directly related to the student's area of research, and (c) one minor focus area outside the Department of Structural Engineering. Minor areas too closely related to the major areas will not be approved by the SE Graduate Affairs Committee. The Solid Mechanics Focus Sequence, which is jointly taught by Structural Engineering and the Department of Mechanical and Aerospace Engineering,

cannot be used to satisfy the outside Structural Engineering requirement. Students intending to specialize in the emerging areas of structural health monitoring, damage prognosis, and validated simulations are advised to take courses in the focus areas of Advanced Structural Behavior and elective courses MAE 283, MAE 261, ECE 251AN, ECE 254, and CSE 291 which can be used to satisfy the outside Structural Engineering requirement. In addition, the department has opportunities for select students in these areas to participate in special seminars, reviews, and research at leading collaborating institutes and laboratories such as the Los Alamos National Laboratories.

Since the examination areas must be approved by the SE Graduate Affairs Committee, students are advised to seek such approval well before their expected examination date, preferably while planning their graduate studies. Although students are not required to take particular courses in preparation for the departmental comprehensive examination, the scope of the examination in each area is associated with a set of three graduate courses, generally focus sequences offered or approved by the department. A candidate can develop a sense of the level of knowledge expected to be demonstrated during the examination by studying the appropriate syllabi and/or discussing the course content with faculty experienced in teaching the courses involved. The Departmental Comprehensive Examination may be a written or an oral examination, at the discretion of the committee.

Teaching experience is required of all Structural Engineering Ph.D. students prior to taking the Ph.D. Candidacy Examination. Teaching experience is defined as lecturing one hour per week in either a problem-solving section or laboratory session, for one quarter in an undergraduate course designated by the department. The requirement can be fulfilled by service as a teaching assistant or taken as a course for academic credit. Students must contact the Student Affairs Office to plan for completion of this requirement.

The **Ph.D. Candidacy Examination** is the second examination required of Structural Engineering doctoral students. In preparation for the Ph.D. Candidacy Examination, students must have completed the Departmental Comprehensive Examination and the Departmental Teaching Experience requirement, obtained a faculty research adviser, have identified a topic for their dissertation research, and have made initial progress in that research. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. In accordance with Academic Senate Regulations 715(D): "A doctoral committee of five or more members shall be appointed by the dean of Graduate Studies under the authority of the Graduate Council. The committee members shall be chosen from at least two departments, and at least two members shall represent academic specialties that differ from the student's chosen specialty. In all cases, each committee must include one tenured UCSD faculty member from outside the student's major department." The committee conducts the Ph.D. Candidacy Examination, during which students must demonstrate the ability to engage in dissertation research. This involves the presentation of a plan for the dissertation research project. A short written document describing the research plan must be submitted to each member of the committee at least two weeks before the Ph.D. Candidacy Examination. The committee may ask questions directly or indirectly related to the research project and general questions that it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate in Philosophy degree. The Ph.D. Candidacy Examination is an oral examination.

The Dissertation Defense is the final Ph.D. examination. Upon completion of the dissertation research project, the student writes a dissertation that must then be successfully defended in an oral examination and public presentation conducted by the doctoral committee. A complete copy of the student's dissertation must be submitted to each member of the doctoral committee at least four weeks before the defense. While the copy of the dissertation handed to the committee is expected to be complete and in final form, it should be noted that students are expected to make changes in the text per direction of the committee as a result of the defense. This examination cannot be conducted earlier than three quarters after the date of advancement to doctoral candidacy. Acceptance of the dissertation by the Office of Graduate Studies and Research and the university librarian represents the final step in completion of all requirements for the Ph.D.

Ph.D. Time Limit Policy. Pre-candidacy status is limited to four years. Doctoral students are eligible for university support for six years. The defense and submission of the doctoral dissertation must be within seven years.

Evaluations. In the spring of each year, the faculty evaluate each doctoral student's overall performance in course work, research, and prospects for financial support for future years. A written assessment is given to the student after the evaluation. If a student's work is found to be inadequate, the faculty may determine that the student cannot continue in the graduate program.

COURSES

All students enrolled in Structural Engineering courses or admitted into a Structural Engineering program are expected to meet prerequisite and performance standards, i.e., students may not enroll in any SE courses or courses in another department which are required for the major prior to having satisfied prerequisite courses with a C- or better. (The department does not consider D or F grades as adequate preparation for subsequent material.) Additional details are given under the various program outlines, course descriptions, and admission procedures for the School of Engineering in this catalog. Furthermore, the majority of SE courses have enrollment restrictions which give priority to, or are open only to, declared pre-engineering students and/or to students who have been admitted to an engineering major. Where these restrictions apply, the registrar will not enroll other students except by department stamp on class enrollment cards. The department expects that students will adhere to these policies on their own volition and enroll in courses accordingly. Students are advised that they may be dropped at any time from course rosters if prerequisites and/or performance standards have not been met.

While some lower-division courses may be offered more than once each year, most SE upper-division courses are taught only once per year, and courses are scheduled to be consistent with the curricula as shown in the tables. When possible, SE does offer selected large enrollment courses more than once each year. A tentative schedule of course offerings is available from the department each spring for the following academic year.

LOWER-DIVISION

SE 1. Introduction to Structures and Design (4) Introduction to structural components, systems from aerospace, civil, mechanical, marine and offshore areas. Structural action, the design process. History of structural engineering. Role and responsibility of

structural engineers in society. Engineering economics, costs-benefits analysis. Implications on safety. Professional ethics. *Prerequisite: priority enrollment given to structural engineering majors.*

SE 2. Structural Materials (4)
Structure of engineering materials (metals, ceramics, concrete, composites) tailoring to produce desired properties and response in structural components and systems. Mechanical tests, elasticity, plastic deformation, fracture, toughness, creep and fatigue. Selection based on performance requirements/application. Laboratory demonstrations and tests. *Prerequisites: Chem. 6A, Phys. 2A. Priority enrollment given to structural engineering majors and mechanical and aerospace engineering majors.*

SE 87. Freshman Seminar (1)
The freshman seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. *Prerequisite: open to freshmen only.*

UPPER-DIVISION

SE 101A. Mechanics I: Statics (4)
Principles of statics using vectors. Two- and three-dimensional equilibrium of statically determinate structures under discrete and distributed loading including hydrostatics; internal forces and concept of stress; free body diagrams; moment, product of inertia; analysis of trusses and beams. *Prerequisites: grades of C- or better in Math. 20C and Phys. 2A.*

SE 101B. Mechanics II: Dynamics (4)
Kinematics and kinetics of particles in two- and three-dimensional motion using vector representation. Orbital mechanics. Work, energy, and power. Conservative forces, conservation principles. Momentum, impulsive motion, and impact. Rigid body kinetics and kinematics; Coriolis acceleration, Eulerian angles. Undamped vibrating systems. *Prerequisites: grades of C- or better in Math. 21D, and SE 101A, or MAE 130A.*

SE 101C. Structural Mechanics III: Structural Dynamics (4)
Free and forced vibrations of damped 1-DOF systems; vibrations isolation, impact and packaging problems. Analysis of discrete MDOF systems using matrix representation; normal mode of frequencies and modal matrix formulation. Lagrange's equations. Modal superposition for analysis of continuous vibrating systems. *Prerequisites: grade of C- or better in SE 101B (or MAE 130B) and SE 130B; SE major.*

SE 102. Numerical, Computational, and Graphical Tools (4)
Introduction to engineering graphics and computer-aided design (CAD). Introduction to numerical computer algorithms and symbolic computation. Introduction to the development of methods for assessing the accuracy of numerical methods. *Prerequisites: grade of C- or better in MAE 9 and SE 101A or MAE 130A; SE major.*

SE 103. Conceptual Structural Design (4)
Introduction to design principles and structural action. Development of design theories, approaches and methodology. Concepts of load and resistance factors, factors of safety, limit and ultimate states, design allowables. Simple design examples from aerospace, civil, marine, offshore and mechanical structural systems. *Prerequisites: grade of C- or better in SE 2, SE 101A.* Priority enrollment given to structural engineering majors.

SE 110A. Solid Mechanics I (4)
Mechanics of deformable bodies under axial, torsional, shearing, and bending loads. Elastic and plastic uniaxial material response as well as 3-D Hooke's law. Mohr's circle for stress and strain. Problems of design for rods, shafts, beams, columns, pressure vessels, and thin walled members. *Prerequisites: grades of C- or better in Math. 20D, 20F, SE 101A.* Priority enrollment given to structural engineering majors.

SE 110B. Solid Mechanics II (4)
Advanced concepts in the mechanics of deformable bodies. Unsymmetrical bending of symmetrical and unsymmetrical sections. Bending of curved beams. Shear center and torsional analysis of open and closed sections. Stability analysis of columns, lateral buckling. Application of the theory of elasticity in rectangular coordinates. *Prerequisite: grade of C- or better in SE 110A.* Priority enrollment given to structural engineering majors.

SE 120. Engineering Graphics & Computer Aided Structural Design (4)
Engineering graphics, solid modeling, CAD applications including 2-D and 3-D transformations, 3-D viewing, wire frame and solid models, Hidden surface elimination. *Prerequisite: grade of C- or better in MAE 9.* Priority enrollment given to structural engineering majors.

SE 121. Numerical Methods in Engineering (4)
Advanced numerical methods for applications for engineering problems. Solution of systems of linear and nonlinear equations, function interpolation and curve fitting, function approximation, computation of integrals, numerical differentiation, and solution of systems of ordinary differential equations. *Prerequisites: grade of C- or better in SE 102, and Math. 20F; SE major.*

SE 125. Statistics, Probability and Reliability (4)
Probability theory. Statistics, data analysis and inferential statistics, distributions, confidence intervals. Introduction to structural reliability and random phenomena. Applications to components and systems. *Priority enrollment given to structural engineering majors.*

SE 130A-B. Structural Analysis (4)
Classical methods of analysis for statically indeterminate structures. Development of computer codes for the analysis of civil, mechanical, and aerospace structures from the matrix formulation of the classical structural theory, through the direct stiffness formulation, to production-type structural analysis programs. *Prerequisites: grades of C- or better in SE 110 A, SE 121, and SE 130A for SE 130B.* Priority enrollment given to structural engineering majors.

SE 131. Finite Element Analysis (4)
Development of stiffness and mass matrices based upon virtual work and variational principles. Application to static and dynamic problems in structural and solid mechanics. The use of general purpose finite element structural analysis codes. *Prerequisites: grade of C- or better in SE 103, SE 130B, MAE 170, and senior standing in the major.*

SE 140. Structures and Materials Laboratory (4)
Introduction to instrumentation and testing techniques. Discussion of standard tension and compression tests. Similitude relationships for structural models. Term project in model structure including complete engineering report on theory, design and results of the term project. *Prerequisites: grade of C- or better in SE 103, SE 130B, MAE 170, and senior standing in the major.*

SE 142. Design of Composite Structures (4)
Design and analysis of lightweight structures composed of laminated composite materials. Stiffness, strength, failure mechanisms, micromechanics, and hygrothermal behavior. Fabrication and experimental testing. Design projects that involve computer implementation. *Prerequisites: grade of C- or better in SE 110A-B; priority given to engineering majors.*

SE 144. Aerospace Structural Analysis (4)
Aspects of structural analysis pertinent to the design of flight vehicles; aerodynamic/inertial loadings, aerospace laminated materials, elements of plate theory, aeroelastic divergence, introduction of matrix methods for structural dynamics and buckling. *Prerequisites: grades of C- or better in SE 101C, SE 110A-B.* Priority enrollment given to structural engineering majors and mechanical and aerospace engineering majors.

SE 150. Design of Steel Structures (4)
Design concepts and loadings for structural systems. Working stress and ultimate strength design theories. Properties of structural steel. Elastic design of tension members, beams, and columns. Design of bolted and welded concentric and eccentric connections. Design of composite floors. Introduction to plastic design. *Prerequisites: grade of C- or better in SE 103, and SE 130A.* Priority enrollment given to structural engineering majors.

SE 151A-B. Design of Structural Concrete (4-4)
Concrete and reinforcement properties. Service and ultimate limit state analysis and design. Design and detailing of structural components. Concept of prestressing. Design and application of prestressed structures and components. *Prerequisites: grade of C- or better in SE 103, SE 130A and SE 130B. SE 151A for SE 151B; SE major.*

SE 152. Seismic Design of Structures (4)
Seismic design philosophy. Ductility concepts. Lateral force resisting systems. Mechanisms of nonlinear deformation. Methods of analysis. Detailing of structural steel and reinforced concrete elements. Lessons learned from past earthquakes. Multistory building design project. *Prerequisites: grade of C- or better in SE 103, SE 130A, SE 130B, SE 150 and SE 151A; concurrent enrollment in SE 151B; SE major.*

SE 154. Design of Timber Structures (4)
Properties of wood and lumber grades. Beam design. Design of axially loaded members. Design of beam-column. Properties of plywood and structural-use panels. Design of horizontal diaphragms. Design of shear walls. Design of nailed and bolted connections. *Prerequisites: grade of C- or better in SE 103 and SE 130A; SE major.*

SE 160A. Aerospace Structural Design (4)
Aircraft and spacecraft flight load definition and operational envelopes, metallic and composite material selection and comparison, applied elasticity, failure theories, stiffened shear panels, thin-wall open and closed-cell torsion pressure vessels, unsymmetical beam bending, shear center, and bending of plates. *Prerequisites: grade of C- or better in SE 101B (or MAE 130B) and SE 110A (or MAE 131A); priority given to engineering majors.*

SE 160B. Aerospace Structural Design (4)
Work-energy principles, statically indeterminate structures, matrix methods, application of finite element method to aerospace structures, sandwich composite structures, structural dynamics of space structures, structural stability of beams, and shells, tension field beams, wing divergence and control reversal, flutter, fasteners, and structural joints. *Prerequisites: grade of C- or better in SE 160A, and SE 101C or MAE 130C; priority given to engineering majors.*

SE 162. Composites – Materials and Manufacturing (4)
Introduction to fibers, resins, composite types, manufacturing methods, stiffness, strength, failure mechanisms, lamination theory, testing. *Prerequisites: grades of C– or better in SE 110A, SE 121, and Math 20F.* Priority enrollment given to structural engineering majors.

SE 163. Nondestructive Evaluation (4)
Damage detection, materials characterization. Introduction to nondestructive evaluation. Impedance-based methods, ultrasonics, acoustic, thermography, shearography, liquid penetrant, proof testing, stress coatings, vibrational techniques. *Prerequisites: grade of C- or better in SE 110A and SE 110B or consent of instructor; SE major.*

SE 170. Civil Structures Rehabilitation (4)
Identification of structural distress, lessons from past history, materials and structural concepts related to rehabilitation, seismic retrofit. Strengthening of beams, slabs and walls, design detailing, safety factors, fabrication/installation methods. *Prerequisites: grade of C– or better in SE 103, SE 110A, SE 130A-B, and SE 151.* Priority enrollment given to structural engineering majors.

SE 171. Aerospace Structures Repair (4)
Identification of structural distress, corrosion/stress corrosion cracking, fatigue cracking, damage tolerance, integrity and durability of built-up members, patching, health monitoring. *Prerequisites: grade of C– or better in SE 103 and SE 130A-B.* Priority enrollment given to structural engineering majors.

SE 180. Earthquake Engineering (4)
Elements of seismicity and seismology. Seismic hazards. Dynamic analysis of structures underground motion. Elastic and inelastic response spectra. Modal analysis, nonlinear time-history analysis. Earthquake resistant design. Seismic detailing. *Prerequisites: grade of C– or better in SE 110A, and SE 130A.* Priority enrollment given to structural engineering majors.

SE 181. Geotechnical Engineering (4)
General introduction to physical and engineering properties of soils. Soil classification and identification methods. Compaction and construction control. Total and effective stress. Permeability, seepage, and consolidation phenomena. Shear strength of sand and clay. *Prerequisites: grade of C- or better in SE 110A or MAE 131A; SE major.*

SE 182. Foundation Engineering (4)
Application of soil mechanics to the analysis, design, and construction of foundations for structures. Soil exploration, sampling, and in-situ testing techniques. Stress distribution and settlement of structures. Bearing capacities of shallow foundations. Axial and lateral capacity of deep foundations, earth pressures on retaining walls. *Prerequisites: grade of C- or better in SE 181; SE major.*

SE 195. Teaching (2-4)
Teaching and tutorial assistance in a SE course under supervision of instructor. Not more than four units may be used to satisfy graduation requirements. (P/NP grades only.) *Prerequisites: B average in major, upper-division standing and consent of department chair. Department stamp required.*

SE 197. Engineering Internship (1-4)
An enrichment program, available to a limited number of undergraduate students, which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industrial supervisor. Coordination of the Engineering Internship is conducted through UCSD's Academic Internship Program. *Prerequisites: completion of ninety units with a 2.5 GPA and consent of department chair. Department stamp required.*

SE 198. Directed Study Group (4)
Directed group study, on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor or department stamp.*

SE 199. Independent Study (4)
Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor or department stamp.*

GRADUATE

SE 201. Advanced Structural Analysis (4)
Applications of advanced analytical concepts to structural engineering problems. Effects of approximations in the descretization and the type of finite elements under consideration. An introduction is given to the nonlinear behavior of structural systems focusing on basic concepts and computational techniques. *Prerequisites: SE 130A-B or equivalent, or consent of instructor.*

SE 202. Structural Stability (4)
Static, dynamic, and energy-based techniques and predicting elastic stability. Linear and nonlinear analysis of classical and shear deformable beams and plates. Ritz, Galerkin, and finite element approaches for frames and reinforced shells. Nonconservative aerodynamic (divergence flutter) and follower forces. *Prerequisite: SE 110B or consent of instructor.*

SE 203. Structural Dynamics (4)
Response of the linear systems to harmonic, periodic and transient excitations. Duhamel's integral response spectra. Principles of dynamics, Hamilton's principle and Lagrange's equations. Linearization of the equations of motion. Free and forced vibrations. Matrix iteration, Jacobi, normal mode and frequency response method. *Prerequisites: MAE 231A-B or consent of instructor.*

SE 204. Advanced Structural Dynamics (4)
Free- and forced-vibration response of continuous systems including axial and torsional vibrations of bars and transverse vibrations of beams, membranes and plates. Differential and integral formulations of the eigenvalue problem. Perturbation and iteration methods. Introduction to structural control.

SE 206. Random Vibrations (4)
Introduction to probability theory and random processes. Dynamic analysis of linear and nonlinear structural systems subjected to stationary and nonstationary random excitations. Reliability Studies related to first excursion and fatigue failures. Applications in earthquake engineering, offshore engineering, wind engineering, and aerospace engineering. *Prerequisites: SE 203 or equivalent and basic knowledge of probability theory (e.g., SE 125).*

SE 207. Topics in Structural Engineering (4)
A course to be given at the discretion of the faculty in which topics of current interest in structural engineering will be presented.

SE 211. Advanced Reinforced and Prestressed Concrete Design (4)
Advanced topics in concrete design, including frame and shear wall structures, design of connections. reinforced and prestressed concrete system evaluation for seismic resistance including confinement and ductility requirements. Upper and lower bound theories for slab design. *Prerequisites: SE 151, or equivalent background in basic RC/PC design, or consent of instructor.*

SE 212. Advanced Structural Steel Design (4)
(Formerly AMES 245) Load and resistance factor design (LRFD) philosophy. Behavior and design of steel elements for global and local buckling. Bracing requirements for stability. Conventional and advanced analysis techniques for P-delta effects. Cyclic behavior. Ductility requirement for seismic design. Composite construction. *Prerequisites: SE 201 and SE 150, or equivalent course, or consent of instructor.*

SE 213. Bridge Design (4)
Design and analysis of bridge structures, construction methods, load conditions. Special problems in analysis—box girders, curved and skewed bridges, environmental and seismic loads. Bearings and expansion joints. Time- temperature-dependent superstructure deformations. Conceptual/preliminary bridge design project. *Prerequisites: SE 201, and fundamental courses in RC and PC design, or consent of instructor.*

SE 214. Masonry Structures (4)
Analysis and design of unreinforced and reinforced masonry structures using advanced analytical techniques and design philosophies. Material properties, stability, and buckling of unreinforced masonry. Flexural strength, shear strength, stiffness, and ductility of reinforced masonry elements. Design for seismic loads. *Prerequisites: SE 151, or equivalent basic reinforced concrete course, or consent of instructor.*

SE 221. Earthquake Engineering (4)
Introduction to plate tectonics and seismology. Rupture mechanism, measures of magnitude and intensity, earthquake occurrence and relation to geologic, tectonic processes. Probabilistic seismic hazard analysis. Strong earthquake ground motion; site effects on ground motion; structural response; soil-structure interaction; design criteria; code requirements.

SE 222. Geotechnical Earthquake Engineering (4)
Influence of soil conditions on ground motion characteristics; dynamic behavior of soils, computation of ground response using wave propagation analysis and finite element analysis; evaluation and mitigation of soil liquefaction; soil-structure interaction; lateral pressures on earth retaining structures; analysis of slope stability.

SE 223. Advanced Seismic Design of Structures (4)
Introduction to fundamental concepts in seismic design of structures. Ductility. Elastic and inelastic response. Time-history analysis. Response spectral analysis. Force- and displacement-based design. Capacity design principles. Learning from earthquake damage. Performance-based design concepts.

SE 234. Plates and Shells (4)
General mathematical formulation of the theory of thin elastic shells; linear membrane and bending theories; finite strain and rotation theories; shells of revolution; shallow shells; selected static and dynamic problems; survey of recent advances.

SE 241. Advanced Soil Mechanics (4)
Advanced treatment of topics in soil mechanics, including state of stress, pore pressure, consolidation and settlement analysis, shear strength of cohesionless and cohesive soils, mechanisms of ground improvement, and slope stability analysis. Concepts in course reinforced by laboratory experiments.

SE 242. Advanced Foundation Engineering (4)
Advanced treatment of topics in foundation engineering, including earth pressure theories, design of earth retaining structures, bearing capacity, ground improvement for foundation support, analysis and design of shallow and deep foundations, including drilled piers and driven piles.

SE 243. Soil-Structure Interaction (4)
Advanced treatment of soils interaction with structures, including shallow and deep foundations, bridge abutments, retaining walls, and buried structures subjected to static and dynamic loading. Elastic approximation. Linear and nonlinear Winkler models p-y and t-z curves.

SE 244. Numerical Methods in Geomechanics (4)
Application of the finite element method to static and dynamic analysis of geotechnical structures. One-, 2-, and 3-D seismic site response of earth structures and slopes. Pore-pressure generation and effects during cyclic loading. System identification using strong motion array data.

SE 245. Constitutive Modeling and Numerical Implementation (4)
Development and numerical implementation of procedures to model the nonlinear behavior of engineering materials, including soil and concrete. Inelastic hyperbolic and elasto-plastic modeling of hysteretic response to cyclic loading. Behavior of soil-structure systems under transient loading, such as seismic earthquake excitation, will be discussed.

SE 251. Processing Science of Composites (4)
Introduction to processing, fabrication methods; process models; materials-process-microstructure interaction; materials selection; form and quality control. Wet layup/sprayup, autoclave cure, SMC; injection molding, RTM; resin infusion; winding and fiber placement; pultrusion. Process induced defects, environmental considerations.

SE 252. Experimental Mechanics and NDE (4)
Theory of electrical resistance strain gages, full-field coherent optical methods including photoelasticity, moire' and speckle interferometry, ultrasonics, thermography and fiberoptic sensing. Applications to materials characterization, defect detection and health monitoring of structures with emphasis on fiber-reinforced composites. *Prerequisites: SE 101A, SE 110A, and MAE 131B, or consent of the instructor.*

SE 253. Mechanics of Laminated Composite Structures (4)
Macro- and micro-material modeling. Classical and shear deformable laminate beam and plate theories developed via energy principles. Ritz, Galerkin, and finite element-based solutions to static, vibration, and stability problems. Assignments include computer program development and use of existing commercial programs. *Prerequisites: SE 101C, SE 110B, and SE 162 or equivalent, or permission of the instructor.*

SE 255. Textile Composite Structures (4)
Introduction to textile structure and behavior, mechanics of yarns and fabrics as relevant to structural composites and geotechnical applications. Mechanics of textiles and fabric-based composites. Applications in fiber reinforced composites, coated textile structures, geotextiles.

SE 261. Aerospace Engineering Design (4)
Advanced topics in the design of weight-critical aerospace structures. Topics include: static, dynamic and environmental load definitions; metallics and polymeric composite material selection; semi-monocoque analysis techniques, and bolted/bonded connections. Design procedures for sizing the structural components of aircraft and spacecraft will be reviewed.

SE 262. Aerospace Structures Repair (4)
Design and analysis for repairing weight-critical aerospace structures. Identification of primary and secondary structural components, review of NASA/FAA approved repair techniques for metallic and composite structural components.

SE 271. Solid Mechanics for Structural and Aerospace Engineering (4)
Application of principles of solid mechanics to structural components and systems, description of stresses, strains, and deformation. Use of conservation equations and principle of minimum potential energy. Development of constitutive equations for metallic cementitious and polymeric materials. *Prerequisites: SE 110A, or consent of instructor.*

SE 272. Theory of Elasticity (4)
Development, formulation, and application of field equations of elasticity and variational principles for structural applications in civil and aerospace area. Use of plane stress and plane strain formulation, solution of typical boundary value problems. *Prerequisites: SE 271, or consent of instructor.*

SE 273. Theory of Plasticity and Viscoelasticity (4)
Mechanical models of viscoelastic, plastic, and viscoplastic behavior in simple shear or uniaxial stress. Constitutive relations for three-dimensional states of stress and strain. Application to selected technological problems for civil and aerospace structural applications. *Prerequisites: SE 272, or consent of instructor.*

SE 290. Seminar in Earthquake Engineering (2)
Weekly seminar and discussion by faculty, visitors, postdoctoral research fellows and graduate students concerning research topics in earthquake engineering and related subjects. May be repeated for credit. *Prerequisite: consent of instructor.* (S/U grades only.)

SE 291. Seminar in Advanced Composite Structures (2)
Weekly seminar and discussion by faculty, visitors, postdoctoral research fellows and graduate students concerning research topics in advanced composite structures and related subjects. May be repeated for credit. *Prerequisite: consent of instructor.* (S/U grades only.)

SE 296. Independent Study (4)
Prerequisite: consent of instructor.

SE 298. Directed Group Study (1-4)
Directed group study on a topic or in a field not included in regular department curriculum, by special arrangement with a faculty member. *Prerequisite: consent of instructor.*

SE 299. Graduate Research (1-12)
(S/U grades permitted.)

SE 501. Teaching Experience (2)
Teaching experience in an appropriate SE undergraduate course under direction of the faculty member in charge of the course. Lecturing one hour per week in either a problem-solving section or regular lecture. *Prerequisite: consent of instructor and the department.* (S/U grades permitted.)

English as a Second Language

OFFICE: 3232 Literature Building,
Warren College
http://esl.ucsd.edu/

Director

Margaret Loken, M.A.

The English as a Second Language Program (ESL) offers three courses designed for students whose home language is not English (ENGL 10, 11, 120).

ENGL 10–Intermediate Writing is a required course for all undergraduates who have not satisfied the Subject A requirement and who have been designated as needing the course based on their Subject A Examination. They must earn the equivalent of a C and have their instructor's recommendation to enroll in the Subject A writing course. Those who earn an equivalent of an A or B will also be recommended to take the Subject A exit exam, with the possibility of going on to their college writing program should they pass.

COURSES

10. Intermediate Writing (4)
This course is designed to provide intensive practice in the conventions of academic English to those students whose first language is not English. This course prepares students for the Subject A writing course. May be repeated once for credit, a second time for workload credit only. *Prerequisite: A department stamp is required.*

11. Writing Workshop (3)
This course is offered to any students who need additional help improving their writing. The course includes class discussion and individualized instruction, and addresses students' grammar and syntax needs.

120. ESL Writing for Graduate Students (4)
This course, designed for graduate students whose first language is not English, provides practice in the

conventions of academic writing required in specific fields of study. Students deal with common rhetorical and grammatical issues but work on writing tasks for their respective disciplines. Workload credit only. May be repeated.

500. Apprentice Teaching of ESL (1-4)
The course, designed for graduate students serving as teaching assistants, includes discussion of teaching theories, techniques, and materials under the supervision of the instructor in charge of the course.

Environmental Studies

David Woodruff, Ph.D., *Professor, Biology—Ecology, Behavior and Evolution*

Minor in Environmental Studies

The minor addresses the scientific, technical, social, and cultural issues raised by the conflicting needs of the worldwide complex of preindustrial, industrial, and postindustrial societies.

Some of the courses related to the minor, particularly those in Group A, have significant prerequisites; students planning an Environmental Studies minor should check catalog course descriptions carefully. Some credit toward the minor may be gained through independent study, field research, study abroad, the Academic Internship Program, and others (prior approval strongly recommended). Petitions for petitionable courses, transfer courses, and individual additions to the courses listed below must be approved by the chair of the Environmental Studies Steering Committee. For updates, individual advising, and quarterly lists, please come to the Environmental Studies Office: Muir Interdisciplinary Studies, 2073 HSS, mail code 0106, phone (858) 534-3589.

Applicable and Petitionable Courses

Environmentally-based courses offered by UCSD departments fall into two categories: applicable and petitionable. Applicable courses are those which have been approved as always applying to the ENVR minor. Petitionable courses (identified by a # sign below) are either new and therefore not yet approved as applicable or are "topics" courses which focus on environmental matters only in particular quarters. Petitionable courses may be approved by petition to the minor during the quarters in which they appear in the ENVR quarterly lists.

Quarterly Lists

Each quarter, when the upcoming quarter's *Schedule of Classes* is published, the Environmental Studies quarterly list is available in 2073 HSS and at the Web site. It is an important, comprehensive source of information about ENVR course offerings as well as those from departments throughout the campus. It identifies applicable as well as petitionable courses for a given quarter. For reference, the office and the Web site maintain archives of quarterly lists.

The minor is structured as follows:

Required:
Environmental Studies 30, usually offered in the fall quarter.
Environmental Studies 130, usually offered in the spring quarter (need not be taken consecutively).

Required:
Five additional courses, at least four in the upper-division, from the following two groups. At least one course must be taken from Group A and one from Group B.

Group A—Natural Sciences

Biology LD 3. Organismic and Evolutionary Biology
Biology EB 120. General Ecology
Biology EB 121. General Ecology Laboratory
Biology EB 130. Introductory Marine Ecology
Biology EB 140. Biodiversity
Biology EB 176. Conservation and the Human Predicament (cross-listed with ANBI 132)
Biology EB 178. Principles of Conservation Biology
Biology EB 179. Conservation Biology Laboratory
Chemistry 15. Chemistry of the Universe
Chemistry 149A. Environmental Chemistry
Chemistry 149B. Environmental Chemistry
Chemistry 173. Atmospheric Chemistry
Earth Sciences 10. The Earth
Earth Sciences 12. History of Earth and Evolution
Earth Sciences 20. The Atmosphere
Earth Sciences 30. The Oceans
#Earth Sciences 101. Introduction to Earth and Environmental Science
Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a natural sciences perspective)
Environmental Systems 101. The Living Earth
Environmental Systems 150. Environmental Perils
MAE 118A. Energy: Non-Nuclear Energy Technologies
Physics 12. Energy and the Environment
Science, Technology, Public Affairs 35. Society and the Sea

Group B—Social Sciences/Humanities

Anthropology GN 182. Origins of Agriculture and Sedentism (was ANGN 100)
Anthropology GN 160. Nature, Culture and Environmentalism
#Anthropology GN 163. Technical Revolutions and Evolution
Anthropology BI 132. Conservation and the Human Predicament (cross-listed with BIEB 176)
Communication CUL 148. Communication and the Environment
#Communication CUL 175. Advanced Topics in Communication: Culture
Economics 131. Economics of the Environment
Economics 132. Energy Economics
Economics 145. Economics of Ocean Resources
Environmental Studies 102. Selected Topics in Environmental Studies (when taught from a humanities/social sciences perspective)
Environmental Studies 110. Environmental Law
#History SC 100. Understanding the Earth/Historical Topics
#History SC 104. History of Popular Science
History SC 105A. History of Environmentalism: Ecology
History SC 105B. History of Environmentalism: Physical Systems

#History TO 121. Geographic Information Systems for Historians and Social Scientists
#History US 114. California History
#History US 117. History of Los Angeles
History US 137. The Built Environment in the Twentieth Century
History US 154. Western Environmental History (cross-listed with USP 160)
#History US 162. American West
#IRPS GN 257. Policy Analysis
#IRPS GN 290/490. Special Topics in Pacific International Affairs
IRPS GN 458. International Environmental Policy
IRPS GN 459. Conflict Resolution of Environmental Issues
#Literature EN 147. Metamorphoses of the Symbol
#Literature EN 148. Genres in English and American Literature
#Literature EN 149. Themes/English and American Literature
#Literature GN 160. Specialized Genres in Literature
#Literature WR 122. Writing for the Sciences
#Literature WR 127. General Nonfiction Prose Workshop
#Literature WR 142. Forms of Written Discourse
Philosophy 148. Philosophy and the Environment
Philosophy 164. Technology and Human Values
#Political Science 154. Special Topics in International Relations
Political Science 162. Environmental Policy
#Sociology D 185. Globalization and Social Development
Urban Studies & Planning 2. Urban World System
Urban Studies & Planning 105. Environmental and Urban Planning Problems: The U.S.-Mexico Border
Urban Studies & Planning 124. Land Use Planning
Urban Studies & Planning 144. Environmental and Preventive Health Issues
Urban Studies & Planning 160. Western Environmental History (cross-listed with HIUS 154)
Urban Studies & Planning 171. Sustainable Development
Urban Studies & Planning 175. Environmental Problems of Urban Studies
#Visual Arts 107G. Earthworks to Ecological Art
#Visual Arts 131. Special Projects in Media

#These courses satisfy minor requirements only when taught with an emphasis on environmental considerations. They must be petitioned for minor credit.

COURSES

30. Environmental Issues: Natural Sciences (4)
Examines global and regional environmental issues. The approach is to consider the scientific basis for policy options. Simple principles of chemistry and biology are introduced. The scope of problems include: air and water pollution, climate modification, solid-waste disposal, hazardous-waste treatment, and environmental impact assessment. *Prerequisite: none.*

90. Undergraduate Seminar (1)
Provides an introduction to environmental studies. Faculty members from departments in natural sciences, social sciences, and humanities offer perspectives on human interaction with the environment and the ways in which the interplay between nature and culture can be analyzed. May be repeated for credit as topics vary.

102. Selected Topics in Environmental Studies (4)
An interdisciplinary course focusing on one of a variety of topics related to environmental studies such as environmental policy and politics, foreign study in environmental problems, environmental history, nature writers, ethics and the environment. May be repeated for credit as topics vary. *Prerequisite: upper-division standing or consent of instructor.*

110. Environmental Law (4)
Explores environmental policy in the United States and the ways in which it is reflected in law. The social and political issues addressed include environmental justice and environmental racism, as well as the role of government in implementing environmental law. *Prerequisite: upper-division standing or consent of instructor.*

130. Environmental Issues: Social Sciences (4)
Explores contemporary environmental issues from the perspective of the social sciences. It includes the cultural framing of environmental issues and appropriate social action, the analysis of economic incentives and constraints, and a comparison of policy approaches. *Prerequisite: upper-division standing or consent of instructor.*

198. Directed Group Study (4)
Directed group research and study, normally with a focus on areas not otherwise covered in the curriculum. *Prerequisite: upper-division standing or consent of instructor. Department stamp required.*

500. Apprentice Teaching in Environmental Studies (4)
A course in which taching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other wirtten exercises, and student relations. *Prerequisite: graduate standing.*

Environmental Systems

Keith Pezzoli, *Lecturer, Urban Studies and Planning*
Frank L. Powell, *Professor, Medicine/Director, White Mountain Research Station*
Jeffrey B. Remmel, *Professor, Mathematics*
Richard C. J. Somerville, *Professor, Meteorology, SIO*
Lisa Tauxe, *Professor, Geosciences, SIO*
Jeffrey R. Vincent, *Professor, Environmental Economics*

There can be little doubt that in the twenty-first century the global human community is facing a substantial growth in the environmental consequences of providing food, energy, materials, and basic services to a population of more than six billion inhabitants. The Environmental Systems Program recognizes the growing demand for environmental specialists and is designed to prepare undergraduates to enter a broad spectrum of environmental careers and graduate programs in, for example, the natural sciences, the social sciences, public policy, law, and business.

This interdisciplinary program recognizes that local, national, regional, international, and global environmental problems do not fit neatly into traditional academic departments. A measurable part of society's inability to effectively manage complex environmental problems stems from the lack of specialists who can apply analytical tools that cross disciplinary boundaries. Many environmental specialists possess little training in the natural sciences including both the fundamental ideas and methodologies of the earth

and *environmental* sciences. The environmental systems major was created to address both of these shortcomings.

To encourage and foster an interdisciplinary focus in the major, the Environmental Systems Program is supported by a wide range of UCSD faculty representing the natural sciences, the social sciences, the humanities, engineering, and medicine. The program includes a required lower-division core, an upper-division "integrating course sequence," two other upper-division courses and statistics, an advanced track, and a senior integrative project and seminar. There is a strong emphasis on a rigorous natural science foundation as well as an introduction to the policy sciences for all students enrolled in the major.

The Environmental Systems program places a significant value on interdisciplinary problem solving and all majors are expected to complete an integrative Senior Project in their final year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic. Appropriate topics for the Senior Project could conceivably include biodiversity conservation, coastal zone management, environmental health, climate change, environmental justice, and/or urban air quality. An important component of the Senior Project is an off-campus or laboratory internship where students might work on, for example, the development of a comprehensive management plan for a threatened ecosystem. The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects.

The Environmental Systems Major

The requirements for completion of the environmental systems major include a lower-division core, two upper-division courses, a three course upper-division integrating sequence (ESYS 101, ESYS 102, ESYS 103), an upper-division statistics course, advanced courses in one of four tracks, and the senior project (ESYS 190A) and senior seminar (ESYS 190B). Any questions concerning the requirements should be directed to the associate director or the program adviser.

Students completing the advanced tracks in "Earth Sciences," "Ecology, Behavior, and Evolution," and "Environmental Chemistry" will be awarded a B.S. in environmental systems. The B.A. in environmental systems will be granted to students completing the "Environmental Policy" track within the major.

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted.

LOWER-DIVISION CORE REQUIREMENTS
(Should be completed early in student's degree program.)

Biology 3—BILD 3

Chemistry 6A, 6B, 6BL, 6C—Environmental Chemistry track students must also complete Chemistry 6CL

Physics 1A, 1AL, 1B, 1BL, 1C, 1CL—Earth Sciences track students complete Physics 2A-B-C

Mathematics 10A, 10B, 10C—Earth Sciences track students may complete Math. 20A-B-C instead and Math. 20D is recommended

Economics 1A

UPPER-DIVISION CORE REQUIREMENTS

Economics 131. Economics of the Environment
Political Science 160AA. Introduction to Policy Analysis

"Integrating Course Sequence"
(Should be taken junior year.)

Environmental Systems 101. The Living Earth
Environmental Systems 102. The Solid and Fluid Earth
Environmental Systems 103. The Human Earth
Environmental Systems 190A. Senior Project (two quarters)
Environmental Systems 190B. Senior Seminar

Special Studies Courses

Special studies in the environmental systems is offered as Esys 199. This course is subject to consent of the instructor and approval by the Environmental Systems faculty adviser. This course is open to students who have accrued at least ninety quarter-units and have a GPA of least 3.0. No more than two quarters of environmental systems special studies may be counted toward any environmental systems major.

Environmental Systems Major Tracks

There are four advanced tracks in which students must complete a minimum of seven upper-division courses. Students will select courses following the requirements below in consultation with a faculty adviser.

Earth Sciences
Ecology, Behavior, and Evolution
Environmental Chemistry
Environmental Policy

It is possible to complete the requirements for any of the Environmental Systems tracks with five upper-division electives and a specialization that consists of two additional upper-division electives from any other track. For example, a student interested in the policy and scientific dimensions of habitat conservation planning for endangered species might plan a course of study to include five advanced courses from the Ecology, Behavior, and Evolution track and two advanced courses from the Environmental Policy track.

Earth Sciences Track

Required upper-division courses:

ERTH 101. Introduction to Earth and Environmental Sciences
ERTH 102. Introduction to Geochemistry
MATH 183. Statistical Methods (This statistics course, required in sophomore year)
Upper-division electives: (must complete a minimum of seven courses)

Solid Earth emphasis:

ERTH 104. Geobiology
ERTH 105. Sedimentology and Stratigraphy
ERTH 120. Introduction to Mineralogy
ERTH 130. Geodynamics of Terrestrial Planets
ERTH 144. Isotope Geochemistry
ERTH 160. Introduction to Tectonics
ERTH 162A. Introduction to Field Geology
ERTH 162L. Structural Analysis for Field Geology
ESYS 120. Science and Environmental Writing
SIO 210. Physical Oceanography
SIO 260. Marine Chemistry
SIO 240. Marine Geology
Other ERTH/SIO courses by petition

Ocean/Atmosphere emphasis:

ERTH 142. Atmospheric Chemistry and Biochemical Cycles

Chemistry 149A. Environmental Chemistry
Chemistry 173. Atmospheric Chemistry
SIO 240. Marine Geology
SIO 269. Special Topics in Marine Chemistry
SIO 280. Biological Oceanography

Other courses may be substituted by petition.

Study abroad through the Education Abroad Program or Opportunities Abroad Program can enhance a student's major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Environmental Systems Office as early as possible if you are planning to study abroad.

COURSES

Many of the courses that are used to fulfill the requirements of the environmental systems major are offered by other departments and programs. Most of these courses are offered on a regular basis. Students should consult the Schedule of Classes or contact the Environmental Systems Office in order to obtain current information. The courses below are offered directly through the Environmental Systems Program.

LOWER-DIVISION

ESYS 10. Introduction to Environmental Systems (4)
This course explores the interdisciplinary character of environmental issues through an examination of a particular topic [climate change, for example] from numerous disciplinary perspectives [e.g., biology, chemistry, physics, political science, and economics]. *Prerequisite: none.* (W)

ESYS 90. Perspectives on Environmental Issues (1)
Provides an introduction to environmental systems. Faculty members from departments in the natural sciences, geosciences, and social sciences will offer perspectives in these areas. (F)

UPPER-DIVISION

ESYS 101. The Living Earth (4)
This course will survey the basic biochemical and physiological processes governing the relationship between organisms and their environments. Fundamentals of molecular biology, enzyme reactions, photosynthesis, and central metabolic processes, mechanisms underlying homeostasis at cellular and organismal levels will be discussed with a view toward understanding the adaptations and sensitivity of biological systems to environmental perturbations. *Prerequisites: Math. 10A, 10B, 10C, BILD 3, CHEM 6A-B-C, Physics 1A, AL-B, BL-C, CL.* (F)

ESYS 102. The Solid and Fluid Earth (4)
The physical Earth system can be divided into three components: the solid earth, the liquid earth, and the atmosphere. These components are all dynamic and interact in complex ways with profound impacts on our environment. We will examine the controls of natural phenomena such as earthquakes, volcanoes, landslides, soil formation (and destruction), and changes in sea-level and climate. *Prerequisites: Math. 10A, 10B, 10C, BILD 3, CHEM 6A-B-C, Physics 1A-B-C plus either Chem/Physics lab.* (W)

ESYS 103. The Human Earth (4)
This course explores the impacts of human, social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation, and governmental regulation on local, national, and global scales. *Prerequisites: grade of C- or better in Math. 20B or Math. 10A-C; Physics 2B or Physics A-C; Chemistry 6B or by consent of instructor. In addition, ESYS majors, must take ESYS 101 and 102 or permission of instructor.* (S)

ESYS 120. Science and Environmental Writing (4)
Course designed to improve the written communication of science majors through frequent writing assignments that develop the practical skills needed to communicate science to lay audiences. Topics include news writing, news releases, grant writing, broadcast script writing, and editorial writing. *Prerequisites: upper-division standing in science or mathematics major and completion of college composition requirement (or consent of instructor).* (W)

ESYS 150. Environmental Perils (4)
An advanced field-oriented course for engineering and science students stressing the geologic basis for environmental perils such as earthquakes, erosion, flooding, and waste disposal. Two one-hour lectures, and a two-hour lab/field trip each week. *Prerequisites: Math. 10 A-B-C sequence and Physics 1A,AL; 1B,BL; 1C,1CL sequence or equivalent.* (S)

ESYS 190A. Senior Project (8)
All majors are required to complete an integrative Senior Project in their senior year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic and is developed either individually or as part of a team over two quarters. Appropriate topics could include biodiversity conservation, environmental health, and/or global change. An important component of the Senior Project is an off-campus or laboratory internship. *Prerequisites: ESYS 103 and upper-division standing, departmental approval, majors only.* (F,W)

ESYS 190A(W). ESYS/UCDC Senior Project (4)
ESYS majors may opt to complete the internship portion of their Senior Project through the UCDC Program. Students are expected to apply to the fall or winter quarter of UCDC Program and obtain an internship in a governmental agency, NGO, and/or research laboratory. *Prerequisites: ESYS 103 and upper-division standing, departmental approval, majors only.* (F,W)

ESYS 190B. Senior Seminar (2)
The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects. *Prerequisite: ESYS 190A or 190A(W) (NOTE: After completing (1) quarter of ESYS 190A, ESYS 190B may be taken concurrently), senior standing.* (S)

ESYS 199. Independent Study (2-4)
Individually guided readings or projects in the area of environmental systems.

Olga Vasquez, *Associate Professor, Communication*
Daniel Widener, *Assistant Professor, History*
Lisa Yoneyama, *Associate Professor, Literature*
Elana Zilberg, *Assistant Professor, Economics*

Ethnic studies is the study of the social, cultural, and historical forces that have shaped the development of America's diverse ethnic peoples over the last 500 years and which continue to shape our future. Focusing on immigration, slavery, and confinement, those three social processes that combined to create in the United States a nation of nations, ethnic studies intensively examines the histories, languages, and cultures of America's racial and ethnic minority groups in and of themselves, in their relationships to each other, and, particularly, in structural contexts of power.

The curriculum of the Department of Ethnic Studies is designed to 1) study intensively the particular histories of different ethnic and racial groups in the United States, especially intra-group stratification; 2) to draw larger theoretical lessons from comparisons among these groups; 3) to articulate general principles that shape racial and ethnic relations both currently and historically; and 4) to explore how ethnic identity is constructed and reconstructed over time both internally and externally.

A degree in ethnic studies offers training of special interest to those considering admission to graduate or professional schools and careers in education, law, medicine, public health, social work, journalism, business, city planning, politics, psychology, international relations, or creative writing. A major in ethnic studies is designed to impart fundamental skills in critical thinking, comparative analysis, social theory and research analysis, and written expression. These skills will give students the opportunity to satisfy the increasingly rigorous expectations of graduate admissions committees and prospective employers for a broad liberal arts perspective.

An ethnic studies major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career.

The Major

To receive a B.A. degree with a major in ethnic studies, students must meet the following requirements:

1. A three-quarter course lower-division sequence (Ethnic Studies 1A-B-C). Ideally this sequence should be taken during the sophomore year as an intensive introduction to the history and theoretical dimensions of ethnic diversity in the United States. Ethnic Studies 1A-B-C, Introduction to Ethnic Studies, will consist of the following three courses: Population Histories of the United States, Immigration and Assimilation in American Life, Race and Ethnic Relations in the United States.
2. A minimum of twelve four-unit upper-division courses in the Department of Ethnic Studies must be completed from the following five categories:
   A. One four-unit upper-division course that intensively explores the theory and comparative methods of ethnic studies (Ethnic Studies 100: Theories and Methods of Ethnic Studies). All ethnic studies majors

Political Science 125. The Politics of Conservation in Developing Countries
Political Science 150A. Politics of Immigration
Political Science 160AB. Introduction to Policy Analysis
Environmental Systems 120. Science and Environmental Writing
Environmental Systems 150. Environmental Perils
IR-GN 459*. Conflict Resolution of Environmental Issues
IR-GN 488*. Corporate Strategy and the Environment
IR-GN 490*. Political Economy of Energy in Asia
IR-GN 490*. Political Economy of Energy in Latin America
IR-GN 490*. Special Topics
IR-PS 453*. Sustainable Development
IR-PS 458*. International Environmental Policy
HISC 105. History of Environmentalism
HIUS 154. Western Environmental History
ANBI 132. Conservation and the Human Predicament
Com/Cul 148. Communication and the Environment
Env. Studies 102. Selected Topics in Environmental Studies
Env. Studies 110. Environmental Law
Philosophy 148. Philosophy of the Environment
Philosophy 164. Technology and Human Values
USP 124. Land Use Planning
USP 144. Environmental and Preventive Health Issues
USP 170. Planning Theory and Practice
USP 171. Sustainable Development

Other courses may be substituted by petition.

* These graduate courses are offered through the Graduate School of International Relations and Pacific Studies. Enrollment in these courses requires the permission of the instructor.

Study abroad through the Education Abroad Program or Opportunities Abroad Program can enhance a student's major, particularly as an opportunity for diverse field experiences. However, careful planning is important to meet all major requirements. Please contact the Environmental Systems Office as early as possible if you are planning to study abroad.

COURSES

Many of the courses that are used to fulfill the requirements of the environmental systems major are offered by other departments and programs. Most of these courses are offered on a regular basis. Students should consult the Schedule of Classes or contact the Environmental Systems Office in order to obtain current information. The courses below are offered directly through the Environmental Systems Program.

LOWER-DIVISION

ESYS 10. Introduction to Environmental Systems (4)
This course explores the interdisciplinary character of environmental issues through an examination of a particular topic [climate change, for example] from numerous disciplinary perspectives [e.g., biology, chemistry, physics, political science, and economics]. *Prerequisite: none.* (W)

ESYS 90. Perspectives on Environmental Issues (1)
Provides an introduction to environmental systems. Faculty members from departments in the natural sciences, geosciences, and social sciences will offer perspectives in these areas. (F)

UPPER-DIVISION

ESYS 101. The Living Earth (4)
This course will survey the basic biochemical and physiological processes governing the relationship between organisms and their environments. Fundamentals of molecular biology, enzyme reactions, photosynthesis, and central metabolic processes, mechanisms underlying homeostasis at cellular and organismal levels will be discussed with a view toward understanding the adaptations and sensitivity of biological systems to environmental perturbations. *Prerequisites: Math. 10A, 10B, 10C, BILD 3, CHEM 6A-B-C, Physics 1A, AL-B, BL-C, CL.* (F)

ESYS 102. The Solid and Fluid Earth (4)
The physical Earth system can be divided into three components: the solid earth, the liquid earth, and the atmosphere. These components are all dynamic and interact in complex ways with profound impacts on our environment. We will examine the controls of natural phenomena such as earthquakes, volcanoes, landslides, soil formation (and destruction), and changes in sea-level and climate. *Prerequisites: Math. 10A, 10B, 10C, BILD 3, CHEM 6A-B-C, Physics 1A-B-C plus either Chem/Physics lab.* (W)

ESYS 103. The Human Earth (4)
This course explores the impacts of human, social, economic, and industrial activity on the environment. It highlights the central roles in ensuring sustainable development played by market forces, technological innovation, and governmental regulation on local, national, and global scales. *Prerequisites: grade of C– or better in Math. 20B or Math. 10A-C; Physics 2B or Physics A-C; Chemistry 6B or by consent of instructor. In addition, ESYS majors, must take ESYS 101 and 102 or permission of instructor.* (S)

ESYS 120. Science and Environmental Writing (4)
Course designed to improve the written communication of science majors through frequent writing assignments that develop the practical skills needed to communicate science to lay audiences. Topics include news writing, news releases, grant writing, broadcast script writing, and editorial writing. *Prerequisites: upper-division standing in science or mathematics major and completion of college composition requirement (or consent of instructor).* (W)

ESYS 150. Environmental Perils (4)
An advanced field-oriented course for engineering and science students stressing the geologic basis for environmental perils such as earthquakes, erosion, flooding, and waste disposal. Two one-hour lectures, and a two-hour lab/field trip each week. *Prerequisites: Math. 10 A-B-C sequence and Physics 1A,AL; 1B,BL; 1C,1CL sequence or equivalent.* (S)

ESYS 190A. Senior Project (8)
All majors are required to complete an integrative Senior Project in their senior year. The Senior Project is designed by the student to focus on an interdisciplinary environmental problem or research topic and is developed either individually or as part of a team over two quarters. Appropriate topics could include biodiversity conservation, environmental health, and/or global change. An important component of the Senior Project is an off-campus or laboratory internship. *Prerequisites: ESYS 103 and upper-division standing, departmental approval, majors only.* (F,W)

ESYS 190A(W). ESYS/UCDC Senior Project (4)
ESYS majors may opt to complete the internship portion of their Senior Project through the UCDC Program. Students are expected to apply to the fall or winter quarter of UCDC Program and obtain an internship in a governmental agency, NGO, and/or research laboratory. *Prerequisites: ESYS 103 and upper-division standing, departmental approval, majors only.* (F,W)

ESYS 190B. Senior Seminar (2)
The Senior Seminar provides a venue for the presentation and group evaluation of the ESYS Senior Projects. *Prerequisite: ESYS 190A or 190A(W) (NOTE: After completing (1) quarter of ESYS 190A, ESYS 190B may be taken concurrently), senior standing.* (S)

ESYS 199. Independent Study (2-4)
Individually guided readings or projects in the area of environmental systems.

Ethnic studies is the study of the social, cultural, and historical forces that have shaped the development of America's diverse ethnic peoples over the last 500 years and which continue to shape our future. Focusing on immigration, slavery, and confinement, those three social processes that combined to create in the United States a nation of nations, ethnic studies intensively examines the histories, languages, and cultures of America's racial and ethnic minority groups in and of themselves, in their relationships to each other, and, particularly, in structural contexts of power.

The curriculum of the Department of Ethnic Studies is designed to 1) study intensively the particular histories of different ethnic and racial groups in the United States, especially intra-group stratification; 2) to draw larger theoretical lessons from comparisons among these groups; 3) to articulate general principles that shape racial and ethnic relations both currently and historically; and 4) to explore how ethnic identity is constructed and reconstructed over time both internally and externally.

A degree in ethnic studies offers training of special interest to those considering admission to graduate or professional schools and careers in education, law, medicine, public health, social work, journalism, business, city planning, politics, psychology, international relations, or creative writing. A major in ethnic studies is designed to impart fundamental skills in critical thinking, comparative analysis, social theory and research analysis, and written expression. These skills will give students the opportunity to satisfy the increasingly rigorous expectations of graduate admissions committees and prospective employers for a broad liberal arts perspective.

An ethnic studies major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career.

The Major

To receive a B.A. degree with a major in ethnic studies, students must meet the following requirements:

1. A three-quarter course lower-division sequence (Ethnic Studies 1A-B-C). Ideally this sequence should be taken during the sophomore year as an intensive introduction to the history and theoretical dimensions of ethnic diversity in the United States. Ethnic Studies 1A-B-C, Introduction to Ethnic Studies, will consist of the following three courses: Population Histories of the United States, Immigration and Assimilation in American Life, Race and Ethnic Relations in the United States.
2. A minimum of twelve four-unit upper-division courses in the Department of Ethnic Studies must be completed from the following five categories:
   A. One four-unit upper-division course that intensively explores the theory and comparative methods of ethnic studies (Ethnic Studies 100: Theories and Methods of Ethnic Studies). All ethnic studies majors

should complete this course before proceeding with the other requirements listed below.

B. Four upper-division ethnic studies history and social science courses from those listed below:

ETHN 103: Environmental Racism
ETHN 104: Race, Space, and Segregation
ETHN 105: Ethnic Diversity and the City
ETHN 106: Ethnoracial Transformations of U.S. Communities
ETHN 107: Field Work in Racial and Ethnic Communities
ETHN 108: Race, Culture, and Social Change
ETHN 109: Race and Social Movements
ETHN 112A: History of Native Americans in the United States I
ETHN 112B: History of Native Americans in the United States II
ETHN 116: The United States-Mexico Border in Comparative Perspective
ETHN 117: Organic Social Movements
ETHN 118: Contemporary Immigration Issues
ETHN 119: Multiracial Societies in the Americas
ETHN 120: Comparative Asian-American History, 1850–1965
ETHN 121: Contemporary Asian-American History
ETHN 123: Asian-American Politics
ETHN 125: Asian-American History
ETHN 129: Asian and Latina Immigrant Workers in the Global Economy
ETHN 130: Social and Economic History of the Southwest I
ETHN 131: Social and Economic History of the Southwest II
ETHN 134: Immigration and Ethnicity in Modern American Society
ETHN 149: African American History in the Twentieth Century
ETHN 150: Politics of Cultural Pluralism and National Integration
ETHN 151: Ethnic Politics in America
ETHN 152: Law and Civil Rights
ETHN 159: Topics in African American History
ETHN 160: Black Politics and Protest in the Early 20th Century (1885–1941)
ETHN 161: Black Politics and Protest Since 1941
ETHN 162: Cultural Contact and Exchange
ETHN 163: Leisure in Urban America
ETHN 165: Sex and Gender in African American Communities
ETHN 167: African-American History in War and Peace: 1917 to the Present
ETHN 170A: Origins of the Atlantic World, c. 1450–1650
ETHN 170B: Slavery and the Atlantic World
ETHN 183: Gender, Race, Ethnicity, and Class
ETHN 188: African Americans, Religion, and the City
ETHN 197: Field Work in Racial and Ethnic Communities*
ETHN 198: Directed Group Studies*
ETHN 199: Supervised Independent Study and Research*

*Only two will be counted in fulfillment of this requirement.

Colloquia

ETHN 180: Topics in Mexican-American History
ETHN 181: Topics in the Comparative History of Modern Slavery
ETHN 182: Segregation, Freedom Movements, and the Crisis of the Twentieth Century
ETHN 184: Black Intellectuals in the Twentieth Century
ETHN 187: Black Nationalism
ETHN 189: Special Topics in Ethnic Studies

C. At least three upper-division courses that focus on language, ethnicity, and institutional discourses:

ETHN 140: Language and American Ethnicity
ETHN 141: Language, Culture, and Inequality
ETHN 142: Medicine, Race, and the Global Politics of Inequality
ETHN 144: Bilingual Communities in the U.S.A.
ETHN 145: Spanish Language in the United States
ETHN 164: African Americans and the Mass Media
ETHN 166: The Black Press and Social Change
ETHN 185: Discourse, Power, and Inequality
ETHN 186: The Ethnic Press in the United States

Students may petition to count one course on language, ethnicity, and institutional discourses offered by other departments. In addition, one course in foreign language at the upper-division level may be counted in partial fulfillment of this requirement, with the consent of the department. Students must seek faculty advice on which courses would best satisfy the requirement and yield the most rigorous training.

D. At least three upper-division ethnic studies courses on the literature and cultural expressions of American racial and ethnic minorities:

ETHN 101: Ethnic Images in Film
ETHN 110: Cultural World Views of Native Americans
ETHN 111: Native American Literature
ETHN 122: Asian-American Culture and Identity
ETHN 124: Asian-American Literature
ETHN 128: Hip Hop: The Politics of Culture
ETHN 132: Chicano Dramatic Literature
ETHN 133: Hispanic-American Dramatic Literature
ETHN 135A: Early Latino/a-Chicano/a Cultural Production: 1848 to 1960
ETHN 135B: Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present
ETHN 136: Topics in Chicano/a-Latino/a Cultures
ETHN 138: Chicano/a-Latino/a Poetry
ETHN 139: Chicano Literature in English
ETHN 146A: Theatrical Ensemble
ETHN 148: Latino/a and Chicano/a Literature

ETHN 168: Comparative Ethnic Literature

ETHN 172: Afro-American Prose

ETHN 173: Afro-American Poetry

ETHN 174: Themes in Afrc-American Literature

ETHN 175: Literature of the Harlem Renaissance

ETHN 176: Black Music/Black Texts: Communication and Cultural Expression

ETHN 178: Blues: An Oral Tradition

ETHN 179A: Jazz Roots and Early Development (1900–1943)

ETHN 179B: Jazz Since 1946: Freedom and Form

E. One four-unit field methods course (Ethnic Studies 190: Research Methods: Studying Ethnic and Racial Communities).

3. Since the goal of the Department of Ethnic Studies is to intensively study both the particular histories of various ethnic and racial groups in the United States and to draw larger theoretical lessons from comparisons among and between groups, students may not fulfill requirements 2B and 2D by focusing all of the seven required courses on only one ethnic or racial group.
4. Ethnic studies majors, including students who are double majors, may petition up to four upper-division courses to fulfill major requirements as long as each of the following three conditions are met for each course: 1) the course is taken from another UCSD department, taken from a UCSD approved study abroad program, or taken at another UC campus; 2) the coursework is appropriate to the ethnic studies major; and 3) the student completes at least one course offered by the UCSD ethnic studies department in each of the five upper-division categories.
5. To satisfy the requirements for the major, lower- and upper-division courses must be completed with a P, C-, or better grade.
6. Except for independent study course electives (ETHN 197, 198, or 199) which are always taken with a Pass/No Pass grade option, students majoring in ethnic studies may take up to two courses, either lower- or upper-division, with a Pass/No Pass option.

The Honors Program

Consistent with other research opportunities offered to undergraduates on the UCSD campus, the department offers the Honors Program to ethnic studies majors in their senior or junior year the opportunity to conduct original research using interdisciplinary methodologies in the comparative study of race and ethnicity. To enroll in the Honors Program, an undergraduate must have a minimum grade-point average of 3.5 in ethnic studies classes counted towards the major. Students with a GPA lower than 3.5 in the major may be admitted by exception if they show promise of success in research.

The Honors Program will be an extension of current departmental offerings using existing faculty resources. Ethnic studies and affiliated faculty will choose to advise students who successfully complete ETHN 191 and continue in the Honors Program based on related research interests. The student will enroll in ETHN 192 and ETHN 193 and work with the appropriate faculty adviser. Students will present their research projects at the annual Ethnic Studies Honors Symposium in June. Students who complete the sequence ETHN 191, ETHN 192, and ETHN 193 will receive one credit towards the "B" (Social Studies/Humanities) requirements for the ethnic studies major. Students who complete their research project with a grade of "B" or better and maintain a minimum 3.25 GPA in the ethnic studies major will receive "Distinction" in the major upon graduation from UCSD. Ethnic Studies 191, 192, and 193 must be taken for letter grade only.

191. Undergraduate Research in Ethnic Studies (4)
This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans.

192. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 191-Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191 and selected a faculty research adviser may enroll in this course. During the quarter the research for the honors project will be completed under the faculty adviser's supervision. Faculty advisers will meet weekly with their honors students to oversee the progress made in carrying out the plan of research.

193. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 192 Honors Research in Ethnic Studies. Students who have completed ETHN 192 and are continuing to work with a faculty research adviser may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty adviser's supervision. The student will meet weekly with the faculty adviser in order to prepare drafts and the final version of the honors paper.

Education Abroad Program

Students are able to participate in the UC Education Abroad Program (EAP) or UCSD's Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate adviser prior to going abroad, and courses taken abroad must be approved by the department. Interested students should contact the Programs Abroad Office in the International Center.

The Minor

Students may minor in ethnic studies. Consistent with the provision for a minor curriculum for students entering after January 1, 1998, students wishing to minor in ethnic studies must satisfy the following requirements:

1) Students must take two four-unit courses in the history and theoretical dimensions of ethnic diversity in the United States from the lower division sequence (Ethnic Studies 1A-B-C); or students must take two four-unit upper-division courses in analytic and comparative study of ethnicity: Theories and Methods of Ethnic Studies (ETHN 100), and Research Methods: Studying Ethnic and Racial Communities (ETHN 190).

2) Students must take five four-unit upper-division ethnic studies elective courses; at least two, but no more than three of the five elective courses must be selected from either the ethnic studies history and social studies courses (listed above in section 2B) or the ethnic studies literature and cultural expressions courses (listed above in section 2D). While language and ethnicity courses offered by the department (listed above in section 2C) may also be used to satisfy this requirement, foreign language and area studies courses from other departments may not. No more than two independent study courses (ETHN 197, 198, or 199) may be used to satisfy this requirement.

3) To satisfy the requirements for the minor, lower- and upper-division courses must be completed with a P, C-, or better grade.

4) Except for independent study course electives (ETHN 197, 198, or 199) which are always taken with a Pass/No Pass grade option, students minoring in ethnic studies may take one course, either lower- or upper-division, with a Pass/No Pass grade option.

Students interested in the African-American experience should consider the following courses:

ETHN 149: African American History in the Twentieth Century

ETHN 159: Topics in African American History

ETHN 160: Black Politics and Protest in the Early 20th Century (1885–1941)

ETHN 161: Black Politics and Protest Since 1941

ETHN 164: African Americans and the Mass Media

ETHN 165: Sex and Gender in African American Communities

ETHN 166: The Black Press and Social Change

ETHN 167: African-American History in War and Peace: 1917 to the Present

ETHN 170A: Origins of the Atlantic World, c. 1450–1650

ETHN 170B: Slavery and the Atlantic World

ETHN 172: Afro-American Prose

ETHN 173: Afro-American Poetry

ETHN 174: Themes in Afro-American Literature

ETHN 175: Literature of the Harlem Renaissance

ETHN 176: Black Music/Black Texts: Communication and Cultural Expression

ETHN 178: Blues: An Oral Tradition

ETHN 179A: Jazz Roots and Early Development (1900–1943)

ETHN 179B: Jazz Since 1946: Freedom and Form

ETHN 181: Topics in the Comparative History of Modern Slavery

ETHN 182: Segregation, Freedom Movements, and the Crisis of the Twentieth Century

ETHN 184: Black Intellectuals in the Twentieth Century

ETHN 187: Black Nationalism

ETHN 188: African Americans, Religion, and the City

Students interested in the Chicano experience should consider the following courses:

ETHN 116: The United States-Mexico Border in Comparative Perspective

ETHN 130: Social and Economic History of the Southwest I

ETHN 131: Social and Economic History of the Southwest II

ETHN 132: Chicano Dramatic Literature

ETHN 133: Hispanic-American Dramatic Literature

ETHN 135A: Early Latino/a-Chicano/a Cultural Production: 1848 to 1960

ETHN 135B: Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present

ETHN 136: Topics in Chicano/a-Latino/a Cultures

ETHN 138: Chicano/a-Latino/a Poetry

ETHN 139: Chicano Literature in English

ETHN 145: Spanish Language in the United States

ETHN 148: Latino/a and Chicano/a Literature

ETHN 180: Topics in Mexican American History

Students interested in the Asian-American experience should consider the following courses:

ETHN 120: Comparative Asian-American History

ETHN 121: Contemporary Asian-American History

ETHN 122: Asian-American Culture and Identity

ETHN 123: Asian-American Politics

ETHN 124: Asian-American Literature

ETHN 125: Asian-American History

Students interested in the Native American experience should consider the following courses:

ETHN 110: Cultural World Views of Native Americans

ETHN 111: Native American Literature

ETHN 112A: History of Native Americans in the United States I

ETHN 112B: History of Native Americans in the United States II

SocD 181i: The Sociology of Indian-White Relations

The Graduate Program

The UCSD Department of Ethnic Studies emphasizes comparative, analytic, and relational study of ethnicity and race in the United States. Our fields of emphasis include intercultural communication and conflict, population histories of the Americas, ethnicity and identity, immigration and assimilation, ethnic politics and social movements, race and racism, urban ethnicity, gender and ethnicity, sexuality, intellectual and cultural histories of ethnic groups, cultural pluralism, national integration, language and ethnic life, and mass media representations of ethnic identity.

Admission

New students are admitted in the fall quarter of each academic year. Prospective applicants should submit the official application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant's own writing, such as term papers. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). Applicants are encouraged to visit the department to talk with faculty and graduate students. The application deadline is January 15.

Program of Study

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.2 or better. To obtain an M.A. degree students must take fifty-one units of course work and write a master's thesis.

Core Curriculum Sequence Requirements

1. **Ethnic Studies 200A-B-C, Core Seminar**
   All graduate students will be required to take the introductory three-quarter core seminar (four units each, twelve units total) during their

first year in the program. This course covers ethnic studies theory , the history of ethnic studies, and controversies in ethnic studies.

2. **Ethnic Studies 210, Research Seminar**
   During the first year of graduate study, all students will be required to take (1) one-quarter of the research seminar (4 units). This course introduces students to the practice of original discovery research in the field of racial and ethnic studies, including articulating a research problem, placing it within theoretical discussions, selecting appropriate methods, and analyzing data.
3. **Ethnic Studies 230, Department Colloquium**
   During the first two years of graduate study, all students will be required to enroll in three one-quarter colloquia required by the department. In Ethnic Studies 230, department faculty and visiting lecturers will make presentations about research in progress in our field. This colloquium is a one-unit course and must be taken for a total of three quarters.
4. **Ethnic Studies 240, Multidisciplinary Research Methods in Ethnic Studies**
   During the first two years of graduate study, students must enroll in two (2) four-unit disciplinary methods courses. The first course must be Ethnic Studies 240; Multidisciplinary Research Methods in Ethnic Studies. Depending upon the student's research interests, the second course will be selected (in consultation with the student's graduate adviser) from those graduate methods courses offered by UCSD Humanities and Social Science Departments.
5. **Ethnic Studies 290A-B, Master's Thesis Preparation**
   Students are required to write a master's thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

Foreign Language Requirement

Competence in one or more foreign languages is encouraged but not required at the M.A. level. All doctoral candidates must satisfy the department's graduate committee that they have adequate linguistic competence in one foreign language relevant to their area of research by translating three pages of scholarly text written in the designated foreign language. The graduate committee may waive the language requirement and test the candidate on other specialized skills in instances where knowledge of a foreign language is not relevant to the candidate's areas of research.

Instruction in Quantification

The department encourages graduate students to employ quantitative methods where appropriate. Instruction in quantitative methods can fulfill elective requirements; recommended courses include Sociology 205 and 206—Survey and Demographic Methods, Political Science 270—Quantitative Methods in Political Science. In cases where a reading knowledge of evidence assembled through quantitative methods would be useful, students who obtain the permission of the director of Graduate Studies may fulfill elective requirements by taking no more than two selected undergraduate courses including Sociology 103—Computer Applications to Data Management in Sociology, Sociology 107—Demographic Methods, Sociology 108—Quantitative Analysis of Survey Data, Sociology 109—Quantitative Analysis of Sociological Data, Political Science 170—Quantitative Political Science, among others.

The Master's Degree

Students entering the ethnic studies doctoral program must first complete a master's degree before continuing toward the doctorate. University regulations prohibit entering students who already have a master's degree in ethnic studies from receiving a second master's degree. Nonetheless, students who are admitted to the ethnic studies doctoral program with a master's degree must complete all the requirements for the ethnic studies master of arts degree. The M.A. will also be a terminal degree for those students denied admission to candidacy.

To obtain the M.A. degree, students must complete the department's course requirements satisfactorily. At the end of the second year in the graduate program, students must submit a written thesis to their Master's Thesis Committee (MTC). The committee will assess the quality of the work and determine whether it demonstrates the likelihood of success in conducting doctoral research.

The final decision regarding the M.A. degree is based on grades, the master's thesis, and yearly faculty evaluations. The Graduate Program Committee awards three possible grades: Pass, M.A. Only, and No Pass. All passing students (with the exception of those who already have a master's degree in ethnic studies from another institution) receive the master of arts degree and proceed in their course of studies for the doctorate. Students who receive M.A. Only evaluations gain the master's degree but may not continue in the department's Ph.D. program. Students who receive a No Pass evaluation must withdraw from the program without a graduate degree. The master's degree is earned as one of the requirements for the Ph.D. and is based on the quality of the student's work during the first two years in the graduate program. At the end of the second year, students are evaluated by the Graduate Program Committee for the master's degree. At that time, the committee (GPC) ascertains the student's suitability for doctoral work and recommends either advancement to Ph.D. work or termination.

Requirements for the Qualifying Examinations

When students complete all the core curriculum requirements and have taken five four-unit elective courses in appropriate areas or disciplines, they are eligible to take the qualifying examination for the Ph.D. degree. Students will be encouraged to take the exam by the end of their third year in the program, but this examination must be completed by the end of the student's fourth year in the program. The qualifying exam is both written and oral; it consists of two parts. Part one tests the student's basic competence and knowledge of ethnic studies scholarship as spelled out in the Department of Ethnic Studies required graduate reading list. The reading list will be distributed to every student entering the graduate program. Over the next three years, students are required to read all of these books and articles, and to have their mastery of these readings tested during the qualifying examination. Part two of the examination requires the submission of a dissertation prospectus. The dissertation prospectus is a written document that 1) specifies the dissertation research topic; 2) places the dissertation research in the context of the relevant literature in the field; 3) identifies the significance of the project as original discovery scholarship; 4) explains and justifies the research methods to be employed; 5) establishes the feasibility of the research and identifies the primary sources or data bases to be used;6) indicates the anticipated steps leading to completion of the project; and 7) provides a timetable for the research and writing phases of the project.

The Doctoral Committee consists of five persons proposed by the student and accepted by the department chair and the office of Graduate Studies and Research according to graduate council regulations. A sixth member of the committee may be added with the approval of the department chair. Students are expected to select the chair of their examination committee by the winter quarter of the third year of study. The chair of the Ph.D. Examination Committee serves as the student's adviser for the remainder of the student's graduate program. Three of the Examination Committee members must be Department of Ethnic Studies faculty; the other two must be from other departments.

Fourteen days before the scheduled qualifying examination, the student must submit the written dissertation prospectus to the examination committee. On this same day, the student will receive from the chair of the examination committee a three-question written exam testing knowledge of the required graduate reading list. Seven days before the scheduled qualifying examination, the student must submit written answers to the questions that have been posed, distributing copies of these essays to all examination committee members. A two-hour oral examination will occur on the appointed date. At the two-hour oral exam, the student will answer questions posed by the committee about the student's dissertation prospectus, mastery of the required graduate reading list, answers to the written part of the exam, and comprehensive knowledge of ethnic studies scholarship. Based on written papers and on oral performance, three possible grades will be selected by the examination committee: No Pass, Pass, and High Pass. Students who receive a No Pass must retake the qualifying examination within one year and obtain a Pass grade to remain in the doctoral program.

The Doctoral Dissertation

Once students pass the qualifying exam, they may begin dissertation research. Students are expected to consult with their committee members on a regular basis during the research process.

All doctoral students will be evaluated annually by the doctoral committee and given a written report signed by the thesis adviser according to campus policy.

When the dissertation has been substantially completed and once committee members have had the opportunity to review drafts of the written work, the committee meets (with or without the student present at the discretion of the committee chair) to consider the progress made and to identify concerns, changes to be made, or further research to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, the defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. Having successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. degree. The final version of the dissertation is then filed with the university librarian via the office of Graduate Studies and Research. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

Departmental Ph.D. Time Limits Policy

Pre-candidacy status, that is, the registered time before a student passes the qualifying examination and thereby advances to Ph.D. candidacy, may not exceed four years. Normative time for a Ph.D. in ethnic studies is six years. Normative time is defined as that period of time in which students under normal circumstances are expected to complete their doctoral program. To provide an incentive for students to complete the Ph.D. within normative time, students will only be eligible for departmental financial support for six years (eighteen quarters). By university policies, the doctoral dissertation must be submitted and defended within eight years. To meet this normative time limit, and to meet departmental requirements, students must complete the Qualifying Examination by the end of the fourth year.

In the spring quarter each year, the Graduate Program Committee will assess the progress of each pre-candidacy student on the basis of evaluations submitted by three faculty members chosen by the student. The committee will establish that the student is in good standing, recommend additional course work, or recommend dismissal. The committee may wish to meet with some students in person to discuss the student's evaluation and progress toward the degree.

COURSES

LOWER-DIVISION

1A. Introduction to Ethnic Studies: Population Histories of the United States (4)
This course examines the comparative historical demography of what is today the United States, focusing on the arrival, growth, distribution, and redistribution of immigrants from Asia, Europe, Africa, and Latin America.

1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4)
A history of immigration to the United States from colonial times to the present, with emphasis on the roles of ethnic and racial groups in economics, power relations between dominant and subordinate groups, and contemporary ethnic and racial consciousness.

1C. Introduction to Ethnic Studies: Race and Ethnic Relations in the United States (4)
This course examines the theoretical literature on race and ethnicity, focusing on issues of domination and subordination, and the historical emergence of racism and ethnic conflict. Attention is given to class and gender differences within racial and ethnic groups.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by department faculty. Enrollment is limited.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor.

100. Theories and Methods in Ethnic Studies (4)
An introduction to research in ethnic studies with special emphasis on theories, concepts, and methods. Students will explore how racial and ethnic categories are shaped by gender, class, and regional experiences and will study ethnicity and race in comparative perspective.

101. Ethnic Images in Film (4)
An upper-division lecture course studying representations of ethnicity in the American cinema. Topics include ethnic images as narrative devices, the social implications of ethnic images, and the role of film in shaping and reflecting societal power relations.

103. Environmental Racism (4)
This course will examine the concept of environmental racism, the empirical evidence of its widespread existence, and the efforts by government, residents, workers, and activists to combat it. We will examine those forces that create environmental injustices in order to understand its causes as well as its consequences. Students are expected to learn and apply several concepts and social scientific theories to the course material.

104. Race, Space, and Segregation (4)
Through in-depth studies of housing segregation, urban renewal and displacement, neighborhood race effects, and the location of hazards and amenities, this course examines how space becomes racialized and how race becomes spatialized in the contemporary U.S.

105. Ethnic Diversity and the City (4)
This course will examine the city as a crucible of ethnic identity exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. (Cross-listed with USP 104.)

106. Ethnoracial Transformations of U.S. Communities (4)
Course examines the rapid growth of ethnic/racial minority populations in U.S. cities; how long-term residents respond to these ethnoracial transformations; how ethnic/racial groups are/are not being incorporated into American institutions; and implications of these transformations for the nation.

107. Field Work in Racial and Ethnic Communities (4)
This is a research course examining social, economic, and political issues in ethnic and racial communities through a variety of research methods which may include interviews, and archival, library, and historical research. (Cross-listed with USP 130.)

108. Race, Culture, and Social Change (4)
Aggrieved groups often generate cultural expressions by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with MUS 151.)

109. Race and Social Movements (4)
This course explores collective mobilizations for resources, recognition, and power by members of aggrieved racialized groups, past and present. Emphasis will be placed on the conditions that generate collective movements, the strategies and ideologies that these movements have developed, and on the prospect for collective mobilization for change within aggrieved communities in the present and future.

110. Cultural World Views of Native Americans (4)
Using interdisciplinary methods, this course examines the cultural world views of various Native American societies in the United States through an exploration of written literary texts and other expressive cultural forms such as dance, art, song, religious and medicinal rituals.

111. Native American Literature (4)
This course analyzes Native American written and oral traditions. Students will read chronicles and commentaries on published texts, historic speeches, trickster narratives, oratorical and prophetic tribal epics, and will delve into the methodological problems posed by tribal literature in translation.

112A. History of Native Americans in the United States I (4)
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation and relations with the European colonial powers and the emerging United States until 1870. (Cross-listed with HIUS 108A.)

112B. History of Native Americans in the United States II (4)
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation and relations with the United States from 1870 to the present. (Cross-listed with HIUS 108B.)

116. The United States-Mexico Border in Comparative Perspective (4)
This course critically explores the U.S.-Mexico frontier and the social-cultural issues on both sides of the international demarcation. Social-historical and political-economic patterns illuminate border life, ethnic identity, social diversity, and cultural expression. Border ethnography is complemented by film and music.

117. Organic Social Movements (4)
Examination of local responses to global change and social disruption through the examination of organic movements in indigenous societies. In-depth analysis of the Kuna Indians of San Blas, Panama; Maya-Zapatistas of Chiapas, Mexico; and Micronesians of the western Pacific.

118. Contemporary Immigration Issues (4)
This course examines the diversity of today's immigrants—their social origins and contexts of exit and their adaptation experiences and contexts of incorporation.

119. Multiracial Societies in the Americas (4)
This course explores the genesis, evolution, and contradictions of racially heterogeneous societies in the Americas, from European conquest to the present. Topics: the social history of Indians, blacks, Asians, and their interactions with Europeans, and racial, sexual, and class divisions.

121. Contemporary Asian-American History (4)
The course will study changes in Asian-American communities as a result of renewed immigration since 1965; the influx of refugees from Vietnam, Kampuchea, and Laos; the impact of contemporary social movements on Asian-Americans' current economic, social, and political status.

122. Asian-American Culture and Identity (4)
A survey of Asian-American cultural expressions in literature, art, and music to understand the social experiences that helped forge Asian-American identity. Topics: culture conflict, media portrayals, assimilation pressures, the model minority myth, and interethnic and class relations.

123. Asian-American Politics (4)
This course will examine the development of Asian-American politics by studying the historical and contemporary factors, such as political and economic exclusion, that have contributed to the importance and complexity of ethnicity as a mobilizing force in politics.

124. Asian-American Literature (4)
Selected topics in the literature by men and women of Asian descent who live and write in the United States. May be repeated for credit when topics vary. (Cross-listed with LTEN 181.)

125. Asian-American History (4)
Explore how Asian Americans were involved in the political, economic and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship. (Cross-listed with HIUS 124.)

127. Sexuality and Nation (4)
This course explores the nexus of sex, race, ethnicity, gender, and nation and considers their influence on identity, sexuality, migration, movement and borders, and other social, cultural, and political issues which these constructs affect. (Cross-listed with CGS 112.)

128. Hip Hop: The Politics of Culture (4)
Examination of hip hop's technology, lyrics, and dance and its influences in graffiti, film, music video, fiction, advertising, gender, corporate investment, government, and censorship with a critical focus on race, gender, and popular culture and the politics of creative expression. (Cross-listed with MUS 152.)

129. Asian and Latina Immigrant Workers in the Global Economy (4)
This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. (Cross-listed with USP 135.)

130. Social and Economic History of the Southwest I (4)
This course examines the history of the Spanish and Mexican Borderlands (what became the U.S. Southwest) from roughly 1400 to the end of the U.S.-Mexican war in 1848, focusing specifically on the area's social, cultural, and political development. (Cross-listed with HIUS 158.)

131. Social and Economic History of the Southwest II (4)
This course examines the history of the American Southwest from the U.S.-Mexican War in 1846-48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity. (Cross-listed with HIUS 159.)

132. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicano dramatic literature, the course will analyze playwrights and theatre groups that express the Chicano experience in the United States, examining relevant actors, plays, and documentaries for their contributions to the developing Chicano theatre movement. (Cross-listed with THHS 110.)

133. Hispanic-American Dramatic Literature (4)
This course examines the plays of leading Cuban-American, Puerto Rican, and Chicano playwrights in an effort to understand the experiences of these Hispanic-American groups in the United States. (Cross-listed with THHS 111.)

134. Immigration and Ethnicity in Modern American Society (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be required to submit a more substantial piece of work. (Cross-listed with HIUS 180 and conjoined with HIUS 280.) *Prerequisites: upper-division standing and department stamp.*

135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)
Cross-disciplinary study of nineteenth and early twentieth century Latino/a-Chicano/a literature, folklore,

The Doctoral Committee consists of five persons proposed by the student and accepted by the department chair and the office of Graduate Studies and Research according to graduate council regulations. A sixth member of the committee may be added with the approval of the department chair. Students are expected to select the chair of their examination committee by the winter quarter of the third year of study. The chair of the Ph.D. Examination Committee serves as the student's adviser for the remainder of the student's graduate program. Three of the Examination Committee members must be Department of Ethnic Studies faculty; the other two must be from other departments.

Fourteen days before the scheduled qualifying examination, the student must submit the written dissertation prospectus to the examination committee. On this same day, the student will receive from the chair of the examination committee a three-question written exam testing knowledge of the required graduate reading list. Seven days before the scheduled qualifying examination, the student must submit written answers to the questions that have been posed, distributing copies of these essays to all examination committee members. A two-hour oral examination will occur on the appointed date. At the two-hour oral exam, the student will answer questions posed by the committee about the student's dissertation prospectus, mastery of the required graduate reading list, answers to the written part of the exam, and comprehensive knowledge of ethnic studies scholarship. Based on written papers and on oral performance, three possible grades will be selected by the examination committee: No Pass, Pass, and High Pass. Students who receive a No Pass must retake the qualifying examination within one year and obtain a Pass grade to remain in the doctoral program.

The Doctoral Dissertation

Once students pass the qualifying exam, they may begin dissertation research. Students are expected to consult with their committee members on a regular basis during the research process.

All doctoral students will be evaluated annually by the doctoral committee and given a written report signed by the thesis adviser according to campus policy.

When the dissertation has been substantially completed and once committee members have had the opportunity to review drafts of the written work, the committee meets (with or without the student present at the discretion of the committee chair) to consider the progress made and to identify concerns, changes to be made, or further research to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, the defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. Having successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. degree. The final version of the dissertation is then filed with the university librarian via the office of Graduate Studies and Research. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

Departmental Ph.D. Time Limits Policy

Pre-candidacy status, that is, the registered time before a student passes the qualifying examination and thereby advances to Ph.D. candidacy, may not exceed four years. Normative time for a Ph.D. in ethnic studies is six years. Normative time is defined as that period of time in which students under normal circumstances are expected to complete their doctoral program. To provide an incentive for students to complete the Ph.D. within normative time, students will only be eligible for departmental financial support for six years (eighteen quarters). By university policies, the doctoral dissertation must be submitted and defended within eight years. To meet this normative time limit, and to meet departmental requirements, students must complete the Qualifying Examination by the end of the fourth year.

In the spring quarter each year, the Graduate Program Committee will assess the progress of each pre-candidacy student on the basis of evaluations submitted by three faculty members chosen by the student. The committee will establish that the student is in good standing, recommend additional course work, or recommend dismissal. The committee may wish to meet with some students in person to discuss the student's evaluation and progress toward the degree.

COURSES

LOWER-DIVISION

1A. Introduction to Ethnic Studies: Population Histories of the United States (4)
This course examines the comparative historical demography of what is today the United States, focusing on the arrival, growth, distribution, and redistribution of immigrants from Asia, Europe, Africa, and Latin America.

1B. Introduction to Ethnic Studies: Immigration and Assimilation in American Life (4)
A history of immigration to the United States from colonial times to the present, with emphasis on the roles of ethnic and racial groups in economics, power relations between dominant and subordinate groups, and contemporary ethnic and racial consciousness.

1C. Introduction to Ethnic Studies: Race and Ethnic Relations in the United States (4)
This course examines the theoretical literature on race and ethnicity, focusing on issues of domination and subordination, and the historical emergence of racism and ethnic conflict. Attention is given to class and gender differences within racial and ethnic groups.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by department faculty. Enrollment is limited.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor.

100. Theories and Methods in Ethnic Studies (4)
An introduction to research in ethnic studies with special emphasis on theories, concepts, and methods. Students will explore how racial and ethnic categories are shaped by gender, class, and regional experiences and will study ethnicity and race in comparative perspective.

101. Ethnic Images in Film (4)
An upper-division lecture course studying representations of ethnicity in the American cinema. Topics include ethnic images as narrative devices, the social implications of ethnic images, and the role of film in shaping and reflecting societal power relations.

103. Environmental Racism (4)
This course will examine the concept of environmental racism, the empirical evidence of its widespread existence, and the efforts by government, residents, workers, and activists to combat it. We will examine those forces that create environmental injustices in order to understand its causes as well as its consequences. Students are expected to learn and apply several concepts and social scientific theories to the course material.

104. Race, Space, and Segregation (4)
Through in-depth studies of housing segregation, urban renewal and displacement, neighborhood race effects, and the location of hazards and amenities, this course examines how space becomes racialized and how race becomes spatialized in the contemporary U.S.

105. Ethnic Diversity and the City (4)
This course will examine the city as a crucible of ethnic identity exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. (Cross-listed with USP 104.)

106. Ethnoracial Transformations of U.S. Communities (4)
Course examines the rapid growth of ethnic/racial minority populations in U.S. cities; how long-term residents respond to these ethnoracial transformations; how ethnic/racial groups are/are not being incorporated into American institutions; and implications of these transformations for the nation.

107. Field Work in Racial and Ethnic Communities (4)
This is a research course examining social, economic, and political issues in ethnic and racial communities through a variety of research methods which may include interviews, and archival, library, and historical research. (Cross-listed with USP 130.)

108. Race, Culture, and Social Change (4)
Aggrieved groups often generate cultural expressions by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with MUS 151.)

109. Race and Social Movements (4)
This course explores collective mobilizations for resources, recognition, and power by members of aggrieved racialized groups, past and present. Emphasis will be placed on the conditions that generate collective movements, the strategies and ideologies that these movements have developed, and on the prospect for collective mobilization for change within aggrieved communities in the present and future.

110. Cultural World Views of Native Americans (4)
Using interdisciplinary methods, this course examines the cultural world views of various Native American societies in the United States through an exploration of written literary texts and other expressive cultural forms such as dance, art, song, religious and medicinal rituals.

111. Native American Literature (4)
This course analyzes Native American written and oral traditions. Students will read chronicles and commentaries on published texts, historic speeches, trickster narratives, oratorical and prophetic tribal epics, and will delve into the methodological problems posed by tribal literature in translation.

112A. History of Native Americans in the United States I (4)
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation and relations with the European colonial powers and the emerging United States until 1870. (Cross-listed with HIUS 108A.)

112B. History of Native Americans in the United States II (4)
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, cultural adaptation and relations with the United States from 1870 to the present. (Cross-listed with HIUS 108B.)

116. The United States-Mexico Border in Comparative Perspective (4)
This course critically explores the U.S.-Mexico frontier and the social-cultural issues on both sides of the international demarcation. Social-historical and political-economic patterns illuminate border life, ethnic identity, social diversity, and cultural expression. Border ethnography is complemented by film and music.

117. Organic Social Movements (4)
Examination of local responses to global change and social disruption through the examination of organic movements in indigenous societies. In-depth analysis of the Kuna Indians of San Blas, Panama; Maya-Zapatistas of Chiapas, Mexico; and Micronesians of the western Pacific.

118. Contemporary Immigration Issues (4)
This course examines the diversity of today's immigrants—their social origins and contexts of exit and their adaptation experiences and contexts of incorporation.

119. Multiracial Societies in the Americas (4)
This course explores the genesis, evolution, and contradictions of racially heterogeneous societies in the Americas, from European conquest to the present. Topics: the social history of Indians, blacks, Asians, and their interactions with Europeans, and racial, sexual, and class divisions.

121. Contemporary Asian-American History (4)
The course will study changes in Asian-American communities as a result of renewed immigration since 1965; the influx of refugees from Vietnam, Kampuchea, and Laos; the impact of contemporary social movements on Asian-Americans' current economic, social, and political status.

122. Asian-American Culture and Identity (4)
A survey of Asian-American cultural expressions in literature, art, and music to understand the social experiences that helped forge Asian-American identity. Topics: culture conflict, media portrayals, assimilation pressures, the model minority myth, and interethnic and class relations.

123. Asian-American Politics (4)
This course will examine the development of Asian-American politics by studying the historical and contemporary factors, such as political and economic exclusion, that have contributed to the importance and complexity of ethnicity as a mobilizing force in politics.

124. Asian-American Literature (4)
Selected topics in the literature by men and women of Asian descent who live and write in the United States. May be repeated for credit when topics vary. (Cross-listed with LTEN 181.)

125. Asian-American History (4)
Explore how Asian Americans were involved in the political, economic and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship. (Cross-listed with HIUS 124.)

127. Sexuality and Nation (4)
This course explores the nexus of sex, race, ethnicity, gender, and nation and considers their influence on identity, sexuality, migration, movement and borders, and other social, cultural, and political issues which these constructs affect. (Cross-listed with CGS 112.)

128. Hip Hop: The Politics of Culture (4)
Examination of hip hop's technology, lyrics, and dance and its influences in graffiti, film, music video, fiction, advertising, gender, corporate investment, government, and censorship with a critical focus on race, gender, and popular culture and the politics of creative expression. (Cross-listed with MUS 152.)

129. Asian and Latina Immigrant Workers in the Global Economy (4)
This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. (Cross-listed with USP 135.)

130. Social and Economic History of the Southwest I (4)
This course examines the history of the Spanish and Mexican Borderlands (what became the U.S. Southwest) from roughly 1400 to the end of the U.S.-Mexican war in 1848, focusing specifically on the area's social, cultural, and political development. (Cross-listed with HIUS 158.)

131. Social and Economic History of the Southwest II (4)
This course examines the history of the American Southwest from the U.S.-Mexican War in 1846-48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity. (Cross-listed with HIUS 159.)

132. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicano dramatic literature, the course will analyze playwrights and theatre groups that express the Chicano experience in the United States, examining relevant actors, plays, and documentaries for their contributions to the developing Chicano theatre movement. (Cross-listed with THHS 110.)

133. Hispanic-American Dramatic Literature (4)
This course examines the plays of leading Cuban-American, Puerto Rican, and Chicano playwrights in an effort to understand the experiences of these Hispanic-American groups in the United States. (Cross-listed with THHS 111.)

134. Immigration and Ethnicity in Modern American Society (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be required to submit a more substantial piece of work. (Cross-listed with HIUS 180 and conjoined with HIUS 280.) *Prerequisites: upper-division standing and department stamp.*

135A. Early Latino/a-Chicano/a Cultural Production: 1848 to 1960 (4)
Cross-disciplinary study of nineteenth and early twentieth century Latino/a-Chicano/a literature, folklore,

music, testimonio, or other cultural practices. Specific periods covered will fall between the immediate aftermath of the Treaty of Guadalupe Hidalgo to the Cuban revolution. Repeatable for credit when topics vary. (Cross-listed with LTSP 150A.) *Prerequisites: LTSP 50B or consent of instructor.*

135B. Contemporary Latino/a-Chicano/a Cultural Production: 1960 to Present (4)
Cross-disciplinary study of late twentieth century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of "Hispanic" or Latino/a identities. Repeatable for credit when topics vary. (Cross-listed with LTSP 150B.) *Prerequisites: LTSP 50B or consent of instructor.*

136. Topics in Chicano/a-Latino/a Cultures (4)
Cross-disciplinary study of late twentieth century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender and sexuality, cultures of the U.S.-Mexican border, and Chicano/a-Mexicano/a literary relations. Repeatable for a credit when topics vary. (Cross-listed with LTSP 151.) *Prerequisites: LTSP 50B or consent of instructor.*

138. Chicano/a and Latino/a Poetry (4)
A study of themes and issues in the poetic production of Latino communities in the United States. Every effort will be made to select text in Spanish but some will be bilingual. Repeatable for credits when topics vary. (Cross-listed with LTSP 153.) *Prerequisites: LTSP 50B or consent of instructor.*

139. Chicano Literature in English (4)
Introduction to the literature in English by the Chicano population, the men and women of Mexican descent who live and write in the United States. The primary focus is the contemporary period. (Cross-listed with LTEN 180.)

140. Language and American Ethnicity (4)
This course examines the intersection of language and ethnicity in the United States, focusing on the social and political impact of bilingualism, ethnically based English dialects, and standard and nonstandard English.

141. Language, Culture, and Inequality (4)
A critical review of conceptions of language and how they have been deployed in constructing images of culture, race, ethnicity, gender, sexuality, and class. Topics include cultural and linguistic relativism, structuralism, symbolic and cognitive approaches, ethnomethodology, sociolinguistics, ethnography of speaking, performance, and ethnopoetics.

142. Medicine, Race, and the Global Politics of Inequality (4)
Globalization fosters both the transmission of AIDS, cholera, tuberculosis, and other infectious diseases and gross inequalities in the resources available to prevent and cure them. This course focuses on how race, ethnicity, gender, sexuality, class, and nation both shape and are shaped by the social construction of health and disease worldwide.

144. Bilingual Communities in the U.S.A. (4)
This course compares the many ways of "doing being bilingual" that exist among communities of speakers of varied national origins, generations, networks, localities, races, classes, and genders. Of particular interest are the varied types of bilingual individuals and linguistic repertoires that exist in communities of Native American, Chicano/Latino, and Asian origin, and the implications of shifting and hybrid linguistic identities for the drawing of community boundaries and the shaping of national language policy. Specific topics include factors that promote language loss or maintenance in families, the linguistic and cultural repercussions of code switching and word borrowing, bilingual education, linguistic profiling, and language ideologies.

145. Spanish Language in the United States (4)
A sociolinguistic study of the popular dialects in the United States and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects. (Cross-listed with LTSP 162.)

146A. Theatrical Ensemble (4-4)
An intensive theatre practicum designed to generate theatre created by an ensemble, with particular emphasis upon the analysis of text. Students will explore and analyze scripts and authors. Ensemble segments include: black theatre, Chicano theatre, feminist theatre, commedia dell'arte theatre. (Cross-listed with THAC 120.)

148. Latino/a and Chicano/a Literature (4)
This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicano/a writers. May be repeated for credit as topics, texts, and historical periods vary. (Cross-listed with LTSP 154.) *Prerequisites: LTSP 50B or consent of instructor.*

149. African American History in the Twentieth Century (4)
This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics. (Cross-listed with HIUS 139.)

150. Politics of Cultural Pluralism and National Integration (4)
This course comparatively analyzes the problems posed by subnational loyalties founded on ethnic, linguistic, racial, religious, and caste identities in Asia, Africa, Europe, and the Western Hemisphere. Particular attention will be given to the processes of national integration in multicultural politics.

151. Ethnic Politics in America (4)
This course will survey the political effects of immigration, ethnic mobilization, and community building in America, and the contemporary role of ethnicity in politics and intergroup relations.

152. Law and Civil Rights (4)
In this course students explore the relationship between race, class, and law as it applies to civil rights both in an historical and a contemporary context. Topics include racism and the law, history of the 14th Amendment, equal protection, school desegregation, and affirmative action.

159. Topics in African American History (4)
A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. (Cross-listed with HIUS 183 and conjoined with HIUS 283.)

160. Black Politics and Protest 1885–1941 (4)
An examination of the evolution of black thought and activism from Booker T. Washington's Atlanta Exposition Address to A. Philip Randolph's March on Washington Movement. Particular attention paid to black institutions and their relationship to the federal government.

161. Black Politics and Protest Since 1941 (4)
Discussion of black social, political, and intellectual experiences since the publication of Richard Wright's *Native Son*. Close examination of blacks' involvement in and relationships to Second World War, Cold War, Civil Rights Movement, Black Power Movement, Reagan Revolution, and Underclass Debate.

162. Cultural Contact and Exchange (4)
An examination of the comparative histories of cultural contact and exchange between indigenous peoples and "outsiders." Particular attention will be paid to the way in which social hierarchy and cultural belief systems guide the balance of power between dissimilar societies.

163. Leisure in Urban America (4)
Historical examination of how leisure has shaped the American urban landscape. Course will explore connections between spectator sports and the rise of "urban mentalities"; sports franchises, urban redevelopment schemes, and racial and ethnic communities; and sports mythology and civil pride.

164. African Americans and the Mass Media (4)
Examination of the media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes, their relationship to changing social, political, and economic frameworks, and African Americans' responses to and interpretations of these mediated images. (Cross-listed with MUS 153.)

165. Sex and Gender in African American Communities (4)
This course will investigate the changing constructions of sex, gender, and sexuality in African American communities defined by historical period, region, and class. Topics will include the sexual division of labor, myths of black sexuality, the rise of black feminism, black masculinity, and queer politics.

166. The Black Press and Social Change (4)
An investigation of the black press—including newspapers, periodicals, and electronic media—as agents for social change in African American history. The course will consider the changing cultural and political functions of the black press, economic forces, and the work of influential journalists, artists, and intellectuals.

167. African-American History in War and Peace: 1917 to the Present (4)
The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. This course examines how the pressures of "total war" and "cold war" shaped the African-American experience in both war and peacetime. (Cross-listed with HIUS 138)

168. Comparative Ethnic Literature (4)
A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary. (Cross-listed with LTEN 178.)

170A. Origins of the Atlantic World, c. 1450–1650 (4)
An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected "Atlantic World." Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade, and early development of plantation slavery in the New World. (Cross-listed with HIUS 135A.)

170B. Slavery and the Atlantic World (4)
The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. (Cross-listed with HIUS 135B.)

172. Afro-American Prose (4)
Students will analyze and discuss the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characters of Afro-American narrative and the cultural and social circumstances that influence their development. (Cross-listed with LTEN 183.)

173. Afro-American Poetry (4)
A close reading and analysis of selected works of Afro-American poetry as they reflect styles and themes that recur in the literature. (Cross-listed with LTEN 184.)

174. Themes in Afro-American Literature (4)
This course focuses on the influence of slavery upon African American writers. Our concern is not upon what slavery was but upon what it is within the works and what these texts reveal about themselves, their authors, and their audiences. (Cross-listed with LTEN 185.)

175. Literature of the Harlem Renaissance (4)
The Harlem Renaissance (1917–39) focuses on the emergence of the "New Negro" and the impact of this concept on black literature, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms. (Cross-listed with LTEN 186.)

176. Black Music/Black Texts: Communication and Cultural Expression (4)
Explores role of music as a traditional form of communication among Africans, Afro-Americans, and West Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. (Cross-listed with LTEN 187 and MUS 154.)

178. Blues: An Oral Tradition (4)
This course will examine the development of the Blues from its roots in work-songs and the minstrel show to its flowering in the Mississippi Delta to the development of Urban blues and the close relationship of the Blues with Jazz, Rhythm and Blues, and Rock and Roll. (Cross-listed with MUS 126.)

179A. Jazz Roots and Early Development (1900–1943) (4)
This course will trace the early development of Jazz and the diverse traditions which helped create this uniquely American art form. We will witness the emergence of Louis Armstrong in New Orleans and examine the composer's role in Jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with MUS 127A.)

179B. Jazz Since 1946: Freedom and Form (4)
This course will examine the evolution of Jazz from 1943 to the present. The course will survey the contrasting and competing styles in Jazz from BEBOP to COOL to the avant garde and fusion. (Cross-listed with MUS 127B.)

Colloquia

180. Topics in Mexican-American History (4)
This colloquium studies the racial representation of Mexican-Americans in the United States from the nineteenth century to the present, examining critically the theories and methods of the humanities and social sciences. (Cross-listed with HIUS 167.)

181. Topics in the Comparative History of Modern Slavery (4)
Slavery was both a thread of continuity in the history of the Americas and distinctive institution in the specific social settings. The purpose of this course is to examine and discuss readings that explore topics in the Caribbean and the U.S. Because topics will vary, the seminar may be taken more than once for credit, with permission of the instructor. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. (Cross-listed with HIUS 164 and conjoined with HIUS 264.)

182. Segregation, Freedom Movements, and the Crisis of the Twentieth Century (4)
A reading and discussion seminar that views the origins of segregation and the social movements that challenged it between 1890 and 1970 in a comparative framework. (Cross-listed with HIUS 165.)

183. Gender, Race, Ethnicity, and Class (4)
Gender is often neglected in studies of ethnic/racial politics. This seminar explores the relationship of race, ethnicity, class, and gender by examining the participation of working class women of color in community politics and how they challenge mainstream political theory.

184. Black Intellectuals in the Twentieth Century (4)
An analysis of black cultural and intellectual production since 1895. Course will explore how race and race-consciousness have influenced the dialogue between ideas and social experience; and how other factors—i.e., age, gender, and class—affected scholars' insights.

185. Discourse, Power, and Inequality (4)
While discourse analysis has transformed numerous disciplines, a gap separates perspectives that envision discourse as practices that construct inequality from approaches which treat discourse as everyday language. This course engages both perspectives critically in analyzing law, medicine, and popular culture.

186. The Ethnic Press in the United States (4)
Readings and research on news media institutions established in ethnic communities since the nineteenth century. The course will trace the emergence, development, and longevity of ethnic presses, their role in cultivating and maintaining ethnic identity, and their attempts to respond to and resist images in mainstream media.

187. Black Nationalism (4)
This course will investigate the ideologies and practices of black nationalist movements in the United States and/or across the black Diaspora, focusing on their political philosophy, political culture, and gender and class structure.

188. African Americans, Religion, and the City (4)
This course details the history of African American migration to urban areas after World War I and World War II and explores the role of religion in their lives as well as the impact that their religious experiences had upon the cities in which they lived. (Cross-listed with USP 132.)

189. Special Topics in Ethnic Studies (4)
A reading and discussion course that explores special topics in ethnic studies. Themes will vary from quarter to quarter; therefore, course may be repeated for credit.

Seminars and Independent Studies

190. Research Methods: Studying Racial and Ethnic Communities (4)
The course offers students the basic research methods with which to study ethnic and racial communities. The various topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations.

191. Undergraduate Research in Ethnic Studies (4)
This course is designed to help students conduct their own research rather than merely read the research of others. The course will introduce students to research paradigms in ethnic studies, familiarize them with finding aids and other library resources, and involve them in the design of research plans. *Prerequisite: instructor approval.*

192. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 191 Undergraduate Research in Ethnic Studies. Students who have completed ETHN 191 and selected a faculty research adviser may enroll in this course. During the quarter the research for the honors project will be completed under the faculty adviser's supervision. Faculty advisers will meet weekly with their honors students to oversee the progress made in carrying out the plan of research. *Prerequisite: completion of 191.*

193. Honors Research in Ethnic Studies (4)
This course is a continuation of Ethnic Studies 192 Honors Research in Ethnic Studies. Students who have completed ETHN 192 and are continuing to work with a faculty research adviser may enroll in this course. During the quarter the written drafts and final honors paper will be completed under the faculty adviser's supervision. The student will meet weekly with the faculty adviser in order to prepare drafts and the final version of the honors paper. *Prerequisite: insructor approval.*

197. Fieldwork in Racial and Ethnic Communities (4)
This course comprises supervised community fieldwork on topics of importance to racial and ethnic communities in the greater San Diego area. Regular individual meetings with faculty sponsor and written reports are required. (May be repeated for credit.)

198. Directed Group Studies (4)
Directed group study on a topic or in a field not included in the regular department curriculum by special arrangement with a faculty member. (May be repeated for credit.)

199. Supervised Independent Study and Research (4)
Individual research on a topic that leads to the writing of a major paper. (May be repeated for credit.)

GRADUATE

200A. History of Ethnic Studies (4)
This course charts the origins of ethnic studies research, the emergence of dominant paradigms, and the history of race and ethnic issues across and within disciplines.

200B. Theories of Ethnic Studies (4)
A critical exploration of the ways in which theories of ethnic studies have constituted as well as analyzed knowledge and ethnic identity.

200C. Controversies in Ethnic Studies (4)
This course is structured around contemporary events and debates over theories, methods, and objects of inquiry in ethnic studies.

210. Research Seminar in Ethnic Studies (4)
This course introduces students to the practice of original discovery research in the field of racial and ethnic studies, including articulating a research problem, placing it within theoretical discussions, selecting appropriate methods, and analyzing data.

230. Departmental Colloquium (1)
This course is a forum for the presentation of recent research by guests, faculty, and students. This course may be repeated three times for credit.

240. Multidiciplinary Research Methods in Ethnic Studies (4)
A critical introduction to the broad range of methods used in ethnic studies research and how they have shaped social constructions of race, ethnicity, gender, class, and sexuality.

241A. Community Ethnography I: Method and Theory (4)
This course reviews the major tenets of ethnography using case studies of ethnographic work and critical theory pertaining to epistemological concerns in the social sciences. Critical here are the major ethical parameters of conducting ethnography in ethnic communities, the role of researchers, and the practical implications of such research.

241B. Community Ethnography II: Practicum (4)
This course focuses on the practical application of ethnographic concepts and methods in actual field research in a local San Diego community. The purpose here is to provide experience in conducting ethnography through participant observation, interviews, and contributing to communities. This will include a brief overview of ethnographic method, but will focus on hands-on research, analysis, and ethnographic writing.

250. Panethnicity in the United States (4)
This course compares and contrasts the experiences of the major panethnic groups in the United States, paying particular attention to the construction of ethnicity within contexts of power.

251. Cultural Pluralism and National Integration (4)
This course explores the ways in which nations and states around the world have imagined and managed the linguistic, racial, and religious differences of their citizens.

252. Ethnic Leadership in Comparative Perspective (4)
Readings and discussion on political and intellectual leadership in racial and ethnic communities. A critical focus will be placed on the tensions underlying leadership formation.

253. Mass Media and Ethnic Identity (4)
This course examines the ways that ethnic identity influences the practices of mass media, and the ways in which mass media shape and reflect ethnic identity.

254. Race and Racism (4)
This course examines inequality based on race with a focus on the institutions, symbols, and social practices which structure and maintain racism. Particular attention is given to laws and social policy which reinforce racial inequality.

255. Diaspora, Migration, and Return in the Post-Fordist Age (4)
This course studies the relationship between the transnational economy, new technologies, and mass migration in the contemporary world.

256. Gender, Sexuality, and Race (4)
This course studies the body cross-culturally as a site for the construction of gender, sex, ethnic, and racial identities.

257A-B. Social Theory (4-4)
An intensive survey of social and cultural theory, focusing on how constructions of science, language, politics, and social inequality shaped early modernity, Romantic Nationalism, Marxism, cultural relativity, psychoanalysis, and *fin de siècle* social thought. The second quarter surveys poststructuralist, postmodern, feminist, Subaltern Studies, globalization, and other critiques. ETHN 257A is not a prerequisite for ETHN 257B.

258. Ethnic Conflict and Cooperation (4)
This course critically examines theories and research on racial and ethnic relations. In particular, it will address how such relations are linked to, and emerge from, everyday activities and structural factors.

259. Comparative Conquests, Colonization, and Resistance in the Americas (4)
This course will offer a comparative survey of the impact of European interactions with Native nations and populations in the New World, from Peru to Canada. Readings will emphasize modes of initial interaction, patterns of European colonization, and Native adaptation and resistance, and broader changes in Native culture and cosmology as a result of conquest and colonization.

260. Transnationalism and Borderlands: The Local and Global (4)
This course critically reviews the analytical frameworks of transnationalism and borderlands. The goals are to assess traditional and current social science practice on immigration, identity, and community studies, and to understand how diverse peoples engage and participate in global processes.

261. Race and Law (4)
This seminar advances a critique of law's innocence—of its claims for universality. The reading of legal and scientific texts will indicate how by incorporation existing constructions of the meanings of race, the law produces racialized modern subjects.

262. Race, Inequality, and Health (4)
New critical and multidisciplinary perspectives provide tools for examining entrenched and newly emerging diseases and inequalities. This course examines medicine and public health in relationship to race, gender, sexuality, class, and nation and explores how these connections affect the distribution of health and health services locally, nationally, and internationally.

289. Topics in Ethnic Studies Research (4)
This course is a research seminar on themes of contemporary and historic importance in ethnic studies. Themes will be determined by instructor. Course may be repeated three times for credit.

290A-B. Master's Thesis Preparation (4-4)
All graduate students are required to write a master's thesis as part of the requirements for the master of arts in ethnic studies. Students should enroll in the thesis preparation courses in the fall and spring quarters of the second year of graduate studies.

298. Directed Reading (1-12)
This is an independent research or individual guided tutorial in an area not covered by present course offerings. This course may be repeated for an indefinite number of times due to the independent nature of the content of the course.

299. Thesis Research (1-12)
Open to graduate students conducting doctoral thesis research. This course may be repeated for an indefinite number of times due to the independent nature of thesis research and writing.

500. Apprentice Teaching in Ethnic Studies (4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations.

The Minor

In the course of the twentieth century film in all its applications—as storytelling, as documentary, as propaganda, as popular entertainment—became a powerful social and cultural force on an international scale. The importance of film is reflected in the number of faculty at UCSD whose scholarship and teaching involves film and in the number of courses regularly offered which focus on some aspect of film studies and which use film as an essential component of the course material. The Film Studies minor is designed to give students a flexible introduction to the full range of courses on film available here. As noted below, the only constraints are that five of the seven courses must be in the upper division and that the seven courses must come from at least two different departments. This latter requirement is designed to insure some level of breath in the minor. The minor should be of interest to students with a wide range of interests from those who plan graduate study in film to those who simply wish to understand better this powerful and influential medium.

REQUIREMENTS

Seven courses, at least five of which must be upper-division, from the following list. The seven courses must be drawn from at least two different departments.

COURSES

COCU 110. Cinema in Latin America (4)

COCU 125. How to Read a Film (4)

COCU 132 Gender and Media (4)

COHI 143. The Psychology of the Filmic Text (4)

COSF 186. Film Industry (4)

ETHN 101. Ethnic Images in Film (4)

HIEA 133. Twentieth-Century China: Cultural History (4)

HIUS 122. History and Hollywood: America and the Movies since the Great Depression (4)

LTWL 4A-B-C-D-E-M. Fiction and Film in Twentieth-Century Societies (4-4-4-4-4-4)

LTAF 120. Literature and Film of Modern Africa (4)

LTEA 120A. Chinese Films (4)

LTEA 120B. Taiwan Films (4)

LTEA 120C. Hong Kong Films (4)

LTEA 120D. Filming Chinese Literature (4)

LTEU 159. Russian and Soviet Film (4)

LTWL 180. Film Studies and Literature: Film History (4)

LTWL 181. Film Studies and Literature: Film Movement (4)

LTWL 182. Film Studies and Literature: Film Genre (4)

LTWL 183. Film Studies and Literature: Director's Work (4)

LTWL 184. Film Studies and Literature: Close Analysis of Filmic Text (4)

LTWL 185. Film Studies and Literature: Interdisciplinary Issues (4)

LTWL 186. The Psychology of the Filmic Text (4)

PHIL 176. Film Aesthetics (4)

SOCA 105. Ethnographic Film: Media Methods (4)

SOCB 172. Films and Society (4)

SOCD 187. African Societies through Film (4)

THGE 10. Theatre and Film (4)

THGE 11. Great Performances on Film (4)

THGE 27. User-Friendly Shakespeare (4)

THGE 123. Mary Poppins Meets Bladerunner (4)

THGE 124. Cult Films: Weirdly Dramatic (4)

THHS 116. Old Myths in New Films (4)

THPW 104. Screenwriting (4)

VIS 84. History of Film (4)

VIS 150. History and Art of the Silent Cinema (4)

VIS 151. History of the Experimental Film (4)

VIS 152. Film in Social Context (4)

VIS 153. The Genre Series (4)

VIS 154. Hard Look at the Movies (4)

VIS 155. The Director Series (4)

VIS 156N. Special Problems in Film History and Theory (4)

VIS 194. Fantasy in Film (4)

OFFICE: University Center, Room 104
(858) 822-5855
http://academicaffairs.ucsd.edu/freshmanseminars.html

Freshman Seminars are designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments, in many undergraduate colleges and academic programs, the Scripps Institution of Oceanography, and The Graduate School of International Relations and Pacific Studies. Topics vary from quarter to quarter. Enrollment is limited to twenty students, with preference given to entering freshmen. Freshman Seminars are specially designated by courses that are numbered 87, e.g., Phys. 87.

Questions about a specific Freshman Seminar should be directed to the department offering the seminar.

Program Description

German Studies is an interdisciplinary program that offers both a major and a minor for students with broad academic interests in the German-speaking world.

In consultation with a faculty adviser in the program, students design individual plans of study from the many core courses offered in the Departments of History, Literature, Music, Philosophy, Political Science, Sociology, and Theatre and Dance. Further courses, including some offered by other departments, may be incorporated into the student's program, if they

bear directly on German studies. Students considering a major or minor should consult a member of the German Studies faculty as early as possible.

Students need to attain competence in German (two years of university-level language courses or the equivalent) *before* they can take certain required upper-division courses. It is recommended that students attain this level of competence early in the program.

Study Abroad

All German Studies students are strongly encouraged to make overseas study an integral part of their program. The UC Education Abroad Program (EAP) conducts formal programs of study in Berlin, Gπttingen, and Bayreuth ranging from one-quarter, intensive beginning language programs to a full year of study at a German university. In addition, Eleanor Roosevelt College administers a full-year exchange program with Augsburg University. Students may petition to use up to five courses completed while studying abroad in their major, and three in their minor.

Senior Honors Thesis

At the beginning of his or her senior year, a student major in German Studies may elect to write a Senior Honor's Thesis. To be eligible, the student must have a GPA of 3.5 in the German Studies major at the beginning of the senior year.

To begin work, the student forms a committee of three appropriate faculty members, including a committee chair, who is chosen from among the German Studies Core Faculty. The chair supervises the student in a two-quarter program of independent study to research and write an Honor's Thesis of approximately thirty to fifty pages (GMST 196A/B; the two courses count among the required twelve for the major). The student defends the thesis in a one-hour oral exam with the full committee, which is charged with recommending the degree of honors that will appear on the student's transcript and diploma.

The Major

The major in German Studies requires twelve upper-division courses chosen from the core course list, and includes:

German Studies 100 and 101
(Literature Department)

three courses in German Literature

two courses in History

five additional core courses, taken in at least two different departments. At least two of these courses must be taken outside the literature department.

Students plan their major in consultation with their German Studies faculty adviser, and submit it to the program director for approval.

The Minor

The minor in German Studies consists of seven courses, at least five of which must be upper-division, including:

German Studies 100 **or** 101
(literature department)

At least six additional core courses, taken in at least two departments.

Students plan their minor in consultation with their German Studies faculty adviser, and submit it to the program director for approval.

Core Courses

Courses marked with an asterisk (*) frequently cover topics bearing on German Studies. Students should check the departments' quarterly course descriptions and yearly course spreads for their applicability to the program, and discuss them in advance with their German Studies adviser.

Program Description

The **Master of Advanced Studies (MAS) in the Leadership of Healthcare Organizations** provides depth and focus on management for health care professionals with an emphasis on clinical process improvement. The goal of the program is to prepare health care professionals to participate more effectively in the business decisions that affect the quality of patient care by teaching participants to deal with error prevention, process quality, and systems of care. Students gain the advanced knowledge and skills that are essential to manage escalating challenges in the competitive business environment of health care. The MAS program crosses many fields and clinical and administrative professions in the health industry, including medicine, nursing, mental health, dentistry, insurance, pharmacy, and other related areas. The program is appropriate for nurses, managers, physicians, allied health professionals, health care executives, and medical students as they assume more active roles in health care leadership and on management teams.

The MAS in the Leadership of Healthcare Organizations is a part-time, self-supporting degree program with a flexible course schedule designed for working professionals. It is the first graduate degree of its kind within the University of California system. The UCSD graduate division confers the MAS degree and the Department of Family and Preventive Medicine in the UCSD School of Medicine is responsible for the academic management of the curriculum. UCSD Extension administers the program and provides student advising and career counseling services.

Admission

New students are admitted in the fall, winter, and spring quarter of each academic year. Prospective candidates should submit and complete the official UCSD online graduate application for admission, the application fee, one set of official transcripts from each institution attended after high school, three letters of professional recommendation, and a current résumé or c.v. The GRE/GMAT is not required; however, it is strongly recommended that candidates have a minimum of five years of professional experience in health care. International applicants must submit official scores from the Test of English as a Foreign Language (TOEFL). The application deadlines are July 15 (fall), November 15 (winter), and January 15 (spring).

Program of Study

The part-time degree program is designed to be completed in one, two, or three years, depending upon a participant's time to devote to the program. Classes are typically scheduled in the late afternoons, evenings, or weekends to meet the demands of working professionals. Students are required to complete thirty-six units of core courses and two prerequisite courses. The prerequisite courses may be taken concurrently with the core courses in the MAS program or prior to being admitted in the degree program.

PREREQUISITES

LHCO 201. Topics in Health Care Management and Innovation—Health Care Finance and Systems

LHCO 201B. Topics in Health Care Management and Innovation—Managing in a Complex Health Care Environment

CORE CURRICULUM

LHCO 201C. Topics in Health Care Management and Innovation—Forums with the Experts (2)
This seminar-style course includes weekly discussions with health care entrepreneurs and managers to expose students to real-life experiences. How are solutions to health care delivery problems identified and implemented? How are solutions brought to the marketplace?

LHCO 202. Organizational Dynamics and Change Management (4)
This course examines principles and applications of management and organization theory as applied to health care organizations. It covers methods for assessing key features of organizational environments and internal structures and identifying, developing, and implementing strategies for improved performance.

LHCO 203. Using and Managing Information and Information Technologies (4)
Designed to familiarize health administrators and professionals with the principles of information systems design and management for health care. Provides an understanding of current trends in information technologies for health care and management issues unique to it. Includes hands-on computer lab.

LHCO 204. Managing People and Teams (2)
(Cross-listed with SOMI 256.) This course studies key management concepts and roles of management and how they apply in successful, dynamic organizations. It also examines competencies of effective managers in developing customer focus, planning, selecting and developing individuals and teams, communicating, managing resources, using technology and being adaptable.

LHCO 205. Modern Health Care Organizations (4)
Describes and analyzes the dynamics responsible for the change in health care delivery and effects on development of modern health care organizations. Describes actions taken by employers, insurers, consumers, and government, analyzing the effects on physicians and provider organizations. **Note**: It is recommended that students take this course in their first winter quarter in the program.

LHCO 206. Topics in Financial Management and Decision Making (2)
This course presents real-life applications in health care provider organizations of financial management and decision-making. Topics include budgeting, uses of financial reports, development of long-range financial forecasts, benchmarking, business plan development, and actuarial analysis in projecting health care delivery costs.

LHCO 207. Health Law and Medical Liability (4)
This course provides an introduction to the relationship of law to health care, including liability, government regulation, financial and ethical issues, contracting and negotiation and dispute resolution.

LHCO 208. Financial Management and Decision Making (4)
This course analyses the impact of time and risk on investment decisions. Financial accounting will be reviewed to understand financial information within an organization including uses and limitation of such information for management purposes. Discussion of procedural aspects of accounting to explicate basic concepts.

LHCO 209. Patient Outcomes and Quality of Care (4)
This course provides a critical overview of the tools used to measure outcomes and quality of care, development and use of practical guidelines, advantages and disadvantages of various methods, and the use of such analysis in administrative decision-making.

LHCO 210. Assessment of Medical Technology (2)
This course covers assessment methodologies, balancing concerns for economics and impact on care, investment strategy, and relationships with developers, vendors, and suppliers.

LHCO 211. Healthcare Leadership and Political Advocacy (2)
Within the context of healthcare advocacy, the course examines the organizational and individual issues that impact success in promoting and advocating for a healthcare agenda. The course aims to provide clarity to that process and assist students with understanding how to navigate the political landscape. Students learn about the legislative process, lobbying, the impact of political campaigns, the involvement of the media, and how healthcare economics impact politics.

LHCO 296. Independent Study in the Management of Health Care Organizations (4)
Students will be involved in an administrative project in UCSD Healthcare or another health care organization in San Diego. The student's experience will be the basis for a report as a requirement for graduation.

Health Care–Social Issues

OFFICE: Interdisciplinary Programs, Literature Building, Second Floor, Room 3238, Warren College

Health care–social issues is an interdisciplinary minor designed to enhance students' competence in analyzing complex social and ethical implications and ramifications of health care issues, policies, and delivery systems. Students gain an understanding of how the economy, culture, technology, sociological and psychological processes influence modern health care. Although it is administered by Warren College, it is available to all UCSD students with a general interest in health care as well as to students considering health care careers. This minor offers UCSD students the opportunity to examine health care-related issues from the perspectives of a wide range of disciplines that include anthropology, contemporary issues, economics, ethnic studies, philosophy, psychology, sociology, urban studies, and science and technology. By bringing together course work from these academic departments, this interdisciplinary curriculum offers a breadth of intellectual experience that enhances students' undergraduate education and their preparation for professional and postgraduate education in health care professions.

Students should consult an academic adviser in their college provost's office to determine how the health care–social issues minor can best meet their college's graduation requirements. Declarations must first be reviewed and approved by the coordinator of Interdisciplinary Programs and then by the student's college academic advising office.

Students are strongly urged to supplement the health care–social issues minor with a health-related internship. The Academic Internship Program offers internship placements in clinical settings and with medical research teams that provide valuable experience, career clarification, and an opportunity to apply theories learned in course work. Juniors and seniors with at least a 2.5 overall grade-point average (some placements require a 3.0 GPA) are eligible and can earn from four to sixteen units of academic credit for the internship experience.

Further information on related programs and activities is available at the Interdisciplinary Programs Office, Literature Building, Second Floor, Room 3238, Warren College, or call (858) 534-1704. Web site: http://warren.ucsd.edu/health

Health Care–Social Issues Minor Requirements

The minor consists of seven courses (three required and four electives). At least five courses must be taken at the upper-division level. Upper-division courses must not overlap with courses in the student's major and must be distributed in two or more disciplines. For full descriptions of the following courses, please see departmental listings.

The health care–social issues minor is applicable as a Warren College program of concentration in the social sciences.

Required Courses

Sociology/L 40—Sociology of Health Care Issues
Philosophy 163—Bio-Medical Ethics

One course in Urban Studies and Planning chosen from the following:

143—The U.S. Health Care System
144—Environmental and Preventive Health Issues
145—Aging: Social and Health Policy Issues
147—Case Studies in Health Care Programs: The Poor and Underserved

(Additional urban studies and planning courses may be taken to fulfill elective requirements in the minor.)

Elective Course Options

Anthropology

Lower-Division

2—Human Origins

Biological Sciences
101—Topics in Biomedical Anthropology
141—The Evolution of Human Diet

General
100—Topics in Sociocultural Anthropology (approval required)
128—The Anthropology of Medicine

Contemporary Issues
22—Human Sexuality
40—The AIDS Epidemic
136—The Anthropology of Medicine

Economics
138A-B—Economics of Health

Ethnic Studies
142—Medicine, Race, and the Global Politics of Inequality

Philosophy
147—Philosophy of Biology
148—Philosophy and the Environment
151—Philosophy of Neuroscience
162—Contemporary Moral Issues
164—Technology and Human Values
165—Professional Ethics

Psychology
2—General Psychology: Biological Foundations
60—Introduction to Statistics
104—Introduction to Social Psychology
124—Introduction to Clinical Psychology
132—Hormones and Behavior
134—Eating Disorders
153—Clinical Psychology
154—Behavior Modification
155—Social Psychology and Medicine
163—Abnormal Psychology
168—Psychological Disorders of Childhood
169—Brain Damage and Mental Function
172—Psychology of Human Sexuality
179—Drugs, Addiction, and Mental Disorders
181—Drugs and Behavior
188—Impulse Control Disorders

Science, Technology, and Public Affairs
181—Elements of International Medicine

Sociology

Lower-Division
60—The Practice of Social Research

Cluster B
120S—Special Topics in Culture, Language, and Social Interaction (prior approval of topic required)
143—Suicide

Cluster C
134A—The Making of Modern Medicine
134B—Medicine in the Twentieth Century
135—Medical Sociology
136A—Sociology of Mental Illness: Historical Approach
136B—Sociology of Mental Illness in Contemporary Society
137—Knowledge and Practice in Biomedicine
138—Genetics and Society
159—Special Topics in Social Organizations and Institutions (prior approval of topic required)

Urban Studies and Planning
143—The U.S. Health Care System
144—Environmental and Preventive Health Issues
145—Aging: Social and Health Policy Issues
147—Case Studies in Health Care Programs: The Poor and Underserved

Recommended Internship Experience

Health care-related internship (AIP 197): to be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor, Warren College. Clinical and research placements are available. For each four units of credit, ten hours per week for one quarter plus a ten-page research paper are required

Hebrew Literature

See Literature.

Edward Reynolds, Ph.D.
Martin J. S. Rudwick, Ph.D.
Ramón Eduardo Ruíz, Ph.D.

The Undergraduate Program

"Whereas other subjects may make us smarter for next time," said the great historian of the Renaissance, Jakob Burckhardt, "the study of history makes us wiser forever." This major is, moreover, an excellent preparation for a number of rewarding careers in university and college teaching and research, law, government, diplomacy, international business, education, and even medicine. At the crossroads of the humanities, the arts, and the social sciences, history is the study of human experience as it has unfolded over the ages. As an academic discipline it presents a unique gateway both to the richness of our cultural heritage and to the immense variety of world civilizations.

Students wishing to declare a major in history should first consult with the Director of Undergraduate Studies. After determining the student's likely field of emphasis, the student should then select an appropriate faculty adviser. All undergraduate majors are strongly encouraged to consult with the faculty adviser at least once each quarter. Any difficulties in the advising procedure or in registration formalities should be reported to the director of Undergraduate Studies.

Department fields of emphasis are as follows: Africa (HIAF), East Asia (HIEA), Europe (HIEU), Near East (HINE), Latin America (HILA), History of Science (HISC), United States (HIUS); as well as the following three thematic fields: Gender and Sexuality; Race, Ethnicity, and Migration; and War, Revolution, and Social Change. A list of courses approved for the thematic fields is available in the department office or on its Web site, http://historyweb.ucsd.edu.

The department also administers the following special research and instructional units; Chinese Studies; Judaic Studies; and the Committee on Area and Ethnic Studies and Research (CAESAR), which includes African Studies, Classical Studies, German Studies, Italian Studies, Japanese Studies, Middle East Studies, Russian and Soviet Studies.

The department is fortunate in having the research and professional activities of its faculty supported by the Laura and John Galbraith Faculty Development Fund.

Basic requirements for the major are as follows:

1. A three-quarter lower-division sequence.
2. Twelve four-unit upper-division courses, which must include the following distribution of courses:
   a) Seven courses in a field of emphasis. (In certain cases, with approval of the academic adviser, two of these courses may be in a neighboring discipline.)
   b) Five courses in other fields within the department.
   c) Three of the twelve courses must focus on the period before 1800. These courses are indicated by the symbol (+).
   d) At least one of the twelve courses must be a colloquium in which students would be required to write a substantial term paper. Colloquia are those courses with numbers between 160 and 190, or others approved by the undergraduate adviser. **Note:** The colloquium does not have to be in the major field of emphasis.

*Requirement 2d applies only to students entering UCSD after September 1, 1998.

Students majoring in history will normally take at least eight of their twelve upper-division history courses at UCSD. Exceptions to this rule may be made for transfer students and for students participating in the EAP/OAP program.

In special cases, upon approval of the director of Undergraduate Studies, students may devise a field of emphasis (e.g., economic, legal, or social history) other than those designated above. Special independent study courses, such as HITO 197, HITO 198, and HITO 199, are available for students. These courses are especially recommended for those students interested in the Honors Program and in Graduate study.

With the exception of 199 courses, all work in the major must be taken for a letter grade. Of the twelve upper-division courses required in the major, no more than two may be History 199 credits. (Exceptions to these rules may be allowed upon petition to the director of Undergraduate Studies.)

Lower-division sequences may be selected from the following:

HILD 2 A-B-C	United States History
HILD 7 A-B-C	Race and Ethnicity in the U.S.A.
HILD 10-11-12	East Asia

Students may also satisfy the lower-division requirement for the major by completing the Revelle College Humanities Sequence or the Fifth College Sequence, "Making of the Modern World." Students entering with AP credit in history may waive part of the lower-division requirement. Transfer students, after consulting with the director of Undergraduate Studies, may petition to substitute a two-semester or three-quarter survey from another school for the department's lower-division requirement.

Established in 1983, the Armin Rappaport Memorial Fund endows an annual prize for the outstanding graduating student in the major. The recipient of the award is announced at every June Commencement.

The Honors Program

The department offers a special program for outstanding students. The Honors Program is especially recommended for those students interested in pursuing graduate study in history or allied fields. It is also a particularly effective preparation for professional careers. Candidates for history honors are chosen during the spring quarter from among juniors in history who have taken at least four upper-division courses in the department. Juniors with a 3.5 GPA in history (3.0 overall) are eligible to apply. Admission to the program is based on the student's academic work. Interested candidates should complete the application form (available in the Department of History office) by the second Friday of May.

In addition to regular course work in the department, the honors program consists of a colloquium in historiography offered in the fall quarter of the senior year and a program of independent study leading to the completion of an honors essay on a topic of the student's choice. During the fall quarter of the senior year, candidates select a topic and begin preliminary work on the honors essay in consultation with a major field adviser (HITO 194). During the winter quarter the student pursues a course of independent study devoted to the completion of the honors essay (HITO 195). The award of history honors is based on satisfactory completion of the colloquium in history and the honors essay. Students are expected to maintain an average of 3.5 or better in all work taken within the department. Honors candidates must include at least three colloquia in their regular course work.

Candidates for history honors should organize their work as follows:

1. Six quarter-courses in one of the major fields offered by the department.
2. Three quarter-courses in a field other than the primary one.
3. Three of these nine quarter courses must be colloquia.
4. HITO 196. Colloquium in History;
5. HITO 194 and 195. History Honors—Honors Essay.

Minors in History

Effective winter quarter 1998, the minor consists of at least seven courses, five of which must be upper-divsion. Although there is no specific distribution requirement, the courses should be selected to constitute a coherent curriculum. No more than two upper-division courses applied to a minor may be taken for Pass/No Pass. Prospective minors in history should consult with an undergraduate adviser for approval of their program.

Education Abroad Program

Students are encouraged to participate in the UC Education Abroad Program (EAP) of UCSD's Opportunities Abroad Program (OAP), while still making progress toward completing their major. Students considering this option should discuss their plans with the departmental Educational Abroad faculty adviser before going abroad, and courses taken abroad must be approved by the department. (For more information on departmental procedures for study aboard see undergraduate program http://historyweb.ucsd.edu. EAP is detailed in the Educational Abroad Program of the *UCSD General Catalog*, or visit http://orpheus.ucsd.edu/icenter. Financial aid is applicable to study abroad, and study abroad scholarships are available. Interested students should contact the Programs Abroad Office in the International Center.

The Graduate Program

The Master's Program

The Department of History offers master's degrees in the fields of Chinese studies, modern European history (1500 to the present), history of science, Latin American history, and United States history. The department also provides the opportunity for students to design special M.A. programs in areas such as African history, medieval European history, and Judaic studies. In consultation with an appropriate faculty member, students may petition the department for approval for a special M.A.

Admission is based on the applicant's undergraduate preparation; previous graduate work, if any, three letters of recommendation; one or two papers (preferably written for history courses); and scores from the Graduate Record Examination (GRE). **The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test or a score of 213 for the computer-based test is required on the TOEFL.**

The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. While proficiency in a foreign language is not an absolute requirement for admission (except in Latin American history, where a reading knowledge of Spanish is required), prospective applicants are strongly urged to begin study of a foreign language appropriate to the proposed area of concentration as early as possible in their academic career. With very few exceptions, students are expected to begin their programs in the fall quarter. Refer to the online application for filing deadline. **Master's students ordinarily do not receive financial aid from the department or the university except when funds are not utilized for support of Ph.D. candidates.**

For online application visit: http://www.ogsr.ucsd.edu/

General Requirements

Candidates for the master's degree are expected to finish the program in one academic year of full-time study or two years of part-time work. The program requires completion of thirty-six units, of which at least twenty units must be in colloquia, conjoined courses, directed readings, and seminars. In addition to course requirements, students must pass a comprehensive oral examination. Students in European or Latin American history and in certain special areas must demonstrate reading knowledge of at least one foreign language relevant to their course work.

Area of Concentration: Chinese Studies

Chinese studies is an interdisciplinary program that allows the graduate student interested in China to take advantage of the university's offerings in various departments to build a coordinated graduate program leading to an M.A. degree in history. Although the program is offered under the auspices of the Department of History, the student selects courses in the Departments of Anthropology, Linguistics, Literature, Political Science, and Sociology, as well as History.

Area of Concentration: Europe

Candidates for the M.A. degree in European history pursue a program concentrating on the history of modern Europe. The program provides background in earlier European history in order to place modern Europe in perspective. Some training in a discipline other than history is also recommended. The requirement of nine courses (thirty-six units) is normally distributed as follows:

1. A two-quarter research seminar, to be selected from HIGR 230, 231, or 232.
2. Three one-quarter courses concerning the historical literature about central problems in European history: HIGR 200, 220, 221, and 222 are the preferred options. If any of them are not scheduled for the year, other graduate-level colloquia may be substituted with approval of the student's graduate adviser.
3. Two courses in preindustrial Europe, 1450–1750: HIGR 200, 220, and 221 may be counted for this requirement.
4. Two courses in industrial Europe since 1750: HIGR 221 and 222 may be counted for this requirement, as well as appropriate graduate level colloquia.

   Note: HIGR 221 may NOT be used for both (3) and (4).
5. One course in a discipline other than history, if relevant to the student's program.

Area of Concentration: History of Science

The master's program in history of science provides a broad background in preparation for a variety of careers related to science and technology, business, journalism, education, government, or for more advanced degree work. The nine courses (thirty-six units) required are normally distributed as follows:

1. Two courses in science in early modern Europe.
2. Two courses in science since 1750.
3. A two-quarter research seminar.
4. The remaining courses are chosen in consultation with the faculty in history of science. For students whose previous training has been mainly scientific, these will include courses in historical fields other than the history of science. For students who already have historical training, they may include one or more courses related to the sciences.

Area of Concentration: Latin America

This program offers the student a general preparation in the history of Latin America. Students will have the opportunity to specialize in national or colonial periods and can emphasize work in one country. Advanced work in another discipline related to Latin America may also be included in the program. Thirty-six units normally should be distributed as follows:

1. HIGR 245A-B-C.
2. Three graduate courses in Latin American history.
3. Three other courses related to Latin America in history or in other disciplines.

Area of Concentration: United States

This area of concentration offers the M.A. candidate a broad grounding in the literature of American history from the colonial period to the present. In addition to a shared core of courses, students specialize in a topical field of their own choosing. Training in a related discipline outside of history is encouraged. The requirement of nine courses (thirty-six units) is ordinarily distributed as follows:

1. HIGR 265A-B-C. The Literature of American History. These colloquia are required of all entering graduate students in American history.
2. A two-quarter research seminar.
3. Two courses in a single topical field chosen from African-American history, history of the borderlands and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women and gender.
4. Two additional courses chosen in consultation with the student's adviser. These courses may be in a related field outside the department.
5. At least six of the nine courses must be colloquia or graduate-level courses. Students may take conjoined courses, directed readings, research seminars, or the 265 series to meet this requirement.

Ph.D. Program

Admission

The Department of History offers the doctor of philosophy degree in the fields of ancient history, East Asian history, European history, history of science, Latin American history, and United States history.

Admission is based on the applicant's undergraduate preparation; previous graduate work, if any; three letters of recommendation; one or two papers (preferably written for history courses); and scores from the Graduate Record Examina-tion (GRE). **The GRE subject exam in history is not required. The Test of English as a Foreign Language (TOEFL) is required for foreign applicants. A minimum score of 550 for the paper-based test or a score of 213 for the computer-based test is required on the TOEFL.**

The minimum grade-point average for admission is 3.0 with a higher average in history and related subjects. In most areas of concentration, knowledge of at least two foreign languages will be required during a student's academic career. In general, applicants are expected to have a reading knowledge of the languages most appropriate to their major field at the time of admission. Thus, students in ancient history, East Asian history, European history, history of science, and Latin American history should have a working knowledge of one foreign language at the time of admission. With very few exceptions, students are expected to begin their programs in the fall quarter. Refer to the online application for filing deadline.

For online application visit: http://www.ogsr.ucsd.edu/

Fields of Study

During the first year of residence each student, after consulting with a graduate adviser in the area of concentration, selects one major field of study and two minor fields. Within a major field the student should indicate a special interest from which the dissertation may develop. The first minor is ordinarily a supplementary field within the student's area of concentration, while the second minor is a complementary field outside the area of concentration. The basic programs of study are as follows:

I. ANCIENT HISTORY

Students in ancient history will be expected to demonstrate a broad mastery of the entire field, with special concentration as follows:

A. Major Fields

1. The history of Israel in the biblical period.
2. The history of the Jewish people in antiquity.

B. First Minor

1. One of the fields listed above not chosen as the major field.
2. Greek and Roman history.
3. The Middle East before Islam (western Asia and northeastern Africa from the sixth century B.C.E. to the seventh century C.E.)

C. Second Minor

1. A field of history outside of ancient history.
2. A related discipline, offered through another department.

D. Language Requirements

1. All students will be expected to demonstrate a reading knowledge of two modern foreign languages, usually French and German. This requirement may be satisfied by any of the means recognized by the department.
2. All students will be expected to demonstrate a reading knowledge of at least one and usually two of the three following ancient languages: Greek, Hebrew, and Latin. The languages will be chosen as appropriate to the student's particular interests and the requirement will be satisfied by departmental examination.
3. The second and sometimes third language not elected under (2) may be required if necessary for the student's research. Additional languages, such as Akkadian, Aramaic, Egyptian, Ugaritic, Phoenician, and middle and modern Hebrew, may be required as necessary for the student's research. The required level of competence will be set as appropriate to the student's needs and the requirement will be satisfied by departmental examination.

II. EAST ASIAN HISTORY

Students in East Asian history will be expected to demonstrate a broad competence in the entire field, with special concentration as follows:

A. Major Fields

1. Modern China
2. Modern Japan

B. Minor Fields

For students majoring in Chinese history, students will be expected to pass three minor fields in order to broaden each student's perspective on East Asian history:

1. Premodern Chinese history.
2. Modern Japanese history.
3. A history field outside of East Asia, or a discipline outside of history.

For students majoring in Japanese history:

1. A field in history.
2. A related field offered through another department.
   Note: One of the minor fields must not focus exclusively on East Asia.

C. Language Requirements

For students majoring in Chinese history: students must demonstrate a reading knowledge of Chinese and a reading knowledge of a second foreign language related to the student's research interests.

For students majoring in Japanese history: students must demonstrate a reading and speaking knowledge of Japanese. Depending on specialization, reading knowledge of a second foreign language might be necessary.

III. EUROPEAN HISTORY

The graduate program in European history is designed to achieve a dual objective: to encourage a broad mastery of historical methods and literature in various fields, as well as to develop a special focus of research within a single area or epoch. The distribution of offerings is as follows:

A. Major Fields

1. Modern Europe, with a specialty in Britain, France, Germany, Italy, Spain, diplomatic history, economic history, intellectual history, or social history.
2. Early modern Europe, with a specialty in the cultural, economic, or social history of one region.

B. First Minor

Any of the following fields may be selected provided that the study concentrates on a chronological period outside the major.

1. Classical Greece and Rome
2. Medieval Europe
3. Early modern Europe
4. Modern Europe
5. A national history

C. Second Minor

1. The history of a geographic area outside of Western Europe
2. History of science
3. Women's history
4. A related discipline, offered through another department.

D. Language Requirements

The department requires Ph.D. candidates in European history to demonstrate competency in two languages in addition to English before advancement to candidacy.

IV. HISTORY OF SCIENCE

Note: Students should indicate whether they are also applicants for admission to the interdepartmental program in Science Studies (history, philosophy, and sociology of science).

A. Major Fields

1. Science in early modern Europe.
2. Science in the eighteenth and nineteenth centuries.
3. Science in the twentieth century.
4. Another field of comparable breadth, defined in consultation with the major field adviser.

B. First and Second Minor Fields (Any two of the following may be selected, in consultation with the major field adviser.)

1. Science Studies (mandatory for students in the Science Studies program).
2. Any of the other fields offered by the department, provided that it offers general historical understanding of the same period as the major field.
3. A field of history of science not chosen as the major field.

4. A second field of history, provided that it concentrates on a period or region other than that chosen for the first minor field.
5. A related discipline, offered through another department. **Note**: this field may be in the physical or life sciences.

C. Language Requirements

Competency in one or two languages in addition to English before advancement to candidacy is required. The requirement will vary depending on chosen major field.

V. LATIN AMERICAN HISTORY

Doctoral candidates in Latin American history are expected to gain a broad chronological and geographical mastery of the field as a whole. The oral examination in the major field, while concentrating on the student's special area of interest, will be a comprehensive examination covering the whole field of Latin American history.

A. Major Fields

1. The national period of Latin America, with a specialty in the Andean Republics, Brazil, the Caribbean, Mexico, or the Southern Cone countries.
2. Colonial Latin America, with an emphasis on one major region.

B. First Minor

The student should select either the national period or the colonial period as a chronological supplement to the major.

C. Second Minor

1. The history of another geographic area outside Latin America and the Caribbean.
2. An area of discipline, offered through another department, related to the student's dissertation or preparation for university teaching.

D. Language Requirement

Competency in two languages in addition to English before advancement to candidacy is required. Normally the first of these will be Spanish. The second may be Portuguese or another European or non-European language, including an indigenous language of the Americas.

VI. UNITED STATES HISTORY

A. Major Fields

1. Colonial and National period to 1877.
2. Modern America, 1877 to the present.

B. First Minor

1. One of the above fields not chosen as the major field.
2. One of the following topical fields:

African-American history, history of the borderlands and Southwest, Chicano history, economic history, legal and constitutional history, political history, social and cultural history, history of the South, history of the West, or history of women and gender.

C. Second Minor

1. A geographic area outside the United States in either the premodern or modern period.
2. A related discipline offered through another department.

D. Language Requirement

Competency in one language in addition to English before advancement to candidacy is required.

E. Third Year Seminar

U.S. History students in their third year of study will be required to complete HIGR 271, New Research Directions in U.S. History, in both the winter and spring quarters.

VII. DUAL DEGREE PROGRAM

Students who wish to earn both the Ph.D. in history from UCSD and the Juris Doctor from California Western School of Law must apply to and be independently accepted into both programs under each of the campus' standards and procedures.

Students pursuing the dual degree program will normally alternate years at each institution, in a manner agreed on by the students' advisers and appropriate committees. Thus, for example, a student may spend his or her first year at Cal Western, his or her second year at UCSD, and so on through the program. At least one year at each institution must be completed by the end of three years.

Each institution will accept a small number of course credits from the other institution to satisfy its degree requirements. Cal Western remains on a semester system, while UCSD continues on a quarter system. With the exception of the historiography and research seminars and subject to approval by a faculty adviser and the graduate committee, the Department of History will accept for credit up to two classes from Cal Western.

VIII. OTHER FIELDS

Students may be admitted to graduate study leading to the Ph.D. in fields other than those listed above upon the recommendation of an appropriate faculty member. In such cases, a special program of study appropriate to the field will be devised by the major field adviser, subject to the approval of the department's graduate committee.

Note: The department also offers graduate work in African history. When appropriate, students may select a minor field in this area.

Ph.D. Course Work

A normal full-time program consists of 12 units per quarter. Ph.D. students are expected to complete at least one of the following minimum formal courses of study prior to their qualifying examination: (1) two two-quarter research seminars, three one-quarter historiography courses in their major field and five other courses (which may be a combination of colloquia, conjoined courses, or directed readings); or (2) three two-quarter research seminars (not necessarily in the same field), three one-quarter historiography courses in their major field, and three other courses (which may be a combination of colloquia, conjoined courses, or directed readings). Students are encouraged to take their first research seminar in their major field during the initial year of graduate study. A maximum of four units per quarter may be taken in teaching assistantships.

Part-time Study

Students who enroll in fewer than twelve graduate or upper-division units per quarter are considered part-time students. Part-time study may be pursued in several master's programs and a few Ph.D. programs at UCSD. Approval for individual students to enroll on a part-time basis may be given for reasons of occupation, family responsibilities, or health. Individuals who are interested in part-time study and meet the above qualifications should see the department's graduate coordinator.

Part-time students must satisfy the same admission requirements as full-time students and are eligible, at the discretion of the department, for 25 percent time teaching or research assistantships. Students who are approved by the dean of Graduate Studies and Research for

enrollment in a program of half-time study or less (maximum of six units) may be eligible for a reduction in fees. All other students pay the same fees as full-time students.

Ph.D. and M.A. Language Requirements

Ph.D. candidates in Chinese, European, and Latin American history must demonstrate competency in two foreign languages. Ph.D. candidates in history of science, Japanese, and United States history, as well as M.A. candidates in European and Latin American history, must demonstrate competency in one foreign language. Ph.D. candidates in ancient history require two modern foreign languages as well as the relevant ancient languages. Additional languages appropriate to the special field of study as well as language requirements for a candidate in a field other than those already mentioned may be required by the Graduate Committee in consultation with the student's major field adviser. Students may satisfy the foreign language requirement in one of the following ways:

A. By completing, with a grade of B- or better in each term, a two-year language sequence from the student's undergraduate institution. Such a sequence must have been completed within two years of the time the request is made to the Graduate Committee for certification of competency.

B. By completing, with a satisfactory (S) grade in each term, a two-year, lower-division sequence in the language approved by the Graduate Committee.

C. By completing, with a satisfactory (S) grade in each term, a one-year, upper-division sequence in the language approved by the Graduate Committee.

D. By passing a translation examination administered by a departmental faculty member who is proficient in the language. (This is the only option available for Chinese and Japanese.)

Students are urged to complete at least one foreign language examination by the end of the first year of study and must do so by the beginning of their third year. *Failure to meet this requirement is grounds for denial of financial support.* No student may take the oral qualifying examination before completing all language requirements.

Ph.D. Examinations

A. Minor Fields

Ph.D. candidates are strongly encouraged to take at least one minor field examination by the end of fall quarter of their second year and to complete all examinations by the end of their third year. Generally, the department recognizes two types of minor fields. The most common minor field is a teaching field. That is, passing a minor field in an area certifies, on a student's record and resume, that the student has mastered the literature and the major issues in a field sufficient to qualify the student to teach in that area. (An example would be a minor field in modern Japanese history for an East Asian history student specializing in modern China; or medieval history for a Europeanist.) A second type of minor field is designed to familiarize a student with a range of theoretical and comparative issues which will be useful in the formulation of a dissertation topic and future research in the student's major field. (An example might be Latin American history for a student working in United States ethnic history; or sociology for a student in any field.) For a minor field taken outside the department, the minor field adviser (not the student or major field adviser) determines the level of expertise sufficient to warrant certification in that field.

Reading lists are negotiated between students and their minor field adviser, but, as a guideline, they should include about 50 titles with 40–70 titles representing a reasonable range. The reading list is agreed upon, at least three months in advance, by the student and faculty member administering the minor field examination. The list is intended to establish what will be expected of the student and to prevent confusion over the material to be covered. Most minor fields include a written examination; these may be in the form of a three-hour departmental exam or a twenty-four hour take-home exam at the administering professor's discretion. (Minor field examinations in East Asian history will be oral; those in history of science may be either written or oral.) The professor composes and grades the written examination.

Students who fail a minor field examination may petition the Graduate Committee for permission to sit for the examination again at any time during the following two quarters, as long as pre-candidacy time limits are not exceeded. A second failure results automatically in dismissal from the program.

B. Oral Qualifying Examination and Candidacy

Students are normally expected to take their qualifying examination no later than the spring of their third year of study (except as otherwise specified by the individual fields), and are required to do so in four years. Students must fulfill all course work, minor field, and language requirements before taking their qualifying examination. The qualifying examination is an oral test in the student's major field of study, conducted by at least five examiners: three of whom must be members of the Department of History and two from a discipline outside the department (at least one examiner must be a tenured faculty member). Or, four examiners from the Department of History (with one member outside the student's field group), and with at least one tenured faculty member from a discipline outside the department. Students should consult with their adviser about the composition of the examining committee well before their examination. The examination committee also serves as the dissertation committee. The membership of the committee must be approved by the Department Chair and ultimately the Dean of graduate studies. The date of the examination is determined by consultation between the candidate and the examining committee. In addition to the major field book list, it is required that students also submit a dissertation prospectus to the committee before the oral examination. The examination, which will include a discussion of the student's prospectus, lasts approximately two to three hours.

Should a candidate fail the examination, the examining committee will consult with the student to clarify weaknesses in preparation for taking the examination a second time. If a second oral examination is warranted, the department requires that it should be taken no later than one quarter after the first examination. If the candidate fails the oral examination a second time, his or her candidacy will be terminated.

An M.A. degree may also be awarded to continuing Ph.D. students upon successfully passing the oral qualifying examination. The M.A.

is not automatically awarded; students must apply in advance to receive the degree. **Note**: Students who wish to receive an M.A. degree as part of the Ph.D. program must apply for master's degree candidacy during the first two weeks of the quarter in which they expect to receive the degree. Please see the graduate coordinator regarding this application.

The various requirements noted above apply to students who have done no previous graduate work in history. If a candidate has completed some graduate work before entering UCSD, there may be appropriate adjustments in course work, as approved by general petition to the Graduate Committee. Nevertheless, all candidates are required to meet language requirements, pass field examinations, as well as complete and defend a dissertation.

Dissertation

After completing all relevant examinations and language requirements, the student is expected to write a dissertation under the supervision of his or her faculty adviser and the doctoral committee. The Department of History has established the following guidelines for dissertation work. The dissertation should:

- represent an original and significant contribution to knowledge.
- be based upon primary research.
- clearly demonstrate the capacity of the student to pursue independent historical research.
- be written in clear and coherent prose.

Decisions concerning the scope of the dissertation and its length will depend upon the nature of the problem and the documentation. The department assumes that most students will have completed their research and writing by the end of their sixth year of study. The scope and length of the dissertation should therefore be such that a complete project can be executed in no more than three years. Whatever the scope or length of the dissertation it should be capable of further development for publication as a series of articles in scholarly journals, or as a book.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

Opportunities for Teaching

Undergraduate teaching, for which graduate teaching assistants earn regular academic credit, is an integral part of the graduate program at UCSD. To prepare for an academic career, the Ph.D. candidate is encouraged to assist in courses offered by the department ordinarily as a course reader (grader) or teaching assistant. A maximum of four units per quarter may be taken in undergraduate teaching. When such an opportunity is not available, a student may teach in various programs outside the department.

The department considers experience in teaching an important part of a graduate student's professional training. Based upon financial aid forms that graduate students complete during the previous winter quarter, the Graduate Committee assigns History Department teaching assistantships and recommends teaching assistantships outside of the department for the upcoming academic year.

Students must maintain a minimum grade-point average of 3.0 in order to receive academic employment on campus.

Financial Support

Upon recommendation of the department, several types of financial aid are available to graduate students: full or partial remission of fees and tuition, fellowships, research assistantships, teaching assistantships, readerships, and travel grants. Graduate students are eligible for one or a combination of the six forms of financial support.

Fellowships and research assistantships are granted by the Office of Graduate Studies and Research (OGSR) upon the recommendation of the department. Teaching assistants are appointed by the department upon the recommendation of the graduate committee and by the college writing programs. Readers are appointed by the department upon the recommendation of the professor whose course requires such assistance. At the discretion of the department, half-time graduate students are eligible for 25 percent TAships or GSRships.

For a small number of outstanding incoming students, the department will award a four year package of guaranteed funding which would include two years of a fellowship and two years of employment as a teaching assistant.

Departmental policy has been to seek seven years of support for students in the program. In recent years all students needing support have received either fellowships, or teaching assistant, research assistant positions. To the extent that resources are insufficient to meet the need, the department, on the advice of the graduate committee, will rank students using a combined criterion of academic performance and financial need.

Graduate students must maintain a minimum grade-point average of 3.0 to be considered for any type of financial aid. Financial support is not renewed automatically but is approved by the department on a yearly basis.

The Office of Graduate Studies and Research grants partial remission of fees for nine quarters after advancement to candidacy ("normative time") if the student is advanced to candidacy by the end of the third year. (If the student delays advancement, the amount of normative time is reduced accordingly.) Upon expiration of normative time the student must complete the dissertation or resume full payment of fees.

Job Placement

In recent years, 75 percent of the department's Ph.D. graduates received positions as tenure-track assistant professors at colleges and universities around the country. The remaining 25 percent are currently administrators, visiting scholars, lecturers, or postdoctoral fellows at various educational institutions. Experience indicates that many from this latter group will eventually get professional appointments.

COURSES

LOWER-DIVISION

HILD 2A-B-C. United States
A year-long lower-division course that will provide students with a background in United States history from colonial times to the present, concentrating on social, economic, and political developments. (Satisfies Muir College humanities requirement and American History and Institutions requirement.)

HILD 7A-B-C. Race and Ethnicity in the United States
Lectures and discussions surveying the topics of race, slavery, demographic patterns, ethnic variety, rural and urban life in the U.S.A., with special focus on European, Asian, and Mexican immigration.

HILD 7A. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be slavery, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 7B. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Asian-American and white ethnic groups, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 7C. Race and Ethnicity in the United States (4)
A lecture-discussion course on the comparative ethnic history of the United States. Of central concern will be the Mexican-American, race, oppression, mass migrations, ethnicity, city life in industrial America, and power and protest in modern America.

HILD 10-11-12. East Asia
A lower-division survey that compares and contrasts the development of China and Japan from ancient times to the present. Themes include the nature of traditional East Asian society and culture, East Asian responses to political and economic challenges posed by an industrialized West, and war, revolution and modernization in the twentieth century.

HILD 10. East Asia: The Great Tradition (4)
Examines the evolving characteristics of East Asian culture and civilization before 1600. Contrasts the rise of imperial Confucian governance in China to the development of feudal society in Japan.

HILD 11. East Asia and the West (4)
Compares Chinese and Japanese responses to Western imperialism after 1600, focusing on popular protest and dynastic decline in China and the rise of the modernizing nation state in Japan.

HILD 12. Twentieth-Century East Asia (4)
Deals with the rise of East Asia in the Pacific Century. This course stresses the emergence of a regionally dominant Japan before and after World War II and examines the process of revolution and state-building in China during the Nationalist and Communist eras.

UPPER-DIVISION

Please note: The following upper-division courses are offered on a regular basis, although not every class is available every year. Check with the department to see what is available each quarter.

AFRICA

Lecture Courses

HIAF 110. History of Africa to 1880 (4)
A survey of pre-colonial Africa, concentrating on ancient Africa, Islam, state formation, the slave trade and abolition, and European penetration of the interior. *Prerequisite: upper-division standing.* +

HIAF 111. Modern Africa Since 1880 (4)
A survey of African history dealing with the European scramble for territory, primary resistance movements, the rise of nationalism and the response of metropolitan powers, the transfer of power, self-rule and military coups, and the quest for identity and unity. *Prerequisite: upper-division standing.*

HIAF 120. History of South Africa (4)
The origins and the interaction between the peoples of South Africa. Special attention will be devoted to industrial development, urbanization, African and Afrikaner nationalism, and the origin and development of apartheid and its consequences. *Prerequisite: upper-division standing.*

HIAF 122. Traditional African Religions (4)
A study of the meaning, structure, and sources of African traditional religion. The course examines the attitudes of mind and belief and practices which have evolved in many societies in Africa. +

HIAF 130. African Society and the Slave Trade (4)
Topics include trans-Saharan trade, slavery with African societies, Atlantic slave trade, East African slave trade, problems of numbers exported and profitability, impact of slave trade on African society, and the abolition of the slave trade. *Prerequisite: upper-division standing.*

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIAF 161/261. Special Topics in African History (4)
This colloquium is intended for students with sufficient background in African history. Topics, which vary from year to year, will include traditional political, economic, and religious systems, and theory and practice of indirect rule, decolonization, African socialism, and pan-Africanism. *Department stamp required.*

HIAF 199. Independent Study in African History (4)
Directed readings for undergraduates. *Prerequisite: consent of instructor and academic adviser required.*

EAST ASIA

Lecture Courses

HIEA 111. Japan: Twelfth to Mid-Nineteenth Centuries (4)
Covers important political issues—such as the medieval decentralization of state power, unification in the sixteenth and seventeenth centuries, the Tokugawa system of rule, and conflicts between rulers and ruled–while examining long-term changes in economy, society, and culture. +

HIEA 112. Japan: From the Mid-Nineteenth Century through the U.S. Occupation (4)
Topics include the Meiji Restoration, nationalism, industrialization, imperialism, Taish™ Democracy, and the Occupation. Special attention will be given to the costs as well as benefits of "modernization" and the relations between dominant and subordinated cultures and groups within Japan.

HIEA 113. The Fifteen-Year War in Asia and the Pacific (4)
Lecture-discussion course approaching the 1931-1945 war through various "local," rather than simply national, experiences. Perspectives examined include those of marginalized groups within Japan, Japanese Americans, Pacific Islanders, and other elites and nonelites in Asian and Pacific settings.

HIEA 114. Postwar Japan (4)
Examines social, cultural, political, and economic transformations and continuities in Japan since World War II. Emphases will differ by instructor. *Prerequisite: upper-division standing.*

HIEA 115. Social and Cultural History of Twentieth-Century Japan (4)
Japanese culture and society changed dramatically during the twentieth century. This course will focus on the transformation of cultural codes into what we know as "Japanese", the politics of culture, and the interaction between individuals and society.

HIEA 116. Japan-U.S. Relations (4)
Survey of relations between Japan and the United States in the nineteenth and twentieth centuries. Although the focus will be on these nation-states, the course will be framed within the global transformation of societies. Topics include cultural frameworks, political and economic changes, colonialism and imperialism, and migration.

HIEA 120. Classical Chinese Philosophy and Culture (4)
Course covers the period from the second millennium B.C. to second century A.D. This is a formative period in Chinese history, witnessing the flowering of philosophical schools–Confucianism, Taoism, and Realism. It was also during this period that the foundations of Chinese political and social structures were laid down. +

HIEA 121. Medieval Chinese Culture and Society (4)
This course covers the period from the sixth century to thirteenth century, the time of the glorious T'ang and Sung dynasties. We focus on the "medieval revolution" that changed the political, economic, and social life of the empire. As much as possible we study these changes from the eyes of the people who lived through them–aristocrats, peasants, soldiers, merchants, women. *Prerequisite: HIEA 120 recommended but not required.* +

HIEA 122. Late Imperial Chinese Culture and Society (4)
This course surveys Chinese culture and society from the fifteenth century to the eighteenth century. We will explore the experiences of a range of political actors—emperors, scholar-officials, merchants, peasants, and women from all classes. *Prerequisites: HIEA 120 and EA 121 recommended but not required.* +

HIEA 123. Food in Chinese History (4)
This course examines the production, distribution, preparation, and consumption of food in Chinese history to illuminate such themes as state agricultural policies, regional transportation and trade networks, dynamics of social interactions and gendered divisions of labor. *Prerequisite: upper-division standing.*

HIEA 124. Science in China and the West from Ancient Times to the Seventeenth Century (4)
(Same as HISC 110.) Joseph Needham asked why a scientific revolution occurred only in early modern Europe when, until that time, the Chinese had been more successful in applying knowledge of nature to society. Examination of Needham's famous "question" and beyond. Comparative representations of the heavens, earth, and body to the arrival of the Jesuits in China. *Prerequisite: upper-division standing.* +

HIEA 127. History of Medicine in China (4)
History of medicine in Chinese society from antiquity to the present day. Medical conceptions of the human body, gender, health, geography, climate, disease, and epidemics. Change in medical institutions, ideas, publishing, practitioners, and therapies. *Prerequisite: upper-division standing.*

HIEA 130. History of the Modern Chinese Revolution: 1800–1911 (4)
This course stresses the major social, political, and intellectual problems of China in the period from the Opium War to the Revolution of 1911. Special emphasis is placed on the nature of traditional Chinese society and values, the impact of Western imperialism and popular rebellion on the traditional order, reform movements, and the origins of the early revolutionary movement.

HIEA 131. History of the Modern Chinese Revolution: 1911–1949 (4)
This course deals with the formative period of the twentieth-century Chinese revolution. Considerable stress is placed on the iconoclastic New Culture period, the rise of the student movement, Chinese communism, the labor movement, revolutionary nationalism, and the emergence of the peasant movement.

HIEA 132. History of the People's Republic of China (4)
This course analyzes the history of the PRC from 1949 to the present. Special emphasis is placed on the problem of postrevolutionary institutionalization, the role of ideology, the tension between city and countryside, Maoism, the Great Leap Forward, the Cultural Revolution.

HIEA 133. Twentieth Century China: Cultural History (4)
This course looks at how the historical problems of twentieth- century China are treated in the popular and elite cultures of the nationalist and communist eras. Special emphasis is placed on film and fiction. Knowledge of Chinese required.

HIEA 137. Women and Family in Chinese History (4)
We explore how the Confucian philosophy influenced the way the Chinese look at the family and the role of women in it, as well as the domestic lives that men and women actually led from the classical times to the present day. *Prerequisite: upper-division standing.* +

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIEA 160/260. Seminar in Modern Japanese History (4)
This colloquium examines controversial domestic and international issues in Japanese history from 1850 to recent times. Topics will vary from year to year. *Prerequisite: department stamp, consent of instructor.*

HIEA 161/261. Representing Japan (4)
Analyzes Anglo-American representations of Japan and "Japaneseness" from mid-nineteenth century to present. Primary focus on literary, visual, and theatrical works that have had a significant and direct impact upon popular (or public) culture and perceptions. *Prerequisite: department stamp or consent of instructor.*

HIEA 162/262. History of Women in China (4)
This course concerns women in Chinese history in Imperial times. This course will focus on women's changing roles in the family, society, and culture. Topics will vary from year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. *Prerequisite: upper-division standing.*

HIEA 164/264. Seminar in Late Imperial Chinese History (4)
Special topics in late Imperial Chinese history. Topics will vary from year to year. Requirements will vary for M.A. and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. *Prerequisite: upper-division standing or consent of instructor.* +

HIEA 167/267. Special Topics in Modern Chinese History (4)
This seminar examines controversial, domestic, and international issues in Chinese history from 1800 to recent times. *Prerequisite: department stamp or consent of instructor.*

HIEA 168/268. Topics in Classical and Medieval Chinese History (4)
This course covers specific topics in Chinese society, thought, religion, culture, and history from the Zhon through the Song dynasties. It always involves reading primary sources. *Prerequisites: upper-division standing or consent of instructor, department stamp.* +

HIEA 170/270. Colloquium on Science, Technology, and Medicine in China (4)
In this course students will examine Chinese history through writings on nature, the heavens, and the human body. The focus will be on the traditional Chinese sciences: medicine, divination, astronomy, alchemy, and geomancy. Discussion will be based on primary Chinese sources in English translation including literary, religious, philosophical, governmental, and medical texts. *Prerequisite: department stamp.*

HIEA 199. Independent Study in East Asian History (4)
Directed reading for undergraduates under the supervision of various faculty members. *Prerequisite: consent of instructor required.*

EUROPE

See History of Science for more European courses (HISC 101ABC, HISC 106)

Lecture Courses

HIEU 101. Greece in the Classical Age (4)
The social, political, and cultural history of the ancient Greek world from the Persian Wars to the death of Alexander the Great (480–323 B.C.). +

HIEU 102. The Roman Republic (4)
The political, economic, and intellectual history of the Roman world from the foundation of Rome to the time of Julius Caesar. +

HIEU 103. The Roman Empire (4)
The political, economic, and intellectual history of the Roman world from the time of Julius Caesar to the death of Justinian (A.D. 565). +

HIEU 104. Byzantine Empire (4)
A survey course of the history of the Byzantine state from the reign of Constantine to the fall of Constantinople. This course will emphasize the importance of the Byzantine state within a larger European focus, its relationship to the emerging Arab states, its political and cultural contributions to Russia and the late medieval west. +

HIEU 109. European Nationalism from a Historical Perspective (4)
An exploration of the origins, evolution, and role of nationalism in European history, from the French Revolution to the present. Nationalism has been a major force in consolidating nation-states, in creating modern identities, and in mobilizing mass movements in the modern world, and most scholars locate its birthplace in Europe. The course will provide a comparative history of nationalism as idea and political movement in each of the major European countries, as well as a more thematic analysis of scholarly approaches to the construction of nationalism and national identities. +

HIEU 110. The Rise of Europe (4)
The development of European society and culture from the decline of the Roman Empire to 1050. *Prerequisite: Humanities sequence or its equivalent.* +

HIEU 111. Europe in the Middle Ages (4)
The development of European society and culture from 1050 to 1400. *Prerequisite: Humanities sequence or its equivalent.* +

HIEU 113. Rule, Conflict, and Dissent in the Middle Ages (4)
This course explores the question of religious and political dissent in Europe from the twelfth through the fifteenth centuries. We will explore the tensions between ideal models of religious and cultural unity, and the realities of community conflict, heretical controversies, and popular uprisings. +

HIEU 115/VIS 121E. The Pursuit of the Millennium (4)
The year 2000 provokes questions about the transformation of time, culture, and society. Taking the year 1000 as a touchstone, this class examines the history of apocalyptic expectations in the Middle Ages through a close scrutiny of both texts and art. +

HIEU 120. The Renaissance in Italy (4)
The social, political, and cultural transformation of late-medieval Italy from the heyday of mercantile expansion before the plague to the dissolution of the Italian state system with the French invasions of 1494. Special focus upon family, associational life and factionalism in the city, the development of the techniques of capitalist accumulation, and the spread of humanism. *Prerequisite: upper-division standing.* +

HIEU 121. Early Modern Italy (4)
Society, politics, and culture in the Italian states from the Renaissance to the Enlightenment provide a laboratory to study the complex interaction and transformation of a wide variety of social and political systems. *Prerequisite: upper-division standing.* +

HIEU 122. Politics Italian Renaissance Style (4)
Modern political and historical thought find their roots in the realistic examination of fifteenth- and sixteenth-century Italian political experience. Contemporary Renaissance humanists and thinkers—Machiavelli, Guicciardini, Castiglione, Botero, and Campanella—tested classical, Christian, and legal models against practical necessities. +

HIEU 125. Reformation Europe (4)
The intellectual and social history of the Reformation and Counter-Reformation from the French invasions to the Edict of Nantes. Emphasis is upon reform from

below and above, the transformation of grass-roots spirituality into institutional control. *Prerequisite: upper-division standing or consent of instructor.* +

HIEU 126. Age of Expansion: Europe and the World, 1400–1600 (4)
Course will begin with a survey of the major empires of the fifteenth century, concentrating on the links between them. It will then examine the entrance of Europeans on the global scene in the sixteenth century. This part of the course will examine European/non-European encounters, focusing on perceptions, economic interaction, and institutional adaptation and will emphasize the Hispanic American, Ottoman, and Indian Ocean cases. +

HIEU 127. Sport in the Modern World (4)
This course looks at the phenomenon of sport in all of its social, cultural, political, and economic aspects. The starting point will be the emergence of modern sport in nineteenth-century Britain, but the focus will be global. Since the approach will be topical rather than chronological, students should already have a good knowledge of world history in the nineteenth and twentieth centuries. *Prerequisite: upper-division standing.*

HIEU 128. Europe Since 1945
An analysis of European history since the end of the Second World War. Focus is on political, social, economic, and cultural developments within European societies as well as on Europe's relationship with the wider world (the Cold War, decolonization).

HIEU 129. Paris, Past and Present (4)
This course surveys the historical and cultural significance of Paris from about 1500 to the present. The focus is on interactions between political, architectural, and urban evolutions, and the changing populations of Paris in times of war, revolutions, and peace. +

HIEU 130. Europe in the Eighteenth Century (4)
A lecture-discussion course focusing on Europe from 1688-1789. Emphasis is on the social, cultural, and intellectual history of France, Germany, and England. Topics considered will include family life, urban and rural production and unrest, the poor, absolutism, and the Enlightenment from Voltaire to Rousseau. Prerequisite: upper-division standing. +

HIEU 131. The French Revolution: 1789–1814 (4)
This course examines the Revolution in France and its impact in Europe and the Caribbean. Special emphasis will be given to the origins of the Revolution, the development of political and popular radicalism and symbolism from 1789 to 1794, the role of political participants (e.g., women, *sans-culottes,* Robespierre), and the legacy of revolutionary wars and the Napeoleonic system on Europe. *Prerequisite: upper-division standing.* +

HIEU 132. German Politics and Culture: 1648–1848 (4)
A lecture-discussion course on the political and cultural history of Germany in the early modern period. +

HIEU 133. Gender in Antiquity and the Early Medieval Mediterranean (4)
This course discusses sex and gender at the end of the classical period and its development into the Middle Ages in both Eastern and Western Mediterranean. Course will examine the ways in which our medieval predecessors assigned gender traits and relationships to members of society. It will approach the topic in part through an examination of the language used about gender and in part through use of modern gender theories. *Prerequisite: upper-division standing.* +

HIEU 134. The Formation of the Russian Empire, 800–1855 (4)
State-building and imperial expansion among the peoples of the East Slavic lands of Europe and Asia from the origins of the Russian state in ninth-century Kiev, through Peter the Great's empire up to the middle of the nineteenth century. *Prerequisite: upper-division standing or consent of instructor.* +

HIEU 136. The Napoleonic Era (4)
A study of the social, intellectual, military, and political currents in French history from 1799 to 1815. Special emphasis on Napoleonic France's interactions with Europe, the non-European world, women, and the military. Lectures, slides, readings, and discussions.

HIEU 136A. European Society and Social Thought, 1688–1870 (4)
A lecture and discussion course on European political and cultural development and social theory from 1688-1870. Important writings will be considered both as responses to and as provocations for political and cultural change. +

HIEU 136B. European Society and Social Thought, 1870–1989 (4)
A lecture and discussion course on European political and cultural development and theory from 1870–1989. Important writings will be considered both as responses to and as provocations for political and cultural change.

HIEU 138. Imperial Spain, 1476–1808 (4)
The rise and decline of Spain's European empire from Ferdinand and Isabella to 1700. The revival of Spain and her return to European affairs in the eighteenth century. *Prerequisite: upper-division standing or graduate standing.* +

HIEU 139. The Origins of Constitutions (4)
The course will cover the development of constitutional ideas and institutions from the twelfth century to the U.S. Constitution. Students will read legal texts and commentaries that established the foundations of the ideas of the rule of law, limited government, inalienable rights, and the independent judiciary. Students will study the formation of institutions such as parliament, the court system, and common law. The course will start and finish with an analysis of the U.S. Constitution. *Prerequisite: upper-division standing or consent of instructor.* +

HIEU 141. European Diplomatic History, 1870–1945 (4)
European imperialism, alliances, and the outbreak of the First World War. The postwar settlement and its breakdown. The advent of Hitler and the disarray of the western democracies. The Second World War and the emergence of the super powers.

HIEU 142. European Intellectual History, 1780–1870 (4)
European thought from the late Enlightenment and the French Revolution to Marx and Baudelaire, emphasizing the origins of romanticism, idealism, and positivism in England, Germany, and France. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 143. European Intellectual History, 1870–1945 (4)
A lecture-discussion course on the crisis of bourgeois culture, the redefinition of Marxist ideology, and the transformation of modern social theory. Readings will include Nietzsche, Sorel, Weber, Freud, and Musil. (This course satisfies the minor in the Humanities Program.) *Prerequisite: upper-division standing.*

HIEU 146. Fascism, Communism, and the Crisis of Liberal Democracy: Europe 1919–1945 (4)
A consideration of the political, social, and cultural crisis that faced Western liberal democracies in the interwar period, with emphasis on the mass movements that opposed bourgeois liberalism from both the left and the right.

HIEU 147. The History of Women in Europe: Middle Ages to the Early Modern Era (4)
This course explores shifts in the roles and representations of women from the early middle ages, through the Renaissance and Reformation, and up to the seventeenth century. Topics will be examined across the European social order and include gender and sexuality, holy women, religious movements, and production and reproduction. *Prerequisite: upper-division standing.* +

HIEU 148. European Women: the Enlightenment to the Victorian Era (4)
This course explores shifts in the roles and representations of women from the late seventeenth century to about 1870. Topics are examined across the European social order and include: gender and sexuality, women writers and print culture, women's participation in the French and industrial revolutions, and the emergence of feminist movements. *Prerequisite: upper-division standing or consent of instructor.* +

HIEU 149. History of Women in Europe: 1870 to the Present (4)
This course explores the history of women across classes from 1870 to the present, with an emphasis on the variety of women's experience and the efforts towards and obstacles to empowerment. Topics include: women and the state, science and gender, feminist movements and the evolution of women's work. *Prerequisite: upper-division standing.*

HIEU 150. Modern British History (4)
Emphasis on changes in social structure and corresponding shifts in political power. The expansion and the end of empire. Two World Wars and the erosion of economic leadership. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 151. Spain since 1808 (4)
Social, political, cultural history of Spain since Napoleon. Features second Spanish Republic, the Civil War, Franco era, and transition to democracy. *Prerequisite: upper-division standing.*

HIEU 153A. Nineteenth-Century France (4)
A study of the social, intellectual, and political currents in French history from the Revolution of 1789 to the eve of the First World War. Lectures, slides, films, readings, and discussions.

HIEU 154. Modem German History: From Bismarck to Hitler (4)
An analysis of the volatile course of German history from unification to the collapse of the Nazi dictatorship. Focus is on domestic developments inside Germany as well as on their impact on European and global politics in the twentieth century.

HIEU 155. Modern Austria (4)
The political, social, and intellectual history of Austria from Maria Theresa to the First Republic with special emphasis on the crisis of liberal culture in the late nineteenth century. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 156. The Russian Empire and the Soviet Union, 1855–1991 (4)
War, revolution, development, and terror in the multinational empires of the nineteenth and twentieth centuries. *Prerequisite: upper-division standing or consent of instructor.*

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIEU 160/260. Topics in the History of Greece (4)
A seminar focusing on selected topics in Greek history from the Bronze Age to the Roman Conquest. *Prerequisite: upper-division standing or consent of instructor.* +

HIEU 161/261. Topics in Roman History (4)
A seminar focusing on selected topics in Roman history and culture from the period of the Kings to the later Roman Empire. *Prerequisite: upper-division or graduate standing or consent of instructor.* +

HIEU 163/263. Special Topics in Medieval History (4)
Intensive study of special problems or periods in the history of medieval Europe. Topics vary from year to year, and students may therefore repeat the course for credit. *Prerequisites: background in European history and upper-division standing.* +

HIEU 165/265. Special Topics in Early Modern Spain (4)
Readings and discussion of recent studies on Spain in the early modern period: the Hapsburg Empire to 1700, social and economic conditions of Spain in the Enlightenment of the eighteenth century, and the breakup of the Old Regime after 1790. *Prerequisite: background in European history.* +

HIEU 167/267. Special Topics in the Social History of Early Modern Europe (4)
Topic varies from year to year. May be repeated for credit. *Prerequisite: upper-division or graduate standing.* +

HIEU 171/271. Special Topics in Twentieth-Century Europe (4)
This course alternates with HIEU 170. Topics will vary from year to year. *Prerequisite: background in European history.*

HIEU 172/272. War in the Twentieth Century (4)
Reckonings by novelists, essayists, and biographers with the phenomenon of contemporary warfare as an unprecedented experience and an abiding threat. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 174/274. The Holocaust: A Psychological Approach (4)
An examination of how traditional moral concerns and human compassion came to be abandoned and how the mass murder of the Jews was organized and carried out. The focus of this course will be on the perpetrators. Requirements will vary for undergraduate M.A. and Ph.D. students. Graduate students are required to submit a more substantial piece of work. *Prerequisites: upper-division or consent of instructor. Department stamp required.*

HIEU 175/275. Selected Topics in the History of Nineteenth- and Twentieth-Century Spain (4)
Topics may include economic development, modernization, political change, intellectual history, and the transition to democracy. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 177/277. Special Topics in Modern German Thought (4)
Topics will vary from year to year. (Satisfies the Humanities Program minor.) *Prerequisite: background in European history.*

HIEU 177A/277A. The Two Germanys Since 1945
An analysis of the parallel and divergent paths of East and West Germany since 1945. Focus is on the close interrelationship between both postwar societies as well as on the origins of the East German revolution and unification in 1989–90. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 178/278. Topics in Russian History and Popular Culture (4)
Topics will vary from year to year. Graduate students are required to submit a more substantial paper. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 180/280. Topics in European Women's History (4)
The specific content of the course will vary from year to year, but will always analyze in depth a limited number of issues in European women's history. *Prerequisite: upper-division standing or consent of instructor.*

HIEU 199. Independent Study in European History (4)
Directed readings for undergraduates under the supervision of various faculty members. *Prerequisite: consent of instructor.*

LATIN AMERICA

Lecture Courses

HILA 100. Latin America–Colonial Transformations (4)
Lecture-discussion survey of Latin America from the pre-Columbian era to 1825. It addresses such issues as the nature of indigenous cultures, the implanting of colonial institutions, native resistance and adaptations, late colonial growth and the onset of independence. +

HILA 101. Latin America: The Construction of Independence 1810–1898 (4)
Lecture-discussion survey of Latin America in the nineteenth century. It addresses such issues as the collapse of colonial practices in the society and economy as well as the creation of national governments, political instability, disparities among regions within particular countries, and of economies oriented toward the export of goods to Europe and the United States.

HILA 102. Latin America in the Twentieth Century (4)
This course surveys the history of the region by focusing on two interrelated phenomena: the absence of democracy in most nations and the region's economic dependence on more advanced countries, especially the United States. Among the topics discussed will be the Mexican Revolution, the military in politics, labor movements, the wars in Central America, liberation theology, and the current debt crisis. *Prerequisite: upper-division standing or consent of instructor.*

HILA 103. Revolution in Modern Latin America
A political, economic, and social examination of the causes and consequences of the Mexican, Cuban, and Nicaraguan revolutions. Also examine guerrilla movements that failed to gain power in their respective countries, namely the Shinning Path in Peru, FARC in Colombia, and the Zapatistas in Mexico. *Prerequisite: upper-division standing.*

HILA 104. Modern U.S.-Latin American Relations
A survey of inter-American relations during the twentieth century. Emphasis will be placed on U.S. territorial and economic expansion, U.S. national-security and ideological morality, and Latin American efforts to influence U.S. policy in order to strengthen, in most cases, elite domination of society. *Prerequisite: upper-division standing.*

HILA 108. Economic History: Continuity and Change in Latin America (4)
Main economic processes in Latin America, from colonial times to the twenty-first century, to understand what has been called the "colonial heritage" role played by economic actors, including the state and foreign capital, and will read Latin America's development in a comparative perspective. Main theoretical propositions to understand patterns of development. No training in economics or statistics is required. *Prerequisite: upper-division standing.*

HILA 112. Economic and Social History of the Andean Region (4)
Study of the economic and social problems of the Andean region from the colonial period until the crisis of 1912, with special attention to theoretical models to explain the processes of change. *Prerequisite: upper-division standing.*

HILA 115. The Latin American City, a History (4)
A survey of the development of urban forms of Latin America and of the role that cities played in the region as administrative and economic centers. After a brief survey of pre-Columbian centers, the lectures will trace the development of cities as outposts of the Iberian empires and as "city-states" that formed the nuclei of new nations after 1810. The course concentrates primarily on the cities of South America, but some references will be made to Mexico City. It ends with a discussion of modern social ills and Third World urbanization. Lima, Santiago de Chile, Buenos Aires, Rio de Janeiro, and Sao Paulo are its principal examples. *Prerequisite: upper-division standing.*

HILA 120. History of Argentina (4)
A survey from the colonial period to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the expansion of the frontier, the creation of a cosmopolitan, predominately European culture, and the failure of industrialization to provide an economic basis for democracy. *Prerequisite: upper-division standing.*

HILA 121. History of Brazil (4)
From colonial times to the present, with an emphasis on the nineteenth and twentieth centuries. Among the topics covered: the evolution of a slave-based economy, the key differences among regions, the military in politics, and the creation of the most populous and industrialized country in Latin America. *Prerequisite: upper-division standing.*

HILA 122. Cuba: From Colony to Socialist Republic
A lecture-discussion course on the historical roots of revolutionary Cuba, with special emphasis on the impact of the United States on the island's development and society. *Prerequisite: upper-division standing.*

HILA 123. The Incas and Their Ancestors (4)
The Incas called their realm Tahuantinsuyu (Land of the Four Quarters). But the Incas were only one of the many ethnic groups in the Andean region. Many different other groups became a part of the Tahuantinsuyu in the wake of Inca expansion. Over the past decade new and fascinating information on these processes have been published, and allows for a re-reading of Inca history between 900 and 1535. +

HILA 131. A History of Mexico (4)
A century of Mexican history, 1821-1924: the quest for political unity and economic solvency, the forging of a nationality, the Gilded Age and aftermath, the ambivalent Revolution of Zapata and his enemies. *Prerequisite: upper-division standing or consent of instructor.*

HILA 132. A History of Contemporary Mexico (4)
The paradox of a conservative state as heir to a legendary social upheaval, with special emphasis on the mural art renaissance, the school crusade, the economic dilemma, and the failure to eradicate poverty and inequality. Lectures and discussion. *Prerequisite: upper-division standing or consent of instructor.*

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HILA 161/261. History of Women in Latin America (4)
A broad historical overview of Hispanic-American women's history focusing on issues of gender, sexuality, and the family as they relate to women, as well as the historiographical issues in Latin American and Chicana women's history. *Prerequisites: upper-division standing and consent of instructor.*

HILA 162/262. Special Topics in Latin American History (4)
Topics will vary from year to year or quarter to quarter. May be repeated for an infinite number of times due to the nature of the content of the course always changing. *Prerequisite: upper-division standing or consent of instructor.*

HILA 163/263. The History of Chile 1880–Present (4)
The course surveys Chile's basic developments beginning with the era of nitrate exports. Students will have the opportunity to address a specific issue of his/her own choosing and develop the topic for class presentation and a final paper. Graduate students are expected to submit a more substantial piece of work. *Prerequisite: upper-division standing or consent of instructor.*

HILA 170/270. Topics in Latin American History, 1820–1910
Topics may vary from year to year. May be repeated for credit. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students must be required to submit a more substantial piece of work. *Prerequisite: upper-division or graduate standing.*

HILA 171/271. Topics in Latin American History 1910
Topics may vary from year to year. May be repeated for credit. Requirements will vary for undergraduates, M.A., and Ph.D. students. Graduate students must be required to submit a more substantial piece of work. *Prerequisite: upper-division or graduate standing.*

HILA 199. Independent Study in Latin American History (4)
Directed readings for undergraduates under the supervision of various faculty members. *Prerequisite: consent of instructor and department stamp.*

NEAR EAST

Lecture Courses

HINE 100. The Ancient Near East and Israel (4)
Introduction to the history and literature of ancient Israel, from c.1200 B.C.E. to c. 500 B.C.E. Reading from the Bible, historical and archaeological surveys, and studies of authorship. +

HINE 102. The Jews in Their Homeland in Antiquity (4)
The Jews in Israel from the sixth century BCE to the seventh century CE. Statehood, nationalism, and autonomy within the framework of the Persian empire, the Hellenistic kingdoms, and the Roman-Byzantine empire. Cultural and religious developments will be explored. *Prerequisite: upper-division standing.* +

HINE 105. The Bible and the Near East: The Prophets (4)
This course covers the four books of the Latter Prophets, including the three major prophets, Isaiah, Ezekiel, and Jeremiah, and the twelve minor prophets. +

HINE 106. The Bible and the Near East: The Writings (4)
This course covers the books of the Hebrew Bible not covered in HINE 104 and HINE 105. It will include Psalms, Proverbs, Job, the Megillot, Daniel, and the Chronicler's Work. +

HINE 108. The Middle East before Islam (4)
The peoples, politics, and cultures of Southwest Asia and Egypt from the sixth century B.C.E. to the seventh century C.E. The Achemenid Empire, the Ptolemaic and Seleucid kingdoms, the Roman Orient, the Parthian and Sasanian states. *Prerequisite: upper-division standing.* +

HINE 109. Learning to Read Biblical Hebrew
Inculcation of the linguistic and grammatical knowledge needed to understand the Hebrew Bible in its original tongue. Emphasis is placed on acquiring a basic vocabulary, mastering fundamentals of grammar, and practice at reading. No previous knowledge of Hebrew is required. +

HINE 114. History of the Islamic Middle East
A survey of the Middle East from the rise of Islam to the region's economic, political, and cultural integration into the West (mid-nineteenth century). Emphasis on socioeconomic and political change in the early Arab empires and the Ottoman state. +

HINE 118. The Middle East in the Twentieth Century (4)
An introduction to the history of the Middle East since 1914. Themes such as nationalism, imperialism, the oil revolution, and religious revivalism will be treated within a broad chronological and comparative framework drawing on the experience of selected countries.

HINE 151A/251A. Introduction to Aramaic Language (4)
General introduction to Aramaic dialects, intense study of Targumic Aramaic. *Prerequisites: knowledge of Hebrew alphabet; acquaintance with a cognate Semitic language highly desirable.* +

HINE 151B/251B. Introduction to Aramaic Dialects (4)
Study of Ancient Inscriptional Persian Imperial and Syriac Aramaic. +

HINE 151C/251C. Introduction to Aramaic Dialects (4)
Study of Qumran and Babylonian Talmudic Aramaic. +

HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)
Priciples of historical linguistics, application to the languages of the ancient Levant. *Prerequisites: knowledge of at least one Semitic language; a course in general linguistics is also desirable.* +

HINE 152B/252B. Introduction to Ugaritic (4)
Decipherment of Ugaritic tablets, history, and culture of ancient Ugarit, study of Ugaritic mythic texts. +

HINE 152C/252C. Advanced Ugaritic (4)
Continued study of Ugaritic literature, comparison with Canaanite inscriptions. +

HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)
Students study cuneiform script and elements of Babylonian-Assyrian grammar, as well as the history of Ancient Mesopotamia. +

HINE 153B/253B. Continued Akkadian Language (4)
Student begin to read and analyze ancient Mesopotamian texts from a variety of genres. +

HINE 153C/253C. Advanced Akkadian Language (4)
Continued study of Mesopotamia literature and history. +

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HINE 161/HINE 261. Seminar in the Hebrew Bible (4)
Systematic reading and rendering of the books of the Hebrew Bible in order. Each time the class is taught, we will look at a different book. Adequate knowledge of Biblical Hebrew is required. Graduate students will have to write an extra paper or exam. *Prerequisites: Judiac Studies 103, graduate standing, or consent of instructor.* +

HINE 166/266. Nationalism in the Middle East (4)
Growth of nationalism in relation to imperialism, religion, and revolution in the nineteenth- and twentieth-century Middle East. Emergence of cultural and political ethnic consciousness in the Ottoman state. Comparative study of Arab, Iranian, and Turkish nationalism as well as Zionism. *Prerequisite: department stamp or consent of instructor.*

HINE 170/270. Special Topics in Jewish History (4)
This course studies a period or theme in Jewish history. Topics will vary from year to year. *Prerequisite: department stamp required.*

HINE 181/281. Problems in the Study of Hebrew Manuscripts (4)
Detailed study of a portion of biblical text. Focus on text-critical and source-critical problems. *Prerequisite: upper-division or graduate standing.* +

HINE 186/286. Special Topics in Middle Eastern History (4)
Focused study of historical roots of contemporary problems in the Middle East: Islamic modernism and Islamist movements; contacts with the West; ethnic and religious minorities; role of the military; economic resources and development. *Department stamp and permission of instructor.*

HINE 199. Independent Study in Near Eastern History (4)
Directed readings for undergraduates under the supervision of various faculty members. *Prerequisite: consent of instructor.*

HISTORY OF RELIGION

HIRE 120. Buddhist Thought and Practice (4)
An introduction to the Buddhist religion, with attention to its moral and philosophical teachings, its modes of practice (e.g. meditation, ritual), and its social and institutional contexts. The course takes a historical approach, concentrating on the traditions as they developed within India.

HISTORY OF SCIENCE

Lecture Courses

HISC 100. The Discovery of Deep Time (4)
The discovery of the vast scale of the past history of the natural world, and the consequent dwarfing of human history, from the chronologies of the seventeenth century, through the emergence of the science of geology, to the planetary histories of the twentieth century.

HISC 101A. Science in the Greek and Roman World (4)
A survey of the principal features of ancient science: the origins of Greek naturalism, the criticism of magic, notions of quantification. Topics may include astronomy, astrology, geography, geometry, optics, mechanics and physical theory, classification of living beings, and human cognition. Emphasis on primary sources, such as the presocratic natural philosophers: Plato, Artistotle, Euclid, Archimedes, Ptolemy, Pliny Galen, and Proclus. *Prerequisite: upper-division standing.* +

HISC 101B. Medieval Science in the Latin West, ca. 500–1500 (4)
Styles of the medieval scientific imagination. Reception and assimilation of the learning of the ancient world, especially Aristotle, Plato, Euclid, Galen, and Ptolemy. Struggles to reconcile Greek, Arabic, and Christian ideals of knowledge. Rise of universities. Natural philosophy, logic, geometry, optics, astronomy, astrology, mechanics, geography, and classification of living beings. *Prerequisite: upper-division standing.* +

HISC 101C. Early Modern Science (4)
Early forms of modern science, mid-15th to 17th centuries. The revolution in printing. Sites of knowledge-making: university and court cultures, museums, academies. Astrology, astronomy, literature of the heavens, prophecy and apocalyptic expectation. Natural history, medicine, alchemy, magic and the physico-mathematical sciences. *Prerequisite: upper-division standing.* +

HISC 103. Gender and Science in Historical Perspective (4)
History of women's struggles and strategies for access and equality in professional science. Questions related to gender bias in science—as a social institution and as an epistemological enterprise—will be addressed in light of the historical and biographical readings. *Prerequisite: upper-division standing.*

HISC 104. History of Popular Science (4)
Historical aspects of the popularization of science. The changing relation between expert science and popular understanding. The reciprocal impact of scientific discoveries and theories, and popular conceptions of the natural world. *Prerequisite: upper-division standing.*

HISC 105. History of Environmentalism (4)
History of human effects on the natural environment, and with environmentalist interpretations of the history of science.

HISC 106. The Scientific Revolution (4)
A cultural history of the formation of early modern science in the sixteenth and seventeenth centuries: the social forms of scientific life; the construction and meaning of the new cosmologies from Copernicus to Newton; the science of politics and the politics of science; the origins of experimental practice; how Sir Isaac Newton restored law and order to the West. *Prerequisite: upper-division standing.* +

HISC 107. The Emergence of Modern Science
The development of the modern conception of the sciences, and of the modern social and institutional structure of scientific activity, chiefly in Europe, during the eighteenth and nineteenth centuries. *Prerequisite: upper-division standing.*

HISC 108. Science in the Twentieth Century (4)
Major intellectual developments in twentieth-century science, including quantum mechanics and relativity, molecular biology and DNA, and plate tectonics. Emphasis on the sources of new ideas and evidence in science, and the forging of consensus in scientific communities. *Prerequisite: upper-division standing.*

HISC 111. Origins of the Atomic Age (4)
The atomic bomb changed the world. We examine the origins and impact of the atomic age: the discovery of radioactivity; the Manhattan project and bombings of Hiroshima and Nagasaki; the H-bomb, nuclear fallout, and the modern environmental movement. *Prerequisite: upper-division standing or consent of instructor.*

HISC 114. The Darwinian Legacy (4)
The Origin of Species by means of Natural Selection, and its scientific, intellectual, and political legacies. Topics include social Darwinism, eugenics, Nazi racial hygiene, population control, neo-Malthusianism in the modern environmental movement. *Prerequisite: upper-division standing.*

HISC 130. Technology in the Twentieth Century (4)
Major technological developments in the twentieth century, including the rise and decline of technologies, unexpected hazards and unanticipated consequences, and why some technologies fail. *Prerequisite: upper-division standing.*

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HISC 160/260. Historical Approaches to the Study of Science (4)
Major recent publications in the history of science will be discussed and analyzed; the topics will range in period from the seventeenth century to the twentieth, and will deal with all major branches of natural science. Special topics. Topics will vary from year to year. *Prerequisite: consent of instructor.*

HISC 162/262. Problems in the History of Science and Religion (4)
Intensive study of specific problems in the relation between science and religion. The problems may range in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit. *Prerequisite: upper-division standing.*

HISC 164/264. Topics in the History of the Physical Sciences
Intensive study of specific problems in the physical (including chemical and mathematical) sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit.

HISC 165/265. Topics in 20th Century Science and Culture
This is a seminar open to advanced undergraduates and graduate students, which explores topics at the interface of science, technology, and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor's permission. Requirements vary for undergraduates, M.A. and Ph.D. students. Graduate students are required to submit a more substantial piece of work. *Prerequisite: upper-division standing or consent of instructor.*

HISC 166/266. The Galileo Affair (4)
Galileo's condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Disobedience? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work. +

HISC 167/267. Gender and Science (4)
Why have women been traditionally excluded from science? How has this affected scientific knowledge? How have scientists constructed gendered representations not only of women, but also of science and nature? We will address these questions from perspectives including history, philosophy, and psychoanalytic theory. *Prerequisite: upper-division standing or consent of instructor.*

HISC 168/268. The Extraterrestrial Life Question (4)
The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750–present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief-systems. Graduate students will be expected to submit a more substantial piece of work. *Prerequisite: upper-division or graduate standing or consent of instructor.*

HISC 199. Independent Study in the History of Science (4)
Directed readings for undergraduates under the supervision of various faculty members. *Prerequisite: consent of instructor.*

UNITED STATES

See History of Science for more U.S. courses (HISC 105, HISC 108, HISC 111)

Lecture Courses

HIUS 100. Colonial Period to 1763 (4)
Political and social history of the thirteen colonies: European background, settlement and expansion, beginnings of culture, and the imperial context. *Prerequisite: upper-division standing.* +

HIUS 101. The American Revolution (4)
Causes and consequences of the revolution: intellectual and social change, the problems of the new nation, the Constitution, and the origins of political parties. *Prerequisite: upper-division standing.* +

HIUS 102. The Age of Encounters, 1492–1630 (4)
Europeans, Native Americans, and Africans in North America from Columbus' first voyage to early English colonization. Emphasis on cultural, political, and ecological consequences of contact. Topics include the Spanish Conquest, the origins of the African slave trade, Iroquois-French commerce, and the early history of California. +

HIUS 105. Thomas Jefferson and Early American History (4)
This course will study Thomas Jefferson, both as an influential American in his own right and as a window onto the age of the American Revolution, the Enlightenment, and the early American Republic. Students will read both biographical materials and original documents to address various aspects of Jefferson's life and times. *Prerequisite: upper-division standing.* +

HIUS 107. The Early Republic (4)
This course will examine the transformation of American society and politics between the American Revolution and the Jacksonian period. Topics to be considered include the emergence of domesticity, the development of political parties, the expansion of capitalist relations, the debate over slavery, the early labor movement, and the origins and motivations of middle-class reform. +

HIUS 108/ETHN 112. History of Native Americans in the United States
This course examines the history of Native Americans in the United States, with emphasis on the lifeways, mores, warfare, and relations with the United States government. Attention is given to the background and evolution of acculturation up to the present day. *Prerequisite: upper-division standing.*

HIUS 114. California History (4)
This course examines California history from 1800 onward, with an emphasis on social, economic, and political change. The course will explore the effect of national and international events as well as the ways in which California–the ideal and the real–shapes the American experience.

HIUS 115. History of Sexuality in the United States
Constructions of sex and sexuality in the United States from the time of pre-contact Native America to the present, focusing on sexual behaviors, sexual ideologies, and the uses of sexuality for social control.

HIUS 116. War and American Society (4)
The connection between social relations and America's wars. Ways that American society has influenced decisions to prepare for or go to war as well as the impact of war on class relations and ideologies of race and gender. Wars considered will include the Revolutionary and Civil Wars, the two World Wars, and Korea and Vietnam. *Prerequisite: upper-division standing.*

HIUS 117. History of Los Angeles (4)
This course examines the history of Los Angeles from the early nineteenth century to the present. Particular issues to be addressed include urbanization, ethnicity, politics, technological change, and cultural diversification.

HIUS 122. History and Hollywood: America and the Movies Since the Great Depression (4)
A lecture-discussion course utilizing written texts and films to explore major themes in American politics and culture from the Great Depression through the 1990s. Topics will include the wars of America, McCarthyism, the counter-culture of the 1960s, and the transformation of race and gender relations. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 124/ETHN 125. Asian American History
Explore how Asian Americans were involved in the political, economic, and cultural formation of United States society. Topics include migration; labor systems; gender, sexuality and social organization; racial ideologies and anti-Asian movements; and nationalism and debates over citizenship.

HIUS 131. Cultural History from the Civil War to the Present (4)
This course will focus on the transformation of work and leisure and the development of consumer culture. Students will consider connections between culture, class relations, gender ideology, and politics. Topics will include labor radicalism, Taylorism, the development of organized sports, the rise of department stores, the transformation of middle-class sexual morality, the growth of commercial entertainment, and the culture of the cold war.

HIUS 134. Art and Society in America
The evolution and interaction of American art and society from the colonial period to the early twentieth century.

HIUS 135A/ETHN 170A. Origins of the Atlantic World, c. 1450–1650 (4)
An examination of interactions among the peoples of western Europe, Africa, and the Americas that transformed the Atlantic basin into an interconnected "Atlantic World." Topics will include maritime technology and the European Age of Discovery, colonization in the Americas, the beginnings of the transatlantic slave trade and the early development of plantation slavery in the New World. *Prerequisite: upper-division standing or consent of instructor.* +

HIUS 135B/ETHN 170B. Slavery and the Atlantic World (4)
The development of the Atlantic slave trade and the spread of racial slavery in the Americas before 1800. Explores the diversity of slave labor in the Americas and the different slave cultures African Americans produced under the constraints of slavery. *Prerequisite: upper-division standing or consent of instructor.* +

HIUS 137. The Built Environment in the Twentieth Century
An examination of urban and regional planning as well as piecemeal change in the built environment. Topics include urban and suburban housing, work environments, public spaces, transportation and utility infrastructures, utopianism. *Prerequisite: consent of instructor.*

HIUS 138/ETHN 167. African-American History in War and Peace: 1917 to the Present (4)
The social, political, economic, and ideological pressures generated during the international conflicts of the twentieth century have had an enormous impact on American life. The course examines how the pressures of "total war" and "cold war" shaped the African-American experience in both war and peacetime. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 139/ETHN 149. African-American History in the Twentieth Century (4)
This course examines the transformation of African America across the expanse of the long twentieth century: imperialism, migration, urbanization, desegregation, and deindustrialization. Special emphasis will be placed on issues of culture, international relations, and urban politics. *Prerequisite: upper-division standing.*

HIUS 140/ECON 158A. Economic History of the United States I (4)
The United States as a raw materials producer, as an agrarian society, and as an industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and nineteenth- and early twentieth-century transformations of American capitalism.

HIUS 141/ECON 158B. Economic History of the United States II (4)
The United States as modern industrial nation. Emphasis on the logic of the growth process, the social and political tensions accompanying expansion, and twentieth-century transformations of American capitalism.

HIUS 147. History of the American Suburb (4)
This lecture explores the development of suburbs in America, from the early nineteenth century to the contemporary era. Topics include suburban formation, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore competing theories of suburbanization as it surveys the major literature.

HIUS 148/USP 103. The American City in the Twentieth Century (4)
This course focuses on the phenomenon of modern American urbanization. Case studies of individual cities will help illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which urban problems have been dealt with historically.

HIUS 149. The United States in the 1960s (4)
An overview of the social and political developments that polarized American society in the tumultuous decade of the 1960s. Themes include the social impact of the post-war "baby boom," the domestic and foreign policy implications of the Cold War; the evolution of the civil rights and women's movements; and the transformation of American popular culture.

HIUS 150. American Legal History to 1865 (4)
The history of American law and legal institutions. This quarter focuses on crime and punishment in the colonial era, the emergence of theories of popular sovereignty, the forging of the Constitution and American federalism, the relationship between law and economic change, and the crisis of slavery and Union. *Prerequisite: upper-division standing.*

HIUS 151. American Legal History since 1865 (4)
The history of American law and legal institutions. This course examines race relations and law, the rise of big business, the origins of the modern welfare state during the Great Depression, the crisis of civil liberties produced by two world wars and McCarthyism, and the Constitutional revolution wrought by the Warren Court. HIUS 150 is not a prerequisite for HIUS 151. *Prerequisite: upper-division standing.*

HIUS 152A. A Constitutional History of the United States to 1865 (4)
The historical development of constitutional thought and practice in the United States from the era of the American Revolution through the Civil War, with special attention to the role of the Supreme Court under Chief Justices Marshall and Taney. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 152B. A Constitutional History of the United States Since 1865 (4)
The historical development of constitutional thought and practice in the United States since 1865, with special attention to the role of the Supreme Court from Chief Justices Chase to Renquist. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 153. American Political Trials (4)
Survey of politicized criminal trials and impeachments from Colonial times to the 1880s. Examines politically-motived prosecutions and trials that became subjects of political controversy, were exploited by defendants for political purposes, or had their outcomes determined by political considerations. +

HIUS 154. Western Environmental History (4)
This course examines human interaction with the western American environment and explores the distinction between the objective environmental understanding of science and the subjective views of history and historians. The course will also analyze the most compelling environmental issues in the contemporary West.

HIUS 155A. Religion and Law in American History: Foundations to the Civil War (4)
Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in the Anglo-American world. Topics include the English background, religion in the age of the American Revolution and the antebellum period. *Prerequisite: upper-division standing or consent of instructor.* +

HIUS 155B. Religion and Law in American History: Civil War to the Present (4)
Selected problems in the history of the relationship between religious beliefs and practice and legal institutions in America from the Civil War to the present. Topics include the religion and government aid; sacred duties and the law; and religion and cultural politics. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 156. American Women, American Womanhood (4)
This course explores the emergence of a dominant ideology of womanhood in America in the early nineteenth century and contrasts the ideal with the historically diverse experience of women of different races and classes, from settlement to 1870. Topics include witchcraft, evangelicalism, cult of domesticity, sexuality, rise of industrial capitalism and the transformation of women's work, Civil War, and the first feminist movement. *Prerequisite: upper-division standing.* +

HIUS 157. American Women, American Womanhood 1870 to Present
This course explores the making of the ideology of womanhood in modern America and the diversity of American women's experience from 1870 to the present. Topics include the suffrage movement, the struggle for reproductive rights and the ERA; immigrant and working-class women, women's work, and labor organization; education, the modern feminist movement and the contemporary politics of reproduction, including abortion and surrogate motherhood. *Prerequisite: upper-division standing.*

HIUS 158/ETHN 130. Social and Economic History of the Southwest I (4)
This course examines the history of the Spanish and Mexican borderlands (what became the U.S. Southwest) from roughly 1400 to the end of the U.S.-Mexico War in 1848, focusing specifically on the area's social, cultural, and political development. +

HIUS 159/ETHN 131. Social and Economic History of the Southwest II (4)
(Cross-listed as Ethnic Studies 131.) This course examines the history of the Amnerican Southwest from the U.S.-Mexican War in 1846-48 to the present, focusing on immigration, racial and ethnic conflict, and the growth of Chicano national identity.

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HIUS 162/262. The American West (4)
This seminar will trace major themes in the history of the American West. Topics will include ethnicity, the environment, urbanization, demographics, and shifting concepts surrounding the significance of the West. Graduate students will be required to submit additional work in order to receive graduate credit for the course. *Prerequisite: department stamp required.*

HIUS 164/264/ETHN 181. Topics in Comparative History of Modern Slavery (4)
Slavery was both a thread of continuity in the history of the Americas and a distinctive institution in specific social settings. The purpose of this course is to examine and discuss readings that explore topics of the Caribbean and the United States. Because topics will vary, the seminar may be taken more than once for credit, with consent of the instructor. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 165/ETHN 182. Segregation, Freedom Movements, and the Crisis of the Twentieth Century (4)
A reading and discussion seminar that views the origins of segregation and the social movements that challenged it between 1890 and 1970 in comparative framework. *Prerequisite: upper-division standing.*

HIUS 166/266. Topics in Southern History (4)
Specific topics will vary from year to year, including slavery, Civil War and Reconstruction, the Afro-American experience, race relations.

HIUS 167/267/ETHN 180. Topics in Mexican-American History (4)
This colloquium studies the racial representation of Mexican Americans in the United States from the nineteenth century to the present, examining critically the theories and methods of the humanities and social sciences. *Prerequisite: upper-division standing.*

HIUS 169/269. Topics in American Legal and Constitutional History (4)
A reading and discussion course on topics that vary from year to year, including American federalism, the history of civil liberties, and the Supreme Court. *Prerequisite: consent of instructor.*

HIUS 171/271. Topics in the American Revolution (4)
Colloquium dealing with selected topics on the American Revolution and formation of the United States. Themes will vary from year to year. *Prerequisite: department stamp or consent of instructor.*

HIUS 175/275. Crime, Law, and Society in the United States, 1600–1900
This colloquium, examines the changing relationships between crime, the law, and society in the United States. We will pay particular attention to the changing forms of punishment, perceptions of crime and criminals, and the place of criminal law in the social order. Requirements will vary for undergraduates, M.A., and Ph.D. students. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 176/276. Race and Sexual Politics
This seminar will explore the histories of sexual relations, politics, and cultures that both cross and define racial boundaries in the nineteenth and twentieth centuries. Reading will focus on the United States as well as take up studies sited in Canada and Latin America. Graduate students are expected to submit a more substantial piece of work. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 180/ETHN 134. Immigration and Ethnicity in Modern American Society (4)
Comparative study of immigration and ethnic-group formation in the United States from 1880 to the present. Topics include immigrant adaptation, competing theories about the experiences of different ethnic groups, and the persistence of ethnic attachments in modern American society. *Prerequisite: upper-division standing.*

HIUS 181/281. Topics in Twentieth Century United States History (4)
A colloquium dealing with special topics in U.S. history from 1900 to the present. Themes will vary from year to year. *Prerequisite: department stamp or consent of instructor.*

HIUS 182/282. Special Topics in Intellectual History: Politics and Culture in the U.S. 1776–1860 (4)
Cultural and political construction of the American nation. Topics include: how citizenship and national

community were imagined and contested; importance of class, gender, and race in the nation's public sphere; debates over slavery expansion and democracy in defining national purpose. Requirements will vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial paper.

HIUS 183/283/ETHN 159. Topics in African American History (4)
A colloquium dealing with special topics in the history of people of African descent in the United States. Themes will vary from quarter to quarter. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students will be required to submit a more substantial piece of work. *Prerequisite: upper-division standing or consent of instructor.*

HIUS 184. Special Topics in American Urban History (4)
This colloquium explores various topics in the history of urban America, including the process of city development, social patterning in urban areas, city life and cultural styles, suburbanization, and the urban west. Topics will vary from year to year. *Prerequisite: department stamp or consent of instructor.*

HIUS 187/287. Topics in American Social History (4)
Colloquium on selected topics in American social history. Topics will vary from year to year, and the course may therefore be repeated for credit.

HIUS 199. Independent Study in United States History (4)
Directed readings for undergraduates under the supervision of various faculty members. *Prerequisite: consent of instructor and department stamp required.*

TOPICS

Courses

HITO 87. Special Freshman Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen, to exciting research programs conducted by department faculty. Enrollment is limited. Topic will vary quarter by quarter.

HITO 102. Religious Traditions: East Asian Religious Traditions (4)
Introduction to the major religious traditions of Asia: Hinduism, Buddhism, Taoism, Shinto, and Confucianism. The course will focus on one religion each year. Since special topics will vary from year to year the course may be repeated for credit three times. *Prerequisite: upper-division standing.* +

HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)
The political and cultural history of the Jews through the early modern period. Life under ancient empires, Christianity and Islam. The post-biblical development of the Jewish religion and its eventual crystallization into the classical, rabbinic model. +

HITO 105. The Jews and Judaism in the Modern World (4)
Topics include the political emancipation of the Jews of Europe; the emergence of Reform, Conservative, and Modern Orthodox Judaism; hasidism; modern antisemitism; Jewish socialism; zionism; the Holo-caust; the American Jewish community; the State of Israel.

HITO 111/211. Marxian Theory (4)
A survey and examination of the principal writings of Marx concerning economic theory and analysis. Emphasis on the theory of value, production, technical change, reproduction and accumulation. Some consideration will also be made of certain neo-Marxist contributions and critiques. *Prerequisite: introductory economics or consent of instructor.*

HITO 117 World History. 1200–1800
This course examines the interaction between sections of the globe after 1200. It emphasizes factors operating on a transcontinental scale (disease, climate, migration) and historical/cultural phenomena that bridge distance (religion, trade, urban systems). This is not narrative history, but a study of developments that operated on a global scale and constituted the first phase of globalization. *Prerequisite: upper-division standing or consent of instructor.* +

HITO 121. Geographic Information Systems for Historians and Social Scientists (4)
This course provides an introduction to the use of geographic information systems (GIS) in the analysis and display of data of interest to historians and social scientists. Topics include cartographic theory and aesthetics, data collection and retrieval, and training in the use of the ArcView GIS program. *Prerequisite: upper-division standing.*

HITO 126. A History of Childhood (4)
This course will examine the different ways that attitudes toward children have changed throughout history. By focusing on the way that the child was understood, we will examine the changing role of the family, the role of culture in human development, and the impact of industrialization and modern institutions on the child and childhood.

HITO 133. War and Society: The Second World War
An examination of the Second World War in Europe, Asia, and the United States. Focus will be on the domestic impact of the war on the belligerent countries as well as on the experiences of ordinary soldiers and civilians. *Prerequisite: upper-division standing or consent of instructor.*

Colloquia

The following courses are available to both undergraduate and graduate students. Undergraduates must receive a departmental stamp or permission of the instructor to register for the course. Requirements for each course will differ for undergraduate, M.A., and Ph.D. students.

HITO 169. History and Historians (4)
An introduction to the history of historical writing. Through discussion of selected readings, the course will focus on such issues as the development of historical thought, the nature of historiographical debates, the interpretation of sources, and the use of theoretical models in writing history. Courses can apply to any concentration within the history major. *Prerequisite: upper-division standing.* (History majors only.)

HITO 193/POLI 194/COM GEN 194/USP 194. Research Seminar in Washington D.C. (6)
Course attached to six-unit internship taken by student participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial historical research paper. *Prerequisites: department stamp required; participating in UCDC program.*

HITO 194. History Honors (4)
A program of independent study providing candidates for history honors an opportunity to develop, in consultation with an adviser, a preliminary proposal for the honors essay. An IP grade will be awarded at the end of this quarter. A final grade will be given for both quarters at the end of HITO 195. *Prerequisite: consent of instructor. Department stamp required.*

HITO 195. The Honors Essay (4)
Independent study under the supervision of a faculty member leading to the preparation of an honors essay. A letter grade for both HITO 194 and 195 will be given at the completion of this quarter. *Prerequisite: consent of instructor. Department stamp required.*

HITO 196. Honors Seminar (4)
The nature and uses of history are explored through the study of the historian's craft based on critical analysis of historical literature relating to selected topics of concern to all historians. Required of all candidates for history honors and open to other interested students with the instructor's consent. *Department stamp required.*

HITO 197. Field Study
Program to be arranged between student and instructor depending on student's needs and instructor's advice. Students are expected to produce substantial final papers on specific subjects described in student's proposals. To prepare such papers will require extensive research and writing. Will require bimonthly reports and one final paper. *Prerequisite: consent of instructor.*

HITO 198. Directed Group Study (4)
Directed group study on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. (P/NP grades only.) *Prerequisite: consent of instructor.*

HITO 199. Independent Study for Undergraduates (4)
Independent study on a topic not generally included in the regular curriculum. Students must make arrangements with individual faculty members. (P/NP grades only.) *Prerequisites: upper-division standing and consent of instructor.*

GRADUATE

Graduate standing is a prerequisite for all graduate-level courses. For more graduate courses (200+), look at history undergraduate colloquia (courses numbered 160–190).

HIGR 200. History and Social Theory (4)
A weekly reading/writing seminar. Themes include historical sociology and large-scale history, interdisciplinary approaches to history (anthropological, psychoanalytic, etc.), and historical method. Students from all fields welcome, though emphasis primarily on early modern period (1500–1800).

HIGR 205. Feminist Historical Studies (4)
An introduction to feminist historical studies, this course is designed for interested graduate students from all history field groups. Graduate students from other disciplines are also encouraged to participate. The course will provide students a rigorous training in women's history, in the feminist theories that undergird that scholarship, and in the emergent field of gender analysis. The particular content of the course will change from year to year, but each course

will include theoretical texts, historical case studies, and primary sources. Readings will be drawn from different times and places. This course is strongly recommended for those preparing minor fields in women's history. The course can be repeated twice for credit.

HIGR 207. Nationalism, Colonialism and Race (4)
A transdisciplinary and comparative course on the interplay of nationalism, colonialism, and race (as well as class and gender/sexuality) in the nineteenth and twentieth centuries. Texts will include classics by authors such as Franz Fanon, as well as theoretically informed newer works that analyze a variety of national and colonial conditions historically.

HIGR 208. History and Theory (4)
This is a one-quarter colloquium, designed for graduate students in modern history. The readings will emphasize developments in historical thinking over the past two centuries, particularly as these ideas influenced professional work. The course includes some major figures in social theory such as Marx and Weber, and addresses issues raised by postmodernism.

HIGR 210. Historical Scholarship on Modern Chinese History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern Chinese history.

HIGR 211. Historical Scholarship on Modern Japanese History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern Japanese history.

HIGR 212. Historical Scholarship on Modern East Asian History (4)
This course will introduce students to the monographic literature and the main historiographic controversies of modern East Asian history.

HIGR 213. Sources on Modern Chinese History (4)
An introduction to Chinese documentary sources and collections on Qing and Republican History. This course will introduce students to the language of Qing documents, and to the contents and uses of imperial documents and archives, documentary collections, periodicals, gazetteers, etc.

HIGR 214. Readings in Japanese on Modern Japan (4)
A one-quarter research and writing course based upon readings in Japanese on modern Japan. Emphasis on selection, collection, and critical evaluation of texts for historical research. Topics will vary from year to year and may be repeated with instructor's permission. *Prerequisite: graduate standing or permission of instructor.*

HIGR 215A-B. Research Seminar in Modern Chinese History (4-4)
A two-quarter research seminar in Chinese history. A paper, based on original research, will be due in the second quarter. Seminar topics will vary. Reading knowledge of Chinese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. *Prerequisite: 215A is a prerequisite for 215B.*

HIGR 216A-B. Research Seminar in Modern Japanese History (4-4)
A two-quarter research seminar in Japanese history. A paper, based on original research, will be due in the second quarter. Seminar topics will vary. Reading knowledge of Japanese is expected. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. *Prerequisite: 216A is a prerequisite for 216B.*

HIGR 220. Historical Scholarship on European History, 1500–1715 (4)
Introduction to the historiography of Renaissance, Reformation, and early modern Europe: an overview of methodologies with emphasis on sources and critical approaches. Required for all beginning European history graduate students.

HIGR 221. Historical Scholarship on European History, 1715–1850 (4)
Selected topics in European history from the early modern to the modern era. Readings and discussions focus on issues of methodology and interpretation. Required for all beginning European history graduate students.

HIGR 222. Historical Scholarship on European History, since 1850 (4)
Critical evaluation of selected topics in the period of modern Europe from the mid-nineteenth century to the present. Required for all beginning European history graduate students.

HIGR 225. Readings in Modern Russian History (4)
Students will read major works on Revolutionary Russia and Soviet history. Attention will be paid to both classic and revisionist works.

HIGR 227A-B. Seminar in Spanish History (4-4)
Readings and critical analysis of selected topics and important works in the history of Spain. May be repeated as content changes. Proficiency in Spanish required to repeat course, but not for the first time taken. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. *Prerequisites: fluent reading knowledge of Spanish desired. German or French also desirable.*

HIGR 230A-B. Research Seminar in Early Modern Europe (4-4)
Selected topics in the period from the sixteenth century through the early nineteenth, with an emphasis on the theory and practice of socio-economic history. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. *Prerequisite: 230A is a prerequisite for 230B.*

HIGR 231A-B. Research Seminar in Modern European Intellectual and Cultural History (4-4)
Selected topics in the period of the nineteenth and twentieth centuries. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. *Prerequisite: 231A is a prerequisite for 231B.*

HIGR 232A-B. Research Seminar in Modern European Social and Political History (4-4)
Selected topics in the period of the nineteenth and twentieth centuries. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter. *Prerequisite: 232A is a prerequisite for 232B.*

HIGR 236A-B. Research Seminar in History of Science (4-4)
A two-quarter research seminar comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chiefly to the writing of individual research papers. Topics vary from year to year, and students may therefore repeat the course for credit. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

HIGR 237. Topics in the History of Ocean Sciences (4)
(Cross-listed with SIO 201.) Intensive study of specific problems in the history of the ocean sciences, and of related earth and atmospheric sciences, in the modern period. Topics vary from year to year, and students may therefore repeat the course for credit.

HIGR 238. Introduction to Science Studies (4)
(Cross-listed as Communication 225A, Philosophy 209A, and Sociology 255A.) Study and discussion of classic work in history of science, sociology of science and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. *Prerequisite: enrollment in Science Studies Program.*

HIGR 239. Seminar in Science Studies (4)
(Cross-listed as Communication 225B, Philosophy 209B, and Sociology 255B.) Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. May be repeated as course content changes annually. *Prerequisite: enrollment in Science Studies Program.*

HIGR 240. Colloquium in Science Studies (4)
(Cross-listed as Communication 225C, Philosophy 209C, and Sociology 255C.) A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. May be repeated as course content changes annually. *Prerequisite: enrollment in the Science Studies Program.*

HIGR 245A-B-C. Historical Scholarship on Latin American History (4-4-4)
Introduction to the literature of Latin American history. A three-quarter sequence of readings and discussions taught each quarter by members of the staff. Required for all beginning students for a graduate degree specializing in Latin American history; open and strongly recommended to other students using Latin American history as a secondary field for a graduate degree. HIGR 245A covers the colonial period, from conquest to independence to today; HIGR 245B covers South America from independence to today; HIGR 245C covers Mexico, Cuba, and Central America from independence to today. The three quarters need not be taken in sequence. Reading knowledge of Spanish is required.

HIGR 247A-B. Research Seminar in Colonial Latin America (4-4)
A two-quarter course involving readings and research on sixteenth- through eighteenth-century Latin America. Students are expected to compose a paper based on original research that is due in the second quarter. Reading knowledge of Spanish required. An IP grade will be awarded at the end of the first quarter. Final grade will not be given until the end of the second quarter.

HIGR 248A-B. Research Seminar in Latin America, National Period (4-4)
A two-quarter course involving readings and research; the first quarter is devoted to the nineteenth and the second quarter to the twentieth century. Students are expected to compose a paper based on original research that is due in the second quarter. An IP grade will be awarded at the end of the first quarter. Final

grade will not be given until the end of the second quarter. Reading knowledge of Spanish and/or Portuguese is helpful but not required.

HIGR 249. Topics in Colonial Latin America (4)
One or two topics in colonial history will be analyzed in depth; reading knowledge of Spanish is expected.

HIGR 252. History, Social Evolution, and Intellectuals in the Andes: Mariátegui, Haya de la Torre, and Arguedas (4)
The course will study three major twentieth-century interpreters of Andean history and society. Mariátegui is Latin America's most original socialist intellectual; Haya de la Torre is the founder of Peru's most important party; and Arguedas was the most profound interpreter of the role of Indian peasants in the Andean nations.

HIGR 255. The Literature of Ancient History (4)
An introduction to the bibliography, methodology, and ancillary disciplines for the study of ancient history together with readings and discussion on selected topics within the field. May be repeated for credit, topic will vary year to year.

HIGR 260A-B-C. Historical Scholarship on Judaic Studies (4-4-4)
Weekly graduate seminar. Faculty and students present results of research. Student research may be towards course work on thesis.

HIGR 264. Topics in Pre-Islamic Jewish History (4)
An examination in depth of selected topics in the history of the Jewish people and Jewish civilization in pre-Islamic times.

HIGR 265A-B-C. Historical Scholarship on American History (4-4-4)
A three-quarter sequence of readings and discussions on the bibliographical and monographic literature of American history from the colonial period to the present. Taught by different members of the staff each quarter, the course is required of all beginning graduate students in American history.

HIGR 267A-B. Research Seminar in United States History (4-4)
Readings and discussion in selected areas of American history for advanced graduate students. An IP (in progress) grade will be awarded the first quarter. The second quarter will be devoted to the presentation, discussion, and evaluation of work in progress. A final grade will be awarded at the end of the second quarter. *Prerequisite: 267A is a prerequisite for 267B.*

HIGR 271. New Research Directions in U.S. History (4)
Students will develop skills in presenting and assessing new research and offering feedback to work in progress by senior students and faculty. Course is required to be taken twice by third-year students and highly recommended for audit by all students in U.S. History. (S/U grades only.)

HIGR 273. The Culture of Consumption (4)
(Cross-listed with COGR 240.) This course will explore the development and cultural manifestations of consumerism in the nineteenth and twentieth centuries. Topics will include the rise of museums, the development of mass-market journalism and literature, advertising, and the growth of commercial amusements. Readings focus primarily on the United States. Students will be encouraged to think historically and comparatively.

HIGR 295. Thesis Seminar (4)
For students advanced to candidacy to the doctorate. Discussion, criticism, and revision of drafts of chapters of theses and of work to be submitted for publication.

HIGR 298. Directed Reading (1-12)
Guided and supervised reading in the literature of the several fields of history. This course may be repeated for an indefinite number of times due to the independent nature of the content of the course. (S/U grades permitted.)

HIGR 299. Ph.D. Thesis Direction (1-12)
Independent work by graduate students engaged in research and writing of doctoral theses. This course may be repeated for an indefinite number of times due to the independent nature of thesis writing and research. (S/U grades only.)

HIGR 500. Apprentice Teaching in History (1-4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation and grading of examinations and other written exercises, and student relations. (S/U grades only.)

The Human Development Major

The scientific study of human development focuses on issues of growth, development, and behavioral change across the lifespan. The Human Development Program is interdisciplinary, incorporating courses from the Departments of Anthropology, Biology, Cognitive Science, Communication, Ethnic Studies, History, Linguistics, Literature, Psychology, Sociology, Teacher Education Program, and Urban Studies and Planning Program. The curriculum is designed to emphasize the idea of development as an essential perspective from which to understand human behavior. The courses cover a broad spectrum of issues in human development; from brain and perceptual development, to reasoning and problem solving, to social interaction and the evolution of cultural systems. The Human Development Program unifies and coordinates the excellent research and teaching resources currently available on campus in this area and profiles the factors that influence the ways in which humans develop and change.

Human development is a very large field, but there is a set of basic questions which serve to define and integrate it: What underlies the development of human knowledge? To what extent is the capacity to know, indeed the concepts themselves, encoded in the genes? How is the role of learning and environmental influences accounted for? How do we learn? What are the ways in which children become competent participants in their social groups? What is the origin and nature of social interaction and organization?

The study of human development has become increasingly central to a wide range of important issues affecting infants, young children and adolescents, as well as the changing structure of the

American family and public policy on children and education. An understanding of the processes which underlie human development is crucial to our evaluation of these issues and to our ability to offer avenues for remediation of the attendant problems. The three major areas of study within the Human Development Program are: *Biological Development, Ontogenetic Development, and Socio-Cultural Development.* These areas consider issues which pertain to development of specific neural and cognitive processes and development within a larger social and cultural context.

Career Guidance

A degree in human development offers training of special interest to those considering admission to graduate or professional schools and careers in medicine, law, education, counseling, clinical psychology, public health, public policy, public administration, or social work. Students who are interested in these areas are advised to see a Human Development Program adviser for assistance in selecting elective and major courses. A major in human development is designed to impart fundamental skills in critical thinking, comparative analysis, research analysis, and written expression.

A human development major can offer preparation for teaching in elementary schools. However, if you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program (TEP) for information about prerequisite and professional preparation requirements. It is recommended you contact TEP as early as possible in your academic career.

Education Abroad

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in studying abroad should see a Human Development Program adviser to discuss curriculum plans and appropriate courses. It is strongly recommended that students obtain HDP pre-approval for EAP courses that are intended to count toward the major. Information on EAP/OAP is detailed in the Education Abroad Program section of the *UCSD General Catalog.* Interested students should contact the Programs Abroad Office in the International Center and visit the Web site at http://www/icenter/pao. Financial aid is applicable and special study abroad scholarships are available.

Prerequisites for Human Development Majors

A bachelor of arts degree in human development will be given to students who satisfactorily complete the general-education and graduation requirements of Marshall, Muir, Revelle, Roosevelt, Sixth, or Warren College in addition to the Human Development Program requirements. In accordance with UCSD academic regulations, upper-division courses used to satisfy major requirements cannot be applied towards minors (please note there is some overlap permitted for double majors). See college adviser and major adviser for questions and restrictions.

Applying for the HDP Major

Students who wish to declare the Human Development Program major must meet premajor requirements and apply for entrance into the major. All lower-division requirements must be fulfilled before applying for the major. All lower-division courses must be completed with a grade of C or better. The cumulative GPA for the eight lower-division courses must equal or exceed 2.75. Students must meet with an HDP adviser and obtain approval to declare the human development major, no later than the second quarter of the student's junior year.

Grade Requirements for the Major

A minimum grade-point average of 2.0 is required in the major. Students must receive a grade of C- or better in any course counted toward fulfillment of the major requirements. **All courses taken to satisfy the program's lower- and upper-division requirements must be taken for a letter grade.** *HDP 1, HDP 150, HDP 181, and HDP 191 must be taken in residence.* No substitutions will be approved.

Lower-Division Requirements

1. **Introduction to Human Development: HDP1**
2. **One statistics course** selected from the approved list: PSYC 60, COGS 14, or BIEB 100, ECON 120A
3. **One formal skills course** selected from: the approved list: PHIL 10, PHIL 12, MATH 10 sequence, MATH 20 sequence

4 & 5. **Two biological sciences courses** selected from the approved list: ANLD 2, BILD 1, BILD 2, BILD 3, BILD 7, BILD 10, BILD 12, BILD 20, BILD 26, COGS 11, COGS 17, PSYC 2

6 & 7. **Two social sciences courses** selected from the approved list: ANLD 1, ANLD2, ANLD 3, COGN 20, COGS 1, COGS 11, HILD 7A, LIGN 4, LIGN 7, LIGN 8, LIGN 101, MMW 1, MMW 2, PSYC 1, PSYC 3, PSYC 6, Soc/L 1A, Soc/L 20

8. **One computer literacy course** selected from the approved list: MAE 5, COGS 3, CSE 5A

Upper-Division Requirements for the HDP Major:

A. **Three Methods Courses**

B. **Three Core Series courses**

C. **Six Development courses**

D. **HDP 150**

(Full information follows)

A. Methods Courses

1. **HDP 181** (Students are encouraged to take this course their junior year.)
2. **HDP 191** (Students are encouraged to take this course their junior year.)
3. One course selected from the following approved list*

ANGN 172. Life History Seminar and Practicum

BICD 131. Embryology Laboratory

BICD 133. Developmental Biology Laboratory

HDP 115/COMT 115. Media and Design of Social Learning Contexts

HDP 131. Fifth Dimension for Elementary Schools

HDP 135/COMT 116. Practicum in Child Development

PSYC 111A or B. Research Methods I or II

Soc/A 104. Field Research: Methods of Participant Observation

Soc/A 110A or B. Qualitative Research In Educational Settings

*Completion of HDP 194 A, B, and C (Honors Thesis) can be used to replace the third methods course (not HDP 181 or HDP 191).

B. Core Series

(3 courses selected from the approved list required, one from each DOMAIN)

***Domain 1:* The biological basis of human development**

ANBI 140. The Evolution of the Human Brain

ANBI 161. Human Evolution

COGS 115. Neurological Development and Cognitive Change

HDP 110. Brain and Behavioral Development

***Domain 2:* The social/cognitive basis of human development**

COGS 156. Language Development

HDP 121. Developing Mind

LIGN 171. Child Language Acquisition

LIGN 179. Second Language Acquisition

PSYC 167. Social and Emotional Development

PSYC 187. Development of Social Cognition

***Domain 3:* The socio-cultural basis of human development**

HDP 133. Socio-cultural Foundations of Human Development

HITO 126. History of Childhood

SOC/B 131. Sociology of Youth

SOC/C 129. The Family

C. DEVELOPMENT COURSES

(6 courses required; at least 1 from each area of focus)

Biological Development

ANBI 140. The Evolution of the Human Brain

ANBI 159. Biological and Cultural Perspectives on Intelligence

BICD 100. Genetics

BICD 130. Embryology

BICD 132. Molecular Basis of Development

BICD 134. Human Reproduction and Development

BIPN 144. Developmental Neurobiology

COGS 115. Neurological Development and Cognitive Change

COGS 184. Modeling the Evolution of Cognition

PSYC 168. Psychological Disorders of Childhood

Ontogenetic Development

COGS 113/PSYC 136. Cognitive Development

COGS 154. Communication Disorders In Children and Adults

COGS 156. Language Development

COHI 100. Introduction to Communication and the Individual

COHI 114. Bilingual Communication

COHI 119. Learning to Read

COHI 121. Literacy, Social Organization, and the Individual

LIGN 171. Child Language Acquisition

LIGN 179. Second Language Acquisition

LTWL 114. Children's Literature

LTWL 116. Adolescent Literature

PSYC 122. Aging

PSYC 156. Cognitive Development in Infancy

PSYC 167. Social and Emotional Development

PSYC 168. Psychological Disorders of Childhood

PSYC 172. Psychology of Human Sexuality

PSYC 180. Adolescence

PSYC 187. Development of Social Cognition

Socio-Cultural Development

ANBI 159. Biological and Cultural Perspectives on Intelligence

COCU 149. Youth, Culture, and Media

COHI 123. Children and Media

HILA 117. Indians, Blacks, and Whites: Family Relations in Latin America

LTWL 114. Children's Literature

LTWL 116. Adolescent Literature

PSYC 167. Social and Emotional Development

PSYC 180. Adolescence

Soc/B 117. Language, Culture, and Education

Soc/B 118A. Gender and Language in Society

Soc/C 129. The Family

Soc/B 131. Sociology of Youth

Soc/C 159. Special Topics in Organizations and Institutions *(Only when topic is approved for HDP major)*

TEP 115. Cognitive Development and Education

TEP 117. Language, Culture, and Education

USP 145. Aging—Social and Health Policy Issues

D. HDP 150. Advanced Human Development

(HDP students should enroll in this course in their senior year.)

Advanced Human Development Requirement HDP 150

Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Provides advanced-level study on subfields of human development. Topics vary quarterly. *Prerequisites: HDP1, HDP 181, HDP 191, senior standing, and department approval one quarter prior to enrollment.*

Field Research Requirement HDP 191

This course provides students with the opportunity to participate jointly in a research project in conjunction with a mentor/collaborator from a local service site. This applied research experience allows students to design and conduct research projects in a variety of settings ranging from laboratory research settings to service oriented placements. In addition to literature research and a final paper at the end of the quarter, students will participate at an off-campus site for a minimum of four hours per week. Research sites are prearranged one academic year in advance (see the student affairs office or the HDP Web site for enrollment information). Students' interests and future career plans are considered for site placement. Various research orientations and methodologies are reviewed in class. *Prerequisites: HDP 1 and department approval one academic year prior to enrollment.*

Honors in Human Development HDP 194A-B-C

The Human Development Program offers an honors option for those students who have demonstrated excellence in the human development major. The honors program allows eligible undergraduates to explore advanced issues in the field through an honors thesis on a topic of their choice and under faculty supervision. In order to be admitted to the honors program, students must have 1) junior standing and 2) maintained a minimum cumulative grade-point average of 3.2, and a 3.5 GPA for courses taken in the human development major. Interested students need to apply for departmental honors in spring quarter of their junior year. Students in the honors program are expected to complete the following additional requirements:

1. An advanced course in statistics or methods design (see the HDP student affairs office for more information).
2. HDP 194A-B-C, a year-long independent research project, which results in an Honors Thesis.
3. Weekly attendance of the Center for Human Development Seminar and participation.

Petitioning Courses

There are three circumstances under which petitions to receive credit for courses not explicitly approved for the major will be considered (all approved courses are detailed in the *UCSD General Catalog,* HDP section): Requests from transfer students, requests from students planning to study abroad, and exceptional courses identified by a student. In all cases, students are required to submit a petition ***in writing*** that clearly describes the course for which they wish to receive HDP major credit, and to attach to the petition as much information as possible about the content of the course (e.g., syllabus, course description, etc.). With the exception of courses petitioned by transfer students, ALL REQUESTS FOR APPROVAL OF COURSES NOT EXPLICITLY LISTED IN THE *UCSD GENERAL CATALOG* SHOULD BE SUMBITTED BEFORE THE COURSE IS TAKEN BY THE STUDENT.

Transfer students. Students transferring from a community college, or other university must petition for HDP credit for courses taken at their previous institution. For students transferring from the California Community College System, articulation agreements for many courses have been developed that facilitate the petition process. Transfer students should make an appointment with an HDP adviser to review courses for which they will most likely receive credit and fill out a written petition for each course.

Education Abroad. Students planning to study abroad may receive credit toward the major for courses taken in another country. IT IS STRONGLY RECOMMENDED THAT STUDENTS RECEIVE PRELIMINARY APPROVAL (BEFORE LEAVING THE COUNTRY) FOR COURSES THEY ARE CONSIDERING TAKING DURING THEIR TIME ABROAD. While the preliminary approval does not guarantee that the actual course will be approved, the great majority of courses for which preliminary approval has been obtained are approved when the actual petition is submitted upon the student's return.

Other courses. Occasionally students identify a UCSD course that has the potential to fulfill an HDP requirement. Students may petition ***in writing*** to request credit for such courses. However, it is important to note that very few such petitions are successful, and students are strongly cautioned to petition and receive approval for such a course BEFORE ENROLLING IN THE COURSE.

Note: Courses are not officially approved for credit until the written petition has been approved by the HDP Executive Committee and signed by the HDP director.

The Minor Program

A total of **seven** courses are required to complete a minor in human development. These include **Introduction to Human Development** (HDP 1), and **six** developmental courses, one from each major area of study from the developmental course list.

FINISH-IN-FOUR PLAN

Students interested in a particular career field should see the student affairs office for more specific Finish-in-Four plans for their particular college.

COURSES

LOWER-DIVISION

HDP 1. Introduction to Human Development (4)
This course introduces students to the central issues in the basic areas in human development. The course will explain relationships between biological, cognitive, social, and cultural aspects of development. Offered once per year. (F)

HDP 87. Freshman Seminar (1)
This seminar is designed to provide new students with the opportunity to explore an intellectual topic in a small seminar setting. Topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. (F,W,S)

UPPER-DIVISION

HDP 110. Brain and Behavioral Development (4)
The purpose of this course is to familiarize students with basic mechanisms of brain and behavioral development from embryology through aging. Multiple levels of analysis will be discussed, including the effects of hormones on behavior, developmental events at the level of cells, structures, and neural systems, and the neural basis of cognition, social, perceptual, and language development. *Prerequisite: HDP 1 or PSYC 101.*

HDP 115. Media and Design of Social Learning Contexts (6)
(Same as COMT 115.) A combined lecture/lab course cross-listed in communication and human development. Students attend lecture, write field notes, and spend three hours per week in specially designed after-school setting working with children and designing new educational media and producing special projects. *Prerequisite: HDP 1 or COHI 100.*

HDP 121. The Developing Mind (4)
This course examines changes in thinking and perceiving the physical and social world from birth through childhood. Evidence of significant changes in encoding information, forming mental representations, and solving problems is culled from psychological research, cross-cultural studies, and cognitive science. *Prerequisite: HDP 1 and declared human development major.*

HDP 131. Fifth Dimension for Elementary Schools (6)
Students will participate four hours per week in classrooms at Torrey Pines Elementary School integrating the Fifth Dimension model of collaborative exploratory learning. Outside work will include readings and class preparation, as well as responding to children's written inquiries, writing field notes, and writing a paper. *Prerequisite: HDP 1.* (F,W,S)

HDP 133. Socio-cultural Foundations of Human Development (4)
This course will provide students with an understanding of the social and cultural foundations of human development. The topics will be explored with both national and international comparisons from infancy through adolescence. *Prerequisite: HDP 1 or PSYC 1.*

HDP 135. Practicum in Child Development (6)
(Same as COMT 116.) A combined lecture and laboratory course for students in psychology, communication, and human development. Student backgrounds should include a background in general psychology or communication. Students will be expected to spend four hours a week in a supervised practical after-school setting at one of the community field sites involving children. Additional time will be devoted to readings and class prep, as well as six hours a week transcribing field notes and writing a paper on some aspect of the fieldwork experience as it relates to class lectures and readings. *Prerequisite: HDP 1 or COHI 100 or PSYC 101.* (F,W,S)

HDP 150. Advanced Human Development (4)
Seminar for graduating HDP seniors. Readings and discussion of special topics in human development. Provides advanced-level study on subfields of human development. Topics vary quarterly. *Prerequisites: HDP 1, HDP 181, HDP 191, senior standing, and department approval.* (F,W,S)

HDP 181. Experimental Projects in Human Development Research (6)
This laboratory course in human development is designed around a variety of intensive experimental projects. With lectures providing background information on research methods and child development, each assignment will include data collection and/or analysis, and a written laboratory report. *Prerequisites: HDP 1 and departmental approval.* (F,W,S)

HDP 191. Field Research in Human Development (6)
This course combines lectures on research methodology (three hours/week) with an applied field research experience (four hours/week) conducted at a pre-approved study site. Required: Completion of a field notebook, review paper, oral presentation, and final paper. *Prerequisites: HDP 1, Students must submit the pre-enrollment questionnaire one academic year prior to enrollment. See HDP Web site for details.* (F,W,S)

HDP 194A-B-C. Honors Thesis (4-4-4)
Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis for their senior hon-

ors thesis. *Prerequisites: overall GPA of 3.2, and a 3.5 GPA for courses taken in the human development major; an advanced course in statistics or experimental design, and consent of instructor.*

HDP 199. Independent Study in Human Development (4)
Independent study and research under the direction of a faculty member. Pass/No Pass only. *Prerequisites: consent of the instructor, completion of at least ninety undergraduate units with a minimum of 2.5 GPA, and a completed and approved Special Studies Form.*

Humanities

OFFICE: Galbraith Hall, Room 180,
Revelle College
http://humanities.ucsd.edu

The Humanities Program offers interdisciplinary courses in history, philosophy, and literature, with a focus on major aspects of the Western humanistic tradition. In these courses, students examine the development of a wide variety of ideas and forms of expression that exert a major influence on modern America. Through lectures and class discussions, and through the writing of essays, students learn to interpret literary, historical, and philosophical texts and to conduct independent critical assessments of documents and ideas.

The sequence of courses, Humanities 1 through 5, meets the humanities and writing requirement of Revelle College. Instruction in university-level writing is part of all five courses, but students in Humanities 1 and 2 (six units each) receive intensive writing instruction.

Students must have satisfied the university's Subject A requirement before registering for any part of the humanities sequence. Humanities 1 and 2 must be taken before Humanities 3-4-5.

For detailed description of the Revelle College humanities requirement, see "Revelle College, General-Education Requirements, Humanities."

COURSES

LOWER-DIVISION

1. The Foundations of Western Civilization: Israel and Greece (6)
Texts from the Hebrew Bible and from Greek epic, history, drama, and philosophy in their cultural context. Revelle students must take course for letter grade. *Prerequisite: satisfaction of the Subject A requirement.* (W)

2. Rome, Christianity, and the Middle Ages (6)
The Roman Empire, the Christian transformation of the classical world in late antiquity, and the rise of a European culture during the Middle Ages. Representative texts from Latin authors, early Christian literature, the Germanic tradition, and the high Middle Ages. Revelle students must take course for letter grade. *Prerequisite: satisfaction of the Subject A requirement.* (S)

3. Renaissance, Reformation, and Early Modern Europe (4)
The revival of classical culture and values and the reaction against medieval ideas concerning the place of human beings in the world. The Protestant Reformation and its intellectual and political consequences. The philosophical background to the scientific revolution. Revelle students must take course for letter grade. *Prerequisite: satisfaction of the Subject A requirement.* (F)

4. Enlightenment, Romanticism, Revolution (1660–1848) (4)
The enlightenment's revisions of traditional thought; the rise of classical liberalism; the era of the first modern political revolutions; romantic ideas of nature and human life. Revelle students must take course for letter grade. *Prerequisite: satisfaction of the Subject A requirement.* (W)

5. Modern Culture (1848–present) (4)
Challenges to liberalism posed by such movements as socialism, imperialism, and nationalism; the growth of new forms of self-expression and new conceptions of individual psychology. Revelle students must take course for letter grade. *Prerequisite: Satisfaction of the Subject A requirement.* (S)

195. Methods of Teaching Humanities (4)
An introduction to teaching humanities. Students are required to attend weekly discussions on methods of teaching humanities, and will teach discussion sections of one of the humanities courses. Attendance at lecture of the course in which the student is participating is required. (P/NP grades only.) *Prerequisite: consent of instructor.* (W,S)

199. Special Studies (2-4)
Individually guided readings or projects in area of humanities not normally covered in standard curriculum. *Prerequisite: upper-division standing or consent of instructor.*

200. Seminar in the Humanities (4)
Selected topics in the history, literature, and thought of Mediterranean antiquity and its successor-cultures. Emphasis on identifying both common themes and cultural distinctiveness. Discussion of pedagogical approaches to this material. Required of all graduate instructional assistants in the humanities sequence. *Prerequisite: graduate standing.* (F)

The Humanities Minor

The humanities minor consists of at least seven courses chosen from the listings of the Departments of History, Philosophy, Literature, Visual Arts, Music, and Theatre. All seven courses may be selected from the upper-division offerings, but at least five upper-division courses must be included. Students for whom Humanities 1-5 fulfill general-education requirements may use two of these courses towards fulfillment of requirements for the humanities minor.

For students who entered UCSD before January 1, 1998, the required number of courses for the minor is six courses, at least three of which must be upper-division.

Courses selected for the minor must be selected from the offerings of more than one department. They must concern themselves with more than one historical, national, or ethnic culture; and they must offer broad treatment of centrally important topics in the humanities. Thus, a course on the history of the United States since the Civil War would be appropriate for the humanities minor, while a course in the history of California would not.

Here are some examples of study lists appropriate for the present humanities minor:

Example 1:

History: HILD 2AB: United States
History: HILD 11: East Asia and the West
Literature: LTEA 110B: Modern Chinese Fiction in Translation
Philosophy 160: Ethical Theory
Philosophy 153: Philosophy of History

Example 2:

History: HILA 102: Latin America in the Twentieth Century
History: HIAF 110: History of Africa to 1880
Literature: LTAM 110: Latin American Literature in Translation
Literature: LTEN 184: African-American Poetry
Music 114: Music of the Twentieth Century
Visual Arts 126DN: African and Afro-American Art

Example 3:

Literature: LTEN 145: The English Novel in the Twentieth Century
Literature: LTEN 146: Women and English/American Literature
Literature: LTNE 100: The Bible and Western Literature
Philosophy 175: Aesthetics
Philosophy 177: Philosophy and Literature
Theatre: TH/HS 11: History of Theatre I: Classical to Renaissance

Students should review their plans for the minor with the humanities adviser as well as with the advisers in their college. Before undertaking the minor, students must submit a study list for approval to the humanities office.

The Humanities Majors

Normally, students interested in majoring in humanities must choose a specific major in the humanities departments, i.e., history, literature, or philosophy. But students from Revelle and Muir Colleges may request to graduate with an approved individual/special project major in the humanities.

Graduate School of International Relations and Pacific Studies (IR/PS)

OFFICE: Building 4, Level 1, Robinson Building Complex

Professors

Julie Collins-Sullivan, Ph.D.
Peter F. Cowhey, Ph.D., *Dean*
Richard E. Feinberg, Ph.D.
Peter A. Gourevitch, Ph.D.
Stephan M. Haggard, Ph.D.
Gordon H. Hanson, Ph.D.
Takeo Hoshi, Ph.D.
Miles Kahler, Ph.D.
Alex Kane, Ph.D.
Lawrence B. Krause, Ph.D., *Emeritus*
Ellis S. Krauss, Ph.D.
Bruce N. Lehmann, Ph.D.
Barry J. Naughton, Ph.D.
Susan L. Shirk, Ph.D.
Matthew F. Shugart, Ph.D.
Y.-H. Tohsaku, Ph.D.
Jeffrey R. Vincent, Ph.D.

Associate Professors

Roger E. Bohn, Ph.D.
Ulrike Schaede, Ph.D.
Barbara F. Walter, Ph.D.
Christopher M. Woodruff, Ph.D.

Assistant Professors

Edward Malesky, Ph.D. *(Acting)*
Jessica Wallack, Ph.D. *(Acting)*
Craig McIntosh, Ph. D.
Krislert Samphantharak, Ph.D.

Adjunct Professors

Julian R. Betts, Ph.D.
Marsha A. Chandler, Ph.D.
William M. Chandler, Ph.D.
Wayne A. Cornelius, Ph.D.
Paul W. Drake, Ph.D.
Theodore Groves, Ph.D.
Germaine A. Hoston, Ph.D.
David A. Lake, Ph.D.
David R. Mares, Ph.D.
Michael M. May, Ph.D.
James E. Rauch, Ph.D.
Peter H. Smith, Ph.D.
Dale E. Squires, Ph.D.

Associate Adjunct Professors

Lisa R. Shaffer, Ph.D.
Christena L. Turner, Ph.D.

The Master of Pacific International Affairs (MPIA)

Requirements for Admission

Students interested in pursuing the MPIA degree program at UCSD's Graduate School of International Relations and Pacific Studies (IR/PS) must have earned a B.A., or its equivalent, with training comparable to that provided by the University of California. A minimum scholastic average of 3.0 or better is required for course work completed in upper-division or prior graduate study. Undergraduate preparation that includes one or more of the following is strongly encouraged: the social sciences (specifically economics and political science) and history; and quantitative methods (such as calculus and statistics); foreign language and related area studies courses. Students with an undergraduate background in the sciences, engineering, or the arts are also encouraged to explore this degree program. The admissions committee looks for students with previous professional employment, a history of meaningful international experience, and demonstrated leadership ability.

Applicants must submit three letters of recommendation from individuals who can attest to their academic or professional competence and to the depth of their interest in pursuing graduate training in international affairs.

Applicants are required to submit the Graduate Record Exam (GRE) scores (verbal, quantitative, and analytical). (Indicate code #R4836 for UCSD, IR/PS department code #1901.) Scores from the Graduate Management Admission Test (GMAT) may be substituted. (Indicate code #4927 for UCSD, Pacific International Affairs.) A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the paper/pencil and 250 on the computer-based TOEFL examination are strongly encouraged to enroll in an English as a second language program before beginning graduate work.

Interviews are not required for admission to the MPIA program. Orientation tours are available for all applicants who would like further information about the degree programs. Tours assist applicants in becoming better acquainted with IR/PS's graduate programs and in understanding how these programs might relate to their long-term career goals. To receive a tour schedule, applicants should contact the IR/PS Office of Admissions at (858) 534-5914.

The MPIA is a two-year, full-time program. Part-time study is feasible within the MPIA curriculum. The maximum course load for half-time study is six units.

The MPIA Curriculum (96 units)

The MPIA curriculum (96 units) is made up of a set of core disciplinary and skill-oriented courses (36 units), a regional specialization (8 units), the foreign language requirement (up to 24 units), a professional Career Track (24 units), and unstructured electives.

CORE CURRICULUM

The Core Curriculum is designed to integrate diverse subject areas such as international management, international relations, applied economics, and comparative public policy. It comprises the following courses:

Globalization, the World System & the Pacific *(IRCO 412)*
Managerial Economics *(IRCO 401)*
Policy Making Processes *(IRCO 400)*
Quantitative Methods *(IRCO 453 and IRCO 454)*
International Politics & Security *(IRCO 410)*
International Economics *(IRCO 403)*

Finance *(IRCO 421)*
Accounting *(IRCO 420)*
Capstone Course—choices include
Managerial Decision Making *(IRCO 460)*,
Business and Government in the Global Economy *(IRCO 461)*, and
Public Policy Workshop *(IRCO 462)*

THE REGIONAL SPECIALIZATION

The regional specialization is made up of two designated courses on the economy and political system of a student's chosen country or region. All students must complete a regional specialization, and may choose from among the following five options: Latin America, Japan, Korea, China, and Southeast Asia.

THE FOREIGN LANGUAGE REQUIREMENT

IR/PS considers foreign language competency to be an indispensable skill for international relations professionals. The foreign language requirement is designed to ensure that students achieve a level of competency to assist in their global interactions. The foreign language requirement may be satisfied in any one of three ways: (a) native speaker ability; (b) completing six quarters (four semesters) of college-level language instruction from UCSD or a comparable institution, with a grade of B or better in the final course; or (c) passing a special IR/PS-administered language exam, which is the equivalent of the final exam administered in the sixth-quarter course in the selected language. The foreign language requirement may be partially or wholly completed prior to matriculation at IR/PS. Please contact the IR/PS Language Program for additional information.

Students must fulfill the foreign language requirement in a language that corresponds to their elected region of specialization. In rare cases, students who demonstrate a strong interest in selecting a foreign language that does not correspond to their chosen area of regional specialization may petition to do so. Students may select either Brazilian Portuguese or Spanish when studying Latin America. Students specializing in China, Japan, or Korea, must study Chinese (Cantonese, Mandarin, or other dialect), Japanese, or Korean, respectively. Students electing to specialize in Southeast Asia may study Bahasa Indonesia, Bahasa Malay, Chinese, Thai, Tagalog, Vietnamese, or other approved language. Please contact the IR/PS Language Program for further information.

Beyond the basic language requirement, IR/PS also offers the option of certification of more advanced language proficiency for students who choose to pursue further language study. Students pursuing advanced language skills are strongly encouraged to undertake significant language study prior to coming to IR/PS.

Students on the Country and Regional Studies track are subject to a different foreign language requirement. These students must pass both the speaking and the reading proficiency examination in their selected language. The writing proficiency examination is optional. The minimum required level of proficiency is equivalent to a Foreign Service Institute (FSI) Scale 2+ for Spanish, 2 for Portuguese, and 2- for most other languages.

The proficiency examination is administered throughout the academic year. Students not following the Country and Regional Studies track may take the exam once free of charge in a language that IR/PS currently provides instructional support. Those students on the Country and Regional Studies track may take the exam twice free of charge, regardless of language selection. Please consult with the IR/PS Language Program Office for additional information.

A variety of language courses are offered by UCSD. IR/PS offers four-unit language courses for international relations professionals in Brazilian Portuguese, Japanese, Mandarin Chinese, and Spanish at the intermediate or advanced levels. In addition, subject to demand, courses in Bahasa Indonesia, Korean, Vietnamese, or other Pacific Rim languages may be offered. Students electing to study a foreign language where IR/PS instructional support is not offered must secure their own language instruction and funding. Course credit for self-supported language learning may be given upon evaluation and approval of the director of the Language Program. Please contact the IR/PS Language Program for additional information.

Students are placed in foreign language courses based on prior preparation and on the results of a placement test administered during the week of orientation. Students with a lower level of language proficiency are placed in beginning language courses offered by the Chinese Studies Program, the Japanese Studies Program, and the Department of Linguistics or Literature.

CAREER TRACKS

Beyond the core curriculum, the regional specialization, and the foreign language requirement, students are offered an array of Career Tracks from which to choose. The Career Tracks provide an opportunity to focus on a specialized professional career path and to work closely with other students and faculty who share similar interests. A Career Track consists of six courses (twenty-four units). Each track combines some designated requirements and a range of relevant electives from which to choose. All students must take a Career Track. A student whose interests do not fall within the existing range of tracks may take the Self-Design Track, and create a tailor-made package of courses in consultation with their faculty adviser. Currently, IR/PS offers the following Career Tracks:

International Management
International Politics
International Environmental Policy
Public Policy
international Economics
Development & Non-Profit Management
Country & Regional Studies
Self-Design (approval of faculty adviser and associate dean required)

ELECTIVES

Students may use remaining units to take electives across the range of IR/PS courses in management, political science, economics, regional studies, and language, as well as (with approval) courses offered elsewhere on campus. The number of elective units available to a student will vary, depending on factors such as prior language study. Prospective students are advised to consult the IR/PS Office of Admissions for a full list of elective courses currently offered.

Internships

Students are encouraged to participate in various internship programs that are available in business and industry, federal and state government, and through various foundations and institutions. The school has established links to a number of programs with internship.

Education Abroad Program

Students are encouraged to participate in the Education Abroad Programs (EAP) in their second year of study. Though this will necessitate a third year of study to meet MPIA requirements, the opportunity provides unparalleled

experience in the selected regional study area and language. By petition, certain credits earned through EAP may be applied to the MPIA degree requirements.

Career Services

The IR/PS Career services team provides students with expertise, guidance, and resources to successfully manage their careers. Career development. This personalized program begins in career management orientation before the student's first quarter and continues throughout the two-year program.

Career services include individual career consulting appointments, workshops, employer/alumni panels, internship employment listings, and on-campus interview. Specialized workshops explore resume writing, cover letters, interviewing skills (including videotaped mock interviews), labor market trends, effective job search strategies, job offer evaluation, and negotiation of total compensation packages.

The Ph.D. in Economics and International Affairs

Requirements for Admission

Students who seek admission to the program must have a B.A. or the equivalent from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program. GRE scores (verbal, quantitative, and analytical) are required of all applicants. (Indicate code #R4836 for UCSD, IR/PS department code #1901.)

A minimum score of 550 on the paper/pencil version and a minimum score of 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score below 600 on the paper/pencil and 250 on the computer-based TOEFL examination are strongly encouraged to enroll in an English-as-a-Second-Language Program (ESL) before beginning doctoral work.

The Ph.D. Curriculum

Program of Study

The Ph.D. in economics and international affairs prepares students for research careers in economics, with an emphasis on international affairs and the Pacific region. The program combines the analytical skills of economics with political economy, institutional analysis, and region/empirical knowledge.

Program Advisory Committee

Each student is assigned a Program Advisory Committee of four economics and IR/PS faculty, at least one must be from economics, one from IR/PS and one outside member from another UCSD department. With this committee, the student works out a plan of study that the committee must approve. The student must make satisfactory progress in a coherent program of course work and reading courses, which meet the approval of the Program Advisory Committee.

Course Requirements

The Ph.D. curriculum in economics and international affairs is designed to provide students with basic training in the techniques of modern economics, as well as empirical and institutional knowledge of the Pacific region. The first year will consist of the three sequences of microeconomics, macroeconomics, and econometrics, taught in the Department of Economics. The second year will consist of continuation of the three series plus seven electives. Two of these electives will be an IR/PS sequence in political economy. In subsequent years, courses will consist of the regional sequence, an empirical project, and two third-year papers.

Regional Requirement

Students must take at least three courses, one of which may be a reading course on policy processes and issues in the Pacific region. These courses may consider the Pacific region as a whole, as a sub-region, or examine individual countries. The courses may be in both IR/PS and, with prior permission, related departments. Some students may choose to take more than the minimum three courses to deepen their knowledge of a particular country or area. Comprehensive examination on regional areas is not required.

Language Requirement

Students are expected to achieve a level appropriate to the student's dissertation topic of reading proficiency in at least one foreign language. Proficiency may be verified by examination or by certification by thesis supervisor.

Comprehensive Examinations

Students must pass written comprehensive exams in microeconomics, macroeconomics, and econometrics, which will be administered and graded by the economics department.

Dissertation

Candidates must present a dissertation prospectus no later than March of their third year in the doctoral program. They will be examined on their prospectus by their dissertation committee and must complete a dissertation, which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. degree.

Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of five years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

The Ph.D. in Political Science and International Affairs

Requirements for Admission

Students who seek admission to the program must have a B.A. or the equivalent from an institution of comparable standing to the University of California. Preference will be given to students with prior academic records of distinction and to those who have a background in one of the fields of emphasis and/or geographical areas covered by the program. GRE scores (verbal, quantitative, and analytical) are required of all applicants. (Indicate code #R4836 UCSD, IR/PS department code #1901.)

A minimum score of 550 on the paper/pencil version and 213 on the computer-based version of the Test of English as a Foreign Language (TOEFL) is required of all international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English. Students who score

below 600 on the paper/pencil and 250 on the computer-based TOEFL examination are strongly encouraged to enroll in an English-as-a-Second-Language Program (ESL) before beginning doctoral work. UCSD Extension offers an excellent ESL program during summer as well as the academic year. For further information, call (858) 534-3400.

The Ph.D. Curriculum

Program of Study

The Ph.D. in political science and international affairs prepares students for research careers in political science, with an emphasis in either international policy analysis or comparative policy analysis. The program combines the analytical skills of political science with political economy, institutional analysis, policy analysis (especially economic policy) and regional training, with special attention to East Asia and/or Latin America.

Course Requirements

The Ph.D. curriculum in political science and international affairs is designed to provide students with basic training in the techniques of modern political science, as well as applications to specific policy areas and countries or regions.

Seventeen courses are required prior to advancement to candidacy. There is a common core sequence, consisting of comparative public policy, two courses in comparative politics, two courses in international relations and research design. Each student must declare a primary field of either international policy analysis (IPA) or comparative policy analysis (CPA), consisting of three specialized courses. There is also a regional focus of five courses. Three additional courses must be taken from a set of electives.

Regional Requirement

The regional focus consists of international relations of Asia Pacific or international relations of the Americas (depending on which region is the student's primary region), three additional courses in the student's primary region, and one course in another region offered by either IR/PS or the Department of Political Science are required. By petition, students may count a region other than one of the IR/PS offerings (currently China, East Asia, Japan, Latin America, or South-east Asia) as their primary region.

Language Requirement

All students in the program are required to meet a high standard of proficiency in a foreign language before being advanced to candidacy. The language must be linked to the student's region.

Seminar Papers

Each student must submit two seminar papers, one in each field. The penultimate draft of each seminar paper must be completed prior to taking the appropriate field exam, and the final draft must be completed by the end of the quarter in which the exam is taken. Both papers must demonstrate knowledge of the student's regional focus, as well as knowledge of relevant theory in the field. At least one of the papers must also demonstrate knowledge of a substantive policy area, related to the student's primary focus field.

Comprehensive Examinations

Each student must pass two comprehensive examinations, one in international relations and one in comparative politics. Each exam will be graded by a joint committee consisting of three permanent faculty members, with at least one from political science and at least one from IR/PS.

The primary field exam contains a focus field, which may be either a substantive field of policy analysis (e.g. trade, environment, international finance) or the student's chosen primary region. Regardless of focus field, that part of the exam will test the student's knowledge of theoretical literature and ability to apply it to a policy issue of relevance to the region.

Dissertation

Candidates must present a dissertation prospectus to be examined by their dissertation committee, and must complete a dissertation which makes a substantial and original contribution to knowledge commensurate with the standards of the University of California in order to receive the Ph.D. degree. The dissertation committee shall consist of four faculty members chosen from the Department of Political Science and IR/PS, with at least one from each unit. A fifth member must be from outside the department and IR/PS.

Oral Defense

Students will defend their dissertation at a final oral examination, which will be open to the public.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of the fourth year. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

The Ph.D. in International Affairs

Pending final approval of the joint Ph.D. degree programs in economics and international affairs, and political science and international affairs, no future admissions will be made to the Ph.D in International Affairs Program.

International Career Associates Program

The International Career Associates Program (ICAP) is designed for working professionals seeking additional exposure to the various areas of international management, international relations, and comparative public policy.

Participants in the program spend from one quarter to one academic year at IR/PS. Under the auspices of the program, professionals have an opportunity to further internationalize their knowledge and experience, as well as enhance their professional development in areas such as finance, management, marketing, accounting, quantitative methods, econometrics, long-range strategic planning, international affairs, and comparative decision-making. The program of study is tailored to individual interests under the guidance of the program's director and faculty advisers.

ICAP offers:

- An individualized program leading to a Certificate of Study
- An optional prep program in August.
- Opportunities to interact with world-renowned Pacific Rim scholars and policymakers
- Special seminars and lectures by academics and professionals
- ICAP-sponsored cultural events and field trips to local, state, and federal organizations and government offices

For further information, contact the International Career Associates Program office at (858) 534-7420.

The Korea-Pacific Program

The Korea-Pacific Program was formed in September 1989 in recognition of the growing

importance of Korea in the world, of Korean-U.S. relationships, and of the Korean model of social and economic development.

Directed by IR/PS Professor Stephan Haggard, the program promotes the understanding of Korea in an international context and encourages the study of Korea by offering courses on the country's economics and politics. Research is supported on contemporary Korean political economy. Outreach to the community is offered through seminars, lectures, courses, and cultural events.

In comparison with other Korean studies programs in the United States, the IR/PS Korea-Pacific Program is distinctive in several respects: it concentrates on contemporary Korea, focuses on policy questions, stresses the foundations of Korean economic growth, explores Korea's international relations, and seeks to understand Korea in a broad regional context.

The ASEAN-Pacific Project

The ASEAN-Pacific Project is one of several major regional and theme-based nodes of activity within the Graduate School of International Relations and Pacific Studies. Its mandate is to support students and to serve as a catalyst for the development of Southeast Asia-related teaching and research activities within the school. The director of the project is Associate Professor Andrew MacIntyre.

The ASEAN-Pacific Project extends the success of the school's original Vietnam-Pacific Project, with scope being broadened to embrace the other countries of Southeast Asia.

The project is built upon private donations to the school, with this resource being supplemented by resources obtained from external grant agencies and the university. The project supports the activities of students at IR/PS with an interest in Southeast Asia through fellowships (for summer travel and internships) and visiting guests speakers.

The project also serves as a catalyst and facilitator for research projects within the school relating to Southeast Asia. It seeks to promote disciplinary-driven work on political and economic topics pertaining to Southeast Asia, as distinct from more traditional area studies scholarship. Examples of this include recent work on national political institutions and policy-making, the dynamics of regional cooperation, food and agricultural policies, and the relocation of the global magnetic disk-drive industry to Southeast Asia. Other recent research-related initiatives include a major international workshop for Ph.D. students in political science working on Southeast Asia, and a workship for the U.S. Agency for International Development on political conflict in Indonesia.

COURSES

IRPS 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15–20 students, with preference given to entering freshmen.

MPIA CORE CURRICULUM

IRCO 400. Policy-Making Processes (4)
This course is designed to teach students how to "read" a country's political and economic system. The course will examine how the evolution of different institutional frameworks in the countries of the Pacific region influences the way in which political choices are made.

IRCO 401. Managerial Economics (4)
Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occurs, and basic topics concerning the aggregate economy.

IRCO 403. International Economics (4)
The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

IRCO 410. International Politics and Security (4)
Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

IRCO 412. Globalization, the World System, and the Pacific (4)
This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

IRCO 420. Accounting (4)
An introduction to financial accounting designed to prepare students to understand their own organizations' international operations and interpret information from outside organizations. The emphasis will be on understanding the potential uses and limitations of accounting information for various management purposes, and the procedural aspects of accounting will be introduced only to the extent necessary to explicate the basic concepts.

IRCO 421. Finance (4)
This course surveys the financial problems facing managers and analyzes financial institutions, financial instruments, and capital markets. Tools acquired will prepare students to analyze international financial topics such as exchange rate behavior, the management of international risk, and international financing. *Prerequisites: IRCO 420, 453, and 454.*

IRCO 453. Quantitative Methods: Decision Making and Scenario Analysis (2)
This course is designed to provide proficiency in quantitative methods that are used for optimization and decision making. It first develops graphic and analytical solutions to resource allocation and efficient production. Next, scenario analysis and elements of decision making under uncertainty are introduced. Finally, the use of spreadsheets is applied to data analysis and problem solving.

IRCO 454. Quantitative Methods: Decision Making under Uncertainty (2)
This course covers elements from statistics that are central to business decision making under uncertainty. In particular, regression analysis and estimation will be applied to problems of forecasting and optimization.

IRCO 460. Managerial Decision Making (4)
This course develops practical decision-making skills useful in a management setting. It stresses identifying relevent information and presenting it effectively. Skills include strategic analysis, negotiation, and application of quantitative methods. *Prerequisites: IRCO 400, 401, 410, 411, 420, 421, 453 and 454.*

IRCO 461. Business and Government in the Global Economy (4)
Business and government interaction in the world economy are examined from both public policy and private sector management perspectives. Topics include competitive advantage, the challenging boundaries of private and public, and the influence of private interests on public sector regulation. *Prerequisites. IRCO 400, 401, 410, 411, 420, 421, 453, 454 and 460, or consent of instructor.*

IRCO 462. Public Policy Workshop (4)
Presents tools for analysis of public policies. Students collaborate on term-long projects analyzing public policy formation, implementation, and outcomes.

GENERAL COURSES

Not all general courses are offered each year.

IRGN 400. International Relations of Asia-Pacific (4)
International relations and developing international political economies of nations bordering the Pacific. Topics include: the "Pacific Basin" concept; the U.S. and "hegemonic-stability" theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan's foreign policy.

IRGN 401. Ethnic Conflict (4)
Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduce students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts.

IRGN 402. International Political Economy: Money and Finance (4)
Examination of effects of national policies and international collaboration on public and private interna-

tional financial insitutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort. *Prerequisite: IRCO 411 or consent of instructor.* Conjoined with Political Science 144D and 262.

IRGN 404. Chinese Politics (4)
This course will analyze post-1949 Chinese politics, including political institutions, the policy making process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

IRGN 405. U.S.–China Relations (4)
Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

IRGN 408. Internal Conflict after the Cold War (4)
Will examine the causes of civil wars and the problems with resolution and state reconstruction. Theoretical approaches discussed will then be applied to three recent case studies: Cambodia, Rwanda, and Bosnia. Policy implications for the international community will be discussed. *Prerequisite: IRCO 410.*

IRGN 409. Economic Policy in Latin America (4)
This course seeks to enhance the students' understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decisionmaking. *Prerequisites: IRCO 401, IRCO 403.*

IRGN 411. Business and Management in Japan (4)
This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

IRGN 412. The Politics of International Competitiveness (4)
Examination of policy debates concerning international economic relations: what policies promote or encourage effective participation in the international economy, and what political factors support or oppose such policies. Examples are drawn from the experiences of the U.S., Japan, Europe, Latin America, and East Asia.

IRGN 416. Post War Politics in Japan (4)
Overview of postwar politics in Japan, including American Occupation reforms, political institutions, major political factors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan's changing democracy.

IRGN 417. Microfinance (4)
This course will begin by examining financial markets in poor countries. Investigates how micro-finance contracts overcome problems, which had previously barred the extension of business credit in many environments.

IRGN 418. Trade and Economic Growth: Lessons from Pacific Basin Economies (4)
The purpose of this course is to survey economic relations among Pacific Basin economics, exploring relevant economic and public policy issues. Major topics include: productivity; trade; technology spill-over/ transfer; foreign direct investment; factor and human capital accumulation; income distribution; and regional insitutional arrangments. *Prerequisites: IRCO 401 and 403.*

IRGN 419. Risk Management (4)
This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main emphasis is on their valuation, use in hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. *Prerequisite: IRCO 421.*

IRGN 420. Strategic Marketing Planning (4)
This course develops the micro-economic foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentiation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. *Prerequisites: IRCO 401 and 403, or consent of instructor.*

IRGN 422. Investments (4)
An analysis of the risk/return characterics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification. *Prerequisites: IRCO 421, 453, and 454, or consent of instructor.*

IRGN 424. Corporate Finance (4)
The topics covered are dividend policy and capital structure, options, debt financing, and short- and long-term financial planning. Course format will consist mostly lectures, with occasional cases. Some international aspects of corporate finance will also be discussed. *Prerequisites: IRCO 401, 403, 420, 421, 453, and 454, or consent of instructor.*

IRGN 425. Managing Service Operations (4)
The course covers (1) strategic issues such as service revision, market positioning, growth, and globalization; (2) process design, facility design, and capacity planning; (3) system control and performance measurement; and (4) human resources, information technology, and other service media. *Prerequisites: IRCO 460 and either IRGN 438 or permission of instructor.*

IRGN 426. Management of Technology (4)
How companies choose and develop new technology. Case studies, lectures by executives. National technology policy, including the roles of intellectual property. This course emphasizes technology strategy at corporate/ national level; the Product Development course emphasizes tactics for developments teams.

IRGN 427. Competition and Regulation in the Global Communications Market (4)
This course explores the global market for telecommunications, Internet, and information services. It analyzes how regulation and international trade rules influence market structure and conduct. It examines the politics underlying government rules. And it probes the strategies of corporations in the global market.

IRGN 429. The Globalization of Production (4)
This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. *Prerequisites: IRCO 401 and 403, or consent of instructor.*

IRGN 430. Globalization (4)
An examination of ideas about economic globalization on production "chains": the division of products into components and their distribution around the world.

IRGN 431. Fiscal and Monetary Policy (4)
Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/unemployment trade-off, budget deficit, and economic growth.

IRGN 432. Immigration and Immigration Policy (4)
This course examines the role of immigration in the globalization of Pacific Rim economies. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in sending and receiving countries; and the nature, scope, and political economy of immigration policy. *Prerequisites: IRCO 401 or consent of insturctor.*

IRGN 433. International Finance (4)
The international financial system will be addressed, including the perspectives of individual investors, borrowers, and financial intermediaries. Public policy issues including the exchange rate mechanism, financial linkages among countries, optimum currency areas and macro-policy coordination will be discussed. *Prerequisites: IRCO 403, 421, or consent of instructor.*

IRGN 434. Strategic Analysis (4)
This course analyzes competitive interactions, surveying the modern economic analysis of relationships between and within organizations. The foundations of the course are game theory and the economics of information. Topics include bargaining and contracting, principal-agent models, and bidding models.

IRGN 435. Topics in International Trade (4)
This course develops new analytical tools and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income. *Prerequisites: IRCO 401 and 403, or consent of instructor.*

IRGN 436. Information and Management (4)
This is a seminar course on the use of information by organizations in strategic and tactical decision-making. Actual content varies, and currently includes doing business on the Internet and supply chain management. *Prerequisite: IRCO 460.*

IRGN 438. Production and Operations Management: Analysis and Control (4)
This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm's operations function. It analyzes production processes, quality control, inventory and materials planning, kanban and just-in-time principles. *Prerequisites: IRCO 453 and 454, or consent of instructor.*

IRGN 440. Managerial Accounting and Control (4)
Focus on planning, managing, controlling and evaluating costs for competitive advantage in global markets.

Key topics will include cost structure, cost-based managerial decision making, strategic cost management, JIT/TQC cost management, and accounting control systems. *Prerequisite: IRCO 420 or consent of instructor.*

IRGN 443. Economics of Telecommunications (4)
This course will focus on the underlying economics of the telecommunications and public policy rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunication marketplace and the nature of competition between service providers in the industry. *Prerequisite: IRCO 401 or consent of instructor.*

IRGN 444. Product Development (4)
This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including marketing, finance, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

IRGN 446. Applied Data Analysis and Statistical Decision Making (4)
The goal of the course is to teach how to evaluate quantitative information in business and economics contexts, and to make sound managerial decisions in complex situations. Much of the problems and course work will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. *Prerequisites: IRCO 453 and 454, or consent of instructor.*

IRGN 447. Organizations (4)
A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are structured. *Prerequisites: IRCO 401 and 403 or consent of instructor.*

IRGN 449. Making U.S. Foreign Policy (4)
Analysis of the interests, structure and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies and "daily briefings" to prepare students to perform professionally in the foreign policy arena. *Prerequisite: IRCO 410 or consent of instructor.*

IRGN 451. Economic Development (4)
This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences of different countries. *Prerequisites: IRCO 401 and 403, or consent of instructor.*

IRGN 453. Sustainable Development (4)
The course will cover the concept of sustainable development, ways in which sustainable development can be measured, evaluation of environmental damages and benefits, and the role of discounting, and will analyze cases demonstrating failure of the market.

IRGN 454. Current Issues in U.S.-Latin American Relations (4)
Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counter-narcotics, anti-corruption, international finance, trade, and U.S.-Mexican and U.S.-Brazilian relations. In each case, students analyze the strengths and weaknesses of current U.S. policy and advocate alternative options. *Prerequisite: IRCO 410 or consent of instructor.*

IRGN 455. Economic Theories of Regional Integration (4)
The first part of the course covers the basic economics of trading blocs and proceeds to more complicated topics in the theory of preferential trading arrangements, customs unions, and currency unions. In the second part we use the formal theory to compare economic integration in different parts of the world. *Prerequisites: IRCO 401 and 403 or consent of instructor.*

IRGN 456. Program Design and Evaluation (4)
Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program and evaluating its success or failure. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

IRGN 457. Cost Benefit Analysis (4)
Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

IRGN 458. International Environmental Policy and Politics (4)
This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

IRGN 459. Conflict Resolution of Environmental Issues (4)
Use of bilateral negotiations (U.S.-Canada), regional organizations (ECE and acid rain in Europe), and United Nations specialized agencies (UNEP and WMO on ozone depletion and climate change) to mediate environmental disputes. Consideration of nontraditional approaches resolving international environmental problems.

IRGN 460. The Politics of U.S.-Japan Economic Relations (4)
This course will analyze how the domestic politics of each country, their international negotiations, and their interaction concerning economic issues have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

IRGN 461. Doing Business in China (4)
This course describes the Chinese commerical, organizational, and cultural environment. Case studies of foreign businesses in China are examined, and the opportunities and pitfalls of operation in China are considered. Negotiation with Chinese counterparts is covered through a negotiation exercise. The focus is on mainland China, but some attention is given to business in Hong Kong and Taiwan as well. Students are required to prepare business plans for proposed Chinese ventures.

IRGN 463. Political Economy of Southeast Asia (4)
This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level of political and economic issues in these countries. In addition, a number of region-wide issues will also be examined such as: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for future economic development.

IRGN 464. Strategies and Skills for Effective Consulting (4)
This course will provide an introduction to the field of consulting. It will focus both on effective consulting strategies and on skills and tools that are helpful in the process. Technical, cultural, economic, and political issues will be considered, as the various aspects of consultant work are examined

IRGN 465. Management of Non-profit Organizations (4)
Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

IRGN 466. Public Finance (4)
Describes principles of taxation and expenditure analysis, public budgeting, and assessment of budget priorities.

IRGN 468. Government and Business in Japan (4)
This course aims to identify and analyze the basic features of the Japanese political economy and government-business relationships in postwar Japan. Following an introduction to the constituents of Japanese political and industrial organization, specific aspects of financial and industrial policy (MOF/MITI) as well as regulation and corporate governance are discussed.

IRGN 469. The Japanese Financial System (4)
This course studies the financial system in Japan and analyzes its role in the development of the Japanese economy. Topics will include *keiretsu* and the main bank system, internationalization and deregulation of finance, the Bank of Japan and monetary policy. *Prerequisites: IRCO 401 and 403.*

IRGN 470. International Business Strategy (4)
This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

IRGN 471. Japanese Economy (4)
A broad survey of the Japanese economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, industrial organization, and labor markets. *Prerequisites: IRCO 401 and 403, or consent of instructor.*

IRGN 472. Japanese Corporate Culture (4)
This course examines Japanese cultural values and social relations in the context of business organizations. The central focus will be on the integration of individuals into their organizations and on the human relations characteristic of their work environments.

IRGN 473. APEC: Regional Integration, Policies and Procedures (4)
This course examines regional integration in the Asia Pacific from historical, institutional, and comparative perspectives. It considers the origins of the Asia Pacific Economic Cooperation (APEC) Forum, the diverse interests of APEC member economies, APEC institutional procedures, the implementations of trade and technical assistance initiatives, and the roles of the private sector and NGOs. Student participation and original research is emphasized.

IRGN 475. International Negotiation (4)
This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Antiballistic Missile Treaty.

IRGN 476. Doing Business in Latin America (4)
Explores the realities of conducting business in Latin America. The focus will be on discussing a variety of cases, mainly in four countries—Mexico, Brazil, Argentina and Chile—covering strategic, operational, organizational, and cross-cultural issues. Course format will consist of case studies and will include the development and presentation of a business plan.

IRGN 477. Latin American Politics (4)
Introductory reading seminar on Latin American politics to acquaint students with leading schools of thought, provide critical perspective on premises and methodology, and identify themes for further inquiry. Themes include authoritarianism, revolution, democratization, regional conflict, and emergence of middle-level powers.

IRGN 479. Politics and Institutions in Latin America (4)
Overview of Latin American politics and the "rules of the game," both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico. *Prerequisite: IRCO 400 or consent of instructor.*

IRGN 480. Policy-Making in Latin America (4)
Major policy issues in contemporary Latin America, especially the breaakdown of import substitution and subsequent liberalization of economics. Special attention is given to the coalition strategies of politicians and the capacity of state institutions to deliver public goods. *Prerequisite: IRGN 479 or consent of instructor.*

IRGN 481. Managing Country Risk in the Modern Multinational Corporation (4)
Examines ways to analyze, assess, and reduce country risk.

IRGN 482. East Asian NICS (4)
Forces explaining the success of four economies in East Asia (South Korea, Taiwan, Hong Kong, Singapore), and two natural resource-rich states (Malaysia, Thailand) will be addressed. Theoretical models, implementation of development policies/strategies, and sociopolitical causes and consequences of development will be discussed. *Prerequisites: IRCO 401 and 403, or IRCO 410 and 411, or consent of instructor.*

IRGN 483. Business and Policy in Southeast Asia (4)
Surveys various dimensions of business in Southeast Asia, with particular attention to the policy context. Special focus on technological capabilities of business organizations in Southeast Asia. *Prerequisite: Economies in Southeast Asia or consent of instructor.*

IRGN 484. Korean Politics (4)
This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects.

IRGN 485. The Korean Economy (4)
Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export promotion, heavy and chemical industrial promotion); Korea's industrial structure including the role of large enterprises (chaebol); role of government; links between Korea and other countries.

IRGN 486. Economic and Social Development of China (4)
This course examines China's development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy; geography and resource constraints; impact of the West and Japan; development since 1949; and contemporary problems and options.

IRGN 487. Applied Environmental Economics (4)
This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. *Prerequisites: IRCO 401, 453, 454, or consent of instructor.*

IRGN 488. Corporate Strategy and the Environment (4)
This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics innclude product differentiation, strategtic use of regulations, the "Porter hypothesis," and environmental management systems. Readings include case studies and research articles. *Prerequisites: IRCO 401, 421, 453, 454, or consent of instructor.*

IRGN 490. Special Topics in Pacific International Affairs (4)
A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

IRGN 497. Internship (4-12)
Field research in an area relevant to career and/or regional specialization. May be repeated for credit.

IRGN 498. Directed Group Study (2-12)
Directed reading in a selected area. The content of each course is to be decided by the professor directing the course with the approval of the student's faculty adviser. May be repeated for credit.

IRGN 499. Independent Research (2-12)
Independent research under the guidance of a faculty member at IR/PS. May be repeated for credit.

LANGUAGE COURSES

IRLA 3A-B-C. First-Year Vietnamese: Vietnamese Conversation (2-2-2)
This course consists of tutorial meetings to provide additional training and practice in Vietnamese conversation. This course must be taken with IRLA 3AX-BX-CX. *Prerequisites: consent of instructor and department stamp.*

IRLA 3AX-BX-CX. First-Year Vietnamese: Analysis of Vietnamese (3-3-3)
This course provides an introduction to the phonology, orthography, morphology, and syntax of the Vietnamese language. The course format consists of lectures and practice. This is a course for students with no Vietnamese background. Must be taken with IRLA 3A-B-C. *Prerequisites: consent of instructor and department stamp.*

IRLA 4A-B-C. Beginning Portuguese: Portuguese Conversation (4-4-4)
Presentation and practice of basic grammatical structures needed for oral and written communication of Portuguese. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. For students with no Spanish background.

IRLA 5A-B-C. Portuguese Language for Spanish Speakers (4-4-4)
This course is designed to introduce undergraduate Spanish-speaking students to the Portuguese language through a combination of classes, exercises, and other language experiences. *Consent of instructor is necessary.*

IRLA 34A-B-C. Vietnamese for Bilingual Speakers (4-4-4)
This course is for those students who have a high level of speaking proficiency in Vietnamese but little or no reading and writing abilities. Special emphasis in the development of reading and writing skills. *Prerequisite: consent of instructor.*

IRLA 145A-B-C. Vietnamese Language and Civilization (4-4-4)
Introduction to Vietnamese culture from the sixteenth century to the present through reading Vietnamese texts regarding religion, politics, economics, and history. This course is for students who have an intermediate level of speaking, reading, and writing abilities in Vietnamese. *Prerequisites: prior ability to read, write, and speak Vietnamese language, department stamp.*

IRLA 400A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a *low-intermediate* level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 401A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *intermediate* level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: *IR/PS majors only, or by consent of instructor.*

IRLA 402A-B-C. Chinese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *advanced-intermediate* level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 403A-B. Chinese Language for Professional Proficiency (4-4)
This course is designed to enable students at an *advanced* level of proficiency to maintain and improve their Chinese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 406A-B-C. Technical Chinese Language (4,4,4)
A course designed to prepare IR/PS technical management track students to meet the language competency requirement in Chinese. Acquisition of technical language skills through classes, language, language laboratory, exercises, and other activities. *Prerequisite:*

IR/PS technical concentration admission status or by consent of instructor.

IRLA 410A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a *low-intermediate* level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only or by consent of instructor.*

IRLA 411A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *intermediate* level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 412A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *advanced-intermediate* level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 413A-B-C. Japanese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *advanced* level of proficiency to maintain and improve their Japanese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 416A-B-C. Technical Japanese Language (4,4,4)
A course designed to prepare IR/PS technical management track students to meet the language competency requirement in Japanese. Acquisition of technical language skills through classes, language laboratory, exercises, and other activities. *Prerequisite: IR/PS technical concentration admission status or by consent of instructor.*

IRLA 417. Introduction to Kanji (2)
Introduction to the characteristics and usage of Chinese characters (Kanji) used in Japanese language: history, structure, cognitive aspects, their relationship with hiragana and katakana, policy issues, learning strategies, and technology. *Prerequisite: basic knowledge of Japanese grammar and consent of instructor, IR/PS majors.*

IRLA 418. Strategies for Reading Japanese (2)
This course introduces effective and efficient strategies for reading advanced-level professional texts in Japanese: analysis of extended sentence structure and multiple predicate sentences and development of strategies for skimming, scanning, and intensive reading of Japanese texts. *Prerequisite: basic knowledge of Japanese grammar and writing system and consent of instructor, IR/PS majors.*

IRLA 420A-B-C. Korean Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a *low-intermediate* level of proficiency to maintain and improve their Korean language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only or by consent of instructor.*

IRLA 421A-B-C. Korean Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *intermediate* level of proficiency to maintain and improve their Korean language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 430A-B-C. Portuguese Language for Spanish Speakers (4-4-4)
This course is designed to enable Spanish-speaking students to acquire proficiency in the Portuguese language through a combination of classes, language laboratories, exercises, and other language experiences. Prerequisite: *IR/PS majors only or by consent of instructor.*

IRLA 431A-B-C. Second Year Portuguese Language for Spanish Speakers (4-4-4)
A continuation of first-year Portuguese for Spanish speakers. This course is designed to enable Spanish-speaking students to be introduced to an *intermediate* level of Portuguese language through a combination of classes, language, laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only or by consent of instructor.*

IRLA 440A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a *low-intermediate* level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only or by consent of instructor.*

IRLA 441A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *intermediate* level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 442A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *advanced-intermediate* level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 443A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *advanced* level of proficiency to maintain and improve their Spanish language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 444A-B-C. Spanish Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a *superior* level of proficiency to maintain and improve their Spanish language skills through individual training with an instructor. Prerequisite: *IR/PS majors only, or by consent of instructor.*

IRLA 446A-B-C. Technical Spanish Language (4,4,4)
A course designed to prepare IR/PS technical management track students to meet the language competency requirement in Spanish. Acquisition of technical language skills through classes, language laboratory, exercises, and other activities. *Prerequisite: IR/PS technical concentration admission status or by consent of instructor.*

IRLA 450A-B-C. Vietnamese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at a *low-intermediate* level of proficiency to maintain and improve their Vietnamese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only or by consent of instructor.*

IRLA 451A-B-C. Vietnamese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *intermediate* level of proficiency to maintain and improve their Vietnamese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 452A-B-C. Vietnamese Language for Professional Proficiency (4-4-4)
This course is designed to enable students at an *advanced-intermediate* level of proficiency to maintain and improve their Vietnamese language skills through a combination of classes, language laboratories, exercises, and other language experiences. *Prerequisite: IR/PS majors only, or by consent of instructor.*

IRLA 460A-B-C. Bahasa Indonesia for Professional Proficiency (4-4-4)
This course is designed to enable students with basic knowledge and skills of Bahasa Indonesia to further develop communicative skills through a combination of classes, exercises, and other language experiences.

IRLA 490. Special Topics in Language (2-12)
A seminar course at an advanced level on core linguistic functions and topics related to international management and policy work in the Pacific Rim area. *Prerequisite: proficiency examination must be passed.*

IRLA 500. Apprentice Teaching of Language (1-4)
This course, designed for graduate students serving as teaching assistants, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. *Prerequisite: graduate standing.*

PH.D. LEVEL COURSES

IRGN 201. Ethnic Conflict (4)
Explanations for why ethnic conflicts break out, why they are difficult to resolve, and what effect outside intervention has on them. Introduce students to the major theories of ethnic and internal conflict. Policy debates regarding how the international community can best respond to these conflicts.

IRGN 202. International Political Economy: Money and Finance (4)
Examination of effects of national policies and international collaboration on public and private international financial institutions, in particular the management of international debt crises, economic policy coordination, and the role of international lender of last resort. Conjoined with Political Science 262.

IRGN 204. International Relations of the Pacific (4)
International relations and developing international political economies of nations bordering the Pacific.

Topics include: the "Pacific Basin" concept; the U.S. and "hegemonic-stability" theory; legacies of the Korean War and Sino-Soviet dispute; immigration patterns and their consequences; and Japan's foreign policy.

IRGN 205. U.S.–China Relations (4)
Can the United States and China manage to develop a constructive relationship or are they headed toward a hostile relationship? This course addresses this question by examining the domestic and international influences on the foreign policies of both countries and key issues in the bilateral relationship. Students also do policy projects.

IRGN 206. Corporate Strategy and the Environment (4)
This seminar examines the ability of firms to increase shareholder value through improved environmental performance. Topics include product differentiation, strategic use of regulations, the "Porter hypothesis," and environmental management systems. Readings include case studies and research articles. *Prerequisites: IRCO 401, 421, 453, 454, or consent of instructor.*

IRGN 207. Bureaucracy and Public Policy (4)
What determines the degree of influence bureaucrats exert over public policy outcomes, versus the influence of politicians? Overview of themes such as developmental state, state autonomy, legislative oversight, clientelism, corruption. Applications to Japan, East Asia, United States, and Latin America. *Prerequisites: IP/Core 400 or consent of instructor; PS 228, graduate standing, or consent of instructor.*

IRGN 208. Internal Conflict after the Cold War (4)
Will examine the causes of civil wars and the problems with resolution and state reconstruction. Theoretical approaches discussed will then be applied to three recent case studies: Cambodia, Rwanda, and Bosnia. Policy implications for the international community will be discussed. *Prerequisites: IRGN 210.*

IRGN 209. Strategic Marketing Planning (4)
This course develops the microeconomics foundations of market exchange by explicitly examining the marketing details of transactions: demand and product differentation, incomplete and incorrect information, search costs and promotion costs. It is argued that within this theoretical framework (i.e., model) most observed marketing behavior can be reconciled. The primary objective of this course is to learn to deduce firm and consumer motives from observed behavior. *Prerequisites: IRGN 221 and 243, or consent of instructor.*

IRGN 210. International Politics and Security (4)
Development of analytic tools for understanding international relations with applications to contemporary problems such as the environment, nuclear proliferation, human rights, humanitarian interventions, and the roots of conflict and cooperation among countries.

IRGN 212. The Politics of International Competitiveness (4)
Examination of policy debates concerning international economic relations: what policies promote or encourage effective participation in the international economy, and what political factors support or oppose such policies. Examples drawn from the experiences of the U.S., Japan, Europe, Latin America, and East Asia.

IRGN 213. Risk Management (4)
This course provides an introduction to derivative assets such as options, futures, and swap contracts. The main emphases is on their valuation, use in the hedging, and role as components of liabilities that mitigate risk and agency problems in business firms. *Prerequisite: IRCO 421.*

IRGN 215. Competition and Regulation in the Global Communications Market (4)
This course explores the global market for telecommunications, Internet, and information services. It analyzes how regulation and international trade rules influence market structure. It examines the politics underlying government rules, and it probes the strategies of corporation in the global market.

IRGN 216. Post War Politics in Japan (4)
Overview of postwar politics in Japan, including American Occupation reforms, political institutions, major political actors, mass and elite, and political behavior. Special attention will be paid to the issue of Japan's changing democracy.

IRGN 217. Microfinance (4)
This course will begin by examining financial markets in poor countries. Investigates how microfinance contracts overcome problems, which had previously barred the extension of business credit in many environments.

IRCO 218. Globalization, the World System, and the Pacific (4)
This course examines globalization and other economic and political factors that shape the international relations of the Pacific Rim. Specific topics include financial market integration, state cooperation and intervention, and case studies of individual countries.

IRGN 219A-B-C. Workshop in International Relations (4,4,4)
Examination of recent research in international politics; development and presentation of research projects by graduate students; presentation of research projects by faculty. Second year students present seminar paper; third year students present dissertation prospectus; candidates make yearly presentation of dissertation research. *Prerequisite: Political Science 202 or consent of instructor.* Conjoined with Political Science 202.

IRGN 220. APEC: Integration, Policies and Procedures (4)
This course examines regional integration in the Asia Pacific from historical, institutional, and comparative perspectives. It considers the origins of the Asia Pacific Economic Cooperation (APEC) Forum, the diverse interest of APEC member economies. APEC institutional procedures, the implementation of trade and technical assistance initiatives, and the roles of the private sector and NGOs. Student participation and original research is emphasized.

IRGN 221. Managerial Economics (4)
Survey of basic tools in economics. Examination of how commodity demand is determined, what affects supply of the commodity, how price is determined, when optimal market allocation of resources and failure occurs, and basic topics concerning the aggregate economy.

IRGN 222. Investments (4)
An analysis of the risk/return characteristics of different assets as perceived by different investors and their implications for security price behavior, emphasizing real world capital market behavior. International aspects include the role of exchange rate risk and international diversification.

IRGN 223. The Globalization of Production (4)
This course examines how trade policy, information technology, and other factors shape the production strategies of multinational enterprises. Topics include foreign direct investment and the mode of entry into foreign markets, global outsourcing and the globalization of work, and the impact of trade and investment policy on the world location of production. *Prerequisites: IRGN 221 and IRGN 243, or consent of instructor.*

IRGN 224. Corporate Finance (4)
The topics covered are dividend policy and capital structure, options, debt financing, and short- and long-term financial planning. Course format will be mostly lectures with occasional cases. Some international aspects of corporate finance will also be discussed. *Prerequisites: IRGN 221, 243, IRCO 420, 421, 453 and 454, or consent of instructor.*

IRGN 225. Managing Service Operations (4)
This course covers (1) strategic issues such as service revision, market positioning, growth, and globalization; (2) process design, facility design, and capacity planning; (3) system control and performance measurement; and (4) human resources, information technology, and other service media. *Prerequisites: IRCO 460 and either IRGN 438 or permission of instructor.*

IRGN 226. Management of Technology (4)
How companies choose and develop new technology. Case studies, lectures by executives. National technology policy, including the roles of intellectual property. This course emphasizes technology strategy at corporate/national level; the product development course emphasizes tactics for development teams.

IRGN 227. Organizations (4)
A seminar course based on the modern economics of organization. Covers an eclectic set of readings on a diverse range of organizations, looking at how incentives for collective action are structured. *Prerequisites: IRGN 221 and 243 or consent of instructor.*

IRGN 228. Government and Business in Japan (4)
This course aims to identify and analyze the basic features of the Japanese political economy and government-business relationships in postwar Japan. Following an introduction to the constituents of Japanese political and industrial organization, specific aspects of financial and industrial policy (MOF/MITI) as well as regulation and corporate governance are discussed. Additional paper and/or examination will be required at the doctoral level.

IRGN 229. Business and Management in Japan (4)
This course introduces the main aspects of Japanese business and industrial organization (keiretsu), Japanese management practices, and the representation and influence of business interests in the Japanese political economy.

IRGN 230. Trade and Economic Growth: Lessons from Pacific Basin Economies (4)
The purpose of this course is to survey economic relations among Pacific Basin economies, exploring relevant economic and public policy issues. Major topics include: productivity, trade, technology spill-over/transfer, foreign direct investment, factor and human capital accumulation, income distribution, and regional institutional arrangements. *Prerequisites: IRGN 221 and IRGN 243.*

IRGN 231. Fiscal and Monetary Policy (4)
Effects of fiscal and monetary policies on aggregate variables such as output, nominal and real interest rates, price level, and employment. Additional topics include the inflation/unemployment trade-off, budget deficit, and economic growth.

IRGN 232. Immigration and Immigration Policy (4)
This course examines the role of immigration in the globalization of Pacific Rim economics. Topics include the economic forces behind immigration; the impact of immigration on wages, employment, and industry structure in sending and receiving countries; and the nature, scope, and political economy of immigration policy. *Prerequisites: IRGN 221 or permission of instructor.*

IRGN 233. International Finance (4)
The international financial system will be addressed including the perspectives of individual investors, borrowers, and financial intermediaries. Public policy issues including the exchange rate mechanism, financial linkages among countries, optimum currency areas, and macro-policy coordination will be discussed. *Prerequisites: IRGN 243 and IRCO 421, or consent of instructor.*

IRGN 234. Strategic Analysis (4)
This course analyzes competitive interactions, surveying the modern economic analysis of relationships between and within organizations. The foundations of the course are game theory and the economics of information. Topics include bargaining and contracting, principal-agent models, and bidding models.

IRGN 235. Topics in International Trade (4)
This course develops new analytical models of international trade and examines their relevance for trade policy. Topics include setting trade policy where firms have global market power; the interaction between international trade, innovation, and economic growth; regional economic policy, dynamic industry clusters, and information technology; and new trade theory and the world distribution of income. *Prerequisites: IRGN 221 and IRGN 243, or consent of instructor.*

IRGN 236. Information and Management (4)
This is a seminar course on the use of information by organizations in strategic and tactical decision-making. Actual content varies, and currently includes doing business on the Internet and supply chain management. *Prerequisite: IRGN 238 or consent of instructor.*

IRGN 238. Production and Operations Management: Analysis and Control (4)
This course provides a comprehensive introduction to the fundamental decisions and trade-offs associated with the control of a firm's operations function. It analyzes production processes, quality control, inventory and materials planning, kanban, and just-in-time principles. *Prerequisites: IRCO 453 and 454.*

IRGN 240. Applied Data Analysis and Statistical Decision Making (4)
The goal of the course is to teach how to evaluate quantitative information in business and economics contexts and to make sound managerial decisions in complex situations. Much of the problems and the course work will involve statistical software and spreadsheet analysis of data. The course covers various applied multivariate statistical methods beyond basics. *Prerequisites: IRCO 453 and 454.*

IRGN 242. Economics of Telecommunications (4)
This course will focus on the underlying economics of the telecommunications and public rationale of regulations applied to this industry. Both theoretical models and case studies will be used to provide better understanding of the telecommunications marketplace and the nature of competition between service providers in the industry. *Prerequisite: IRGN 221 or consent of instructor.*

IRGN 243. International Economics (4)
The theory and mechanics of international economics. Included will be such topics as real trade theory, international movements of capital, the effects of trade and capital flows on domestic economies, and policies toward trade and foreign investment.

IRGN 244. Product Development (4)
This course examines how high-tech companies develop successful products. Emphasizes interplay between business and technology issues, including marketing, finance, manufacturing, prototyping, testing, and design. Student teams develop novel products, from concept to working prototype, including a business plan for launching the product. Discussion of concurrent engineering, rapid prototyping, industrial design, and other design methodologies.

IRGN 249. Making U.S. Foreign Policy (4)
Analysis of the interests, structure, and procedures of the main executive branch agencies involved in the formulation of foreign policy, and of the roles of Congress, the media, public opinion, and non-governmental actors. Case studies and "daily briefings" to prepare students to perform professionally in the foreign policy arena. *Prerequisite: IRGN 210 or consent of instructor Suggested: IRGN 218 and IRCO 454.*

IRGN 250. The Politics of U.S.-Japan Economic Relations (4)
This course will analyze how the domestic politics of each country, their international negotiations, and their interaction concerning economic issues have affected the U.S.-Japan relationship. Both the politics of cooperation and integration, and trade friction and conflict will be addressed in part through study of specific cases.

IRGN 251. Economic Development (4)
This course examines comparative patterns of industrialization and agricultural modernization with a focus on certain common features of the modernization process and widely varying endowments, policies, and experiences of different countries. *Prerequisites: IRGN 221 and 243, or consent of instructor.*

IRGN 253. Sustainable Development (4)
The course will cover the concept of sustainable development, ways in which sustainable development can be measured, evaluation of environmental damages and benefits, and the role of discounting, and will analyze cases demonstrating failure of the market.

IRGN 254. International Relations Theory (4)
A survey of the principal theories and approaches to the study of international relations.

IRGN 255. Globalization (4)
An examination of ideas about economic globalization. focusing on production "chains": the division of products into components, and their distribution around the world.

IRGN 256. Program Design and Evaluation (4)
Introduction to elements of program design and evaluation. Examines principles and guidelines used in creating a program and evaluating its success or failure. International case studies are explored. Students have the opportunity to develop their own program and evaluate projects.

IRGN 257. Cost Benefit Analysis (4)
Examination of public policy analysis, such as cost-benefit analysis and project evaluation, for use in policy formation. Sustainable development will receive particular attention. Case studies emphasizing the environment, agriculture and food, and economic development will be included.

IRGN 258. International Environmental Policy and Politics (4)
This course analyzes multilateral environmental agreements and negotiating positions of key countries on climate change, biodiversity conservation, sustainable development, and other subjects. It explores the challenges countries face to balance economic development objectives with global environmental concerns.

IRGN 259. Conflict Resolution of Environmental Issues (4)
Use of bilateral negotiations (U.S.-Canada), regional organization (ECE and acid rain in Europe), and United Nations specialized agencies (UNEP and WMO on ozone depletion and climate change) to mediate environmental disputes. Consideration of nontraditional approaches resolving international environmental problems.

IRGN 260. Economic and Social Development of China (4)
This course examines China's development experience from a generally economic standpoint. Contents include: patterns of traditional Chinese society and economy, geography and resource constraints, impact of the West and Japan, development since 1949, and contemporary problems and options.

IRGN 261. Chinese Politics (4)
This course will analyze post-1949 Chinese politics, including political institutions, the policymaking process, and citizen political behavior. Special attention will be given to the prospects for political reform in China.

IRGN 262. Comparative Public Policy: A Political Economy Approach (4)
Introduction to research methods in comparative policy analysis and to the design of research proposals. Survey of major competing approaches in the field, with analysis of methods used. Special attention to needs of Ph.D. students formulating dissertation proposals.

IRGN 263. Political Economy of Southeast Asia (4)
This course provides an introduction to five Southeast Asian countries: Indonesia, Thailand, Malaysia, the Philippines, and Vietnam. The focus will be on national level political and economic issues in these countries. In addition, we will also be examining a number of region-wide issues: Chinese business groups and networks; clientelism and corruption; regional trade and investment linkages; democratization; and the implications of political change for future economic development.

IRGN 265. Management of Non-profit Organizations (4)
Analyzes the particular environment in which non-profit organizations define and achieve their objectives. Management tools are applied to existing non-profits and to student projects.

IRGN 266. Public Finance (4)
Describes principles of taxation and expenditure analysis, public budgeting, and assessment of budget priorities.

IRGN 267. Policymaking and Political Economy in Japan (4)
Examines the policymaking process in Japan, the interaction and role of state and non-state actors in shaping Japan's economy. Analysis and comparison, through case studies of industrial policies (toward high-tech and declining industries), and non-industrial policies and their consequences.

IRGN 268. Political Development and Modern China (4)
Political development has dominated the study of comparative politics among U.S. academicians since the revival of the Cold War in 1947. This course examines critically the paradigm and its Western philosophical roots in the context of the experience of modern China. Conjoined with Political Science 132C/232C.

IRGN 269. The Japanese Financial System (4)
This course studies the financial system in Japan and analyzes its role in the development of the Japanese economy. Topics will include *keiretsu* and the main bank system, internationalization and deregualtion of finance, the Bank of Japan and monetary policy. *Prerequisites: IRGN 221 and 243.*

IRGN 270. International Business Strategy (4)
This course analyzes corporate strategies and management issues in their international dimensions. Based on numerous case studies, the class examines the strategic opportunities and problems that emerge when companies transfer corporate skills and competence to other countries.

IRGN 271. Japanese Economy (4)
A broad survey of the Japanese economy, together with in-depth examination of some distinctively Japanese phenomena such as savings behavior, financial structure, industrial organization, and labor markets. *Prerequisites: IRGN 221 and 243, or consent of instructor.*

IRGN 272. Japanese Corporate Culture (4)
This course examines Japanese cultural values and social relations in the context of business organizations. The central focus will be on the integration of individuals into their organizations and on the human relations characteristic of their work environments.

IRGN 273. Current Issues in U.S.-Latin American Relations (4)
Issues to be actively debated include the collective defense of democracy, coping with revolutionary change, counternarcotics, anti-corruption, international finance, trade, and U.S.-Mexican and U.S.-Brazilian relations. In each case, students analyze the strengths and weaknesses of current U.S. policy and advocate alternative options. *Prerequisite: IRCO 210 or consent of instructor.*

IRGN 274. Economic Policy in Latin America (4)
This course seeks to enhance the students' understanding of the main policy alternatives open to the largest Latin American countries. Development and stabilization policies are analyzed, emphasizing the current debate between conventional and heterodox policy packages and their impact on decision making. *Prerequisites: IRGN 221 and 243.*

IRGN 276. International Negotiation (4)
This course attempts to reach a broad audience of students who seek in-depth understanding of how states and other international actors attempt to achieve specific objectives through give-and-take of the negotiation process. Cases include Northern Ireland and Middle East peace processes, negotiations leading to Dayton accords, and negotiations over Antiballistic Missile Treaty.

IRGN 277. Latin American Politics (4)
Introductory reading seminar on Latin American politics to acquaint students with leading schools of thought, provide critical perspective on premises and methodology, and identify themes for further inquiry. Themes include authoritarianism, revolution, democratization, regional conflict, and emergence of middle-level powers. *Conjoined with political Science 235A.*

IRGN 279. Doing Business in Latin America (4)
Explores the realities of conducting business in Latin America. The focus will be on discussing a variety of cases, mainly in four countries—Mexico, Brazil, Argentina and Chile—covering strategic, operational, organizational, and cross-cultural issues. Course format will consist of case studies and includes the development and presentation of a business plan.

IRGN 281. Managing Country Risk in the Modern Multinational Corporation (4)
Examines ways to analyze, assess, and reduce country risk.

IRGN 282. East Asian NICS (4)
Forces explaining the success of four economies in East Asia (South Korea, Taiwan, Hong Kong, Singapore), and two natural resource-rich states (Malaysia, Thailand) will be addressed. Theoretical models, implementation of development policies/strategies, and sociopolitical causes and consequences of development will be discussed. *Prerequisites: IRGN 221 and 243, or IRGN 210 and 218, or consent of instructor.*

IRGN 284. Korean Politics (4)
This course will examine characteristics and distinctive aspects of contemporary Korean society and politics. Emphasis will be placed on continuity and change in social values, political culture and leadership, economic growth and its impact, and democratization and its future prospects.

IRGN 285. The Korean Economy (4)
Analytical review of South Korea's economic performance. Examination of major policy changes (e.g., shifts toward export promotion, heavy and chemical industrial promotion); Korea's industrial structure including the role of large enterprise (chaebol); role of government; links between Korea and other countries.

IRGN 286. Business and Policy in Southeast Asia (4)
Surveys various dimensions of business in Southeast Asia, with particular attention to the policy context. Special focus on technological capabilities of business organizations in Southeast Asia. *Prerequisites: IRGN 290: Economics in Southeast Asia, or consent of instructor.*

IRGN 287. Politics and Institutions in Latin America (4)
Overview of Latin American politics and the "rules of the game," both formal and informal. Key topics include military rule, presidentialism, and clientelism in the region as a whole, with special emphasis on Argentina, Brazil, Chile, and Mexico.

IRGN 288. Policy-Making in Latin America (4)
Major policy issues in contemporary Latin America, especially the breakdown of import substitution and subsequent liberalization of economies. Special attention to the coalition strategies of politicians and the capacity of state institutions to deliver public goods. *Prerequisite: IRGN 287 or consent of instructor.*

IRGN 289. Applied Environmental Economics (4)
This course teaches students how to analyze environmental and natural resource policy issues in developing countries using economic concepts and methods. Weekly spreadsheet exercises based on real-world data provide hands-on practice. *Prerequisites: IRCO 453, 454, IRGN 221, or consent of instructor.*

IRGN 290. Special Topics in Pacific International Affairs (4)
A seminar course at an advanced level on a special topic in Pacific international affairs. May be repeated for credit.

IRGN 298. Directed Group Study (2-12)
Directed reading in a selected area. The content of each course is to be decided by the professor directing the course, with the approval of the student's faculty adviser. May be repeated for credit.

IRGN 299. Independent Research (2-12)
Independent research under the guidance of a faculty member at IR/PS. May be repeated for credit.

Lisa Yoneyama, Ph.D., *Associate Professor, Literature*
Leon Zamosc, Ph.D., *Associate Professor, Sociology*

The International Studies Program

Technology and the forces of cultural and economic integration appear to reduce the distances between societies, which now impinge on one another on many dimensions. At the same time, ethnic, religious, and economic conflicts erupt within and between societies, often in violent form. Both the proximity of other societies and the remaining divides within and between them demand a better understanding of their cultures and institutions. Societies cannot be understood in isolation or at a single point in time, however; they are shaped by global and regional environments—political, military, economic, cultural—and their pasts. Individuals and societies in turn shape those environments as they reinterpret their histories.

Using different disciplinary lenses, the international studies major explores the interaction between international and national, global and local, contemporary and historical. The program builds on the strengths of existing international specializations at UCSD. International relations and comparative politics are established and distinguished fields of political science. The comparative study of societies and cultures lies at the core of sociology and anthropology. Literature and linguistics offer a rich array of courses dealing with languages and traditions outside the English-speaking societies. Area studies programs provide comprehensive understanding of particular countries and regions.

The international studies major provides students with both a firm grounding in a discipline and the flexibility to permit exploration from alternative perspectives. The primary and secondary tracks chosen by each student contain the disciplinary foundations of the major. International studies majors also complete two core courses that serve as gateways to disciplinary approaches and to central international and comparative issues that cut across disciplines. Among these subjects are cultural boundaries and identities, economic and social development, international and regional integration and their effects, the evolution of political and social institutions, and forms of communication and language. A required capstone seminar permits the completion of a research paper in close association with a member of the faculty. International studies majors benefit throughout from the activities and programs of the Institute for International, Comparative, and Area Studies (IICAS), the home for international studies at UCSD.

Education Abroad

Majors in international studies are encouraged to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP). Subject to approval by the faculty director of the major, courses taken through EAP/OAP will be accepted for credit toward the major. Students are strongly encouraged to complete INTL 101 and INTL 102 before departure. Students interested in studying abroad should see an international studies program adviser to discuss appropriate courses and programs for their plan of study. Information on EAP/OAP is given in the Education Abroad Program section of the UCSD General Catalog. Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://www.ucsd.edu/icenter/pao. Financial aid can be used for EAP/OAP study, and special study abroad scholarships are also available.

CAREERS

International studies attracts students who are interested in a variety of careers, including government and international organizations, international business, non-governmental organizations, journalism, the arts, and the media. Because of its strong disciplinary core, the major also prepares students who wish to pursue graduate degree programs in international affairs or in one of the participating disciplines.

HONORS

The Honors Program in International Studies recognizes academic excellence in the major. The Honors Program allows qualified students to complete an honors thesis on a topic of their choice in close collaboration with a member of the faculty. Students who wish to participate in the Honors Program in International Studies should indicate their interest in the Spring quarter of their junior year. Honors program application is available on the Web site at http://www.intlstudies.ucsd.edu/requirements.html under HONORS. Application is due by Monday of the ninth week, the quarter before you enroll in 190H.

Requirements for the Honors Program

Candidates for honors in any of the International Studies degrees must meet the following requirements:

- A GPA of 3.5 in courses in the International Studies Major (INTL 101, 102, primary track, and secondary track courses)
- Completion of INTL 190H: Senior Honors Seminar in International Studies.
- Completion of a senior honors thesis (INTL 196H). On the recommendation of the student's instructor in INTL 190H and with the approval of the director of the International Studies program, qualified students will enroll in INTL 196H: Directed Thesis Research (4 units) and complete a senior honors thesis under the direction of a member of the International Studies faculty. The thesis must reflect a research project that is substantially broader in scope and that includes more original research than the research paper required of all International Studies students in INTL 190.

Criteria for "distinction," "high distinction," and "highest distinction"

- Students must maintain a 3.5 GPA in the major to graduate with distinction.
- Each student whose honor thesis also earns a grade of A– shall be entitled to the designation "with distinction."
- Each student whose honors thesis earns a grade of a A shall be entitled to the designation "with high distinction."

- Each student whose honors thesis earns a grade of a A+ shall be entitled to the designation "with highest distinction."

The International Studies Major

A student who satisfactorily completes the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the international studies requirements described below will be awarded one of the following bachelor of arts degrees based upon selection of the primary track:

International Studies-Anthropology

International Studies-Economics

International Studies-History

International Studies-Linguistics

International Studies-Literature

International Studies-Political Science

International Studies-Sociology

All upper-division courses applied to the requirements of the major must be taken for a letter grade. A 2.0 grade-point average is required in the major, and students must earn at least C– in each course counted for the major. Transfer students should see the international studies adviser to determine whether courses taken elsewhere satisfy international studies program requirements.

Lower-Division Requirements

Foreign language (four quarters of college-level language or equivalent proficiency)

Students majoring in international studies are required to demonstrate basic proficiency in a modern foreign language by completing four quarters of foreign language instruction (or equivalent) with a passing grade. Students may also complete this requirement by demonstrating advanced language ability on a proficiency exam.

College-level language study is a prerequisite for study abroad in most non-English speaking countries and enhances understanding of those societies. Students who plan to study abroad in non-English speaking countries may need to take additional language classes, and they will need to take all language courses for letter grades.

Students should make substantial progress toward fulfilling college general-education requirements and the foreign language requirement of the international studies major before beginning the core sequence of the international studies major.

Departmental tracks (described below) may have lower-division requirements. In the absence of such requirements, majors are encouraged to take lower-division courses that will prepare them for their departmental or area tracks. Students in colleges whose general-education requirements do not have an international component are also encouraged to take lower-division courses in their prospective departmental or area tracks or as part of their college distribution requirements.

Upper-Division Requirements

The upper-division requirements for a major in international studies are

1) Two core courses (INTL 101 and INTL 102)
2) A capstone seminar (INTL 190)
3) Eight 4-unit upper-division courses in a primary track
4) Five 4-unit upper-division courses in a secondary track

CORE COURSES

Two core courses (INTL 101 and INTL 102) provide an intellectual gateway to central issues and disciplinary approaches in international studies. Students may begin the sequence with either course. Sophomore status is a prerequisite for both courses.

INTL 101. Culture and Society in International Perspective (4)

INTL 102. Economics, Politics, and International Change (4)

CAPSTONE SEMINAR

All majors will complete the capstone seminar, preferably in the fall or winter quarter of the senior year. Students are required to complete a research paper for this course.

INTL 190. Seminar in International Studies (4)

PRIMARY AND SECONDARY TRACKS

Each international studies major will complete eight four-unit upper-division courses for his or her primary track. Five additional four-unit upper-division courses will be required for a secondary track. Of these thirteen track courses (eight primary and five secondary), three courses must concentrate on one country or region.

DEPARTMENTS OFFERING BOTH PRIMARY AND SECONDARY TRACKS

Anthropology:

Primary Track: Students are required to take at least one course from the core sequence, Anthropology: Program Courses (ANPR):

ANPR 105. Social Anthropology

ANPR 106. Cultural Anthropology

ANPR 107. Psychological Anthropology

The remaining upper-division courses should be selected from the Anthropology: General (ANGN) and Anthropology: Regional (ANRG) listings. Up to two approved courses from Anthropology: Biological Anthropology (ANBI) can also be counted toward the major with the approval of the international studies program adviser.

Secondary Track: Students should be encouraged to take ANPR 105 and 106; all other courses should be from the ANPR, ANGN, or ANRG series; one course from the ANBI series will be accepted for credit by petition.

Economics:

Primary and Secondary Tracks: Both primary and secondary track IS majors must satisfy lower-division department requirements:

Calculus. Mathematics 10A-B-C or Mathematics 20A-B and 20C and

Economics 1, 2, 3

Upper-division courses may be selected from:

Economics 100A-B. Microeconomics or Economics 170A-B Management Science Microeconomics

Economics 110A-B. Macroeconomics

Economics 120A-B-C. Econometrics

Economics 101. International Trade

Economics 103. International Monetary Relations

Economics 116. Economic Development

Economics 117. Economic Growth

Economics 125. Economics of Population Growth

Economics 131. Economics of the Environment

Economics 132. Energy Economics

Economics 145. Economics of Ocean Resources

Economics 161. Latin American Economic Development

Economics 163. Japanese Economy

Both primary and secondary track majors must take at least two of the following courses:

Economics 101. International Trade

Economics 103. International Monetary Relations

Economics 116. Economic Development

Economics 117. Economic Growth

Economics 125. Economics of Population Growth

Economics 131. Economics of the Environment

Economics 132. Energy Economics

Economics 145. Economics of Ocean Resources

Economics 161. Latin American Economic Development

Economics 163. Japanese Economy

At least one of the above must be Economics 101, 103, or 116.

History:

Primary Track: At least 6 of 8 courses must be taken in any of the following categories:

History of Africa (HIAF)

History of Europe (HIEU)

History of East Asia (HIEA)

History of the Near East (HINE)

History of Latin America (HILA)

History of Science (HISC)

History of Religion (HIRE) and/or History Topics (HITO), except HITO 194-199

Up to two courses may be taken in History of the United States (HIUS).

Secondary Track: All courses must be taken in non-U.S. history.

Linguistics:

Primary Track: Eight upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least three courses from the following list:

LIGN 105. Law and Language

LIGN 108. Languages of Africa

LIGN 141. Language Structures

LIGN 142. Language of Typology

LIGN 143. Structure of Spanish

LIGN 145. Pidgins and Creoles

LIGN 174. Gender and Language in Society

LIGN 175. Sociolinguistics

LIGN 176. Language of Politics and Advertising

LIGN 177. Multilingualism

At most, one of the eight courses can be LIGN 199 (Independent Study in Linguistics).

Secondary Track: Five upper-division courses in linguistics, which must include LIGN 101 (Introduction to the Study of Language) and at least two courses from the list above. At most, one of the five courses can be LIGN 199 (Independent Study in Linguistics).

Literature:

Primary Track: Eight upper-division courses may be selected from the following:

Literatures in English (LTEN):

LTEN 188. Contemporary Caribbean Literature

LTEN 189. Twentieth-Century Postcolonial Literatures

and all courses listed under:

Literatures in Chinese (LTCH)

Literatures in French (LTFR)

Literatures in German (LTGM)

Greek Literature (LTGK)

Literatures in Italian (LTIT)

Latin Literature (LTLA)

Korean Literature (LTKO)

Literatures in Portuguese (LTPR)

Russian Literature (LTRU)

Literatures in Spanish (LTSP) with exception of (150,151,152,153,162)

Selected courses listed as Literatures from the World (LTWL) can also be taken for credit for the IS major with the approval of the undergraduate adviser.

Students whose primary track is in Literature may take up to two courses in Literature/Theory (LTTH) and Literature/Cultural Studies (LTCS) with approval of the undergraduate advisor.

Secondary Track: Five courses selected from the above.

Political Science:

Primary Track: Eight courses selected from the following: all courses numbered POLI 120 through POLI 159:

Comparative Politics: POLI 120A through POLI 139A

International Relations: POLI 140A through POLI 159

Up to three courses may be from the following subfields:

American Politics: POLI 100A through POLI 108

Political Theory: POLI 110A through 119A

Policy Analysis: POLI 160AA through 168

Research Methods: POLI 170A and POLI 181

Secondary Track: Five upper-division courses selected from courses numbered POLI 120 through POLI 159 (see above); 1 of the 5 courses may be selected from the following subfields:

American Politics: POLI 100A through POLI 108

Political Theory: POLI 110A through 119A

Policy Analysis: POLI 160AA through 168

Research Methods: POLI 170A and POLI 181

Sociology:

Primary Track: Eight upper-division courses selected from the following list:

Cluster B: Culture, Language, and Social Interaction (Soc/B)

Soc/B 111A-B. Human Rights

Soc/B 122. Jerusalem: Sacred and Profane

Soc/B 162R. Religion and Popular Culture in East Asia

Cluster C: Social Organization and Institutions (Soc/C)

Soc/C 136A. Sociology of Mental Illness: An Historical Approach

Soc/C 136B. Sociology of Mental Illness in Contemporary Society

Soc/C 139. Social Inequality: Class, Race, and Gender

Soc/C 148. Political Sociology

Soc/C 156. Sociology of Religion

Soc/C 157. Religion in Contemporary Society

Soc/C 180. Social Movements and Social Protest

Cluster D: Comparative and Historical Sociology (Soc/D)

Soc/D 151. Comparative Race and Ethnic Relations

Soc/D 158J. Religion and Ethics in China and Japan

Soc/D 169. Citizenship, Community, and Culture

Soc/D 171. Science and the Making of the Modern World

Soc/D 177. International Terrorism

Soc/D 178. The Holocaust

Soc/D 179. Social Change

Soc/D 181. Modern Western Society

Soc/D 183. Minorities and Nations

Soc/D 185. Sociology of Development

Soc/D 187. African Societies through Films

Soc/D 188A. Community and Social Change in Africa

Soc/D 188B. Chinese Society

Soc/D 188D. Latin America: Society and Politics

Soc/D 188F. Modern Jewish Societies and Israeli Society

Soc/D 188J. Change in Modern South Africa

Soc/D 189. Special Topics in Comparative-Historical Sociology

Secondary Track: Five upper-division courses selected from the above lists.

DEPARTMENTS AND PROGRAMS OFFERING ONLY SECONDARY TRACKS

Communication:

Course Prerequisites: Must have taken COGN 20 to enroll in upper-division courses.

Secondary Track: Five courses selected from the following lists:

Communication as a Social Force (COSF)

COSF 120. The Transformation of Global Communication

COSF 140A. Comparative Media Systems: Asia

COSF 140B. Comparative Media Systems: Europe

COSF 140C. Comparative Media Systems: Latin America and the Caribbean

COSF 159. Work and Industry in the New Information Economy

COSF 160. Political Economy/ Global Consumer Culture

COSF 167. Emerging Global High-Tech Regions: Labor and National Development

COSF 181. Political Economy of International Communications

Communication and Culture (COCU)

COCU 110. Cinema in Latin America

COCU 130. Tourism: Global Industry and Cultural Form

COCU 162. Popular Culture

COCU 179. Colonialism and Culture

COCU 180. Cultures and Markets

Communication and Human Information Processing (COHI)

COHI 114. Bilingual Communication
COHI 121. Literacy, Social Organization, and the Individual

Regional Secondary Tracks

Five upper-division courses in a single area studies program selected from the following list of programs:

African Studies
Chinese Studies
German Studies
Italian Studies
Japanese Studies
Latin American Studies
Middle East Studies
Russian and Soviet Studies
Third World Studies

Course lists can be found in the *UCSD General Catalog.* All courses must be four units, upper-division, non-language courses. Please contact ISP academic adviser with questions.

Students seeking a broader regional focus (e.g., European or East Asian Studies) may elect to combine courses from area studies programs dealing with that region.

COURSES

UPPER-DIVISION

INTL 101. Culture and Society in International Perspective (4)
Analysis of the cultural and social developments of the modern era from the perspective of interaction among societies. Particular attention is paid to the definition, representation, and negotiation of social and cultural boundaries over time. *Prerequisites: department stamp.*

INTL 102. Economics, Politics, and International Change (4)
Examination of the domestic and international sources of economic and political change. Topics include the rise of the nation-state, comparative economic development, authoritarian and democratic regimes, international and civil conflict, globalization and its domestic and international implications. *Prerequisites: department stamp.*

INTL 190. Seminar in International Studies (4)
Required seminar for international studies seniors. Readings and discussion of topics in international and comparative studies from an interdisciplinary perspective. Emphasis on independent work and completion of a research paper. *Prerequisites: successful completion of INTL 101 and 102, senior standing, and department stamp.*

INTL 190H. Honors Seminar in International Studies (4)
Required of all honors students in International Studies. Reading and discussion of topics international and cooperative studies from an interdisciplinary perspective. Emphasis on research design and completion of research paper in preparation for INTL 196H. *Prerequisites: International Studies major with 3.5 major GPA; department stamp; senior standing; INTL 101; INTL 102; consent of instructor.*

INTL 196H. International Studies Honors Program (4)
Open only to seniors who have completed INTL 190H. Completion of an honors thesis under the supervision of a member of the International Studies faculty. *Prerequisites: International Studies major with 3.5 GPA; department stamp; senior standing; INTL 190H; consent of instructor.*

Adriana de Marchi Gherini, Ph.D., *Literature*

Italian studies is an interdisciplinary program in the language, literature, history, theater, music, and art of Italy. Italian studies coordinates the resources of the Departments of History, Literature, Music, Theatre and Dance, and Visual Arts, and offers students the opportunity to design a major, leading to a B.A., around the course offerings of these five departments. Students in Italian studies are encouraged to participate in the University of California Education Abroad Program (EAP), which is affiliated with the Universities of Padua, Trento, and Bologna: this provides the possibility of a junior year abroad, including both language courses and courses dealing with various aspects of Italian studies. EAP credits may be transferred back to UCSD to coordinate with on-campus offerings.

The Major Program

A major in Italian studies consists of a choice of twelve upper-division courses in literature, history, music, theatre, and visual arts approved for the program and listed below. Courses in other areas of Italian studies taken abroad or on our campus may also apply. At least three areas must be represented in the student's program of study. The particular courses making up each student's major will be selected in consultation with the program adviser. The study of Dante (LTIT 115) is considered central for all Italian studies majors.

The Minor Program

A minor in Italian studies consists of seven upper-division courses from among those listed below (at least three areas must be represented). Credit from the EAP program may be applied toward the minor.

Upper-Division/Italian Studies Courses

For description of courses listed below, see appropriate departmental listing.

Literature

LTIT 1A-B-C. The Language of Italian Culture
LTIT 100. Introduction to Italian Literature
LTIT 110. Selected Topics in Italian Literature
(may be repeated for credit as topics vary)
LTIT 115. Medieval Studies
LTIT 116. Sixteenth-Century Prose
LTIT 118. Italian Romanticism
LTIT 122. Studies in Modern Italian Culture
LTIT 136. Studies in Modern Italian Poetry
LTIT 137. Studies in Modern Italian Prose

LTIT 138. Contemporary Italian Thought
LTIT 140. Women in Italy
LTIT 143. Major Italian Authors
LTIT 150. Italian North American Culture
LTIT 161. Advanced Stylistics and Conversation
LTIT 190. Seminar
LTIT 196. Honors Thesis
LTIT 198. Directed Group Study
LTIT 199. Special Studies

N.B.: Students must complete the following prerequisites for all upper-division work in Italian literature:

1. Linguistics/Italian 1A-B-C, or LTIT 1A-B-C
2. Literature/Italian 2A-B, 50

Visual Arts

122BN. Italian Art of the Early Renaissance
122CN. High Renaissance Art
122D. Michelangelo
122E. The City in Italy
128BN. Topics in Early Modern Art History (when on Italian topic)
129BN. Special Problems in Early Modern Art History (when on Italian topic)

History (HIEU)

113. Rule, Conflict, and Dissent
122. Politics, Italian Renaissance Style
124. The City in Italy
199. Independent Study for Undergraduates

The following courses may be applied to the major or minor, when 50 percent or more of the course focus is on Italian topics:

Music 113
THHS 101

Additional courses counting toward a major in Italian studies are offered on a year-to-year basis. As these often cannot be listed in the catalog in advance, interested students should consult the program faculty for an up-to-date list.

Japanese Studies

OFFICE: 3024 Humanities and Social Sciences Building, Muir College
Web site: http://japan.ucsd.edu

Faculty

Yumiko Blanford, *Lecturer, History (Japanese Language)*
Takashi Fujitani, *Associate Professor, History*
Takeo Hoshi, *Professor, International Relations and Pacific Studies*
Germain A. Hoston, *Professor, Political Science*
Hifumi Ito, *Lecturer, History (Japanese Language)*
Noriko Kameda, *Lecturer, History (Japanese Language)*
Yukata Kunitake, *Lecturer, History (Japanese Language)*
Ellis Krauss, *Professor, International Relations and Pacific Studies*
Sige-Yuki Kuroda, *Professor Emeritus, Linguistics*
Mayumi McKee, *Lecturer, History (Japanese Language)*
Masao Miyoshi, *Hajime Mori Professor of Japanese, English, and Comparative Literature*
Masato Nishimura, *Lecturer, History (Japanese Language)*
Ulrike Schaede, *Associate Professor, International Relations and Pacific Studies*
Stefan Tanaka, *Associate Professor, History*
Yasu-Hiko Tohsaku, *Professor, International Relations and Pacific Studies*
Christena Turner, *Associate Professor, Sociology*
Lisa Yoneyama, *Associate Professor, Literature*
Joji Yuasa, *Professor Emeritus, Music*

The Program in Japanese Studies coordinates a variety of campus offerings dealing with the language, history, culture, and political economy of Japan. The program is especially strong in the area of modern and contemporary Japan. In addition to courses available in the Departments of Anthropology, Economics, History, Linguistics, Literature, Music, Political Science and Sociology, qualified undergraduates also may enroll in Japan-related courses in the Graduate School of International Relations and Pacific Studies with consent of instructors.

The Major

A. LOWER-DIVISION REQUIREMENT (9 COURSES)

1. Japanese language: two years lower-division or the transferred equivalent:
   Japanese Studies 10A-B-C
   Japanese Studies 20A-B-C
2. The remaining three courses may be chosen from among the following:
   a. East Asian History: HILD 10-11-12
   b. Eleanor Roosevelt College students may petition to use MMW Courses 2 and 5.
   c. Thurgood Marshall College students may petition to use DOC course 1.
3. The language requirement may be waived by demonstrating the equivalent proficiency through exam.

B. UPPER-DIVISION REQUIREMENT (12 COURSES)

1. Japanese language: six upper-division language courses or the transferred equivalent from:
   Japanese Studies 100A-B-C
   Japanese Studies 130A-B-C
   Japanese Studies 140A-B-C
   Japanese Studies 150A-B-C
2. Japanese Studies 190 (JAPN 190): Selected Topics in Contemporary Japanese Studies. This is a seminar-style course focusing on selected topics in contemporary interdisciplinary studies of Japan. This course will be offered once a year.
3. The remaining five courses must be taken from two or more different disciplines.
   a. Students may petition to include two non-language upper-division courses taken abroad under EAP or OAP.
   b. Students may include one 199.
   c. Students may include one course on China or Korea.
4. All upper-division courses must be taken for a letter grade.
5. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language upper-division courses.

C. HONORS PROGRAM

1. Junior standing.
2. A GPA of 3.5 or better in the major.
3. Overall GPA of 3.2 or better.
4. Completion of at least four upper-division non-language courses approved by the Program in Japanese Studies.
5. Recommendation of a faculty sponsor familiar with the student's work.

Students who qualify for honors take a two-quarter sequence Japanese Studies 196A-B (fall and winter quarters preferred) of directed study

during which they define a research project, carry out the research, and complete an honors thesis.

The completed honors thesis will be evaluated by a committee consisting of the student's thesis adviser and one other faculty member appointed by the Program in Japanese Studies director.

The Minor

A minor in Japanese studies consists of at least fifteen units of Japanese language (lower- or upper-division) and at least sixteen units of upper-division non-language coursework taken from two or more departments. Students may use one non-language course taken abroad. All courses to be used for the minor must be approved by the Program in Japanese Studies and must be taken for a letter grade. Students who are already beyond first- and second-year language levels will be placed in one of our upper-division Japanese language courses, Written Japanese (100A-B-C), Third-Year Japanese (130A-B-C), Fourth-Year Japanese (140A-B-C), or Advanced Japanese (150A-B-C), and will be required to take four upper-division language courses and three upper-division non-language courses. The language requirement can be waived by demonstrating the equivalent proficiency through exam. The required number of courses must be fulfilled by taking other non-language, upper-division courses.

COURSES

All graduate-level courses require permission of the instructor for undergraduate students. Course titles may vary from year to year.

HISTORY

HIEA 111. Japan: Twelfth through Mid-Nineteenth Century

HIEA 112. Japan: from Mid-Nineteenth Century through U.S. Ocupation

HIEA 113. The Fifteen-Year War in Asia and the Pacific

HIEA 114. Postwar Japan

HIEA 115. Social and Cultural History of Twentieth-Century Japan

HIEA 116. Japan-U.S. Relations

HIEA 160. Colloquium on Modern Japanese History

HIEA 161. Representing Japan

JAPANESE STUDIES

JAPN 190. Selected Topics in Contemporary Japanese Studies

LANGUAGE

(Students who have prior preparation of Japanese language are placed in language courses based on the results of a placement exam or an oral interview with an instructor. Students who have lived in Japan, or use Japanese at home are required to take a placement exam administered prior to the beginning of the fall quarter. Contact the Japanese Studies office for more information.)

10A-B-C. First-Year Japanese
(No prior study of Japanese language is required for 10A.) *Prerequisites for 'B' and 'C': previous course or consent of instructor.*

20A-B-C. Second-Year Japanese
Prerequisites: previous course or consent of instructor.

100A-B-C. Japanese for Bilingual Speakers I
(These courses are for those students who have a high level of speaking proficiency in Japanese but no or little reading and writing abilities.) *Prerequisite for 'A': consent of instructor. Prerequisites for 'B' and 'C': previous course or consent of instructor.*

130A-B-C. Third-Year Japanese
Prerequisites: previous course or consent of instructor.

140A-B-C. Fourth-Year Japanese
Prerequisites: previous course or consent of instructor.

150A-B-C. Advanced Japanese
Prerequisites: previous course or consent of instructor.

ECONOMICS

ECON 163. Japanese Economy

LITERATURE

LTEA 130. Earlier Japanese Literature in Translation
(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama; and E. Essays, travelogues, diaries, etc.)

LTEA 132. Later Japanese Literature in Translation
(Quarter offerings will vary among A. General Literature; B. Poetry; C. Prose Fiction; D. Drama and Film; and E. Essays, criticism, etc.)

LTEA 134. A Single Japanese Author (in translation)

LTEA 136. Special Topics in Japanese Literature

LTWL 155. Gender Studies

LTCS 120. Historical Perspectives on Culture

LTCS 130. Gender, Race, Ethnicity/Class, and Culture

LTCS 150. Topics in Cultural Studies

Lit/Th 240. Forms and Genres (when on Japan)

MUSIC

(Check with program office as to whether these courses may be used toward a Japanese studies minor.)

111. World Music

211. Seminar in World Music

POLITICAL SCIENCE

132B. Modernity and Identity in East Asia

133A. Introduction to Japanese Politics

133B. Chinese and Japanese Political Thought (I)

133C. Chinese and Japanese Political Thought (II)

Melford E. Spiro, Ph.D., *Professor Emeritus, Anthropology*
Alana Shuster, *Lecturer, Hebrew*
Randy L. Sturman, *Lecturer, Anthropology*

Judaic Studies is an interdisciplinary program offering courses, majors, minors, concentrations, and masters degrees that draw upon a variety of perspectives. For doctoral programs see below—the Ph.D. in ancient history and the Ph.D. in anthropology. Courses are offered in the Departments of Anthropology, Communication, History, Literature, Music, Political Science, Philosophy, and Sociology.

Students also have the option within the Literatures of the World major, in the Department of Literature, of concentrating on Judaic literature; or on a combined program of the Literatures of the World major (concentration in Judaic literature) and classical studies.

In addition, Revelle and Muir Colleges have noncontiguous minors in Judaic studies and in Hebrew language and literature; Warren College has Judaic studies and Hebrew literature concentrations; and various general requirements in all colleges can be met by courses in the Judaic area. For details students should inquire at their provost's office or at the Judaic Studies Program office.

The Judaic Studies Program offers scholarships and fellowships for study abroad.

Students are encouraged to participate in the UC Education Abroad Program (EAP) in Jerusalem or Beersheva, and to investigate other options through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree, major, and minor requirements. Interested students should contact the Programs Abroad Office in the International Center for more information. Please visit the Web site at http://orpheus.ucsd.edu/icenter/pao.

In addition, the Judaic Studies Program and UCSD Department of Anthropology offer credit and hands-on experience in Near Eastern archaeology at their archaeological field school in Israel or Jordan. Up to twelve units of academic credit may be earned through the UCSD Summer Session Program. Some scholarships are available through Judaic Studies. For more information call the UCSD Summer Session Office. Or visit our Web site at: http://weber.ucsd.edu/Depts/Anthro/classes/tlevy for our archaeological field schools in Israel and Jordan. For a general overview of the Judaic Studies Program see: http://historyweb.ucsd.edu//JudaicStud.html.

Major

Requirements for the major in Judaic studies are:

1. Judaic Studies 100 or equivalent; HITO 104, HITO 105.
2. Twelve upper-division courses in Judaic studies, to be selected in consultation with a faculty adviser.
3. Upper-division competence in Hebrew, normally to be fulfilled by completion of first- and second-year Hebrew language courses, or equivalent.

Minors

A. Requirements for the minor in Judaic studies:
   1. Judaic Studies 100, HITO 104, HITO 105.
   2. Four upper-division courses in Judaic studies, to be selected in consultation with a faculty adviser.

B. Requirements for the minor in Hebrew language and literature:

   Seven quarter courses in Hebrew language and literature, ordinarily Judaic Studies 1, 2, 3, 101, 102, and 103 plus one elective course.

Note: Other course combinations for the major and minor may be approved by the student's faculty adviser.

Note: A majority of the courses for the major or minor must be taken at UCSD.

THE PH.D. IN ANCIENT HISTORY

The Department of History offers a Ph.D. program in ancient history. Relevant major fields are the history of Israel in the biblical period and the history of the Jewish people in antiquity. One of the two minor fields may be outside the history department. Stu-dents must acquire competence in the relevant ancient and modern languages.

THE PH.D. IN ANTHROPOLOGY (ARCHAEOLOGY)

The Department of Anthropology offers graduate training in social, cultural, and psychological anthropology, as well as in anthropological archaeology and biological anthropology. In conjunction with the Judaic Studies Program, students may concentrate in Near Eastern archaeology with a focus on Israel and Jordan. Students pursuing anthropological archaeology are expected to take required courses in anthropology and engage in field research.

THE M.A. IN JUDAIC STUDIES

The M.A. in Judaic Studies, offered under the auspices of the Department of History, is an interdisciplinary program permitting the student to select courses primarily in history and literature, but also in anthropology, political science, sociology, and philosophy.

FELLOWSHIPS

Substantial fellowships are available for Ph.D. students. These include:

The Dita Gumpel Judaic Studies Endowed Fellowship

The University Fellowship

The Wexler Family Judaic Studies Fellowship Fund in honor of David Noel Freedman

Judaic Studies Fellowships

Teaching assistantships are available in the Revelle College Humanities/Writing Program and in other writing programs. Dissertation fellowships may be awarded to doctoral students at the dissertation stage of their studies. Funds are also available for support of travel to archaeological excavations. Students are also eligible for research-travel funds to other campus libraries of the University of California, as well as for grants that permit research in archives and libraries elsewhere. Students who read papers at scholarly conferences may also receive financial support for their participation.

Archaeology

Since 1993, the Judaic Studies Program has sponsored major archaeological excavations in Israel's northern Negev desert. Shortly after the peace treaty was formalized between Israel and

Jordan, the program began a long-term archaeological field program in the Jabal Hamrat Fidan Region (JHF) of southern Jordan. The project aims at studying the influence of early ore procurement and metallurgy on social change from the Neolithic period through the Iron Age. UCSD graduate students play an active role in the fieldwork and laboratory studies of material from these excavations. Qualified students are encouraged to use these data as part of their doctoral studies. In 2004-2005, the UCSD Judaic Studies Program will join in several emergency excavations along the Wadi Fidan in southern Jordan. This is part of the UCSD Summer Session Middle East Field School.

The Judaic Studies Program supports a state-of-the art archaeological laboratory in the Social Sciences Building. A wide range of digital-based technologies is used for archaeological data and image processing that are linked through the Internet. Labs for processing pottery, stone tools, and other materials are available for student use.

Publications

The program produces a series of volumes: *Biblical and Judaic Studies* from the University of California, San Diego (published by Eisenbrauns). *The Anchor Bible* (Commentary, Reference Library, and Dictionary) is edited by David Noel Freedman at UCSD. The program has published four volumes that were developed from international conferences held at UCSD.

Lectures and Conferences

The program regularly hosts international conferences and an annual series of lectures and seminars by distinguished scholars in Hebrew Bible, Archaeology, and Judaica. The Yigal Shiloh Memorial Lecture in Archaeology is given by an archaeologist each year in memory of Professor Yigal Shiloh.

Application Procedures

The deadline for applications is January 9. For further information contact:

University of California, San Diego
GRADUATE PROGRAM, JUDAIC STUDIES 0104
9500 Gilman Drive
La Jolla, California 92093-0104
email: jdempsey@ucsd.edu

COURSES

Following are course offerings in this area.

For descriptions of the courses listed below, refer to the appropriate department's section of the catalog.

Judaic Studies 1. Beginning Hebrew (4)
Acquisition of basic vocabulary, fundamentals of Hebrew grammar, conversation, and reading.

Judaic Studies 2. Intermediate Hebrew (4)
Continued study of vocabulary and grammar, emphasis on fluency in conversation, and reading.

Judaic Studies 3. Intermediate Hebrew, Continued (4)
Vocabulary, grammar, conversation, introduction to literary and nonliterary texts.

Judaic Studies 100. Introduction to Hebrew Bible (4)
An introduction to the Hebrew Bible focusing on the first five books, the Torah.

Judaic Studies 101. Introduction to Hebrew Texts (4)
Reading and analysis of texts from Biblical through modern authors, study of advanced vocabulary and grammar. Course taught in Hebrew and in English.

Judaic Studies 102. Intermediate Hebrew Texts (4)
Further reading and analysis of Hebrew literature from a range of periods. Advanced grammar and vocabulary. Course taught in Hebrew and in English.

Judaic Studies 103. Advanced Hebrew Texts (4)
Synthesis of fluency, reading, and grammatical skills. Reading of texts from a range of periods.

Judaic Studies 110. Introduction to Judaism (4)
An introductory survey of Jewish history, literature, and culture from antiquity to contemporary times. Topics include sacred texts, the variety of groups and views of Judaism, the historical and geographical movements of the Jewish people, and the intersection of religion, ethnicity, and culture.

Judaic Studies 111. Topics in Judaic Studies (4)
Study of a particular period, theme, or literature in Jewish civilization.

Judaic Studies 120. Topics in Zionism: Israelis and Palestinians: Two Cultures in Conflict (4)
This course examines Israeli culture, Palestinian culture, and the conflict between them. We will discuss what is distinct about each culture, how they are different, how they are similar, their histories, and what influences the relationship/conflict between them. *Prerequisites: upper-division standing or consent of instructor.*

Judaic Studies 198. Directed Group Study in Judaic Studies (1-4)
Directed group study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

Judaic Studies 199. Independent Study in Judaic Studies (1-4)
Independent study on a topic not generally included in the regular curriculum. Student must make arrangements with individual faculty members. (P/NP only)

ANLD 3. World Prehistory (4)

ANGN 100. Special Topics in Socio-Cultural Anthropology: Law, Religion, and Politics in Israel (4)

ANGN 142. Pastoralism in Archaeological Ethnographic Perspective (4)

ANGN 181. Anthropological Archaeology (4)

ANGN 183. Chiefdoms, States, and the Emergence of Civilizations (4)

ANPR 194. Archaeological Field School (4)

ANRG 116. Archaeology of Society in Syro-Palestine (4)

ANRG 150. The Rise and Fall of Ancient Israel (4)

ANRG 162. Peoples of the Middle East (4)

ANRG 286. Archaeology, Anthropology, and the Bible—Foundations, Data, and Debate

HIGR 260A-B-C. Seminar in the Judaic Studies (4-4-4)

HIGR 264. Topics in Pre-Islamic Jewish History (4)

HIGR 295. Thesis Seminar

HIGR 296. M.A. Thesis Direction

HIGR 298. Directed Reading (1-12)

HIGR 299. Ph.D. Thesis Direction (1-12)

HIGR 500. Apprentice Teaching (1-40)

HINE 100. The Ancient Near East and Israel (4)

HINE 102. The Jews in Their Homeland in Antiquity (4)

HINE 103. The Jewish Diaspora in Antiquity (4)

HINE 104. The Bible and the Ancient Near East: The Primary History (4)

HINE 105. The Bible and the Near East: The Prophets (4)

HINE 106. The Bible and the Near East: The Writings (4)

HINE 108. The Middle East before Islam (4)

HINE 109. Learning to Read Biblical Hebrew (4)

HINE 114. History of the Islamic Middle East (4)

HINE 116. The Middle East in the Age of European Empires (1798 to 1914) (4)

HINE 118. The Middle East in the Twentieth Century (4)

HINE 151A/251A. Introduction to Aramaic Language (4)

HINE 151B/251B. Introduction to Aramaic Dialects (4)
Prerequisite: previous course.

HINE 151C/251C. Introduction to Aramaic Dialects (4)
Prerequisite: previous course.

HINE 152A/252A. The Evolution of the Northwest Semitic Dialects (4)
Prerequisites: knowledge of at least one Semitic language; a course in general linguistics also desirable.

HINE 152B/252B. Introduction to Ugaritic (4)
Prerequisite: previous course.

HINE 152C/252C. Advanced Ugaritic (4)
Prerequisite: previous course.

HINE 153A/253A. Introduction to Akkadian Language and Mesopotamian Culture (4)

HINE 153B/253B. Continued Akkadian Language (4)
Prerequisite: previous course.

HINE 153C/253C. Advanced Akkadian Language (4)
Prerequisite: previous course.

HINE 160/260. Special Topics in the Bible and Ancient Near East (4)

HINE 161/261. Seminar in the Hebrew Bible (4)

HINE 166/266. Nationalism in the Middle East (4)

HINE 170/270. Special Topics in Jewish History (4)

HINE 181/281. Problems in Hebrew Manuscripts (4)

HINE 186/286. Topics in Middle Eastern History (4)

HINE 199. Independent Study in Near Eastern History (4)

HITO 104. The Jews and Judaism in the Ancient and Medieval Worlds (4)

HITO 105. The Jews and Judaism in the Modern World (4)

HITO 106. How Jewish Women Lived in Modern Times (4)

Humanities 1. The Foundations of Western Civilization: Israel and Greece (6)

LTCO 212. Studies in the Hebrew Bible (4)

LTEU 105. Medieval Studies: Crusade, Conquest, Conversion in Medieval Literature (4)

LTNE 101. Bible: The Narrative Books (4)

LTNE 102. Bible: The Prophetic Books (4)

LTNE 103. Bible: The Poetic Books (4)

LTWL 115. Contemporary Literature/Italy and Holocaust: Jewish Experience in Literature (4)

LTWL 134. A Cultural History of American Jewry (4)

LTWL 138. Critical Religion Studies (4)

LTWL 148. Yiddish Literature in Translation (4)

LTWL 198. Directed Group Study (4)

LTWL 199. Special Studies (4)

Courses cross-listed as LTNE and LTWL may be taken as Hebrew literature by students proficient in the language or as general literature by students without knowledge of Hebrew.

Music II. Folk Music: Klezmer Music (4)

Philosophy 185. Philosophy of Religion (4-4)

Political Science 121. Government and Politics of the Middle East (4)

Political Science 121B. Politics in Israel (4)

Political Science 138D. The Arab-Israeli Conflict (4)

Sociology/C 156. Sociology of Religion (4)

Sociology/C 157. Religion in Contemporary Society (4)

Sociology/D 178. The Holocaust (4)

Sociology/D 188F. Modern Jewish Societies and Israeli Society (4)

Victor Ferreira, Ph.D., *Psychology*
John Moore, Ph.D., *Linguistics*

Assistant Professors

Leslie Carver, Ph.D., *Psychology*
Gedeon Deak, Ph.D., *Cognitive Science*

Research Scientist

Nina Dronkers, Ph.D. *(Adjunct/Neurology UC Davis)*

The Joint Doctoral Program

San Diego State University (SDSU) and the University of California, San Diego (UCSD), offer jointly a doctoral program in Language and Communicative Disorders. The program's focus is the interdisciplinary study of language and communicative disorders. A major emphasis of the program is to apply techniques developed in cognitive science and neuroscience to the study of language and language disorders. The program involves study and research in normal language (including sign languages of the deaf and language impairments), and in the neural bases of language use and language loss. Participating faculty have research interests in a wide range of issues in processes of language development, language and aging, multilingualism, language disorders, assessment, and intervention. Graduates of the program will be qualified to serve as faculty in university programs in a variety of disciplines, and to provide leadership in research and health services. The doctoral program faculty at UCSD are an interdisciplinary group from the Departments of Cognitive Science, Communication, Linguistics, Neurosciences, and Psychology. The doctoral program faculty at SDSU are members of the Departments of Communicative Disorders, Linguistics, and Psychology. The program is coordinated by the doctoral program coordinators at each campus, in conjunction with an Executive Committee comprising three faculty from each campus appointed by the Graduate Deans from each campus.

The program is innovative in that many of the requirements are designed to function as a model of professional preparation specifically incorporating activities in which a successful teacher and researcher must engage after obtaining the Ph.D: students will be required to participate in interdisciplinary research throughout the program, learn about the nature and ethics of research, prepare grant proposals, write manuscripts, and will gain experience in oral presentations and teaching. Graduates from the program will be well prepared for the rigors of an academic/research career. The doctoral program in Language and Communicative Disorders, being interdisciplinary, draws from a variety of undergraduate disciplines including communicative disorders, psychology, cognitive science, linguistics, engineering, and other related sciences. Students should have adequate preparation in mathematics, statistics, and biological sciences. Background in neurosciences and/or language sciences, or language disorders is helpful, but not required for admission.

By the end of the first year, all students will select a major field of emphasis by choosing one of three concentrations. The *Adult Language* concentration is intended to provide intensive education in communicative disorders in adults. Students in this concentration will also develop expertise in the study of language processing in normal adults. The *Child Language* concentration is intended to provide specialized education in childhood (birth to adolescence) communicative disorders. Students in this concentration will also achieve competence in developmental psycholinguistics emphasizing language acquisition in normally developing children. The *Multilingualism*

concentration is intended to provide education in cross-linguistic, ethnographic, and other comparative studies of communicative disorders in children and/or adults, including those associated with bilingualism and second-language acquisition (including acquisition of sign language in deaf individuals). All students will be required to take some courses in each of the three concentrations. In addition, each student will elect a *methods minor*, applying one of the new technologies of cognitive neuroscience to research on language and communicative disorders. These may include computer-controlled studies of language processing in real-time functional brain imaging (including event-related brain potentials and/or functional magnetic resonance imaging), or neural-network simulations of communicative disorders.

The program is designed as a five-year curriculum, based on a twelve-month academic year. Students will be admitted to the doctoral program only in the fall semester/quarter. Information regarding admission is found in the current edition of the *Bulletin of the Graduate Division* of San Diego State University. To receive an application for admission, contact: SDSU/UCSD Joint Doctoral Program in Language and Communi-cative Disorders, San Diego State University, 5500 Campanile Drive, San Diego, California 92182-1518, (619) 594-6775.

Required courses include the *Tools* requirement (two courses in statistics/research design, a course in neuroanatomy and physiology, a course in language structure and theory and a professional survival skills course), the *Foundations* requirement (three courses on normal language and three courses on disorders of language) and the *Electives* requirement (at least five courses, with a minimum of three courses related to the chosen concentration, chosen from a broad list of approved options from Anthropology, Cognitive Science, Communicative Disorders, Computer Science, Linguistics, Neurosciences, and Psychology). Consult with adviser for approved list of elective courses. The five required electives must be approved by the student's adviser and the Doctoral Program Coordinators. In addition to their *course requirements, students are required* to complete three laboratory rotations in different research methodologies (each lasting a minimum of one quarter), two research projects (first year and second year), a qualifying examination for advancement to candidacy, and a dissertation proposal in the form of grant proposal to one of the public agencies that funds research in communicative disorders.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

COURSES

(See individual departments for details; for courses available at SDSU, see *SDSU Graduate Catalogue*.)

Tools Requirement:

Quantitative Methods
Psychology 201A-B-C

Ethics and Survival Skills in Academia
Cognitive Science 241

Neuroanatomy and Neurophysiology
Cognitive Science 201 or Basic Neurology SOMC 205

Language: Theories and Methods in the Study of Cognitive Phenomena
Cognitive Science 203 or Introduction to Grammatical Theory (Linguistics 221A) and
Introductory Phonology (Lingusitics 211A)

Foundations Requirement:

Special Topics in Psycholinguistics
Psychology 244

Aphasia
Cognitive Science 251 or Psychology 245

Language Acquisition
Psychology 215 or Cognitive Science 256

Electives:

Cognitive Science
202: Foundations: Computational Modeling of Cognition
211A-B-C: Research Methods in Cognitive Science
213: Issues in Cognitive Development
260: Seminar on Special Topics
272: Topics in Theoretical Neurobiology
273: Biological Basis of Attention

Communication
200A: Communication as Social Force
200B: Communication and Culture
200C: Communication and the Individual
201B: Ethnographic Methods for Communication Research
201C: Discourse Analysis
222: Childhood and Culture

Linguistics
211A: Introductory Phonology[1]
221A: Introduction to Grammatical Theory[1]
225: Topics in Syntax
249: Topics in Sign Languages of the Deaf
270: Psycholinguistics
272: Topics in Neurolinguistics
278: Research in Second Language Acquisition

Psychology
218A-B: Cognitive Psychology
222: Biological Psychology
227: Cognitive Development
236: Substance Abuse
242A-B-C: Research Topics in Developmental Psychology
244: Special Topics in Psycholinguistics
252: Seminar on Cognitive Neuroscience
254: Functional Brain Imaging
264A-B-C: Advanced Topics in Language Processes

Computer Science and Engineering
250A-B: Artificial Intelligence
253: Neural Networks
256: Statistical Natural Language Processing
258A: Connectionist Natural Language Processing

Neurosciences:
243: Physiological Basis of Human Information
263: Developmental Neurobiology
264: Behavioral Neuroscience

Philosophy:
234: Philosophy of Language

[1]Students who use this course to fulfill the Tools requirement may not use this as an elective.

Karen Lindvall-Larson, M.L.S., *Librarian, Geisel Library*
Dean Sidelinger, M.D., *Research Fellow, Pediatrics*
Maria Zuniga, Ph.D., *Administrative Assistant, Pediatrics*

The Latin American Studies Program

UCSD's program in Latin American Studies has attained national and international distinction for its excellence in teaching, research, and public service. Each year its faculty offers approximately 100 Latin America-related courses in fourteen academic departments, and the Latin American Studies Program offers three interdisciplinary degrees:

- Bachelor of Arts in Latin American Studies
- Minor in Latin American Studies
- Master of Arts in Latin American Studies

Latin American Studies at UCSD offers distinct advantages:

- At the undergraduate level, students may take elective courses on Latin American topics or pursue a minor or a B.A. degree in Latin American Studies. At the graduate level, they can work on Latin America through interdisciplinary master's programs or through doctoral programs in academic departments.
- Latin American Studies integrates teaching, research, and policy analysis, encouraging students to develop interdisciplinary perspectives and to work actively with faculty on research projects and conferences.
- Students participate in the activities of an outstanding array of research and teaching organizations, including the Center for Iberian and Latin American Studies, the Center for U.S.-Mexican Studies, the Graduate School of International Relations and Pacific Studies, and the Institute of the Americas. The Center for Iberian and Latin American Studies (CILAS) sponsors multidisciplinary colloquia, conferences, projects, and publications. CILAS also awards fellowships and grants each year to promising graduate students.
- Students are encouraged to interact with visiting Latin American scholars and to participate in Latin America-related internships, seminars, clubs, foreign exchange programs, and other extracurricular activities.
- Students at UCSD have access to one of the largest and fastest-growing library collections on Latin America in the United States.

Degree programs in Latin American Studies are supervised by an interdisciplinary faculty group under the direction of the director and associate director of the Center for Iberian and Latin American Studies.

The Curricular Program

Undergraduate Major in Latin American Studies

The Bachelor of Arts in Latin American Studies blends coverage of methodological and theoretical approaches to the study of Latin America with a broad foundation in the humanities and social sciences. Students receiving this degree will be prepared for private and government employment or for graduate training; the major also provides a valuable supplement for those who

subsequently pursue professional degrees in business, law, engineering, medicine, or other fields.

To satisfactorily complete the B.A. degree, students must take a broad range of courses from at least three of UCSD's humanities and social science departments. The collection of courses should be structured so as to provide both depth in a special area of study and breadth across the broader field. Students must also demonstrate proficiency in Spanish.

All students entering the major must enroll in LATI 50 "Introduction to Latin America," an interdisciplinary course that prepares majors to build a coherent curriculum on Latin America. During the senior year, all B.A. candidates are required to successfully complete LATI 190, a writing seminar. This course will culminate in the preparation of an interpretive paper based on the secondary analysis of existing scholarly research (approximately twenty to forty pages in length). As part of the overall requirements, students are strongly encouraged to enroll in four credits of Individual Study (LATI 199) with a member of the Latin Americanist faculty, who will serve as the student's principal adviser.

All upper-division courses applied to the requirements of the major must be taken for a letter grade (with the sole exception of LATI 199). A 2.0 grade-point average is required in the major, and students must earn at least a C– in each course counted for the major.

Students majoring in Latin American Studies are also urged to minor in a core discipline such as anthropology, economics, history, literature, political science, or sociology. In summary, the requirements for the bachelor of arts in Latin American Studies are:

LOWER-DIVISION REQUIREMENTS

1. The equivalent of at least two years of college-level language instruction in Spanish, comparable to satisfactory completion of Literature/Spanish 2C; students who satisfy this requirement are strongly encouraged to study Portuguese.
2. LATI 50: Introduction to Latin America

UPPER-DIVISION REQUIREMENTS

1. Eleven upper-division courses selected from the approved interdisciplinary course list for Latin American Studies as follows:
   a. Course work must be in at least three departments.
   b. At least three courses must be from one department.
   c. No more than five courses from one department will count for credit.
   d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.
2. Enrollment in the four-credit Senior Seminar (LATI 190), usually to be taken in the winter quarter of the senior year; satisfactory completion of a substantial paper is required of all graduating majors.
3. Maintain a 2.0 grade-point average, earning at least a C– in each course counting for the major. With the sole exception of LATI 199, all courses must be taken for a letter grade.

Honors in Latin American Studies

The Latin American Studies Program offers an Honors Program for students who demonstrate excellence in the major. In order to receive Honors in Latin American Studies a student must:

1. Satisfy all lower-division requirements of the major program;
2. Complete nine upper-division courses selected from the Approved Interdisciplinary Course List for Latin American Studies as follows:
   a. Course work must be in at least three departments.
   b. At least three courses must be from one department.
   c. No more than five courses from one department will count for credit.
   d. At least two courses must concentrate exclusively on periods earlier than the twentieth century.
3. Complete a three-course sequence in the senior year consisting of Individual Study, the Senior Seminar, and the Honors Seminar (LATI 199, 190, and 191, respectively);
4. Produce an original thesis based on primary research under the direction of a mentor selected from the Latin Americanist faculty, and defend this thesis during the spring quarter before an interdisciplinary faculty committee; and
5. Maintain a minimum GPA of 3.5 in the major.

Undergraduate Minor in Latin American Studies

The Latin American Studies minor allows students to explore interdisciplinary approaches to a significant world region while pursuing a major in an academic discipline. To complete the program, students take at least six Latin America-related courses in the humanities and social sciences all taken for a letter grade; five of these courses must be at the upper-division level. Students must also complete the equivalent of two years of college-level Spanish or Portuguese.

Education Abroad

Students in Latin American Studies are encouraged to participate in the Education Abroad Program (EAP) in Brazil, Chile, Costa Rica, or Mexico, or in other study abroad programs offered by the Opportunities Abroad Program (OAP). Subject to approval by petition after courses have been completed (based on syllabi and coursework), courses taken through EAP/OAP will be accepted for credit toward the major or minor. The equivalent of six UCSD upper-division courses can be petitioned for credit toward the major, and a maximum of two UCSD upper-division courses can be petitioned for credit toward the minor.

Students interested in studying abroad should see the Latin American Studies Student Affairs coordinator to discuss appropriate courses and programs for their plan of study before they leave. Information on EAP/OAP is given in the Education Abroad Program section of the *UCSD General Catalog.* Interested students should contact the Programs Abroad Office in the International Center and visit its Web site at http://www.ucsd.edu/icenter/pao. Financial aid can be used for EAP/OAP study, and special study abroad scholarships are also available.

Master of Arts in Latin American Studies

The Master of Arts in Latin American Studies is designed for students who seek to integrate a broad range of disciplinary approaches to a world region of growing international significance. Upon graduation, most students pursue additional advanced degrees in academic or professional fields; others proceed to careers in the private sector, in international organizations, or in government.

To qualify for admission, students must have a B.A. with a grade-point average of at least 3.5 on a 4.0 scale for the final two years of undergraduate study plus satisfactory scores on the Graduate Record Examination.

To receive the Master of Arts in Latin American Studies, a student must:

1. Demonstrate foreign language competence in Spanish or Portuguese;
2. Maintain a 3.0 GPA in 40 units of coursework (about ten courses) to be completed as follows:
   a. Complete the Latin American Studies Basic Seminar Sequence: 8 units must be taken in the required Core Seminar in Latin American Studies (LATI 200, 4 units), and Latin American Library Resources and Research Methodology (LATI 210A and LATI 210B, 2 units each).
   b. Courses must be completed in at least three fields, with no more than 16 units in any one department. Students are encouraged to include four units of independent research (LATI 299) for work on the master's thesis.
   c. At least 16 units must be taken in graduate-level courses, and up to 16 units may be taken in upper division, undergraduate-level courses.
3. Successfully complete either a comprehensive exam or master's thesis.

M.A. students have the option to upgrade upper-division, undergraduate-level courses to graduate-level courses (contact the Latin American Studies Student Affairs coordinator for information on requirements and procedures). To convert an undergraduate-level course (100 level) into a 298 graduate-level course, a student must attend all of the course meetings and incorporate a component of additional, graduate-level research work, upon arrangement with the faculty member teaching the course (a special form describing the supplementary work must be filled by the student and approved by the instructor and CILAS' academic coordinator). In all such cases, the supplementary work should, (a) increase the amount of reading to match the regular reading expectations of a graduate seminar, (b) include additional meeting time with the professor for a graduate-level discussion of the material, and (c) require the student to write a research paper (which would generally be on the order of fifteen to twenty pages).

Disciplinary and Thematic Concentrations

M.A. students in Latin American Studies who are interested in specific disciplines or research topics may apply for a disciplinary or thematic concentration. Currently students may choose from concentrations in gender studies, international migration, history, and sociology.

In addition to the general requirements for all candidates applying for admission to the Master of Arts in Latin American Studies, applicants to a concentration must submit a statement explaining their intellectual and career interests in that specific area of study. Applications from new students will be considered for the fall quarter. Current students in the Latin American Studies master's program may apply in the spring quarter of their first year.

M.A. students who were previously enrolled as undergraduates at UCSD will not be allowed to repeat courses for credit toward the concentration. In all cases there are alternatives, and those students will be expected to take other classes to fulfill the requirements.

General Concentration Requirements

To receive the Master of Arts in Latin American Studies with a concentration, a student must:

1. Demonstrate foreign language competence in Spanish or Portuguese.
2. Maintain a 3.0 GPA in 40 units of coursework (about ten courses) to be completed as follows:
   a. Complete the Latin American Studies Basic Seminar Sequence: 8 units must be taken in the required Core Seminar in Latin American Studies (LATI 200, 4 units), and Latin American Library Resources and Research Methodology (LATI 210A and LATI 210B, 2 units each).
   b. Complete 16 units within the specifications of the concentration (as specified below). All of the concentration units must be taken at the graduate level (200 level), and a maximum of two undergraduate-level courses (100 level) may be upgraded to graduate-level 298 courses.
   c. Complete 16 units of general electives within the specification of the concentration (as specified below). At least 50 percent of the general elective units must be taken at the graduate level (200 level).
3. Successfully complete a master's thesis on a topic relevant to the area of concentration.

Concentration in Gender Studies

To receive the Master of Arts degree in Latin American Studies (gender studies), a student must complete the following units as concentration course work and general electives:

1. One general theoretical course in gender studies (4 units in any of the following: ANGR 244, CGS 100, CGS 101, CGS 104, CGS 112, COCU 132, COCU 139, ETNH 256, LTCS 250, SOCB 118, SOCC 132, SOCC 267).
2. One course in feminist theory (4 units in any of the following: CGS 103, COCU 138, HIGR 205, POLI 116A, POLI 217).
3. One course focused on gender studies in Latin America (4 units in any of the following: ETHN 129, ETHN 148, HILA 261, LTAM 105, LTAM 106, LTSP 175, USP 135).
4. One course of directed reading (298, 4 units), taken with a faculty member affiliated with the CGS Program, focused on a topic relevant to Latin American gender studies.
5. General Electives: The remaining 16 units must be taken as follows: two courses from the approved list of courses on Latin America (8 units), 4 units of directed reading (298), and 4 units of independent research (299).

Concentration in History

To receive the Master of Arts degree in Latin American Studies (history), a student must complete the following units as concentration course work and general electives:

1. A required research seminar sequence in Latin American history (8 units in any of the following: HIGR 245A-B-C, HIGR 247A-B, or HIGR 248A-B).
2. Two elective courses or seminars in Latin American history (8 units in any two of the following: ETHN 130, ETHN 131, ETHN 180, ETHN 259, HILA 100, HILA 101, HILA 102, HILA 107, HILA 108, HILA 112, HILA 113, HILA 115, HILA 120, HILA 121, HILA 122, HILA 123, HILA 125, HILA 131, HILA 132, HILA 160/260, HILA 161/261, HILA 162/262, HILA 166/266, HILA 170/270, HILA 171/271, HIGR 245A-B-C, HIGR 247A-B, HIGR 248A-B, HIGR 249, HIGR 250, HIGR 251, HIGR 252, HIUS 158, HIUS 159, HIUS 167/267, LTSP 116, LTSP 135A).

3. General Electives: The remaining 16 units must be taken in departments other than the Department of History as follows: two courses from the approved list of courses on Latin America (8 units), 4 units of directed reading (298), and 4 units of independent research (299).

Concentration in International Migration

To receive the Master of Arts degree in Latin American Studies (international migration), a student must complete the following units as concentration course work and general electives:

1. One course focused on economic and social factors in international migration (4 units in any of the following: ECON 114, ETHN 118, ETHN 131, ETHN 134, HIUS 159, IRGN 490, POLI 248, SOCG 282).
2. One course focused on immigration policy (4 units in any of the following: POLI 150, POLI 236, IRGN 490).
3. One course focused on Latin American international migration (4 units in any of the following: COHI 175, ETHN 189, HIUS 180, HIUS 186, IRGN 490, LTAM 109, LTSP 177).
4. One course of directed reading (4 units in a 298 course, focused on a topic relevant to Latin American migratory movements).
5. General Electives: The remaining 16 units must be taken as follows: two courses from the approved list of courses on Latin America (8 units), 4 units of directed reading (298), and 4 units of independent research (299).

Concentration in Sociology

To receive the Master of Arts degree in Latin American Studies (sociology), a student must complete the following units as concentration course work and general electives:

1. One seminar in classical sociological theory (4 units in SOC 201A or SOC 201B).
2. One seminar in sociological research methods (4 units in any of the following: SOC 203, SOC 204, SOC 205, SOC 206, SOC 207, SOC 227).
3. One core sociological field seminar (4 units in any of the following: SOC 212, SOC 216, SOC 222, SOC 226, SOC 234, SOC 244, SOC 264, SOC 267).
4. One sociology course or seminar focused on Latin America (4 units in any of the following: SOCD 182, SOCD 188D, SOCG 258).
5. General Electives: The remaining 16 units must be taken in departments other than the Department of Sociology as follows: two courses from the approved list of courses on Latin America (8 units), 4 units of directed reading (298), and 4 units of independent research (299).

COURSES

LATI 50. Introduction to Latin America (4)
Interdisciplinary overview of society and culture in Latin America—including Mexico, the Caribbean, and South America: legacies of conquest, patterns of economic development, changing roles of women, expressions of popular culture, cycles of political change, and U.S.-Latin American relations.

LATI 50XL. Foreign Language Discussion—Introduction to Latin America (1)
Students will exercise advanced foreign language skills to discuss materials and the correspondingly numbered Latin American Studies foreign area course. This section is taught by the course instructor, has no final exam, and does not affect the grade in the core course, LATI 50.

LATI 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

LATI 120/220. Special Topics in Latin American Studies (1-4)
A course designed to cover various aspects and various disciplines of Latin American Studies.

LATI 190. Senior Seminar (4)
Research seminar on selected topics in the study of Latin America; all students will be required to prepare and present independent research papers. (Honors students will present drafts of senior research theses, of no less than fifty pages in length; non-honors students will present final versions of analytical papers of approximately twenty-five to forty pages in length.) *Prerequisites: satisfactory completion of LATI 50 and a working knowledge of Spanish.*

LATI 191. Honors Seminar (4)
Independent reading and research under direction of a member of the faculty group in Latin American Studies; goal is to provide honors students with an opportunity to complete senior research thesis (to be defended before three-person interdisciplinary faculty committee). *Prerequisites: successful completion of LATI 50, working knowledge of Spanish; minimum GPA of 3.5 in the major.*

LATI 199. Individual Study (4)
Guided and supervised reading of the literature on Latin America in the interdisciplinary areas of anthropology, communications, economics, history, literature, political science, and sociology. For students majoring in Latin American Studies, reading will focus around potential topics for senior papers; for honors students in Latin American Studies, reading will culminate in formulation of a prospectus for the research thesis. *Prerequisites: LATI 50 and working knowledge of Spanish.*

LATI 200. Core Seminar on Interdisciplinary Research and Methodology in Latin American Studies (4)
A team-taught course wherein members of the faculty group in Latin American Studies present diverse disciplinary and thematic approaches to the region. Topics vary from year to year. Grades are based on discussions and on a series of analytical papers. *Prerequisite: enrollment in the master's degree program in Latin American Studies or permission of instructor.*

LATI 210A-B. Latin American Library Resources & Research Methodology (2-2)
A detailed survey of major research methods and resources for the study of Latin America. Both conventional library materials and those available electronically will be explored. Skills will transfer to any major research library. Various methodologies will also be explored in relation to the students' individual projects. A critical review, annotated bibliography, and a statement of research methodology, related to their proposed topics, will be required.

LATI 298. Directed Reading (1–12)
Guided and supervised reading of the literature of the several areas included in the interdisciplinary fields of anthropology, communications, economics, history, literature, political science, and sociology. *Prerequisite: graduate standing in Latin American Studies.*

LATI 299. Independent Research (1–12)
Independent work by graduate students engaged in thesis research and writing under the direct supervision of a faculty adviser.

LATI 500. Teaching Apprenticeship (1-4)
The course is designed for teaching assistants to learn effective teaching methods through supervision and mentorship by the faculty. Student will learn handling of discussions; preparation and grading of examinations and other written exercises; and student relations.

COURSES THAT SATISFY UNDERGRADUATE/ GRADUATE DEGREE REQUIREMENTS IN LATIN AMERICAN STUDIES

Approved Interdisciplinary Courses: The following is a list of courses available in UCSD departments that are approved to satisfy the requirements of the major, minor, and master's in Latin American Studies. Please note that these courses may not be offered every quarter or year and new courses may be added. Check the current schedule of classes or the Latin American Studies Web site (http://orpheus.ucsd.edu/las) for updated information.

The Departments of Linguistics and Literature and the Graduate School of International Relations and Pacific Studies offer language courses in Spanish and Portuguese. **Language courses do not count toward the course requirements** for Latin American Studies degrees.

Anthropology

ANRG 100	Special Topics *(when Latin American content)*
ANRG 114	Urban Cultures in Latin America
ANRG 121	The Archaeology of South America
ANRG 126	Rise of New World Civilizations: Mesoamerica and the Andes
ANRG 132	Modernity in Brazil
ANRG 143	Indigenous Peoples of Latin America
ANGR 269	Current Readings on Latin America

Communication

COCU 110	Cinema in Latin America: Visions of a Continent in Transition
COHI 114	Bilingual Communication
COSF 140C	Comparative Media Systems: Latin America and the Caribbean

Economics

ECON 161	Latin American Economic Development

Ethnic Studies

ETHN 116	The United States-Mexico Border in Comparative Perspective
ETHN 117	Organic Social Movements
ETHN 129	Asian and Latina Immigrant Workers in the Global Economy
ETHN 130	Social and Economic History of the Southwest I
ETHN 131	Social and Economic History of the Southwest II
ETHN 132	Chicano Dramatic Literature
ETHN 133	Hispanic American Dramatic Literature
ETHN 135A	Early Latino/a-Chicano/a Cultural Production, 1848–1960
ETHN 135B	Early Latino/a-Chicano/a Cultural Production, 1960–Present
ETHN 136	Topics in Chicano/a-Latino/a Cultures
ETHN 138	Chicano/a and Latino/a Poetry
ETHN 139	Chicano Literature in English
ETHN 144	Bilingual Communities in the U.S.A.
ETHN 145	Spanish Language in the United States
ETHN 148	Latino/a and Chicano/a Literature
ETHN 180	Special Topics in Mexican-American History
ETHN 189	Special Topics in Ethnic Studies

History

HIEU 138	Imperial Spain, 1476–1808
HILA 100	Latin American Colonial Transformation
HILA 101	Latin American Independence 1810–1898
HILA 102	Latin America in the Twentieth Century
HILA 107	State and Society in Nineteenth and Twentieth Century Latin America
HILA 113	Lord and Peasant in Latin America
HILA 115	Latin American City, A History
HILA 120	History of Argentina
HILA 121	History of Brazil
HILA 122	Cuba: From Colony to Socialist Republic
HILA 123	The Incas and Their Ancestors
HILA 125	History of Childhood in Latin America
HILA 131	History of Mexico in the Nineteenth Century
HILA 132	History of Contemporary Mexico
HILA 160/260	Topics in Latin American Colonial History 1500–1820
HILA 161/261	History of Women in Latin America
HILA 162/262	Special Topics in Latin American History
HILA 166/266	Cuba: From Colony to Socialist Republic
HILA 170/270	Topics in Latin American History, 1820–1910
HILA 171/271	Special Topics in Latin American History since 1910
HIUS 117	History of Los Angeles
HIUS 158	Social and Economic History of the Southwest I
HIUS 159	Social and Economic History of the Southwest II
HIGR 245ABC	Seminar in the Literature of Latin American History
HIGR 247AB	Readings and Seminar on Colonial Latin America
HIGR 248AB	Readings and Seminar on Latin America, National Period
HIGR 249	Topics in Colonial Latin America
HIGR 250	Topics in the National Period of Latin America
HIGR 251	Topics in the History of Mexico
HIGR 252	History, Social Evolution, and Intellectuals in the Andes

International Relations and Pacific Studies

IRGN 409	Economic Policy in Latin America
IRGN 454	Current Issue/US-Latin American Relations
IRGN 476	Doing Business in Latin America
IRGN 477	Latin American Politics
IRGN 479	Politics and Institutions in Latin America
IRGN 480	Policy-Making in Latin America
IRGN 490	Special Topics (with Latin American content)

Latin American Studies

LATI 50	Introduction to Latin America
LATI 50XL	Foreign Language Discussion—Introduction to Latin America
LATI 87	Freshman Seminar
LATI 120	Special Topics in Latin America
LATI 190	Senior Seminar
LATI 191	Honors Thesis Seminar
LATI 199	Independent Study
LATI 200	Core Seminar in Latin American Studies
LATI 210AB	Latin American Library Resources
LATI 220	Special Topics in Latin America
LATI 298	Directed Reading
LATI 299	Independent Research
LATI 500	Teaching Apprenticeship

Literature

LTAM 100	Latino/a Cultures in the United States
LTAM 101	Early Latino/a-Chicano/a Cultures: 1848–1960

Law and Society

OFFICE: Interdisciplinary Programs, Literature Building, Second Floor, Room 3238, Warren College

Law and society is an interdisciplinary minor that emphasizes the complexity and interrelationship of legal, social, and ethical issues in their historical context. Although it is administered by Warren College, it is available to all UCSD students considering law-related careers or those with a general interest in law as a social institution. The purpose of the program is to enhance students' critical analysis of social and ethical issues related to law and of the legal implications and ramifications of policy and decision-making in their major fields of study. Students examine the role of the legal system and specific legal issues from the perspectives of the social sciences and humanities. Social forces, historical questions, and issues of values will be considered in the context of the legal system. The focus of the minor is on the process of law—how the law both reflects and defines basic social values—and its relation to the political, economic, and social conflicts within society.

The interdisciplinary content of the law and society minor offers UCSD students the opportunity to examine law-related issues from the perspectives of a broad range of disciplines including: communication, economics, environmental studies, ethnic studies, history, linguistics, philosophy, political science, psychology, sociology, urban studies and planning, and critical gender studies.

Students should consult an academic adviser in their college provost's office to determine how the law and society minor can best meet their college's graduation requirements. Declarations must first be reviewed and approved by the coordinator of Interdisciplinary Programs and then by the students' college academic advising office.

Students are strongly urged to supplement the law and society minor with a law-related

internship. Both local and out-of-town internships are available to juniors and seniors with at least a 2.5 grade-point average (some placements require a 3.0 GPA) through the Academic Internship Program. The Academic Internship Program offers local placements with lawyers, judges, elected officials, government offices, and public interest groups. In addition, placements are available in Washington, D.C. with senators, representatives, legislative committees, and political action committees. Students may earn from four to sixteen units of academic credit for the internship experience. To apply AIP197 and courses in the UC/DC Program toward minor requirements, contact the Interdisciplinary Programs coordinator.

A number of extracurricular events and programs are also available to students interested in law. Information on these programs and activities is available in the Interdisciplinary Programs Office, Literature Building, Second Floor, Room 3238, Warren College, or call (858) 534-1704. Web site: http://warren.ucsd.edu/law

Law and Society Minor Requirements

The minor consists of seven courses, five of which must be upper-division, chosen from the courses listed below. To assure an interdisciplinary learning experience, students must include at least one course from each of the following academic departments: history, philosophy, political science, and sociology. Law and Society 101, Contemporary Legal Issues, may be counted as either political science or sociology, and may be repeated for credit once, for a maximum total of eight units.

Required Courses

1. Political Science 40–Introduction to Law and Society
2. Law and Society 101–Contemporary Legal Issues
3. One of the following four courses:
   History US 150–American Legal History to 1865
   History US 151–American Legal History since 1865
   Political Science 104A–The Supreme Court and the Constitution
   Political Science 104B–Civil Liberties—Fundamental Rights
4. One of the following two courses:
   Philosophy 168–Philosophy of Law
   Sociology/C-140–Sociology of Law

ELECTIVES CHOSEN FROM THE FOLLOWING:

Anthropology: General

100–Topics in Sociocultural Anthropology (approval required)

Communication/SF

139A-B–Law, Communication, and Freedom of Expression

Critical Gender Studies

106–Gender, Equality, and the Law
107–Gender and Reproductive Rights

Dimensions of Culture

2–Justice (open to Marshall College students)

Economics

118A-B–Law and Economics

Ethnic Studies

152–Law and Civil Rights

Environmental Studies

110–Environmental Law

History U.S.

152A–A Constitutional History of the U.S. to 1865
152B–A Constitutional History of the U.S. since 1865
153–American Political Trials
155A-B–Law and Religion in American History
169–American Legal and Constitutional History

Linguistics/General

105–Law and Language
176–Language of Politics and Advertising

Philosophy

10–Introduction to Logic
12–Logic and Decision Making
162–Contemporary Moral Issues
163–Bio-Medical Ethics
165–Professional Ethics
167–Contemporary Political Philosophy

Political Science

13–Power and Justice
104A–The Supreme Court and the Constitution
104B–Civil Liberties—Fundamental Rights
104C–Civil Liberties—The Rights of Criminals and Minorities
104D–Judicial Politics
104F–Constitutional Law Seminar
104I–Law and Politics—Courts and Political Controversy
104L–Positive Political Theory of Law
104M–Law and Sex
117–Violence and Social Order
140A–International Law and Organizations

Psychology

162–Psychology and the Law

Sociology

120S/B–Special Topics in Culture, Language, and Social Interaction (prior approval of topic required)
140F/C–Law and the Workplace
141/C–Crime and Society
142/B–Social Deviance
144/C–Forms of Social Control
146/B–Law Enforcement in America
145/B–Violence and Society
159/C–Special Topics in Social Organizations and Institutions (prior approval of topic required)
173/B–Elite Crime

Urban Studies and Planning

124–Land Use Planning

Students may petition to substitute courses in the minor that have substantial legal content. Petitions should be submitted to the Interdisciplinary Programs Office.

Recommended Internship Experience

Law-related internship (AIP 197): To be arranged at least one quarter in advance through the Academic Internship Program, Literature Building, Second Floor, Warren College. For each four units of credit, ten hours a week for one quarter and a ten-page research paper are required.

COURSES

As indicated above, most course work for the Law and Society minor is listed under the academic department providing instruction. Law and Society 101, described below, is an interdisciplinary course. It may be counted toward minor requirements as either political science or sociology. Further information on Law and

Society 101 is available in the Interdisciplinary Programs Office.

UPPER-DIVISION

101. Contemporary Legal Issues (4)
This course will deal in depth each year with a different legal issue of contemporary significance, viewed from the perspectives of political science, history, sociology, and philosophy. Required for students completing the law and society minor. May be repeated for credit once, for a maximum total of eight units.

Linguistics

OFFICE: 5237 McGill Hall, Muir College
http://ling.ucsd.edu

Professors

Farrell Ackerman, Ph.D.
Grant Goodall, Ph.D.

In what ways do languages differ, and in what ways are all human languages alike? These are the basic questions that the science of linguistics seeks to answer.

In formulating hypotheses about language it has been found that languages have intricate structure at a number of different levels. Phonetics studies the sounds of speech and how they are produced and perceived. Phonology studies the principles by which the sounds of a language are organized into a system and combined into syllables and larger units. Morphology studies the principles by which smaller units of meaning are combined into words. Syntax is the study of the principles by which words are combined into larger units such as phrases and sentences. Semantics studies meaning—the meanings of words and the ways the meanings of words are related to the meanings of larger units such as the phrase, the sentence, and the discourse. Linguists attempt to discover to what extent the principles at each level vary across languages, and to what extent they are universal.

Because language provides a window into the human mind, linguistics plays a central role in the study of human cognition and figures prominently in the field of cognitive science. We know, for example, that all normal children succeed in learning language relatively quickly at a time when their other cognitive abilities are still developing. The universal properties of human language that linguists discover can be used to provide models of this process, to explain why it occurs so rapidly, and to make specific predictions about the way it unfolds. The results of linguistic research can also be tested directly in experimental studies of how language is represented and processed in the mind (psycholinguistics) and brain (neurolinguistics). Language can also be studied in terms of its function as a cognitive system shared by an entire society; sociolinguistics investigate the ways in which the language we use is affected by our social environment.

The department of Linguistics offers a series of lower-division courses designed to introduce non-majors to the scientific study of language in the broader perspective of a liberal arts education. These are LIGN 3 (Language as a Social and Cultural Phenomenon), LIGN 4 (Language as a Cognitive System), LIGN 7 (Sign Language and Its Culture), LIGN 8 (Languages and Cultures in America), and LIGN 17 (Making and Breaking Codes). These courses may be used to satisfy the Marshall College disciplinary breadth requirement. Lower-division linguistics courses may be used to satisfy the social sciences requirement at Muir College and Revelle College, and they partially fulfill the requirements for a program of concentration in Warren College. In addition, certain linguistics courses satisfy the American Cultures requirement in Revelle College and the cultural diversity requirement in Muir College and Warren College. LIGN 17 (Making and Breaking Codes) satisfies the Thurgood Marshall Computational Skills requirement in addition to the formal skills requirement in Warren College and in the Human Development Program. This course also satisfies the Structured Reasoning requirement in Sixth College. Students should consult their college advising offices to determine which linguistics courses satisfy these other requirements.

Linguistics courses are relevant to a wide range of fields of study at UCSD, including anthropology, cognitive science, communication, computer science, human development, law and society, psychology, and sociology, as well as areas such as African studies, Chinese studies, ethnic studies, Judaic studies, Latin American studies, and others. In some cases certain linguistics courses count toward a major or minor in one of these departments or programs. Students should consult with a faculty adviser in linguistics and the other department or program when deciding on their course of study.

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress toward the major. Students considerating this option should discuss their plans with the department undergraduate adviser before going abroad. Detailed information on EAP/OAP is found in this catalog under the heading "Education Abroad Program."

The Department of Linguistics oversees the Linguistics Langauge Program, which offers basic language instruction in Arabic, ASL, French, German, Italian, Portuguese, and Spanish. Courses from the Language Program satisfy general-education requirements, as well as the Department of Linguistics language requirement. Graduate students who require a reading knowledge of French or German may enroll in LIFR 11 or LIGM 11, respectively.

The department also offers language instruction for individuals who grew up in an English-speaking environment while speaking a different language at home (Arabic, Armenian, Cantonese, Hindi, Korean, Persian, Tagalog, and Vietnamese; other languages may be added to this list if student demand is sufficient). Instruction in these languages is designed to raise students' linguistic and cultural competence to professional levels. Finally, directed self-instruction is available for a wide variety of languages through LIDS 19.

Note: Please check with the department office for updates concerning programs and course offerings.

The Major Program

General Requirements

Every linguistics major (except the language studies major) must satisfy the undergraduate language requirement and must successfully complete a minimum of twelve upper-division courses, including six required courses and at least five upper-division linguistics electives. In addition to the general major, the department offers a set of enriched major programs in various specializations.

Except for LIGN 199, no course taken on a Pass/Not Pass basis may be counted toward a linguistics major. No more than one quarter of LIGN 199 may be counted toward a linguistics major. At least six of the required upper-division linguistics courses counted toward the major must be taken in residence at UCSD. A letter grade of C– or better is required for every course counted toward a linguistics major, including courses taken to satisfy the department's undergraduate language requirement.

Required Linguistics Courses

Linguistics 101 is required as an introduction to the field and serves as the prerequisite to certain other courses. Students who choose a linguistics major should enroll in it as early as possible.

Every major program in linguistics (except the language studies major) must include the following required courses covering basic areas of the field:

LIGN 101: Introduction to the Study of Language
LIGN 110: Phonetics
LIGN 111: Phonology I
LIGN 120: Morphology
LIGN 121: Syntax I
LIGN 130: Semantics

Students are advised to take these required courses as early as possible, since the background they provide may be needed for other upper-division linguistics courses. Check individual course listings for prerequisite information.

Linguistics Electives

LIGN 104: Language and Conceptualization
LIGN 105: Law and Language
LIGN 108: Languages of Africa
LIGN 140: The Structure of American Sign Language
LIGN 141: Language Structures
LIGN 142: Language Typology
LIGN 143: The Structure of Spanish
LIGN 144: Discourse Analysis: American Sign Language and Performing Arts
LIGN 145: Pidgins and Creoles
LIGN 146: Sociolinguistics in Deaf Communities
LIGN 150: Historical Linguistics
LIGN 165: Computational Linguistics
LIGN 169: Principles of Discourse and Dialog
LIGN 170: Psycholinguistics
LIGN 171: Child Language Acquisition
LIGN 172: Language and the Brain
LIGN 174: Gender and Language in Society
LIGN 175: Sociolinguistics
LIGN 176: Language of Politics and Advertising
LIGN 177: Multilingualism
LIGN 178: Second Language Teaching Methodology
LIGN 179: Second Language Acquisition Research

Restricted Courses

LIGN 195: Apprentice Teaching (does not count as a linguistics elective)
LIGN 197: Linguistics Internship
LIGN 199: Independent Study in Linguistics
LIGN 199H: Honors Independent Study in Linguistics

Note to Revelle and Warren students.

Revelle: For Revelle College only, the classification of the linguistics major as humanities, natural science, or social science must be determined on the basis of each student's specific program. The classification of the major program will in turn determine what areas will be acceptable for the noncontiguous minor.

Warren: For Warren College only, any courses taken in departments other than linguistics may not overlap with the student's outside area(s) of concentration.

Undergraduate Language Requirement

Linguistics majors must demonstrate proficiency in one foreign language.

Proficiency in a foreign language may be demonstrated in either of two ways:

1. By passing the reading proficiency examination and the oral interview administered by the Department of Linguistics in French, German, Italian, or Spanish; or
2. By successfully completing a course given at UCSD representing the fourth quarter (or beyond) of instruction in any single foreign language with a grade of C– or better.

Students are encouraged to satisfy this requirement as early as possible in order to be able to use the language for reference in linguistics courses. Students with native language competence in a language other than English may petition to have English count as satisfying the proficiency requirement.

General Major (12 courses)

The general major in linguistics requires satisfaction of the undergraduate language requirement and successful completion of twelve upper-division courses:

6 required linguistics courses:
LIGN 101
LIGN 110
LIGN 111
LIGN 120
LIGN 121
LIGN 130

5 linguistics electives

1 additional linguistics elective or upper-division course in another department pertaining to the study of language

Specialized Majors

Every student with a specialized major must consult the faculty adviser in the Department of Linguistics to have approved an individual curricular plan to satisfy the major requirements for the option chosen. Each specialized major requires satisfaction of the undergraduate language requirement and successful completion of upper-division requirements as specified below. The specialization will be reflected in the wording of a degree, e.g., "B.A. in Linguistics (with Specialization in Language and Society)."

Cognition and Language (12 courses)

6 required linguistics courses:
LIGN 101

LIGN 110
LIGN 111
LIGN 120
LIGN 121
LIGN 130

4 linguistics electives chosen from:

LIGN 104
LIGN 165
LIGN 170
LIGN 171
LIGN 172
LIGN 176
LIGN 179

2 additional courses from linguistics or other departments subject to adviser approval.

Courses currently approved to satisfy this requirement include the following (Note: some of these courses may have prerequisites):

Linguistics:

Any upper-division courses (except those used to fulfill requirements A and B).

Anthropology:

ANBI 140: The Evolution of the Human Brain
ANBI 159: Biological and Cultural Perspectives on Intelligence
ANBI 161: Human Evolution
ANBI 173: Cognition in Animals and Humans

Cognitive Science:

COGS 101C: Language
COGS 102A: Distributed Cognition
COGS 102B: Everyday Cognition
COGS 107C: Cognitive Neuroscience
COGS 108D: Programming Methods for Cognitive Science
COGS 108E: Neural Network Models of Cognition I
COGS 108F: Advanced Programming Methods for Cognitive Science
COGS 151: Analogy and Conceptual Systems
COGS 153: Language Comprehension
COGS 154: Communication Disorders in Children and Adults
COGS 156: Language Development
COGS 170: Natural and Artificial Symbolic Representational Systems
COGS 181: Neural Network Models of Cognition II
COGS 184: Modeling the Evolution of Cognition
COGS 191: Laboratory Research

Computer Science and Engineering:

CSE 133: Information Retrieval

Philosophy:

PHIL 110: Wittgenstein
PHIL 120: Symbolic Logic I
PHIL 121: Symbolic Logic II
PHIL 134: Philosophy of Language
PHIL 135: Meaning and Communication
PHIL 136: Philosophy of Mind
PHIL 150: Philosophy of the Cognitive Sciences

Psychology:

PSYC 105: Introduction to Cognitive Psychology
PSYC 118A: Real-Time Examination of Language Processing
PSYC 118B: Real-Time Examination of Language Processing
PSYC 119: Psycholinguistics/Cognition Laboratory
PSYC 145: Psychology of Language

LANGUAGE AND SOCIETY (12 COURSES)

6 required linguistics courses

2 appropriate upper-division courses in other departments (especially the Departments of Anthropology, Communication, Cognitive Science, or Sociology), selected in consultation with the faculty adviser for language and society

1 course in sociolinguistics (by approval of the faculty adviser, may be taken in another department)

3 linguistics electives. Courses particularly relevant to this specialization are:

LIGN 105: Law and Language
LIGN 175: Sociolinguistics
LIGN 176: Language of Politics and Advertising
LIGN 177: Multilingualism

Language Studies Major

Students majoring in language studies must consult with the language studies faculty adviser to approve an individual curricular plan.

The language studies major is designed for students who wish to pursue the study of a particular language from a variety of perspectives. To this end, students will take courses in linguistics and literature, as well as electives in linguistics, literature, culture, and area studies. This major provides preparation for a variety of careers that make use of second language skills. Depending on the elective emphasis, these include international business/law, teaching, translation, interpreting, linguistics, and foreign service. Each language studies major will specialize in one **language of concentration.** In principle, this could be any language other than English. However, some languages may require that some coursework be completed outside UCSD. **Hence, it is recommended that language studies majors consider a year abroad.** Students whose language of concentration is **American Sign Language** will need to consult the faculty adviser for individualized requirements; these students may also consider an exchange year at Gallaudet University.

Requirements:

Lower-division preparation:

- Two years of language instruction in the language of concentration, or equivalent proficiency
- Lower-division prerequisites for upper-division courses in the literature of the language of concentration

Upper-division requirements:

Note: At least two of the upper-division courses must be conducted in the language of concentration. Students are encouraged to increase their academic exposure to their language of concentration by taking one-unit seminars in the language and by participating in the EAP program.

A. 6 upper-division linguistics courses, as follows:
LIGN 101: Introduction to Linguistics

3 courses chosen from:
LIGN 104: Language and Conceptualization
LIGN 110: Phonetics
LIGN 111: Phonology I
LIGN 120: Morphology
LIGN 121: Syntax I
LIGN 130: Semantics
LIGN 150: Historical Linguistics

"Structure of" language of concentration (e.g., LIGN 143 Structure of Spanish). If no such course is available, then any upper-

division LIGN course or any course from another department (e.g., literature) that deals with the structure or history of the language of concentration may be substituted (subject to faculty approval).

One additional upper-division LIGN course.

B. 2 upper-division courses in the literature of the language of concentration

C. 4 additional upper-division courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture/area studies (e.g., anthropology, economics, history, political science, sociology), subject to approval of the faculty advisor.

Approved courses for this requirement include the following (Note: some of these courses may have prerequisites):

Linguistics: Any upper-division courses (except those used to fulfill requirement A).

Literature: Any upper-division courses related to the language of concentration (except those used to fulfill requirement B)..

Area Studies: Approved courses are listed by language of concentration; other languages of concentration are possible in principle, but probably require coursework outside of UCSD.

Honors Program

The department offers an honors program for outstanding students. Those students who have a 3.75 GPA in linguistics (3.25 overall) at the end of their junior year are eligible to participate. Students interested in participating in the honors program should consult with their department adviser: admission to the program requires nomination by the adviser and approval of the department faculty.

The honors program requires that two graduate linguistics courses be taken as part of the twelve required courses for the major, and further requires one quarter of LIGN 199H. During one of the two graduate courses, the student, in consultation with the instructor and a faculty adviser, will begin a substantial research project which will be continued during the quarter of 199H and will culminate in an honors paper. Responsibility for proposing possible projects and completing necessary paperwork rests with the student. Upon successful completion of the requirements the designation "with distinction," "with high distinction," or "with highest distinction" will appear on the student's diploma.

Independent Study and Directed Group Study in Linguistics for Majors

Upon presentation of a written study proposal or project, and with the consent of the instructor and the adviser, linguistics majors with at least a 3.5 GPA in the major courses may request permission to undertake independent study in linguistics (LIGN 199). No more than one such course (to be taken Pass/Not Pass) may count toward the major.

The Minor Program

The *Linguistics* minor consists of LIGN 101, plus six additional courses in linguistics, at least four of which must be upper-division.

For all courses counted toward the linguistics minor, the student must receive letter grades of C– or better. Courses counted toward the minor may not be taken on a Pass/Not Pass basis, except LIGN 199. Only one quarter of LIGN 199 may be counted toward the minor.

The *Language Studies* minor consists of seven courses, at least five of which must be upper-division:

Literature: One upper-division literature course is required in the language of concentration. This will require proficiency as well as lower-division prerequisites. Therefore, the lower-division courses of the minor may consist of prerequisites for the upper-division literature requirement. American Sign Language students may substitute a non-literature upper-division elective with approval of the faculty adviser.

Linguistics: LIGN 101 is required. In addition students must take either a 'Structure of' course (if available), or one course chosen from LIGN 104, 110, 111, 120, 121, 130, and 150.

Other: Two additional courses that deal with general linguistics, the language of concentration (e.g., literature), or the corresponding culture, subject to approval of the faculty adviser are required.

The Ph.D. Program

The UCSD Ph.D. program in linguistics offers rigorous training in multiple areas of theoretical linguistics, including syntax, semantics, phonetics, phonology, and morphology. The department is particularly strong in the study of interface areas, including syntax/semantics, phonetics/

phonology, and phonology/syntax. Research conducted in a variety of theoretical frameworks is integrated into the graduate curriculum. Students receive a firm foundation in both formal and cognitive/functionalist approaches to syntax and semantics. In phonology, basic training includes segmental and autosegmental phonology, constraint-based phonology, syllable theory, metrical theory, and theories of the phonology-morphology interface. The first two years of graduate study are devoted primarily to gaining a strong background in these core theoretical areas.

This theoretical strength of the department is matched by strength in both language study and experimental science. The range of languages represented in faculty research encompasses American Sign Language (ASL), Bantu, Caucasian, Chinese, Finno-Ugric, Germanic, Persian, Romance, Semitic, Slavic, and Uto-Aztecan. The departmental concern with the empirical facts of language is reflected in a field methods requirement for graduate students as well as in the graduate student language requirement (conversational ability in one language other than English and reading ability in one language other than English). The department has a tradition of working with native speakers of a wide variety of languages. The department's language laboratory maintains a library of written and recorded materials permitting independent study of dozens of languages; it also includes a microcomputer facility for self-instruction in French, German, Italian, and Spanish. The Linguistics Language Program (LLP) provides basic foreign language instruction for the entire campus, and many linguistics graduate students are employed as TAs in the program. Aside from providing a source of funding, the LLP provides graduate students with valuable teaching experience.

The department houses laboratories devoted to experimental studies of language with emphasis on phonetics, event-related brain potentials (ERPs), computational linguistics, and signed languages. The focus of experimental research in the department is the mutual dependence between mechanisms of language processing and theories of phonology and syntax. Linguistics graduate students may supplement their theoretical studies with experimental research; in addition to departmental laboratories, graduate students have access to experimental laboratories concerned with language issues in other departments.

The department has a strong commitment to, and is an active and integral part of, the cognitive science and neuroscience communities at UCSD. Most linguistics faculty have joint appointments in the Department of Linguistics and the Cognitive Science Interdisciplinary Ph.D. Program, and participate in the Department of Cognitive Science graduate core course in language (Cognitive Science 201D) as well as in the all-campus Interdisciplinary Program seminar (Cognitive Science 200) on a regular basis. Graduate students in the Cognitive Science Department frequently participate in Linguistics graduate courses, and Linguistics graduate students regularly attend courses in the Cognitive Science Department on neuroscience, child language acquisition, aphasia, neural networks, and semantics and cognition. Linguistics graduate students are eligible to pursue a joint degree in Cognitive Science and Linguistics within the Interdisciplinary Program. Areas of secondary specialization that are especially well represented in the cognitive science community at UCSD and related institutes include child development, connectionist modelling, distributed cognition, language disorders, neuroscience, philosophy, and psycholinguistics.

The department has access to rich informational resources; in addition to the extensive linguistics holdings in the main library, the department maintains a collection of research reports, dissertations, and unpublished papers. Access to the libraries of other universities exists through interlibrary loan.

Preparation

Since linguistics is a highly technical and analytic field, linguistics students will find their undergraduate training in mathematics and the natural sciences especially valuable. Undergraduate work in certain of the social sciences and humanities, particularly psychology, anthropology, philosophy and literature, is also good preparation for linguistics. The ideal candidate for admission will have both experience with foreign languages and some knowledge of the fundamentals of contemporary linguistic theory. Students who, upon admission, are deficient either in their formal linguistics preparation or languages will be advised by the department on how to make up the deficiency. All graduate students must demonstrate a basic proficiency in phonetics in the first year of graduate study either by passing a basic proficiency test in phonetics upon registration or by taking LIGN 110. New graduate students will be admitted only in the fall of any academic year.

Language Requirements

A candidate for the Ph.D. degree must demonstrate: (1) Conversational ability in *one* language other than English. (2) A reading knowledge of any one language other than his or her native language, subject to faculty approval.

Required Courses

Candidates for the Ph.D. must pass certain graduate courses prior to taking the qualifying examination. All graduate students must take a common core of ten courses. These are:

- Three courses in Syntax and Semantics: 221A, 221B, 230
- Three courses in Phonology and Phonetics: 210, 211A, 211B
- Three courses in Research Methods: 240, 241, 245
- One course in Research Paper Writing: 293

All required courses (except 293) must be taken for a letter grade.

Evaluations

A graduate student is formally evaluated by the entire faculty at particular stages during the first three years of graduate study. The first evaluation (at the end of the third quarter of graduate study) pertains chiefly to performance in courses. The second (or comprehensive) evaluation (at the end of the sixth quarter) determines the student's fitness to continue in the Ph.D. program. It takes into account performance in course work and ability to engage in original research in one area of linguistics as demonstrated in a research paper. The third evaluation (at the end of the ninth quarter) focuses primarily on a second research paper (which must be in a different area of linguistics from the first).

Qualifying Examination

Candidates for the Ph.D. degree must pass an oral qualifying examination which tests the student's knowledge in the area of specialization. Prior to taking this examination, the student must pass the comprehensive evaluation, satisfy all language requirements, successfully complete all required courses, and demonstrate—through

research papers—the ability to carry out independent, dissertation-level research. Students must take the qualifying examination by the end of the fourth year of graduate work.

Colloquium Presentation

Sometime prior to the thesis defense, a student must present a paper orally at a professional gathering. The colloquium requirement is intended to enable a student to develop the skills necessary for organizing research results for oral presentation. The requirement is generally met by presenting a department colloquium or by presenting a paper at a professional meeting. In either case, a faculty member must certify the acceptability of the presentation.

Dissertation

The candidate for the Ph.D. will write a substantial dissertation incorporating the results of original and independent research carried out under the supervision of the doctoral committee. The candidate will be recommended for the doctor of philosophy degree after having made a successful oral defense of the dissertation before the doctoral committee in a public meeting and after having the final version of the dissertation accepted by Geisel Library.

Apprentice Teaching

As part of their preparation for a future academic career, graduate students in linguistics at UCSD are given special opportunities to participate in teaching programs under the supervision of a professor. Depending on qualifications, students may conduct conversation or analysis classes in lower-division language courses, or may assist a professor in the teaching of a graduate or undergraduate linguistics course.

Other Degrees

Candidates for the Ph.D., who have not previously earned a master's degree, may be granted the M.A. in linguistics after: 1) satisfactorily completing twelve required courses; all but LIGN 293 must be taken for a letter grade; 2) passing the comprehensive evaluation at the end of the sixth quarter; and 3) demonstrating a reading knowledge of any language except English, subject to faculty approval.

Candidates for the Ph.D. may also be granted the C. Phil. upon completion of all degree requirements other than the dissertation.

Departmental Ph.D. Time Limit Policies

The time a student takes to complete the Ph.D. depends on a number of factors, including previous preparation and the amount of time spent in teaching or other job commitments. Several policies set an upper limit to the length of the program. All degree requirements other than the dissertation must be completed by the end of the fourth year of graduate work. Total instructional support (TAships, etc.) cannot exceed six years; total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

COURSES

NOTE: Not all courses are offered every year. It is essential that students consult the linguistics adviser when planning their degree programs.

LINGUISTICS

LOWER DIVISION

3. Language as a Social and Cultural Phenomenon (4)
Introduction to the study of language: language variation, change, and loss; multilingualism, pidginization, and creolization; language planning, standardization, and prescriptivism; writing systems; the role of language in thought, myth, ritual, advertising, politics, and the law.

4. Language as a Cognitive System (4)
Introduction to the study of language: differences between animal communication, sign systems, and human language; origins and evolution of language; neural basis of language; language acquisition in children and adults; fundamental issues in language and cognition.

5. The Linguistics of Invented Languages (4)
Introduction to the study of language through the investigation of invented languages, whether conscious (Elvish, Klingon, Esperanto) or unconscious (creoles, twin/sibling languages). Students will participate in the invention of a language fragment. Topics discussed include language structure, history, culture, and writing systems.

7. Sign Language and Its Culture (4)
Deaf history since the eighteenth century. The structure of American Sign Language and comparison with oral languages. ASL poetry and narrative and Deaf people's system of cultural knowledge. Basic questions concerning the nature of language and its relation to culture.

8. Languages and Cultures in America (4)
Language in American culture and society. Standard and non-standard English in school, media, pop-culture, politics; bilingualism and education; cultural perception of language issues over time; languages and cultures in the 'melting pot', including Native American, Hispanic, African-American, Deaf.

17. Making and Breaking Codes (4)
A rigorous analysis of symbolic systems and their interpretations. Students will learn to encode and decode information using progressively more sophisticated methods; topics covered include ancient and modern phonetic writing systems, hieroglyphics, computer languages, and ciphers (secret codes).

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshman and sophomores, to exciting research programs and conducted by the faculty.

UPPER DIVISION

101. Introduction to the Study of Language (4)
Language is what makes us human, but how does it work? This course focuses on speech sounds and sound patterns, how words are formed, organized into sentences, and understood, how language changes, and how it is learned.

104. Language and Conceptualization (4)
How does language reflect the ways humans conceptualize the world? Issues discussed include the relation between language and thought, how languages differ in conceiving and portraying situations, and how cultural differences are reflected in language structure.

105. Law and Language (4)
The interpretation of language in understanding the law: 1) the language of courtroom interaction (hearsay, jury instructions); 2) written legal language (contracts, ambiguity, legal fictions); 3) language-based issues in the law (First Amendment, libel and slander).

108. Languages of Africa (4)
Africa is home to an astonishing variety of languages. This course investigates the characteristics of the major language families as well as population movements and language contact, and how governments attempt to regulate language use.

110. Phonetics (4)
The study of the sounds which make up human language. How sounds are physically produced; acoustics of speech perception; practical training in translating speech signals into written form and in interpreting computerized speech signals. *Prerequisite: LIGN 101 or consent of instructor.*

111. Phonology I (4)
Why does one language sound different from another? This course analyzes how languages organize sounds into different patterns, how those sounds interact, and how they fit into larger units, such as syllables. Focus on a wide variety of languages and problem-solving. *Prerequisite: LIGN 110.*

119. First and Second Language Learning: From Childhood through Adolescence (4)
(Same as TEP 119) An examination of how human language learning ability develops and changes over the

first two decades of life, including discussion of factors that may affect this ability. *Prerequisite: upper-division standing or consent of instructor.*

120. Morphology (4)
How do some languages express with one word complex meanings that English needs several words to express? Discovery of underlying principles of word formation through problem-solving and analysis of data from a wide variety of languages. *Prerequisite: LIGN 101 or consent of instructor.*

121. Syntax I (4)
What universal principles determine how words combine into phrases and sentences? Introduction to research methods and results. Emphasis on how argumentation in problem-solving can be used in the development of theories of language. *Prerequisite: LIGN 101 or consent of instructor.*

130. Semantics (4)
Introduction to the formal study of meaning. The meanings of words and phrases have an intricate internal structure that is both logical and intuitive. How, precisely, do words mean what they do in isolation and in context? *Prerequisite: LIGN 101 or consent of instructor.*

140. The Structure of American Sign Language (4)
Examination of ASL phonetics, phonology, morphology, syntax, semantics. Including linguistic facial expressions and uses of physical space in verb agreement, aspectual morphology, and classifier constructions. Discussion of discourse, acquisition, psycholinguistics, and historical change. *Prerequisite: LIGN 101; in its absence LISL 1CX or consent of instructor.*

141. Language Structures (4)
Detailed investigation of the structure of one or more languages. May be repeated for credit as topics vary. *Prerequisite: LIGN 101 or consent of instructor.*

143. The Structure of Spanish (4)
Surveys aspects of Spanish phonetics, phonology, morphology, and syntax. Topics include dialect differences between Latin American and Peninsular Spanish (both from a historical and contemporary viewpoint), gender classes, verbal morphology, and clause structure. *Prerequisite: LIGN 101 or consent of instructor.*

144. Discourse Analysis: American Sign Language and Performing Arts (4)
A discourse-centered examination of ASL verbal arts: rhyme, meter, rhythm, handedness, non-manual signals, and spatial mapping; creation of scene and mood; properties of character, dialogue, narration, and voice; cultural tropes; poetic constructions in everyday genres; transcription, body memory and performance. *Prerequisites: LISL 1C/1CX or consent of instructor.*

146. Sociolinguistics in Deaf Communities (4)
An examination of sociolinguistic research on Deaf communities throughout the world, including: sociohistorical contexts for phonological, lexical and syntactic variation, contact between languages, multilingualism, language policies and planning, second language learning, language attitudes, and discourse analysis of specific social contexts. Course will be conducted in ASL. *Prerequisite: LISL 1C/1CX or consent of instructor.*

150. Historical Linguistics (4)
Language is constantly changing. This course investigates the nature of language change, how to determine a language's history, its relationship to other languages, and the search for common ancestors or 'proto-language'. *Prerequisite: LIGN 101 or consent of instructor.*

165. Computational Linguistics (4)
An introduction to the fundamental concepts of computational linguistics, in which we study natural language syntax and semantics from an interpretation perspective, describe methods for programming computer systems to perform such interpretation, and survey applications of computational linguistics technology. Not offered in 2004–2005.

169. Principles of Discourse and Dialog (4)
The principles and mechanisms that underlie the production and interpretation of monologic discourse and conversational dialog. Reference, attention, and dynamic models of discourse state. Discourse coherence and structure. Turn-taking and speech acts in conversation. Computational models. Not offered in 2004–2005.

170. Psycholinguistics (4)
The study of models of language and of language acquisition from the point of view of modern linguistics and psychology. Basic experimental method as applied to language. *Prerequisite: LIGN 101 or consent of instructor.*

171. Child Language Acquisition (4)
A central cognitive, developmental mystery is how children learn their first language. Overview of research in the learning of sound systems, word forms and word meanings, and word combinations. Exploration of the relation between cognitive and language development. *Prerequisite: LIGN 101 or consent of instructor.*

172. Language and the Brain (4)
The mind/body problem, basic neuroanatomy and neurophysiology, cerebral lateralization, origins and evolution of language, aphasia, magnetic resonance imaging (MRI), and event-related potentials (ERPs). *Prerequisite: LIGN 101 or consent of instructor.*

174. Gender and Language in Society (4)
(Same as SOC/B 118A) This course examines how language contributes to the social construction of gender identities, and how gender impacts language use and ideologies. Topics include the ways language and gender interact across the life span (especially childhood and adolescence); within ethnolinguistic minority communities; and across cultures. *Prerequisite: upper-division standing.*

175. Sociolinguistics (4)
The study of language in its social context, with emphasis on the different types of linguistic variation and the principles underlying them. Dialects; registers; sex-based linguistic differences; factors influencing linguistic choice; formal models of variation; variation and change. *Prerequisite: LIGN 101 or consent of instructor.*

176. Language of Politics and Advertising (4)
How can we explain the difference between what is literally said versus what is actually conveyed in the language of law, politics, and advertising? How people's ordinary command of language and their reasoning skills are used to manipulate them.

177. Multilingualism (4)
Official and minority languages, pidgins and Creoles, language planning, bilingual education and literacy, code switching, and langage attrition. *Prerequisite: LIGN 101 or consent of instructor.*

178. Second Language Teaching Methodology (4)
The history of second language teaching methodology, language acquisition theories, current methods, and teaching techniques. *Prerequisite: LIGN 101 or consent of instructor.* Not offered in 2004–2005.

179. Second Language Acquisition Research (4)
Topics in second language acquisition including the critical period, the processing and neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition. *Prerequisite: LIGN 101 or consent of instructor.*

195. Apprentice Teaching (0-4)
Students lead a class section of a lower-division linguistics course. They also attend a weekly meeting on teaching methods. (This course does not count toward minor or major.) May be repeated for credit, up to a maximum of four units. (P/NP grades only.) *Prerequisites: consent of instructor, advanced standing.*

197. Linguistics Internship (2 or 4)
The student will undertake a program of practical research in a supervised work environment. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies. *Prerequisite: consent of instructor.*

199. Independent Study in Linguistics (2 or 4)
The student undertakes a program of research or advanced reading in linguistics under the supervision of a faculty member of the Department of Linguistics. (P/NP grades only.) *Prerequisite: consent of instructor.* May be repeated for credit.

199H. Honors Independent Study in Linguistics (4)
The student undertakes a program of research and advanced reading in linguistics under the supervision of a faculty member in the Department of Linguistics. (P/NP grades only.) *Prerequisite: admission to Honors Program.*

GRADUATE

200. Research Forum (2)
A forum for discussion of current issues. (S/U grades only.) May be repeated for credit.

210. Laboratory Phonetics (4)
Readings and laboratory work in acoustic and articulatory phonetics and speech perception. Experimental design and methodology. Phonetic explanation in phonology. Students will gain hands-on experience with laboratory equipment. *Prerequisite: LIGN 110 or equivalent.*

211A. Introductory Phonology (4)
Introduction to the study of the sound patterns of language. Rules and representations, lexical phonology, segmental processes, autosegmental phonology. *Prerequisite: LIGN 110 or consent of instructor.*

211B. Nonlinear Phonology (4)
This course will introduce topics in prosodic phonology and morphology, (including syllable structure, stress, and reduplication). These topics will be investigated within constraint-based phonology. *Prerequisite: LIGN 211A or equivalent.*

215. Topics in Phonology (4)
Descriptive and theoretical problems in phonology. Discussion of work in progress and/or theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

221A. Introduction to Grammatical Theory (4)
This course introduces basic syntactic phenomena and argumentation via the Government and Binding Theory of the 1980s. The phenomena, including NP-Movement, Binding, and Wh-Movement, have been important in the development of Generative Grammar and remain central to current generative frameworks.

221B. Introduction to Grammatical Theory (4)
This course continues to develop Principles and Parameters Theory, as introduced in 221A. It concentrates on A-bar dependencies and the Binding Theory. Focus will be on testing theoretical proposals and understanding the role of theoretical alternatives, underlying assumptions, and the empirical results upon which these theoretical proposals are based.

221C. Introduction to Grammatical Theory (4)
A basic introduction to the theory of Cognitive Grammar, which claims that lexicon, morphology, and syntax form a continuum of symbolic structures. Among the topics examined are semantic structure, grammatical classes, constructions, rules, clause structure, and reference-point phenomena. Not offered in 2004–2005.

222. Theories of Grammar (4)
Introduction to a particular grammatical theory. May be repeated for credit when topics vary.

223. Current Issues in Principles and Parameters Theory (4)
This course examines recent developments in Principles and Parameters Theory. Topics include fundamental work that led to the Minimalist Program and more recent developments in this tradition. May be repeated for credit when topics vary.

224. Lexicalist Theories of Grammar (4)
Introduction to conceptual issues and representational apparatus of lexicalist theories of grammar. Focus on empirical argumentation from numerous languages for lexicalist assumptions. Particular attention to lexical semantics, morphology, and syntax.

225. Topics in Syntax (4)
Descriptive and theoretical problems in syntactic analysis. Theoretical consequences of alternative analyses. May be repeated for credit when topics vary.

230. Formal Semantics (4)
Theories of semantic structure. The relation of meaning to grammar, and how it is to be accommodated in an overall model of linguistic organization. The application of formal semantics to the description of natural language.

235. Topics in Semantics (4)
Advanced material in special areas of the study of meaning and its relation to formal aspects of human language. As subject matter varies, the course may be repeated for credit.

236. Language Universals and Linguistic Typology (4)
Introduction to the typological study of language, contrasting alternative approaches to research in language universals. Main topics covered: cross-linguistic approach to language study (sampling: universal generalizations, hierarchies); explanations for language universals; the role of cross-linguistic analyses in linguistic theory.

237. Functional Linguistics (4)
A sequel to LIGN 221A-C presenting fundamental assumptions of functional linguistics and comparing functionalism with other major theories of syntax. Goals: to expand students' knowledge of theoretical approaches to fundamental grammatical phenomena; to practice constructing arguments based on empirical evidence.

238. Topics in Cognitive Linguistics (0–4)
(Same as Cognitive Science 238) Basic concepts, empirical findings, and recent developments in cognitive and functional linguistics. Language viewed dynamically in relation to conceptualization, discourse, meaning construction, and cognitive processing. As topics vary, may be repeated for credit. Not offered in 2004–2005.

239. Information Structure and Discourse (4)
This course will examine major information-structural categories (topic, focus, etc.) and the relationships between these categories, semantic roles, and grammatical functions. The course will also examine the status of information structure within the architecture of a linguistic theory. *Prerequisite: LIGN 221A, 221B, 221C, 221D, or consent of instructor.*

240. Field Methods (4)
Techniques of discovering the structure of a language through elicitation of data from native speaker consultants. Phonemic, morphemic, and syntactic analysis. *Prerequisite: LIGN 110 or equivalent.*

241. Fieldwork (4)
Fieldwork continuing the research of the previous quarter; student-directed elicitations on topics of interest. *Prerequisite: LIGN 240.*

242. Discourse Interpretation (4)
A graduate course examining discourse interpretation from a computational perspective. Theoretically principled algorithms for resolving pronominal and other types of reference. The interpretation of ellipsis. Methods for recovering the structure of a discourse and determining its coherence.

244. Tense and Aspect (4)
Tense and aspect in natural languages, with an emphasis on the temporal information they predicate over eventualities in discourse. Theories of event structure and their intereaction with tense and aspect. Computational models. Not offered in 2004–2005.

245. Computational Corpus Linguistics (4)
Introduction to computational corpus tools for performing empirically-grounded linguistic investigations. Annotated and unannotated corpora; annotation schemes. Searching using regular expressions. UNIX tools. The PERL programming language. Publically-available language processing systems.

246. Natural Language Processing in LISP (4)
An introduction to the Common LISP programming language in the context of developing computational linguistics technology. Basic computational methods for morphological, syntactic, and semantic processing. Representing lexical and world knowledge. No previous programming experience is assumed.

248. Morphology (4)
Theories of word structure are examined and confronted with data from a variety of languages. Topics may include: the distinction between derivational and inflectional morphology, the morphology/phonology interface, and the morphology/syntax interface. May be repeated for credit as topics vary.

249. Topics in Sign Languages of the Deaf (4)
Topics in the structure of American Sign Language and/or other natural sign languages of Deaf communities. May be repeated for credit when topics vary.

250. Topics in Historical Linguistics (4)
Introduction to the concepts and methodology of historical linguistics. Topics covered include the nature of language change, genetic and areal relationships, the comparative method, and internal reconstruction.

255. Statistics for Linguists (4)
Overview of specific statistical procedures for linguistic analyses of experimental and non-experimental data. Topics covered include: variance, standard deviation, probability, z-scores, t-tests, ANOVA, chi-square, correlation, regression, trend analysis, magnitude estimation, nonparametric tests, post-hoc tests, transformations of data, and displaying data.

260. Formal Linguistics (4)
Much of modern linguistics relies on formal mathematical models for describing structure in natural language. This course surveys some of the main results and techniques with an emphasis on applications in phonology, syntax, semantics, and the information structure of discourse.

270. Psycholinguistics (4)
Issues of natural language processing in relation to one or more of the following levels of linguistic analysis: phonetics, phonology, the lexicon, morphology, syntax, semantics, information structure, or discourse. May be repeated for credit when topics vary.

272. Topics in Neurolinguistics (4)
Issues of language representation and neural instantiation that arise in studies of neural imaging, language disorders, multilingualism and second language acquisition, animal communication, and the origins and evolution of language. May be repeated for credit when topics vary.

278. Research in Second Language Acquisition (4)
This course will investigate topics in second language acquisition including the critical period, the processing and neural representation of language in bilinguals, theories of second language acquisition and creolization, exceptional language learners, and parallels with first language acquisition.

293. Research Practicum (0-4)
Gathering and interpreting data, formulating research questions and hypotheses, making the predictions of hypotheses explicit, finding relevant evidence, and organizing research results into suitable form for presentation in abstracts, talks, and research papers. (S/U grades only.) May be repeated for credit.

295. Professional Development in Methodology of Language Teaching (0-2)
Skills, techniques, issues, and principles relevant to the methods and pedagogy involved in the teaching and learning of a foreign language and the successful transition to a professional career. Readings, discussions, and demonstrations of techniques. (S/U grades only.) May be repeated for credit. *Prerequisite: permission of instructor.* Not offered in 2004–2005.

296. Directed Research (1-8)
Individual research. May be repeated for credit.

299. Doctoral Research (1-12)
Directed research on dissertation topic for students who have been admitted to candidacy for the Ph.D. degree. May be repeated for credit. *Prerequisite: admission to candidacy.*

501. Culture, Art, and Technology Apprentice Teaching (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching in the interdisciplinary sixth college core sequence, Culture, Art, and Technology under supervision of Core Program faculty, with assistance of the Core Program director, associate director for the Writing Program, and the associate director of the Thematic Program.

502. Apprentice Teaching of Linguistics (1-4)
The course, designed for graduate students serving as teaching assistants in the department's linguistics courses, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. The student must be serving as a teaching assistant in a LIGN course to receive credit.

503. Apprentice Teaching of American Sign Language (1-4)
The course, designed for graduate students serving as teaching assistants in American Sign Language, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

504. Apprentice Teaching of French (1-4)
The course, designed for graduate students serving as teaching assistants in French, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

505. Apprentice Teaching of German (1-4)
The course, designed for graduate students serving as teaching assistants in German, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

506. Apprentice Teaching of Italian (1-4)
The course, designed for graduate students serving as teaching assistants in Italian, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

507. Apprentice Teaching of Spanish (1-4)
The course, designed for graduate students serving as teaching assistants in Spanish, includes discussion of teaching theories, techniques and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

508. Apprentice Teaching of Language/Directed Study (1-4)
The course, designed for graduate students serving as teaching assistants in language directed study, includes discussion of teaching theories, techniques and materials, directing study of various uncommonly taught languages, sessions, and participation in examinations, under the supervision of the instructor in charge of the course. (S/U grades only.) May be repeated for credit.

509. Apprentice Teaching, Head Teaching Assistant (1–4)
This course, designed for a graduate student serving as Head Teaching Assistant in the Linguistics Language Program, includes discussion of teaching methods and materials, and classroom observation, directing study of various uncommonly taught languages, sessions, and participation in examinations, under the supervision of the instructor in charge of the course.

COURSES

LANGUAGE

OFFICE: Linguistics Language Program Office, 2125 McGill Hall, Muir College

Students are placed in foreign language courses based on prior preparation and, for French, German, Italian, and Spanish, on the results of a placement test administered prior to or during orientation. Students who miss the placement exam should contact the Linguistics Language Program Office (McGill 2125) for instructions.

In American Sign Language (ASL), Arabic, French, German, Hindi, Italian, and Spanish, conversation sections (Linguistics 1A-1B-1C-1D) consist of small tutorial meetings with a native speaker, plus reading and assigned laboratory work. Analysis sections (Linguistics 1AX-1BX-1CX-1DX) consist of presentation and practice of grammatical structures, discussion sections, assigned laboratory work, and outside reading. For the above languages, each course in the 1A-1B-1C-1D series must be taken concurrently with the corresponding course in the 1AX-1BX-1CX-1DX series.

The Linguistics Language Program also offers Beginning Portuguese 1A-1B-1C. These courses are designed to teach basic vocabulary and grammatical structures needed for oral and written communication in the language. Courses 1A-1B-1C meet three days a week and do not have corresponding 1AX-1BX-1CX courses.

Heritage Language courses are offered in Arabic, Cantonese, Hindi, Korean, Persian, Tagalog, Vietnamese, and Western Armenian. These courses are designed for students with a background in the language who want to improve their oral and written expression.

Linguistics 11 courses are self-instructional: intended for reading the language for scholarly purposes. They are particularly aimed at graduate students preparing to fulfill French or German reading requirements.

Linguistics 19 courses, offered in more than sixty languages, are designed for self-instructional study at an introductory level. Students may enroll for two or four units of credit. For some languages, depending on the availability of suitable materials, the course may be repeated for credit.

AMERICAN SIGN LANGUAGE

Linguistics/American Sign Language (LISL) 1A. American Sign Language Conversation (2.5)
Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1AX. *Prerequisite: no prior study of ASL.*

Linguistics/American Sign Language (LISL) 1AX. Analysis of American Sign Language (2.5)
Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1A. *Prerequisite: no prior study of ASL.*

Linguistics/American Sign Language (LISL) 1B. American Sign Language Conversation (2.5)
Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1BX. *Prerequisites: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.*

Linguistics/American Sign Language (LISL) 1BX. Analysis of American Sign Language (2.5)
Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural information. The course is taught entirely in ASL. Must be taken with LISL 1B. *Prerequisites: LISL 1A with a grade of C– or better, or equivalent and LISL 1AX with a grade of D or better, or equivalent.*

Linguistics/American Sign Language (LISL) 1C. American Sign Language Conversation (2.5)
Small tutorial meetings with a signer of American Sign Language (ASL). Conversational practice organized around common everyday communicative situations. Must be taken with LISL 1CX. *Prerequisites: LISL 1B with a grade of C– or better, or equivalent and LISL 1BX with a grade of D or better, or equivalent.*

Linguistics/American Sign Language (LISL) 1CX. Analysis of American Sign Language (2.5)
Study of American Sign Language (ASL) and analysis of its syntactic, morphological, and phonological features. Readings and discussions of cultural informa-

tion. The course is taught entirely in ASL. Must be taken with LISL 1C. *Prerequisites: LISL 1B with a grade of C– or better, or equivalent and LISL 1BX with a grade of D or better, or equivalent.*

Linguistics/American Sign Language (LISL) 1D. American Sign Language Conversation (2.5)
Small conversation sections taught entirely in American Sign Language. Emphasis on developing signing fluency and greater cultural awareness. Practice of the principal language functions needed for successful communication. Must be taken in conjunction with LISL 1DX. **Successful completion of LISL 1D and LISL 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LISL 1C with a grade of C– or better, or equivalent and LISL 1CX with a grade of D or better, or equivalent.*

Linguistics/American Sign Language (LISL) 1DX. Analysis of American Sign Language (2.5)
Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in American Sign Language. Must be taken in conjunction with LISL 1D. **Successful completion of LISL 1D and LISL 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LISL 1C with a grade of C– or better, or equivalent and LISL 1CX with a grade of D or better, or equivalent.*

Linguistics/American Sign Language (LISL) 1E. Intermediate American Sign Language Conversation (4)
Course aims to improve language skills through discussion of topics relevant to the Deaf community. Central topics will include education and American Sign Language (ASL) literature. Conducted entirely in American Sign Language. *Prerequisites: LISL 1D and LISL 1DX with a grade of C– or better, or equivalent.*

ARABIC

Linguistics/Arabic (LIAB) 1A. Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1AX. *Prerequisite: no prior study of Arabic.*

Linguistics/Arabic (LIAB) 1AX. Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1A. *Prerequisite: no prior study of Arabic.*

Linguistics/Arabic (LIAB) 1B. Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1BX. *Prerequisite: LIAB 1A with a grade of C– or better, or equivalent and LIAB 1AX with a grade of D or better, or equivalent.*

Linguistics/Arabic (LIAB) 1BX. Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1B. *Prerequisite: LIAB 1A with a grade of C– or better, or equivalent and LIAB 1AX with a grade of D or better, or equivalent.*

Linguistics/Arabic (LIAB) 1C. Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1CX. *Prerequisite: LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.*

Linguistics/Arabic (LIAB) 1CX. Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1C. *Prerequisite: LIAB 1B with a grade of C– or better, or equivalent and LIAB 1BX with a grade of D or better, or equivalent.*

Linguistics/Arabic (LIAB) 1D. Arabic Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIAB 1DX. *Prerequisite: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.*

Linguistics/Arabic (LIAB) 1DX. Analysis of Arabic (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Arabic. Must be taken in conjunction with LIAB 1D. *Prerequisite: LIAB 1C with a grade of C– or better, or equivalent and LIAB 1CX with a grade of D or better, or equivalent.*

CHINESE

See: **Chinese Studies**

See also: **Linguistics Directed Study**

FRENCH

Linguistics/French (LIFR) 1A. French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1AX. *Prerequisite: no prior study of French.*

Linguistics/French (LIFR) 1AX. Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1A. *Prerequisite: no prior study of French.*

Linguistics/French (LIFR) 1B. French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1BX. *Prerequisites: LIFR 1A with a grade of C– or better, or equivalent and LIFR 1AX with a grade of D or better, or equivalent.*

Linguistics/French (LIFR) 1BX. Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1B. *Prerequisites: LIFR 1A with a grade of C– or better, or equivalent and LIFR 1AX with a grade of D or better, or equivalent.*

Linguistics/French (LIFR) 1C. French Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIFR 1CX. *Prerequisites: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.*

Linguistics/French (LIFR) 1CX. Analysis of French (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in French. Must be taken in conjunction with LIFR 1C. *Prerequisites: LIFR 1B with a grade of C– or better, or equivalent and LIFR 1BX with a grade of D or better, or equivalent.*

Linguistics/French (LIFR) 1D. French Conversation (2.5)
Small conversation sections taught entirely in French. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LIFR 1DX. **Successful completion of LIFR 1D and LIFR 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a grade of D or better, or equivalent.*

Linguistics/French (LIFR) 1DX. Analysis of French (2.5)
Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in French. Must be taken in conjunction with LIFR 1D. **Successful completion of *LIFR 1D and LIFR 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.*** *Prerequisites: LIFR 1C with a grade of C– or better, or equivalent and LIFR 1CX with a grade of D or better, or equivalent.*

Linguistics/French (LIFR) 11. Elementary French Reading (2-4)
A self-instructional program designed to prepare graduate students to meet reading requirements in French. After a one-week introduction to French orthography/sound correspondence, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

GERMAN

Linguistics/German (LIGM) 1A. German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1AX. *Prerequisite: no prior study of German.*

Linguistics/German (LIGM) 1AX. Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1A. *Prerequisite: no prior study of German.*

Linguistics/German (LIGM) 1B. German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension,

speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1BX. *Prerequisites: LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.*

Linguistics/German (LIGM) 1BX. Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1B. *Prerequisites: LIGM 1A with a grade of C– or better, or equivalent and LIGM 1AX with a grade of D or better, or equivalent.*

Linguistics/German (LIGM) 1C. German Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIGM 1CX. *Prerequisites: LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.*

Linguistics/German (LIGM) 1CX. Analysis of German (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in German. Must be taken with LIGM 1C. *Prerequisites: LIGM 1B with a grade of C– or better, or equivalent and LIGM 1BX with a grade of D or better, or equivalent.*

Linguistics/German (LIGM) 1D. German Conversation (2.5)
Small conversation sections taught entirely in German. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LIGM 1DX. **Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.*

Linguistics/German (LIGM) 1DX. Analysis of German (2.5)
Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in German. Must be taken in conjunction with LIGM 1D. **Successful completion of LIGM 1D and LIGM 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LIGM 1C with a grade of C– or better, or equivalent and LIGM 1CX with a grade of D or better, or equivalent.*

Linguistics/German (LIGM) 11. Elementary German Reading (2-4)
A self-instructional program designed to prepare graduate students to meet reading requirements in German. After a one-week introduction to German orthography/sound correspondences, students work with a self-instructional textbook. Mid-term and final examinations. (F,W,S)

HERITAGE LANGUAGES

Linguistics/Heritage Languages: Tagalog (LIHL) 112. (4)
Designed for students with a background in Tagalog seeking to improve their oral and written expression. Emphasis is on language functions needed for successful oral communication, basic grammatical structures, reading, writing, and culture. The readings will include current newspapers and fiction. Students need to learn different aspects of grammar, variation in the vocabulary, speech etiquette, and use of different language styles. *Prerequisite: Some speaking ability in Tagalog or consent of instructor.*

Linguistics/Heritage Languages: Western Armenian (LIHL) 113. (4)
Designed for students with a background in Western Armenian seeking to improve their oral and written expression. Emphasis is on language functions needed for successful oral communication basic grammatical structures, reading, writing, and culture. *Prerequisite: Some speaking ability in Armenian or consent of instructor.*

Linguistics/Vietnamese for Vietnamese Speakers (LIHL) 114. (4)
Designed for students who grew up speaking Vietnamese and English seeking to improve their skills in Vietnamese. Emphasis on language functions needed for successful oral communication, grammatical structures, reading, writing, politics, culture. Instruction in aspects of grammar, variation in the vocabulary, speech etiquette, use of different language styles. *Prerequisite: some speaking in Vietnamese or consent of instructor.*

Linguistics/Korean for Korean Speakers (LIHL) 115. (4)
Designed for students who grew up speaking Korean and English seeking to improve their skills in Korean. Emphasis on language functions needed for successful oral communication, grammatical structures, reading, writing, politics, culture. Instruction in aspects of grammar, variation in the vocabulary, speech etiquette, use of different language styles. *Prerequisite: some speaking in Korean or consent of instructor.*

Linguistics/Arabic for Arabic Speakers (LIHL) 116. (4)
Designed for students who grew up speaking Arabic and English seeking to improve their skills in Arabic. Emphasis on language functions needed for successful oral communication, grammatical structures, reading, writing, politics, culture. Instruction in aspects of grammar, variation in the vocabulary, speech etiquette, use of different language styles. *Prerequisite: some speaking in Arabic or consent of instructor.*

Linguistics/Persian for Persian Speakers (LIHL) 117. (4)
Designed for students who grew up speaking Persian and English seeking to improve their skills in Persian. Emphasis on language functions needed for successful oral communication, grammatical structures, reading, writing, politics, culture. Instruction in aspects of grammar, variation in the vocabulary, speech etiquette, use of different language styles. *Prerequisite: some speaking in Persian or consent of instructor.*

Linguistics/Cantonese for Cantonese Speakers (LIHL) 118. (4)
Designed for students who have had prior exposure to Cantonese seeking to improve their skills. Emphasis on language functions needed for successful communication. Instruction in aspects of grammar, variation in vocabulary, speech etiquette, different language styles. *Prerequisite: some speaking ability in Cantonese or consent of instructor.*

Linguistics/Hindi for Hindi Speakers (LIHL) 119. (4)
Designed for students who have had prior exposure to Hindi seeking to improve their skills. Emphasis on language functions needed for successful communication. Instruction in aspects of grammar, variation in vocabulary, speech etiquette, different language styles. *Prerequisite: some speaking ability in Hindi or consent of instructor.*

HINDI

Linguistics/Hindi (LIHI) 1A. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1AX. *Prerequisite: no prior study of Hindi.*

Linguistics/Hindi (LIHI) 1AX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1A. *Prerequisite: no prior study of Hindi.*

Linguistics/Hindi (LIHI) 1B. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1BX. *Prerequisite: LIHI 1A with a grade of C– or better, or equivalent and LIHI 1AX with a grade of D or better, or equivalent.*

Linguistics/Hindi (LIHI) 1BX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1B. *Prerequisite: LIHI 1A with a grade of C– or better, or equivalent and LIHI 1AX with a grade of D or better, or equivalent.*

Linguistics/Hindi (LIHI) 1C. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1CX. *Prerequisite: LIHI 1B with a grade of C– or better, or equivalent and LIHI 1BX with a grade of D or better, or equivalent.*

Linguistics/Hindi (LIHI) 1CX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1C. *Prerequisite: LIHI 1B with a grade of C– or better, or equivalent and LIHI 1BX with a grade of D or better, or equivalent.*

Linguistics/Hindi (LIHI) 1D. Hindi Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIHI 1DX. *Prerequisite: LIHI 1C with a grade of C– or better, or equivalent and LIHI 1CX with a grade of D or better, or equivalent.*

Linguistics/Hindi (LIHI) 1DX. Analysis of Hindi (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. This course is taught entirely in Hindi. Must be taken in conjunction with LIHI 1D. *Prerequisite: LIHI 1C with a grade of C– or better, or equivalent and LIHI 1CX with a grade of D or better, or equivalent.*

ITALIAN

Linguistics/Italian (LIIT) 1A. Italian Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1AX. *Prerequisite: no prior study of Italian.*

Linguistics/Italian (LIIT) 1AX. Analysis of Italian (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1A. *Prerequisite: no prior study of Italian.*

Linguistics/Italian (LIIT) 1B. Italian Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1BX. *Prerequisites: LIIT 1A with a grade of C– or better, or equivalent and LIIT 1AX with a grade of D or better, or equivalent.*

Linguistics/Italian (LIIT) 1BX. Analysis of Italian (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1B. *Prerequisites: LIIT 1A with a grade of C– or better, or equivalent and LIIT 1AX with a grade of D or better, or equivalent.*

Linguistics/Italian (LIIT) 1C. Italian Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LIIT 1CX. *Prerequisites: LIIT 1B with a grade of C– or better, or equivalent and LIIT 1BX with a grade of D or better, or equivalent.*

Linguistics/Italian (LIIT) 1CX. Analysis of Italian (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Italian. Must be taken with LIIT 1C. *Prerequisites: LIIT 1B with a grade of C– or better, or equivalent and LIIT 1BX with a grade of D or better, or equivalent.*

PORTUGUESE

Linguistics/Portuguese (LIPO) 1A. Beginning Portuguese (4)
Presentation and practice of the basic vocabulary and grammatical structures needed for oral and written communication and reading. Emphasis on listening comprehension, speaking, vocabulary-building, grammar, reading, and culture. The course is taught entirely in Portuguese. *No prior study of Portuguese required.*

Linguistics/Portuguese (LIPO) 1B. Beginning Portuguese (4)
Presentation and practice of the basic vocabulary and grammatical structures needed for oral and written communication and reading. Emphasis on listening comprehension, speaking, vocabulary-building, grammar, reading, and culture. The course is taught entirely in Portuguese. *Prerequisite: LIPO 1A with a grade of C– or better.*

Linguistics/Portuguese (LIPO) 1C. Beginning Portuguese (4)
Presentation and practice of the basic vocabulary and grammatical structures needed for oral and written communication and reading. Emphasis on listening comprehension, speaking, vocabulary-building, grammar, reading, and culture. The course is taught entirely in Portuguese. *Prerequisite: LIAB 1B with a grade of C– or better.*

RUSSIAN

SPANISH

Linguistics/Spanish (LISP) 1A. Spanish Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1AX. *Prerequisite: no prior study of Spanish.*

Linguistics/Spanish (LISP) 1AX. Analysis of Spanish (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Spanish. Must be taken with LISP 1A. *Prerequisite: no prior study of Spanish.*

Linguistics/Spanish (LISP) 1B. Spanish Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1BX. *Prerequisites: LISP 1A with a grade of C– or better, or equivalent and LISP 1AX with a grade of D or better, or equivalent.*

Linguistics/Spanish (LISP) 1BX. Analysis of Spanish (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Spanish. Must be taken with LISP 1B. *Prerequisites: LISP 1A with a grade of C– or better, or equivalent and LISP 1AX with a grade of D or better, or equivalent.*

Linguistics/Spanish (LISP) 1C. Spanish Conversation (2.5)
Small conversation sections taught entirely in the target language. Emphasis on listening comprehension, speaking, vocabulary building, reading, and culture. Must be taken in conjunction with LISP 1CX. *Prerequisites: LISP 1B with a grade of C– or better, or equivalent and LISP 1BX with a grade of D or better, or equivalent.*

Linguistics/Spanish (LISP) 1CX. Analysis of Spanish (2.5)
Presentation and practice of the basic grammatical structures needed for oral and written communication and for reading. The course is taught entirely in Spanish. Must be taken with LISP 1C. *Prerequisites: LISP 1B with a grade of C– or better, or equivalent and LISP 1BX with a grade of D or better, or equivalent.*

Linguistics/Spanish (LISP) 1D. Spanish Conversation (2.5)
Small conversation sections taught entirely in Spanish. Emphasis on speaking, reading, writing, and culture. Practice of the language functions needed for successful communication. Must be taken in conjunction with LISP 1DX. **Successful completion of LISP 1D and LISP 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LISP 1C with a grade of C– or better, or equivalent and LISP 1CX with a grade of D or better, or equivalent.*

Linguistics/Spanish (LISP) 1DX. Analysis of Spanish (2.5)
Practice of the grammatical functions indispensable for comprehensible communication in the language. The course is taught entirely in Spanish. Must be taken in conjunction with LISP 1D. **Successful completion of LISP 1D and LISP 1DX satisfies the requirement for language proficiency in Eleanor Roosevelt and Revelle Colleges.** *Prerequisites: LISP 1C with a grade of C– or better, or equivalent and LISP 1CX with a grade of D or better, or equivalent.*

Linguistics/Spanish (LISP) 15, 16, 17. Intermediate Spanish for the Social Sciences (2)
Conducted entirely in Spanish. Course aims to improve oral language skills through discussions of social science topics, with emphasis on political events and current affairs. Course materials encompass televised news broadcasts, newspapers and periodicals. LISP 15 is offered fall quarter only, LISP 16 is offered winter quarter only, and LISP 17 is offered spring quarter only. Each course may be taken one time and need not be taken in sequence. *Prerequisite: LISP 1D/DX or at least three semesters/four quarters of college Spanish or by permission of the instructor.*

DIRECTED STUDY

Linguistics (LIDS) 19. Directed Study–Language (2-4)
Introductory-level study of a language in the language laboratory on a self-instructional basis. Depending on the availability of appropriate study materials, the course may be taken in blocks of two or four units of credit and may be repeated up to the total number of units available for that language.

Visiting Professor

Fredric Jameson, Ph.D.

All literature courses at UCSD are offered by a single Department of Literature. The department brings together writers, teachers, scholars, and students of several different languages and literatures. Here, they are united by the nature of the studies they pursue. This lends a comparative aspect to both undergraduate and graduate programs, which lead to the bachelor of arts, master of arts, the candidate in philosophy, and doctor of philosophy degrees. All students must show knowledge of a foreign literature by doing upper-division or graduate work in that literature in the original language. Courses are offered not only in the literatures themselves but in the theoretical aspects of literature and—often in cooperation with other departments—in the relationship of literary study to other disciplines such as philosophy, visual arts, music, sociology, history, psychology, linguistics, and communication. With special permission, undergraduates may take graduate courses for credit, and graduate students may also take undergraduate courses for credit.

The UCSD Library's Mandeville Department of Special Collections offers the undergraduate and graduate literature student an excellent range of resources, including single-author collections, rare and out-of-print books, tapes, maps, and historical archives. Of special interest are the Southworth Collection of Spanish Civil War materials, the Hill Collection of South Pacific Voyages, the Don Cameron Allen Renaissance collection, and the Archive for New Poetry. Within the latter collection are an extensive series of single-author archives, including the papers of Paul Blackburn, Donald Allen, Lew Welch, Charles Reznikoff, Joanne Kyger, Jerome Rothenberg, and others. The Archive for New Poetry is one of the largest collections of contemporary poetry in the United States. Graduate students also have access, facilitated by travel grants, to all other University of California research collections.

Careers for Literature Majors

A major in literature opens many career possibilities. Education is a primary option, but specializations in literature (English, Spanish, etc.) and writing also serve as excellent preparation for graduate and professional programs. A degree in literature provides a strong background for the LSAT and law school. Medical schools seek out students who are prepared not only in the sciences, but also in the humanities and writing. The business world seeks college-trained English majors, and international corporations actively recruit students with a specialty in French, German, Italian, Russian, or Spanish. Literature majors find careers in advertising, book editing and publishing, journalism, communications, mass media, and other professions where writers and editors are in demand. The knowledge of a second language and culture provides literature majors with a decided career advantage.

Secondary School English Teaching

The literature department offers an excellent preparation for teaching English/ESL in secondary schools. Suggested majors include Literatures of the World (with a TEP focus), Literatures in English, and Literature/Writing. If you are interested in receiving a California teaching credential from UCSD, contact the Teacher Education Program for information about prerequisites and professional preparation requirements. Please consult the TEP and the literature department early in your academic career to plan an appropriate literature curriculum.

The Undergraduate Program

Lower-Division Preparation

Lower-division requirements vary, depending on the literature program in which the student elects to concentrate. However, the department strongly recommends that, as part of the freshman/sophomore course work, students who have chosen or are considering a major in literature begin an appropriate lower-division language sequence in the Department of Linguistics or Literature as preparation for upper-division course work in a foreign language and literature. All literature majors require knowledge of a second language.

Writing Component in Literature Courses

It is the departmental expectation that students in lower-division courses should write a minimum of 2,500 words per course. In upper-division courses the minimum requirement is 4,000 words per course.

The Major in Literature

There are nine majors available to students within the Department of Literature: Literatures in English, French, German, Italian, Russian, Spanish, Literatures of the World, Writing, and the composite major in two literatures. Requirements vary from program to program as described below. Once a student has decided upon a major in literature, he or she is required to meet regularly with an adviser in the Department of Literature. Worksheets defining major requirements are available in the literature undergraduate office to help students organize their course work.

All students majoring in literature must study a secondary literature, that is, a literature written in a language different from that of their primary literature. The range of secondary literatures includes Classical Greek, Hebrew, and Latin, as well as the previously mentioned French, German, Italian, Russian, Spanish, and for those concentrating in a foreign literature, English. Students will satisfy this requirement by taking three courses in the secondary literature, given substantially in the native language. At least one of these courses must be upper-division. Students should see an adviser to confirm the selection of the specific courses that will be taken to satisfy both the lower-division and the upper-division components of the secondary literature requirement.

The lower-division component within the secondary literatures may be satisfied by: French 2B and either 2C or 50; German 2B and 2C; Hebrew 2 and 3 (see "Judaic Studies"); Italian 2B and 50; Greek 2 and 3; Latin 2 and 3; Russian 2B and 2C; two courses from Spanish 50A-50B-50C. For majors other than Literatures in English, two courses from English 27-28-29 and 60, 21-22-23-25-26, and 50 are applicable. (Literatures of the

World and writing courses may not be applied toward the English secondary literature requirement.) **Note**: World Literature courses taught in English do not apply unless there is a foreign-language discussion section and materials are available in the foreign language. World Literature (LTWL) courses whose primary focus is U.S. literature may apply toward secondary literature requirements in Literatures in English.

Upper-division courses in the secondary literature are counted as part of the total number of upper-division courses required for the major. Students are free to choose from any of the regularly scheduled upper-division offerings in their secondary foreign literature. Special Studies courses (198s and 199s) cannot be used to satisfy upper-division secondary literature requirements.

All regularly-scheduled departmental courses taken to satisfy the requirements of the literature major, including courses in the secondary literature, must be taken for a letter grade. No grade below C– is acceptable for a course taken in the major.

At least six of the upper-division courses for the major, including a minimum of four in the primary literature and one in the secondary literature, must be taken at UCSD.

Dual Major in Literature

The dual major in literature permits a student to develop a solid foundation in two literatures while remaining within one department. Because the UCSD Literature Department houses literatures that are divided among different departments at most universities, our dual major allows students to coordinate their studies with a single, closely-knit group of faculty, and to arrange their program without repeating two different sets of major requirements. (For example, since a dual major necessarily combines literatures written in two different languages, it automatically fulfills the foreign-language requirement for the literature major.)

Students pursuing a dual major work closely with a faculty adviser to plan a program of study that meets the following requirements:

1. Students will select two literatures of concentration (Literature 1 and Literature 2)
   a. one of the literatures must be in a language other than English;
   b. both concentrations, however, can be in non-English literatures; thus a student can choose English and French, for example, or Russian and Spanish, French and Italian, German and Latin, Spanish and English, etc., but not Literatures of the World or Literature/Writing.
2. Students will meet all lower-division major requirements for each of the two literatures of concentration. See specific "Primary Concentration" listings above; English, Spanish, and Russian, for example, all have lower-division requirements for the major.
3. Students will take eight upper-division courses in each of the two selected literatures of concentration for a total of sixteen upper-division courses.
   a. These must satisfy the upper-division course requirements for each of the two majors. Thus, for example, if one of the concentrations is English, the student must include courses from each of the five stipulated categories; if one of the concentrations is Spanish, upper-division courses must include LTSP 119AB, 119C, 130A, and 130B.
   b. Beyond the upper-division requirements for each literature of concentration (Literature 1 and Literature 2), students will take a sufficient number of elective courses in each of the two literatures of concentration to make a total of eight upper-division courses in each chosen concentration.

Honors Program

The department offers a special program of advanced study for outstanding undergraduates majoring in literature. Admission to this program ordinarily requires an overall GPA of 3.5 and a literature major GPA of 3.7 at the beginning of the senior year. Students meeting these requirements will be sent, during the latter part of fall quarter, an invitation to participate in the program. Interested students who anticipate that they will not meet the established criteria may petition to participate in the program by submitting a personal statement and three letters of support from members of the literature faculty by the end of the third week of fall quarter. During the winter quarter of their senior year, all honors students together take an honors seminar (LTWL 191), which aims to deepen their understanding of the issues of theory and method implied in the study of literature. This seminar lays the groundwork for an honors thesis, written in spring quarter (LT 196), each under the supervision of a faculty member who specializes in the literature of the student's primary concentration. The Honors Program concludes with an oral examination of each honors candidate by a faculty committee, which is charged with recommending whether departmental honors are warranted and, if so, which degree of honors will appear on the student's transcript and diploma. A student from this program will also be recommended for the Burckhardt Prize, which is awarded at graduation for outstanding achievement in the literature major. The honors seminar and thesis course may be applied toward the primary concentration in the literature major. For Literature/Writing majors, the honors seminar is considered to be equivalent to a writing workshop.

Special Studies

These upper-division independent studies opportunities are intended for advanced students, able to work on their own, and interested in a topic not normally covered by departmental offerings.

Students with upper-division standing, a departmental GPA of at least 3.0, an overall GPA of at least 2.5, and completion of lower-division prerequisites in the subject, are eligible to take Special Studies courses (198s and 199s). Those not satisfying these criteria may, with justification supported by the proposed Special Studies instructor, petition for an exception to the regulation. 198s and 199s require at least 4,000 words of writing or an equivalent project as determined by the instructor. Information and Special Studies Enrollment forms are available in the literature undergraduate office. Enrollment requires departmental approval. These courses may not be used to satisfy upper-division secondary literature requirements for majors or minors.

Study Abroad

Study abroad can significantly enhance a student's major, particularly in ways in which it relates to international issues. Literature students are encouraged to study abroad before their senior year. Students who take Education Abroad Program or Opportunities Abroad Program (EAP/OAP) courses in a country appropriate to their major may use up to five upper-division courses to satisfy major requirements or a total

of three toward a minor. For dual majors in literature, six courses from abroad may apply, with no more than four toward either one of the two concentrations. These must be approved by the department after they have been entered on the student's official record at UCSD. The approval process is described in a hand-out on receiving transfer credit, available in the Literature Undergraduate Office. The main point to remember is that before leaving for study abroad, students should know which EAP courses will count toward the major or minor, and which will not.

Individual Program Requirements

Primary Concentration in Literatures in English

1. Six lower-division courses:
   a. LTEN 21, 22, and 23.
   b. LTEN 25 and 26, plus one of the following: LTEN 27, 28, or 29.

   Even if some or all of these courses are used toward meeting a college's humanities or general-education requirements, they will still count toward satisfying the requirements for the major in literatures in English.
2. Nine upper-division courses from literatures in English offerings, including courses from each of the following three categories:
   a. Two British literature courses, one each from periods before and after 1660.
   b. Two U.S. literature courses, one each from periods before and after 1860.
   c. One course in world Anglophone literature(s) with focus other than British or U.S. literatures.
3. One upper-division course in the history of criticism or in literary/cultural theory and methods from among the following: LTTH 110; LTTH 115; or LTCS 100.
4. Three courses in a secondary literature, at least one of which must be upper-division. (See *"The Major in Literature"*, above.)
5. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Primary Concentration in a Foreign Literature

Literatures in French

1. Nine upper-division courses as follows:
   a. LTFR 115-116, Themes in French Intellectual and Literary History
   b. Seven additional upper-division courses in French literature, including at least one course in each of the following periods: seventeenth or eighteenth century; nineteenth century; and twentieth century.
2. Three courses in a secondary literature, that is, a literature written and taught in a language other than French. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in French do not apply to the secondary literature requirement.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in German

1. Nine upper-division courses in German literature. Two of these should be in literature written before the year 1850.
2. Three courses in a secondary literature, that is, a literature written and taught in a language other than German. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in German do not apply to the secondary literature requirement. See The Major in Literature, above, for applicable lower-division courses.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Literatures in Italian

1. Nine upper-division courses in Italian literature as follows:
   a. LTIT 100, Introduction to Italian Literature
   b. LTIT 115, Medieval Studies
   c. LTIT 161, Advanced Stylistics and Conversation
   d. LTCS 140, Subaltern Studies in Context or LTIT 150, Italian North American Culture
   e. Five additional upper-division courses in Italian literature taught in Italian
2. Three courses in a secondary literature, that is, a literature written and taught in a language other than Italian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Italian do not apply to the secondary literature requirement. See The Major in Literature, above, for applicable lower-division courses.
3. Upper-division electives chosen from Department of Literature offerings to make a total of twelve upper-division courses.

Russian Literature

1. Russian 1A-B-C and 2A-B-C or their equivalent
2. Twelve upper-division courses in Russian:
   a. LTRU 104A-B-C
   b. LTRU 110A-B-C
   c. Six additional upper-division courses in Russian literature
3. Three courses in a secondary literature, that is, a literature written and taught in a language other than Russian. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Russian do not apply to the secondary literature requirement. See The Major in Literature, above, for applicable lower-division courses.

Students in the Russian literature major are encouraged to participate in the Education Abroad Program (EAP) in Moscow and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirments.

Literatures in Spanish

1. Two lower-division Spanish literature courses, as indicated:
   a. LTSP 50A, Peninsular Literature
   b. Either LTSP 50B or LTSP 50C, Latin American Literature
2. Nine upper-division courses as follows:
   a. LTSP 130A, Development of Spanish Literature
   b. LTSP 130B, Development of Latin American Literature

c. LTSP 119AB or 119C (Cervantes)

d. Six additional upper-division courses in Spanish, Latin American, and/or Chicano literature (taught in Spanish)

3. Three courses in a secondary literature, that is, a literature written and taught in a language other than Spanish. At least one of these courses must be upper-division. Special studies courses (198s and 199s) and courses in foreign literatures taught in Spanish do not apply to the secondary literature requirement. See The Major in Literature, above, for applicable lower-division courses.

4. Upper-division electives from Department of Literature offerings, whether in Spanish or in another literature, to make a total of twelve upper-division courses.

Students majoring in Spanish can choose to concentrate on either Spanish or Latin American literature. All students, however, are encouraged to take courses in the various national literatures as well as in Chicano literature for a broad background in Spanish language literatures.

Students not having a solid linguistic base in Spanish are advised to take intermediate language courses from the LTSP 2 and 50 sequences for additional review of Spanish grammar, development of writing skills, and introduction to literary analysis. Only 50A and either 50B or 50C, however, can count towards the major.

It is strongly recommended that students take LTSP 130A before any other upper-division Spanish (peninsular) literature course and LTSP 130B before any other upper-division Latin American literature course.

Primary Concentration in Literatures of the World

The major in Literatures of the World allows students to expand the focus of their work beyond a single-language literature. They plan an individual program with options in regional studies (Europe, the Americas, East Asia, Africa, Near East) and topical studies (genre, period, gender, ethnic literature, teacher education, literature and the visual arts, cultural studies, literature and science, writing, Third World Studies, The Western Tradition) as well as the single-language literatures.

1. Lower-division (three courses):

A three-course sequence in literature chosen from any section in literature.

Students can combine courses in an original national language/literature with courses in translation to satisfy this requirement, such as LTFR 2A and 2B plus LTWL 4A (Fiction and Film in the 20th Century: France). As of fall 2003, students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt College's Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL major or minor.

2. Upper-division (twelve courses):

a. six courses in a regional or single-language literature, to be taken in the original language(s) or in translation

b. four courses focused on a topic or another regional or single-language literature

c. two courses in non-European and non-U.S. literature; if satisfied under group (a) or group (b), any other two literature courses may be substituted.

3. Three courses in a secondary literature, that is, a literature written and taught in a language different from that of the primary literature. At least one of these courses must be upper-division. Upper-division courses taken to satisfy the secondary literature requirement may be counted as part of the twelve upper-division courses for the major and may, where appropriate, be applied to requirements in Group 2 or 3. Students should see an adviser when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures taught in translation do not apply to the secondary literature requirement. See The Major in Literature, above, for applicable lower-division courses.

At least two of the required twelve upper-division courses must be in literature written before 1850. No more than four courses in Lit/Writing may be taken as part of the world literatures major, and these will generally apply to Group 2.b.

Courses formerly listed under General Literature were renumbered effective fall 1998 under the following subject headings:

LTAF–African Literatures

LTAM–Literature of the Americas

LTEA–East Asian Literatures

LTEU–European and Eurasian Literatures

LTNE–Near Eastern Literatures

LTWL–World Literatures (courses or sequences which do not belong to a single linguistic or regional grouping)

The Pre-Writing Major

Until they are admitted to the writing major, students may indicate their interest in writing by declaring a pre-writing major using the pre-writing major code (LT01). Admission to the writing major will be determined by evaluation of each student's performance in the LTWR 8A/8B/8C sequence.

Normally, students are expected to achieve a grade of B or better in each of these courses to ensure their eligibility for declaring the major.

Primary Concentration in Writing

The writing major is designed to provide direct experience in writing fiction, nonfiction, and poetry as well as engage the student writer in both the world of "writing culture"—public readings, publication, and the media—and literary theory and practical critique. An indispensable feature of this program is that it engages students with one another's work, both critically and communally. Writing majors will move through a sequence of courses within (and between) genres in order to develop their own style and confidence in the work of writing and critique. Students who are interested in teaching writing will find this major an opportunity both for writing extensively and dealing critically with the act of written composition. Students must complete the sequence LTWR 8A-B-C prior to declaring a major in Literature/Writing. The major requirements are as follows:

1. Any of the following literature sequences:

a. LTWL 4A-B-C-D-E-M–any three courses in the sequence (Fiction and Film in Twentieth-Century Societies)

b. LTWL 19A-B-C (Introduction to the Ancient Greeks and Romans)

c. LTEN 21 and 22, plus one course chosen from LTEN 23, 25, 26, 27, 28, and 29.

d. TWS 21, 22, 23, 24, 25, 26-any three courses (Third World Literatures)

2. Twelve upper-division courses:

a. Six upper-division courses in Lit/Writing from the writing workshop sequence (LTWR 100–129). These workshops may

be repeated for credit (see course listing for number of times workshops may be repeated), but the requirement should show a range of writing experience in at least two major writing types. No other courses may be substituted for this basic requirement of six upper-division workshops.

b. One course from the group numbered Lit/Writing 140-148.

c. Five upper-division electives chosen from Department of Literature offerings.

3. Three courses in a secondary literature, that is, a literature written and taught in a language other than English. At least one of these courses must be upper-division. Students should see an adviser when selecting specific courses that will be taken to satisfy this requirement. Special studies courses (198s and 199s) and courses in foreign literatures which are taught in English translation do not apply to the secondary literature requirement. See The Major in Literature, above, for applicable lower-division courses.

Double Major in Literature/Writing and a Subject outside Literature

Students who wish to major both in Literature/Writing and in a department other than the Department of Literature must fulfill all requirements for the writing major as described above. Students must submit a double major petition for approval by the participating departments and the student's provost office.

Double Major within the Department of Literature in Literature/Writing and Another Literature

Students who wish to major both in literature/writing and in literature (any section) should see the department for information regarding appropriate double major requirements. Generally, all requirements for each major must be completed, though the secondary literature and two upper-division courses, where appropriate, may overlap from one major to the other.

The Minor in Literature

The department offers a wide range of possibilities for noncontiguous minors. The options include courses in a single regional or national literature, courses in more than one literature, and a combination of language and literature courses. In all instances, the minors require six or seven courses depending upon a student's first quarter of attendance at UCSD. *All courses taken to complete a literature minor must be taken for a letter grade.* No grade below C– is acceptable.

Please see the department undergraduate office for specific minor requirements.

For students entering winter quarter 1998 and thereafter, a minor in literature will consist of seven courses as described below.

French, German, Greek, Italian, Latin, Russian, or Spanish Literature: seven courses, at least four of which must be upper-division in the same literature.

Literatures in English, Literatures of the World, and Literature/Writing: seven courses, at least five of which must be upper-division.

Lower-division courses applicable toward minors:

English—LTEN 21, 22, 23, 25, 26, 27, 28, 29, 50, 60
French—LTFR 2A-B-C, 50
German—LTGM 2A-B-C
Greek—LTGK 1, 2, 3
Hebrew—JUDA 1, 2, 3 (see Judaic Studies)
Italian—LTIT 2A-B, 50
Latin—LTLA 1, 2, 3
Russian—LTRU 2A-B-C
Spanish—LTSP 2A-B-C-D, 50A-B-C
Writing—LTWR 8A-B-C

General Minor—For students entering fall 1997 and earlier: six Literature courses, at least three of which must be upper-division: usually 1) a three-course lower-division sequence such as LTEN 21/22/23, LTEN 27/28/29, LTFR 2A/2B/50, LTGN 19A/9B/19C, LTLA 1/2/3, LTSP 2A/2B/2C; and 2) three or more upper-division courses, at least two of which must be in a single national literature, taught either in the original language or in translation. No more than one upper-division course in Literature/Writing may be applied toward the general literature minor. Students should see the general literature faculty adviser or the undergraduate staff when planning a minor or program of concentration in general literature.

Literatures of the World—For students entering Winter 1998 and thereafter: seven literature courses, at least five of which must be upper-division—usually 1) a two- or three-course lower-division sequence and 2) five upper-division courses with a single unifying theme. As of fall 2003, students may use either the Revelle College Humanities sequence (HUM 1–5) or Eleanor Roosevelt College's Making of the Modern World (MMW 1–6) to satisfy the lower-division sequence for the LTWL major or minor.

Writing Minor—Seven courses, at least five of which must be upper-division. The minimum of five upper-division courses must cover at least two major writing genres, with course work chosen from writing courses numbered 100 through 146.

Please see the department for further information and specifics regarding minors in literature.

The Graduate Program

Doctoral Degree Program

The department offers a single Ph.D. in literature with concentrations in any of the fields in which members of the department do research (see below). The C.Phil. (candidate in philosophy) is conferred upon all students who pass the qualifying examination and are advanced to candidacy. Ph.D. Students in the doctoral program may also qualify for the M.A. upon completion of their qualifying examinations.

Preparation

The following are requirements for admission to graduate study in literature:

1. A baccalaureate or a master's degree with a major in one of the literatures offered by the department, or in another field approved by the departmental committee on graduate studies.
2. Satisfactory scores on the Graduate Record Examination achieved within the past three calendar years. The Subject Test is not required.
3. Competence in reading, understanding, and interpreting both literary and critical texts in a second language, and—when appropriate—ability to follow seminar discussions or lectures in a second or third language.

Completed applications and supporting materials must be received by the deadline posted on our Web site: http://literature.ucsd.edu, for admission to the following fall quarter. Those planning to apply should take

the Graduate Record Examination far enough in advance so that the scores will be available to the admissions committee in January.

Course of Study

Formal study begins with a first-year, three-quarter introductory sequence (Literature/Theory 200A-B-C) having an interdisciplinary and theoretical emphasis. During the first three years, the course of study will include at least four seminars in one literature and two in another (students in comparative literature must take at least one seminar or upper-division undergraduate course in a third literature); at least four seminars drawn from offerings in literary theory, the second or a third literature, cultural studies, comparative literature, or composition studies; and five additional seminars open entirely to the student's choice (four for students in comparative literature). Such "open" seminars should generally be related to the intended dissertation field. At most, two seminars in other disciplines may be substituted for any of the latter group, with the adviser's permission. Students must also fulfill a historical breadth requirement by completing two seminars dealing with texts or cultural practices prior to 1800. For students with approved M.A. degrees the initial three-year sequence may be reduced somewhat, depending on the department's criteria for transferring credits and on the students' plans for doctoral study.

Students in comparative literature must take four of the above-described seminars in comparative literature or in other sections, provided that they be clearly comparative in nature. Comparative literature seminars taken for Literature 1, 2, or 3 must be substantially focused upon the relevant language and deal with materials in the original. Students who wish to take these courses in a literature for which seminars are not regularly offered in the Department of Literature may substitute 298s or undergraduate courses enhanced by additional assignments. To do so, however, students must demonstrate through prior course work that they have already attained graduate-level competency in the literature and language in question and they must obtain approval from the comparative literature graduate adviser and the director of Graduate Studies.

In the sixth quarter, students may register for one four-unit independent study course to prepare reading lists for the subject-area qualifying examinations. The third year is spent in taking seminars and in preparing for the qualifying examinations. During this year, students may register for one four-unit independent study course in which they work on the long paper required for the qualifying examinations.

The qualifying examination is usually taken during the ninth quarter of enrollment. It must be completed by the end of the tenth quarter. The fourth and fifth years will be devoted to preparation of the dissertation

Students may write dissertations in any of the fields in which members of the department do research. These fields include English, American, French, German, biblical Hebrew, Italian, Greek, Latin, Spanish, Chinese, Japanese, Russian, Chicano, Asian-American, and African-American literature, comparative literature, literary theory, women's studies, cultural studies, early modern studies, and composition studies.

Specialty in Composition Theory, Research, and Practice

The Department of Literature offers special studies to graduate students who wish to concentrate on composition theory, research, and practice. The composition subspecialty is an interdisciplinary course of study that requires students to work with faculty both in the department and across the university. The department regularly offers graduate seminars taught by faculty in composition, along with a variety of seminars on history, theory, cultural studies, and literatures in English of special interest to students in composition. Students in special studies in composition take two research methods courses outside the department on topics such as field work, historiography, or research design in the human sciences to qualify them to conduct the research for their dissertations. Students are also encouraged to apply to teach in one of the five college undergraduate writing programs on campus, to see for themselves how classroom and administrative practice intersect with theory and research.

Language Requirements

Graduate students in literature are required to develop the ability to read literary and secondary texts and—when appropriate—to follow seminar discussions or lectures in a second language, a language other than the one in which the literature of their intended specialization is written. To satisfy this requirement students must demonstrate language proficiency and completion of two seminars in the literature of the second language. With the approval of the director of Graduate Studies, students may satisfy the language requirement by substituting for a seminar an upper-division undergraduate course enhanced by additional assignments, and which must be completed with the grade of A. This is normally done only when there is no seminar offered in the chosen language. Students must pass an examination in reading, interpretation, and translation in each of the two courses taken to satisfy the second language requirement. The language requirements must be satisfied by the end of the third year of study.

Doctoral students specializing in comparative literature require knowledge in depth of two foreign languages. "Knowledge in depth" means the ability to attend graduate seminars given in the original language (or seminars where the texts are read in the original language). Students must demonstrate this ability by enrolling in such seminars or, where this is not possible, by taking enhanced upper-division courses. If upper-division courses are not available, students may take guided independent study in the language in question.

The M.A. program in comparative literature requires knowledge in depth of one foreign language.

Advancement to Candidacy

No later than the first quarter of the third year, the student should choose a Ph.D. adviser, who will, in consultation with the student, form a qualifying examination committee. The student and the qualifying examination committee will jointly determine the nature of the long research paper, (approximately 30 pages) and the two areas of specialization upon which the student will be examined in writing. After satisfactory completion of the paper and the written examinations, the student will take a two-hour oral doctoral examination. On passing the oral examination, the student is declared eligible for advancement to candidacy for the Ph.D. The C. Phil. degree is conferred on those so advanced. Thereupon, a doctoral dissertation is written. This work is defended in a traditional final examination.

Teaching

The department requires that each Ph.D. student do some apprentice teaching before the

completion of the degree; the minimum amount required is equivalent to the duties expected of a half-time teaching assistant for three academic quarters. This teaching involves conducting, with the guidance and support of a supervising professor, discussion sections and related activities in a variety of freshman and sophomore courses. Academic credit is granted for the training given under the apprentice teaching program.

Grading

The only grading option for literature graduate courses is Satisfactory/Unsatisfactory (S/U). Students receive written evaluations of their performance in seminars. Upper-division undergraduate courses must be taken for a letter grade. Students must receive a grade of A to maintain acceptable graduate status and continuation of funding.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the tenth quarter of study. Departmental normative time is five years. Total registered time at UCSD cannot exceed eight years.

Financial Support

Ph.D. students entering the program with a B.A. may be supported (either by employment or fellowships) for five years. Students who have an M.A. and have been given transfer credit may be supported for four years. Such support depends upon the funds available, the number of students eligible, and the rate of progress.

Master's Degree Program

The master's degree program is intended to meet the needs of several groups: (1) persons interested in possibly applying later, at UCSD or elsewhere, for admission to a Ph.D. program and wishing to strengthen their preparation for such a program; (2) persons seeking a master's degree only, for reasons of professional development or cultural enrichment; and (3) graduate students who have been admitted to the Ph.D. program and who decide to qualify also for a master's degree. The M.A. degree is currently available in five fields: literatures in English, French, German, Spanish, and Comparative literature. **Note**: *The department does not offer financial support for M.A. candidates.* It is possible, in cases of full-time employment or other compelling reasons, to apply for permission to enroll on a part-time basis.

Completed applications and supporting materials must be received by the deadline indicated in the department's Web site for admission to the following fall quarter. Those planning to apply should take the Graduate Record Examination far enough in advance so that the scores will be available to the admissions committee in January.

The requirements for the M.A. degree are a total of thirty-six units. Included must be the following:

1. Twenty units of graduate seminars, including Literature/Theory 201, which is normally taken during a student's first quarter in the program.
2. Eight additional units of graduate seminars. Normally, M.A. students should take graduate seminars. If no seminars are available in the student's area of specialization (defined as Literatures in English, Literatures in French, etc.), students may take an enhanced upper-division course in place of a seminar. Students may take ONE guided independent study (298) to fulfill requirements in this category, with the adviser's permission.
3. For the M.A. in Literatures in English, Spanish, French, and German, students will be required to complete a minimum of sixteen units of course work in the specific literature, read in its original language, in which they plan to receive their degree. Students may take enhanced upper-division courses or, in exceptional circumstances, on guided independent study to complete this requirement if no graduate seminars are available in the language in question. For the M.A. in comparative literature students will be required to complete a minimum of twelve units of course work in one literature of concentration. Comparative literature seminars are recommended when their focus is substantially upon the literature in question and they deal with materials in the original language.
4. Language Requirement: Four units of literature in a language other than that of the student's principal concentration. For students in French, German, Spanish and literatures in English, this course may be taken either in the original language or in translation, and it may be used toward fulfilling the requirements listed under items 1 and 2 above. A graduate seminar in English or American literature may be used to fulfill this requirement by students working toward an M.A. degree in French, German, or Spanish. An enhanced upper-division course in Literatures of the World may be taken to satisfy this requirement as long as its principal readings were originally written in a language other than that of their principal concentration. For the M.A. in comparative literature students must take either eight units of seminar work in the second literature (other than the literature of concentration) or four units of seminar work in a second literature and four units of seminar or enhanced upper-division course in a third literature. Texts or other materials must be dealt with in the original languages. Comparative literature seminars are recommended when their focus is substantially upon the literature in question and they deal with materials in the original language.
5. For the M.A. in comparative literature students must take at least one seminar in comparative literature or in another section, if the seminar is clearly comparative in nature. This requirement can be satisfied by a course taken for item 3 or item 4 above. Students wishing to take courses for requirements 3 or 4 above in a literature for which seminars are not regularly offered in the Department of Literature may substitute upper-division undergraduate courses enhanced by additional assignments or, in exceptional cases, may take 298s. To do so, however, students must demonstrate through prior course work that they have already attained graduate-level competency in the literature and language in question and they must obtain approval from the comparative literature graduate adviser. Such 298s and upper-division courses should not exceed a total of two courses within a student's program unless demonstrably necessary.
6. Eight units of guided research 295, culminating in an acceptable master's thesis or master's examination.

The only grading option for literature graduate courses is Satisfactory/Unsatisfactory (S/U).

Students receive written evaluations of their performance. Upper-division undergraduate courses must be taken for a letter grade. Students must receive a grade of A to maintain acceptable graduate status and continuation of funding.

COURSES

Note: A list of specific course offerings (with names of instructors for the following academic year) is available in the undergraduate office of the Department of Literature, LIT 3110. A list of graduate course offerings is available in the graduate office, LIT 3140.

Undergraduate students may enroll in graduate seminars with the consent of instructor and will receive a P/NP grade unless they petition for a letter-grade option within the first four weeks of the quarter in which the course is taken.

CHINESE LITERATURE

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTCH 101. Readings in Contemporary Chinese Literature (4)
Intended for students who have the competence to read contemporary Chinese texts, poetry, short stories, and criticism in vernacular Chinese. May be repeated for credit as topics vary.

COMPARATIVE LITERATURE

GRADUATE

LTCO 202C. History of European Criticism and Aesthetics (4)
A core course for comparative literature, strongly recommended for all graduate students in the comparative literature program. A historical survey of criticism and aesthetics divided as follows: 202C, Romanticism to late nineteenth century.

LTCO 210. Classical Studies (4)
Analysis of significant works of the Greek and Roman traditions, with attention to their interest for later European literature. May be repeated for credit as topics vary.

LTCO 212. Studies in the Hebrew Bible (4)
Analysis of books of the Hebrew Bible from literary, historical, archaeological, theological, and psychological perspectives; text-critical and source-critical study of the Hebrew text. Repeatable for credit when topics vary.

LTCO 264. Oral Literature (4)
An introduction, through the study of recordings of actual oral performance as well as of the written record, to research in oral literature and the theoretical and methodological problems entailed. (Not offered 2002–03.)

LTCO 274. Genre Studies (4)
A consideration of a representative selection of works relating to a theme, form, or literary genre. May be repeated for credit as topics vary.

LTCO 231. Literature and Film (4)
A study of literature and film in relation to one another, to critical and aesthetic theories, and to historical context. May be repeated for credit when topics vary. *Prerequisite: graduate standing or consent of instructor.*

LTCO 282. Literature and Philosophy (4)
Questions and problems from the history of philosophy or from the various fields of philosophy (e.g., epistemology, ethics, logic) in their interaction with intellectual issues and questions addressed by literary criticism and theory. Repeatable for credit when topics vary.

LTCO 295. M.A. Thesis (1–8)
Research for the master's thesis. Opened for repeated registration up to eight units. (Satisfactory/Unsatisfactory grades only.) *Prerequisite: enrolled in M.A. program.*

LTCO 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTCO 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTCO 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTCO 299. Dissertation (1–12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURE/CULTURAL STUDIES

LOWER-DIVISION

LTCS 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. *No prerequisites.*

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor.

LTCS 100. Theories and Methods in Cultural Studies (4)
Reading in some of the major theoretical texts that have framed work in cultural studies, with particular emphasis on those drawn from critical theory, studies in colonialism, cultural anthropology, feminism, semiotics, gay/lesbian studies, historicism, and psychoanalytic theory. *Prerequisite: upper-division standing.*

LTCS 110. Popular Culture (4)
A reading of recent theory on popular culture and a study of particular texts dealing with popular cultural practices, both contemporary and noncontemporary, as sites of conflict and struggle. Repeatable for credit when topics vary.

LTCS 115. Performance Culture (4)
An investigation of different types of performances such as theatrical genres ranging from melodrama and minstrelsy to various cultural rituals and speech acts. From the perspective of literary studies, performance studies, postcolonial theory, ethnography and theatre history, the course explores race, gender, sexuality, and nation through performance. *Prerequisite: upper-division standing or consent of instructor.*

LTCS 118. Comedy (4)
Comedy in fiction and film from ancient times to contemporary, including the Bible, Aristophanes, Shakespeare, and modern writers and film makers. *Prerequisite: upper-division standing or consent of instructor.*

LTCS 120. Historical Perspectives on Culture (4)
The course will explore the relation among cultural production, institutions, history, and ideology during selected historical periods. In considering different kinds of texts, relations of power and knowledge at different historical moments will be discussed. Repeatable for credit when topics vary.

LTCS 125. Cultural Perspectives on Immigration and Citizenship (4)
Introduction to the studies of cultural dimensions of immigration and citizenship. Examines the diverse cultural texts—literature, law, film, music, the televisual images, etc., that both shape and are shaped by immigration and the idea of citizenship in different national and historical contexts. *Prerequisite: upper-division standing or consent of instructor.*

LTCS 130. Gender, Race/Ethnicity, Class, and Culture (4)
The course will focus on the representation of gender, ethnicity, and class in cultural production in view of various contemporary theories of race, sex, and class. Repeatable for credit when topics vary.

LTCS 135. Interdisciplinary Approaches to Lesbian, Gay, Bisexual, and Transgender Studies (4)
Introduction to interdisciplinary examination of human sexuality and, especially, lesbian, gay, bisexual, and transgender identities and desires. Juxtaposes perspectives from humanities, social sciences, and natural sciences. Introduces queer theory to understand sexuality in relation to phenomena such as government, family, culture, medicine, race, gender, and class.

LTCS 145. National Cultures in Colonial and Postcolonial Contexts (4)
Studies of emergence of national cultures under colonial rule and their transformations in the process of decolonization. Investigation of ideological constructions of such cultural institutions as modern national language, national history and histiography, national literary canon, and folk literature and culture. *Prerequisite: upper-division standing or consent of instructor.*

LTCS 150. Topics in Cultural Studies (4)
The course will examine one or more forms of cultural production or cultural practice from a variety of theoretical and historical perspectives. Topics may include: contemporary debates on culture, genres of popular music/fiction/film, AIDS and culture, the history of sexuality, subcultural styles, etc. Repeatable for credit when topics vary.

LTCS 160. Cultural Studies Approaches to Popular Music (4)
An investigation of different types of popular music genres, cultures, and practices such as hip hop, punk rock, R&B, jazz, country, and dance music cultures. From the perspective of ethnography and cultural and performance studies, the course explores race, gender, sexuality, and the negotiations of local, as well as national communities and subcultures via popular music. *Prerequisite: upper-division standing or consent of instructor.*

LTCS 170. Visual Culture (4)
The course will focus on visual practices and discourses in their intersection and overlap, from traditional media, print, and photography to film, video, TV, computers, medical scanners, and the Internet.

LTCS 198. Directed Group Study (4)
Directed group research, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department. (P/NP only.) *Prerequisite: permission of the department.*

LTCS 199. Special Studies (2 or 4)
Individual reading in an area not covered in courses currently offered by the department. (P/NP only.) *Prerequisite: permission of the department.*

GRADUATE

LTCS 201. Theories and Methods of Analysis in Cultural Studies (4)
Contemporary theories of cultural studies. The seminar will concentrate on major interpretive approaches drawn from several areas of cultural and political analysis, including historicism, Marxist theory, feminism, structuralism, psychoanalytic theory, semiotics, postmodernist studies, gay and lesbian studies, and others. The particular focus and approach may vary. Repeatable for credit. *Prerequisite: graduate standing or consent of instructor.*

LTCS 210. History and Culture (4)
This seminar will focus on the cultural practices of a particular historical period as a means of analyzing the relation between culture/ideology and economic and political modes of production and domination. Topic, historical period, and theoretical approach may vary. Repeatable for credit. *Prerequisite: graduate standing or consent of instructor.*

LTCS 220. Film/TV/Video Studies (4)
The seminar will concentrate on genres or subgenres within film/TV/video studies or on a stand of film/TV/video theory. Possible topics may include: horror film, melodrama, sitcoms/soaps/talk shows, music videos, black or queer cinema, etc. Repeatable for credit.

LTCS 225. Interdisciplinary and Historical Analysis of Cultural Texts (4)
The seminar will focus on a particular historical period and examine a variety of cultural texts vis-a-vis related historical, economic, political, and sociological discourses. The conjunction and disjunction of approaches will be explored in relation to specific texts. Repeatable for credit.

LTCS 250. Topics in Cultural Studies (4)
This seminar will be organized around any of various topic areas relating to cultural studies. These might include studies in colonialism, historicism, gender, sexuality, social institutions, popular culture, subaltern practices, etc. May be repeated for credit as topics vary. *Prerequisite: graduate standing or consent of instructor.*

LTCS 255. Cultural Studies, Colonialism, and Decolonialism (4)
This course considers different approaches to the study of colonialism in a variety of national contexts. Educational, legal, religious, military, and cultural apparatuses of colonialism, theories of decolonization, the "postcolonial" and feminist critiques of "modernity"/modernization will also be studied. May be repeated for credit when topics vary. *Prerequisite: graduate standing or consent of instructor.*

LTCS 256. Cultural Studies of Technoscience (4)
The course will explore work in cultural studies, feminist studies, and queer theory of scientific practices altering social relations, cultural identities, and conceptions of "nature". Issues may include the AIDS pandemic, genetic research, electronic communities, reproductive technologies, and other topics. May be repeated for credit when topics vary. *Prerequisite: graduate standing or consent of instructor.*

LTCS 296. Research Practicum (1–12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTCS 297. Directed Studies: Reading Course (1–12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTCS 298. Special Projects: Writing Course (1–12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to *two* 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTCS 299. Dissertation (1–12)
Research toward the dissertation. Open only to Ph.D. students who have advanced to candidacy. Repeatable for credit.

LITERATURES IN ENGLISH

LOWER-DIVISION

LTEN 21. Introduction to the Literature of the British Isles: Pre-1660 (4)
An introduction to the literatures written in English in Britain before 1660, with a focus on the interaction of text and history.

LTEN 22. Introduction to the Literature of the British Isles: 1660–1832 (4)
An introduction to the literatures written in English in Britain and Ireland between 1660 and 1832, with a focus on the interaction of text and history.

LTEN 23. Introduction to the Literature of the British Isles: 1832–Present (4)
An introduction to the literatures written in English in Britain, Ireland, and the British Empire (and the former British Empire) from 1832 to the present, with a focus on the interaction of text and history.

LTEN 25. Introduction to the Literature of the United States, Beginnings to 1865 (4)
An introduction to the literatures written in English in the United States from the beginnings to 1865, with a focus on the interaction of text and history.

LTEN 26. Introduction to the Literature of the United States, 1865 to the Present (4)
An introduction to the literatures written in English in the United States from 1865 to the present, with a focus on the interaction of text and history.

LTEN 27. Introduction to African American Literature (4)
A lecture discussion course that examines a major topic or theme in African American literature as it is developed over time and across the literary genres of fiction, poetry, and belles lettres. A particular emphasis of the course is how African American writers have adhered to or departed from conventional definitions of genre.

LTEN 28. Introduction to Asian-American Literature (4)
This course provides an introduction to the study of the history, communities, and cultures of different Asian-American people in the United States. Students will examine different articulations, genres, conflicts, narrative forms, and characterizations of the varied Asian experience.

LTEN 29. Introduction to Chicano Literature (4)
This course provides an introduction to the literary production of the population of Mexican origin in the United States. Students will examine a variety of texts dealing with the historical (social, economic, and political) experiences of this heterogeneous population.

LTEN 60. Topics in Ethnic American Literature (4)
A lecture and discussion course that critically examines the literary and cultural production emerging out of racialized, ethnic, and immigrant communities in the United States. Course may include fiction, poetry, novels, plays, popular culture, and film.

LTEN 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. *No prerequisites.*

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTEN 107. Chaucer (4)
A study of Chaucer's poetic development, beginning with *The Book of the Duchess* and *The Parliament of Fowls*, including *Troilus* and *Criseyde*, and concluding with substantial selections from *The Canterbury Tales*.

LTEN 110. The Renaissance: Themes and Issues (4)
Major literary works of the Renaissance, an exciting period of social and cultural transformation in England as elsewhere in Europe. Topics may include a central theme (e.g., humanism, reformation, revolution), a genre (e.g., pastoral), or comparison with other arts and sciences.

LTEN 112. Shakespeare I: The Elizabethan Period (4)
A lecture/discussion course exploring the development of Shakespeare's dramatic powers in comedy, history, and tragedy, from the early plays to the middle of his career. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare's theatre and his society. Enrollment limited to upper-division students.

LTEN 113. Shakespeare II: The Jacobean Period (4)
A lecture/discussion course exploring the rich and varied achievements of Shakespeare's later plays, including the major tragedies and late romances. Dramatic forms, themes, characters, and styles will be studied in the contexts of Shakespeare's theatre and his society. Enrollment limited to upper-division students.

LTEN 114. Shakespeare III: Stage, Film, and Television (4)
A lecture/discussion/laboratory course involving the close study of six to eight plays representative of Shakespeare's artistic career with particular emphasis upon the interrelation of Elizabethan plays and the stage and the critical implications of transposing plays to film and television. (Generally offered in summer session only.)

LTEN 115A. The Sixteenth Century: Themes and Issues (4)
Selected topics concerned with sixteenth-century English literature as a whole.

LTEN 117A. The Seventeenth Century: Themes and Issues (4)
Selected topics in English literature during a period of social change, religious controversy, emergence of the "New Science", and the English Civil War. Readings chosen from writers including Jonson, Donne, Bacon, Milton, Marvell, and Dryden, among others. Repeatable for credit. *Prerequisite: upper-division standing or consent of instructor.*

LTEN 118. Milton (4)
A critical examination of the major works, including *Paradise Lost*, by an author who was both a central figure in English political life in a revolutionary age and, in the view of most critics, the greatest non-dramatic poet in the English language. The course will study his poetic development in a variety of historical contexts.

LTEN 119. Restoration Literature (4)
The literature of a period following twenty years of civil war and revolution which saw the reopening of theatres and the rise of the professional writer. Topics may include Restoration comedy and tragedy; satire; neoclassical literary theory.

LTEN 120A. The Eighteenth Century: Themes and Issues (4)
Selected topics in English literature during an age of satiric writing, the shift from neoclassicism to romanticism, the emergence of the novel, and the expansion of the reading and writing public among the middle class and women. Writers such as Defoe, Pope, Swift, Richardson, Johnson, Burney, Wollstonecraft. May be repeated for credit when topics vary.

LTEN 120D. William Blake and the Age of Sensibility (4)
A study of the great visionary poet and artist, William Blake, in the context of several of his eighteenth-century contemporaries, such as Gray, Collins, Chatterton, and Cowper.

LTEN 120E. Women in the Eighteenth Century (4)
Selected topics concerning British women writers and readers in an age of increasing female participation in print culture. Topics include women writers; representations of women, domesticity, and the family in the novel, in drama, in satire; early feminist writing; literary constructions of gender. May be repeated for credit when topics vary.

LTEN 124. The Nineteenth Century: Themes and Issues (4)
Selected topics in nineteenth-century British literature and culture, drawing on both romantic and Victorian periods: e.g., relationships between literature and imperialism, social and political debate, gender issues, religion, or science; or continuities between romantic and Victorian authors.

LTEN 125A. Romanticism: Themes and Issues (4)
Selected topics concerned with the romantic period as a whole.

LTEN 125B. First Generation Romantic Poets (4)
The poets who came of age during the French Revolution and who inaugurated literary modes that continue in our own time: Wordsworth, Coleridge, Blake, and their contemporaries.

LTEN 125C. Second Generation Romantic Poets (4)
Byron, Keats, Shelley, and their contemporaries.

LTEN 125F. Byron and Byronism (4)
Lord Byron's life, works, and cultural impact, including an examination of some later authors, such as Carlyle and the Brontes, who responded to Byron through their own writings.

LTEN 125G. Keats and His Poetical Heirs (4)
The major poetry of John Keats considered together with selected works influenced by him, including poems by such authors as Tennyson, Christina Rossetti, Hopkins, Hardy, Yeats, and Stevens.

LTEN 127A. The Victorian Period: Themes and Issues (4)
Selected topics concerned with Victorian literature as a whole.

LTEN 127B. Victorian Poetry (4)
Tennyson, Browning, Arnold, Clough, Hopkins, and their contemporaries.

LTEN 130. Modern British Literature (4)
Selected topics concerned with modern British literature; study of various authors, issues, and trends in literatures of the British Isles from the mid-1850s through the end of the twentieth century. Repeatable for credit when topics vary. (Replaces the former LTEN 130A and 130B)

LTEN 132. Modern Irish Literature (4)
The Irish Revival and its aftermath: Yeats, Synge, O'Casey, Joyce, Beckett, and their contemporaries.

LTEN 133. Modern Scottish Literature (4)
This course takes Scottish writing from the Kailyard School of the late nineteenth century through the 1920s' revival of Scottish nationalism, to the 1980s' emergence of Glasgow as a literary center.

LTEN 134. Twentieth-Century British Poetry (4)
Survey of many poets of the United Kingdom including Scotland and Ireland. Included: War poems (1914-18, 1940-45), '30s poems of social commitment, the Movement (1950s), recent postmodern figures (Hughes, Prynne). *Prerequisite: upper-division standing.*

LTEN 140. The Early Nineteenth-Century British Novel (4)
Includes the work of Jane Austen, Charlotte Bronte, Emily Bronte, Mary Shelly, and Charles Dickens.

LTEN 141. The High Victorian Novel (4)
Dickens, Thackeray, Trollope, Charlotte Bronte, Emily Bronte.

LTEN 142. The End of Victorianism (4)
The work of Robert Louis Stevenson, H.G. Wells, Thomas Hardy, Rudyard Kipling, and Joseph Conrad.

LTEN 143. The English Novel in the Eighteenth Century (4)
This course studies the writing of the novel in the eighteenth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 144. The English Novel in the Nineteenth Century (4)
This course studies the writing of the novel in English during the nineteenth century. The focus of the course may be a survey of the nineteenth century (an introduction to selected major writers and texts), or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 145. The English Novel in the Twentieth Century (4)
This course studies the writing of the novel in English during the twentieth century. The focus of the course may be an introduction to selected major writers and texts, or a particular issue or problem in the literary and social history of the novel. May be repeated for credit when topics vary.

LTEN 146. Women and English/American Literature (4)
Selected topics concerning women and anglophone literature. Topics include women writers, the literary representation of women, and women as readers. May be repeated for credit when topics vary.

LTEN 147. Metamorphoses of the Symbol (4)
An investigation of a single symbol–such as the cave or the mountain–as it functions within the literature and other expressions of widely different historical moments, with an emphasis upon English and American literature. May be repeated for credit as topics vary.

LTEN 148. Genres in English and American Literature (4)
An examination of one or more genres in English and/or American literature, for example, satire, utopian fiction, autobiography, landscape poetry, the familiar essay. May be repeated for credit as topics vary.

LTEN 149. Themes in English and American Literature (4)
A consideration of one of the themes that recur in many periods of English or American literature, for

instance, love, politics, the role of women in society. May be repeated for credit as topics vary.

LTEN 150. Gender, Text, and Culture (4)
This course studies representations of the sexes and of their interrelationship in various forms of writing produced during different phases of English history. Emphasis will be placed upon connections of gender and of literature to other modes of social belief, experience, and practice. Repeatable for credit when topics vary.

LTEN 152. The Origins of American Literature (4)
Studies in American writing from the Puritans to the early national period (1620–1830), with emphasis on the thrust and continuity of American culture, social and intellectual, through the beginnings of major American writing in the first quarter of the nineteenth century.

LTEN 153. The Revolutionary War and the Early National Period in U.S. Literature (4)
A critical examination of how writing of various kinds—political, philosophical, and literary—functioned in the construction of the political body of the new American republic and the self-conception of its citizens.

LTEN 154. The American Renaissance (4)
A study of some of the chief works, and the linguistic, philosophical, and historical attitudes informing them, produced by such authors as Emerson, Hawthorne, Melville, Dickinson, and Whitman during the period 1836–1865, when the role of American writing in the national culture becomes an overriding concern.

LTEN 155. Interactions Between American Literature and the Visual Arts (4)
An exploration of the parallels between the work of individual writers, or movements, in American literature and the style and content of the work of certain visual artists. The writers studied are always American; the artists or art movements may represent non-American influences on these American writers. May be repeated for credit as topics vary.

LTEN 156. American Literature from the Civil War to World War I (4)
A critical examination of works by such authors as Mark Twain, Henry James, Kate Chopin and Edith Wharton, who were writing in an age when the frontier was conquered and American society began to experience massive industrialization and urbanization.

LTEN 158. Modern American Literature (4)
A critical examination of American literature in several genres produced between the turn of the century and World War II. Attention will be given to historical and cultural contexts for defining American modernism. *Prerequisite: upper-division standing*. Repeatable for credit when topics vary.

LTEN 159. Contemporary American Literature (4)
A critical examination of American literature in several genres produced since World War II. Attention will be given to historical and cultural contexts for defining American postmodernism. *Prerequisite: upper-division standing*. Repeatable for credit when topics vary.

LTEN 160. Ideas and Photographic Images in American Culture (4)
Relate the history of photography in America to the history of ideas in American culture. It assumes that photographers think in images and through their images participate in cultural discourse. Repeatable for credit when topics vary.

LTEN 172. American Poetry II—Whitman through the Modernists (4)
Reading and interpretation of American poets from Whitman through the principal modernists—Pound, H.D., Eliot, Moore, Stevens, and others. Lectures will set the appropriate context in sociocultural and literary history.

LTEN 174. American Fiction II—Since Middle James (4)
Reading and interpretation of American fiction from Henry James through the principal modernists—Fitzgerald, Stein, Welty, Faulkner, and others. Lectures will set the appropriate context.

LTEN 175A. New American Fiction—Post-World War II to the Present (4)
Reading and interpretation of American fiction from the mid-1940s to the present. Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit when topics vary.

LTEN 175B. New American Poetry—Post-World War II to the Present (4)
Reading and interpretation of American poets whose work has made its major impact since the last war, for instance Charles Olson, Robert Creeley, Denise Levertov, Adrienne Rich, Allen Ginsberg, Frank O'Hara, and John Ashbery. Lectures will set the appropriate context in sociocultural and literary history. May be repeated for credit as topics vary.

LTEN 176. Major American Writers (4)
A study in depth of the works of major American writers. May be repeated for credit as topics vary.

LTEN 177. California Literature (4)
Reading and interpretation of such novelists as London, Norris, Steinbeck, West, and Didion and such poets as Jeffers, Rexroth, Everson, Duncan, and Snyder. May be repeated for credit as topics vary.

LTEN 178. Comparative Ethnic Literature (4)
A lecture-discussion course that juxtaposes the experience of two or more U.S. ethnic groups and examines their relationship with the dominant culture. Students will analyze a variety of texts representing the history of ethnicity in this country. Topics will vary.

LTEN 180. Chicano Literature in English (4)
Introduction to the literature in English by the Chicano population, the men and women of Mexican descent who live and write in the United States. Primary focus on the contemporary period.

LTEN 181. Asian American Literature (4)
Selected topics in the literature by men and women of Asian descent who live and write in the United States. Repeatable for credit when topics vary.

LTEN 183. African American Prose (4)
Analysis and discussion of the novel, the personal narrative, and other prose genres, with particular emphasis on the developing characteristics of African American narrative and the cultural and social circumstances that influence their development.

LTEN 184. African American Poetry (4)
Close reading and analysis of selected works of African American poetry as they reflect styles and themes that recur in the literature.

LTEN 185. Themes in African American Literature (4)
An intensive examination of a characteristic theme, special issue, or period in African American literature. May be repeated for credit when topics vary.

LTEN 186. Literature of the Harlem Renaissance (4)
The Harlem Renaissance (1917–39) focuses on the emergence of the "New Negro" and the impact of this concept on black literature, art, and music. Writers studied include Claude McKay, Zora N. Hurston, and Langston Hughes. Special emphasis on new themes and forms.

LTEN 187. Black Music/Black Texts: Communication and Cultural Expression (4)
Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West-Indians. Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. *Prerequisite: upper-division standing.*

LTEN 188. Contemporary Caribbean Literature (4)
This course will focus on contemporary literature of the English-speaking Caribbean. The parallels and contrasts of this Third World literature with those of the Spanish- and French-speaking Caribbean will also be explored.

LTEN 189. Twentieth-Century Postcolonial Literatures (4)
The impact of British colonialism, national independence movements, postcolonial cultural trends, and women's movements on the global production of literary texts in English. Course is organized by topic or geographical/historical location. May be repeated for credit when topics vary. *Prerequisite: upper-division standing or consent of instructor.*

LTEN 190. Seminars (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. The student may enroll in more than one section in a single quarter.

LTEN 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTGN 191. Oral exam.

LTEN 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the staff. May be repeated for credit three times. (P/NP grades only.) *Prerequisite: permission of department.*

LTEN 199. Special Studies (2 or 4)
Tutorial; individual guided reading in an area not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisite: permission of department.*

GRADUATE

Prerequisite: graduate standing or consent of instructor.

LTEN 222. Elizabethan Studies (4)
Selected topics in the study of literary, dramatic, and other Elizabethan cultural texts. Emphasis will be upon articulations among a range of discourses, practices, and institutions. May be repeated for credit when topics vary.

LTEN 224. Seventeenth-Century English Literature (4)
Consideration of one or more figures, texts, or trends in seventeenth-century English literature, including the

metaphysical poets and Jacobean drama. May be repeated for credit as topics vary.

LTEN 226. Shakespeare (4)
Shakespeare's plays in relation to the Elizabethan background; selected major texts. May be repeated for credit as topics vary.

LTEN 231. Restoration and Eighteenth-Century English Literature (4)
Consideration of one or more figures, texts, or trends in Restoration and eighteenth-century English literature, including Dryden, Pope, Swift, the early novel, satire. May be repeated for credit as topics vary.

LTEN 241. English Literature of the Romantic Period (4)
A study of the major poetry and related prose of early nineteenth-century literature. May be repeated for credit as topics vary.

LTEN 243. Early American Literature and Culture (4)
Consideration of one or more major figures, texts, or trends in Colonial and/or Revolutionary period American Literature, in particular, the relationship between literature and culture. *Prerequisite: graduate standing.*

LTEN 245. Nineteenth-Century American Studies (4)
Consideration of some of the principal writers and movements in nineteenth-century American literature. May be repeated for credit as topics vary.

LTEN 246. Victorian Literature (4)
Consideration of one or more major figures, texts, or trends in the Victorian period. May be repeated for credit as topics vary.

LTEN 252. Studies in Modern American Literature and Culture (4)
Consideration of one or more major figures, texts, or trends in American literature, in particular the relationship between literature and culture. May be repeated for credit as topics vary.

LTEN 256. Postcolonial Discourses (4)
A survey of selected responses to imperialism and colonialism as presented in cultural texts produced by colonized or once-colonized peoples. Related issues to be examined: gender dynamics, class, representing others, mimicry, language, cultural theory, and the politics of literary genres. May be repeated for credit when topics vary.

LTEN 271. Genres in English (4)
Consideration of one or more genres present in English and/or American literature; for instance, the ballad, landscape poetry, comedy, satire, the familiar essay. May be repeated for credit when topics vary. *Prerequisites: graduate standing or consent of instructor.*

LTEN 272. Cultural Traditions in English (4)
The study of writing produced over an extended period of time by members of an identifiable cultural formation as defined, e.g., by political/social ideology, class, religion, ethnicity, or sexual preference. May be repeated for credit when topics vary.

LTEN 281. Practicum in Literary Research and Criticism (4)
This course will focus on strategies for framing, organizing, and drafting projects in literary research. Students will study and apply various forms of literary methodology and will learn about recent developments in bibliography, textual editing, and research. May be repeated twice for credit as topics vary.

LTEN 295. M.A. Thesis (1-8)
Research for the master's thesis. Opened for repeated registration.

LTEN 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTEN 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subject not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTEN 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES IN FRENCH

LOWER-DIVISION

Language and Literature Courses

Ordinarily, students entering the French literature program elect one of the following sequences: LTFR 2A, 2B, and 2C; or 2A, 2B, and 50.

LTFR 2A. Intermediate French I (5)
The first course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. It also introduces the student to basic techniques of literary analysis. It is expected that this sequence will be completed in the course of one academic year. This course may not be repeated for credit. *Prerequisites: LTFR 1C/CX or its equivalent, score of 3 on French language AP exam or consent of instructor.*

LTFR 2B. Intermediate French II (5)
The second course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. It also introduces the student to basic techniques of literary analysis. It is expected that this sequence will be completed in the course of one academic year. This course may not be repeated for credit. *Prerequisites: LTFR 2A or its equivalent, score of 4 on French language or 3 French literature AP exams or consent of instructor.*

LTFR 2C. Intermediate French III: Composition and Cultural Topics (4)
Designed to improve writing and conversational skills. Aims to develop written expression in terms of organization of ideas, structure, vocabulary. Grammar review. Discussions of a contemporary novel and film. May be taken in lieu of LTFR 50 as a prerequisite for upper-division courses. *Prerequisites: LTFR 2B or its equivalent, score of 5 on French language or 4 French literature AP exams or consent of instructor.*

LTFR 21. Conversation Workshop I (1)
Designed to allow students to practice and develop their oral skills by expanding the vocabulary necessary to discuss abstract ideas and by building up the confidence necessary to participate in literature classes. *Prerequisite: LIFR 1C/1CX or 1D/1DX or LTFR 2A or LTFR 2B or LTFR 2C or LTFR 50 or consent of instructor.*

LTFR 31. Conversation Workshop II (1)
A one-credit, one-class-a-week course. Designed to develop and maintain oral skills at an advanced level by discussing current cultural issues of the francophone world. *Prerequisite: LTFR 2B or LTFR 2C or LTFR 50, or consent of instructor.*

LTFR 50. Intermediate French III: Textual Analysis (4)
The third course in a three-quarter sequence designed to prepare students for upper-division French courses. The course is taught entirely in French and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. It also introduces the student to basic techniques of literary analysis. It is expected that this sequence will be completed in the course of one academic year. This course may not be repeated for credit. *Prerequisites: LTFR 2B or its equivalent, score of 5 on French language AP exam or consent of instructor.*

LTFR 60A. French for Reading Knowledge I (2)
A course designed for undergraduate and graduate students interested in developing reading skills only. No previous knowledge of French required. Texts are taken primarily from the Humanities and Social Sciences.

LTFR 60B. French for Reading Knowledge II (2)
A continuation of the course for undergraduate and graduate students interested in developing reading skills only. No previous course work in French required, though recommended. Texts are taken primarily from the Humanities and Social Sciences.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. All upper-division courses are taught in French. Additional prerequisites may be specified below.

Students are strongly encouraged to take LTFR 115 and 116 before enrolling in other upper-division French literature courses.

LTFR 115. Themes in Intellectual and Literary History (4)
This is the first course in a two-quarter sequence designed as an introduction to French literature and literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. *Prerequisites: LTFR 50 and LTFR 2C.*

LTFR 116. Themes in Intellectual and Literary History (4)
This is the second course in a two-quarter sequence designed as an introduction to French literature and

literary history. Each quarter will center on a specific theme or problem. It is recommended that majors whose primary literature is French take this sequence as early as possible. *Prerequisites: LTFR 50 and LTFR 2C.*

LTFR 121. The Middle Ages and the Renaissance (4)
Major literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of the period. Medieval texts in modern French translation. May be repeated for credit as topics vary. *Prerequisite: LTFR 115.*

LTFR 123. Eighteenth Century (4)
Major literary works and problems of the eighteenth century. May be repeated for credit as topics vary. *Prerequisite: LTFR 115.*

LTFR 124. Nineteenth Century (4)
Major literary works of the nineteenth century. May be repeated for credit as topics vary. *Prerequisite: LTFR 116.*

LTFR 125. Twentieth Century (4)
Major literary works and problems of the twentieth century. May be repeated for credit as topics vary. *Prerequisite: LTFR 116.*

LTFR 141. Literatures in French (4)
One or more periods or authors in French literature. Texts will be read in the original language. May be repeated for credit as topics vary.

LTFR 142. Literary Genres (4)
An examination of one or more major or minor genres of French literature: for example, drama, novel, poetry, satire, prose poem, essay.

LTFR 143. Major Authors (4)
A study in depth of the works of a major French writer. Recommended for students whose primary literature is French. May be repeated for credit as topics vary.

LTFR 144. Literature and Ideas (4)
This course will center on writers or movements of international literary, cultural, or ideological significance. May be repeated for credit when topics vary.

LTFR 160. Advanced Grammar and Stylistics (4)
A course for students who wish to perfect their knowledge of evolving French grammar and to increase their sensitivity to style while improving their written and spoken French.

LTFR 164. Cultural Topics (4)
A course on changing topics such as France during the 60s, contemporary social and cultural structures (the school system, economy, political parties), myths of America in France, etc. *Prerequisite: LTFR 116.*

LTFR 170. Film (4)
May include close analysis of films made in the French-speaking world from 1895 to the present; study of film theory, history, criticism; social contexts of films' emergence and changing contexts of reception; particular movement, styles, or individual directors' work.

LTFR 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTGN 191. Oral exam.

LTFR 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the staff. (P/NP grades only.) *Prerequisites: upper-division standing and special permission of department.*

LTFR 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of French literature not normally covered in courses. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTFR 240. Topics in French Literature (4)
An examination of one or more major topics in French literature. May be repeated for credit when topics vary. *Prerequisite: graduate standing or consent of instructor.*

LTFR 295. M.A. Thesis (1-8)
Research for the master's thesis. Opened for repeated registration up to eight units.

LTFR 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit. *Prerequisite: consent of the instructor.*

LTFR 297. Directed Studies: Reading Course (1-12)
This course may be desinged according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit. *Prerequisite: consent of the instructor.*

LTFR 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit. *Prerequisite: consent of the instructor.*

LTFR 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURES IN GERMAN

LOWER-DIVISION

Language and Literature Courses

LTGM 2A. Intermediate German I (5)
LTGM 2A follows the basic language sequence of the Department of Linguistics and emphasizes the development of reading ability, listening comprehension, and conversational and writing skills. The course includes grammar review and class discussion of reading and audio-visual materials. Specifically, the course prepares students for LTGM 2B and 2C. *Prerequisites: LIGM 1C/1CX or its equivalent or score of 3 on AP German language exam or consent of instructor.*

LTGM 2B. Intermediate German II (5)
LTGM 2B is a continuation of LTGM 2A for those students who intend to practice their skills in reading, listening comprehension, and writing on a more advanced level. The literary texts are supplemented by readings from other disciplines as well as audio-visual materials. *Prerequisites: LTGM 2A or score of 4 on AP German language exam or consent of instructor.*

LTGM 2C. Intermediate German III (4)
A course designed for students who wish to improve their ability to speak and write German. Students will read and discuss a variety of texts and films, and complete the grammar review begun in 2A. 2C emphasizes speaking, writing, and critical thinking, and prepares students for upper-division course work in German. *Prerequisites: LTGM 2B or equivalent or score of 5 on AP German language exam or consent of instructor.*

LTGM 60A. German for Reading Knowledge I (2)
A program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required. Texts are taken primarily from the humanities and social sciences, and include selections from publishers' catalogs, scholarly articles, and books.

LTGM 60B. German for Reading Knowledge II (2)
A continuation of the program for graduate and undergraduate students interested in developing reading skills only. No previous knowledge of German required, though recommended. Texts are taken primarily from the humanities and social sciences and include selections from publishers' catalogs, scholarly articles, and books.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTGM 100. German Studies I: Aesthetic Cultures (4)
This course offers an overview of German aesthetic culture in its various forms (literature, film, art, music, and architecture) and methods of analysis. Materials will explore the diversity of aesthetic production from the eighteenth century to the present.

LTGM 101. German Studies II: National Identities (4)
This course offers an overview of issues in contemporary and historical German cultures. How has national identity been constructed in the past? What does it mean to be a German in the new Europe? Materials include fiction, historical documents, films, and the Internet.

LTGM 123. Eighteenth-Century German Literature (4)
Major literary works as seen against the historical and intellectual background of the period. May be repeated for credit when topics vary. *Prerequisite: upper division standing or consent of instructor.*

LTGM 125. Nineteenth-Century German Literature (4)
Major literary works, authors, or movements of the nineteenth century. May be repeated for credit as topics vary.

LTGM 126. Twentieth-Century German Literature (4)
Major literary works, authors, or movements of the twentieth century. May be repeated for credit as topics vary.

LTGM 130. German Literary Prose (4)
The development of major forms and modes of German literary prose. May be repeated for credit as topics vary.

LTGM 131. German Dramatic Literature (4)
The development of the drama in Germany. May be repeated for credit as topics vary.

LTGM 132. German Poetry (4)
The development of major forms and modes of German verse. May be repeated for credit as topics vary.

LTGM 190. Seminars (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems in literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like.

LTGM 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTGN 191. Oral exam.

LTGM 198. Directed Group Study (4)
Research seminars and research, under the direction of a member of the staff. May be repeated for credit. (P/NP grades only.) *Prerequisite: permission of department.*

LTGM 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of German literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTGM 242. Nineteenth-Century German Literature (4)
Consideration of one or more major figures, texts, or trends in nineteenth-century German literature. Topic varies. May be repeated for credit.

LTGM 272. Genres, Trends, and Forms (4)
Seminars on literary genres, trends, movements, schools, and on aspects of literary forms and structures in any given era or over a certain period of time. May be repeated for credit as topics vary.

LTGM 295. M.A. Thesis (1)
Research for the master's thesis. Opened for repeated registration up to eight units.

LTGM 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTGM 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTGM 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTGM 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

GREEK LITERATURE

(See also listings under Classical Studies)

LOWER-DIVISION

LTGK 1. Beginning Greek (4)
Study of ancient Greek, including grammar and reading.

LTGK 2. Intermediate Greek (I) (4)
Continuation of study of ancient Greek, including grammar and reading. *Prerequisite: LTGK 1 or equivalent.*

LTGK 3. Intermediate Greek (II) (4)
Continuation of study of ancient Greek, including grammar and reading of texts. *Prerequisites: LTGK 1 and 2 or equivalent.*

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTGK 101. Greek Composition (4)
Greek prose composition. *Corequisites: student must be concurrently enrolled in upper-division Literature/Greek course numbered 110 or above.*

LTGK 110. Archaic Period (4)
Readings, in Greek, of texts from the archaic period. May be repeated for credit as topics vary.

LTGK 112. Homer (4)
Readings from the works of Homer. Repeatable for credit when texts and material vary.

LTGK 113. Classical Period (4)
Readings, in Greek, of texts from the fifth and fourth centuries B.C. May be repeated for credit as topics vary.

LTGK 118. Hellenistic Period (4)
Reading, in Greek, of texts from Hellenistic period. *Prerequisites: LTGK 1, 2, 3, or equivalent.*

LTGK 120. New Testament Greek (4)
Readings, in Greek, in the Greek New Testament. May be repeated for credit as topics vary.

LTGK 130. Tragedy (4)
Readings, in Greek, of one or more of the works of the classical tragedians Aeschylus, Sophocles, and Euripides. May be repeated for credit as topics vary.

LTGK 131. Comedy (4)
Readings, in Greek, of one or more of the works of Aristophanes. *Prerequisite: LTGK 1, 2, and 3, or equivalent.*

LTGK 132. History (4)
Readings, in Greek, in the works of the ancient historians, including Herodotus, Thucydides, Xenophon, and others. May be repeated for credit as topics vary.

LTGK 133. Prose (4)
Readings, in Greek, in the works of ancient prose writers. May be repeated for credit as topics vary.

LTGK 135. Lyric Poetry (4)
Readings, in Greek, of the works of the ancient lyric poets. May be repeated for credit as topics vary.

LTGK 198. Directed Group Study (4)
Directed group study in areas of Greek literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

LTGK 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Greek literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTGK 297. Directed Studies (1-12)
Guided and supervised reading in a broad area of Greek literature. Offered for repeated registration.

LTGK 298. Special Projects (4)
Treatment of a special topic in Greek literature. Offered for repeated registration.

HEBREW LITERATURE

Please see Near Eastern Literatures under Literatures of the World.

LITERATURES IN ITALIAN

LOWER-DIVISION

(See Department of Linguistics for other course offerings in first-year Italian.)

LTIT 1A. The Language of Italian Culture I (4)
An introduction to the study of the Italian language. Exercises in grammar, syntax, conversation, and writing are generated from the texts of Italian plays (Goldoni, Pirandello, Campanile, Fo). No prior study of Italian required.

LTIT 1B. The Language of Italian Culture II (4)
A continued study of the elements of Italian conversation and grammar based on cultural texts: an opera libretto, a short mystery, short movies. *Prerequisite: LTIT 1A or consent of instructor.*

LTIT 1C. The Language of Italian Culture III (4)
Further study of Italian conversation and grammar based on cultural texts: a short novel, folk music lyrics. Preparation for the second-year Italian literature/language sequence. *Prerequisite: LTIT 1B or consent of instructor.*

LTIT 2A. Intermediate Italian I (5)
A second-year course in Italian language and literature. Conversation, composition, grammar review, and an introduction to literary and nonliterary texts. *Prerequisite: LIIT 1C or LIIT 1C/1CX or its equivalent or consent of instructor.*

LTIT 2B. Intermediate Italian II (5)
Continuation of second-year Italian language and literature. Reading, writing, conversation, grammar review, and an introduction to literary genres and contemporary Italian culture and society. *Prerequisite: LTIT 2A or its equivalent or consent of instructor.*

LTIT 50. Advanced Italian (4)
This course constitutes the sixth and final quarter of the Italian language sequence. It offers an intensive study of Italian grammar, drills in conversation and composition, and readings in modern Italian literature. *Prerequisite: LTIT 2A and 2B, or consent of instructor.*

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTIT 100. Introduction to Literatures in Italian (4)
Reading and discussion of selections from representative authors. Review of grammar as needed. *Prerequisite: LTIT 50 or equivalent or consent of instructor.*

LTIT 110. Italian Literature (4)
One or more periods of authors in Italian literature. May be repeated for credit as topics vary.

LTIT 113. Love, War, and Conquest in the Italian Renaissance (4)
A critical reading of Italian Renaissance texts with special attention to those themes, forms, and ideological conflicts still operative in today's culture. May be repeated for credit when topics vary.

LTIT 115. Medieval Studies (4)
Studies in medieval culture and thought with focus on one of the "three crowns" of Italian literature: Dante, Boccaccio, or Petrarca. May be repeated for credit when course content varies. *Prerequisite: upper-division standing or consent of instructor.*

LTIT 122. Studies in Modern Italian Culture (4)
Politics, literature, and cultural issues of twentieth-century Italy. May be repeated for credit when topics vary.

LTIT 137. Studies in Modern Italian Prose (4)
A study of the chief modern Italian prosatori, including D'Annunzio, Calvino, Pavese, Pasolini, etc.

LTIT 140. Women in Italy (4)
A study of historical, political, and literary texts regarding women and feminism in Italian society.

LTIT 143. Major Italian Authors (4)
A study in depth of the works of a major Italian author. May be repeated for credit when topics vary. *Prerequisite: LTIT 100 or permission of instructor.*

LTIT 161. Advanced Stylistics and Conversation (4)
Analysis of Italian essays, journalism, literature. Intensive practice in writing and Italian conversation. *Prerequisite: LTIT 100 or consent of instructor.*

LTIT 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the literature honors program and who have completed General Literature 191. Oral examination. *Prerequisite: departmental approval.*

LTIT 198. Directed Group Study (4)
Directed group study in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

LTIT 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Italian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTIT 297. Directed Studies (1-12)
Guided and supervised reading in a broad area of Italian literature. Offered for repeated registration.

The following summer session courses may be of interest:

LTIT 7A-B-C. Introductory Intensive Italian (4-4-4)
The equivalent of a full year of Italian language is covered. Through a total immersion approach, students will be able to develop proficiency in grammar, essential reading and writing skills, basic comprehension and production of spoken Italian and language functions. Given in summer session only.

LTIT 40. Conversational Intermediate Italian (4)
Students improve their verbal skills through group conversations about issues relevant to modern life in Italy and their own life in America. Italian current events and society are discussed; students contribute oral presentations on Italian topics. Given in summer session only. *Prerequisite: Linguistics/Italian 1C/1CX or consent of instructor.*

KOREAN LITERATURE

LTKO 1A-B-C. Beginning Korean: First Year I-II-III (5-5-5)
This course will help students develop beginning-level skills in the Korean language, beginning with an introduction to the writing and sound system of the Korean language. The remainder of the course will focus on basic sentence structures and expressions. *Prerequisites: no prerequisite for 1A, but a placement test is required. 1A is a prerequisite to 1B; 1B is a prerequisite to 1C.*

LTKO 2A-B-C. Intermediate Korean: Second Year I-II-III (5-5-5)
This course will help students develop intermediate-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various daily conversational situations. *Prerequisites: LTKO 1CN or 1CH or placement test for 2A; 2A is prerequisite for 2B; 2B for 2C.*

LTKO 3. Advanced Korean: Third Year (5)
This course will help students develop advanced-level skills in the Korean language. Upon completion of this course, students are expected to have good command of Korean in various formal settings and to understand daily news broadcasts/newspapers. *Prerequisites: LTKO 2C or placement test and consent of instructor.*

LTKO 50. Intermediate Readings and Composition (4)
Designed to enhance reading and writing skills. We will read and discuss a variety of materials, including newspaper and magazine articles, short essays, and prose fiction. Writing exercises will stress improving students' ability to express themselves as well as their critical responses to reading. *Prerequisites: LTKO 2C and/or recommendation of instructor.*

LTKO 100. Readings in Korean Literature and Culture (4)
Majors issues in modern Korean history from colonial period to present, such as Japanese colonization, division, U.S./Soviet occupation, the Korean War, and authoritarian rule, industrialization, labor/agrarian movement and cultural/social issues, emerging within the globalized economy in South Korea. *Prerequisites: reading knowledge of Korean (two years college-level Korean or equivalent); upper-division standing.*

LATIN LITERATURE

(See also listings under Classical Studies)

LOWER-DIVISION

LTLA 1. Beginning Latin (4)
Study of Latin, including grammar and reading.

LTLA 2. Intermediate Latin (I) (4)
Study of Latin, including grammar and reading. *Prerequisite: LTLA 1 or its equivalent.*

LTLA 3. Intermediate Latin (II) (4)
Study of Latin, including grammar and reading. *Prerequisite: LTLA 2 or its equivalent.*

LTLA 4. Intensive Elementary Latin (12)
Equivalent of LTLA 1, 2, and 3. Given in summer session only.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTLA 100. Introduction to Latin Literature (4)
Reading and discussion of selections from representative authors of the Augustan age. Review of grammar as needed. *Prerequisite: LTLA 3 or equivalent.*

LTLA 101. Latin Composition (4)
Latin prose composition. *Prerequisites: completion of LTLA 100. Student must be concurrently enrolled in upper-division Literature/Latin course numbered 111 or above.*

LTLA 111. Pre-Augustan (4)
Readings, in Latin, in the works of Roman writers of the pre-Augustan period. May be repeated for credit as topics vary.

LTLA 114. Vergil (4)
Readings from the works of Vergil. Repeatable for credit when texts and material vary.

LTLA 116. Silver Latin (4)
Readings, in Latin, in the works of Roman writers of the Silver Age. May be repeated for credit as topics vary.

LTLA 131. Prose (4)
Readings, in Latin, of the work of Roman prose writers. May be repeated for credit as topics vary.

LTLA 132. Lyric and Elegiac Poetry (4)
Readings, in Latin, in the works of lyric and elegiac poets. May be repeated for credit as topics vary.

LTLA 133. Epic (4)
Readings in Latin in the works of the Roman epic poets. *Prerequisites: LTLA 1, 2, 3 or its equivalent.*

LTLA 134. History (4)
Readings, in Latin, in the works of Roman historians. May be repeated for credit as topics vary.

LTLA 135. Drama (4)
Readings, in Latin, in the works of Roman dramatists. *Prerequisite: LTLA 3 or equivalent; LTLA 100 recommended.* Repeatable for credit when topics vary.

LTLA 198. Directed Group Study (4)
Directed group study in areas of Latin literature not normally covered in courses. May be repeated three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

LTLA 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Latin literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTLA 297. Directed Studies (1-12)
Guided and supervised reading in a broad area of Latin literature. Offered for repeated registration.

LTLA 298. Special Projects (4)
Treatment of a special topic in Latin literature. Offered for repeated registration.

RUSSIAN LITERATURE

LOWER-DIVISION

LTRU 1A-B-C. First-Year Russian (5-5-5)
First-year Russian, with attention to reading, writing, and speaking.

LTRU 1AB and 1BC. Intensive Beginning Russian (7.5-7.5)
Intensive study of beginning Russian. Covers material of first-year Russian in two quarters. Development of all facets of language proficiency—speaking, listening, reading, writing. Attention given to cultural materials as well.

LTRU 2A-B-C. Second-Year Russian (5-5-5)
Second-year Russian grammar, with attention to reading, writing, and speaking. *Prerequisite: LIRU 33/53, LTRU 1A-B-C or equivalent.*

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Note: Many Russian literature courses are cross-listed as courses in European and Eurasian Literatures (LTEU). Lectures and discussions are conducted in English, and students may choose whether to do the reading and writing assignments in translation, in which case they should enroll for the course under its LTEU rubric, or in Russian, in which case they should enroll under the LTRU rubric. Other courses are offered in English translation with one-unit Foreign Language Discussion Sections (XL course number suffix) for students who wish to read and discuss some or all of assignments in Russian.

LTRU 104A-B-C. Advanced Practicum in Russian (4-4-4)
Development of advanced skills in reading, writing, and conversation. Course based on written and oral texts of various genres and styles. Individualized program to meet specific student needs. *Prerequisite for 104A: LTRU 2C or equivalent.*

LTRU 110A-B-C. Survey of Russian and Soviet Literature in Translation, 1800–Present (4-4-4)
A study of literary works from Pushkin to the present. LTRU 110A is not a prerequisite for LTRU 110B, and LTRU 110B is not a prerequisite for LTRU 110C.

110A. 1800–1860
110B. 1860–1917
110C. 1917–present

LTRU 123. Single Author in Russian Literature (4)
Study of the works of a single Russian author. May be repeated for credit two times. *Prerequisite: LTRU 101C, its equivalent, or permission of instructor.*

LTRU 129. Twentieth-Century Russian or Soviet Literature (4)
A study of literary works from the twentieth century. May be repeated for credit as topics vary. *Prerequisite: upper-division standing or consent of instructor.*

LTRU 150. Russian Culture (4)
An introduction to Russia's past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present. *Prerequisite: upper-division standing.*

LTRU 150XL. Russian Culture: The Modern Period—Foreign Language Discussion Section (1)
Students will exercise advanced Russian language skills to read and discuss materials in LTRU 150. This section is taught by the course professor, has no final examination, and does not affect the student's grade in the parent course. *Prerequisites: co-registration in LTRU 150; four quarters of Russian language study or the equivalent.*

LTRU 198. Directed Group Study (4)
Directed group study in areas of Russian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

LTRU 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of Russian literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

LITERATURES IN SPANISH

LOWER-DIVISION

Language and Literature Courses

Students entering the Spanish language/literature program must have completed one year of college-level Spanish (Linguistics/Spanish 1C/1CX) or its equivalent at another institution or have the consent of the instructor. Ordinarily, students take LTSP 2A, 2B, 2C, and one or more courses from the 50 sequence. Native speakers are encouraged to take LTSP 2D.

LTSP 2A. Intermediate Spanish I: Foundations (5)
Course is taught in Spanish, emphasizing the development of reading ability, listening comprehension, and writing skills. It includes grammar review, weekly compositions, and class discussions. Successful completion of LTSP 2A satisfies the requirement for language proficiency in Revelle College. *Prerequisites: completion of LTSP 1C/1CX, 1D/DX, or the equivalent score of 3 on AP Spanish language exam, or instructor consent.*

LTSP 2B. Intermediate Spanish II: Readings and Composition (5)
Review of major points of grammar with emphasis on critical reading and interpretation of Spanish texts through class discussions, vocabulary development, and written compositions. It is a continuation of LTSP 2A. *Prerequisites: LTSP 2A or score of 4 on AP Spanish language or 3 on AP Spanish literature exams or consent of instructor.*

LTSP 2C. Intermediate Spanish III: Cultural Topics and Composition (4)
Continuation of LTSP 2B, with special emphasis in writing and translation. It includes discussion of cultural topics as well as grammar review and composition, further developing the ability to read articles, essays, and longer pieces of fiction/nonfictional texts. *Prerequisites: LTSP 2B or equivalent or score of 5 on AP Spanish language or 4 on AP Spanish literature exams or consent of instructor.*

LTSP 2D. Intermediate/Advanced Spanish: Spanish for Bilingual Speakers (4)
Spanish for native speakers. Designed for bilingual students seeking to become biliterate. Reading and writing skills stressed with special emphasis on improvement of written expression and problems of grammar and orthography. Prepares native speakers with little or no formal training in Spanish for more advanced courses. *Prerequisite: native speaking ability and/or recommendation of instructor.*

LTSP 2E. Advanced Readings and Composition for Bilingual Speakers (4)
Second course in a sequence designed for bilingual students seeking to become bi-literate. Special emphasis given to improvement of written expression, grammar, and orthography. Prepares bilingual students with little or no formal training in Spanish for more advanced course work. *Prerequisites: LTSP 2D native Spanish speaking ability and/or recommendation of instructor.*

LTSP 21. Conversation Workshop I (1)
Allows students with a basic grounding in Spanish to discuss a variety of topics related to literary and cultural issues. Vocabulary development, use of idiomatic expression, and advancement of oral proficiency in Spanish. May be taken as an adjunct to lower-division LTSP courses. Recommended for students planning to sutdy abroad. *Prerequisite: LISP IC/ICX or LTSP ID/IDX or LTSP 2A or 2B or 2C or 2D or 50A or 50B or 50C.*

LTSP 31. Conversation Workshop II (1)
Enhances intermediate/advanced students' command of spoken Spanish through debates on literary and cultural issues and the formulation and expression of thoughts in Spanish. May be taken as an adjunct to lower- and upper-division LTSP courses. Recommended for students planning to study abroad. *Prerequisite: LISP IC/ICX or LISP ID/IDX or LTSP 2A or 2B or 2C or 2D or 50A or 50B or 50C.*

LTSP 41. Conversation and Orthography Workshop (1)
The workshop format of this course allows students to attain a stronger command of skills in matters of Spanish orthography, spelling, punctuation, and accent rules. May be taken as an adjunct to lower- or upper-division LTSP courses. Recommended for students planning to study abroad. *Prerequisite: LISP IC/ICX or LISP ID/IDX or LTSP 2A or 2B or 2C or 2D or 50A or 50B or 50C.*

LTSP 50A. Readings in Peninsular Literature (4)
An introduction to Peninsular literature, this course offers a selection of major works and introduces students to literary analysis through reading extensive texts in Spanish. Two or more quarters of courses in

the 50 series are suggested before students proceed to upper-division courses. *Prerequisite: two years of college Spanish or the equivalent.*

LTSP 50B. Readings in Latin American Literature (4)
An introduction to Latin American literature, this course offers a selection of major works and introduces students to literary analysis through reading extensive texts in Spanish. Two or more quarters of courses in the 50 series are suggested before students proceed to upper-division courses. *Prerequisite: two years of college Spanish or the equivalent.*

LTSP 50C. Readings in Latin American Topics (4)
An introduction to major topics in Latin American literature, this course focuses on the literature of a particular region, period, or movement. Works vary from those in 50B and introduce students to literary analysis through reading extensive texts in Spanish. *Prerequisite: two years of college Spanish or the equivalent.*

LTSP 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Note: As of fall 1992, students must have taken at least one (but preferably two) course(s) in the LTSP 50A-B-C sequence with a grade of C– or better before enrolling in upper-division courses. Without fulfillment of this prerequisite, students must obtain the consent of the instructor of the requested course.

LTSP 100. Major Works of the Middle Ages (4)
Major Spanish literary works of the Middle Ages and Renaissance as seen against the historical and intellectual background of this period. *Prerequisites: upper-division standing, LTSP 50A, 50B, or 50C, or consent of instructor.*

LTSP 107. Literature of the Fifteenth Century (4)
Survey of cultural texts including courtly romances, political poetry, Columbus's letters, and the tragicomedia *La Celestina*. Issues of gender, blood purity, social estates, and colonialism will be discussed. Repeatable for credit when topics vary.

LTSP 116. Representations of Spanish Colonialism (4)
Analysis of selected materials that represent the cultural and political relationship between Spain and its colonies. Close reading of literary texts and historical documents. Specific periods covered will fall between the origins of empire in the early sixteenth century to the demise of imperial Spain in 1898; topics may include cultural exchanges between Spain and Latin America, the Philippines, or the U.S. Southwest. Repeatable for credit as topics vary.

LTSP 119AB. Cervantes: Teatro y Novelas (4)
Study of Cervantes's innovations in the short narrative form and theatrical production during the late sixteenth and early seventeenth centuries. Special attention to textual structures and ideological elements such as gender, religion, and early modern conceptions of ethnicity, "race," and nation. This course fulfills the requirement for Spanish literature majors.

LTSP 119C. Cervantes: Don Quixote (4)
Close reading of the 1605 and 1615 texts with special attention to the social and cultural background of the early 17th century in Spain. This course fulfills the requirement for Spanish literature majors. *Prerequisites: LTSP 50A and either 50B or 50C.*

LTSP 122. The Romantic Movement in Spain (4)
This course will explore the historical context of the emergence of a Romantic movement in Spain, particularly the links between Romanticism and liberalism. Major Romantic works in several genres will be studied in depth. *Prerequisite: upper-division standing or consent of instructor.*

LTSP 123. Topics in Modern Spanish Culture (4)
Investigation of selected topics concerning Spanish cultural production after 1800. Topics might focus on a genre (film, popular novel, theater) or on the transformations of a theme or metaphor (nation, femininity, the uncanny). Repeatable for credit as topics vary.

LTSP 125 Spanish Modernisms (4)
Analysis and discussion of forms, movements, and issues arising in Spanish culture between 1898 and 1936 in relation to the loss of empire, accelerating modernization and new social movements. Repeatable for credit as topics vary.

LTSP 129. Spanish Writing after 1939 (4)
Analysis and discussion of literary production during and after the Franco dictatorship. May focus on specific genres, sub-period, or issues. Repeatable for credit as topics vary.

LTSP 130A. Development of Spanish Literature (4)
An introduction to the major movements and periods of Spanish literary history, centered on close reading of representative texts, but aimed at providing a sense of the scope of Spanish literature and its relation to the course of Spain's cultural and social history. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Spanish (peninsular) literature course. *Prerequsites: LTSP 50A and either 50B or 50C.*

LTSP 130B. Development of Latin American Literature (4)
An introduction to major movements and periods in Latin American literature, centered on a study of key works from pre-Columbian to the present time. Texts will be seen within their sociohistorical context and in relation to main artistic trends of the period. This course is required of all Spanish literature majors. It is strongly recommended that this course be taken before any other upper-division Latin American literature course. *Prerequisites: LTSP 50A and either 50B or 50C.*

LTSP 133. Contemporary Latin American Literature (4)
A study of the major literary works and problems in Latin America from 1900 to the present as seen against the historical context of the period. Repeatable for credit as topics vary.

LTSP 134. Literature of the Southern Cone (4)
Study of movements, traditions, key authors, or major trends in Argentine, Paraguayan, Uruguayan, and Chilean literatures, including gaucho poetry, the realist novel, modern urban narratives, the Borges School, etc. Repeatable for credit as topics vary.

LTSP 135A. Mexican Literature before 1910 (4)
Explores the relationships among cultural production, politics, and societal changes in Mexico before the 1910 Revolution, specifically the roles of intellectuals and popular culture in nation-building and modernization. Readings may include didactic literature and historiographic writings, forms of popular discourse, as well as novels and poetry. Repeatable for credit as topics vary.

LTSP 135B. Modern Mexican Literature (4)
Study of popular novels, movements, traditions, key authors, or major trends in modern Mexican literature. May be repeated for credit as topics vary.

LTSP 136. Andean Literatures (4)
Study of movements, traditions, key authors, or major trends in Peruvian, Ecuadorian, and Bolivian literatures, such as indigenismo, urban narrative, and the works of authors such as Vallejo, Icaza, Arguedas, Vargas Llosa. Repeatable for credit as topics vary.

LTSP 137. Caribbean Literature (4)
Study of movements, traditions, key authors, or major trends in Caribbean literature in Spanish, such as the romantic movement, the literature of independence, the essay tradition, Afro-Antillean literature, the historical novel. May be repeated for credit as topics vary.

LTSP 138. Central American Literature (4)
Study of movements, traditions, key authors, or major trends in the literatures of Guatemala, El Salvador, Nicaragua, Honduras, Costa Rica, and Panama, such as the anti-imperialist novel, indigenismo, guerrilla poetry, and testimonio. Repeatable for credit as topics vary.

LTSP 140. Latin American Novel (4)
A study in depth of selected novelists of Spanish America. May be organized around a specific theme or idea which is traced in its development through the narratives. Course may be repeated for credit when topics vary.

LTSP 141. Latin American Poetry (4)
A critical study of some of the major poets of Spanish America, focusing on the poet's central themes, the evolution of poetic style, and the significance of the poetry to the historical context. May be repeated as topics vary.

LTSP 142. Latin American Short Story (4)
Readings and interpretation of short story form in Latin America. Focus is primarily nineteenth or twentieth century. May be repeated for credit as topics vary.

LTSP 150B. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)
Cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, film, or other cultural practices. Specific periods covered will fall between the Kennedy years to the era of neoliberalism and the creation of "Hispanic" or Latino identities. Repeatable for credit as topics vary.

LTSP 151. Topics in Chicano/a-Latino/a Cultures (4)
Cross-disciplinary study of late twentieth-century Chicano/a-Latino/a literature, the visual and performing arts, film, or other cultural practices. Representative areas of study are social movements, revolution, immigration, globalization, gender and sexuality, cultures of the U.S.-Mexico border, and Chicano/a-Mexicano/a literary relations. Repeatable for credit as topics vary.

LTSP 153. Chicano/a and Latino/a Poetry (4)
A study of themes and issues in the poetic production of Latino communities in the U.S. Every effort will be made to select texts in Spanish but some may be bilingual. Repeatable for credit as topics vary.

LTSP 154. Latino/a and Chicano/a Literature (4)
This course will study the representation of a variety of social issues (immigration, racism, class differences, violence, inter/intra-ethnic relations, etc.) in works written in Spanish by Latino/a and Chicano/a writers. Repeatable for credit as topics, texts, and historical periods vary.

LTSP 160. Spanish Phonetics (4)
A comparative study of the English and Spanish phonetic systems. Includes a study of the organs of articulation, manner of articulation stress and intonation patterns, as well as dialectal variations of Spanish. *Prerequisites: upper-division standing, LTSP 50A-B-C, or consent of instructor.*

LTSP 162. Spanish Language in the United States (4)
A sociolinguistic study of the popular dialects in the U.S.A. and their relation to other Latin American dialects. The course will cover phonological and syntactic differences between the dialects as well as the influence of English on the Southwest dialects.

LTSP 164. Language and Society (4)
A comparison of language policies in Latin America and that of other Third World countries and its reflection in literature. *Prerequisites: upper-division standing, LTSP 50A-B-C, or consent of instructor.*

LTSP 165. History of the Spanish Language (4)
Course traces the development of the Spanish language from Vulgar Latin to modern Spanish and focuses on phonological, morphological and syntactic changes across time and space. Texts from various periods/regions of Spain and Latin America will be used. *Prerequisites: upper-division standing, LTSP 50A-B-C, or consent of instructor.*

LTSP 166. Creative Writing (4)
A workshop designed to foster and encourage writing in Spanish of students working on short forms of fiction. The workshop will include discussions of techniques and intensive writing. *Prerequisites: completion of LTSP 50A-B-C, upper-division standing, or consent of instructor.*

LTSP 170. Contemporary Theories of Cultural Production (4)
Selected readings in recent cultural and literary theory. Students will be exposed to a variety of methodologies drawn from the Latin American, European, and U.S. traditions. Final project consists of a practical "application" of a method or methods to a specific cultural object. This course is recommended for students who plan to pursue graduate work in literature.

LTSP 172. Indigenista Themes in Latin American Literature (4)
Study of the literary modes by which nineteenth and twentieth century authors have interpreted the themes of indigenous survival and resistance in Latin America, primarily in Mexico and the Andean region. Repeatable for credit as topics vary.

LTSP 173. Problems in Spanish and Latin American Literary History (4)
Study of the issues involved in understanding the development process of literary expression; the problem of genre; the relation of literature to social institutions; the function of literary influence and tradition; the relation of popular and print cultures. May be repeated for credit as topics vary.

LTSP 174. Topics in Culture and Politics (4)
Study of the relationships between cultural production (literature, film, popular cultures), social change, and political conflict, covering topics such as colonialism, imperialism, modernization, social movements, dictatorship, revolution. Repeatable for credit as topics vary.

LTSP 175. Gender, Sexuality, and Culture (4)
This course will examine issues of gender, sexuality, and culture in Spanish, Latin American, and/or Chicana/o literatures. Repeatable for credit as topics, texts, and historical periods vary.

LTSP 176. Literature and Nation (4)
Study of literature as a means through which the nation has been imagined and as a site of debates over national identity and citizenship. Course materials may focus on Spain and/or Latin America. Repeatable for credit as topics vary.

LTSP 177. Literary and Historical Migrations (4)
This course will focus on a variety of Latin American and/or Spanish intra- and inter-national migrations throughout the world and on the literature produced by these exiles or immigrants. Repeatable for credit as topics, texts, and historical periods vary.

LTSP 190. Seminars (4)
These seminars are devoted to a variety of special topics, including the works of single authors, genre studies, problems of literary history, relations between literature and the history of ideas, literary criticism, literature and society, and the like. The student may enroll in more than one seminar in a single quarter.

LTSP 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTGN 191. Oral Exam.

LTSP 198. Directed Group Study in Spanish Literature (4)
Research seminars and research, under the direction of a member of the staff. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

LTSP 199. Special Studies (2 or 4)
Tutorial: individual guided reading in areas of Spanish literature not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTSP 224. Golden Age Studies (4)
Consideration of one or more major figures, texts, trends, or problems in Spanish Golden Age studies. May be repeated for credit as topics vary.

LTSP 252. Studies in Modern Hispanic Literature and Culture (4)
Major trends and figures considered in the context of late nineteenth-and twentieth-century Hispanic culture. May be repeated for credit as topics vary.

LTSP 258. Spanish American Prose (4)
Consideration of one or more major figures, texts, trends, or problems in Spanish American prose. May be repeated for credit as topics vary.

LTSP 272. Literature and Society Studies (4)
Special topics in practical criticism involving social and economic historical perspectives. May be repeated for credit as topics vary.

LTSP 275. Latin American(ist) Literary and Cultural Theories Since the 1960s (4)
A historical survey of late twentieth-century literary and cultural criticism in and about Latin America, focusing on questions of political economy and periodization, cultural heterogeneity and transculturation, gender and sexuality, and the relationships between literary, popular, and mass cultures. *Prerequisite: graduate standing.*

LTSP 295. M.A. Thesis (1-8)
Research for the master's thesis. Open for repeated registration up to eight units. (S/U grades only.)

LTSP 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTSP 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTSP 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LTSP 299. Dissertation (1-12)
Research for the dissertation. Offered for repeated registration. Open only to Ph.D. students who have advanced to candidacy.

LITERATURE/THEORY

Courses in theory may apply to various literature majors. Please consult your adviser.

Additional theory courses are offered in the various department sections. See quarterly course descriptions in the Department of Literature office, first floor LIT building.

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTTH 110. History of Criticism (4)
A critical and interpretive review of some of the major documents in criticism from the classical period to the present time.

LTTH 115. Introduction to Critical Theory (4)
(Formerly LTTH 100) A critical review of major contemporary theories of the nature of literature, its sociocultural function, and appropriate modes of evaluation.

LTTH 130. Introduction to Linguistic and Discourse Theories (4)
An introduction to linguistic and discourse theories, analyses of linguistic structures, elements of sociolinguistics, language use, language acquisition, and bilingualism.

LTTH 150. Topics in Critical Theory (4)
Selected topics in critical theory such as: a particular mode of literary theory; comparative study of theories of text and image; a problem or theme in the history of theory; issues involved in the relationship between fiction and other discourses (science, law, history, philosophy, music). Repeatable for credit when topics vary. *Prerequisite: upper-division standing or consent of instructor.*

LTTH 198. Directed Group Study (4)
Directed group study, under the guidance of a member of the faculty, in an area not covered in courses currently offered by the department (P/NP only)

LTTH 199. Special Studies (2 or 4)
Individual reading in an area not covered in courses currently offered by the department. (P/NP only).

GRADUATE

LTTH 200A. Text/Culture/Critical Practice (4)
An introduction to theories and practices of literary and cultural criticism. Topics may vary, but emphasis will be on terminology, methods of readings, modes of interdisciplinary analysis and argumentation, recent debates on questions of theory, history, textual scholarships, etc. *Prerequisite: registered doctoral student in literature.*

LTTH 200B. Problems in Contemporary Literary Theory (4)
The focus is feminist literary/cultural theories and their relations with major contemporary theoretical discourses (e.g., psychoanalysis, poststructuralism, and various forms of historicism). *Prerequisite: registered doctoral student in literature.*

LTTH 200C. Cultural Perspectives and Cultural Criticism (4)
Literary and cultural relations between the First and Third Worlds, colonialism and neo-colonialism, orality and literacy, construction of ethnicity, formation of canon, and popular culture and the market. *Prerequisite: registered doctoral student in literature.*

LTTH 201. Contemporary Theoretical Debates and Critical Discourses (4)
An introduction to a wide range of theoretical and methodological issues, schools of thought, and interpretative styles in contemporary literary studies. Required of all M.A. students in the Department of Literature, normally in their first quarter in the program. *Prerequisites: admission to the M.A. program in the Department of Literature or consent of instructor; graduate standing.*

LTTH 210. Major Periods and Movements (4)
Historically oriented study of past criticism and critical theory as they pertain to contemporary interests and concerns. May be repeated for credit when topics vary.

LTTH 220. Theories of Literary Criticism (4)
Close study of any of the several bodies of literary theory currently applied to literary criticism: psychoanalytic, Marxist, historicist, semiotic, feminist, hermeneutic, reader-response, among others. May be repeated for credit when topics vary.

LTTH 230. Comparative Literary Theory (4)
Comparison of theoretical approaches across cultures (e.g., East/West studies), across modes of discourse (e.g., oral/written), or across media (e.g., literature/art or literature/music). May be repeated for credit when topics vary.

LTTH 296. Research Practicum (1-12)
Research project to be developed by a small group of students under the continued direction of individual faculty members. Primarily a continuation of a previous graduate seminar. The 296 courses do not count toward the seminar requirement. Repeatable for credit.

LTTH 297. Directed Studies: Reading Course (1-12)
This course may be designed according to an individual student's needs when seminar offerings do not cover subjects, genres, or authors of interest. No paper required. The 297 courses do not count toward the seminar requirement. Repeatable for credit.

LTTH 298. Special Projects: Writing Course (1-12)
Similar to a 297, but a paper is required. Papers are usually on subjects not covered by seminar offerings. Up to two 298s may be applied toward the twelve-seminar requirement of the doctoral program. Repeatable for credit.

LITERATURES OF THE WORLD

AFRICAN LITERATURES

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTAF 110. African Oral Literature (4)
Survey of various genres of African and oral literary traditions. Oral narrative genres, investigation of proverb, riddle, praise poetry, and epic. Development and use of a methodology to analyze aspects of performance, composition, and education in oral traditional systems.

LTAF 120. Literature and Film of Modern Africa (4)
This course traces the rise of modern literature in traditional African societies disrupted by the colonial and neocolonial experience. Contemporary films by African and Western artists will provide an additional insight into the complex social self-images of the continent.

LITERATURES OF THE AMERICAS

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTAM 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

LTAM 100. Latino/a Cultures in the United States (4)
An introductory historical and cultural overview of the various Latino/a populations in the U.S. with a study of representative cultural texts.

LTAM 101. Early Latino/a-Chicano/a Cultures: 1848–1960 (4)
A cross-disciplinary study of nineteenth- and early twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

LTAM 102. Contemporary Chicano/a-Latino/a Cultural Production: 1960 to Present (4)
A cross-disciplinary study of late twentieth-century Latino/a-Chicano/a literature, the visual and performing arts, and other cultural practices. May be repeated for credit as topics vary.

LTAM 105. Gender and Sexuality in Latino/a Cultural Production (4)
A study of the construction of differences in gender and sexual orientation in Latino/a-Chicano/a literature and other cultural production with an emphasis on examining various theoretical/ideological perspectives on these issues. May be repeated for credit as topics vary.

LTAM 106. Modern Chicana and Mexican Women Writings (4)
A study of themes and issues in the writings of Chicana and Mexican women with a view toward establishing connections while recognizing national and cultural differences between the two. May be repeated for credit as topics vary.

LTAM 107. Comparative Latino/a and U.S. Ethnic Cultures (4)
A comparative and intersecting study of Latino/a and other U.S. ethnic cultures. Literary texts will be viewed as "windows" into real time and spaces where cultures meet and mix. May be repeated for credit as topics vary.

LTAM 108. Chicano/a and Latino/a Cultures: Intellectual and Political Traditions (4)
The course will center on Chicano/a-Latino/a writers and movements of literary, intellectual, cultural, or political significance. Texts may be read in the original language or in English. May be repeated for credit as topics vary.

LTAM 109. Cultural Production of the Latino/a Diasporas (4)
A study of the cultural production of Latino/a immigrant groups with a focus on the literary representation of homeland, national culture, and the forces that led to migration. May be repeated for credit as topics vary.

LTAM 110. Latin American Literature in Translation (4)
Reading of representative works in Latin American literature with a view to literary analysis (form, theme, meaning), the developmental processes of the literature, and the many contexts: historical, social, cultural. Texts may be read in English. May be repeated for credit as topics vary.

LTAM 111. Latin American Literature in Translation (4)
Comparative survey of Caribbean literatures from the Spanish, French, English, and Dutch Caribbean. Literary texts trace historical paradigms including the development of plantation slavery, emancipation, the quest for nationhood, migration, and transnational identities. Films and music may complement discussion. *Prerequisite: upper-division standing.*

LTAM 120. Mexican Literature in Translation (4)
Study of popular novels, movements, traditions, key authors, or major trends in modern Mexican literature. Texts may be read in English. May be repeated for credit as topics vary.

LTAM 130. Reading North by South (4)
An analysis of the readings and appropriations of European and U.S. traditions by Latin American, Caribbean, and Filipino writers. The course addresses philosophies, ideologies, and cultural movements and explores the specific literary strategies used by authors in constructing their paricular "cosmovisión".

LTAM 132. The Dark Side of Enlightenment in Spain, the Americas, and the Philippines (4)
This course deals with the cultural production of Spain, the Philippines, Latin America, and the U.S. to examine views (both optimistic and pessimistic) on the Enlightenment as a mode of conducting scientific investigation of nature, constituting forms of government, and imagining the future. May be repeated for credit as topics vary.

EAST ASIAN LITERATURES

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTEA 100A. Classical Chinese Poetry in Translation (4)
A survey of different genres of traditional Chinese poetry from various periods.

LTEA 100B. Modern Chinese Poetry in Translation (4)
A survey of Chinese poetry written in the vernacular from 1918 to 1949.

LTEA 100C. Contemporary Chinese Poetry in Translation (4)
A survey of Chinese poetry development from 1949 to the present.

LTEA 110A. Classical Chinese Fiction in Translation (4)
The course will focus on a few representative masterpieces of Chinese literature in its classical age, with emphasis on the formal conventions and the social or intellectual presuppositions that are indispensable to their understanding. May be repeated for credit when topics vary.

LTEA 110B. Modern Chinese Fiction in Translation (4)
A survey of representative works of the modern period from 1919 to 1949. May be repeated for credit when topics vary.

LTEA 110C. Contemporary Chinese Fiction in Translation (4)
An introductory survey of representative texts produced after 1949, with particular emphasis on the social, cultural, and political changes. May be repeated for credit when topics vary.

LTEA 120A. Chinese Films (4)
A survey of representative films from different periods of Chinese cinematic development. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 120B. Taiwan Films (4)
A survey of "New Taiwan Cinema" of the Eighties and Nineties. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 120C. Hong Kong Films (4)
An examination of representative works of different film genres from Hong Kong. Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 120D. Filming Chinese Literature (4)
An investigation of various adaptations of both traditional and modern literary texts from the three main Chinese communities (China, Taiwan, and Hong Kong). Priority may be given to Chinese Studies majors and Literature majors. Repeatable for credit when topics vary.

LTEA 130. Earlier Japanese Literature in Translation (4)
An introduction to earlier Japanese (bungo) literature in translation. Will focus on several works, placing their forms in the historical context. No knowledge of Japanese required. Repeatable for credit when topics vary.

LTEA 132. Later Japanese Literature in Translation (4)
An introduction to later Japanese (kogo) literature in translation. Will focus on several "modern" works, placing their form in the historical context. No knowledge of Japanese required. Repeatable for credit when topics vary.

LTEA 136. Special Topics in Japanese Literature (4)
The course will focus on important problematics of literary studies as they relate to Japan (e.g., "feminism," "modernity," "literary mode of production," "Orientalism and nativism"). No knowledge of Japanese required. May be repeated for credit as topics vary.

LTEA 140. Modern Korean Literature in Translation from Colonial Period (4)
A survey of modern Korean prose fiction and poetry from the colonial period. Exploration of major issues such as Japanese colonization, rise of left-wing and right-wing nationalisms, construction of national culture, and relations between tradition and modernity.

LTEA 141. Modern Korean Literature in Translation from 1945 to the Present (4)
A survey of modern Korean prose fiction and poetry from 1945 to the 1990s. Examination of literary representations of national division, the Korean War, accelerated industrialization, authoritarian rule, and the labor/agrarian movements.

LTEA 142. Korean Film, Literature, and Popular Culture (4)
A study of modern Korean society and its major historical issues as represented in film, literature, and other popular cultural media such as TV and music video. We will explore additional issues such as cinematic adaptations of prose fiction, fluid distinctions between popular literature and "serious" literature, and the role of mass media under authoritarian rule.

LTEA 143. Gender and Sexuality in Korean Literature and Culture (4)
A study of constructions of gender and sexuality in pre-modern and modern Korean societies. We will discuss literary works as well as historical and ethnographic works on gender relations, representations of masculinity and femininity, and changing roles of men and women in work and family.

LTEA 144. Korean American Literature and Other Literatures of Korean Diaspora (4)
An examination of the experiences of the Korean diaspora linked to the historical contexts of modern Korea, Japan, the United States, and other countries. We will focus on literature both about Korea and the Korean immigrant experience written in the United States but will also read from and about other Korean diasporic contexts.

LTEA 145. Literature, History, and Colonial and Postcolonial Modernity in Korea (4)
Comparative examination of historiographical and literary representations of major issues such as nationalism, industrialization, class division, gender, and sexuality. Literary re-writings of modern Korean history and recent revisionist historiographical works and trends. *Prerequisite: upper-division standing.*

LTEA 198. Directed Group Study (4)
Research seminars and research, under the direction of a faculty member.

LTEA 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas not normally covered in courses. (P/NP grades only.)

EUROPEAN AND EURASIAN LITERATURES

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTEU 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. *No prerequisites.*

LTEU 102. Women in Antiquity (4)
Selected topics in classical culture including women and myth, women in Greek and Roman society, and the representation of women in classical literature. May be repeated for credit as topics vary.

LTEU 105. Medieval Studies (4)
Studies in medieval culture and thought with focus on one of the "three crowns" of Italian literature: Dante,

Boccaccio, or Petrarca. May be repeated for credit when course content varies.

LTEU 109. Studies in Eighteenth-Century European Literature (4)
Topics to be considered include the age of sensibility, enlightenment, neo-classicism. Attention given to historical and cultural contexts.

LTEU 110. European Romanticism (4)
Attention given to historical and cultural contexts. Topics to be considered include the concept of nature, the reaction to science, the role of the imagination. May be repeated for credit as topics vary.

LTEU 120. Literatures in French (4)
One or more periods or authors in French literature. Texts read in English. May be repeated for credit as topics vary.

LTEU 130. German Literature in Translation (4)
One or more aspects of German literature, such as major authors, the contemporary novel, nineteenth-century poetry, German expressionism. Texts may be read in English or the original language. May be repeated for credit as topics vary.

LTEU 138. Single Author in German Literature (4)
A study of literary works by a single German author. All readings will be in English, although when appropriate, a separate German language discussion section will be offered for students interested in reading and discussing the texts in German. *Prerequisite: upper-division standing.*

LTEU 139. Marx/Nietzsche/Freud (4)
Intensive examination of the major ideas of all three writers, with special attention to the literary styles and problematic aspects of their work. Often offered with an optional LTEU 139XL section, for students who are prepared to work and prefer to work in the original German.

LTEU 140. Italian Literature in Translation (4)
One or more periods or authors in Italian literature. Texts may be read in English. May be repeated for credit as topics vary.

LTEU 145. Studies in Modern Italian Poetry (4)
Study of the chief modern Italian poets, including Montale, Ungaretti, and Quasimodo, with attention to long, poetic form and contemporary Italian culture. *Prerequisite: upper-division standing.*

LTEU 146. Studies in Modern Italian Prose (4)
A study of the chief modern Italian *prosatori* including D'Annunzio, Calvino, Pavese, Pasolini, etc. Repeatable for credit. (Conjoined with LTIT 137.)

LTEU 147. Women in Italy (4)
A study of historical, political, and literary texts regarding women and feminism in Italian society.

LTEU 150A-B-C. Survey of Russian and Soviet Literature in Translation, 1800 to the Present
A study of literary works from Pushkin to the present.

150A. 1800–1860
150B. 1860–1917
150C. 1917–present

LTEU 153. Twentieth-Century Russian or Soviet Literature in Translation (4)
A study of literary work from the twentieth century. May be repeated for credit as topics vary.

LTEU 154. Russian Culture (4)
An introduction to Russia's past and present through the cross-disciplinary study of literature, the visual and performing arts, social and political thought, civic rituals, popular entertainments, values and practices from 1825 to the present. *Prerequisite: upper-division standing.*

LTEU 158. Single Author in Russian Literature in Translation (4)
A study of literary works by a single Russian author. All readings will be in English. May be repeated for credit when authors vary.

NEAR EASTERN LITERATURES

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LTNE 100. The Bible and Western Literature (4)
Biblical and related texts that influenced the great writers of the Middle Ages and Renaissance, including sections from the Jewish and Christian scriptures. *Prerequisite: upper-division standing or consent of instructor.*

LTNE 101. The Bible: The Narrative Books (4)
Examination of the Biblical accounts in their ancient Near Eastern context. Emphasis will be placed on literary- and form-criticism and textual analysis. Attention to related literature and to archaeological data; consideration of theological issues. Repeatable for credit as topics vary.

LTNE 102. The Bible: The Prophetic Books (4)
The prophetic books of the Bible in their historical contexts. The relationship between the prophetic and narrative books. Literary/critical analyis, theological issues, reference to archaeological data. Repeatable for credit as topics vary.

LTNE 103. The Bible: The Poetic Books (4)
Study of biblical peotry, its settings, genres, and themes. Analysis of metre and structure with particular attention to the use of parallel. Comparison with Canaanite and Mesopotamian examples. May be repeated for credit. *Prerequisite: upper-division standing.*

LTNE 120A. Topics in Early Christian Literature: The New Testament (4)
An introduction to the writings of the New Testament, their creation, collection, and critical study.

LTNE 120F. Topics in Early Christian Literature: Christianity and the Roman Empire (4)
An evaluation of significant attempts (from Edward Gibbon to Peter Brown) to explain the "rise" of Christianity and the "decline and fall" of the Roman Empire.

LITERATURES OF THE WORLD

In both lower- and upper-division world literature courses, texts may be read in English translation when necessary, and lectures and discussions are conducted in English.

Foreign language discussion sections (XLs) may be offered in conjunction with courses taught in translation. Students enrolled in these joint courses may use them to fulfill major, minor, and secondary literature requirements. Please see the undergraduate office for further information.

LOWER-DIVISION

LTWL 4A-B-C-D-F-M. Film and Fiction in Twentieth-Century Societies (4)
A study of modern culture and of the way it is expressed and understood in novels, stories, and films. The sequence aims at an understanding of relationship between the narrative arts and society in the twentieth century, with the individual quarters treating fiction and film of the following language groups. 4A French, 4B German, 4C Asian, 4D Italian, 4M multiple national literatures and film, 4F Spanish.

LTWL 19A-B-C. Introduction to the Ancient Greeks and Romans (4-4-4)
An introductory study of the Graeco-Roman world, its literature, myth, philosophy, history, and art.

LTWL 50. Introduction to Literary and Cultural Studies (4)
A preliminary survey of issues and problems raised by literary and cultural studies. Discussion will focus on basic terms in literary analysis (narrative, genre, character, poetics) and on rhetorical techniques for writing advanced expository papers in literary and cultural topics. It is designed for both nonmajors and students who anticipate becoming majors in literature who would like a broad-based introduction to the field.

LTWL 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. *No prerequisites.*

LTWL 90. Undergraduate Seminar (1)
Readings and discussions focused on a writer, period, or literary topic. The aim of the course is to acquaint the student with literature as a field of university-level study. Repeatable for credit.

LTWL 99. Lower-Division Independent Study (4)
Independent study at the lower-division level, in an area not covered by the department's regular course offerings, under the direction of a member of the Literature Department faculty. *Prerequisites: lower-division standing; cumulative 3.0 GPA.*

UPPER-DIVISION

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

LTWL 100. Mythology (4)
A study of various bodies of myth: their content, form, and meaning. May be repeated for credit as topics vary.

LTWL 101. What Socrates Knew (4)
Socratic perspectives on the nature of life and death, virtue and happiness, love and the gods.

LTWL 102. Women in Antiquity (4)
Selected topics in classical culture, including women and myth, women in Greek and Roman society, and the representation of women in classical literature. May be repeated for credit when topics vary.

LTWL 106. The Classical Tradition (4)
Greek and Roman literature in translation. May be repeated for credit as topics vary.

LTWL 107. Prose Fiction (4)
Aspects of prose fiction. Not confined to a single national literature. Texts may be read in English. May be repeated for credit as topics vary.

LTWL 108. Words and Their Vicissitudes (4)
The history of English and its forebears, focusing on the quirky nature of semantic change in order to equip students with a basis for evaluating metaphor, metonymy, and other forms of verbal deviance. *Prerequisite: upper-division standing.*

LTWL 110B. Folk and Fairy Tales (4)
A study of folk and fairy tales from various cultures, from the point of view of literary form, psychological meaning, and cultural function. May be repeated for credit as topics vary.

LTWL 111. Medieval Studies (4)
A lecture/discussion course designed to explore a variety of topics in medieval literatures and cultures. Topics may include a genre or combination of genres (e.g., drama, romance, lyric, allegory), or a central theme (e.g., the Crusades or courtly love).

LTWL 114. Children's Literature (4)
A study of literature written for children in various cultures and periods. May be repeated for credit as topics vary.

LTWL 115. Contemporary Literature (4)
A study of novels and authors of the present and recent times. May be repeated for credit as topics vary.

LTWL 116. Adolescent Literature (4)
A study of fiction written for the young adult in various cultures and periods. Consideration will be given to the young adult hero in fiction. May be repeated for credit as topics vary.

LTWL 120. Popular Literature and Culture (4)
A study of various popular forms—such as pop music, cult books, film, fashion, magazines, graphic arts—within a broader cultural context. Focus may be on a particular genre (e.g., best sellers) or era (e.g., the sixties). May be repeated for credit when topics vary.

LTWL 122. Fantasy (4)
Reading and analysis of various works that fall into several categories of the fantastic—e.g., heroic, gothic, irrealist, postmodern—with particular attention to the cultural uses of myth, folklore, and fantasy, and to the psychological and structuralist theories of same. May be repeated for credit when topics vary.

LTWL 124. Science Fiction (4)
An exploration of the genre—past and present, in literature and the visual media—as a cultural response to scientific and technological change, as modern mythmaking, and as an enterprise serving a substantial fan subculture. May be repeated for credit when topics vary.

LTWL 128. Introduction to Semiotics and Applications (4)
Semiotics, basically a theory of signification, describes the models and conceptual constructs through which meaning is grasped and produced. Background in the history of semiotics and its dominant models. *Prerequisite: upper-division standing.*

LTWL 129. Wisdom: The Literature of Authority (4)
What is wisdom? Does wisdom refer to a specific type of discourse; a literary genre; a specific content that holds true transculturally and transtemporally? This class will consider these questions by reading literature from diverse times and places. *Prerequisite: upper-division standing.*

LTWL 131A. Topics in Early Christian Literature: The New Testament (4)
An introduction to the writings of the New Testament, their creation, collection, and critical study.

LTWL 131B. Topics in Early Christian Literature: Paul and the Invention of Christianity (4)
An evaluation of ancient and modern accounts of Christian origins set against a careful reading of early Jewish and Christian texts (canonical and non-canonical).

LTWL 131C. Topics in Early Christian Literature: Reinventing Jesus (4)
A survey of the "gospels" of the first three centuries for light they may (or may not) shed on the historical figure of Jesus, set within the context of religious biography in late antiquity.

LTWL 131D. Topics in Early Christian Literature: The Fourth Gospel (4)
A solution to the riddle of the Fourth Gospel.

LTWL 131E. Topics in Early Christian Literature: The History of Heresy (4)
Study of "heretical" movements within the first three centuries of Christianity's history (e.g., gnosticism).

LTWL 131F. Topics in Early Christian Literature: Christianity and the Roman Empire (4)
An evaluation of significant attempts (from Edward Gibbon to Peter Brown) to explain the "rise" of Christianity and the "decline and fall" of the Roman Empire.

LTWL 131G. Topics in Early Christian Literature: Against the Christians (4)
From Celsus to Julian the Apostate, the pagan assault on Christianity in the intellectual, political, and religious context of late antiquity.

LTWL 133. Religion: Inside Out and Upside Down (4)
A study of the nature and importance of place in Western religious imagination, through a comparative reading of the ancient Mesopotamian "Epic of Gilgamesh", the early Christian "Gospel of John", and Ridley Scott's futuristic film noir, "Blade Runner".

LTWL 135. A The Buddhist Imaginary (4)
An introduction to the imaginative universe of Indian Buddhism, with a focus on the connection between cosmological models and liberative practices. In this class we read Buddhist narrative and doctrinal literatures, supplemented by archaeological and art historical artifacts. *Prerequisite: upper-division standing or consent of instructor.*

LTWL 136. Goddesses and Women in India (4)
This course uses Hindu texts, along with art and film, to explore the intersection of literary representation and real life. How does Hindu literature, which fully supports the belief in powerful goddesses, both empower women and constrain them? *Prerequisite: upper-division standing or consent of instructor.*

LTWL 137. Sanskrit (4)
Study of classical Sanskrit, including grammar and reading.

LTWL 138. Critical Religion Studies (4)
Selected topics, texts, and problems in the study of religion. May be repeated for credit when content varies.

LTWL 139. Gnosticism: The Religious Underground from Late Antiquity to the New Age (4)
A survey of Gnostic currents in religious thought which influenced the Abrahamic traditions of Judaism, Christianity, and Islam, and which resurfaced periodically as heretical challenges to these mainstream traditions and their doctrinal orthodoxies.

LTWL 140. Novel and History in the Third World (4)
This course sets out to explore the relation between the novel and the "dependent" history of the Third World, contrasting and comparing the uses of history in the European novel as defined in the theoretical analysis of Lukacs with uses of history in the Third World novel. An analysis of major themes and movements common to selected ethnic literature in the United States and national literatures in the Third World.

LTWL 141. Islam and Modernity (4)
A survey of developments in the Islamic world during the period of European colonial domination and its aftermath, with special attention to the works of leading Muslim thinkers (e.g., Sayid Ahmed Khan, Muhammad Abduh, Hasan al Banna, Ruhallah Khomeini, among others.)

LTWL 145. South Asian Religious Literatures: Selected Topics (4)
One or two topics in the religious literature of South Asia will be examined in depth. Repeatable for credit when topics vary. *Prerequisite: upper-division standing or consent of instructor.*

LTWL 149. The Last Turn of the Century in the West (4)
A multi-media examination of the momentous cultural and intellectual changes that accompanied the last turn of the century (nineteenth–twentieth) in the West. Areas covered include literature, philosophy, visual arts, music, religion, social movements, and scientific thought.

LTWL 150. Modernity and Literature (4)
Explores the various cross-cultural historical, philosophical, and aesthetic ideas which formed the basis of most twentieth-century literature. Literature from the Americas, Europe, Asia, and Africa will be studied through lectures and the reading of texts in English translation. Repeatable for credit when topics vary.

LTWL 155. Gender Studies (4)
The study of the construction of sexual differences in literature and culture. May be repeated for credit when topics vary.

LTWL 160. Women and Literature (4)
This course will explore the relationship between women and literature, i.e., women as producers of literature, as objects of literary discourse, and as readers. Foreign language texts will be read in translation. May be repeated for credit as topics vary.

LTWL 170. Specialized Genres in Literature (4)
The study of literary genres that do not fall into the ordinary categories of lyric, drama, fiction, and prose. Topics vary from year to year. May be repeated for credit as topics vary.

LTWL 172. Special Topics in Literature (4)
Studies in specialized literary, philosophic, and artistic movements, approaches to literature, literary ideas, historical moments, etc.

LTWL 176. Literature and Ideas (4)
The course will center on writers or movements of international literary, cultural, or ideological significance. The texts studied, if foreign, may be read either in the original language or in English. May be repeated for credit as topics vary.

LTWL 180. Film Studies and Literature: Film History (4)
The study of film history and its effects upon methods of styles in literary history. Repeatable for credit when topics vary.

LTWL 181. Film Studies and Literature: Film Movement (4)
Study of analogies between literary movements and film movements. Repeatable for credit when topics vary.

LTWL 183. Film Studies and Literature: Director's Work (4)
Methods of criticism of author's work applied to the study and analysis of film director's style and work. Repeatable for credit when topics vary.

LTWL 184. Film Studies and Literature: Close Analysis of Filmic Text (4)
Methods of literary analysis applied to the study of shots, sequences, poetics, and deep structure in filmic discourse. Repeatable for credit when topics vary.

LTWL 185. Film Studies and Literature: Interdisciplinary Issues (4)
Inquiry into interrelated and interdisciplinary issues concerning the diverse field of film studies and literature.

TWS 21-22-23-24-25-26. Third World Literatures (4-4-4-4-4-4)
(See entry under "Third World Studies" heading.)
The courses in this sequence are equivalent to world literature courses. The sequence satisfies Marshall College general-education requirements.

Seminars/Independent Studies

LTWL 191. Honors Seminar (4)
Explorations in critical theory and method. This course, designed to prepare students to write an honors thesis, is open only to literature majors invited into the department's Honors Program.

LTWL 195. Apprentice Teaching (0 or 4)
Undergraduate instructional assistance. Student must (1) prepare reading materials assigned by the professor; (2) lead student discussions; (3) assist professor in grading; and (4) prepare report to professor at conclusion of quarter concerning his/her work.

LTWL 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTGN 191. Oral exam. *Prerequisite: permission of department.*

LTWL 198. Directed Group Study (4)
Research seminars and research, under the direction of faculty member. *Prerequisite: permission of department.*

LTWL 199. Special Studies (2 or 4)
Tutorial; individual guided reading in areas of literature (in translation) not normally covered in courses. May be repeated for credit three times. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.*

GRADUATE

LTWL 500. Apprentice Teaching in Literature (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in literature courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 501. Apprentice Teaching in Humanities (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in humanities sequences under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 502. Apprentice Teaching in Muir College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Muir College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 503. Apprentice Teaching in Marshall College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Marshall College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 504. Apprentice Teaching in Warren College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Warren College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

LTWL 506. Apprentice Teaching in Roosevelt College (2 or 4)
Consideration of pedagogical methods appropriate to undergraduate teaching in Eleanor Roosevelt College courses under the supervision of instructor of course. Doctoral students in literature are required to participate in undergraduate teaching for a minimum of twelve units (two to four units per quarter) prior to completion of the Ph.D. degree.

WRITING/LITERATURE

LOWER-DIVISION

LTWR 8A. Writing Fiction (4)
Study of fiction in both theory and practice. Narrative technique studied in terms of subjectivity and atmosphere, description, dialogue, and the editing process will be introduced through readings from the history of the novel and short story. Writing exercises accompany reading assignments. *Prerequisite: completion of college writing requirement.*

LTWR 8B. Writing Poetry (4)
Study and practice of poetry as artistic and communal expression. Techniques of composition (traditional forms, *avant garde* techniques, dramatic monologue, performance poetry, and new genre) studied through written and spoken examples of poetry. Writing exercises accompany reading assignments. *Prerequisite: completion of college writing requirement.*

LTWR 8C. Writing Nonfiction (4)
Study of nonfictional prose in terms of genre and craft. Techniques of composition (journalism, essay, letters, reviews) will be studied through written examples of the genre. Practical imitations and exercises accompany the reading assignments. Prerequisite to upper-division non-fiction prose workshops. *Prerequisite: completion of college writing requirement.*

UPPER-DIVISION

Departmental approval is required for enrollment in all upper-division Lit/Writing courses.

Prerequisite: upper-division standing or consent of instructor. Additional prerequisites may be specified below.

(See Department of Theatre for course offerings in dramatic writing.)

Prose Fiction, Poetry, Media Workshops

LTWR 100. Short Fiction (4)
A workshop for students with some experience and special interest in writing fiction. This workshop is designed to encourage regular writing in the short forms of prose fiction and to permit students to experiment with various forms. There will be discussion of student work, together with analysis and discussion of representative examples of short fiction from the present and previous ages. May be taken for credit three times. *Prerequisite: LTWR 8A.*

LTWR 101. Beginning Poetry Workshop (4)
A workshop for beginning students of poetry. This course has weekly writing assignments in basic poetic forms; readings from ancient through contemporary poetry. Prepares students for LTWR 102 and other more advanced poetry workshops. May be taken only once. *Prerequisite: LTWR 8B.*

LTWR 102. Poetry (4)
A workshop for students with some experience and special interest in writing poetry. This workshop is designed to encourage regular writing of poetry. There will be discussion of student work, together with analysis and discussion of representative examples of poetry from the present and previous ages. May be taken for credit three times. *Prerequisite: LTWR 8B.*

LTWR 104. The Novella (4)
Workshop for fiction writers ready to tackle longer forms. Each student will produce a novella of at least fifty-pages by the end of the quarter. We'll look at examples of this form as well as films and comic novels to explore editing techniques that facilitate the writer's growing force and complexity of vision. *Prerequisites: LTWR 100; department approval.*

LTWR 106. Science Fiction, Fantasy, Irrealism (4)
In this workshop, students will practice skills of narration, characterization, and style with particular attention to the demands of non-realistic genres, especially the challenge of suspending disbelief in fictional environments that defy conventional logic. Readings and lectures will accompany writing exercises. *Prerequisites: LTWR 8A; department approval.*

LTWR 107. Writing for Children (4)
A workshop in writing for young children (5–8 years). The stories will be directed towards the act of reading aloud, either at bedtime or in a group situation. There will be many weekly readings assigned in, and about, the genre. *Prerequisites: LTWR 8A; department approval.*

LTWR 108. Writing for Young Adults (4)
A workshop in writing for 9–12 year-olds. Students will be asked to write one long chapter story or a series of short stories for young adults to read to themselves. The stories will generally involve young teens. Weekly readings will be assigned. *Prerequisites: LTWR 8A; department approval.*

LTWR 109. Writing and Publishing Children's Literature (4)
A workshop in writing for children, with the additional focus of exploring successful approaches to publication of children's stories. There will be regular weekly reading and writing assignments.. *Prerequisites: LTWR 8A; LTWR 107 recommended; department approval via stamp or pre-authorization.*

LTWR 110. Screen Writing (4)
A workshop designed to encourage writing of original screen plays and adaptations. There will be discussion of student work, together with analysis of discussion of representative examples of screen writing. May be taken for credit three times.

LTWR 112. Adapting Literature to the Screen (4)
Development of a feature-length screenplay based on poems or works of fiction or non-fiction. This course will provide a basic knowledge of the adaptation process from synopsis, through step outline, to fully developed treatment. *Prerequisites: LTWR 8A or 8B or 8C, department approval.*

LTWR 113. Intercultural Writing (4)
This course is an introduction to modes of writing from other cultural systems vastly different from the cultural-aesthetic assumptions of Anglo-American writing. While disclosing the limitations of the English language, this course attempts to provide new language strategies for students.

LTWR 115. Experimental Writing (4)
This workshop explores writing for which the traditional generic distinctions of prose/poetry, fiction/documentary, narrative/discourse do not apply. Students taking this course will be asked to challenge the boundaries of literature to discover new forms and modes of expression. May be taken for credit three times.

LTWR 117. Landscape Poetry (4)
The differences between landscape poetry written in East Asia and Western counterparts form an exciting subject as well as a challenge to habits of language. We will read from the history of landscape poetry, and produce and critique new poems. *Prerequisites: LTWR 8B; department approval.*

LTWR 119. Writing for Performance (4)
A workshop and survey of experimental approaches to the writing and production of performance works in a range of literary genres. Emphasis will be placed on the integration of written texts with non-verbal elements from the visual arts, theater, and music. *Prerequisite: LTWR 8A or 8B, to be determined by quarterly offerings of LTWR 119.*

Nonfiction Prose Workshops

LTWR 120. Personal Narrative (4)
A workshop designed to encourage regular writing of all forms of personal experience narrative, including journals, autobiography, firsthand biography, and firsthand chronicle. Instructor and students will discuss student work as well as published personal narratives. *Prerequisite: LTWR 8C.*

LTWR 121. Media Writing (4)
Workshop focusing on the review, the op-ed piece, the column, the blurb, the profile, the interview, and "content-providing" for Web sites. We'll examine current examples of media writing; students will produce a body of work and critique one another's productions. *Prerequisites: LTWR 8C; department approval.*

LTWR 122. Writing for the Sciences (4)
A workshop in writing about science for the public. Students will study and then construct metaphors or analogues which introduce readers to scientific perplexities. May be repeated for credit when topics vary

LTWR 123. Biographical Writing (4)
Workshop in biographical writing. The class will read published examples, consider what constitutes a suitable subject for biography, and discuss research techniques and sources. Each student will work on a profile-length or book chapter-length biography, submitting installments throughout the quarter. *Prerequisites: LTWR 8C; department approval.*

LTWR 125. Persuasion (4)
A workshop in the writing of argument or persuasion, with particular attention to strategies of persuasion for different kinds of audiences. Instructor and students will discuss student work as well as published work. May be taken for credit three times. *Prerequisite: LTWR 8C.*

LTWR 127. General Nonfiction Prose Workshop (4)
A workshop designed to encourage the writing of all forms of nonfiction prose. This workshop is usually limited to advanced students in the writing major. May be taken for credit three times. *Prerequisite: LTWR 8C.*

LTWR 128. Editing Workshop (4)
A workshop to acquaint students with the fundamentals of bringing written works from concept to publication. Genres covered will vary with instructor.

LTWR 129. Distributing Literature (4)
Workshop designed to critique and engage the means of distributing literature within culture. Publishing from "zine" through mainstream publication; Web publishings; readings and "slams"; publicity and funding; colloquia with writers; politics and literature; and the uses of performance and media. *Prerequisites: LTWR 100 or LTWR 102 or LTWR 120 or LTWR 127; department approval through course pre-authorization department stamp.*

Writing Process, Written Discourse, and Writing Pedagogy

These courses are not writing workshop courses like those listed above. Rather, they examine various aspects of writing as a field of study and writing pedagogy. Writing majors who plan to teach writing may be particularly interested in these courses. See the department for applicability of these courses to the writing major requirements.

Note: As of fall 1991, all writing majors are required to take one course chosen from offerings numbered LTWR 140–144 to fulfill one of their upper-division requirements.

LTWR 141. The Process of Writing (4)
A study of writing as a creative process. Review of research on creativity and on the writing process and analysis of writers' introspective accounts of their work. Delineation of the stages in writing process and exploration of implications for learning to write.

LTWR 142. Forms of Written Discourse (4)
A review of current rhetorical theory and discourse theory. Some attention to recent developments in text linguistics. Students will write several discourse types and explore differences among the types, with special attention to differences for the writing process and for the structure of the written discourse itself.

LTWR 143. Stylistics and Grammar (4)
A close look at sentence-level features of written discourse–stylistics and sentence grammars. Students will review recent research on these topics and experiment in their own writing with various stylistic and syntactic options.

LTWR 144. The Teaching of Writing (4)
Wide reading in current theory and practice of teaching writing in schools and colleges. Careful attention to various models of classroom writing instruction and to different approaches in the individual conference. Students in this course may observe instruction in the UCSD college writing programs or tutor freshman students in those programs.

LTWR 148. Theory for Writers/Writing for Theory (4)
Hybrid workshop offering writing students a working knowledge of literary theory while exposing literature students to practical techniques from poetry, fiction, and nonfiction to refresh their writing of theoretical nonfiction texts. Discussion of student work and published work. *Prerequisite: department approval.*

Directed Study and Special Study

LTWR 195. Apprentice Teaching (4)
Undergraduate instruction assistance. Students will 1) assist TA in editing students' writing for LTWR 8A and 8C during class and outside of class; and 2) prepare a paper and report for the professor at the end of the quarter. *Prerequisite: LTWR 144, The Teaching of Writing.*

LTWR 196. Honors Thesis (4)
Senior thesis research and writing for students who have been accepted for the Literature Honors Program and who have completed LTGN 191. Oral exam.

LTWR 198. Directed Group Study (2 or 4)
Directed group study in areas of writing not normally covered in courses. (P/NP grades only.) Repeatable for credit when areas of study vary.

LTWR 199. Special Studies (2 or 4)
Tutorial; individual guidance in areas of writing not normally covered in courses. (P/NP grades only.) *Prerequisites: upper-division standing and permission of department.* May be taken for credit three times.

GRADUATE

LTWR 260. Autoethnographies of Literacy (4)
Designed for public school teachers, this writing seminar concerns ethnographic and autoethnographic studies of "literates" and "illiterates" in the United States. *Prerequisite: graduate standing or consent of instructor.*

LTWR 271. Theory and Practice of College Writing Instruction (4)
In this course we will explore the implications for writing instruction of current discourse theory and of linguistics (sentence-level and text-level). We will also review research on writing instruction and look carefully at several models of classroom instruction and individual conferencing.

LTWR 272. Research in Composing and Writing Discourse (4)
This course will survey current research on composing and written discourse. It will also explore various problems and issues in designing research studies.

LTWR 282. Writing States (4)
This course will be a cross-genre writing workshop where graduate students in literature with some experience in creative writing can work with other writers and broaden their own practices. The seminar will read selected texts that spur specific writing assignments. Students who already have a new or ongoing writing project can workshop that as an alternative to doing assignments. The group will critique one another's efforts, each participant creating a twenty-page manuscript. Also at the end of the quarter the students will collectively agree on a project—a reading, performance, video, or publishing project that will document the workshop. *Prerequisite: graduate standing or consent of instructor.*

The Making of the Modern World

OFFICE: Eleanor Roosevelt College
Administration Building
http://provost.ucsd.edu/roosevelt/mmw/

The Making of the Modern World is a six-course sequence required of all Eleanor Roosevelt College students. It is designed to encourage them to think historically, comparatively, and in an interdisciplinary manner about world cultures. Disciplinary perspectives include literature, history, philosophy, anthropology, sociology, political science, and fine arts. Students will examine and interpret primary documents and artifacts from diverse eras and cultures, as well as learn about them from secondary sources. All six quarters of the sequence will include lectures, discussions, and writing assignments. Courses in the sequence may be taken for a letter grade only.

Students in the Making of the Modern World 2 and 3 (offered in winter and spring quarters respectively) fulfill their University of California composition requirement by receiving intensive instruction in university-level writing. Subject matter for writing instruction is drawn from or related to course material. Instruction in writing is provided in discussion sessions, which meet twice each week. Each of these two writing-intensive quarters carries six units of credit. Students must have satisfied the university's Subject A requirement in English composition before enrolling in the Making of the Modern World 2 or 3.

For further details on Eleanor Roosevelt College requirements, see "Eleanor Roosevelt College, General-Education Requirements."

COURSES

TRADITIONS

1. Prehistory and the Birth of Civilization (4)
This quarter introduces students to what is known about early humans, including the evolution of the human body and the reconstruction of Paleolithic and Neolithic cultures. It examines contemporary hunting-and-gathering and tribal societies and illuminates the complexity of such cultures with respect to mythology and oral tradition, interpersonal relations, and ecological practices. The course will conclude with an analysis of the emergence of large agrarian societies and the earliest great settled communities and civilizations. Three hours of lecture, one hour of discussion. Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

2. The Great Classical Traditions (6)
An introduction to five major classical civilizations of the ancient world. Equal attention will be given to the ancient Near East, Greece, India, China and the Roman Republic, all of which have left legacies to the present. The course covers the great early systems of religious and social thought, using an approach that combines history and social science. This course includes intensive instruction in writing expository prose. Three hours of lecture, two hours of writing and discussion sections. *Prerequisite: satisfaction of the Subject A requirement.* Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

3. The Medieval Heritage (6)
A survey of the period from about 29 B.C.E. to 1200 C.E., this quarter concentrates on the development of China from the Han to the Sung Dynasties, the growth and eventual dissolution of the Roman Empire, the development of Christianity, and the rise of Islam. This course includes intensive instruction in university-level writing. Three hours of lecture, two hours of writing and discussion sections. *Prerequisite: satisfaction of the Subject A requirement.* Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)

TRANSFORMATIONS

4. New Ideas and the Clash of Cultures (4)
An examination of the world from 1200 to 1750, the course focuses on the transition from medieval to modern by addressing philosophical, social, political, economic, and technological changes in Asia, Europe, and Islamic territories. Topics may include the Mongol invasions and their impact; the European Renaissance, Reformation, and Scientific Revolution; Islamic and Chinese empires; exploration and trade; and European expansion into the Americas. Three hours of lecture, one hour of discussion. *Prerequisites: satisfaction of the Subject A requirement; successful completion of MMW 2 and/or MMW 3.* Open to Eleanor Roosevelt College students only. (Letter grade only.) (F)

5. Revolution, Industry, and Empire (4)
A consideration of the great changes in European society from the late eighteenth century to the Russian Revolution, and their impact on the non-Western world. Topics include industrialization, the rise of nationalism and the nation-state, Western imperialism, and the colonial experience. Developments in non-Western countries during this period will be examined from their own internal perspective. Three hours of lecture, one hour of discussion. *Prerequisites: satisfaction of the Subject A requirement; successful completion of MMW 2, MMW 3, and/or MMW 4.* Open to Eleanor Roosevelt College students only. (Letter grade only.) (W)

6. Twentieth Century and Beyond (4)
The course begins with a consideration of the causes and consequences of World War I, and then looks at the post-war crisis of liberal values and institutions. It addresses the deepening of crisis in the thirties, especially evident in the emergence of ideological politics and extreme nationalism in the context of world-wide depression. This period of crisis provides the background for understanding World War II. Attention is then devoted to the Cold War, the competition between capitalism and communism, and the process of decolonization. The course ends with a discussion of the collapse of communism and the emerging world order (or disorder). Three hours of lecture, one hour of discussion. *Prerequisites: satisfaction of the Subject A requirement; successful completion of MMW 2, MMW 3, MMW 4, and/or MMW 5.* Open to Eleanor Roosevelt College students only. (Letter grade only.) (S)

Materials Science and Engineering Program

Professors

Sungho Jin, Ph.D., *MAE, Program Director*
Gustaf Arrhenius, Ph.D., *SIO*
Robert J. Asaro, Ph.D., *SE*
David J. Benson, Ph.D., *MAE*
Ami Berkowitz, Ph.D., *Emeritus, Physics*
John E. Crowell, Ph.D., *Chemistry and Biochemistry*
Robert Dynes, Ph.D., *Physics, UC President*
Sadik Esener, Ph.D., *ECE*
Yeshaiahu Fainman, Ph.D., *ECE*
Yuan-Cheng Fung, Ph.D., *Emeritus, Bioengineering*
David Gough, Ph.D., *Bioengineering*
Gilbert A. Hegemier, Ph.D., *SE*
Frances Hellman, Ph.D., *Physics*
Vistasp Karbhari, Ph.D., *SE*
John B. Kosmatka, Ph.D., *SE*
Sergi Krasheninnikov, Ph.D., *MAE*
Clifford Kubiak, Ph.D., *Chemistry and Biochemistry*
S.S. Lau, Ph.D., *ECE*
Yu-Hwa Lo, Ph.D., *ECE*
Huey-Lin Luo, Ph.D., *ECE*
M. Brian Maple, Ph.D., *Physics*
Xanthippi Markenscoff, Ph.D., *MAE*
Joanna McKittrick, Ph.D., *MAE*
Marc A. Meyers, Ph.D., *MAE, Associate Director, Institute for Mechanics and Materials*
David R. Miller, Ph.D., *MAE, Associate Vice Chancellor, Academic Affairs*
Hidenori Murakami, Ph.D., *MAE*
Siavouche Nemat-Nasser, Ph.D., *MAE, Director, Center of Excellence for Advanced Materials*
Vitali F. Nesterenko, Ph.D., *MAE*
Johann K. Oesterreicher, Ph.D., *Chemistry and Biochemistry*
M. Lea Rudee, Ph.D., *Emeritus, ECE*
Michael J. Sailor, Ph.D., *Chemistry and Biochemistry*
Geert W. Schmid-Schoenbein, Ph.D., *Bioengineering*
Ivan K. Schuller, Ph.D., *Physics*
Lu Jeu Sham, Ph.D., *Physics*
Jan Talbot, Ph.D., *MAE*
Frank E. Talke, Ph.D., *MAE, CMRR Endowed Chair*
Charles W. Tu, Ph.D., *ECE*
Kenneth S. Vecchio, Ph.D., *MAE*
Harry H. Wieder, D.Sc., *In-Residence, ECE*
Edward T. Yu, Ph.D., *ECE*
Paul Yu, Ph.D., *ECE*

Associate Professors

Sangeeta Bhatia, Ph.D., *Bioengineering*
Richard K. Herz, Ph.D., *MAE*
Yitzhak Tor, Ph.D., *Chemistry and Biochemistry*
George Tynan, Ph.D., *MAE*

Assistant Professor

Prabhakar Bandaru, Ph.D., *MAE*

Materials Science and Engineering Program is concerned with the study of the structure and properties of materials. The Materials Science and Engineering Program at UCSD aims to provide fundamental knowledge for quantitative understanding of materials with the objective of predicting, modifying, and tailoring the properties of materials to yield, at the technology level, enhanced material performance. The foundations of materials science are the basic sciences of physics, chemistry, and mathematics. The great variety of materials response, at the optical, magnetic, electrical, mechanical, and chemical levels, requires a solid scientific foundation and breadth of basic knowledge from the materials scientists. The interdisciplinary nature of the program at UCSD is ideally suited to address this requirement. The graduate of the Materials Science and Engineering Program benefits from unique research facilities existing at UCSD. These include the resources in the Departments of MAE, SE, ECE, Physics, Chemistry/Biochemistry, Bioengineering, and SIO, as well as in the Center of Excellence for Advanced Materials and the Center for Magnetic Recording Research. Of particular emphasis within the program is the experimental investigation and theoretical modeling of the mechanical response and failure models of advanced materials at ultrahigh strain rates; electronic, superconducting, magnetic, and optical properties of materials for advanced applications; biomaterials; and advanced composite materials for civil structures.

The Graduate Program

The Materials Science and Engineering Program is interdisciplinary, with participation of faculty members from several departments. Faculty from the following departments participate in the Materials Science and Engineering Graduate Program: the Departments of Mechanical and Aerospace Engineering (MAE), Structural Engineering (SE), Bioengineering, Physics, Scripps Institution of Oceanography (SIO), Electrical and Computer Engineering (ECE), and Chemistry. The governance of the program is carried out by the executive committee of the program. The executive committee coordinates all affairs of the Materials Science and Engineering Program, including student admissions, degree requirements, graduate courses in materials science given by various participating departments, maintenance of laboratory instructional facilities, seminars, special courses, part-time instructors, and related matters.

Undergraduate preparation for the materials science and engineering M.S. and Ph.D. normally would include a degree in materials science and in engineering or physical sciences, such as physics, chemistry, geology, and related disciplines. Students are expected to have an adequate mathematics, physics, chemistry, and related basic sciences background.

Master's Degree Program

The program offers the M.S. degree in materials science and engineering under both the Thesis Plan I and the Comprehensive Examination Plan II; see "Graduate Studies: Master's Degree." The requirements for the M.S. degree are as follows:

1. All students must complete a total of thirty-six units.
2. All students must complete at least six of the following nine core courses:

   (1) MS 200; (2) MS 227; (3) MS 201A; (4) MS 201B; (5) MS 201C; (6) MS 205A; (7) Physics 152A; (8) MS 251; (9) MS 252.

   (Physics 211A can replace 152A with adviser's permission.) See "Courses" for descriptions.
3. Students may include up to twelve units of undergraduate courses. These include the one undergraduate core course, Physics 152A.
4. Enroll in MATS200, as required. See "Courses" for descriptions.
5. Remaining courses to complete the thirty-six unit requirement for the M.S. degree may be selected from an approved list of graduate courses with the consent of a faculty adviser.

6. Students either complete a thesis (Plan I) or pass a comprehensive examination (Plan II) as described in the "Graduate Studies" section of this catalog.
7. Students must meet all other requirements established by the university.

Students who transfer with some graduate credit or an M.S. from another institution will have their records reviewed by a faculty adviser, and an appropriate individual course of study may be approved.

The Ph.D. Program

After completing the M.S. degree (or meeting *equivalent requirements) and meeting the minimum* standard on the comprehensive examination to be admitted to or continue in the Ph.D. program, a student must:

1. Meet all the university's residency and other requirements.
2. Successfully complete three advanced graduate courses (in addition to those required for the M.S. degree) which have been approved by the student's potential dissertation adviser.
3. Enroll in MATS200, as required. See "Courses" for descriptions.
4. Pass the Literature Review Examination. This requirement must be successfully completed within one year after passing the Comprehensive Examination.
5. Pass the Ph.D. Qualifying Examination (Senate Exam) to be advanced to Ph.D. candidacy.
6. Successfully complete and defend a dissertation which, in the opinion of the dissertation committee, contains original work that should lead to publication of at least one significant article in an appropriate refereed journal.

In principle, it should be possible to finish the M.S. degree in three quarters, and a Ph.D. in an additional three years. Ph.D. time limits are as follows: Pre-candidacy—four years; Support limit—six years; Total time limit—seven years; Normative time limit for a properly prepared B.S. student—five years. (See "Graduate Studies–Ph.D. Time Limits" for further explanation.)

Departmental Examination

THE COMPREHENSIVE EXAMINATION

The examination will consist of twelve questions, two from each of the six core courses. A passing grade is 60 percent for the Master's degree, and 70 percent for the Ph.D. The examination will not exceed six hours in duration. The examination is usually administered the second week in January, and a week after spring quarter finals week in June. Typically, students take the exam after one year of full-time enrollment. This exam may only be retaken once before the end of the second year of study.

THE LITERATURE REVIEW EXAMINATION

The Literature Review Examination tests the student's ability to prepare and present a comprehensive overview of a topic based on existing journal literature. It should be a comprehensive discussion of the literature, scientific theory, problems or theoretical deficiencies, and possible areas of research in some area of materials science and engineering. The topic may be in the general area in which the student plans to pursue his or her thesis research, or it may be in an unrelated field. The topic must be approved by the three faculty member committee in advance of the seminar. The Literature Review Examination is not to be a discussion of the student's research project or their research proposal. A presentation which includes the student's own work which has not been published will constitute a no pass grade. This exam must occur within one year of the student having passed the Comprehensive Examination.

COURSES

GRADUATE

200. Graduate Seminar (0)
Each graduate student in the Materials Science and Engineering Program is expected to attend a weekly seminar in materials science or related areas. M.S. students must enroll for three quarters, Ph.D. students for six quarters, as of fall 1995. (S/U grades only.) (F,W,S)

201A. Thermodynamics of Solids (4)
The thermodynamics and statistical mechanics of solids. Basic concepts; equilibrium properties of alloy systems; thermodynamic information from phase diagrams, surfaces, and interfaces; crystalline defects. *Prerequisite: consent of instructor.*

201B. Solid State Diffusion and Reaction Kinetics (4)
Thermally activated processes, Boltzmann factor, homogeneous and heterogeneous reactions, solid state diffusion, Fick's laws, diffusion mechanisms, Kirkendall effect, Boltzman-Matano analysis, high diffusivity paths. *Prerequisite: consent of instructor.*

201C. Phase Transformations (4)
Classification of phase transformations: displacive and reconstructive transformations: classical and nonclassical theories of nucleation: Becker-Doering, Volmer-Weber, lattice instabilities, spinodal decomposition. Growth theories: interface migration, stress effects, terrace-ledge mechanisms, epitaxial growth, kinetics, and mechanics. Precipitation. Order-disorder transformations. Solidification. Amorphization. *Prerequisite: consent of instructor.* (Cross-listed with MAE 271C.)

205A. Imperfections in Solids (4)
Point, line, and planar defects in crystalline solids, including vacancies, self-interstitials, solute atoms, dislocations, stacking faults, and grain boundaries; effects of imperfections on mechanical properties; interactions of dislocations with point defects; strain hardening by micro-obstacles, precipitation, and alloying elements. *Prerequisite: consent of instructor.*

205B. Advanced Study of Defects in Solids (4)
Advanced topics in dislocation theory and dislocation dynamics. Defects and defects interactions. Atomistic and subatomistic effects. Physical models based on microscopic considerations. *Prerequisite: MS 205A or consent of instructor.* (Cross-listed with ECE 234B.)

207. Surface Reactions, Corrosion, and Oxidation (4)
The nature of surfaces; nucleation and growth of surface films. Techniques for studies of surface structures and of surface films. Types of corrosion phenomena and mechanisms of corrosion. Methods of corrosion control and prevention. Mechanisms of oxidation. Control of oxidation by alloying and surface coatings. *Prerequisite: MS 201A or consent of instructor.*

211A. Mechanical Properties (4)
Review of basic concepts in mechanics of deformation; elasticity, plasticity, viscoelasticity, and creep; effects of temperature and strain-rate on inelastic flow; microstructure and mechanical properties; application of basic concepts to selected advanced materials. *Prerequisite: consent of instructor.* (Cross-listed with MAE 229.)

213A. Dynamic Behavior of Materials I (4)
Elastic waves in continuum; longitudinal and shear waves. Surface waves. Plastic waves; shock waves; Rankine-Hugoniot relations. Method of characteristics, differential and difference form of conservation equations; dynamic plasticity and dynamic fracture. Shock wave reflection and interaction. *Prerequisite: consent of instructor.* (F) (Cross-listed with MAE 273A.)

218. Fatigue, Fracture, and Failure Analysis in Engineering Materials (4)
The course will cover the engineering and scientific aspects of fatigue crack initiation, stable crack growth, fatigue life predictions, selection of materials for fatigue applications, fractography, and failure analysis, including case studies. *Prerequisites: MAE 160 or equivalent and consent of instructor.*

225. Materials for Magnetic Recording (4)
Properties of magnetic materials utilized as magnetic recording media and heads: magnetic structure of oxides and metals; fine particle magnetism; micromagnetic analysis; hysteresis and reversal mechanisms of hard materials; dynamic processes and domain patterns of soft materials; thermal fluctuations; multilayer phenomena; giant magnetoresistance. *Prerequisites:*

undergraduate electromagnetism and solid state physics or consent of instructor. (Cross-listed with ECE 246A.)

227. Structure and Analysis of Solids (4)
Key concepts in the atomic structure and bonding of solids such as metals, ceramics, and semiconductors. Symmetry operations, point groups, lattice types, space groups, simple and complex inorganic compounds, structure/property comparisons, structure determination with X-ray diffraction. Ionic, covalent, metallic bonding compared with physical properties. Atomic and molecular orbitals, bands verses bonds, free electron theory. *Prerequisite: graduate student or consent of instructor.*

230. Electrochemistry (4)
Application of electrochemical techniques to chemistry research. Basic electrochemical theory and instrumentation: the diffusion equations, controlled potential, and current methods. Electro-chemical kinetics, Butler-Volmer, Marcus-Hush theories, preparative electrochemistry, analytical electrochemistry, solid and polymer electrolytes, semiconductor photo-electrochemistry. (Cross-listed with CHEM 240.)

233A-B. Processing and Synthesis of Advanced Materials (4-4)
Background information on conventional techniques: forging, rolling, drawing, casting. Rapid solidification processing of metals and ceramics. Production of composites. Directionally solidified eutectics. Combustion synthesis. Sol-gel synthesis of ceramics. Mechanical alloying. Shockwave synthesis and processing. Thin film techniques. Laser glazing. Electron beam mixing. Molecular beam epitaxy. Superplastic processing. *Prerequisite: consent of instructor.*

236. Ceramic and Glass Materials (4)
Powder synthesis, powder compaction and densification via different processing routes. Phase equilibria and crystallography in ceramic materials. Sintering, liquid and vapor phase processing and single crystal growth. Control of the microstructural development and interfacial properties to optimize properties for structural, thermal, electrical, or magnetic use. Topics in processing and use of advanced ceramic materials. Glass formation and structure, phase separation, viscous flow and relaxation. *Prerequisite: consent of instructor.*

240A. Scanning Electron Microscopy and X-Ray Microanalysis (4)
Electron optics, electron-beam-specimen interactions. Image formation in the SEM. The role of specimen and detector in contrast formation. Imaging strategies. X-ray spectral measurements. Qualitative and quantitative X-ray microanalysis. Materials specimen preparation. *Prerequisite: consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via SEM.*

240B. Transmission Electron Microscopy (4)
Operation and calibration of the TEM, lens defects and resolution, formation of images and diffraction patterns, electron diffraction theory (kinematic dynamical), indexing diffraction patterns, diffraction contrast. Quantitative analysis of crystal defects, phase contrast, and specimen preparation. *Prerequisite: MS 240A or consent of instructor. The laboratory section will teach the operation of the microscope to conduct material analysis via TEM.*

243. Modern Materials Analysis (4)
Analysis of the near surface of materials via ion, electron, and x-ray spectroscopes. Topics to be covered include particle solid interactions. Rutherford Backscattering, secondary ion mass spectroscopy, electron energy loss spectroscopy, particle induced x-ray emission, Auger electron spectroscopy, extended x-ray absorption fine structure and channeling. *Prerequisite: consent of instructor.* (Cross-listed with ECE 237.)

251. Structure and Properties of Electronic, Magnetic, and Photonic Materials (4)
Explores the interplay between the electronic, magnetic, and photonic properties of advanced engineering materials in relation to processing, fabrication, and microstructure. Semiconductors, metals, alloys, ceramics, polymers, and composite materials will be studied along with their practical applications. *Prerequisite: consent of instructor.* (Cross-listed with MAE 265.)

252. Biomaterials (4)
This class will cover biomaterials and biomimetic materials. Metal, ceramic, and polymer biomaterials will be discussed. Emphasis will be on the structure-property relationships, biocompatibility/degradation issues and tissue/material interactions. Synthesis and mechanical testing of biomimetic materials will also be discussed. *Prerequisite: consent of instructor.* (Cross-listed with MAE 266.)

253. Nanomaterials and Properties (4)
This course discusses synthesis techniques, processing, microstructural control, and unique physical properties of materials in nano-dimensions. Topics include nanowires, quantum dots, thin films, electrical transport, electron emission properties, optical behavior, mechanical behavior, and technical applications of nanomaterials. *Prerequisite: consent of instructor.* (Cross-listed with MAE 267.)

254. MEMS Materials, Fabrication, and Applications (4)
Fabrication of Micro-Electro Mechanical Systems (MEMS) by bulk and surface micromachining of single crystal, polycrystal, and amorphous silicon and other materials. Performance issues including electrostatic, magnetic, piezoelectric actuations, residual stresses, deformation. Novel device applications, future trends in smart materials and nano-electro-mechanical (NEMS) systems. *Prerequisite: consent of instructor.* (Cross-listed with MAE 268.)

255. Presentations, Inventions, and Patents (4)
This course covers methodology and skills for oral and written presentations. Topics include preparation of presentation materials, presentation exercise, publication manuscripts, research work proposals, understanding and securing of inventions and intellectual properties, patent applications and licensing. *Prerequisite: consent of instructor.* (Cross-listed with MAE 269.)

290. Topics in Materials Science (4)
A course to be given at the discretion of the faculty on topics of current interest in materials science.

295. Research Conference (2)
Group discussion of research activities and progress of group members. *Prerequisite: consent of instructor.*

296. Independent Study (4)
Prerequisite: consent of instructor.

299. Graduate Research (1-12)
(S/U grades only.)

Subject to the approval of a faculty adviser, students may also choose from the following courses offered by departments participating in the Materials Science and Engineering Program (see the relevant pages of this catalog for descriptions):

Mechanical and Aerospace Engineering (MAE)

MAE 229A. Mechanical Properties (4)
MAE 229B. Advanced Mechanical Behavior (4)
MAE 231A. Foundations of Solid Mechanics (4)
MAE 231B. Elasticity (4)
MAE 232A-B-C. Finite Element Methods in Solid Mechanics (4-4-4)
MAE 233A. Fracture Mechanics (4)
MAE 233B. Micromechanics (4)
MAE 233C. Advanced Mechanics of Composite Materials (4)
MAE 238. Stress Waves in Solids (4)
MAE 251. Structure and Analysis of Solids (4)
MAE 256. Rheology of Fluids (4)

Chemistry

Chem 240. Electrochemistry (4)

Electrical and Computer Engineering (ECE)

ECE 230A. Solid State Electronics (4)
ECE 230B. Solid State Electronics (4)
ECE 230C. Solid State Electronics (4)
ECE 234B. Advanced Study of Defect in Solids (4)
ECE 237. Modern Materials Analysis (4)
ECE 246A. Materials for Magnetic Recording (4)

Physics

Phys. 133/219. Condensed Matter/Materials Science Laboratory (2)
Phys. 152B/232. Electronic Materials (4)
Phys. 211A. Solid State Physics (5)
Phys. 211B. Solid State Physics (4)

Mathematics

Professors

Ian S. Abramson, Ph.D.
Jim Agler, Ph.D.
Randolph E. Bank, Ph.D.
M. Salah Baouendi, Ph.D.
Edward A. Bender, Ph.D.
James R. Bunch, Ph.D., *Chair*
Samuel R. Buss, Ph.D., *Vice Chair*
Bennett Chow, Ph.D.

Bruce K. Driver, Ph.D.
Peter F. Ebenfelt, Ph.D.
Thomas J. Enright, Ph.D.
John W. Evans, M.D., Ph.D., *Emeritus*
Ronald J. Evans, Ph.D.
Jay P. Fillmore, Ph.D., *Emeritus*
Carl H. FitzGerald, Ph.D.
Patrick J. Fitzsimmons, Ph.D.
Theodore T. Frankel, Ph.D., *Emeritus*
Michael Freedman, Ph.D., *Emeritus*
Adriano M. Garsia, Ph.D.
Ronald K. Getoor, Ph.D., *Emeritus*
Philip E. Gill, Ph.D.
Fan Chung Graham, Ph.D.
Mark W. Gross, Ph.D.
Leonard R. Haff, Ph.D.
Hubert Halkin, Ph.D., *Emeritus*
Guershon Harel, Ph.D.
J. William Helton, Ph.D.
Michael J. Holst, Ph.D.
James P. Lin, Ph.D.
Hans Lindblad, Ph.D.
Alfred B. Manaster, Ph.D., *Emeritus*
David A. Meyer, Ph.D.
John O'Quigley, Ph.D., *Emeritus*
Dimitris Politis, Ph.D.
Jeffrey M. Rabin, Ph.D., *Academic Senate Distinguished Teaching Award*
Jeffrey B. Remmel, Ph.D., *Associate Dean, Division of Physical Sciences*
Yosef Rinott, Ph.D., *Emeritus*
Burton Rodin, Ph.D., *Emeritus*
Helmut Rohrl, Ph.D., *Emeritus*
Murray Rosenblatt, Ph.D., *Emeritus*
Linda P. Rothschild, Ph.D., *Vice Chair*
Michael J. Sharpe, Ph.D.
Lance W. Small, Ph.D.
Donald R. Smith, Ph.D., *Emeritus*
Harold M. Stark, Ph.D.
Peter Teichner, Ph.D.
Audrey A. Terras, Ph.D.
Adrian R. Wadsworth, Ph.D.
Nolan R. Wallach, Ph.D.
Hans G. Wenzl, Ph.D.
Ruth J. Williams, Ph.D.
Daniel E. Wulbert, Ph.D., *Provost, Revelle College*
Efim Zelmanov, Ph.D.

Associate Professors

William M. McEneaney, Ph.D.
Kate Okikiolu, Ph.D.
Justin D. Roberts, Ph.D.
Van Vu, Ph.D.
John J. Wavrik, Ph.D.

Assistant Professors

Li-Tien Cheng, Ph.D.
Wee Teck Gan, Ph.D.
Lei Ni, Ph.D.
Cristian Popescu, Ph.D.
Jason Schweinsberg, Ph.D.
Glenn Tesler, Ph.D.

Senior Lecturer with Security of Employment

Frank B. Thiess, Ph.D., *Emeritus*

Lecturers with Security of Employment

John D. Eggers, Ph.D.
Norman A. Shenk, Ph.D., *Emeritus*

The Undergraduate Program

The mathematics department offers a wide range of courses in pure and applied mathematics for its majors and for students in other disciplines. The department offers six majors leading to the B.A. degree: mathematics, applied mathematics, mathematics–applied science, mathematics–computer science, joint major in mathematics and economics, and mathematics– secondary education, and one leading to the B.S. degree: mathematics–scientific computation. In addition, students can minor in mathematics. The department also has an Honors Program for exceptional students in any of the seven majors. See the sections on major programs and the other areas mentioned above as well as the course descriptions at the end of this section for more specific information about program requirements and the courses that are offered by the department. You may visit our Web site, math.ucsd.edu for more information including course Web pages, career advising, and research interests of our faculty.

First-Year Courses

Entering students must take the Mathematics Placement Exam prior to orientation unless they have either an appropriate score on a Calculus AP exam, a score of 650 or higher on the SAT II Math Level 2C exam, or transferable credit in calculus. The purpose of the Mathematics Placement Exam is to assess the student's readiness to enter the department's calculus courses. Some students will be required to take precalculus courses before beginning a calculus sequence.

Math. 3C is the department's preparatory course for the Math. 10 sequence, providing a review of algebraic skills, facility in graphing, and working with exponential and logarithmic functions.

Math. 4C is the department's preparatory course for the Math. 20 sequence, providing a brief review of college algebra followed by an introduction to trigonometry and a more advanced treatment of graphing and functions.

Math. 10A-B-C is one of two calculus sequences. The students in this sequence have completed a minimum of two years of high school mathematics. This sequence is intended for majors in liberal arts and the social and life sciences. It fulfills the mathematics requirements of Revelle College and the option of the general-education requirements of Muir College. Completion of two quarters fulfills the requirement of Marshall College and the option of Warren College and Eleanor Roosevelt College.

The other first-year calculus sequence, Math. 20A-B-C, is taken mainly by students who have completed four years of high school mathematics or have taken a college level precalculus course such as Math. 4C. This sequence fulfills all college level requirements met by Math. 10A-B-C and is required of many majors, including chemistry and biochemistry, bioengineering, cognitive science, economics, mathematics, molecular biology, psychology, MAE, CSE, ECE, and physics. Students with adequate backgrounds in mathematics are strongly encouraged to take Math. 20 since it provides the foundation for Math. 20D-E-F which is required for some science and engineering majors. **Note:** As of summer 2003, Math. 21C and 21D have been renumbered to Math. 20C and 20D.

Certain transfers between the Math. 10 and Math. 20 sequences are possible, but such transfers should be carefully discussed with an adviser. Able students who begin the Math. 10 sequence and who wish to transfer to the Math. 20 sequence, may follow one of three paths:

1. Follow Math. 10A with Math. 20A, with two units of credit given for Math. 20A. This option is not available if the student has credit for Math. 10B or Math. 10C. This option is available only if the student obtains a grade of A in Math. 10A or by consent of the Math. 20A instructor.
2. Follow Math. 10B with Math. 20B, receiving two units of credit for Math. 20B.
3. Follow Math. 10C with Math. 20B, receiving two units of credit for Math. 20B and two units of credit for Math. 20C.

Credit will not be given for courses taken simultaneously from the Math. 10 and the Math. 20 sequence.

Major Programs

The department offers six different majors leading to the Bachelor of Arts degree: (1) mathematics, (2) applied mathematics, (3) mathematics–applied science, (4) mathematics–computer science, (5) joint major in mathematics and economics, (6) mathematics–secondary education; and one leading to a B.S. degree: mathematics-scientific computation. The specific emphases and course requirements for these majors are described in the following sections. All majors must obtain a minimum 2.0 grade-point average in the upper-division courses used to satisfy the major requirements. Further, the student must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. Any mathematics course numbered 100–194 may be used as an upper-division elective. (**Note**: 195, 196, 197, 198, 199, and 199H cannot be used towards any mathematics major.) All courses used to fulfill the major must be taken for a letter grade.

It is strongly recommended that all mathematics majors review their programs at least annually with a departmental adviser, and that they consult with the Advising Office in AP&M 6016 before making any changes to their programs. Current course offering information for the entire academic year is maintained on the department's Web page at http://math.ucsd.edu. Special announcements are also emailed to all majors.

Students who plan to go on to graduate school in mathematics should be advised that only the best and most motivated students are admitted. Many graduate schools expect that students will have completed a full sequence of abstract algebra (Math. 100A-B-C) as well as a full sequence of analysis (Math. 140A-B-C). The advanced Graduate Record Exam (GRE) often has questions that pertain to material covered in the last quarter of analysis or algebra. In addition, it is advisable that students consider Summer Research Experiences for Undergraduates. This is a program funded by the National Science Foundation to introduce students to math research while they are still undergraduates. In their senior year or earlier, students should consider taking some graduate courses so that they are exposed to material taught at a higher level. In their junior year, students should begin to think of obtaining letters of recommendation from professors who are familiar with their abilities.

Education Abroad

Students may be able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress towards the major. Students interested in this option should contact the Programs Abroad Office in the International Center and discuss their plans with the mathematics advising officer before going abroad.

The department must approve courses taken abroad. Information on EAP/OAP can be found in the Education Abroad Program section of the *UCSD General Catalog* and the Web site http://orpheus.ucsd.edu/icenter/pao.

Major in Mathematics

The upper-division curriculum provides programs for mathematics majors as well as courses for students who will use mathematics as a tool in the biological, physical and behavioral sciences, and the humanities.

All students majoring in mathematics must complete the basic 20 sequence, Math. 20A-B-C-D-E-F. Math. 109 should be taken in the spring quarter of the sophomore year. All mathematics majors must complete at least thirteen upper-division courses including:

1. 109
2. 140A-B or 142A-B and 120A
   (140A-B-C recommended for graduate school)
3. 100A-B or 103A-B and 102
   (100A-B-C recommended for graduate school)

Upper-division electives to complete the thirteen courses required may be chosen from any mathematics course numbered 100–194.

As with all departmental requirements, more advanced courses on the same material may be substituted with written approval from the departmental adviser.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year. Either Math. 140A-B or 100A-B should be taken during the junior year.

Major in Applied Mathematics

A major in applied mathematics is also offered. The program is intended for students planning to work on the interface between mathematics and other fields.

All students majoring in applied mathematics are required to complete the following courses:

1. Calculus: 20A-B-C-D-E-F
2. Mathematical Reasoning: 109 (should be taken in sophomore year)
3. Programming:
   MAE 9 (C++) or MAE 10 (Fortran) or
   CSE 8AB (Java) or CSE 11 (Java)
4. Linear Algebra: Math. 102 or 170A.
5. Advanced Calculus: Math. 140A-B or 142A-B
6. One of the following:
   a. 180A-B-C-181A
   b. 180A-181A and any 2 from 181B-C-D-E
   c. (183 or 180A-181A) and any 3 from 170A-B-C-172-173.
7. One additional sequence which may be chosen from the list (#6) above or the following list: 110-120A-130A, 120A-B, 130A-132A, 155A-B, 171A-B, 184A-B, 193A-B.

At least thirteen upper-division courses must be completed in mathematics, except:

a. Up to twelve units may be outside the department in an approved applied mathematical area. A petition specifying the courses to be used must be approved by an applied mathematics adviser. No such units may also be used for a minor or program of concentration.
b. MAE 107, Econ. 120A-B-C, cannot be counted toward the fifty-two units.

To be prepared for a strong major curriculum, students should complete the last three quarters of the 20 sequence and Math. 109 before the end of their sophomore year.

Major in Mathematics–Scientific Computation

This major is designed for students with a substantial interest in scientific computation. The program is a specialized applied mathematics program with a concentration in computer solutions of scientific problems.

Required Courses:

Lower Division

1. Math. 20A-F
2. Computer Programming:
   MAE 9 or MAE 10 and
   CSE 8A-B or CSE 11
3. Basic Computation:
   Math. 15A (or CSE 20) and
   Math. 15B (or CSE 21) and
   CSE 12

Upper Division

4. Mathematical Reasoning: Math. 109
5. Linear Algebra: Math. 102
6. Probability and Statistics: Math. 183 or 180A-181A ***(Note**: No credit for Math. 183 if Math. 180A or 181A taken prior or concurrently.)*
7. Analysis:
   Math. 140A-B or 142A-B ***(Note**: Students planning to go to grad school should take 140A-B)*
8. Numerical Analysis: Math. 170A-B-C or Math. 170A-B/Math. 172
9. Optimization: Math. 171A-B
10. Scientific Computing: Math. 173
11. Additional elective upper-division courses to total 15 chosen from the following:
    Math. 107A-B, 110, 120A-B, 130A-B, 131, 132A-B, 152, 155A-B-C, 170C, or 172.

At least 15 upper-division mathematics courses are required for the major, except:

a. Up to 3 upper-division courses may be taken outside the department in an approved scientific computation area in the sciences or engineering. A petition specifying the courses to be used must be approved by a mathematics-scientific computation adviser. No such units may also be used by a minor or program of concentration.

b. MAE 107, Econ. 120A-B-C, Math. 195, 196, 197, 199, and 199H cannot be counted toward the 13 four-unit upper-division courses.

Major in Mathematics–Applied Science

This major is designed for students with a substantial interest in mathematics and its applications to a particular field such as physics, biology, chemistry, biochemistry, cognitive science, computer science, economics, management science, or engineering.

Required Courses:

1. Math. 20A-B-C-D-E-F
   One of the following is recommended

CSE 8A-B	Intro to Computer Sci: Java
CSE 11	Intro to Computer Sci: Java (Accelerated Pace)
MAE 9	C/C++ Programming
MAE 10	FORTRAN for Engineers

2. Seven upper-division mathematics courses that include:
   a) Math. 109
      and
   b) Math. 102 or Math. 170A
      and
   c) Any two-quarter upper-division math sequence.

Applied Science Requirement:

1. Seven upper-division courses selected from one or two other departments
2. At least three of these seven upper-division courses must require at least Math. 20C as a prerequisite

Students must submit an individual plan for approval in advance by a mathematics department adviser, and all subsequent changes in the plan must be approved by a mathematics department adviser.

Major in Mathematics–Computer Science

The program provides for a major in computer science within the Department of Mathematics. *Graduates of this program will be* mathematically oriented computer scientists who have specialized in the mathematical aspects and foundations of computer science or in the computer applications of mathematics.

As of fall 2000, a mathematics-computer science major is not allowed to also minor in computer science in the Computer Science and Engineering department.

The detailed curriculum is given in the list below:

Mathematics–Computer Science Pre-Major

In October 2001, the Academic Senate approved a mininum GPA requirement of 2.5 in the lower-division mathematics courses required for the mathematics–computer science major. The 2.5 minimum GPA in the lower-division math courses reflects minimal preparation for the upper-division courses required for the major.

Therefore, students entering UCSD as first-year students for the fall 2002 quarter and later and students entering as transfer students for the fall 2003 quarter and later will be held to this requirement. Applications from students entering UCSD on or after the effective dates above will be held until all lower-division math courses for the major are completed and the minimum GPA in those courses of 2.5 can be verified. Students meeting the 2.5 minimum GPA requirement will be accepted into the mathematics–computer science major.

Lower-Division Requirements:

1. Calculus: Math. 20A-B-C-D-E-F
2. Intro to Computer Science—CSE 8A-B Introduction to Computer Science: Java, or CSE 11 Introduction to Computer Science: Java *(Accelerated)*
3. Basic Data Structures and Object-oriented *Programming:* CSE 12
4. Computer Organization and Systems Programming: CSE 30

Upper-Division Requirements:

5. Mathematical Reasoning: Math. 109
6. Modern Applied Algebra: Math. 103AB or Modern Algebra: Math. 100AB
7. Theory of Computability: Math. 166 or CSE 105
8. Intro to Probability: Math. 180A or 183
9. Mathematical Foundations of Computer Science: Math. 184A
10. Computer Implementations of Data Structures: Math. 176 or CSE 100
11. Design & Analysis of Algorithms: Math. 188 (or CSE 101)
12. Eight units from: Math. 170A, B, C, 172, 173, 174 (Note duplication of credit between Math. 174 and 170A-B-C)
13. Eight units from: Math. 107A-B, 152, 155A-B, 160A-B, 166B, 168A-B, 179A-B, 184B, 187, CSE 120-121, 130, 131A-B, 140-140L, 141-141L, 167
14. Eight additional units from: any course in list #12 or #13 above or Math. 102, 110, 111A-B, 120A-B, 130A-B, 131, 132A-B, 140A-B, 142A-B, 150A-B, 165, 181A-B-C

In order to graduate by the end of their senior year, students should complete Math. 103A-B by the end of their junior year.

Joint Major in Mathematics and Economics

Majors in mathematics and the natural sciences often feel the need for a more formal introduction to issues involving business applications of science and mathematics. Extending their studies into economics provides this application and can provide a bridge to successful

careers or advanced study. Majors in economics generally recognize the importance of mathematics to their discipline. Undergraduate students who plan to pursue doctoral study in economics or business need the more advanced mathematics training prescribed in this major.

This major is considered to be excellent preparation for Ph.D. study in economics and business administration, as well as for graduate studies for professional management degrees, including the MBA. The major provides a formal framework making it easier to combine study in the two fields.

Course requirements of the Joint Major in Mathematics and Economics consist principally of the required courses of the pure mathematics major and the economics/management science major.

Lower-Division Requirements:

1. Calculus: Math. 20A-B-C-D-F
2. Intro to Economics: Econ. 1-2-3

Upper-Division Requirements:

Fifteen upper-division courses in mathematics and economics, with a minimum of seven courses in each department, chosen from the courses listed below (prerequisites are strictly enforced):

1. Mathematical Reasoning: Math. 109
2. One of the following:
   Applied Linear Algebra: Math. 102
   Numerical Linear Algebra: Math. 170A
   Modern Algebra: Math. 100AB
3. One of the following:
   Foundations of Analysis: Math. 140A
   Advanced Calculus: Math. 142A
4. One of the following:
   Ordinary Differential Equations: Math. 130A,
   Foundations of Analysis: Math. 140B
   Advanced Calculus: Math. 142B
5. One of the following:
   Microeconomics: Econ. 100A-B or
   Management Science Microeconomics: Econ. 170AB
6. Econometrics: Econ. 120A-B-C or
   Math. 180A and Econ. 120B-C or
   Probability: Math. 180A, 181A and Econ. 120C
7. One of the following:
   Macroeconomics: Econ. 110AB
   Mathematical Programming: Numerical Optimization: Math. 171AB
   or
   Two courses from the following:
   Decisions Under Uncertainty: Econ. 171
   Introduction to Operations Research: Econ. 172A-B-C, (**Note**: 172A is a prerequisite for 172BC)

Other courses which are strongly recommended are: Math. 130B, 131, 181B, 190 and 193AB and Econ. 109, 113, 175, and 178.

Major in Mathematics–Secondary Education

This major offers excellent preparation for teaching mathematics in secondary schools. Students interested in earning a California teaching credential from UCSD should contact the Teacher Education Program (TEP) for information regarding prerequisites and requirements. It is recommended you contact TEP as early as possible.

Lower-Division Requirements

1. Calculus 20A-B-C-D-E-F

Recommended:

1. One of the following:
   Introduction to Computer Science: Java: CSE 8A-B,
   Fortran: MAE 10
   C/C++ Programming: MAE 9

Upper-Division Requirements:

1. Mathematical Reasoning: Math. 109
2. Number Theory: Math 104A
3. History of Mathematics: Math. 163
4. Practicum in Learning: TEP 129A-B-C
5. One of the following:
   Computer Algebra: Math. 107A
   Computer Graphics: Math. 155A
   Numerical Linear Algebra: Math. 170A
   Intro. to Cryptography: Math. 187
   Mathematical Computing: Math. 161
6. One of the following:
   Intro. to Probability: Math. 180A
   Statistical Methods: Math. 183
7. One of the following:
   Differential Geometry: Math. 150A
   Topics in Geometry: Math. 151
   Geometry for Secondary Teachers: Math. 153
   Intro. to Topology: Math. 190
8. One of the Following:
   Modern Algebra: Math. 100A
   Applied Linear Algebra: Math. 102
   Modern Applied Algebra: Math. 103A
9. One of the following:
   Foundations of Analysis: Math. 140A
   Advanced Calculus: Math. 142A
10. Upper-division courses must total thirteen upper-division courses chosen from items 1 to 10. Upper-division courses must include at least one two-quarter sequence from the following list:

    100A-B; 103A-B, 103A-102; 104A-B; 110-120A; 110-130A-B; 110-132A; 110-131; 120A-B; 130A-132A; 130A-B; 140A-B;142A-B; 150A-B; 155A-B; 160A-B; 170A-B; 170A-172; 170A-173; 170A-171A; 171A-B; 180A-B; 180A-181A; 184A-B; 193A-B.

Minor in Mathematics

The minor in mathematics consists of seven or more courses. At least four of these courses must be upper-division courses taken from the UCSD Department of Mathematics. Acceptable lower-division courses are Math. 20D, 20E, and 20F.

Math. 195, 196, 197, 198, 199, and 199H are not acceptable courses for the mathematics minor. A grade of C– or better (or P if the Pass/No Pass option is used) is required for all courses used to satisfy the requirements for a minor. There is no restriction on the number of classes taken with the P/NP option. Upper-division courses cannot overlap between major and minor programs.

Mathematics Honors Program

The Department of Mathematics offers an honors program for those students who have demonstrated excellence in the major. Successful completion of the honors program entitles the student to graduate with departmental honors (see Department Honors in the Academic Regulations section). Application to the program should be made the spring quarter before the student is at senior standing.

Requirements for admission to the program are:

1. Junior standing
2. An overall GPA of 3.0 or higher
3. A GPA in the major of 3.5 or higher
4. Completion of Math. 109 (Mathematical Reasoning) and at least one of Math. 100A,

103A, 140A, or 142A. (Completion of additional major courses is strongly recommended.)

Completion of the honors program requires the following:

1. At least one quarter of the student colloquium, Math. 196 (**Note:** Math. 196 is only offered in the fall quarter.)
2. The minimum 3.5 GPA in the major must be maintained
3. An Honors Thesis. The research and writing of the thesis will be conducted over at least two quarters of the junior/senior years under the supervision of a faculty adviser. This research will be credited as eight to twelve units of Math. 199H. The completed thesis must be approved by the department's Honors Committee, and presented orally at the Undergraduate Research Conference or another appropriate occasion.

The department's Honors Committee will determine the level of honors to be awarded, based on the student's GPA in the major and the quality of the honors work. Applications for the mathematics department's Honors Program can be obtained at the mathematics department Undergraduate Affairs Office (AP&M 7018) or the Mathematics Advising Office (AP&M 6016). Completed applications can be returned to the Mathematics Advising Office.

Duplication of Credit

In the circumstances listed below, a student will not receive full credit for a Department of Mathematics course. The notation "Math. 20A [2 if Math. 10A previously/0 if Math. 10A concurrently/0 if Math. 10B or 10C]" means that a student already having credit for Math. 10A will receive only two units of credit for Math. 20A, but will receive no units if he or she has credit for Math. 10B or 10C, and no credit will be awarded for Math. 20A if Math. 10A is being taken concurrently.

1. Math. 4C [0 if Math. 10A or Math. 20A previously or concurrently]
2. Math. 15A [0 if CSE20]
   Math. 15B [0 if CSE21]
3. Math. 20A [2 if Math. 10A previously/0 if Math. 10A concurrently/0 if Math. 10B or 10C]
4. Math. 20B [2 if Math. 10B or 10C previously/0 if Math. 10B concurrently]
5. Math. 20C [2 if Math. 10C previously/0 if Math. 10C concurrently]
6. Math. 20D [2 if Math. 20D previously/0 if Math. 2DA previously]
7. Math. 20E [0 if Math. 2F previously]
8. Math. 20F [0 if Math. 2EA previously]
9. Both Math. 100 and Math. 103 cannot be taken for credit
10. Math. 142A-B [0 if Math. 140A-B]
11. Math. 155A [0 if CSE 167]
12. Math. 166 [0 if CSE105]
13. Math. 174 [0 if 170A or B or C previously]
14. Math. 180A [2 if Econ. 120A previously/0 if Econ. 120A concurrently]
15. Math. 181A [2 if Econ. 120B/0 if Econ. 120B concurrently]
16. Math. 183 [0 if Econ. 120A or Math. 180A or Math. 181A has been taken previously or concurrently. Full credit for Math. 183 will be given if taken previously to Math. 180A or Math. 181A.]

For duplication or repeat of credit guidelines between the Math. 20 sequence and the Math. 10 sequence, refer to the section titled "First-Year Courses."

Advisers

Advisers change yearly. Contact the undergraduate office at (858) 534-3590 for current information.

The Graduate Program

The Department of Mathematics offers graduate programs leading to the M.A. (pure or applied mathematics), M.S. (statistics), and Ph.D. degrees.

The application deadline for fall admission is January 15. Candidates should have a bachelor's or master's degree in mathematics or a related field from an accredited institution of higher education or the equivalent. A minimum scholastic average of B or better is required for course work completed in upper-division or prior graduate study. In addition, the department requires all applicants to submit scores no older than twelve months from both the GRE General Test and Advanced Subject Test in Mathematics. Completed files are judged on the candidate's mathematical background, qualifications, and goals.

Departmental support is typically in the form of teaching assistantships, research assistantships, and fellowships. These are currently only awarded to students in the Ph.D. program.

General Requirements

All student course programs must be approved by a faculty adviser prior to registering for classes each quarter, as well as any changes throughout the quarter.

Full-time students are required to register for a minimum of twelve (12) units every quarter, eight (8) of which must be graduate-level mathematics courses taken for a letter grade only. The remaining four (4) units can be approved upper-division or graduate-level courses in mathematics-related subjects *(Math. 500 may not be used to satisfy any part of this requirement).* After advancing to candidacy, Ph.D.
candidates may take all course work on a Satisfactory/Unsatisfactory basis. Typically, students should not enroll in Math. 299 until they have satisfactorily passed both qualifying examinations *(see Ph.D. in Mathematics)* or obtained approval of their faculty adviser.

Master of Arts in Pure Mathematics

[*Offered only under the Comprehensive Examination Plan.*] The degree may be terminal or obtained on the way to the Ph.D. A total of forty-eight units of credit is required. Twenty-four of these units must be graduate-level mathematics courses approved in consultation with a faculty adviser.

In the selection of course work to fulfill the remaining twenty-four units, the following restrictions must be followed:

a. No more than eight units of upper-division mathematics courses.
b. No more than twelve units of graduate courses in a related field outside the department (approved by the Department of Mathematics).
c. No more than four units of Math. 295 (Special Topics) or Math. 500 (Apprentice Teaching).
d. No units of Math. 299 (Reading and Research) may be used in satisfying the requirements for the master's degree.

COMPREHENSIVE EXAMINATIONS

Seven written departmental examinations are offered in three areas (refer to "Ph.D. in Mathematics," Areas 1, 2, and 3, for list of exams). A student must complete two examinations, one from Area 1 and one from Area 2, both with an M.A. pass or better.

FOREIGN LANGUAGE REQUIREMENT

A reading knowledge of one foreign language (French, German, or Russian) is required. In exceptional cases other languages may be substituted. Testing is administered by faculty in the department who select published mathematical material in one of these languages for a student to translate.

TIME LIMITS

Full-time students are permitted seven quarters in which to complete all degree requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Master of Arts in Applied Mathematics

[*Offered only under the Comprehensive Examination Plan*] The degree may be terminal or obtained on the way to the Ph.D. Out of the total forty-eight units of required credit, two applied mathematics sequences comprising twenty-four units must be chosen from the following list (not every course is offered each year):

202A-B-C.	(Applied Algebra)
210A-B-C.	(Mathematical Methods in Physics and Engineering)
261A-B-C.	(Combinatorial Algorithms)
264A-B-C.	(Combinatorics)
270A-B-C.	(Numerical Mathematics)
271A-B-C.	(Numerical Optimization)
272A-B-C.	(Numerical Partial Differential Equations)
273A-B-C.	(Scientific Computation)

In certain cases, a petition may be approved to substitute one of these requirements from the following list of sequences:

220A-B-C.	(Complex Analysis)
231A-B-C.	(Partial Differential Equations)
240A-B-C.	(Real Analysis)
280A-B-C.	(Probability Theory)
281A-B-C.	(Mathematical Statistics)
282A-B.	(Applied Statistics)

In choosing course work to fulfill the remaining twenty-four units, the following restrictions must be followed:

a. At least eight units must be approved graduate courses in mathematics or other departments [a one-year sequence in a related area outside the department such as computer science, engineering, physics, or economics is strongly recommended];
b. A maximum of eight units can be approved upper-division courses in mathematics; and
c. A maximum of eight units can be approved upper-division courses in other departments.
d. A maximum of four units of Math. 500 (Apprentice Teaching).
e. NO UNITS of Math. 295 (Special Topics) or Math. 299 (Reading and Research) may be used.

Students are strongly encouraged to consult with a faculty adviser in their first quarter to prepare their course of study.

COMPREHENSIVE EXAMINATIONS

Two written comprehensive examinations must be passed at the master's level in any of the required applied mathematics sequences listed above. The instructors of each course should be contacted for exam details.

FOREIGN LANGUAGE REQUIREMENT

There is no foreign language requirement for the M.A. in applied mathematics.

TIME LIMITS

Full-time M.A. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Master of Science in Statistics

[*Offered only under the Comprehensive Examination Plan*] The M.S. in statistics is designed to provide recipients with a strong mathematical background and experience in statistical computing with various applications. Out of the forty-eight units of credit needed, required core courses comprise twenty-four units, including:

Math. 281A-B. (Mathematical Statistics)
Math. 282A-B. Applied Statistics)

and any two topics comprising eight units chosen at will from Math. 287A-B-C-D and 289A-B-C (see course descriptions for topics).

The following guidelines should be followed when selecting courses to complete the remaining twenty-four units:

a. For a theoretical emphasis, Math. 280A-B-C (Probability Theory) is required.
b. For an applied orientation, Math. 270A-B-C (Numerical Mathematics) is recommended.
c. A maximum of eight units of approved upper-division applied mathematics courses (see faculty adviser) and Math. 500 (Apprentice Teaching).

Upon the approval of the faculty adviser, all twenty-four units can be graduate-level courses in other departments.

COMPREHENSIVE EXAMINATIONS

Two written comprehensive examinations must be passed at the master's level in related course work (approved by a faculty adviser). Instructors of the relevant courses should be consulted for exam dates as they vary on a yearly basis.

FOREIGN LANGUAGE REQUIREMENT

There is no foreign language requirement for the M.S. in statistics.

TIME LIMITS

Full-time M.S. students are permitted seven quarters in which to complete all requirements. While there are no written time limits for part-time students, the department has the right to intervene and set individual deadlines if it becomes necessary.

Ph.D. in Mathematics

WRITTEN QUALIFYING EXAMINATIONS

The department offers written qualifying examinations in seven subjects. These are grouped into three areas as follows:

Area #1

Complex Analysis (Math. 220A-B-C)
Real Analysis (Math. 240A-B-C)

Area #2

Algebra (Math. 200A-B-C)
Applied Algebra (Math. 202A-B-C)
Topology (Math. 290A-B-C)

Area #3

Numerical Analysis (Math. 270A-B-C)
Statistics (Math. 281A-B-C)

i) Three qualifying exams must be passed. At least one must be passed at the Ph.D. level, and a second must be passed at either the Ph.D. or Provisional Ph.D. level. The third exam must be passed at least at the master's level.

ii) Of the three qualifying exams, there must be at least one from each of Areas #1 and #2. Algebra and Applied Algebra do not count as distinct exams in Area #2.

iii) Students must pass a least two exams from distinct areas with a minimum grade of Provisional Ph.D. (For example, a Ph.D. pass in Real Analysis, Provisional Ph.D. pass in Complex Analysis, M.A. pass in Algebra would NOT satisfy this requirement, but a Ph.D. pass in Real Analysis, M.A. pass in Complex Analysis, Provisional Ph.D. pass in Algebra would, as would a Ph.D. pass in Numerical Analysis, Provisional Ph.D. pass in Applied Algebra, and M.A. pass in Real Analysis.)

iv) All exams must be passed by the September exam session prior to the beginning of the third year of graduate studies. (Thus, there would be no limit on the number of attempts, encouraging new students to take exams when they arrive, without penalty.)

Department policy stipulates that a least one of the exams must be completed with a Provisional Ph.D. pass or better by September following the end of the first year. Anyone unable to comply with this schedule will be terminated from the doctoral program and transferred to one of our Master's programs.

Any Master's student can submit for consideration a written request to transfer into the Ph.D. program when the qualifying exam requirements for the Ph.D. program have been met and a dissertation adviser is found. Approval by the Qualifying Exam and Appeals Committee (QEAC) is not automatic, however.

Exams are typically offered twice a year, one scheduled late in the spring quarter and again in early September (prior to the start of fall quarter). Copies of past exams are made available for purchase in the Graduate Office.

In choosing a program with an eye to future employment, students should seek the assistance of a faculty adviser and take a broad selection of courses including applied mathematics, such as those in Area #3.

FOREIGN LANGUAGE REQUIREMENT

A reading knowledge of one foreign language (French, German, or Russian) is required prior to advancing to candidacy. In exceptional cases other languages may be substituted. Testing is administered within the department by faculty who select published mathematical material in one of these languages for a student to translate.

ADVANCEMENT TO CANDIDACY

It is expected that by the end of the third year (nine quarters), students should have a field of research chosen and a faculty member willing to direct and guide them. A student will advance to candidacy after successfully passing the oral qualifying examination, which deals primarily with the area of research proposed but may include the project itself. This examination is conducted by the student's appointed doctoral committee. Based on their recommendation, a student advances to candidacy and is awarded the C.Phil. degree.

DISSERTATION AND FINAL DEFENSE

Submission of a written dissertation and a final examination in which the thesis is publicly defended are the last steps before the Ph.D. degree is awarded. When the dissertation is substantially completed, copies must be provided to all committee members at least four weeks in advance of the proposed defense date. Two weeks before the scheduled final defense, a copy of the dissertation must be made available in the department for public inspection.

TIME LIMITS

The normative time for the Ph.D. in mathematics is five years. Students must be advanced to candidacy by the end of eleven quarters. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

COURSES

All prerequisites listed below may be replaced by an equivalent or higher-level course. The listings of quarters in which courses will be offered are only tentative. Please consult the Department of Mathematics to determine the actual course offerings each year.

LOWER-DIVISION

3C. Pre-Calculus (4)
Functions and their graphs. Linear and polynomial functions, zeroes, inverse functions, exponential and logarithm, trigonometric functions and their inverses. Emphasis on understanding algebraic, numerical and graphical approaches making use of graphing calculators. (No credit given if taken after Math. 4C, 1A/10A, or 2A/20A.) *Prerequisite: two or more years of high school mathematics or equivalent.*

4C. Pre-Calculus for Science and Engineering (4)
Review of polynomials. Graphing functions and relations: graphing rational functions, effects of linear changes of coordinates. Circular functions and right triangle trigonometry. Reinforcement of function concept: exponential, logarithmic, and trigonometric functions. Vectors. Conic sections. Polar coordinates. Three lectures, one recitation. (No credit given if taken after Math. 1A/10A or 2A/20A. Two units of credit given if taken after Math. 3C.) *Prerequisite: Math Placement Exam qualifying score, or Math. 3C with a grade of C or better.*

10A. Calculus (4)
Differentiation and integration of algebraic functions. Fundamental theorem of calculus. Applications. (No credit given if taken after Math. 2A/20A. Formerly numbered Math. 1A.) *Prerequisites: Math Placement Exam qualifying score, or AP Calculus AB score of 2, or SAT II Math. 2C score of 650 or higher, or Math. 3C with a grade of C or better, or Math. 4C with a grade of C– or better.*

10B. Calculus (4)
Further applications of the definite integral. Calculus of trigonometric, logarithmic, and exponential functions. Complex numbers. (No credit given if taken after Math. 2B/20B. Formerly numbered Math. 1B.) *Prerequisites: AP Calculus AB score of 3, 4, or 5, or Math. 10A with a grade of C– or better, or Math. 20A with a grade of C– or better.*

10C. Calculus (4)
Vector geometry, velocity, and acceleration vectors. (No credit given if taken after Math. 2C/20C. Formerly numbered Math. 1C.) *Prerequisites: AP Calculus BC score of 3, 4, or 5, or Math. 10B with a grade of C– or better, or Math. 20B with a grade of C– or better.*

11. Elementary Probability and Statistics (4)
Events and probabilities, combinatorics, conditional probability, Bayes formula. Discrete random variables: mean, variance; binomial, multinomial, Poisson distributions. Continuous random variables: densities, mean, variance; normal, uniform, exponential distributions. Sample statistics, confidence intervals, regression. Applications. Intended for biology and social science majors. *Prerequisites: Math. 10A-B or Math. 20A-B.*

15A. Discrete Mathematics (4)
Basic discrete mathematical structures: sets, relations, functions, sequences, equivalence relations, partial orders, number systems. Methods of reasoning and proofs: propositional logic, predicate logic, induction, recursion, pigeonhole principle. Infinite sets and diagonalization. Basic counting techniques; permutations and combinations. Applications will be given to digital logic design, elementary number theory, design of programs, and proofs of program correctness. Equivalent to CSE 20. Credit not offered for both Math. 15A and CSE 20. *Prerequisites: CSE 8A or CSE 8B or CSE 11. CSE 8B or CSE 11 may be taken concurrently with Math. 15A/CSE 20.*

15B. Mathematics for Algorithm and Systems (4)
This course introduces mathematical tools for the qualitative and quantitative analysis of algorithms and computer systems. Topics to be covered include basic enumeration and counting techniques; recurrence relations; graph theory; asymptotic notation; elementary applied discrete probability. Equivalent to CSE 21. *Prerequisite: Math. 15A or CSE 20 or 160A; CSE 12 is strongly recommended for CSE 21.*

18. Computer Animated Statistics (4)
Students will acquire the basics of statistical analysis by working with computer-simulated models rather than abstract mathematical language. Topics include hypothesis testing, maximum likelihood estimation, sampling, chi-square tests and construction of confidence intervals. *Prerequisite: Math. 1B or 10B or 20B.*

20A. Calculus for Science and Engineering (4)
Foundations of differential and integral calculus of one variable. Functions, graphs, continuity, limits, derivative, tangent line. Applications with algebraic, exponential, logarithmic, and trigonometric functions. Introduction to the integral. (Two credits given if taken after Math. 1A/10A and no credit given if taken after Math. 1B/10B or Math. 1C/10C. Formerly numbered Math. 2A.) *Prerequisite: Math Placement Exam qualifying score, or AP Calculus AB score of 2 or 3, or SAT II Math. 2C score of 650 or higher, or Math. 4C with a grade of B or better, or Math. 10A with a grade of C– or better.*

20B. Calculus for Science and Engineering (4)
Integral calculus of one variable and its applications, with exponential, logarithmic, hyperbolic, and trigonometric functions. Methods of integration. Polar coordinates in the plane. (Two units of credits given if taken after Math. 1B/10B or Math. 1C/10C.) *Prerequisite: AP Calculus AB score of 3, 4, or 5, or AP Calculus BC score of 3, or Math. 20A with a grade of C– or better, or Math. 10B with a grade of C– or better, or Math. 10C with a grade of C– or better.*

20C. Calculus and Analytic Geometry for Science and Engineering (4)
Vector geometry, vector functions and their derivatives. Partial differentiation. Maxima and minima. Double integration, Two units of credit given if taken after Math. 10C. Formerly numbered Math. 21C. *Prerequisite: AP Calculus BC score of 3, 4, or 5, or Math. 20B with a grade of C– or better.*

20D. Introduction to Differential Equations (4)
Infinite series. Ordinary differential equations: exact, separable, and linear; constant coefficients, undetermined coefficients, variations of parameters. Series solutions. Systems, Laplace transforms, technique for engineering sciences. Computing symbolic and graphical solutions using Matlab. Formerly numbered Math. 21D. May be taken as repeat credit for Math. 21D. *Prerequisite: Math. 20C or equivalent or consent of instructor.*

20E. Vector Calculus (4)
Change of variable in multiple integrals, Jacobian Line integrals, Green's theorem. Vector fields, gradient fields, divergence, curl. Spherical and cylindrical coordinates. Taylor series in several variables. Surface integrals, Stoke's theorem. Gauss' theorem and its applications. Conservative fields. (Zero units given if Math. 2F previously. Formerly numbered Math. 2F) *Prerequisite: Math. 20C (or 21C) or equivalent, or consent of instructor.*

20F. Linear Algebra (4)
Matrix algebra, solution of systems of linear equations by Gaussian elimination, determinants. Linear and affine subspaces, bases of Euclidean spaces. Eigenvalues and eigenvectors, quadratic forms, orthogonal matrices, diagonalization of symmetric matrices. Applications. Computing symbolic and graphical solutions using Matlab. (Zero units given if Math. 2EA previously. Formerly numbered 2EA.) *Prerequisite: Math. 20C (or 21C) or equivalent or consent of instructor.*

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshman. *Prerequisite: none.*

UPPER-DIVISION

100A-B-C. Modern Algebra (4-4-4)
An introduction to the methods and basic structures of higher algebra: sets and mappings, the integers, rational, real and complex numbers, groups, rings (especially polynomial rings) and ideals, fields, real and complex vector spaces, linear transformations, inner product spaces, matrices, triangular form, diagonalization. Both 100 and 103 cannot be taken for credit. Three lectures, one recitation. *Prerequisites: Math. 20F, and Math. 109 or consent of instructor.* (F,W,S)

102. Applied Linear Algebra (4)
A second course in linear algebra from a computational yet geometric point of view. Elementary Hermitian matrices, Schur's theorem, normal matrices, and quadratic forms. Moore-Penrose generalized inverse and least square problems. Vector and matrix norms. Characteristic and singular values. Canonical forms. Determinants and multilinear algebra. Three lectures, one recitation. *Prerequisite: Math. 20F.* (W)

103A-B. Modern Applied Algebra (4-4)
Abstract algebra with applications to computation. Set algebra and graph theory. Finite state machines. Boolean algebras and switching theory. Lattices. Groups, rings and fields: applications to coding theory. Recurrent sequences. Three lectures, one recitation. Both 100 and 103 cannot be taken for credit. *Prerequisites: Math. 20F and Math. 109 (may be taken concurrently).* (F,W)

104A-B-C. Number Theory (4-4-4)
Topics from number theory with applications and computing. Possible topics are: congruences, reciprocity laws, quadratic forms, prime number theorem, Riemann zeta function, Fermat's conjecture, diophantine equations, Gaussian sums, algebraic integers, unique factorization into prime ideals in algebraic number fields, class number, units, splitting of prime ideals in extensions, quadratic and cyclotomic fields, partitions. Possible applications are Fast Fourier Transform, signal processing, coding, cryptography. Three lectures. *Prerequisite: consent of instructor.*

107A-B. Computer Algebra (4)
An introduction to algebraic computation. Computational aspects of groups, rings, fields, etc. Data representation and algorithms for symbolic computation. Polynomials and their arithmetic. The use of a computer algebra system as an experimental tool in mathematics. Programming using algebra systems. *Prerequisite: prior or concurrent enrollment in the Math. 100 or 103 sequence.*

109. Mathematical Reasoning (4)
This course uses a variety of topics in mathematics to introduce the students to rigorous mathematical proof, emphasizing quantifiers, induction, negation, proof by contradiction, naive set theory, equivalence relations and epsilon-delta proofs. Required of all departmental majors. *Prerequisite: Math. 20F.*

110. Introduction to Partial Differential Equations (4)
Fourier series, orthogonal expansions, and eigenvalue problems. Sturm-Liouville theory. Separation of variables for partial differential equations of mathematical physics, including topics on Bessel functions and Legendre polynomials. *Prerequisites: Math. 20D (or 21D) and 20F, or consent of instructor.* (F,S)

111A-B. Mathematical Modeling (4-4)
An introduction to mathematical modeling in the physical and social sciences, concentrating on one or more topics that vary from year to year. Students work on independent or group projects. May be repeated for credit when topics change. *Prerequisites: Math. 20D and Math. 20F, or consent of instructor.*

120A. Elements of Complex Analysis (4)
Complex numbers and functions. Analytic functions, harmonic functions, elementary conformal mappings. Complex integration. Power series. Cauchy's theorem. Cauchy's formula. Residue theorem. Three lectures, one recitation. *Prerequisite or co-registration: Math. 20E, or consent of instructor.* (F,W)

120B. Applied Complex Analysis (4)
Applications of the Residue theorem. Conformal mapping and applications to potential theory, flows, and temperature distributions. Fourier transformations. Laplace transformations, and applications to integral and differential equations. Selected topics such as Poisson's formula. Dirichlet problem. Neumann's problem, or special functions. Three lectures, one recitation. *Prerequisite: Math. 120A.* (W,S)

130A. Ordinary Differential Equations (4)
Linear and nonlinear systems of differential equations. Stability theory, perturbation theory. Applications and introduction to numerical solutions. Three lectures. *Prerequisites: Math. 20D/21D and 20F.* (F)

130B. Ordinary Differential Equations (4)
Existence and uniqueness of solutions to differential equations. Local and global theorems of continuity and differentiabillity. Three lectures. *Prerequisites: Math. 20D/21D and 20F, and Math. 130A.* (W)

131. Variational Methods in Optimization (4)
Maximum-minimum problems. Normed vector spaces, functionals, Gateaux variations. Euler-Lagrange multiplier theorem for an extremum with constraints. Calculus of variations via the multiplier theorem. Applications may be taken from a variety of areas such as the following: applied mechanics, elasticity, economics, production planning and resource allocation, astronautics, rocket control, physics, Fermat's principle and Hamilton's principle, geometry, geodesic curves, control theory, elementary bang-bang problems. Three lectures, one recitation. *Prerequisites: Math. 20D/21D and 20F or consent of instructor.* (S)

132A. Elements of Partial Differential Equations and Integral Equations (4)
Basic concepts and classification of partial differential equations. First order equations, characteristics. Hamilton-Jacobi theory, Laplace's equation, wave equation, heat equation. Separation of variables, eigenfunction expansions, existence and uniqueness

of solutions. Three lectures. *Prerequisite: Math. 110 or consent of instructor.* (W)

132B. Elements of Partial Differential Equations and Integral Equations (4)
Relation between differential and integral equations, some classical integral equations, Volterra integral equations, integral equations of the second kind, degenerate kernels, Fredholm alternative, Neumann-Liouville series, the resolvent kernel. Three lectures. *Prerequisite: Math. 132A.* (S)

140A-B-C. Foundations of Analysis (4-4-4)
Axioms, the real number system, topology of the real line, metric spaces, continuous functions, sequences of functions, differentiation, Riemann-Stieltjes integration, partial differentiation, multiple integration, Jacobians. Additional topics at the discretion of the instructor: power series, Fourier series, successive approximations of other infinite processes. Three lectures, one recitation. *Prerequisites: Math. 20F and Math. 109 or consent of instructor.* Credit cannot be obtained for both Math. 140A-B and 142A-B. (F,W,S)

142A-B. Advanced Calculus (4-4)
The number system. Functions, sequences, and limits. Continuity and differentiability. The Riemann integral. Transcendental functions. Limits and continuity. Infinite series. Sequences and series of functions. Uniform convergence. Taylor series. Improper integrals. Gamma and Beta functions. Fourier series. Three lectures. *Prerequisites: Math. 20F and Math. 109 (concurrent enrollment in Math. 109 allowed.)* Credit cannot be obtained for both Math. 140A-B and 142A-B.

150A. Differential Geometry (4)
Differential geometry of curves and surfaces. Gauss and mean curvatures, geodesics, parallel displacement, Gauss-Bonnet theorem. Three lectures. *Prerequisite: Math. 20E or consent of instructor.* (F)

150B. Calculus on Manifolds (4)
Calculus of functions of several variables, inverse function theorem. Further topics, selected by instructor, such as exterior differential forms, Stokes' theorem, manifolds, Sard's theorem, elements of differential topology, singularities of maps, catastrophes, further topics in differential geometry, topics in geometry of physics. Three lectures. *Prerequisite: Math. 150A.* (W)

151. Topics in Geometry (4)
A topic, selected by the instructor, from Euclidean geometry, non-Euclidean geometry, projective geometry, algebraic geometry, or other geometries. May be repeated for credit with a different topic. Three lectures. *Prerequisite: consent of instructor.* (S)

152. Applicable Mathematics and Computing (4)
This course will give students experience in applying theory to real world applications such as Internet and wireless communication problems. The course will incorporate talks by experts from industry and students will be helped to carry out independent projects. Topics include graph visualization, labelling, and embeddings, random graphs and randomized algorithms. May be taken 3 times for credit. *Prerequisites: Math. 20D or 21D, and 20F or consent of instructor.*

153. Geometry for Secondary Teachers (4)
Two- and three-dimensional Euclidean geometry is developed from one set of axioms. Pedagogical issues will emerge from the mathematics and be addressed using current research in teaching and learning geometry. This course is designed for prospective secondary school mathematics teachers. *Prerequisite: Math. 109.*

155A. Computer Graphics (4)
Bezier curves and control lines, de Casteljau construction for subdivision, elevation of degree, control points of Hermite curves, barycentric coordinates, rational curves. Three lectures, one recitation, and approximately eight laboratory hours per week. *Prerequisites: Math. 20F and programming experience.* [Warning: There are duplicate credit restrictions on this course. See section on Duplication of Credit.] (F)

155B. Topics in Computer Graphics (4)
Spline curves, spline interpolation, affine and affine cross ratios, polar forms (blossoming), the Oslo algorithm for knot insertion, NURBS and geometric continuity. Three lectures, one recitation, and approximately eight laboratory hours per week. *Prerequisite: Math. 155A or consent of instructor.* (W)

160A-B. Elementary Mathematical Logic (4-4)
An introduction to recursion theory, set theory, proof theory, and model theory. Turing machines. Undecidability of arithmetic and predicate logic. Proof by induction and definition by recursion. Cardinal and ordinal numbers. Completeness and compactness theorems for propositional and predicate calculi. Three lectures. *Prerequisite: Math. 100A, 103A, 140A, or consent of instructor.*

161. Mathematical Computing (2 or 4)
Programming in higher level mathematical language such as Mathematica: Lists, Functions, Expressions, Recursion, Iteration, graphics, packages. Application to diverse areas of mathematics such as differential equations, dynamical systems, fractals, chaos, probability, financial models. *Prerequisite: Math. 20A-B, 21C-D, 20E-F or equivalent.*

163. History of Mathematics (4)
Topics will vary from year to year in areas of mathematics and their development. Topics may include the evolution of mathematics from the Babylonian period to the eighteenth century using original sources, a history of the foundations of mathematics and the development of modern mathematics. *Prerequisite: Math. 20B or consent of instructor.* (S)

165. Introduction to Set Theory (4)
Sets, relations, and functions. Partial, linear, and well-orders. The axiom of choice, proof by induction and definition by recursion. Cardinal and ordinal numbers and their arithmetic. *Prerequisite: Math. 100A or 140A or 103, or consent of instructor.*

166. Intro to the Theory of Computation (4)
Introduction to formal languages; regular languages; regular expressions, finite automata, minimization, closure properties, decision algorithms, and non-regular languages; context-free languages, context-free grammars, push-down automata, parsing theory, closure properties, and noncontext-free languages; computable languages; turing machines, recursive functions, Church's thesis, undecidability and the halting problem. Equivalent to CSE 105. *Prerequisites: CSE 8B or 9B or 10 or 65 or 62B AND CSE 20 or 160A or Math. 15A or 109 or 100A or 103A.*

168A. Topics in Applied Mathematics-Computer Science (4)
Topics to be chosen in areas of applied mathematics and mathematical aspects of computer science. May be repeated once for credit with different topics. Three lectures, one recitation. *Prerequisite: consent of instructor.* (W,S)

170A. Numerical Linear Algebra (4)
Analysis of numerical methods for linear algebraic systems and least squares problems. Orthogonalization methods. Ill conditioned problems. Eigenvalue and singular value computations. Three lectures, one recitation. *Prerequisites: Math. 20F and knowledge of programming.* (F,S)

170B. Numerical Analysis (4)
Rounding and discretization errors. Calculation of roots of polynomials and nonlinear equations. Interpolation. Approximation of functions. Three lectures, one recitation. *Prerequisites: Math. 20F and knowledge of programming.* (W)

170C. Numerical Ordinary Differential Equations (4)
Numerical differentiation and integration. Ordinary differential equations and their numerical solution. Basic existence and stability theory. Difference equations. Boundary value problems. Three lectures, one recitation. *Prerequisite: Math. 170B or consent of instructor.* (S)

171A-B. Mathematical Programming–Numerical Optimization (4-4)
Mathematical optimization and applications. Linear programming, the simplex method, duality. Nonlinear programming, Kuhn-Tucker theorem. Selected topics from integer programming, network flows, transportation problems, inventory problems, and other applications. Three lectures, one recitation. *Prerequisites: Math. 20F and knowledge of programming.*

172. Numerical Partial Differential Equations (4)
Finite difference methods for the numerical solution of hyperbolic and parabolic partial differential equations; finite difference and finite element methods for elliptic partial differential equations. Three lectures. *Prerequisites: Math. 170A or Math. 110 and programming experience.* (S)

173. Mathematical Software–Scientific Programming (4)
Development of high quality mathematical software for the computer solution of mathematical problems. Three lectures, one recitation. *Prerequisites: Math. 170A or Math. 174 and knowledge of FORTRAN.* (W)

174. Numerical Methods in Science and Engineering (4)
Floating point arithmetic, linear equations, interpolation, integration, differential equations, nonlinear equations, optimization, least squares. Students may not receive credit for both Math. 174 and Physics 105 or MAE 153 or 154. Students may not receive credit for Math. 174 if Math. 170 A,B, or C has already been taken. *Prerequisites: Math. 20D (21D) and Math. 20F.*

176. Advanced Data Structures (4)
Descriptive and analytical presentation of data structures and algorithms. Lists, tables, priority queues, disjoint subsets, and dictionaries data types. Data structuring techniques include linked lists, arrays, hashing, and trees. Performance evaluation involving worst case, average and expected case, and amortized analysis. Crecit not offered for both Math. 176 and CSE 100. Equivalent to CSE 100. *Prerequisites: CSE 12, CSE 21, or Math. 15B, and CSE 30, or consent of instructor.*

180A. Introduction to Probability (4)
Probability spaces, random variables, independence, conditional probability, distribution, expectation, joint distributions, central-limit theorem. Three lectures. *Prerequisites: Math. 20D/21D.* [Warning: There are duplicate credit restrictions on this course. See section on Duplication of Credit.] (F)

180B. Introduction to Probability (4)
Random vectors, multivariate densities, covariance matrix, multivariate normal distribution. Random walk, Poisson process. Other topics if time permits. Three lectures. *Prerequisites: Math. 180A and Math. 20E.* (W)

180C. Introduction to Probability (4)
Markov chains in discrete and continuous time, random walk, recurrent events. If time permits, topics chosen from stationary normal processes, branching processes, queuing theory. Three lectures. *Prerequisite: Math. 180B.* (S)

181A. Introduction to Mathematical Statistics (4)
Random samples, linear regression, least squares, testing hypotheses, and estimation. Neyman-Pearson lemma, likelihood ratios. Three lectures, one recitation. *Prerequisites: Math. 180A and 20F.* [Warning: There are duplicate credit restrictions on this course. See section on Duplication of Credit.] (W)

181B. Introduction to Mathematical Statistics (4)
Goodness of fit, special small sample distribution and use, nonparametric methods. Kolmogorov-Smirnov statistics, sequential analysis. Three lectures. *Prerequisite: Math. 181A.* (S)

181C. Mathematical Statistics (4)
Nonparametric Statistics. Topics covered may include the following: Classical rank test, rank correlations, permutation tests, distribution free testing, efficiency, confidence intervals, nonparametric regression and density estimation, resampling techniques (bootstrap, jackknife, etc.) and cross validations. *Prerequisites: Math. 181A, 181B previously or concurrently.*

181D. Mathematical Statistics (4)
Sampling Theory. Basic notions of estimation: bias, variance, and sampling errors. Sampling from finite populations: simple random, stratified, cluster, sampling with unequal probabilities. Ratio and regression estimaters, multistage sampling. *Prerequisites: Math. 181A, 181B previously or concurrently.*

181E. Mathematical Statistics (4)
Time Series. Analysis of trends and seasonal effects, autoregressive and moving averages models, forecasting, informal introduction to spectral analysis. *Prerequisites: Math. 181A, 181B previously or concurrently.*

182. Introduction to Combinatorics (4)
Combinatorial methods and their computer implementation. Permutations and combinations, generating functions, partitions, principle of inclusion and exclusion. Polya's theory of counting. Hall's theorem, assignment problem, backtrack technique, error-correcting codes, combinatorial optimization problems. Three lectures, one recitation. *Prerequisites: Math. 20F and programming experience.* (W)

183. Statistical Methods (4)
Introduction to probability. Discrete and continuous random variables–binomial, Poisson and Gaussian distributions. Central limit theorem. Data analysis and inferential statistics: graphical techniques, confidence intervals, hypothesis tests, curve fitting. (Credit not offered for Math. 183 if Econ. 120A, Math. 180A, or Math. 181A previously or concurrently.) *Prerequisite: Math. 20C (21C).* (F,S)

184A. Mathematical Foundations of Computer Science (4)
Enumeration of combinatorial structures. Ranking and unranking. Graph theory with applications and algorithms. Recursive algorithms. Circuit design. Inclusion-exclusion. Generating functions. Polya theory. Three lectures, one recitation. *Prerequisite: Math. 15B or CSE 21 or Math. 109 or consent of instructor.* (W,S)

186. Probability Statistics for Bioinformatics (4)
This course will cover an introduction to probability and statistics, the use of discrete and random variables, different types of distributions, data analysis and inferential statistics, likelihood estimators and scoring matrices with applications to biological problems. Introduction to probability, Binomial, Poisson, and Gaussian distributions, central limit theorem, applications to sequence and functional analysis of genomes and genetic epidemiology. *Prerequisite: Math. 20A, Math. 20B, Math. 20C (21C).*

187. Introduction to Cryptography (4)
An introduction to the basic concepts and techniques of modern cryptography. Classical cryptanalysis. Probabilistic models of plaintext. Monalphabetic and polyalphabetic substitution. The one-time system. Caesar-Vigenere-Playfair-Hill substitutions. The Enigma. Modern-day developments. The Data Encryption Standard. Public key systems. Security aspects of computer networks. Data protection. Electronic mail. Three lectures, one recitation. *Prerequisite: programming experience.* (S)

188. Design and Analysis of Algorithms (4)
Introduction to the design and analysis of efficient algorithms. Basic techniques for analyzing the time requirements of algorithms. Algorithms for sorting, searching, and pattern matching, algorithms for graphs and networks. NP-complete problems. Equivalent to CSE 101. *Prerequisites: CSE 100 or Math. 176A for Math. 188; CSE 12, CSE 21, and CSE 100 for CSE 101.*

190. Introduction to Topology (4)
Topological spaces, subspaces, products, sums and quotient spaces. Compactness, connectedness, separation axioms. Selected further topics such as fundamental group, classification of surfaces, Morse theory, topological groups. May be repeated for credit once when topics vary, with consent of instructor. Three lectures. *Prerequisite: Math. 109 or consent of instructor.* (W)

191. Topics in Topology (4)
Topics to be chosen by the instructor from the fields of differential algebraic, geometric, and general topology. Three lectures. *Prerequisite: Math. 190 or consent of instructor.* (S)

193A. Actuarial Mathematics (4)
Probabilistic Foundations of Insurance. Short-term risk models. Survival distributions and life tables. Introduction to life insurance. *Prerequisite: Math. 180A or 183, or consent of instructor.*

193B. Actuarial Mathematics (4)
Life Insurance and Annuities. Analysis of premiums and premium reserves. Introduction to multiple life functions and decrement models as time permits. *Prerequisite: Math. 193A.*

193C. Actuarial Mathematics (4)
Topics to be selected from pension plans, collective risk models, advanced topics in insurance. *Prerequisite: Math. 193B.*

194. The Mathematics of Finance (4)
Introduction to the mathematics of financial models. Basic probabilistic models and associated mathematical machinery will be discussed, with emphasis on discrete time models. Concepts covered will include conditional expectation, martingales, optimal stopping, arbitrage pricing, hedging, European and American options. *Prerequisites: Math. 20D (21D), Math. 20F, and Math. 180A or 183.*

195. Introduction to Teaching in Mathematics (4)
Students will be responsible for and teach a class section of a lower-division mathematics course. They will also attend a weekly meeting on teaching methods. (Does not count towards a minor or major.) Five lectures, one recitation. *Prerequisite: consent of instructor.* (F,W,S)

196. Student Colloquium (1-2)
A variety of topics and current research results in mathematics will be presented by guest lecturers and students under faculty direction. *Prerequisites: upper-division status or consent of instructor (for one unit) and consent of instructor (for two units).*

197. Mathematics Internship (2 or 4)
An enrichment program which provides work experience with public/private sector employers. Subject to the availablility of positions, students will work in a local company under the supervision of a faculty member and site supervisor. Units may not be applied towards major graduation requirements. *Prerequisites: completion of 90 units, 2 upper-division mathematics courses, an overall 2.5 UCSD G.P.A., consent of mathematics faculty coordinator, and submission of written contract. Department stamp required.*

199. Independent Study for Undergraduates (2 or 4)
Independent reading in advanced mathematics by individual students. Three periods. (P/NP grades only.) *Prerequisite: permission of department.* (F,W,S)

199H. Honors Thesis Research for Undergraduates (2-4)
Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a mathematics faculty member. *Prerequisites: admission to the Honors Program in mathematics, department stamp.*

GRADUATE

200A-B-C. Algebra (4-4-4)
Group actions, factor groups, polynomial rings, linear algebra, rational and Jordan canonical forms, unitary and Hermitian matrices, Sylow theorems, finitely generated abelian groups, unique factorization, Galois theory, solvability by radicals, Hilbert Basis Theorem, Hilbert Nullstellensatz, Jacobson radical, semisimple Artinian rings. *Prerequisite: consent of instructor.*

201A. Basic Topics in Algebra (4)
Recommended for all students specializing in algebra. Basic topics include categorical algebra, commutative algebra, group representations, homological algebra, nonassociative algebra, ring theory. *Prerequisites: Math. 200A-B-C or consent of instructor.* (F,W,S)

202B-C. Applied Algebra (4-4)
Algebra from a computational perspective using Maple, Mathematica and Matlab. Groups, rings, linear algebra, rational and Jordan forms, unitary and Hermitian matrices, matrix decompositions, perturbation of eigenvalues, group representations, symmetric functions, fast Fourier transform, commutative algebra, Grobner basis, finite fields. *Prerequisite: consent of instructor.*

203A-B-C. Algebraic Geometry (4-4-4)
Places, Hilbert Nullstellensatz, varieties, product of varieties: correspondences, normal varieties. Divisors

and linear systems; Riemann-Roch theorem; resolution of singularities of curves. Grothendieck schemes; cohomology, Hilbert schemes; Picard schemes. *Prerequisites: Math. 200A-B-C.* (F,W,S)

204. Topics in Number Theory (4)
Topics in analytic number theory, such as zeta functions and L-functions and the distribution of prime numbers, zeros of zeta functions and Siegel's theorem, transcendence theory, modular forms, finite and infinite symmetric spaces. *Prerequisite: consent of instructor.*

205. Topics in Algebraic Number Theory (4)
Topics in algebraic number theory, such as cyclotomic and Kummer extensions, class number, units, splitting of primes in extensions, zeta functions of number fields and the Brauer-Siegel Theorem, class field theory, elliptic curves and curves of higher genus, complex multiplication. *Prerequisite: consent of instructor.*

207A-B-C. Topics in Algebra (4-4-4)
In recent years, topics have included number theory, commutative algebra, noncommutative rings, homological algebra, and Lie groups. May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

208. Seminar in Algebra (1-4)
Prerequisite: consent of instructor. (S/U grades permitted.)

209. Seminar in Number Theory (1 to 4)
Prerequisite: consent of instructor. (S/U grades permitted.)

210A. Mathematical Methods in Physics and Engineering (4)
Complex variables with applications. Analytic functions, Cauchy's theorem, Taylor and Laurent series, residue theorem and contour integration techniques, analytic continuation, argument principle, conformal mapping, potential theory, asymptotic expansions, method of steepest descent. *Prerequisites: Math. 20DEF, 140A/142A or consent of instructor.*

210B. Mathematical Methods in Physics and Engineering (4)
Linear algebra and functional analysis. Vector spaces, orthonormal bases, linear operators and matrices, eigenvalues and diagonalization, least squares approximation, infinite-dimensional spaces, completeness, integral equations, spectral theory, Green's functions, distributions, Fourier transform. *Prerequisite: Math. 210A or consent of instructor.* (W)

210C. Mathematical Methods in Physics and Engineering (4)
Calculus of variations: Euler-Lagrange equations, Noether's theorem. Fourier analysis of functions and distributions in several variables. Partial differential equations: Laplace, wave, and heat equations; fundamental solutions (Green's functions); well-posed problems. *Prerequisite: Math. 210B or consent of instructor.* (S)

211. Fourier Analysis on Finite Groups (4)
Applied group representations. Emphasis on the integers, mod n, finite matrix groups. Applications may include: the fast Fourier tranform, digital signal processing, finite difference equations, spectral graph theory, error-correcting codes, vibrating systems, finite wavelet tranforms. *Prerequisite: none.*

212A. Introduction to the Mathematics of Systems and Control (4)
Linear and nonlinear systems, and their input-output behavior, linear continuous time and discrete-time systems, reachability and controllability for linear systems, feedback and stabilization, eigenvalue placement, nonlinear controllability, feedback linearization, disturbance rejection, nonlinear stabilization, Lyapunov and control-Lyapunov functions, linearization principle for stability. *Prerequisites: Math. 102 or equivalent, Math. 120A or equivalent, Math. 142A or equivalent.*

212B. Introduction to the Mathematics of Systems and Control (4)
Observability notions, linearization principle for observability. Realization theory for linear systems, observers and dynamic feedback, detectability, external stability for linear systems, frequency-domain considerations, dynamic programming, quadratic cost, state estimation and Kalman filtering, nonlinear stabilizing optimal controls, calculus of variations, and the Maximum Principle. *Prerequisite: Math. 212A.*

212C. Introduction to the Mathematics of Systems and Control (4)
Topics of current interest on systems theory, control, and estimation to be chosen by instructor. *Prerequisite: Math. 212B.*

216. Topics in Pure Mathematics (4)
This course brings together graduate students, postdocs, and faculty to examine a current research topic of broad interest. Previously covered topics include: noncommutative geometry, Loop groups, geometric quantization. *Prerequisite: consent of instructor.*

217A. Topics in Applied Mathematics (4)
In recent years, topics have included applied complex analysis, special functions, and asymptotic methods. May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

220A-B-C. Complex Analysis (4-4-4)
Complex numbers and functions. Cauchy theorem and its applications, calculus of residues, expansions of analytic functions, analytic continuation, conformal mapping and Riemann mapping theorem, harmonic functions. Dirichlet principle, Riemann surfaces. *Prerequisites: Math. 140A-B or consent of instructor.* (F,W,S)

221A-B. Topics in Several Complex Variables (4-4)
Formal and convergent power series, Weierstrass preparation theorem; Cartan-Ruckert theorem, analytic sets; mapping theorems; domains of holomorphy; proper holomorphic mappings; complex manifolds; modifications. *Prerequisites: Math. 200A and 220A-B-C or consent of instructor.*

227A-B. Topics in Complex Analysis (4-4)
In recent years, topics have included conformal mapping, Riemann surfaces, value distribution theory, external length. May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

229. Computing Technology for Mathematics (2)
Preparation for making effective use of computer technology in research and teaching of mathematics. UNIX basics, document preparation using TEX, Internet resources, HTML, computer technology in teaching. *Prerequisite: graduate status in mathematics.*

231A-B-C. Partial Differential Equations (4-4-4)
Existence and uniqueness theorems. Cauchy-Kowalewski theorem, first order systems. Hamilton-Jacobi theory, initial value problems for hyperbolic and parabolic systems, boundary value problems for elliptic systems. Green's function, eigenvalue problems, perturbation theory. *Prerequisites: Math. 210A-B or 240A-B-C or consent of instructor.*

233. Singular Perturbation Theory for Differential Equations (4)
Multivariable techniques, matching techniques and averaging techniques, including various approaches to proofs of asymptotic correctness, for singular perturbation problems including initial value problems with nonuniformities at infinity, initial value problems with initial nonuniformities, two point boundary value problems, and problems for partial differential equations. Applications taken from celestial mechanics, oscillation problems, fluid dynamics, elasticity, and applied mechanics. *Prerequisites: Math. 130A-B or 132A-B or consent of instructor.* (S/U grades permitted.) (S)

237A-B-C. Topics in Differential Equations (4-4-4)
May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

240A-B-C. Real Analysis (4-4-4)
Lebesgue integral and Lebesgue measure, Fubini theorems, functions of bounded variations, Stieltjes integral, derivatives and indefinite integrals, the spaces L and C, equi-continuous families, continuous linear functionals general measures and integrations. *Prerequisites: Math. 140A-B-C.* (F,W,S)

241A-B. Functional Analysis (4-4)
Metric spaces and contraction mapping theorem; closed graph theorem; uniform boundedness principle; Hahn-Banach theorem; representation of continuous linear functionals; conjugate space, weak topologies; extreme points; Krein-Milman theorem; fixed-point theorems; Riesz convexity theorem; Banach algebras. *Prerequisites: Math.240A-B-C or consent of instructor.*

247A-B-C. Topics in Real Analysis (4-4)
In recent years, topics have included Fourier analysis, distribution theory, martingale theory, operator theory. May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

248. Seminar in Real Analysis (1 to 4)
Prerequisite: consent of instructor. (S/U grades permitted.)

250A-B-C. Differential Geometry (4-4-4)
Differential manifolds, Sard theorem, tensor bundles, Lie derivatives, DeRham theorem, connections, geodesics, Riemannian metrics, curvature tensor and sectional curvature, completeness, characteristic classes. Differential manifolds immersed in Euclidean space. *Prerequisite: consent of instructor.* (F,W,S)

251A-B-C. Lie Groups (4-4-4)
Lie groups, Lie algebras, exponential map, subgroup subalgebra correspondence, adjoint group, universal enveloping algebra. Structure theory of semi-simple Lie groups, global decompositions, Weyl group. Geometry and analysis on symmetric spaces. *Prerequisites: Math. 200 and 250 or consent of instructor.* (F,W,S)

256. Seminar in Lie Groups and Lie Algebras (2 to 4)
Various topics in Lie groups and Lie algebras, including structure theory, representation theory, and applications. *Prerequisite: consent of instructor.* (F,W,S)

257A. Topics in Differential Geometry (4)
In recent years, topics have included Morse theory and general relativity. May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

258. Seminar in Differential Geometry (1 to 4)
Various topics in differential geometry. *Prerequisite: consent of instructor.*

259A-B-C. Geometrical Physics (4-4-4)
Manifolds, differential forms, homology, deRham's theorem. Riemannian geometry, harmonic forms. Lie groups and algebras, connections in bundles, homotopy sequence of a bundle, Chern classes. Applications selected from Hamiltonian and continuum mechanics, electromagnetism, thermodynamics, special and general relativity, Yang-Mills fields. *Prerequisite: graduate standing in mathematics, physics, or engineering, or consent of instructor.*

260A-B. Mathematical Logic (4-4)
Propositional calculus and quantification theory. Completeness theorem, theory of equality, compactness theorem, Skolem-Lowenheim theorems. Vaught's test: Craig's lemma. Elementary number theory and recursive function theory. Undecidability of true arithmetic and of Peano's axioms. Church's thesis; set theory; Zermelo-Frankel axiomatic formulation. Cardinal and ordinal numbers. The axiom of choice and the generalized continuum hypothesis. Incompleteness and undecidability of set theory. Relative consistency proofs. *Prerequisites: Math. 100A-B-C or consent of instructor.*

261A-B. Combinatorial Algorithms (4-4)
Lexicographic order, backtracking, ranking algorithms, isomorph rejection, sorting, orderly algorithms, network flows and related topics, constructive Polya theory, inclusion-exclusion and seiving methods, Mobius inversion, generating functions, algorithmic graph theory, trees, recursion, depth firstsearch and applications, matroids. *Prerequisites: CSE 160A-B or Math. 184A-B or consent of instructor.* (F,W,S)

262A-B. Topics in Combinatorial Mathematics (4-4)
Development of a topic in combinatorial mathematics starting from basic principles. Problems of enumeration, existence, construction, and optimization with regard to finite sets. Some familiarity with computer programming desirable but not required. *Prerequisites: Math. 100A-B-C.*

263. History of Mathematics (4)
Mathematics in the nineteenth century from the original sources. Foundations of analysis and commutative algebra. For algebra the authors studied will be Lagrange, Ruffini, Gauss, Abel, Galois, Dirichlet, Kummer, Kronecker, Dedekind, Weber, M. Noether, Hilbert, Steinitz, Artin, E. Noether. For analysis they will be Cauchy, Fourier, Bolzano, Dirichlet, Riemann, Weierstrass, Heine, Cantor, Peano, Hilbert. *Prerequisites: Math. 100A-B, Math. 140A-B.*(S)

264A-B-C. Combinatorics (4-4-4)
Topics from partially ordered sets, Mobius functions, simplicial complexes and shell ability. Enumeration, formal power series and formal languages, generating functions, partitions. Lagrange inversion, exponential structures, combinatorial species. Finite operator methods, q-analogues, Polya theory, Ramsey theory. Representation theory of the symmetric group, symmetric functions and operations with Schur functions. (F,W,S)

267A-B-C. Topics in Mathematical Logic (4-4-4)
Topics chosen from recursion theory, model theory, and set theory. May be repeated with consent of adviser. *Prerequisite: consent of instructor.* (S/U grades permitted.)

268. Seminar in Logic (1 to 4)
Prerequisite: consent of instructor. (S/U grades permitted.)

269. Seminar in Combinatorics (1 to 4)
Prerequisite: consent of instructor. (S/U grades permitted.)

270A-B-C. Numerical Mathematics (4-4-4)
Error analysis of the numerical solution of linear equations and least squares problems for the full rank and rank deficient cases. Error analysis of numerical methods for eigenvalue problems and singular value problems. Error analysis of numerical quadrature and of the numerical solution of ordinary differential equations. *Prerequisites: Math. 20F and knowledge of programming.*

271A-B-C. Numerical Optimization (4-4-4)
Formulation and analysis of algorithms for constrained optimization. Optimality conditions; linear and quadratic programming; interior methods; penalty and barrier function methods; sequential quadratic programming methods. *Prerequisite: consent of instructor.* (F,W,S)

272A-B-C. Numerical Partial Differential Equations (4-4-4)
The numerical solution of elliptic, parabolic, and hyperbolic partial differential equations; discretization and solution techniques. *Prerequisite: consent of instructor.* (F,W,S)

273A-B-C. Scientific Computation (4-4-4)
Continuum mechanics models of physical and biological systems, finite element methods and approximation theory, complexity of iterative methods for linear and nonlinear equations, continuation methods, adaptive methods, parallel computing, and scientific visualization. Project-oriented; theoretical and software development projects designed around problems of current interest in science and engineering. *Prerequisite: experience with Matlab and C, some background in numerical analysis, or consent of instructor.* (F,W,S)

277A. Topics in Numerical Mathematics (4)
Topics vary from year to year. May be repeated for credit with consent of adviser. *Prerequisite: consent of instructor.*

278. Seminar in Numerical Mathematics (1 to 4)
Prerequisite: consent of instructor. (S/U grades permitted.)

280A-B-C. Probability Theory (4-4-4)
Probability measures; Borel fields; conditional probabilities, sums of independent random variables; limit theorems; zero-one laws; stochastic processes. *Prerequisites: advanced calculus and consent of instructor.* (F,W,S)

281A. Mathematical Statistics (4)
Statistical models, sufficiency, efficiency, optimal estimation, least squares and maximum likelihood, large sample theory. *Prerequisites: advanced calculus and basic probablilty theory or consent of instructor.*

281B. Mathematical Statistics (4)
Hypothesis testing and confidence intervals, one-sample and two-sample problems. Bayes theory, statistical decision theory, linear models and regression. *Prerequisites: advanced calculus and basic probablilty theory or consent of instructor.*

281C. Mathematical Statistics (4)
Nonparametrics: tests, regression, density estimation, bootstrap and jackknife. Introduction to statistical computing using S plus. *Prerequisites: advanced calculus and basic probablilty theory or consent of instructor.*

282A-B. Applied Statistics (4-4)
Sequence in applied statistics. First quarter: general theory of linear models with applications to regression analysis. Second quarter: analysis of variance and covariance and experimental design. Third quarter: further topics to be selected by instructor. Emphasis throughout is on the analysis of actual data. *Prerequisite: Math. 181B or equivalent or consent of instructor.* (S/U grades permitted.)

283. Statistical Methods in Bioinformatics (4)
This course will cover material related to the analysis of modern genomic data; sequence analysis, gene expression/functional genomics analysis, and gene mapping/applied population genetics. The course will focus on statistical modeling and inference issues and not on database mining techniques. *Prerequisites: one year of calculus, one statistics course or consent of instructor.*

285A-B. Stochastic Processes (4-4)
Elements of stochastic processes, Markov chains, hidden Markov models, Poisson point processes, renewal processes martingales, Brownian motion, Gaussian processes, Kalman filter. Other topics to be selected by instructor depending on interest of class. *Prerequisites: Math. 180A (or equivalent basic probablilty course) or consent of instructor.*

286. Stochastic Differential Equations (4)
Review of continuous martingale theory. Stochastic integration for continuous semimartingales. Existence and uniqueness theory for stochastic differential equations. Strong Markov property. Selected applications. *Prerequisite: Math. 280A-B or consent of instructor.*

287A. Time Series Analysis (4)
Discussion of finite parameter schemes in the Gaussian and non-Gaussian context. Estimation for finite parameter schemes. Stationary processes and their spectral representation. Spectral estimation. *Prerequisite: Math. 181B or equivalent or consent of instructor.*

287B. Multivariate Analysis (4)

288. Seminar in Probability and Statistics (1 to 4)
Prerequisite: consent of instructor. (S/U grades permitted.)

289A-B. Topics in Probability and Statistics (4-4)
In recent years, topics have included Markov processes, martingale theory, stochastic processes, stationary and Gaussian processes, ergodic theory. May be repeated for credit with consent of adviser.

290A-B-C. Topology (4-4-4)
Point set topology, including separation axioms, compactness, connectedness. Algebraic topology, including the fundamental group, covering spaces, homology and cohomology. Homotopy or applications to manifolds as time permits. *Prerequisites: Math. 100A-B-C and Math. 140A-B-C.* (F,W,S)

291A-B-C. Topics in Topology (4)
In recent years, topics have included generalized cohomology theory, spectral sequences, K-theory, homotophy theory. *Prerequisites: consent of instructor.*

292. Seminar in Topology (1-4)
Various topics in topology. *Prerequisites: consent of instructor.*

294. The Mathematics of Finance (4)
Introduction to the mathematics of financial models. Hedging, pricing by arbitrage. Discrete and continuous stochastic models. Martingales. Brownian motion, stochastic calculus. Black-Scholes model, adaptations to dividend paying equities, currencies and coupon-paying bonds, interest rate market, foreign exchange models.

Prerequisite: Math. 180A (or equivalent probability course) or consent of instructor.

295. Special Topics in Mathematics (1 to 4)
A variety of topics and current research results in mathematics will be presented by staff members and students under faculty direction.

296. Student Colloquium (1 to 2)
A variety of topics and current research in mathematics will be presented by guest lecturers and students under faculty direction. *Prerequisites: for one unit—upper-division status or consent of instructor (may only be taken P/NP), or graduate status (may only be taken S/U); for two units—consent of instructor, standard grading option allowed.*

297. Mathematics Graduate Research Internship (2-4)
An enrichment program which provides work experience with public/private sector employers and researchers. Under supervision of a faculty adviser, students provide mathematical consultation services. *Prerequisites: consent of instructor.*

299. Reading and Research (1 to 12)
Independent study and research for the doctoral dissertation. One to three credits will be given for independent study (reading) and one to nine for research. *Prerequisite: consent of instructor.* (S/U grades permitted.)

Teaching of Mathematics

500. Apprentice Teaching (1 to 4)
Supervised teaching as part of the mathematics instructional program on campus (or, in special cases such as the CTF program, off campus). *Prerequisite: consent of adviser.* (S/U grades only.)

The Joint Doctoral Program

UCSD and San Diego State University have created this innovative program for students who already have a master's degree in biology, chemistry, mathematics, or physics. In this program, students will complement their discipline knowledge with studies of how people learn mathematics and science. The UCSD Joint Doctoral Group in Mathematics and Science Education currently consists of faculty from the Division of Biology and the Departments of Chemistry and Biochemistry, Cognitive Science, Communication, Mathematics, Philosophy, Physics, Psychology, and Sociology. The SDSU Program faculty is drawn from the Departments of Biology, Mathematical Sciences, Natural Sciences, Physics, Psychology, and Teacher Education.

The program includes research, practical applications, and formal coursework. Students must commit four years to the program, and most students will complete the program in four to five years. An individualized course of study will be designed for each student, depending on the student's background and interests.

The graduates of this program will be able to contribute to the developing body of knowledge about human cognitive processes in mathematics and science. They will be expected to maintain a strong connection to educational practice through teaching and application of research results on learning to instructional situations.

Information regarding admission is found in the current edition of the *Bulletin of the Graduate Division* of San Diego State University.

Ph.D. Time Limit Policies

All time limits for this program start when a student first registers in this program. Students must be advanced to candidacy by the end of four years. Total university support to students in this program cannot exceed five years. Total registered time in this program cannot exceed six years. The normative time in this program is five years.

COURSES

MSED 295. Orientation Practicum (2-6)
This course should be taken the first year. Each practicum lasts five weeks and is designed to inform students about a faculty member's research program.

MSED 296A-B-C. Mathematics and Science Education/ Seminar (4)
Issues concerning the learning of mathematics and science, with particular emphasis on lower-division coursework, will be addressed from the perspectives of how students learn, what students learn, and how students are taught.

MSED 298. Research Project (2–12)
Students will work on an independent research project under the supervision of MSED faculty.

MSED 299. Reading and Research (1–12)
Students will do independent study and research in preparation of their doctoral dissertation under the supervision of MSED faculty.

The Minor

The minor in Middle East studies is an interdisciplinary program aimed at a comparative study of the Middle East (including North Africa).

The program consists of seven courses, of which at least five must be upper-division courses. Three courses have to deal with the Middle East since the emergence of Islam, as listed here under "Core Courses." The remaining courses may be chosen from either the Core Courses or the Supporting Courses; and they may be courses dealing with the ancient, medieval, or modern Middle East or a three-quarter sequence of a Middle Eastern language (in which case only four of the seven courses need to be upper-division). Ordinarily, all seven courses must be taken for a letter grade.

The courses which make up the minor must be approved by the student's college and by the Middle East Studies Program.

Approved courses taken at other universities or through participation in the Education Abroad Program can be included as part of the minor by petition.

COURSES

CORE COURSES

ANRG 122. Peoples and Culture of the Middle East

ANPR 199. Independent Study (Middle East Anthropology)

HINE 108. The Middle East before Islam

HINE 114. History of the Islamic Middle East

HINE 116. The Middle East in the Age of European Empires

HINE 118. The Middle East in the Twentieth Century

HINE 166. Nationalism in the Middle East

HINE 186. Special Topics in Middle Eastern History

HINE 199. Independent Study (Middle East History)

HITO 105. Jews and Judaism in the Modern World

LTWL 141. Islam and Modernity

LTWL 160. Women in Literature: Arabic Women in Literature & Society

POLI. 121. Middle East Politics

POLI. 138D. Special Topics/Comparative Polities: The Arab-Israeli Conflict

Soc./D 122. Jerusalem: Sacred and Profane

Soc./D 158. Islam in the Modern World

Soc./D 188F. Modern Jewish Societies and Israeli Society

Soc./E 199. Independent Study (Middle East Sociology)

TWS 25. Third-World Literatures

SUPPORTING COURSES

ANLD 3. World Prehistory

ANRG 115. Foundations/Social Complex/Near East

ANRG 116. Archaeology of Society in Syro-Palestine

ANRG 182. Ethnography of Island Southeast Asia

JUDA 1. Beginning Hebrew

JUDA 2. Intermediate Hebrew

JUDA 3. Intermediate Hebrew Continued

JUDA 101. Introduction to Hebrew Texts

JUDA 102. Intermediate Hebrew Texts

JUDA 103. Advanced Hebrew Texts

HINE 100. The Ancient Near East and Israel

HINE 102. The Jews in Their Homeland in Antiquity

HINE 104. The Bible and the Ancient Near East

HINE 106. The Bible and the Near East: The Writings

HINE 160. Special Topics in the Bible and Ancient Near East

HINE 170. Special Topics in Jewish History

HITO 100. Ancient Religions

LIAB 1A. Beginning Arabic

LIAB 1B. Beginning Arabic

LIAB 1C. Elementary Arabic

LIAB 1D. Elementary Arabic

LIHL 116. Arabic for Arabic Speakers

LTNE 102. Bible: The Prophetic Books

LTNE 106. Bible: Topics in Biblical Narrative

Molecular Pathology

OFFICE: 1012 Basic Science Building, School of Medicine

Professors

Stephen Baird, M.D., *Pathology (Academic Senate Distinguished Teaching Award)*
Roland C. Blantz, M.D., *Medicine*
Kenneth R. Chien, M.D., *Medicine*

Sylvia Evans, Ph.D., *Medicine*
Gen-Sheng Feng, Ph.D., *Pathology*
Steven Frisch, Ph.D., *Pathology*
Roberta Gottlieb, M.D., *Pathology*
David W. Rose, Ph.D., *Medicine*
Guy Salvesen, Ph.D., *Pathology*

Associate Clinical Professor

H. Elizabeth Broome, M.D., *Pathology*

The Graduate Program

The goal of the molecular pathology Ph.D. program is to provide research training in the molecular mechanisms of human disease for students pursuing biomedical careers in academia or the biotechnology industry. The program is interdepartmental in nature. It is centered in the Department of Pathology, but faculty members are also drawn from other departments and institutions. The program provides a comprehensive knowledge of normal and abnormal biological processes, with particular emphasis on the molecular mechanisms of human diseases.

Course Work

The goal of the Molecular Pathology Program is to produce outstanding researchers focused on the molecular basis of disease who also understand disease at levels of histology, pathology, and treatment. The basic science curriculum includes classes in Molecular Biology of the Cell, Methods in Cellular and Molecular Pathology, the Molecular Pathology of Cancer, and Neurologic and Muscle Disease. Electives are offered in Microbial Pathogenesis and Mouse Models for Human Disease. Learning is focused on reading and evaluating current scientific literature, with special attention to identifying the major open questions within a field and determining the correct experimental plan to answer these questions. Two electives are required, and may also be selected from graduate level courses offered by other medical school programs or undergraduate departments (biology, chemistry and biochemistry, bioengineering). This option allows students the opportunity to acquire advanced training in areas they have selected for graduate research. Popular classes are graduate level immunology, genetics, neurobiology, molecular modeling, microbial pathogenesis, and mouse models of human disease. An education in histology and pathology is acquired by taking the School of Medicine course in histology and an overview course in human pathology developed by Department of Pathology faculty for molecular pathology and pharmacy students. All students must take five of seven core courses offered by faculty members from the Department of Pathology. Students may elect to take in-depth pathology training in their particular disease(s) of interest by attending a set of comprehensive lectures (eight to twelve) taught as part of the comprehensive medical school pathology curriculum. Concurrent with their thesis research, third-year students can acquire a practical consideration of the clinical treatment of disease by attending pathology conferences, including Breast Pathology Conference, Tumor Board, Pediatric Autopsy, and Neuropathology "Brian-cutting" conference. In such conferences, students learn how disease presents and progresses, how physicians currently treat disease, what the practical obstacles are in disease treatment, and where the opportunities are for development of molecular therapeutics.

Examinations

First Qualifying Examination (Minor Proposition)

The purpose of this examination is to test the student's ability to choose a research problem in molecular pathology and to propose an experimental approach to its solution. The problem should be unrelated to the student's thesis project. The student is expected to demonstrate knowledge in molecular biology and basic pathology. The first qualifying examination will be taken by the end of the fall quarter of the second year.

Second Qualifying Examination (Major Proposition)

The second qualifying examination, a university requirement, consists of an oral report by the student about research accomplished and the goals to be achieved for completion of the thesis. Upon successful completion of the examination, the student will advance to candidacy. The second qualifying examination should be completed by the end of the third year, and must be completed by the end of the fourth year.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

COURSES

PATH 208G. Human Disease (8)
An integrated consideration of the general principles of pathology and microbiology, epidemiology, and medical therapeutics of the important diseases. An example of their application to a specific organ system will be included.

PATH 220. Molecular Pathology of Disease (4)
This course will explore the molecular pathology associated with various diseases other than cancer. Emphasis will be placed on understanding the abberant cellular processes, caused by mutation or environmental factors, that are associated with the disease state. Cardiovascular, neurological, immunological, and other diseases will be investigated.

PATH 221. Molecular Pathology of Cancer (4)
The purpose of this course is to present exciting new developments in molecular carcinogenesis, with particular emphasis on oncogene expression and functions of oncogenic proteins. The relevance of molecular mechanisms for understanding human cancer will be discussed.

PATH 222. Microbial Pathogenesis (3)
Topics covered in this course include molecular and cellular mechanisms of viral, bacterial, and protozoan pathogenesis. Host response and microbial mechanisms of host defense will also be discussed. Sessions will consist of faculty and student presentations of current literature.

PATH 225. Molecular Pathology Research Seminar (2)
Group and individual discussion of current literature and ongoing research activities. The format of SOM 225 will encourage student participation. Students are to present on their rotation work or current research project.

PATH 230G. Molecular Biology of the Cell (6)
An integrated consideration of the general principles of molecular pathology. This course will provide the basic foundation of the molecular biology of the cell for graduate students as a prerequisite for Pathology 208G. This course is for graduate students only.

PATH 231. Modern Methods in Cellular and Molecular Pathology (4)
This course presents key concepts and methodologies used in cellular and molecular pathology research. Topics will include cell membrane transport, protein purification, recombinant DNA techniques, DNA sequencing, and PCR technology. The relevance of these methods for investigating human disease will be discussed.

PATH 232. Statistical Methods and Experimental Design
This course will emphasize the relationships between experimental design, statistical methods, and biomedical research. The content of the course will include basic issues in experimental design and commonly used statistical methods. The assumptions behind the statistical tests, their appropriate use, and examples of misuse will be discussed.

PATH 296. Directed Reading (1-4)
Reading and laboratory study of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases.

PATH 299. Independent Study or Research (1-12)
Independent study or research.

SOM 213. Histology (2)
This course teaches the structural basis of normal and abnormal function at the cellular and tissue levels. Emphasis is based on microscopic study conducted in small laboratory groups under close faculty supervision.

Muir College

OFFICE: Provost, Muir College, 2126 Humanities and Social Sciences Building

COURSES

199. Muir Special Project (4-16)
A course of independent work on a research or creative project to satisfy a Muir graduation requirement. (Only Muir students who have had Muir Special Project proposals approved may enroll in this course.) Students wishing to enroll must submit a written request with a description of the project. (Muir students must submit the Muir Special Project 199 form to the major adviser and to the Office of the Provost by the seventh week of the quarter prior to the quarter in which the 199 is to be undertaken. For information on other requirements, consult the provost's office.) *Prerequisites: upper-division status, approval by project adviser and by provost.* (Letter grades only.)

The Writing Program

OFFICE: 2346 Humanities and Social Sciences Building, Muir College (858) 534-2522.

DIRECTOR: Barbara Tomlinson, Ph.D., *Professor of Literature*

The Muir College Writing Program is a sequence of courses in critical thinking and the writing of expository prose during which students must advance beyond the basic competency expected at entrance to understand and write discourse acceptable at the university level. Even when faced with challenging topics, students must demonstrate the ability to comprehend texts at more than a superficial level; their writing must exhibit focused theses, systematic methods of analysis and argumentation, awareness of the needs of their audience, strong organization and development, clear presentation of ideas, appropriate syntax and diction, and—needless to say—correct grammar and usage.

To achieve these ends, the courses focus on principles of analysis and reasoned argumentation. Through close reading of texts, students learn both to identify underlying issues, assumptions, and values, and to identify rhetorical strategies by which these are conveyed or revealed. Students also learn to monitor and adapt their own writing processes. Since the ability to evaluate one's own writing and carry out appropriate revision strategies is particularly crucial to effective writing, all students are required to revise their papers several times. Attention is devoted to developing skill in evaluation and revision in discussion sections and in individual conferences with instructors. Sections of MCWP 50 vary in theme and content, giving students the opportunity to write in areas that interest them or that may be relevant to their major fields. (Descriptions of the MCWP 50 sections are available each quarter in the Muir Writing Program office during preregistration.)

Students are required to take both MCWP 40 and MCWP 50 for a letter grade in their first year of residence at the college. All transfer students, upon satisfaction of Subject A, must take MCWP 40 and MCWP 50 in their first year of residence. In cases where more than one quarter of practice is needed to prepare a student for MCWP 50, an IP grade is given in MCWP 40, and the student takes MCWP 41. MCWP 41 is then followed by MCWP 50. Completion of the sequence allows students to meet the Muir College writing requirement.

Certain exceptionally well-prepared students, particularly transfer students, may satisfy the MCWP 40 or MCWP 50 requirement by examination. The Muir challenge examinations are given at the beginning of fall and winter quarters only. Students may not take the challenge in the same quarter in which they expect to graduate.

IGETC and TAG certified transfer students: please contact the Muir Writing Program Office.

40. Critical Writing (4)
First course of sequence in university reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students who have not completed a comparable course elsewhere. MCWP 40 introduces students to the basic elements of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. Those who need additional work to prepare for MCWP 50 will be given a grade of IP and will be required to take MCWP 41. *Prerequisite: satisfaction of the Subject A requirement.*

41. Special Study in Writing (4)
An individualized writing class including both class discussion and tutorials. Students confer individually with instructors on a regular weekly basis to talk about writing problems. The course is designed for students who have taken MCWP 40 or its equivalent but need additional writing practice to prepare for MCWP 50. MCWP 41 does not satisfy the first part of the Muir Writing requirement. MCWP 41 must be taken for a letter grade and must be taken within two quarters of MCWP 40. *Prerequisite: MCWP 40 or its equivalent.*

50. Critical Writing (4)
Second course of sequence in reading and writing which satisfies the Muir College graduation requirement in writing. Required of all Muir College first-year students and of transfer students. MCWP 50 focuses on advanced skills of argument and analysis. Students engage in close reading of texts, weekly writing and revision, and individual conferences. Course must be taken for a letter grade. *Prerequisite: satisfaction of MCWP 40 requirement or completion of TAG or IGETC agreement.*

Music Technology Director

Peter Otto, M.F.A., *Lecturer*

This department is dedicated to the development of musical intelligence and capacity, centering its quest on the music of our own time. The undergraduate programs intend to enhance the exercise and comprehension of the music-making process. The graduate programs aim to educate practitioners and researchers who can nourish the entire domain of music as well as extend its boundaries.

Resources

Performance/Production Opportunities

Although performance students take lessons and give recitals within the framework of their degree program, non-performance students are also encouraged to participate in the performance life of the department—in ensembles, festivals, and collaborative ventures.

During the academic year, a diverse slate of more than 150 public concerts is presented in well-equipped venues: Mandeville Center Auditorium (792 seats), Mandeville Recital Hall (150 seats), Erickson Hall (150 seats), and Studio A (100 seats). These concerts provide students with both performance experience and a forum for examining the music of diverse eras and cultures. Substantial resources and staffing are dedicated to producing the music of our time, including faculty and student works, by new music ensembles, SONOR (faculty), experimental and improvisation ensembles, and student performance collectives (New Music Forum, Performers' Forum, and CS/EP Forum).

Practice facilities include a complement of grand pianos, disclaviers and uprights, an electronic keyboard lab, several harpsichords, a wide array of percussion, a percussion studio, and a limited collection of musical instruments for student checkout.

ENSEMBLES IN RESIDENCE

Concert Choir
Chamber Music Ensembles
Chamber Orchestra
Chamber Singers
Ensemble Realization of Unconventionally Notated Scores
Gospel Choir
Improvisation Ensemble
Jazz Chamber Ensembles
Large Jazz Ensemble
La Jolla Symphony and Chorus
redfishbluefish
SONOR
Wind Ensemble
World Music (Sitar & Tabla)

VISITING ARTISTS/ARTISTS IN RESIDENCE

Visiting artists and artists in residence play an integral part in the research at UCSD's Department of Music. Outside artists collaborate with faculty and students in Focus seminars, concerts, week-long festivals, and colloquia, bringing an array of new creativity and ideas.

Music Technology Facilities

http://orpheus.ucsd.edu/dept.music/musictech

The Department of Music maintains highly sophisticated, continuously upgraded facilities for the support of graduate and undergraduate instruction.

Computer Music Instructional Laboratory (B-104)— Mandeville Center room B-104 was originally established in 1987 to support undergraduate and graduate studies in computer music. B-104 is a 900-square-foot facility with recessed storage and printing areas, machine isolation, acoustical treatments, presentation console, ergonomic workstation components, high-resolution data projection system, CD and DVD authoring, and integrated digital and analog audio equipment for student access to audio processing, duplicating, mixing and high-quality multi-channel audio monitoring.

A server is maintained with network connections, mass storage, and archiving systems. Intel computer workstations run unique music software packages developed at UCSD. The CARL package, by Professor F.R. Moore and Gareth Loy, earned UCSD an international reputation for computer music and was adopted for use in computer music facilities around the world. Pd is a new real-time, interactive musical and graphics programming environment written and under continuing development by Professor Miller Puckette. Other audio and graphics editing and processing software packages are also supported. Mobile systems optimized for live performance applications are also maintained in B-104. The facility is configured and optimized to support direct connection of musical instruments to computers for prototyping of real-time interactive performance and compositional projects using MAX/MSP/Jitter and Pd computer music software.

Digital Music Project Studio (B-108)— Mandeville Center room B-108 Digital Music

Project Studio is a 900-square-foot facility, including an isolation booth, absorption and diffusion treatments, data connections and audio tie-lines to B-104 and Erickson Hall. This studio houses Macintosh and Linux systems and many dedicated devices for music production and recording, including a ProTools digital audio production package with 8 channels of digital and analog i/o for precise digital recording and editing. Recent upgrades include improved microphone preamps and an array of new software packages including ProTools plugins and spatialization tools. The studio features a Tascam 24-track hard disk and digital multi-track recorders with synchronization and digital i/o, a Yamaha 02R96 digital mixing console with all upgrades, Zsys digital patchers, and sound-for-picture capabilities. The studio supports MIDI for synthesis, processing, and control in music composition and performance, and includes hardware and software for CD and DVD mastering.

Open Computing Laboratory (B-206)—This facility occupies 1950 square feet, with audio and printer connections to B-104. All workstations are networked and several stations are equipped with CD and DVD burning equipment. B-206 was established in 1990 to support many facets of the music department curriculum, and has been upgraded incrementally nearly every year thereafter. It now comprises of 17 computer workstations (13 iMacs, 3 desktop G4s, and an Intel), most with MIDI interfaces and Yamaha SY22/33 synthesizer. Coda Finale, Max/MSP, Soundhack, Metasynth, Pd, and IRCAM Forum are some of the packages supported in the lab. Large-format music and text printing are supported. For instructional presentation, the room features a high quality data projection and sound system. The presentation station also features a PC workstation, a G4 Mac with stereo ProTools editing, DAT, Bias Peak editor and SpectraFoo, signal display software, and a CD burner.

Media Networking—B-104, B-108, B-206, and most of UCSD Department of Music's performance spaces and classroom spaces have been upgraded for fast ethernet and media networking. Media networking allows advanced students and researchers to "stream" digital video and audio among diverse on-campus facilities and onto the Internet. Additionally, there is wireless connectivity at various campus locations.
http://www-crca.ucsd.edu

CONCERT AND RECORDING TECHNOLOGY

http://www.ucsd.edu/music/cd

Students can check out recording and concert production equipment on a daily basis. All faculty and most student concerts are recorded by professional staff or their assistants, and qualified students can utilize the department's extensive high tech resources for experimental projects resulting in public performance and recordings of new works. Our first annual 2-CD compilation, guided by faculty mentors, features advanced graduate students who performed, composed, edited, and collaborated to produce a snapshot of musical achievement that predicts distinguished careers and new avenues of musical thought and practice.

WARREN STUDIOS

http://orpheus.ucsd.edu/dept.music/musictech

The Warren Studios are state-of-the-art musical recording and faculty research facilities. The studios were designed to serve the faculty and advanced students of the music department, meeting the following objectives:

- to serve as an unsurpassed facility for recording and mastering of musical works
- to serve as a reference-critical listening space for the evaluation of audio production and musical materials
- to support faculty research in psychoacoustics, computer music, audio signal processing, and musical performance. These fully professional studios support most formats of analog and digital audio, all phases of tracking, mixing, and CD mastering, and feature sufficient infrastructure to enable large video and film shoots with full synchronization.

Center for Research in Computing and the Arts (CRCA)

http://www-crca.ucsd.edu

The Center for Research in Computing and the Arts (CRCA) is an organized research unit of UCSD. CRCA exists to foster collaborative working relationships among artists, scientists, and technologists by identifying and promoting projects in which common research interests may be advanced through the application of computer-mediated strategies.

Computer music projects at CRCA cover a broad spectrum, from pure research to technically advanced creative endeavors. Current research in spatialized audio, computer music languages, interactive performance, and synthesis techniques is conducted at CRCA.

CRCA offers a broad array of events in its facility, reflecting the areas of research and artistic expression of our faculty, students, associates, and visiting scholars. The center's event space offers 8-channel spatialized sound capabilities, seating for 75 to 100, projection of computer and video sources, and audio playback from digital and analog sources.

Music Library

http://orpheus.ucsd.edu/music

The Music Library (located in Geisel Library) houses an extensive collection of holdings in all areas of Western music, and possesses one of the most exhaustive collections of twentieth-century music in this country. In addition, the collection of materials in non-Western music is aggressively being expanded. The Music Library has remote playback capability whose purpose is to support the coursework and research of UCSD faculty and students. The listener can directly control any of the cassette decks, reel-to-reel tape decks, turntables, CD players, laser disc players, VHS HiFi VCRs, and BETA HiFi VCRs. Ten of the remote control listening stations are equipped with video monitors. The Auxiliary Studio and Seminar Room are equipped with full remote control of any of the audio or video equipment. The Music Library's innovative Digital/Audio Reserve Project (DARP) uses networked audio streaming to maximize student access to listening assignments.

The Undergraduate Program

Undergraduate courses offered in the Department of Music satisfy a wide range of interests for non-music majors as well as for students majoring in music.

Students wishing to acquire a musical background to support further study should take Music 1A-B-C, which develops skills musicians use in the analysis and performance of music. Students interested in "music appreciation" should choose from the following courses, which introduce aspects of the rich heritage of music: Music 4–15. None of the aforementioned courses have prerequisites. For students with prior musical background who wish to continue in upper-division theory courses, Music 2A-B-C (*in lieu* of 1A-B-C) is essential.

Music Major Programs

The undergraduate program at UCSD offers a bachelor of arts degree in *music* and in *music humanities*. The curriculum emphasizes the development of musical listening and performance skills as applied to both contemporary and traditional music.

The *music major* is intended for students who may choose to engage in music as a profession. This major thus requires extensive development of musical skills. A student without the appropriate level of those skills upon entrance to UCSD must devote considerable time to attaining them, either in lower-division courses or independent study. Students can concentrate in composition, performance, literature, technology, or jazz and the music of the African diaspora.

The Department of Music is committed to creative music making; thus all music majors are required to enroll in ensemble performance for at least three quarters (see #8 below).

The *music/humanities major* is intended for students who wish to pursue a broad liberal arts program that includes music as a central element. This program emphasizes music history and literature, and allows the individual student to select an area of interest for the major within the broad field of the humanities.

Music Major Requirements

The lower-division prerequisites for the music major are Music 2A-B-C, and Music 2AK-BK-CK. Jazz emphasis students take Music 2JK in lieu of 2CK. To continue within the major, all students must pass Music 2C or an equivalent proficiency exam. Composition emphasis students must take Music 33, Introduction to Composition, or take a proficiency exam for the course. All required music major courses must be taken for a letter grade, with the exception of Music 143, which is taken on a Pass/No Pass basis. All courses to be counted toward satisfying the major requirements must be passed with a grade of C or better.

To complete the music major the following courses are required. Courses which are specific to each area of emphasis are shown in parentheses.

1. One of the following sequences:
   - Music 101A-B-C (performance, composition, literature, and technology)
   - Music 101A-B and 104 (jazz)
2. One of the following sequences:
   - Music 102A-B-C (performance, composition, literature, and technology)
   - Music 137A-B-C (jazz)
3. Music 120A-B-C
4. One quarter of Music 133 (normally taken in the winter quarter of the junior or senior year)
5. One of the following:
   - Music 111 or 114 (performance, composition, literature, and technology)
   - Music 150 (jazz)
6. One of the following :
   - three quarters of Music 132 or 132V (performance)
   - Music 103A-B-C (composition)
   - three courses [*in addition* to Music 111 or 114] from the series Music 111-115, 126, and 127A-B (literature)
   - Music 170/171/175 (technology)
   - two courses from Music 105, 126, 127A, and 127B; *plus* one course from Music 107, 110, 111, 114, 115, or 150 [*in addition* to #5 above] (jazz).
7. One additional course to be selected from:
   - Music 111-115, 126, 127A-B, and 150 (performance, composition, literature, and technology)
   - Music 151-154 (jazz)
8. One of the following sequences:
   - three quarters of Music 95, 130, 131, or 134, *including* two quarters from 95C, 95D, or 95K (performance, composition, literature, and technology)
   - two quarters of Music 95JC or 131, *plus* one quarter of Music 95C, 95D, 95G, or 95K (jazz)
9. Music 143 every quarter

Music/Humanities Major Requirements

The prerequisite for the music/humanities major is Music 1A-B-C (or 2A-B-C, if qualified). To complete the major the following courses are required:

1. Music 120A-B-C.
2. Three courses chosen from Music 111–115, 126, and 127A-B.
3. Six upper-division courses, selected from the humanities or the fine arts, that form a coherent program of study relevant to the chosen upper-division music courses.
4. Three quarters of Music 95, 130, 131, or 134 (two from 95C, 95D, or 95K).
5. Music 143 every quarter.

Students interested in this major should confer with the music/humanities faculty adviser to work out a course of study, which must be submitted at the beginning of the junior year for the adviser's written approval.

Interdisciplinary Computing and the Arts (ICAM) Major

Major Requirements

Twenty courses are required in the computing and the arts major for the attainment of the Bachelor of Arts degree. A minimum of twelve of these courses must be upper division.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C– or better will be accepted in the major.

The Undergraduate Program

The Interdisciplinary Computing and the Arts program in the Music and Visual Arts departments draws upon, and aims to bring together, ideas and paradigms from computer science, art, and cultural theory. It also takes for granted that the computer has become a metamedium and that artists working with computers are expected to combine different media forms in their works. All of this makes the program unique among other currently existing computer art or design programs which, on the one hand, usually focus on the use of computers for a particular media (for instance, specializing in computer animation, or computer music, or computer design for print) and, on the other hand, does not enter into a serious dialog with the current research in computer science, only teaching the students off-the-shelf software.

The program also recognizes that creating sophisticated artistic works with computers requires a new model of the creative process, one that combines traditional artistic procedures with the experimental research characteristic of the sciences. All in all, it aims to train a new type of cultural producer, who is familiar with music technology, who is equally proficient with computer programming and artistic skills, who is

always ready to learn new technologies, and who is comfortable interacting with scientists and computer industry resources.

The goals of the program are:

- to prepare the next generation of artists who will be functioning in a computer-mediated culture
- to give students necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new aesthetics for computer media
- to prepare students to mediate between the worlds of computer science and technology, the arts, and the culture at large by being equally proficient with computing and cultural concepts
- to give students sufficient understanding of the trajectories of development in computing so they can anticipate and work with the emerging trends, rather than being locked in particular software currently available on the market.

Admission to the ICAM Major

Student interest in the Interdisciplinary Computing and the Arts Major (ICAM) has been strong. Because the department has limited resources to accommodate student demand, it is necessary to limit admission to these majors to the most highly qualified students. Any student admitted to UCSD beginning in fall 2002 who wishes to declare an ICAM major will be admitted to the pre-major rather than being directly admitted to the major.

ICAM Pre-Major

Students designated as pre-majors in ICAM must complete the following eight required lower-division courses within six quarters (by the end of their sophomore years):

MUS 4, Introduction to Western Music
VIS 1, Introduction to Art-Making
ICAM 40/VIS 40, Introduction to Computing in the Arts
MATH 20A, Calculus for Science and Engineering*
MATH 20B, Calculus for Science and Engineering*
CSE 11, Introduction to Computer Science: JAVA*

and one from

MUS 1A, Musical Literacy
MUS 2A, Basic Musicianship
MUS 5, Introduction to Music Making

and one from

MUS 6, Electronic Music
MUS 7, Music, Science, and Computers
MUS 14, Contemporary Music

* MATH 20A and MATH 20B is an accelerated calculus course for science and engineering. MATH 10A-B-C covers similar material in a non-accelerated format, and can be substituted. CSE 11 is an accelerated course in the JAVA programming language. CSE 8A and CSE 8B, which cover the same material in a non-accelerated format, may be substituted.

Applying to the Major

Upon completion of all required lower-division courses, pre-majors who seek entrance to the ICAM major must formally apply at the Music Department Undergraduate Program Office. Admission will be based on the following criteria:

1. Performance in the lower-division courses as measured by a GPA of 3.0 or higher, determined by the department on an annual basis.
2. Submission to the department of a portfolio of work demonstrating superior progress as a pre-major. The portfolio will consist of at least two projects that the student has produced in ICAM 40/VIS 40, in another digital arts class, or independently, that in the faculty's judgment demonstrate that the student possesses the artistic ability and technical skills to perform at a high level in upper-division courses in the majors. Pre-majors should consult the undergraduate adviser in music as to the form in which projects should be submitted (disk, slides, tapes, etc.). For ICAM-music students the portfolio may consist of CDs, DVDs, videotapes, audio tapes, Web sites, performances and performace reviews, ICAM 40 projects, media works created independently or collaboratively with other students, media works created independently or during internships or employment, written personal statements regarding career goals; written recommendations from ICAM faculty, software design, and implementation projects.

Transfer Students

Beginning in fall 2002, transfer students who wish to declare an ICAM major are subject to the major's admissions policies: that is, they will be admitted initially as pre-majors, apply to the major on the same basis as other students, and be subject to the same requirements with respect to lower-division courses, grade-point average, and portfolio evaluation. Transfers entering with 36 or more quarter units must apply for admission to the major no later than their third quarter of study at UCSD. At the time of admission to the pre-major, transfer students' transcripts will be evaluated by the departments to determine what courses completed elsewhere, if any, may be petitioned as equivalent to required courses. Students should be prepared to provide course descriptions and other materials that may be required to determine the content of such courses.

Continuing Students (Students admitted prior to fall 2002)

Any student admitted to UCSD before fall 2002 may declare an ICAM major by completing a Change of Major form at the undergraduate adviser's office and attending an orientation meeting.

Policies Relating to the ICAM Major

Satisfactory Progress

Any ICAM major whose GPA in courses required for the major drops below 2.0 will be placed on probationary status the following quarter. If, during that probationary quarter, the GPA does not move back to up 2.0 or better, he or she will be dropped from the major.

Prerequisites

Students are required to complete all prerequisites prior to enrolling in any course required for the major. Exceptions must be negotiated with the instructor of the course in question, in consultation with the department undergraduate adviser.

Limitations to Enrollment by Non-Majors

A department stamp is required for all upper-division courses in computing in the arts. Because ICAM is an impacted major, first preference in enrollment in upper-division computing in the arts will be given to ICAM majors and to music majors with a technology concentration. Second preference will be given to other visual arts and music majors. Other students will be admitted to these courses only if space is available.

Lower-Division

(Eight courses required.)

MUS 4, Introduction to Western Music

VIS 1, Introduction to Art-Making
ICAM 40/VIS 40, Introduction to Computing in the Arts
MATH 20A, Calculus for Science and Engineering*
MATH 20B, Calculus for Science and Engineering*
CSE 11, Introduction to Computer Science: JAVA*

and one from

MUS 1A, Musical Literacy
MUS 2A, Basic Musicianship
MUS 5, Introduction to Music Making

and one from

MUS 6, Electronic Music
MUS 7, Music, Science, and Computers
MUS 14, Contemporary Music

* MATH 20A and MATH 20B is an accelerated calculus course for science and engineering. MATH 10A-B-C covers similar material in a non-accelerated format, and can be substituted. CSE 11 is an accelerated course in the JAVA programming language. CSE 8A and CSE 8B, which cover the same material in a non-accelerated format, may be substituted.

Upper-Division
(twelve courses required)

Survey (one course required)

ICAM 110. Computing in the Arts: Current Practice

Foundation (three courses required)

ICAM 101/VIS 140. Digital Imaging: Image and Interactivity
ICAM 102/VIS 145A. Digital Media I: Time, Movement, Sound
ICAM 103/MUS 170. Musical Acoustics

Advanced (four courses required)

One of:

MUS 172. Computer Music II
VIS 141B. Computer Programming for the Arts II
VIS 145B. Digital Media II
VIS 147B. Electronic Technologies for Art II

Three of:

ICAM 120. Virtual Environments
ICAM 130/VIS 149. Seminar in Contemporary Computer Topics
MUS 171. Computer Music I
MUS 173. Audio Production: Mixing and Editing
MUS 174A-B. Audio and MIDI Studio Techniques
MUS 175. Musical Psychoacoustics
MUS 176. Music Technology Seminar
VIS 109. Advanced Projects in Media
VIS 131. Special Projects in Media
VIS 132. Installation Production and Studio
VIS 141A. Computer Programming for the Arts I
VIS 147A. Electronic Technologies for Art I
VIS 174. Media Sketchbook

Theory and History (two courses required)

ICAM 150/VIS 159. History of Art and Technology

and one of:

MUS 111. World Music Traditions
MUS 114. Music of the Twentieth Century
VIS 123CN. Early Print Culture: The First Media Revolution
VIS 125E. History of Performance
VIS 150. History and Art of the Silent Cinema
VIS 151. History of the Experimental Film
VIS 152. Film in Social Context
VIS 153. The Genre Series
VIS 154. Hard Look at the Movies
VIS 155. The Director Series
VIS 157. Video History and Criticism
VIS 158. Histories of Photography

Senior Project (two courses required)

ICAM 160A. Senior Project in Computer Arts I
ICAM 160B. Senior Projects in Computer Arts II

All Computing and the Arts (ICAM) course descriptions are listed at the end of the lower- and upper-division sections under "Courses." Not all courses are offered each year.

Honors

1. To be admitted into the honors program a student must have the following:
   - Excellence in a specific subject matter (performance, composition, literature, technology, or music/humanities) and faculty support.
   - Performers must have previously performed on Performers Forum and enrolled in Chamber Music, Music 130. (Vocalists can seek an exception.) Other students must have completed all Music 95 requirements prior to entering the honors program.
   - A GPA in the Department of Music of 3.6; an overall GPA of 3.0

   All of the requirements below must be completed before the last day of instruction in the spring quarter prior to the academic year in which the student proposes to pursue an honors curriculum.
   - Performance students must present a piece before the performance faculty that demonstrates their technical and musical abilities. In addition, students must provide a proposed program for an honors recital.
   - Composition students must have a composition performed on the New Music Forum series. Either the student's principal instructor must attend this performance or a tape of this performance must be provided for faculty review. In addition, students must provide a proposed portfolio of original scores for an honors recital.
   - Literature students who have (1) presented historically- or musicologically-oriented research papers at campus venues featuring undergraduate research, or (2) been involved in the faculty mentor program, or (3) participated in the presentation of the winter opera with the accompanying symposium, may submit a portfolio of papers to the Critical Studies/Experimental Practices (CSEP) faculty. In addition, students must propose a fifty minute lecture for the Department Seminar (Music 143).
   - Music science and technology students must present a portfolio of projects to the music technology faculty and propose a fifty-minute lecture/demonstration for the Department Seminar (Music 143).
2. Once admitted to the honors program:
   - Students must be supervised by a faculty adviser throughout the honors program.
   - *Composition* students admitted to the honors program will enroll in twelve units of the Composition Honors course (Music 103D-E-F). *Performance* students will enroll in twelve units of Music 132R (after at least three quarters of Music 132). *Technology* students will enroll in twelve units of Music 176 or 199; *Music literature* and *music humanities* students will enroll in twelve units of Music 199, 150, or 107.
3. To receive honors:
   - A student must publicly demonstrate an appropriate level of excellence, an acceptable GPA, and suitable participation in department presentations and seminars,

as determined by the student's honors committee.

Please Note: Being admitted to the honors curriculum does not guarantee that a student will receive honors.

For further information on the Department of Music Honors Program and to obtain an application form, students should make an appointment with the undergraduate staff adviser.

Transfer Students

Students who plan to transfer into the music major should have strong skills in basic musicianship. For those planning to emphasize performance, solid proficiency on the instrument is required. A general course in the history of music is recommended. All transfer students must pass a proficiency examination in Music 2C (Basic Musicianship) and Music 2CK (Basic Keyboard). To verify the acceptability of transfer music courses, students must make an appointment with the undergraduate staff adviser.

Minor Programs

Please obtain a Department of Music brochure of approved minors from the undergraduate office. Students must seek advice and obtain approval from the undergraduate adviser prior to embarking upon a minor program.

The music minor for students entering UCSD in and after winter quarter 1998 consists of:

- two lower-division music courses except performance ensembles (Music 95A–Music 95W) and lessons (Music 32)
- five upper-division music courses

Students who entered UCSD before winter 1998 may select either the new minor or one of the music minors offered at the time of their entry into the university.

A minor with an emphasis in ICAM consists of seven specific courses, of which at least five must be upper division. Prospective minors should consult with the respective departmental adviser for a complete list of appropriate classes acceptable for the minor.

Advising Office

Undergraduate Staff Adviser
Eileen Voreades, Room 110
Mandeville Center, (858) 534-8226
evoreades@ucsd.edu

The Graduate Program

UCSD offers the master of arts and doctor of philosophy in music as well as a doctor of musical arts. Areas of emphasis for the M.A. include *Composition, Computer Music, Critical Studies/ Experimental Practices (CS/EP),* and *Performance.* For the Ph.D., areas of emphasis offered are *Composition, Computer Music,* and *Critical Studies/ Experimental Practices.* The doctoral of musical arts has an emphasis in *Contemporary Music Performance.*

Composition

The Composition Program is committed to nourishing the individual gifts and capacities of student composers in a diverse and active environment, with an emphasis on intensive personal interaction between faculty and student. The faculty mentor considers a student's particular goals and then attempts to strengthen his or her technical capacity to meet them. Of course, it is also the case that the diversity and liveliness of our program itself often challenges students to reevaluate their goals.

An incoming member in the M.A. or Ph.D. program begins with a year-long seminar (taught by a different faculty composer each quarter) and continues with individual studies thereafter. At the close of the first year fall quarter and again after the following spring quarter, the entire composition community gathers for a day-long "jury." Each seminar member is allotted a block of time during which the composition that has just been completed is performed and recorded in a carefully rehearsed presentation. There is a detailed discussion of each work by the faculty composers, and the student has opportunity to comment, explain, and pose questions. Following the performance and discussions of this day, the composition faculty meets to assess the students' work collectively and to offer any guidance deemed necessary. This process is at the root of the uniqueness of the UCSD program, and manifests the range, seriousness, and vitality with which compositional issues are explored here.

After completing three quarters of seminar and two juries, students come to know something about the ideas and perspectives of each faculty composer; the faculty, in turn, is aware of each student's objectives and needs. At this point, an individual mentor is agreed upon and this relationship becomes the center of the student's continuing work as the degree is completed. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student's performance mentor and guide in interfacing with the performance community. There is also a biweekly Focus on Composition Seminar at which faculty, students and selected visitors present work of interest (compositional, analytical, technological, and even whimsical).

The seminars serve to foster mutual awareness within the student composer group. Collegial relationships develop which lead not only to friendships but also to further creative outlets in cooperative projects, including the student-run Composers' Forums, performance collectives, and recital projects. UCSD performers—faculty and student—are all committed to the playing of new music, and frequent composer/performer collaborations are a vital aspect of life in the Department of Music.

Computer Music

http://orpheus.ucsd.edu/dept.music/musictech/

The Computer Music Program emphasizes research in new techniques for electronic music composition and performance, catalyzed through an active concert program of new works by students, faculty, and visitors. Areas of research include:

- new audio synthesis techniques
- audio signal processing
- psychoacoustics
- live improvisation with and by computers
- integrating audio and video
- electronic spatialization of sounds
- techniques for live electronic music performance
- computer music software and HCL design
- audio analysis and feature detection

The Computer Music Program encourages work which overlaps with the other programs of study: composition, performance, and critical studies/experimental practices. Analyzing and performing electronic music repertoire as well

as writing new music involving electronics are encouraged.

The computer music area's first year is centered on a year-long "backbone" course covering the essentials of the computer music field. This material divides naturally into three portions (audio signal processing, compositional algorithms, and musical cognition).

In their second year, students work individually with faculty members to deepen their mastery of their subject areas of concentration. For example, a student wishing to focus on signal processing aspects might study techniques for digital audio analysis and resynthesis, drawing on the current research literature.

Also during these first two years Ph.D. students take seminars on music analysis, composition, and performance practice. After having taken a critical mass of such subjects students enter a qualifying examination preparation period, and, once successful, they start their dissertation research.

UCSD's Center for Research in Computing and the Arts (http://crca.ucsd.edu) offers an ideal research environment for graduate students in this area. The music department also provides extensive laboratory and computing support for computer music.

Critical Studies/ Experimental Practices

The Program in Critical Studies/Experimental Practices (CS/EP) explores what music is about over the widest possible range of traditions and possibilities. An exploration of experimental, Western, and non-Western music-making is combined with the critical examination of music and musical ideas within human societies.

This interactive environment encourages a cross-fertilization between diverse musical forms and the theoretical and critical discourses that surround them, often drawing in those who may not fit conventional categories of "composer" or "performer," or those whose work is not constrained by traditional disciplinary boundaries.

Thinking about music requires both analytic engagement with real music and the creative investigation of ideas relevant to its nature, creation, production, and reception. Core seminars explore multiple ways of thinking about music, including critical, cognitive, and intercultural approaches as well as traditional syntactical analysis. Recent seminars have included cross-culturalism in music, psychoacoustics, film and popular music, multimedia aesthetics, methodologies for improvisation, representations of sexuality and gender in music, ethics, music and theater, and contemporary theories of narrativity in music. Students are encouraged to share their scholarly, musical, and intermedia work in quarterly CS/EP forums.

Music-making in CS/EP encompasses both compositional and performance activities. Experimental performance workshops incorporate improvisation and such diverse elements as new technologies, video, dance, visual, and theatrical components to make music in a multiplicity of ways.

Student-generated projects and workshops are also an important component of the UCSD Gra-duate Program in CS/EP. Individual student interests and initiatives are welcomed by the faculty, who are expert in such diverse fields as cognitive psychology, computer-aided improvisation, ethnomusicology, historical development of Western music, and contemporary critical thought.

Performance

Fostering the creative, intelligent, and passionate performance of contemporary music is the mission of the Performance Program of the Department of Music. As once stated by founding faculty composer Robert Erickson, we at UCSD are a "community of musicians."

The performance of contemporary music is viewed as a creative act which balances expertise and exploration. Within this context, performers act and interact in a communal environment, working with faculty and student composers, collaborating in music technology, researching instrument design, improvising, and experimenting in performance practice, among many other pursuits.

Graduate performance students pursue either a master of arts or a doctor of musical arts degree in contemporary performance. The course of study for both programs involves the completion of required graduate seminars and intensive study with a mentoring faculty member. Students are encouraged to adopt a vigorous, exploratory orientation in their private study. Final degree requirements include a recital, or in the case of the DMA, two recitals and the presentation of personal performance research.

The work of graduate performance students forms an integral component of a rich musical environment which produces an astonishing quantity and variety of performances. Students may perform in SONOR (the university's contemporary music ensemble) or in SIRIUS, (the graduate student contemporary music group). The Performance Forum, a student-initiated concert series, provides an opportunity for students to present a wide variety of concerts of improvised music, world music, and music with technology. A strong, collaborative spirit between the Performance and Composition programs also yields many new works each year performed on New Music Forum concerts series.

Graduate Admissions

Students are admitted to begin in fall quarter only. The deadline for submission of ALL application materials is January 12. Failure to meet this deadline jeopardizes admission and financial support.

STEP 1 PRELIMINARY APPLICATION

The application process begins at the Department of Music Web site http://www.ucsd.edu/music with a preliminary online application. We encourage all applicants to apply as early as September.

STEP 2 PORTFOLIO

Music applicants must submit a portfolio consisting of the following by January 12 to: UCSD, Department of Music, MC 0326, La Jolla, CA 92093. Please include your most recent works as well as twentieth-century pieces, when possible.

- For **all** applicants, a repertory list of works (solo and chamber) performed or composed during the past few years and a sample of printed concert programs in which you have participated, either as performer, composer, or collaborator.
- For **all** applicants, a minimum of two papers illustrating writing ability in any of the following areas: musical analysis, criticism, aesthetics, music theory, or music technology.

—in addition—

- For **composition** applicants ONLY, a minimum of three scores of instrumental works with taped examples of the works being performed (These may include, but should not be exclusively, electroacoustic works.)
- For **computer music** and **CS/EP** applicants ONLY, appropriate documentation (e.g., papers, performances, intermedia works, computer programs, etc.) of prior work.

- For **performance** applicants ONLY, tapes or CD demonstrating the level of vocal and/or instrumental performance. In person auditions are desirable when possible, but not required.

STEP 3 UCSD APPLICATION FOR GRADUATE ADMISSION

All sections of the official online UCSD Application for Graduate Admission with the $60 non-refundable fee must be submitted by January 12. Applications must include all supporting documents:

- statement of purpose
- three letters of recommendation
- official transcripts
- Graduate Record Examination (GRE) required for **all** applicants.
- TOEFL (Test of English as a Foreign Language) required for all applicants whose country of citizenship does not have English as its primary language. Minimum score is 550 (or 213 for the computer-based exam).

Advisory Examinations

After completion of an advisory examination during Welcome Week, each new student will meet with the departmental M.A. or Ph.D. adviser. Students found to be deficient in any areas covered on the advisory examination (dictation, sight reading, keyboard proficiency, history, and literature) will be advised to remedy deficiencies during their first year.

Core Graduate Curriculum

All graduate students are required to take Music 201 (Projects in New Music Performance) as outlined under each area, Music 210 (Musical Analysis), Music 228 (Conducting)—optional for CS/EP students, and Music 291 (Problems and Methods of Music Research and Performance). Students who completed Music 210, 228, and 291 during their master's degree program at UCSD, do not need to retake those courses for their doctoral curriculum.

To assure that all requirements are being adequately met, all graduate students must make an appointment with the graduate staff adviser for a degree check no later than the winter quarter of the second year.

Master's Degree Program

The master of arts in music degree includes areas of emphasis in *Composition, Computer Music, Critical Studies/Experimental Practices (CS/EP)*, and *Performance*. The degree requires completion of at least thirty-six quarter units of graduate courses (courses numbered 201–299), including six units of Music 500 (Apprentice Teaching in Music) and six units of Music 299 (Advanced Research Projects and Independent Study) bearing directly on completion of the master's thesis. Master's students are expected to complete all requirements for the degree in six quarters of residence.

Course Requirements

In addition to the core graduate curriculum, all master's degree students are required to complete requirements in their area of emphasis:

COMPOSITION

1. Music 201 (A, B, C, D, E, or F)—must take at least two times.
2. Music 203ABC—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar.
3. Music 203D—after successful completion of 203C, students must enroll in Music 203D (with their committee chair) every quarter until graduation.
4. Music 204—every quarter until graduation.
5. Music 206 and/or 207—a combination of any two courses.

COMPUTER MUSIC

1. Music 201 (A, B, C, D, E, or F)—must take at least two times.
2. Music 270A-B-C—must take within the first year of the program.
3. Music 270D—required every quarter of the second year.
4. Music 206, 207, and/or 267—a combination of any two courses.

CRITICAL STUDIES/EXPERIMENTAL PRACTICES

1. Music 201 (A, B, C, D, E, or F)—must take at least two times.
2. Music 205—every quarter until graduation.
3. Music 206 or 207—a combination of any two courses.
4. Music 208A-B-C—must take within the first year of the program.
5. Music 208D—one time during the second year.

PERFORMANCE

1. Music 201(A, B, C, D, E, or F) or 202—every quarter until graduation.
2. Music 206 or 207—a combination of any two courses.
3. Music 232—every quarter until graduation.
4. Music 245—every quarter in residence.

Master's Degree Completion Requirements

A folio of **three research papers** in professional format (normally to be written in connection with the courses the student will be taking) must be accepted by the student's committee prior to approval of the thesis.

M.A. candidates will present a **thesis** consisting of the following under the supervision of the student's committee chair in Music 299:

1. Candidates emphasizing *Composition* will prepare a folio of three chamber compositions together with tape recordings of at least two of them.
2. Candidates emphasizing *Computer Music* will write a research paper (thesis) and present a lecture-performance in which the scientific, technological, and musical aspects of an original computer music composition are documented, played, and discussed.
3. Candidates emphasizing *Critical Studies/Experimental Practices* will write an extended research paper (thesis) on a topic chosen with their committee chair.
4. Candidates emphasizing *Performance* will present a recital supported by lecture-quality notes. The program must be approved by the student's committee chair.

All of the above master's requirements must have final approval from the student's individual committee upon completion.

Doctoral Degree Program

Students of superior musical competence may pursue a program with emphasis in *Composition, Computer Music,* or *Critical Studies/Experimental Practices (CS/EP)* leading to the Ph.D. or doctor of musical arts (D.M.A.) degree in *Contemporary Music Performance.*

All doctoral students within the Department of Music must complete the Core Graduate Curriculum (outlined in the section above the Master's Degree Program) plus additional core requirements for the Ph.D. or D.M.A. program. These additional core requirements are:

1. Successful completion of an M.A. degree, including requirements equivalent to those described above for the M.A. in music. UCSD M.A. students who apply to the Ph.D./D.M.A. program must complete all departmental requirements, obtain OGSR approval, and file the M.A. degree at Geisel Library **before** enrolling in any Ph.D./D.M.A. level courses.
2. The Department of Music strongly recommends that entering students have acquired a reading ability in at least one of the standard reference foreign languages (French, German, Italian, or Spanish) in addition to their native language.
3. All Ph.D./D.M.A. students are required to complete six units of credit in Music 500 (Apprentice Teaching) unless the student has completed this requirement in UCSD's master's degree program.
4. After completing the qualifying examination, all students must remain in residence for at least three quarters, during which time they must enroll in twelve units of Music 299 (Advanced Research Projects and Independent Study) with their committee chair or members every quarter.

Course Requirements

In addition to the core graduate and Ph.D./D.M.A. curriculum, doctoral students (according to their area of emphasis) must complete the following courses prior to the qualifying examination:

COMPOSITION

1. Music 201 (A, B, C, D, E, or F)—must take at least two times.
2. Music 203A-B-C—successful completion of the jury process is necessary to get a passing grade in the corresponding seminar. Continuing students from the UCSD Composi-tion M.A. program may be excused from Music 203B-C by successfully completing Music 203A at the Ph.D. level.
3. Music 203D—after successful completion of 203C, students must enroll in Music 203D (with their committee chair) every quarter in residence.
4. Music 204—every quarter in residence.
5. Music 206 and/or 207—a combination of any three courses.
6. Music 209—must be taken at least three times.
7. Music 298—must complete at least six units.

COMPUTER MUSIC

1. Music 201 (A, B, C, D, E, or F)—must take at least two times.
2. Music 270A-B-C—must be taken within the first year of the program unless previously taken as a UCSD M.A. student.
3. Music 270D—after successful completion of 270C, students must enroll in Music 270D (with their committee chair) every quarter in residence.
4. Music 206, 207, 209, and/or 267—a combination of any six courses.

CRITICAL STUDIES/EXPERIMENTAL PRACTICES

1. Music 201 (A, B, C, D, E, or F)—must take at least two times.
2. Music 205—every quarter in residence.
3. Music 206 and/or 207—a combination of any three courses.
4. Music 208A-B-C—must take within the first year of the program unless previously taken as a UCSD M.A. student.
5. Music 208D—required at least three times during the Ph.D. program.
6. Music 209—must be taken at least three times.
7. Music 298—must complete at least six units.

PERFORMANCE

1. Music 201(A, B, C, D, E, or F) or 202—every quarter until completion of qualifying examination.
2. Music 206/207/209—as approved by D.M.A. adviser, a combination of any six seminars related to the primary and secondary area of specialization. Music 296 may be substituted for up to four seminars with permission of D.M.A. adviser.
3. Music 232—every quarter until completion of qualifying examination.
4. Music 245—every quarter in residence.
5. Music 250—must be taken at least three times.
6. Music 298—must complete at least six units.

Qualifying Examination/ Advancement to Candidacy

Requirements prior to taking the qualifying examination:

1. Completion of all Ph.D./D.M.A. required course work.
2. For Ph.D. students, one research paper judged to be of publishable quality must be completed prior to qualifying examinations. The subject of the publishable paper will be developed during the student's first two years and must be approved by the student's Ph.D. committee chair.
3. For *Composition* students, in addition to the publishable paper, a folio of not fewer than three compositions (not previously accepted for an M.A. degree) must be completed prior to qualifying examinations. A Third Year Forum presents, under departmental auspices, a work composed by each third-year Ph.D. composer in the four quarters since his or her second jury. As a part of preparation for this forum, each student composer is expected to have a faculty performer on his or her Ph.D. committee (as a regular member, or as an additional sixth member). The faculty performer is the student's performance mentor and guide in interfacing with the performance community.
4. For D.M.A. students, one major recital; plus either (a) an abstract of the thesis or research project which will be given to the Doctoral Committee at the qualifying examination; or (b) a substantial portion of the works from the student's first two "major recitals" will be presented at the qualifying examination.

The qualifying examination for all doctoral students will consist of the following:

- A written and oral defense of three questions provided by the Doctoral Committee pertaining to appropriate areas of specialization.

Ph.D./D.M.A. Degree Completion Requirements

1. For *Composition* students, completion of a major composition project.
2. For *CS/EP* and *Computer Music* students, completion of an acceptable dissertation.
3. For *D.M.A.* students, completion of a second major recital plus one of the following:

(a) thesis or research project; or (b) a concert that is innovative in design and/or content, and which is supported by a document containing extensive stylistic or analytical discussion of the program; or (c) a lecture/concert pertaining to innovative and/or original material, with appropriate documentation as determined by the committee, or (d) two approved chamber music concerts with appropriate documentation as determined by the committee.

4. A final public defense of the composition/dissertation/recitals.

Materials previously submitted for other degrees are not acceptable for submission for the Ph.D./D.M.A. degree.

Time Limit Policy for the Doctoral Degree

NORMATIVE TIME LIMITS

4 years: Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

6 years: Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program (i.e., 2 years for M.A. program plus 4 years normative time for Ph.D./D.M.A.).

SUPPORT TIME LIMITS

6 years: Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

7 years: Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program

TOTAL REGISTERED TIME LIMITS

6 years: Students entering the Ph.D./D.M.A. program with a master's degree from another institution.

8 years: Students continuing into the Ph.D./D.M.A. program with a master's degree from UCSD. Time limit is calculated from the beginning of the M.A. program

Students who have not completed all Ph.D. requirements within the maximum total registered time will no longer be permitted to register for classes.

COURSES

NOTE: The following course offerings outline the general scope of our program. Not all courses are offered every year. It is essential that students work closely with departmental advisers when planning their degree programs.

LOWER-DIVISION

1A-B-C. Fundamentals of Music (4-4-4)
Primarily intended for students without extensive musical experience, this course develops musical abilities through a conceptual understanding of the structure of music together with listening exercises and techniques. Topics include musical notation, melodic transcription, scales, chords, intervals, keys, rhythm, meter, and rudiments of musical form. *Prerequisite: none.*

2A-B-C. Basic Musicianship (4-4-4)
Primarily intended for music majors. Development of basic skills: perception and notation of pitch and temporal relationships. Introduction to functional harmony. Studies in melodic writing. Drills in sight singing, rhythmic reading, and dictation. *Prerequisites: passing score on placement exam. Must be taken in sequence. Music majors must be concurrently enrolled in Music 2AK, 2BK, and 2CK (Basic Keyboard).*

2AK-BK-CK. Basic Keyboard (2-2-2)
Scales, chords, harmonic progressions, transposition, and simple pieces. *Prerequisites: concurrent enrollment in Music 2A, B, C.*

2JK. Jazz Keyboard (2)
This course will introduce basic voicings and voice leading, stylistically appropriate accompaniment, and basic chord substitution. For majors with a Jazz and the Music of the African Diaspora emphasis to be taken concurrently with Music 2C. *Prerequisites: Music 2AK and 2BK or passing proficiency exam, or consent of instructor. Concurrent enrollment in Music 2C. Majors only.*

4. Introduction to Western Music (4)
A brief survey of the history of Western Music from the Middle Ages to the present. Much attention will be paid to the direct experience of listening to music and attendance of concerts. Class consists of lectures, listening labs, and live performances. *Prerequisite: none.*

5. Introduction to Music Making (4)
A one-quarter course designed to discover musical potential and expand musical experience. No knowledge of music, notation, or instrumental skill is necessary. Small lab sessions present music through composing, improvising, and performing. Results take the form of works for tape, theatre, voices, or instruments. *Prerequisite: none.*

6. Electronic Music (4)
Lectures and listening sessions devoted to the most significant works of music realized through the use of computers and other electronic devices from the middle of this century through the present. *Prerequisite: none.*

7. Music, Science, and Computers (4)
Exploration of the interactions among music, science, and technology, including the history and current development of science and technology from the perspective of music. *Prerequisite: none.*

8. American Music (4)
A course designed to study the development of music in America. The focus will be on both the vernacular traditions including hymn singing, country music, jazz, big band, rock, etc., as well as the cultivated traditions of various composers from William Billings to John Cage. *Prerequisite: none.* (Offered in selected years.)

9. Symphony (4)
The symphonic masterworks course will consist of lectures and listening sessions devoted to a detailed discussion of a small number of recognized masterworks (e.g., Mozart, Beethoven, Berlioz, Stravinsky, Ligeti, etc.). *Prerequisite: none.* (Offered in selected years.)

10. Chamber Music (4)
Chamber Music will consist of lectures and listening sessions devoted to a detailed discussion of recognized chamber masterworks (e.g., Haydn, Mozart, Beethoven, Bartok, etc.). *Prerequisite: none.* (Offered in selected years.)

11. Folk Music (4)
A course on folk musics of the world, covered through lectures, films, and listening sessions devoted to detailed discussion of music indigenous to varying countries/areas of the world. Topics vary from year to year. May be repeated once for credit. *Prerequisite: none.*

12. Opera (4)
A study of opera masterworks that often coincide with operas presented in the San Diego Opera season. Class consists of lectures, listening labs, live performances, and opera on video. *Prerequisite: none.*

13AF. World Music/Africa (4)
A course that focuses on the music of Africa and on African ways of music making in the Diaspora to the Caribbean and South America. No prior technical knowledge of music is necessary. *Prerequisite: none.*

13AM. World Music/Multicultural America (4)
A study of music cultures in the United States, particularly Native American, Hispanic American, European American, Asian American, and Pacific Islanders from the perspective of ethnicity, origin, interaction, and the contribution of various ethnic groups to American musical life. No prior technical knowledge of music is necessary. *Prerequisite: none.*

13AS. World Music/Asia and Oceania (4)
Introduction to selected performance traditions of Asia and Oceania with links to local and visiting musicians from these cultures. No prior technical knowledge of music is necessary. *Prerequisite: none.*

14. Contemporary Music (4)
This course offers opportunities to prepare oneself for experiences with new music (through preview lectures), hear performances (by visiting or faculty artists), to discuss each event informally with a faculty panel: an effort to foster informed listening to the new in music. *Prerequisite: none.*

15. Popular Music (4)
A course on popular music from different time periods, covered through lectures, films, and listening sessions. Topics vary from year to year. May be repeated once for credit. *Prerequisite: none.*

32. Instrumental/Vocal Instruction (2)
Individual instruction on intermediate level in instrumental technique and repertory. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. May be taken six times for credit. *Prerequisites: audition and department stamp.*

32G. Group Instrumental Instruction (2)
Group instruction in instrumental or vocal technique and repertory. Intermediate level. Intended for students who make an important contribution to Department of Music ensembles. *Prerequisites: Written recommendation of ensemble director and audition for performance faculty on first day of classes required. Department stamp required.* May be taken for credit six times. (Offered in selected years)

32V. Vocal Instruction (1)
Individual instruction on intermediate level in vocal technique and repertory. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course and in Music 32VM. May be taken six times for credit. *Prerequisites: audition and department stamp.*

32VM. Vocal Masterclass (1)
All students enrolled in voice lessons (32, 132, or 132C) perform for one another and their instructors. Students critique in-class performances, with emphasis on presentation, diction, dramatic effect, vocal quality, and musicality. *Prerequisites: concurrent enrollment in Music 32, 132V or 132C.*

33. Introduction to Composition (4)
This course is intended to provide the prerequisite knowledge necessary to pursue an emphasis in composition. Topics covered will include notation, calligraphy, instrumentation, orchestration, and twentieth-century music literature. *Prerequisite: Music 2A and 2B or consent of instructor.*

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen.

95. Ensemble Performance (2)
Performance in an ensemble appropriate to student abilities and interests. Normally each section requires student participation for the whole academic year, with credit for participation each quarter. Sections of Music 95W have included: African drumming, Korean percussion, Indian sitar and tabla, koto, and Indonesian flute. Not all sections will be offered every year. May be repeated for credit. Grading on participation level, individual testing, comparative papers on repertoire covered, etc. *Prerequisites: audition and consent of instructor for each section.*

Note: Students in the Music 95 series courses may enroll with a letter grade option a total of twelve units for registered music majors and a total of six units for all other students; after which students may continue to enroll in Music 95 courses, but only with a P/NP grade option. There is one exception to the above grading policy. Music 95G, Gospel Choir, can *only* be taken for a P/NP grading option.

Section B. Instrument Choir (Not offered every year.)

Section C. Concert Choir

Section D. Symphonic Chorus

Section E. Chamber Orchestra

Section G. Gospel Choir

Section H. Chamber Opera (Not offered every year.)

Section JC. Jazz Chamber Ensembles

Section JL. Large Jazz Ensemble

Section K. Chamber Singers

Section L. Wind Ensemble

Section W. World Music Ensembles

ICAM 40. Introduction to Computing in the Arts (4)
(Cross-listed with VIS 40.) Introduction to conceptual uses and historical precedents for use of computers in art making. Introduces students to the program's computer facilities and teaches them basic computer skills. *Prerequisite: Visual Arts and ICAM majors and minors only.* **NOTE:** Materials Fee required.

UPPER-DIVISION

101A-B-C. Music Theory and Practice I (4-4-4)
Study of the materials and structures of music through hearing, analysis, writing, and performance. Writing in two voices (101A) and four voices (101B-C). Continues sight singing, dictation, and keyboard. *Prerequisites: Music 2C and 2CK, and passing grade on proficiency exam.*

102A-B-C. Music Theory and Practice II (4-4-4)
Advanced study of the materials and structures of music. Chromatic harmony and twentieth-century techniques. Aural discrimination, analysis, exercises, and short compositions. Continues sight singing, dictation, and keyboard. *Prerequisites: Music 101A-B-C. Department stamp required.*

103A-B-C. Seminar in Composition (4-4-4)
Individual projects in composition will be critically reviewed in seminar with fellow student and faculty composers. *Prerequisites: Music 2A-B-C and 33.*

103D-E-F. Honors Seminar in Composition (4-4-4)
Advanced individual projects for senior music majors pursuing honors in composition. Projects will be critically reviewed in seminar with fellow students and faculty composers. *Prerequisites: Music 103A-B-C and admission into the Department of Music Honors Program in compostion. Department stamp required.*

104. Jazz Transcription and Analysis (4)
An introduction to the practice of transcribing and analyzing improvised music. Discussion of music technique, style, aesthetics, and the ideology of transcription. *Prerequisites: Music 101A and 101B.*

105. Jazz Composition (4)
This course will explore a range of compositional possibilities from song forms to modal and more extended forms. May be repeated once for credit. *Prerequisite: Music 104 or consent of instructor.*

107. Critical Studies Seminar (4)
Explore music in relation to various traditions of critical thought and their methodologies, such as in literature, cultural studies, sociology, and philosophy. Readings and scores to be determined by the professor. *Prerequisite: upper-division standing or consent of instructor.*

110. Doing Ethnomusicology (4)
A how-to course in the practice and theory of studying the music of contemporary cultures. Students will record, document, analyze, and present music from their local environment. Designed for students in music, ethnic studies, anthropology, and the social sciences. *Prerequisite: none.* (Offered in selected years.)

111. Topics/World Music Traditions (4)
A study of particular regional musics in their repertory, cultural context, and interaction with other traditions. Topics vary. *Prerequisite: none.*

112. Topics in European Music Before 1750 (4)
This course will address topics in medieval, Renaissance, and Baroque music; topics will vary from year to year. May be repeated five times for credit. *Prerequisites: knowledge of music notation or consent of instructor; Music 4, 8-10 or 120 recommended.*

113. Topics in Classic, Romantic, and Modern Music (4)
This course will focus on Western music between 1750 and the early 20th century; topics will vary from year to year. May be repeated five times for credit. *Prerequisites: knowledge of music notation or consent of instructor; Music 4, 8-10 or 120 recommended.*

114. Music of the Twentieth Century (4)
An exploration of materials and methods used in the music of our time. There will be an extra discussion group for music majors. May be repeated once for credit. *Prerequisites: none.*

115. Women in Music (4)
A survey of the biographical, historical, sociological, and political issues affecting woman musicians, their creativity, their opportunities, and their perception by others. It compares and contrasts the work of women composers, performers, patrons, teachers, and writers on music from the Middle Ages through the present. *Prerequisite: consent of instructor.*

120A-B-C. Survey of Music History and Literature (4-4-4)
Intensive historical, analytical, and cultural-esthetic examination of music from Gregorian chant through the twentieth century. *Prerequisites: knowledge of music notation; Music 1C or 2C strongly recommended.*

126. Blues: An Oral Tradition (4)
This course will examine the development of the Blues from its roots in work-songs and the minstrel show to its flowering in the Mississippi Delta to the development of Urban Blues and the close relationship of the Blues with Jazz, Rhythm and Blues, and Rock and Roll. (Cross-listed with Ethnic Studies 178.) *Prerequisite: none.*

127A. Jazz Roots and Early Development (1900–1943) (4)
This course will trace the early development of Jazz and the diverse traditions which helped create this uniquely American art form. We will witness the emergence of Louis Armstrong in New Orleans and examine the composer's role in Jazz with Jelly Roll Morton and Duke Ellington. (Cross-listed with Ethnic Studies 179A.) *Prerequisite: none.*

127B. Jazz Since 1946: Freedom and Form (4)
This course will examine the evolution of Jazz from 1943 to the present. The course will survey the con-

trasting and competing styles in Jazz from BEBOP to COOL to the avant garde and fusion. (Cross-listed with Ethnic Studies 179B.) *Prerequisite: none.*

128. Principles and Practice of Conducting (4)
The theory and practice of instrumental and/or choral conducting as they have to do with basic baton techniques, score reading, interpretation, orchestration, program building, and functional analysis. Members of the class will be expected to demonstrate their knowledge in the conducting of a small ensemble performing literature from the eighteenth, nineteenth, and twentieth centuries. *Prerequisites: Music 2A-B-C and 101A-B-C. Department stamp required.*

129. Orchestration (4)
This course will give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of these various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. *Prerequisite: Music 101B.*

130. Chamber Music Performance (2-4/0)
Instruction in the preparation of small group performances of representative instrumental and vocal chamber music literature. May be taken for credit six times, after which students must enroll for zero units. *Prerequisite: consent of instructor through audition.*

131. Advanced Improvisation Performance (4/0)
Master class instruction in advanced improvisation performance for declared majors and minors only or consent of instructor. Audition required at first class meeting. May be repeated six times for credit. *Prerequisites: consent of instructor through audition. Department stamp required.*

132. Pro-Seminar in Instrumental Instruction (4)
Individual or master class instruction in advanced instrumental performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course. May be taken six times for credit. *Prerequisites: audition and department stamp.*

132C. Vocal Coaching (3)
Individual instruction in advanced vocal coaching. Emphasis placed on diction and musical issues. For declared music majors and minors. Students must be simultaneously enrolled in the Vocal Masterclass, Music 32VM. May be taken six times for credit. *Prerequisites: at least one quarter of Music 132V and consent of instructor. Department stamp required.*

132R. Recital Preparation (4)
Advanced instrumental/vocal preparation for senior music majors pursuing honors in performance. Repertoire for a solo recital will be developed under the direction of the appropriate instrumental/vocal faculty member. Special audition required during Welcome Week preceding fall quarter. *Prerequisites: by audition only; Music 132. Department stamp required.*

132V. Pro-Seminar in Vocal Instruction (3)
Individual instruction in advanced vocal performance. For declared music majors and minors. Students must be simultaneously enrolled in a performance ensemble or non-performance music course and in the Vocal Masterclass, Music 32VM. May be taken six times for credit. *Prerequisites: audition and department stamp.*

133. Projects in New Music Performance (4)
Performance of new music of the twentieth century. Normally offered winter quarter only. Required a minimum of one time for all music majors. May be taken two times for credit. *Prerequisite: consent of instructor through audition.*

134. Symphonic Orchestra (4)
Repertoire is drawn from the classic symphonic literature of the eigtheenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. *Prerequisites: audition and department stamp required.*

137 A-B-C. Jazz Theory and Improvisation (4-4-4)
Study of jazz theory and improvisation, focused on fundamental rhythmic, harmonic, melodic, and formal aspects of modern jazz style. Application of theoretical knowledge to instruments and concepts will be reinforced through listening, transcription work, and composition and improvisation exercises. *Prerequisites: Music 2A-B-C, proficiency exam, or consent of instructor.*

143. Department Seminar (1)
The department seminar serves both as a general department meeting and as a forum for the presentation of research and performances by visitors, faculty, and students. Required of all undergraduate music majors every quarter.

150. Jazz and the Music of the African Diaspora: Special Topics Seminar (4)
An in-depth writing and listening intensive investigation into a jazz or diaspora-related music history topic. Topics vary from year to year. May be repeated once for credit. *Prerequisite: Music 126, 127A-B, or consent of instructor.*

151. Race, Culture, and Social Change (4)
Aggrieved groups generate distinctive cultural expressions by turning negative ascription into positive affirmation and by transforming segregation into congregation. This course examines the role of cultural expressions in struggles for social change by these communities inside and outside the U.S. (Cross-listed with Ethnic Studies 108.) *Prerequisite: upper-division standing or consent of instructor.*

152. Hip Hop: The Politics of Culture (4)
Examination of hip-hop's music, technology, lyrics, and its influence in graffiti, film, music video, fiction, advertising, gender, corporate investment, government and censorship with a critical focus on race, gender, popular culture, and the politics of creative expression. (Cross-listed with Ethnic Studies 128.) *Pre-requisite: upper-division standing or consent of instructor.*

153. African Americans and the Mass Media (4)
Examination of media representations of African Americans from slavery to the present focusing on emergence and transmission of enduring stereotypes, their relationship to changing social, political, and economic frameworks, and African Americans' responses to and interpretations of these mediated images. (Cross-listed with Ethnic Studies 164.) *Prerequisite: upper-division standing or consent of instructor.*

154. Black Musicic/Black Texts: Communication and Cultural Expression (4)
Explores roles of music as a traditional form of communication among Africans, Afro-Americans, and West Indians: Special attention given to poetry of black music, including blues and other forms of vocal music expressive of contestatory political attitudes. (Cross-listed with Ethnic Studies 176 and Literature in English 187.) *Prerequisite: upper-division standing or consent of instructor.*

170. Musical Acoustics (4)
(Formerly Music 160A) An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. *Prerequisites: Music 1A, 2A, or 4. Cross-listed with ICAM 103.*

171. Computer Music I (4)
(Formerly Music 160C) A practical introduction to computer techniques for desktop audio, including audio editing, MIDI control, and real-time music algorithms using the MAX programming environment. *Prerequisite: Music 170; music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.*

172. Computer Music II (4)
(Formerly Music 161) Computer synthesis techniques including wavetable and additive synthesis, waveshaping, and sampling. Transformation of musical sounds using filters, modulation, and delay effects. Fourier analysis of sounds. *Prerequisite: Music 171 (formerly Music 160C); music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.*

173. Audio Production: Mixing and Editing (4)
(Formerly Music 162) Theoretical and practical aspects of recording, mixing, and editing sound for both musical and multimedia applications. Covers audio montage, equalization, effects processing, spatialization, mastering, and diffusion. *Prerequisite: Music 170 (formerly Music 160A); music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.*

174. Recording/MIDI Studio Techniques (2-2-2)
(Formerly Music 164) This sequenced course surveys hardware and software resources in an advanced analog/digital audio and media studio. It is a required course for anyone who wishes to use the B108 Studio. Topics include: electronic and computer music, digital and analog audio signal mixing and manipulation, studio devices, interfacing, compositional applications, MIDI, synchronization, performance and studio techniques. Student projects demonstrate mastery of techniques studied. 174A: signals, mics, device based recording, mixing, monitoring; 174B: digital audio workstations, computer-based mixing and editing, soundfile transformation; 174C: MIDI, synchronization, sound-for-picture. *Prerequisites: MUS 174A: MUS 170; MUS 174B: MUS 174A; MUS 174C: MUS 174B; music majors, ICAM-music and ICAM-visual arts majors and minors, or consent of instructor.*

175. Musical Psychoacoustics (4)
(Formerly Music 160B) Survey of psychoacoustical phenomena, theories of hearing, and their relation to musical perception and cognition. Techniques of psychoacoustical experimentation. *Prerequisite: Music 170 (formerly Music 160A) recommended.*

176. Music Technology Seminar (4)
(Formerly Music 163) Selected topics in music technology and its application to composition and/or performance. Offerings vary according to faculty avail-

ability and interest. May be repeated for credit. *Prerequisites: Music 172 (formerly Music 161) and consent of instructor.*

195. Instructional Assistance (2)
Assisting in the instruction of an undergraduate music class under the direct and constant supervision of a faculty member. May be taken for credit three times. *Prerequisites: consent of instructor and departmental approval.*

198. Directed Group Study (1-4)
Concentrated inquiry into various problems not covered in the usual undergraduate courses. *Prerequisites: consent of instructor and department chair approval.* Pass/No Pass grade only.

199. Independent Study (1-4)
Independent reading, research, or creative work under the direction of a faculty member, provided no course covering the material to be studied already exists, and the study area derives from previous course work. *Prerequisites: consent of instructor and department chair approval. Department stamp required.* Pass/No Pass grade only. May be taken for credit two times.

ICAM 101. Digital Imaging: Image and Interactivity (4)
(Cross-listed with VIS 140). Introduction to digital image involving images, texts, and interactive display and operates both within computer mediated space (i.e., Web site) and in physical space (i.e., artist book). Interactive narrative and computer programming are explored. Materials fee required. *Prerequisites: VIS 40 or ICAM 40.* Open to media, ICAM, and studio majors; computing and ICAM minors only.

ICAM 102. Digital Media I: Time, Movement, Sound (4)
(Cross-listed with VIS 145A). Exploration of time dependent media components. Creation and manipulation of digital sound as well as moving images and their integration in multimedia works. Use of computer programming to control time is emphasized. Materials fee required. *Prerequisites: VIS 40 or ICAM 40 and VIS 140 or ICAM 101.* Open to media, and ICAM majors; ICAM minors only. Two production course limitation.

ICAM 103. Musical Acoustics (4)
(Cross-listed with MUS 170). An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. *Prerequisites: MUS 1A, 2A, or 4.*

ICAM 110. Computing in the Arts: Current Practice (4)
Designed around the presentations by visiting artists, critics, and scientists involved with contemporary issues related to computer arts. Lectures by the instructor and contextual readings provide background material for the visitor presentations. *Prerequisites: none.* **NOTE:** Materials fee required.

ICAM 120. Virtual Environments (4)
Students create virtual reality artworks. Projects may be done individually or in groups. Exploration of theoretical issues involved will underlie acquisition of techniques utilized in the construction of virtual realities. Materials fee required. *Prerequisites: VIS 145A or ICAM 102; CSE 11 recommended. Open to ICAM majors and minors only.* Two production course limitation.

ICAM 130. Seminar in Contemporary Computer Topics (4)
(Cross-listed with VIS 149). Topics relevant to computer-based art- and music-making, such as computer methods for making art/music, design of interactive systems, spatialization of visual/musical elements, critical studies. Topics will vary. May be repeated twice. Materials fee required. *Prerequisites: VIS 140 or ICAM 101; VIS 145A or ICAM 102 and MUS 170 or ICAM 103 recommended.* Open to media and ICAM majors; ICAM minors only. Two production course limitation.

ICAM 150. History of Art and Technology (4)
(Cross-listed with VIS 159). This course aims to provide historical context for computer arts by examining the interaction between the arts, media technologies, and sciences in different historical periods. Topics vary. Examples of topics which may be considered are: Renaissance perspective, the introduction of the printing press, the history of visual illusion in Western art, new physics and the avant-garde in the early twentieth century, futurism and technology, early electronic and computer art of the 1950s and 1960s. *Prerequisite: none.* **NOTE:** Materials fee required.

ICAM 160A. Senior Projects in Computer Arts I (4)
Students pursue projects of their own design over two quarters with support from faculty in a seminar environment. Project proposals are developed, informed by project development guidelines from real world examples. Collaborations are possible. Portfolio required for admissions. *Prerequisites: VIS 141B or VIS 145B or VIS 147B ior MUS 172.* Open to ICAM majors only. Department stamp required. Two production course limitation.

ICAM 160B. Senior Projects in Computer Arts II (4)
Continuation of ICAM 160A. Completion and presentation of independent projects along with documentation. *Prerequisite: ICAM 160A.* Open to ICAM majors only. Department stamp required. Two production course limitation.

ICAM 199. Special Studies (2/4)
Independent reading, research or creative work under direction of faculty member. *Prerequisites: department stamp and upper-division standing required.*

GRADUATE

All courses numbered 200 and above are intended for students admitted to the graduate program in music.

201A-B-C-D-E-F. Projects in New Music Performance (1-4, 1-4, 1-4, 1-4, 1-4, 1-4)
Performance of contemporary music. Different sections represent active performance ensembles. A core requirement for music graduate students as outlined in the curriculum.

202. Advanced Projects in Performance (1-4)
Advanced performance of new music with members of the performance faculty (SONOR). Students taking this course do not need to take Music 201 that quarter. Enrollment by consent of instructor/director of SONOR.

203A-B-C. Advanced Projects in Composition (6-6-6)
Meetings and laboratory sessions devoted to the study of composition.

203D. Advanced Projects in Composition (1-4)
Meetings on group basis with faculty composer in sessions devoted to the study of composition. *Prerequisites: 203A-B-C and consent of instructor.*

204. Focus on Composition (2)
The purpose of this seminar is to bring together the entire population of the graduate composition program (all students and faculty) for in-depth discussion of critical issues in music theory and composition. Each meeting will feature a formal presentation by either a student, faculty member, or visitor, followed by lively and challenging debate on relevant issues. *Prerequisite: consent of instructor.*

205. Focus on Critical Studies/Experimental Issues in Music (2)
The purpose of this seminar is to bring together CS/EP students and faculty for in-depth discussion(s) of theoretical, critical, and cultural issues in music. In conjunction with the seminar, each student not yet advanced to candidacy will meet with a faculty adviser to plan and prepare a presentation of his or her own work as part of a one-day CS/EP student symposium during the spring quarter.

206. Experimental Studies Seminar (4)
Seminars growing out of current faculty interests. The approach tends to be speculative and includes individual projects or papers as well as assigned readings. In the past, such areas as new instrumental and vocal resources, mixed media, and compositional linguistics have been offered.

207. Theoretical Studies Seminar (4)
Seminars on subject areas relating to the established dimensions of music and in which theoreticians have produced a substantial body of work. These include studies in analysis, timbre, rhythm, notation, and psychoacoustics. Offerings vary depending on faculty availability and interest. Analytical paper required.

208A. Critical Methods and Creative Identities (4)
The goal of this course is to develop critical thinking and self-reflexive inquiry through study of a diverse range of critical and scholarly traditions as they relate to music. Students are encouraged to investigate their own sense of identity and voice, as embodied in their creative work. *Prerequisite: consent of instructor.*

208B. Experimental Musical Practices (4)
This course examines, from social, cultural, historical and technological perspectives the current state of experimental musical practice. Meetings and laboratory sessions will explore alternative systems of musical organization, such as improvisation, computer-based multimedia, and interdisciplinary performance collaboration. *Prerequisite: consent of instructor.*

208C. World Musical Perception (4)
This seminar attempts to develop alternative procedures for the analysis of intercultural musicality. Methods and practices to be explored will involve computer technology, musical cognition and perception, and world music practices, as these relate to the elucidation and interrogation of notions of self and other, and tradition and innovation. *Prerequisite: consent of instructor.*

208D. Advanced Projects in CS/EP (1-4)
On a group or individual basis, this course provides an opportunity for students to create projects under the guidance of different faculty members each term. Enrollment in this course culminates in the development by the student of a portfolio of original work, or in a master's thesis. *Prerequisite: consent of instructor.*

209. Advanced Music Theory and Practice (4)
Advanced integrated studies in music theory; composition and styles study through analysis and performance. This course is intended primarily for doctoral students and may be taken by M.A. students only with special approval of M.A. adviser and course instructor. A major research or analytical publishable paper required.

210. Musical Analysis (4)
The analysis of complex music. The course will assume that the student has a background in traditional music analysis. The goal of the course is to investigate and develop analytical procedures that yield significant information about specific works of music, old and new. Reading, projects, and analytical papers. Normally offered fall quarter only.

228. Conducting (4)
This course will give practical experience in conducting a variety of works from various eras of instrumental and/or vocal music. Students will study problems of instrumental or vocal techniques, formal and expressive analysis of the music, and manners of rehearsal. Required of all graduate students. *Prerequisite: consent of instructor.* (Offered in selected years.)

229. Seminar in Orchestration (4)
A seminar to give practical experience in orchestration. Students will study works from various eras of instrumental music and will demonstrate their knowledge by orchestrating works in the styles of these various eras, learning the capabilities, timbre, and articulation of all the instruments in the orchestra. *Prerequisite: graduate standing.* (Offered in selected years.)

230. Chamber Music Performance (4)
Performance of representative chamber music literature, instrumental and/or vocal, through coached rehearsal and seminar studies. Course may be repeated for credit since the literature studied varies from quarter to quarter. *Prerequisite: consent of instructor.*

232. Pro-Seminar in Music Performance (4)
Individual or master class instruction in advanced instrumental/vocal performance. *Prerequisite: consent of instructor through audition.*

234. Symphonic Orchestra (4)
Repertoire is drawn from the classic symphonic literature of the eigtheenth, nineteenth, and twentieth centuries with a strong emphasis on recently composed and new music. Distinguished soloists, as well as The La Jolla Symphony Chorus, frequently appear with the orchestra. The La Jolla Symphony Orchestra performs two full-length programs each quarter, each program being performed twice. May be repeated six times for credit. *Prerequisites: audition and department stamp required.*

245. Focus on Performance (2)
The purpose of this seminar is to bring together performance students, faculty, and guests for discussion, presentation of student and faculty projects, performances by guest artists, and master classes with different members of the performance faculty. *Prerequisite: consent of instructor.*

250. Special Projects (1-12)
An umbrella course offered to music graduate students in lieu of normal seminar offerings. Topics will be generated by faculty and graduate students and submitted in December each year for review by faculty. Students may register for up to four units of a specialized research topic with given faculty. May be taken for up to twelve units a quarter.

267. Advanced Music Technology Seminar (4)
Advanced topics in music technology and its application to composition and/or performance. Offerings vary according to faculty availability and interest. May be repeated for credit. *Prerequisites: Music 173 or equivalent and consent of instructor.*

270A. Digital Audio Processing (4)
Digital techniques for analysis, synthesis, and processing of musical sounds. Sampling theory. Software synthesis techniques. Digital filter design. The short-time Fourier transform. Numerical accuracy considerations. *Prerequisite: consent of instructor.*

270B. Musical Cognitive Science (4)
Theoretical bases for analyzing musical sound. Approaches to perception and cognition, including psychoacoustics and information processing, both ecological and computational. Models of audition including Helmholtz's consonance/dissonance theory and Bregman's streaming model. Musical cognition theories of Lerdahl and Narmour. Neural network models of music perception and cognition. Models of rhythm. The problem of timbre and timbre perception. *Prerequisite: consent of instructor.*

270C. Compositional Algorithms (4)
Transformations in musical composition; series and intervalic structures; serial approaches to rhythm and dynamic. The stochastic music of Xenakis and Cage. Hiller's automatic composition. Improvisational models. Computer analysis of musical style. Neurally inspired and other quasiparallel algorithms. *Prerequisite: consent of instructor.*

270D. Advanced Projects in Computer Music (4)
Meetings on group basis with computer music faculty in support of individual student research projects. *Prerequisites: consent of instructor and completion of Music 270A-B-C.*

271. Survey of Electronic Music Techniques (2)
A hands-on encounter with several important works from the classic electronic repertory, showing a representative subset of the electronic techniques available to musicians. Intended primarily for students in areas other than computer music. *Prerequisite: none.* (S/U grade option only.)

291. Problems and Methods of Music Research and Performance (2)
The course will give practical experience in historical research, including use of important source materials, evaluation of editions, and examination of performance practice problems. (S/U grade option only.)

292. Academic Writing (1-4)
Individual and/or group work on particular academic writing projects in music. *Prerequisite: consent of instructor.*

296. Directed Group Research in Performance (4)
This group research seminar involves the investigation and exploration of new and experimental performance concerns. Areas could include: improvisation, graphic notation, performance electronics, and working with combined media (such as dance, poetry, and theater). (S/U grade option only.)

298. Directed Research (1-4)
Individual research. (S/U grades permitted.) May be repeated for credit. Enrollment by consent of instructor only.

299. Advanced Research Projects and Independent Study (1-12)
Individual research projects relevant to the student's selected area of graduate interest conducted in continuing relationship with a faculty adviser in preparation of the master's thesis or doctoral dissertation. (S/U grades permitted.)

500. Apprentice Teaching (1-4)
Participation in the undergraduate teaching program is required of all graduate students at the equivalent of 25 percent time for three quarters (six units is required for all graduate students).

501. Apprentice Teaching—Nondepartmental (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching.

Neurosciences

OFFICE: Building #1, School of Medicine,

The Graduate Program

The group in neurosciences accepts candidates for the Ph.D. degree who have undergrad-

uate majors in such disciplines as biology, chemistry, engineering, microbiology, mathematics, physics, psychology, and zoology. A desire and competence to understand how the nervous system functions is more important than previous background and training.

Doctoral Degree Program

Students in this program receive guidance and instruction from a campuswide group of faculty interested in nervous system mechanisms. Each student, in consultation with an advisory committee, selects courses relevant to his or her research interests and goals. The selection will include formal courses listed in this catalog and informal seminars offered by the department. A regular schedule of rotation through the laboratories of faculty members is a feature of the first year; the student is exposed in this way to the various approaches, techniques, and disciplines represented on the campus.

Course Work

By the time of the minor proposition (see below), students are expected to demonstrate competence in the basics of neuroscience by taking five quarters of mandatory course work—three quarters of Basic Neuroscience (Neurosci. 200 A-B-C), and one quarter each of Neuroanatomy Lab (Neurosci. 257) and Statistical Methods and Experimental Design (Neurosci. 225). In addition, students choose among three of six remaining courses: Molecular and Cellular Neuroendocrinology (Neurosci. 222), Molecular and Cellular Neurochemistry (Neurosci. 234), Neuropsychopharmacology (Neurosci. 277), Molecular and Cellular Neurobiology (Neurosci. 268), Behavioral Neuroscience (Neurosci. 264), and Developmental Neuroscience (Neurosci. 263). Students are also permitted to substitute previous courses that are similar to the Neurosciences core courses. Such a substitution would require approval of the graduate advisor in consultation with the Core Curriculum Committee and course instructor(s).

Minor Proposition

The purpose of this examination is to test the student's ability to choose a problem in the neurosciences and propose an experimental approach to its solution. The problem should be broad, requiring experimental approaches from more than one discipline. The problem should be outside the area of the student's anticipated dissertation research. Students will be required to demonstrate a working knowledge of the disciplines involved in the minor proposition.

Oral defense of the minor proposition will be required at the end of the spring quarter of the second year of study. Exemptions may be granted to entering students already holding a master's degree.

Dissertation

During the second year, students are expected to propose and initiate work on a dissertation problem under the guidance of a faculty preceptor. The neurosciences group at UCSD currently conducts animal research and clinical studies in the fields of neuroanatomy, neurochemistry, neuropharmacology, neurophysiology, comparative neurology, physiology of excitable membranes, synaptic transmission, neuronal integration and coding, nervous system tissue culture, neuroimmunology, brain function, sensory physiology, motor mechanism, and systems analysis as applied to neurological problems.

Qualifying Examination

This examination, a university requirement, focuses on the proposed research that the student will undertake for his or her dissertation. This examination is conducted by the approved doctoral committee.

Dissertation Examination

The required formalities listed in the *Instruction for Preparation and Submission of Doctoral Dissertations* issued by the Office of Graduate Studies and Research to students should be followed closely. The final examination includes both a public presentation followed by a closed defense of the dissertation with members of the Committee.

Teaching

Students are required to teach and to develop their talents as teachers. To this end, opportunities to lecture and to assist in laboratory exercises and demonstrations are provided.

Ph.D. Time Limit Policies

Students must advance to candidacy by the end of four years. Total university support cannot exceed six years. Total registered time at UCSD cannot exceed seven years.

COURSES

UNDERGRADUATE

199. Independent Research (2 or 4)
Laboratory research under the supervision of individual members of the faculty of the neurosciences department in one or a combination of neurosciences disciplines, e.g., neuroanatomy, neurophysiology, neurochemistry, neuropharmacology. (P/NP grades only.) *Prerequisite: consent of department chair.* (F,W,S)

GRADUATE

200A-B-C. Basic Neuroscience (4-4-4)
These courses are designed for graduate students in the neurosciences and other departments that are part of the interdisciplinary program (i.e., Biology, Cog. Sci.). These courses have been designed to cover as much basic neuroscience as possible in *three quarters of study*. It will combine two three-hour meetings each week with a 1.5 hour lecture and a 1.5 hour discussion of papers. These will be required courses for all first-year neurosciences graduate students. Biology will cross-list courses under Biology headings, making it a requirement of first year Biology graduate students. *Prerequisite: graduate student or consent of instructor.* (F,W,S)

221. Advanced Topics in Neurosciences (2)
Specialized advanced topic areas in neurosciences will be addressed in an interactive seminar course format. A different specific topic will be considered each quarter as announced in advance. Students will each present an aspect of the topic area and participate in discussions. *Prerequisite: graduate student or consent of instructor.* (F,W,S)

222. Molecular and Cellular Neuroendocrinology (4)
This course will examine the role of the CNS in controlling reproductive functions, stress, growth and behavior, with emphasis on the cellular and molecular mechanisms of neuroendocrine function. The lectures will be given by experts on each of the topic subjects. Lectures will include a basic introduction on the topic followed by a description of the current research in the area.

225. Statistical Methods and Experimental Design (2)
This course is designed for graduate students in the neurosciences, but will address issues of statistical methods and experiment design for investigators working in any field of biological research. The course will combine lectures, discussion, and practical examples drawn from the experience of the participant. *Prerequisite: graduate student in the neuroscience graduate program or consent of the instructor.* (F)

233. Comparative Vertebrate Neurobiology (4)
Survey of the organization and evolution of vertebrate nervous systems. *Prerequisite: consent of instructor.* (S/U grades only.) (W)

234. Molecular and Cellular Neurochemistry (4)
Topics include membrane and nerve function in nervous system, structure and function of receptors for neurotransmitters, role of cAMP as a second messenger in the nervous system, synthesis and processing of neuropeptides.

235. Neurobiology of the Chemical Senses (1)
This lecture and seminar course surveys the neuroanatomy and neurophysiology of the central and peripheral taste and olfactory systems. Plasticity of the mature and developing chemosensory systems will also be covered. Behavioral studies of sensory function will be related to psychophysical studies in humans, including those directed at evaluating clinical chemosensory disorders. Students are expected to discuss readings of journal articles. (S)

241. Ethics and Survival Skills in Academia (2-4)
This course will cover "ethical" issues in academia, including dishonesty, plagiarism, attribution, sexual misconduct, etc. We will also discuss "survival" issues, including job hunting, grant preparation, journal reviews, writing letters of recommendation, mentoring, etc. (W)

243. Physiological Basis of Human Information (2)
Psychological processes including attention, perception, and memory will be studied in connection with event-related potentials of the human brain. The interrelations among psychological and physiological events will be explored in order to arrive at unified concepts of human information processing. *Prerequisites: Neurosci. 238 or Psych. 231, and consent of instructor.* (S/U grades only.) (F)

251. Scientific Communication (2)
(Same as SIO 292) Forms of scientific communication, practical exercise in scientific writing and short oral communication, and in criticism and editing, preparation of illustrations, preparation of proposals; scientific societies and the history of scientific communication. Examples from any field of science, most commonly biology, marine biology, ecology, and neuroscience. *Prerequisite: graduate status in science.* (S/U grades only.) (S)

253. Clinical Neuroanatomy (1)
Review of neuroanatomy, with emphasis on clinical correlations. Pertinent physiological, chemical, and clinical information will be included and functional organization will be stressed. It is essential that students be familiar with neuroanatomical nomenclature. *Prerequisite: medical student, graduate student, intern, resident, or consent of instructor.* (S/U grades only.)

256. Mammalian Neuroanatomy (4)
Lectures presenting the basic features of the anatomy of the mammalian nervous system. This will include consideration of cellular components, development, topographic anatomy, and a detailed presentation of the organization of functional systems. *Prerequisite: graduate status or consent of instructor.* (S/U grades only.) (F) (not offered in 2000–2001)

257. Mammalian Neuroanatomy Laboratory (4)
Neuroanatomy laboratory course taught in conjunction with Mammalian Neuroanatomy (256). Laboratories deal with gross and microscopic neuroanatomy of brain systems. Sessions include microscopic analysis of histological sections and observations and dissections of human brain material. *Prerequisite: Neuroanatomy 256 or concurrent enrollment.* (S/U grades permitted.) (W)

259. Workshop in Electron Microscopy (4)
This course is to introduce graduate students in the neurosciences to research methods used in electron microscopy (EM) through one hour of formal lecture, one hour of seminar, three hours of demonstration, and three hours of supervised laboratory work per week. Students will become familiar with sectioning EM, scanning EM, and freeze-fracture EM. *Prerequisites: graduate-student standing in neurosciences doctoral program and consent of instructor.* Enrollment limited. (S/U grades only.) (S)

263. Developmental Neurobiology (3)
(Same as Biology 258.) Cellular and developmental aspects of the nervous system. Methods of investigation and culture approaches. Basic neuroembryology and selected examples of regional developments. Neuroglial cells and neuron-glia interactions. Extrinsic controls of survival growth and maturation of neural cells. Neurite growth and synapse formation. Potential for plasticity and regeneration in the nervous system. *Prerequisite: graduate students or consent of instructor.* (S)

264. Behavioral Neuroscience (5)
The course is to cover different areas of behavioral biology, such as ethology, behavioral biology, learning and memory, perception psychophysics. Some outside reading will be required. *Prerequisite: medical student, graduate student, or consent of instructor.* (W)

268. Molecular and Cellular Neurobiology (4)
This course focuses on cellular anatomy of the nervous system at the molecular level. The lectures will communicate current molecular genetic and cell biological approaches used to study the specialized structures and cell types of nervous tissue. Topics will include cell organelles; chromatin structure/function; gene expression/regulation; cytoskeleton and membrane interactions; signal transduction/receptors, channels and pumps; cellular junctions/synapses; node of Ranvier; and neuroplasmic transport. *Prerequisites: neurochemistry, neuroanatomy, biochemistry.* (F)

269. Electroencephalography and Clinical Neurophysiology (1)
Using the Journal of Electroencephalography and Clinical Neurophysiology as a core text, subjects chosen from the journal will be discussed and critically evaluated by the participants, and the literature pertinent to each topic reviewed. *Prerequisites: Neurosci. 238, Basic Neurology (205), neurology resident, or consent of instructor.* (F,W,S)

274. Neurobiology of Cognitive Developmental Disorders (2)
Neurobiological foundation of developmental disorders in information processing including infantile autism, developmental dysphasia, attention deficit disorder, and childhood schizophrenia. Neurophysiologi-cal, neuroanatomical, and psychological evidence will be explored. *Prerequisite: undergraduate or graduate course in neurobiology.* (S/U grades permitted.)

276. Neuroscience Research Rounds (2)
Neurosciences group faculty members and graduate students will present and discuss ongoing research. Attendance will be mandatory for first- and second-year graduate students. Faculty, advanced graduate students, medical students, postdoctoral trainees, and other interested parties are encouraged to attend. (F,W,S)

277. Neuropsychopharmacology (4)
An examination of the molecular and biochemical bases of drug and transmitter action. The course is devoted to receptor mechanisms, neuropharmacology, and drug action on excitable tissues. (S)

296. Neurosciences Research Rotation (1-12)
Independent study. (S/U grades only.) (F,W,S)

298. Neurosciences Independent Study Project (ISP) (1-12)
Prerequisite: approved ISP proposal. (F,W,S)

299. Neurosciences Research (1-12)
Independent study. (S/U grades only.) (F,W,S)

401. Neurology General Clinical Selective Clerkship (7)
Provides opportunities for practical application of neurological skills to the understanding and treatment of a variety of clinical disorders of the nervous system. *Prerequisite: successful completion of first two years of medical school.* (F,W,S)

426. Subintern Pediatric Neurology (7)
Subinterns are responsible for the primary care of hospitilized pediatric neurology patients under the direct resident and attending physician supervision. They will perform procedures such as lumbar puncture and participate in night call, daily teaching round, neurology Grand Rounds, and Journal Clubs. *Prerequisite: Neurology 401 or consent of instructor.* (F,W,S)

427. Neurology Outpatient Clerkship (7)
The student will rotate through the general and subspecialty (stroke, epilepsy, headache, nerve, and muscle) neurology clinics based at UCSD Medical Center. Lectures and clinical conferences will be attended as well. *Prerequisite: Neurosciences 401 or equivalent.* (F,W,S)

496. Clinical Independent Study (1-12)
Independent clinical study for medical students (S/U grades only.) (F,W,S)

500. Apprenticeship Teaching (1-4)
Participation in the department teaching program is required of all students working toward a Ph.D. degree. In general, students are not expected to teach in the first year, but are required to serve as teaching assistants or tutors for one quarter at any time during their subsequent years of training. The amount of teaching required is equivalent to the duties expected of a 50 percent assistant for one quarter. *Prerequisite: neurosciences graduate students. (S/U grades only.)* (F,W,S)

Avrum Stroll, Ph.D., *Research Professor*

Introduction to the Department

Philosophy addresses some of the most basic questions humans ask about the world. Some questions are very broad, such as how can minds know about the external world, themselves, and other minds? How can we arrive at reasonable answers to ethical questions about right and wrong? What distinguishes science from other kinds of knowledge and are there limits to science? What is the role of moral choice and values in human life? Do standards of truth and logic apply in areas such as religion, art, politics, and law?

Philosophy also seeks answers to particular problems in specific areas of science, medicine, law, ethics, and technology. For example, it explores the ways that modern physics impacts our notions of space, time, causation, and nature itself. It considers the ways that neuroscience and genetics impact the traditional ideas about free will and responsibility. It debates the limits of democratic governments in regulating individuals' conduct. It wrestles with problems about the right to die and the varied responsibilities of medical professionals. It inquires into the relation between science and religion. Related issues concern privacy, the limits of private property, and who should have access to what information.

Career Guidance

Philosophy is a broad field with diverse subfields. Some students may want to pursue a general course of study for the major, sampling courses across several of these distinct subfields. This strategy develops a solid foundation for graduate work in philosophy and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytic skills.

Other students may wish to pursue a more specialized program of studies. Below are descriptions of several areas of emphasis within philosophy. These illustrate the possibilities of developing your own coherent and focused set of courses that fulfill the requirements for the major in ways that are tailored to your specific intellectual and career interests. Philosophy is preparation for a wide range of careers—including science, law, medicine, teaching, business, and public policy.

Choosing a philosophy major is an excellent way to follow a disciplined and rigorous course of study that joins the breadth of a traditional college education with specialization in a chosen area.

Undergraduate Program—Major

The Department of Philosophy offers the degree of bachelor of arts (B.A.) in philosophy for the undergraduate major. A major in philosophy requires a total of fifteen philosophy courses, at least twelve of which must be upper-division (courses numbered 100 and above). Up to two upper-division courses outside of philosophy can count among the twelve required for the major if they are drawn from a related field and contribute to the major's philosophical program; such credit must be approved by the undergraduate adviser. Honors and directed study courses (Philosophy 191–199) may not be used to satisfy the major requirement of fifteen philosophy courses. Major requirements may be met by examination.

There is no standard or required introduction to philosophy or the major. The department offers a variety of lower-division courses and sequences (numbered 1–99), any of which could be a suitable introduction to philosophy.

At the upper-division level, majors are encouraged to take courses in the central areas of philosophical study:

Metaphysics and Epistemology
Law, Ethics, and Politics
Philosophy of Science and Logic
History of Philosophy

Though many upper-division courses have no prerequisite, any combination of three lower-division courses would provide a good foundation for taking most upper-division courses.

Core Requirements for the Major

1. History of Philosophy. Majors must complete three courses in the history of philosophy. At least one course must be in ancient philosophy (courses 31, 100–103) and one course must be in modern philosophy (courses 32–33 and 104–107). This requirement can be met by taking the lower-division sequence 31, 32, 33 or by taking any suitable combination of courses from the sequences 31–33 and 100–110.
2. Logic. Philosophy 10 and Philosophy 120 are required of all majors. Because Philosophy 120 is a prerequisite for a variety of upper-division courses, prospective majors are strongly encouraged to take it and Philosophy 10 as early as possible.
3. Moral and Political Philosophy. Majors must take at least one upper-division course in moral or political philosophy from among Philosophy 160, 161, 166, or 167.
4. Metaphysics and Epistemology. Majors must take at least one upper-division course in traditional areas of analytic philosophy—metaphysics, epistemology, philosophy of language, and philosophy of mind—from among Philosophy 130, 132, 134, or 136.

Optional Areas of Emphasis in the Major

The Department of Philosophy offers four optional areas of emphasis within the major, as described below. Students selecting an optional area of emphasis for the major must take and pass five of the courses listed under that area. Courses taken to complete an area of emphasis are counted toward the fifteen courses required for the major. Particular courses may be applied both to the completion of the area of emphasis

and in fulfillment of a core requirement for the major. Students should be aware, as they plan their course of study, that only some of the courses listed for an area of emphasis will be taught in any given year.

The department encourages students considering a philosophy major to consult with the assistant director of the philosophy undergraduate program and the philosophy faculty undergraduate adviser to plan a program of study that is suitable to their particular interests and needs. The department Web site http://philosophy.ucsd.edu provides additional information about courses falling within each area of emphasis. The optional areas of emphasis are:

1. Law, Ethics, and Society

This area targets the nature and source of our moral rights and obligations, the authority of the state and law, the basis of value and goodness. Several courses in this area target ethical issues in medicine, the environment, technological change, economic inequality, and matters concerning race, gender, class, ethnicity, and nationality. In this area, students will learn how moral and legal reasoning can reshape the political debates over abortion, the death penalty, privacy on the Internet, genetic testing, religious tolerance, free speech, affirmative action, and other issues.

This area is excellent preparation for law school as well as for postgraduate study and careers in public policy.

125. Games and Decisions
148. Philosophy and the Environment
152. Philosophy of Social Science
160. Ethical Theory
161. Topics in the History of Ethics
162. Contemporary Moral Issues
163. Biomedical Ethics
164. Technology and Human Values
166. Classics in Political Philosophy
167. Contemporary Political Philosophy
168. Philosophy of Law
169. Feminism and Philosophy
170. Philosophy and Race
182. Marx and Marxism

2. Science, Technology, and Medicine

This emphasis focuses on the insights and challenges presented by science. Modern science and technologies affect our view of ourselves and of nature, introducing novel promises and problems. For instance, how do we balance technical, economic, environmental, and ethical values in making decisions concerning which technologies or drugs to develop? Modern science has also changed our understanding of nature. Quantum physics, the genetic revolution, and neuroscience (to name a few) present problems and have important implications for human life. Finally, there are questions about science itself. What are the methods of modern science? Do they vary from one science to another? Can the sciences be value free?

This area will appeal especially to those students interested in pursuing careers in philosophy, science, clinical medicine, medical research, the social sciences, science journalism, and public policy.

123. Philosophy of Logic
145. Philosophy of Science
146. Philosophy of Physics
147. Philosophy of Biology
148. Philosophy and the Environment
149. Philosophy of Psychology
150. Philosophy of Cognitive Sciences
151. Philosophy of Neuroscience
152. Philosophy of Social Science
153. Philosophy of History
163. Biomedical Ethics
164. Technology and Human Values

3. Mind, Brain, and Cognitive Sciences

Traditional epistemology (the theory of how and what we know) and philosophy of mind (the theory of that-which-perceives-and-thinks) have recently been joined by several scientific disciplines in a collective search for illuminating theories. Psychology, cognitive neurobiology, computer science, and sociology have all made explosive contributions to a tradition as old as Plato and Aristotle. For example, our growing understanding of the biological brain has given new life to our traditional attempts to understand the nature of the mind. New accounts of the various mechanisms of cognition—both at the cellular and the social levels—have provided entirely new perspectives on the nature of consciousness, the self, knowledge and free will, and on the nature of science itself.

This area is excellent preparation for careers in cognitive science, neuroscience, artificial intelligence, science journalism, and philosophy.

132. Epistemology
134. Philosophy of Language
136. Philosophy of Mind
138. Consciousness
139. The Nature of Representation
145. Philosophy of Science
147. Philosophy of Biology
149. Philosophy of Psychology
150. Philosophy of Cognitive Sciences
151. Philosophy of Neuroscience
180. Phenomenology

4. Historical Perspectives on Philosophy, Science, and Religion

Throughout its history, philosophy has developed in a complex relationship with the natural sciences and religion. Philosophical ideas have both contributed to and challenged our understanding of nature and God, and developments in the sciences and religion have posed new challenges for philosophical thinking. The historical perspectives emphasis focuses on the fertile interplay between philosophy, science, and religion in several key periods: ancient Greece, the Scientific Revolution, and Enlightenment and post-Enlightenment Europe. The aim is not simply to document the history of philosophical ideas, but to use this history as a way of better understanding contemporary debates about the basic questions of human life.

This area prepares students for postgraduate work in philosophy, and for any career that requires breadth of knowledge, intellectual flexibility, as well as communicative and analytical skills.

100. Plato
101. Aristotle
102. Hellenistic Philosophy
104. The Rationalists
105. The Empiricists
106. Kant
107. Hegel
108. Nineteenth-Century Philosophy
109. History of Analytic Philosophy
110. Wittgenstein
161. Topics in the History of Ethics
166. Classics in Political Philosophy
180. Phenomenology
181. Existentialism
182. Marx and Marxism
183. Topics in Continental Philosophy

Grade Rules for Majors/Minors

All courses applied toward the major or minor must be completed with a grade of C– or higher. Further, a GPA of 2.0 must be maintained in courses applied toward the major or minor. It should be noted that courses taken under the Pass/Not-Pass (P/NP) grading option cannot be applied toward the major or minor.

Honors Program

The philosophy department offers an honors program for outstanding students in the major. Majors who have a 3.7 GPA in philosophy (3.25 overall) at the end of their junior year and who have taken at least four upper-division philosophy courses are eligible to apply. Interested students must consult with a faculty sponsor by the last day of classes during the spring term of their junior year. Admission to the honors program requires nomination by a faculty sponsor and approval of the undergraduate adviser. Nominating Petitions can be obtained from the philosophy department.

In addition to the usual major requirements, an honors student is required to complete a senior honors thesis by the end of winter quarter. During the fall and winter quarters, the student will be registered for Philosophy 191 and 192 and will be engaged in thesis research that will be supervised and evaluated by the student's faculty sponsor. A departmental committee will read and assess the completed thesis and determine if philosophy honors are to be awarded. Honors students are expected to maintain an average of 3.7 or better for all work taken in the program. (Qualified students wishing to participate in the honors program according to a different timetable than the one described above can apply to do so by petitioning the undergraduate adviser.)

Transfer Credit

Courses taken at other institutions may be applied toward the major by petition only. Petitions should be submitted to the Department of Philosophy main office, and must be accompanied by supporting materials (transcripts, syllabi, course work, etc.). Students are required to submit one petition per transfer course.

For specific regulations regarding transfer credit for Philosophy 10 (Introduction to Logic), please see the information on the department Web site: http://philosophy.ucsd.edu.

It is important to note that seven of the twelve upper-division courses in the major must be taken in the Department of Philosophy at UCSD.

Note: All courses applied towards major must be taken for a letter grade.

Undergraduate Program—Minor

The Department of Philosophy offers a minor in philosophy. As with the major, the minor is an attractive option for a wide range of career paths, including medicine, law, research in the natural and social sciences, journalism, education, and government. A minor requires a total of seven philosophy courses, at least five of which must be upper division. If choosing an area of emphasis, at least four upper-division courses must be from the chosen area of emphasis. All courses must be taken for a letter grade, C– or better.

Advising Office

Students who desire additional information concerning our course offerings or program may contact individual faculty or the assistant director of the undergraduate program through the department main office at 7002 H&SS, (858) 534-3070.

Graduate Program Requirements

The department offers programs leading to the M.A. and Ph.D. It is the intention of the graduate program to enable the student to obtain an understanding of diverse traditions and to develop as a philosopher in his or her own right. To this end, the department offers courses and seminars in the history of philosophy and in traditional and contemporary philosophical issues, from a variety of perspectives.

Master's Degree Program

To qualify for a master's degree in philosophy, a student must pass eight of the distribution requirement seminars as described below, under the subheading "Distribution Requirements." At least one of the seminars must be from the ethics and political philosophy category, and no more than four seminars from any one of the five areas may count toward the master's degree. The student must also complete a master's research paper, under the direction of a faculty member or his or her choice, and have it approved by two members of the department faculty.

Although Ph.D. students sometimes elect to complete their studies with a master's degree, *we do not admit students to a master's degree program.*

Doctoral Degree Program

Course Work

During the first two years of residence the student's work will normally total thirty-six units (nine courses) per year. At least twelve of these units in each year must be graduate philosophy seminars (those numbered 201-285). The balance may be made up from additional graduate courses in philosophy, upper-division courses in philosophy (those numbered 100-199), approved upper-division or graduate courses in related departments, and, if the student is a teaching assistant, Philosophy 500 (Apprentice Teaching).

After consultation with the graduate adviser, each entering student shall be assigned a faculty adviser. Students are encouraged to meet with their faculty adviser periodically to plan their course of study during their first two years and must meet once a year in the spring to review progress in the program.

Logic Requirement

During the first term of residence, all entering graduate students will take an examination designed to demonstrate their level of proficiency in formal logic. The examination covers the predicate calculus, up to and including functions, relations, and identity. Students who pass the examination with a grade of B+ or better have satisfied the first component of the logic requirement. Students who do not score a B+ or better must take Philosophy 120 (Symbolic Logic) during the first year of study and achieve a grade of B+ or better. By the end of the sixth term of residence, all students must also pass an advanced logic course (Philosophy 121, 122, 221, or another logic class approved by the graduate adviser) with at least a grade of B+.

Proseminar

In fall quarter of their first year of residence, graduate students shall take a proseminar designed to introduce them to philosophical

methods and improve their skills at writing and analysis. Enrollment in the proseminar is limited to first-year students. The proseminar is normally team-taught. The topics to be covered will address some central area of areas of philosophy and will vary from year to year. The proseminar is a regular four-unit seminar and as such may be counted toward satisfaction of the distribution requirement.

Core Courses

In the following areas, the department shall offer "core" or advanced introductory seminars: philosophy of mind, philosophy of language, philosophy of science, the history of philosophy, epistemology, metaphysics, and ethics. The department shall offer at least three of these courses in each academic year. Students must take two of these core courses by the end of their sixth quarter of residence. Courses taken to satisfy this requirement may be applied toward the distribution requirement. (A *core course* provides a point of entry into a field that is suitable for graduate students with no prior work in this area of philosophy as well as students with some background knowledge. A core course need not be and normally should not be a general survey of the field, but will take up some central topic. A core course will normally offer students the option of writing shorter papers rather than one long seminar paper; as an alternative, a final examination may be offered.)

Distribution Requirements

By the end of the seventh quarter of residence, a student must have completed ten graduate seminars in philosophy with a grade of B+ or better. The seminars must be distributed as follows:

1. Four seminars in the history of philosophy. At least one of these courses must be in ancient philosophy; at least one must be in modern philosophy.
2. Six seminars in the four areas listed below. Students must take at least one seminar in every area and two seminars in any two of the areas.

A. Philosophy of science and philosophy of logic

B. Philosophy of mind and philosophy of language

C. Ethics and political philosophy

D. Metaphysics and epistemology

Courses used to satisfy a requirement in one category cannot be used to satisfy a requirement in another category. The determination as to what category or categories a particular seminar taught in a given quarter may count toward is normally made by the seminar instructor.

The proseminar and courses used to satisfy the core course requirement may be counted toward fulfillment of the distribution requirement.

At the end of the fifth quarter of residence, a student must have completed eight of the required seminars. In order to remain in the program, a student must have attained an average of B+ or better in all philosophy seminars completed by this point.

Philosophy Writing Workshop

In fall term of their third year of study, graduate students shall enroll in the Philosophy Writing Workshop, a one- to three- unit course depending on the expected enrollment. This course is graded on a Satisfactory/Unsatisfactory basis. In this workshop each student shall produce a polished original philosophical essay (this may be based on a paper written for a seminar), criticize the essays produced by other workshop participants, and present the essay as a talk to an audience of workshop participants, the faculty instructor, and other interested graduate students and faculty.

Independent Study Courses

Philosophy 290 (Directed Independent Study) is appropriate for a graduate student still in the process of fulfilling course requirements for the degree.

Philosophy 295 (Research Topics) is an appropriate course for a student in the process of coming up with a dissertation prospectus.

Philosophy 299 (Thesis Research) is appropriate for a student working on his or her dissertation.

Language Requirement

Before advancing to candidacy, all students must demonstrate reading proficiency in one of the following languages:

German
French
Latin
Classical Greek

If a student's chosen dissertation topic requires competence in a second language from the above list, then the student's dissertation adviser can require a suitable demonstration of competence. In special circumstances students may be permitted to substitute a different language or a special competency (such as advanced work in mathematics or in one of the sciences) if educationally compelling reasons can be given for doing so. These exceptions will be decided on a case-by-case basis. The language requirement must be met before the student can be advanced to candidacy.

Third-Year Advising

At the end of the student's sixth quarter of study, the department appoints a three-member faculty committee for that student. The composition of the committee will reflect the student's preferences and the area of philosophy in which the student is inclined to do dissertation work. The committee's task is to help the student to develop a sound dissertation project and advance to candidacy in a timely manner. There is no expectation that the members of this third-year committee necessarily will serve on the dissertation committee.

Dissertation Prospectus and Oral Candidacy Exam

Some time after completing the distribution requirements, the student must submit a dissertation prospectus to his or her doctoral committee. The committee will then orally examine the student on the intended subject and plan of research. The examination will seek to establish that the thesis proposed is a satisfactory subject of research and that the student has the preparation and the abilities necessary to complete that research. This oral qualifying exam must be passed before the end of the twelfth quarter of residence. Students who are passed and have met the other requirements will be advanced to candidacy for the Ph.D.

Teaching Requirements

Participation in undergraduate teaching is one of the requirements for a Ph.D. in philosophy. The student is required to serve as a teaching assistant for the equivalent of one-quarter time for three academic quarters. The duties of a teaching assistant normally entail grading papers and examinations, conducting discussion sections, and related activities, including attendance at lectures in the course for which he or she is assisting.

Doctoral Dissertation

Under the supervision of a doctoral committee, each candidate will write a dissertation demonstrating a capacity to engage in original and independent research. The candidate will defend the thesis in an oral examination by the doctoral committee. (See "Graduate Studies: The Doctor of Philosophy Degree.")

Application Request

Interdisciplinary Degree Programs

The philosophy department at UCSD participates in two interdisciplinary programs, the requirements for which are outlined below.

Interdisciplinary Degree Program in Cognitive Science

The Interdisciplinary Ph.D. Program in Cognitive Science includes faculty from a number of UCSD departments including anthropology, biology and neurobiology, cognitive science, communication, computer science and engineering, linguistics, music, neurosciences, philosophy, psychiatry, psychology, and sociology. This group includes many outstanding figures in contemporary cognitive science.

Students wishing to pursue a Ph.D. in "Philosophy and Cognitive Science" register in the philosophy program in the normal fashion, but pursue a significant portion of their studies with faculty in the several departments participating in the interdisciplinary program. Students may apply for admission to the interdisciplinary program at the same time that they apply to the Department of Philosophy, or at some point after entering UCSD, (All students wishing to transfer into any interdisciplinary program must do so prior to the end of the fifth quarter of residency.)

Students in philosophy/cognitive science are required to do the following:

1. Complete all requirements for the philosophy Ph.D. except that the distribution requirement is amended. By the end of the ninth quarter of residence, a philosophy/cognitive science degree student must have completed ten graduate seminars in philosophy with a grade of B+ or better in each course distributed across the areas of (A) philosophy of science and philosophy of logic, (B) philosophy of mind and philosophy of language, (C) ethics and political philosophy, (D), epistemology and metaphysics, and (E) history of philosophy. Students must take at least one seminar from each of these five areas and at least two seminars form any four of these areas.
2. The equivalent of one year's course work (usually in six courses) in one or more of the other departments affiliated with the Department of Cognitive Science. (It should be noted that a philosophy graduate student who completes this requirement is deemed thereby to have satisfied the philosophy language requirement by gaining an approved special competency.)
3. Six quarters of Cognitive Science 200

A plan detailing the course of study must be approved by the Cognitive Science Program Committee. The dissertation should be interdisciplinary, reflecting the two areas of specialization.

Science Studies Program

The Science Studies Program at UCSD is committed to interdisciplinary investigations. Understanding, interpreting, and explaining the scientific enterprise demand a systematic integration of the perspectives developed within the history, sociology, and philosophy of science. The program offers students an opportunity to work towards such integration, while receiving a thorough training at the professional level in one of the component disciplines.

Students enrolled in the program choose one of the component disciplines for their major field of specialist studies, and are required to complete minor field requirements in the others. The core of the program, however, is a year-long seminar in science studies, led by faculty from all participating departments.

To obtain a Ph.D. in "Philosophy/Science Studies," students must take a total of eighteen courses, including:

1. Nine seminars in philosophy with a grade of B+ or better, distributed across the areas of (A) philosophy of science and philosophy of logic, (B) philosophy of mind and philosophy of language, (C) ethics and political philosophy, (D) metaphysics and epistemology, and (E) history of philosophy. Students must take at least one seminar from each of these five areas and at least two seminars from any three of these areas. This requirement must be completed by the end of the seventh quarter of residence. By the end of the fifth quarter of residence, a student must have taken at least five Philosophy seminars (distributed across at least three areas), and must have achieved an average B+ or better in all philosophy seminars taken up to that point. Failure to take a sufficient number of seminars or to achieve a B+ average means that the student may not continue in the program after the fifth quarter.
2. The Introduction to Science Studies 209A, plus the Seminar in Science Studies 209B, to be taken twice with changed content, plus Colloquium in Science Studies 209C, to be taken once on a Satisfactory/Unsatisfactory basis and once for a letter grade.
3. Two additional Science Studies courses outside philosophy drawn from a list of approved courses available each year from the Science Studies Program office. (One course in one of the sciences may be substituted for one of these courses as part of an approved program of study.)

The student's program of study must be approved by the philosophy faculty adviser for Science Studies.

Students may apply for admission to the interdisciplinary program at the same time that they apply to the Department of Philosophy, or at some point after entering UCSD. (All students wishing to transfer into any interdisciplinary program must do so prior to the end of the fifth quarter of residency.)

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

Financial Aid

Almost all philosophy graduate students are supported by some form of financial aid. Most work as teaching assistants at 50 percent time (approximately $14,143 for nine months). Typically this involves running discussion sections and grading papers for lecture and introductory courses in philosophy, humanities, and writing

programs. An assistantship is also regarded as a full-credit course, so teaching assistants usually take two graduate classes each quarter.

In addition, some Regents' fellowships are available for first-year students, and the department usually awards one or more dissertation fellowships a year for its advanced graduate students. Various fee scholarships, tuition and tuition/fee scholarships are also available, as are San Diego fellowships.

Advanced graduate students who have just completed or nearly completed their dissertations are sometimes hired by the department as teaching associates or visiting lecturers. Under these titles advanced graduate students autonomously plan and teach their own courses.

COURSES

LOWER-DIVISION

1. The Nature of Philosophy (4)
What is philosophy? A study of major philosophical questions, making use of both classical and contemporary sources. An introduction to the basic methods and strategies of philosophical inquiry.

10. Introduction to Logic (4)
Basic concepts and techniques in both informal and formal logic and reasoning, including a discussion of argument, inference, proof, and common fallacies, and an introduction to the syntax, semantics, and proof method in sentential (propositional) logic. (May be used to fulfill general-education requirements for Warren and Eleanor Roosevelt Colleges.)

12. Logic and Decision Making (4)
An introduction to the study of probability, inductive logic, scientific reasoning, and rational choice among competing hypotheses and alternative courses of action when the evidence is incomplete or uncertain. (May be used to fulfill general-education requirements for Marshall, Warren, and Eleanor Roosevelt Colleges.)

13. Introduction to Philosophy: Ethics (4)
An inquiry into the nature of morality and its role in personal or social life by way of classical and/or contemporary works in ethics. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

14. Introduction to Philosophy: Metaphysics (4)
A survey of central issues and figures in the Western metaphysical tradition. Topics include the mind-body problem, freedom and determinism, personal identity, appearance and reality, and the existence of God. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

15. Introduction to Philosophy: Theory of Knowledge (4)
A study of the grounds and scope of human knowledge, both commonsense and scientific, as portrayed in the competing traditions of Continental rationalism, British empiricism, and contemporary cognitive science. (May be used to fulfill general-education requirements for Muir and Marshall Colleges.)

27. Ethics and Society (4)
(Same as Political Science 27) An inquiry into the principles of ethical conduct and their applications. The course examines some of the major theories (including natural law, individual rights, utilitarianism) and the general issue of rights and obligations with respect to adherence to law (as in civil disobedience abortion and the refusal to obey an unjust law or order). Case studies will be employed to consider the relevance of these principles to various occupations such as business, engineering, law and government, in order to enable students to anticipate some of the difficulties that will arise for them in real-life situations whenever hard moral choices must be made. Satisfies the Warren College ethics and society requirement. This course is required for all Warren students entering the college in fall 1985 and thereafter.

31. History of Philosophy: Ancient Philosophy (4)
A survey of classical Greek philosophy with an emphasis on Socrates, Plato and Aristotle, though some consideration may be given to Presocratic and/or Hellenistic philosophers. (May be used in fulfilling the Muir College breadth requirement.)

32. History of Philosophy: The Origins of Modern Philosophy (4)
A survey of early modern philosophy. Beginning with the contrast between medieval and modern thought, the course focuses on modern philosophy and its relation to the scientific revolution of the sixteenth and seventeenth centuries. Philosophers to be studied include Descartes, Hobbes, Spinoza, and Leibniz. (May be used in fulfilling the Muir College breadth requirement.)

33. History of Philosophy: Philosophy in the Age of Enlightenment (4)
A survey of the major philosophers of the late seventeenth and eighteenth centuries with a focus on the British empiricists—Locke, Berkeley, and Hume—and the critical philosophy of Kant. (May be used in fulfilling the Muir College Breadth requirement.)

UPPER-DIVISION

100. Plato (4)
A study of Socrates and/or Plato through major dialogues of Plato. Possible topics include the virtues and happiness; weakness of the will; political authority and democracy; the theory of Forms and sensible flux; immortality; relativism, skepticism, and knowledge. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

101. Aristotle (4)
A study of major issues in Aristotle's works, such as the categories; form and matter; substance, essence, and accident; the soul; virtue, happiness, and politics. *Prerequisite: upper-division standing or consent of instructor.*

102. Hellenistic Philosophy (4)
A study of selected texts from the main schools of Hellenistic philosophy—Stoicism, Epicureanism, and Skepticism. *Prerequisite: upper-division standing or consent of instructor.*

104. The Rationalists (4)
The major writings of one or more of the seventeenth century rationalists—Descartes, Spinoza, and Leibniz. Topics include the existence of God, the mind-body problem, free will, the nature of knowledge, belief, and error. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

105. The Empiricists (4)
The major writings of one or more of the British empiricists—Locke, Berkeley, Hume, and Reid. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

106. Kant (4)
A study of selected portions of the Critique of Pure Reason and other theoretical writings and/or his major works in moral theory. *Prerequisite: Philosophy 33 or 105 or consent of instructor.* May be repeated for credit with change in content and approval of the instructor.

107. Hegel (4)
A study of one or more of Hegel's major works, in particular, *The Phenomenology of Spirit* and *The Philosophy of Right.* Readings and discussion may also include other figures in the Idealist tradition—such as Fichte, Hölderlin, and Schelling—and critics of the Idealist tradition—such as Marx and Kierkegaard. *Prerequisite: upper-division standing or consent of instructor.*

108. Nineteenth-Century Philosophy (4)
A study of one or more figures in nineteenth-century philosophy, such as Schopenhauer, Nietzsche, Kierkegaard, Marx, Emerson, Thoreau, James, and Mill. The focus may be on particular figures or intellectual themes and traditions. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

109. History of Analytic Philosophy (4)
Central texts, figures, and traditions in analytic philosophy. Figures may include Frege, Russell, Wittgenstein, Carnap, Moore, Austin, Tarski, Quine, Davidson, Kripke, and Putnam. May be repeated for credit with change of content and approval of instructor. *Prerequisite: Philosophy 120 or consent of instructor.*

110. Wittgenstein (4)
Central themes and writings in the philosophy of Ludwig Wittgenstein. Topics include the nature of logic and philosophy, solipsism, the private language argument, certainty, meaning, and rule-following. Readings include *Tractatus Logico-Philosophicus, Philosophical Investigations,* and *On Certainty. Prerequisite: upper-division standing or consent of instructor.*

111. Contemporary Work in Epistemology and Metaphysics (4)
A study of a prominent figure or central issue in contemporary epistemology and/or metaphysics. Examples of figures: Quine, Putnam, Sellars; examples of issues: the problem of universals, the nature of self-knowledge, freedom, ontological relativity. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

115. Philosophical Methods Seminar (4)
This course provides an introduction to the techniques of philosophical inquiry through detailed study of selected philosophical texts and through extensive training in philosophical writing based on those texts. Enrollment limited and restricted to majors; must be taken for letter grade. May not be repeated for credit. *Prerequisite: open to philosophy majors only.*

120. Symbolic Logic I (4)
The syntax, semantics, and proof-theory of first-order predicate logic with identity, emphasizing both conceptual issues and practical skills (e.g., criteria for logical truth, consistency, and validity, the application of logical methods to everyday as well as scientific reasoning). *Prerequisite: Philosophy 10 or consent of instructor.*

121. Symbolic Logic II (4)
The meta-theory of first-order predicate logic: expressive power, the notions of a model, truth-in-a-model, effective procedure, proof and decidability, the completeness of first-order logic (co-extensionality of the semantic and proof-theoretic methods), etc. The course is fairly formal. *Prerequisite: Philosophy 120 or consent of instructor.*

122. Topics in Logic (4)
A study of new, extended, or alternative logics and/or special issues in meta-logic. Topics include the nature of logic, modal logic, higher-order logic, generalized logic, free logic, the Skolem-Lπwenheim theorem, the incompleteness of arithmetic, undecidability. May be repeated for credit with change in content and approval of instructor. *Prerequisite: Philosophy 120 (and for advanced topics: Philosophy 121) or consent of instructor.*

123. Philosophy of Logic (4)
Philosophical issues underlying standard and nonstandard logics, the nature of logical knowledge, the relation between logic and mathematics, the revisability of logic, truth and logic, ontological commitment and ontological relativity, logical consequence, etc. May be repeated for credit with change in content and approval of instructor. *Prerequisite: Philosophy 120 or consent of instructor.*

125. Games and Decisions (4)
Formal and philosophical issues in the theory of games and the theory of rational decision. *Prerequisite: Philosophy 12 or consent of instructor.*

130. Metaphysics (4)
Central problems in metaphysics, such as free will and determinism, the mind-body problem, personal identity, causation, primary and secondary qualities, the nature of universals, necessity, and identity. *Prerequisite: upper-division standing or consent of instructor.*

131. Topics in Metaphysics (4)
An in-depth study of some central problem, figure, or tradition in metaphysics. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

132. Epistemology (4)
Central problems in epistemology such as skepticism; a priori knowledge; knowledge of other minds; self-knowledge; the problem of induction; foundationalist, coherence, and causal theories of knowledge. *Prerequisite: upper-division standing or consent of instructor.*

134. Philosophy of Language (4)
Examination of contemporary debates about meaning, reference, truth, and thought. Topics include descriptional theories of reference, sense and reference, compositionality, truth, theories of meaning, vagueness, metaphor, and natural and formal languages. *Prerequisite: upper-division standing or consent of instructor.*

136. Philosophy of Mind (4)
Different conceptions of the nature of mind and its relation to the physical world. Topics include identity theories, functionalism, eliminative materialism, internalism and externalism, subjectivity, other minds, consciousness, self-knowledge, perception, memory, and imagination. *Prerequisite: upper-division standing or consent of instructor.*

137. Philosophy of Action (4)
The nature of action and psychological explanation. Topics include action individuation, reasons as causes, psychological laws, freedom and responsibility, weakness of will, self-deception, and the emotions.

138. Consciousness (4)
Philosophical issues about consciousness, such as multiple or split consciousness, altered consciousness, perspectives and points of view, neuroscientific and cognitive theories, animal, machine, and social consciousness, the evolution of consciousness, zombies. *Prerequisite: upper-division standing or consent of instructor.*

139. The Nature of Representation (4)
A philosophical grounding in concepts and distinctions that govern the use of representations in various media, such as analog/digital, implicit/explicit, imagistic/propositional, indexical/descriptive, medium/message, distributed/local, symbolic/associative, situated/context-independent, and opaque/transparent. *Prerequisite: upper-division standing or consent of instructor.*

145. Philosophy of Science (4)
Central problems in philosophy of science, such as the nature of confirmation and explanation, the nature of scientific revolutions and progress, the unity of science, and realism and antirealism. *Prerequisite: upper-division standing or consent of instructor.*

146. Philosophy of Physics (4)
Philosophical problems in the development of modern physics, such as the philosophy of space and time, the epistemology of geometry, the philosophical significance of Einstein's theory of relativity, the interpretation of quantum mechanics, and the significance of modern cosmology. *Prerequisite: upper-division standing or consent of instructor.*

147. Philosophy of Biology (4)
Philosophical problems in the biological sciences, such as the relation between biology and the physical sciences, the status and structure of evolutionary theory, and the role of biology in the social sciences. *Prerequisite: upper-division standing or consent of instructor.*

148. Philosophy and the Environment (4)
Investigation of ethical and epistemological questions concerning our relationship to the environment. Topics may include the value of nature, biodiversity, policy and science, and responsibility to future generations. *Prerequisite: upper-division standing or consent of instructor.*

149. Philosophy of Psychology (4)
Philosophical issues raised by psychology, including the nature of psychological explanation, the role of nature versus nurture, free will and determinism, and the unity of the person. *Prerequisite: upper-division standing or consent of instructor.*

150. Philosophy of the Cognitive Sciences (4)
Theoretical, empirical, methodological, and philosophical issues at work in the cognitive sciences (e.g., Psychology, Linguistics, Neuroscience, Artificial Intelligence, and Computer Science), concerning things such as mental representation, consciousness, rationality, explanation, and nativism. *Prerequisite: upper-division standing or consent of instructor.*

151. Philosophy of Neuroscience (4)
An introduction to elementary neuroanatomy and neurophysiology and an examination of theoretical issues in cognitive neuroscience and their implications for traditional philosophical conceptions of the relation between mind and body, perception, consciousness, understanding, emotion, and the self. *Prerequisite: upper-division standing or consent of instructor.*

152. Philosophy of Social Science (4)
Philosophical issues of method and substance in the social sciences, such as causal and interpretive models of explanation, structuralism and methodological individualism, value neutrality, and relativism. *Prerequisite: upper-division standing or consent of instructor.*

153. Philosophy of History (4)
A study of classical and/or contemporary conceptions of history and historical knowledge. Topics may include the structure of historical explanation, historical progress, objectivity in historiography, hermeneutics and the human sciences. *Prerequisite: upper-division standing or consent of instructor.*

160. Ethical Theory (4)
Systematic and/or historical perspectives on central issues in ethical theory such as deontic, contractualist, and consequentialist conceptions of morality; rights and special obligations; the role of happiness and virtue in morality; moral conflict; ethical objectivity and relativism; and the rational authority of morality. *Prerequisite: upper-division standing or consent of instructor.*

161. Topics in the History of Ethics (4)
Central issues and texts in the history of ethics. Subject matter can vary, ranging from one philosopher (e.g., Aristotle, Hobbes, Kant, or Mill) to a historical tradition (e.g., Greek ethics or the British moralists). May be repeated for credit with change in content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

162. Contemporary Moral Issues (4)
An examination of contemporary moral issues, such as abortion, euthanasia, war, affirmative action, and freedom of speech. *Prerequisite: upper-division standing or consent of instructor.*

163. Biomedical Ethics (4)
Moral issues in medicine and the biological sciences, such as patient's rights and physician's responsibilities, abortion and euthanasia, the distribution of health care, experimentation, and genetic intervention. *Prerequisite: upper-division standing or consent of instructor.*

164. Technology and Human Values (4)
Philosophical issues involved in the development of modern science, the growth of technology, and control of the natural environment. The interaction of science and technology with human nature and political and moral ideals. *Prerequisite: upper-division standing or consent of instructor.*

166. Classics in Political Philosophy (4)
Central issues about the justification, proper functions, and limits of the state through classic texts in the history of political philosophy by figures such as Plato, Aristotle, Hobbes, Locke, Rousseau, Mill, and Marx. *Prerequisite: upper-division standing or consent of instructor.*

167. Contemporary Political Philosophy (4)
Different perspectives on central issues in contemporary political philosophy, such as the nature of state authority and political obligation, the limits of government and individual liberty, liberalism and its critics,

equality and distributive justice. *Prerequisite: upper-division standing or consent of instructor.*

168. Philosophy of Law (4)
A study of issues in analytical jurisprudence such as the nature of law, the relation between law and morality, and the nature of legal interpretation and issues in normative jurisprudence such as the justification of punishment, paternalism and privacy, freedom of expression, and affirmative action. *Prerequisite: upper-division standing or consent of instructor.*

169. Feminism and Philosophy (4)
Examination of feminist critiques of, and alternatives to, traditional philosophical conceptions of such things as morality, politics, knowledge, and science. *Prerequisite: upper-division standing or consent of instructor.*

170. Philosophy and Race (4)
A philosophical investigation of the topics of race and racism. The role of "race" in ordinary speech. The ethics of racial discourse. Anthropological and biological conceptions of race. The social and political significance of racial categories. Post-racialist conceptions of race.

175. Aesthetics (4)
Central issues in philosophical aesthetics such as the nature of art and aesthetic experience, the grounds of artistic interpretation and evaluation, artistic representation, and the role of the arts in education, culture, and politics. *Prerequisite: upper-division standing or consent of instructor.*

177. Philosophy and Literature (4)
A study of philosophical themes contained in selected fiction, drama, or poetry, and the philosophical issues that arise in the interpretation, appreciation, and criticism of literature. *Prerequisite: upper-division standing or consent of instructor.*

180. Phenomenology (4)
An examination of the phenomenological tradition through the works of its major classical and/or contemporary representatives. Authors studied will vary and may include Brentano, Husserl, Heidegger, Merleau-Ponty, Levinas, Bourdieu. *Prerequisite: upper-division standing or consent of instructor.*

181. Existentialism (4)
Classical texts and issues of existentialism. Authors studied will vary and may include Nietzsche, Kierkegaard, Sartre, and Heidegger. *Prerequisite: upper-division standing or consent of instructor.*

182. Marx and Marxism (4)
Central issues in the writings of the early and late Marx, such as alienation, false consciousness, exploitation, historical materialism, the critique of capitalism, and communism. Attention may be given to Marx's philosophical predecessors (e.g., Smith, Rousseau, Hegel, Feuerbach) and/or to subsequent developments in Marxism (e.g., the Frankfurt school and analytical Marxism). *Prerequisite: upper-division standing or consent of instructor.* Not offered in 2004-2005.

183. Topics in Continental Philosophy (4)
The focus will be on a leading movement in continental philosophy (e.g., the critical theory of the Frankfurt school, structuralism and deconstruction, post-modernism) or some particular issue that has figured in these traditions (e.g., freedom, subjectivity, historicity, authenticity). May be repeated for credit with change in content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

185. Philosophy of Religion (4)
A general introduction to the philosophy of religion through the study of classical and/or contemporary texts. Among the issues to be discussed are the existence and nature of God, the problem of evil, the existence of miracles, the relation between reason and revelation, and the nature of religious language. *Prerequisite: upper-division standing or consent of instructor.*

190. Special Topics (4)
A special philosophical topic. May be repeated for credit with change of content and approval of instructor. *Prerequisite: upper-division standing or consent of instructor.*

191. Philosophy Honors (4)
Independent study by special arrangement with and under the supervision of a faculty member, including a proposal for the honors essay. An IP grade will be awarded at the end of this quarter; a final grade will be given for both quarters at the end of 192. *Prerequisites: department stamp; consent of instructor.*

192. The Honors Essay (4)
Continuation of 191: independent study by special arrangement with and under the supervision of a faculty member, leading to the completion of the honors essay. A letter grade for both 191 and 192 will be given at the end of this quarter. *Prerequisite: consent of instructor.*

199. Directed Individual Study (4)
Directed individual study by special arrangement with and under the supervision of a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor.*

GRADUATE COURSES

200. Proseminar (4)
Introduction to philosophical methods of analysis through study of classic historical or contemporary texts. Writing intensive. Enrollment limited to entering graduate students.

201A. Core Course in History (4)
A study of selected texts or topics in the history of philosophy. Usually the focus will be on a single major text. May be taken for credit nine times with changed content.

202. Core Course in Ethics (4)
An introduction to some central issues in ethical theory with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

203. Core Course in Political Philosophy (4)
A study of central topics concerning the nature, justification, and limits of state authority. The emphasis may be on classic texts or contemporary writings. May be taken for credit three times with changed content.

204A. Core Course in Philosophy of Science (4)
An introduction to one or more central problems in the philosophy of science, or in the philosophy of one of the particular sciences, such as the nature of confirmation and explanation, the nature of scientific knowledge, reductionism, the unity of science, or realism and antirealism. May be taken for credit three times with changed content.

205A. Core Course in Metaphysics (4)
An introduction to central topics in metaphysics with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

206A. Core Course in Epistemology (4)
An introduction to central topics in epistemology with emphasis on classic texts or contemporary authors. May be taken for credit three times with changed content.

209A. Introduction to Science Studies (4)
Study and discussion of classic work in history of science, and philosophy of science, and of work that attempts to develop a unified science studies approach. Required of all students in the Science Studies Program.

209B. Seminar in Science Studies (4)
Study and discussion of selected topics in the science studies field. Required of all students in the Science Studies Program. The topic varies from year to year and students may, therefore, repeat the course for credit. May be taken for credit three times with changed content.

209C. Colloquium in Science Studies (4)
A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. May be taken for credit two times with changed content.

210. Greek Philosophy (4)
A study of selected texts or topics from the history of Greek philosophy. Usually centers on works by Plato or Aristotle. May be taken for credit six times with changed content.

214. Early Modern Philosophy (4)
A study of selected texts or topics from philosophers of the sixteenth and seventeenth centuries, Descartes, Spinoza, Leibniz, or Locke. May be taken for credit six times with changed content.

215. Eighteenth-Century Philosophy (4)
A study of selected texts or topics from philosophers of the eighteenth century: for example, Kant or Hume. May be taken for credit six times with changed content.

216. Nineteenth-Century Philosophy (4)
A selective study of major philosophical texts for the period, with emphasis on such figures as Hegel, Marx, Nietzsche, Mill, and others. May be taken for credit six times with changed content.

217. Twentieth-Century European Philosophy (4)
A study of selected topics in twentieth-century European philosophy as reflected in the major writings of Husserl, Heidegger, Sartre, Merleau-Ponty, and others. May be taken for credit six times with changed content.

218. Contemporary Analytical Philosophy (4)
A study of the historical development of the analytical movement, with emphasis on major texts. May be taken for credit six times with changed content.

221. Advanced Symbolic Logic (4)
Topics in mathematical logic and set theory, metatheory, nonstandard logics, and other contemporary developments in logical theory. May be taken for credit five times with changed content.

222. Philosophy of Logic (4)
A study of selected issues in the philosophy of logic. The focus may be on contemporary texts or historical works or both. May be taken for credit six times with changed content.

230. Metaphysics (4)
Topics may include identity, personal identity, universals and particulars, modality and possible worlds, causa-

tion, reduction, supervenience, freedom and determinism, space and time, and realism versus antirealism. May be taken for credit six times with changed content.

232. Epistemology (4)
This seminar will cover issues such as rival accounts of knowledge, justification, and warrant, traditional and contemporary perspectives on empiricism, rationalism, and pragmatism, and skepticism. May be taken for credit six times with changed content.

234. Philosophy of Language (4)
Central issues in contemporary philosophy of language, such as the nature of linguistic meaning, truth, content, reference, the syntax and semantics of various linguistic constructions, presupposition, speech acts, the epistemology of language understanding and language learning, the mental/psychological basis of linguistic understanding and use. May be taken for credit six times with changed content.

236. Philosophy of Mind (4)
Contemporary debates on the nature, function, and operation of the mental. May include questions about the mind-body relation, mental causation, perception, consciousness, and mental representation. May be taken for credit six times with changed content.

245. Philosophy of Science (4)
This seminar will cover current books and theoretical issues in the philosophy of science. May be taken for credit seven times with changed content.

247. Philosophy of Biology (4)
Historical and contemporary perspectives on foundational issues about biology. May include questions about the nature of biological explanation, the relation of biology to chemistry and physics, the status of attributions of function, and the relation of biology to the social sciences. May be taken for credit six times with changed content.

250A. Philosophy of the Cognitive Sciences (4)
Contemporary debates about the study of the mind-brain as studied in one or more of the empirical cognitive sciences. May include questions about the different strategies of explanation invoked, the conceptions of representation employed, the connections between theoretical models developed. May be taken for credit six times with changed content.

260. Ethics (4)
Topics may include metaethics (e.g., the semantics, metaphysics, epistemology, and normativity of ethics), consequentialism and deontology, moral psychology (e.g., freedom, responsibility, and weaknesses of will), or substantive moral problems. The approach may be systematic, historical, or both. May be taken for credit six times with changed content.

267. Political Philosophy (4)
Topics may include the nature and limits of state authority, liberty and equality, distributive justice, liberalism and its critics (e.g., feminists, libertarians, and others), or issues in jurisprudence. The focus may be on classic texts or contemporary authors. May be taken for credit six times with changed content.

275. Aesthetics (4)
An exploration of problems in the philosophy of art, aesthetic experience, and aesthetic judgment within the context of a critical survey of some current aesthetic theories, and their illustrative application in various fields of art. May be taken for credit six times with changed content.

276. German Translation Workshop (1)
This course meets weekly to provide training in reading and translating philosophical German. Students prepare in advance written translations of assigned passages. The course helps train graduate students preparing to take the Departmental German Exam. Can be taken nine times for credit with changed content.

277. Phenomenology Reading Group (1-2)
This course meets biweekly with students reading and presenting material from the phenomenological literature. The course is designed both for students doing active research in phenomenology and for those seeking to gain some familiarity with that tradition. Can be taken nine times for credit with changed content.

278. Topics and Methods in Contemporary Philosophy (1-2)
Investigation of central issues in contemporary philosophy. Content varies but typically will center on a recent and important philosophical book. Can be taken nine times for credit with changed content.

279. Experimental Philosophy Laboratory (2)
A weekly forum of presentations, EPL provides a wider range of content than a traditional seminar. Content varies, but the focus is on philosophical problems of mind, representation, language and consciousness through empirical and philosophical methods. Can be taken nine times for credit with changed content.

280. Philosophy of Science Topics and Methods (1-2)
This course meets weekly to discuss recent books or articles in philosophy of science. The reading is designed both for students doing active research in the field and for those seeking to gain some familiarity with it. Can be taken nine times for credit with changed content.

281. History of Philosophy Research and Methods (1-2)
This course meets to discuss work in progress in the history of philosophy. Its aim is to introduce understanding of the methods and standards of research in the field through constructive criticism of each other's work. Can be taken nine times for credit with changed content.

282. Topics and Methods in Ethics (1-2)
Weekly or biweekly meetings to discuss recent literature in ethics, broadly construed so as to include ethical theory, normative ethics, jurisprudence, and historical traditions in these fields. The course is suitable for those specializing in ethics and for those seeking some familiarity with the field. Can be taken nine times for credit with changed content.

283. Topics and Methods in Political Philosophy (1-2)
Weekly or biweekly meetings to discuss recent literature in political philosophy and historical tradition of this field. The course is suitable for those specializing in ethics and for those seeking some familiarity with the field.

285. Seminar on Special Topics (4)
Focussed examination of specific problems or themes in some area of philosophy. May be taken for credit nine times with changed content.

290. Directed Independent Study (4)
Supervised study of individually selected philosophical topics. S/U grades permitted.

292. Writing Workshop (1-3)
Each enrolled student produces a research essay ready for publication, presents it to students and faculty, and offers critiques of other students' presentations. Units will vary according to enrollment in course. To be taken in fall quarter of third year of philosophy graduate study.

295. Research Topics (1-12)
Advanced individual research studies under the direction of a member of the staff. Hours of outside prep.will vary with number of units taken. May be taken for credit nine times with changed content.

299. Thesis Research (1-12)
S/U grades permitted.

500. Apprentice Teaching (1-4)
A course designed to satisfy the requirement that graduate students should serve as teaching assistants, either in the Department of Philosophy or in one of the writing programs offered by the various colleges. Each Ph.D. candidate must teach the equivalent of quarter time for three academic quarters. Students are permitted to sign up as TAs for a maximum of eighteen quarters.

Professors

Henry D. I. Abarbanel, Ph.D., *Director, Institute for Nonlinear Science*
Daniel P. Arovas, Ph.D., *Vice Chair for Education*
Dmitri N. Bassov, Ph.D.
Ami E. Berkowitz, Ph.D., *Research Professor*
James G. Branson, Ph.D.
Keith A. Brueckner, Ph.D., *Emeritus*
E. Margaret Burbidge, Ph.D., *Emeritus and Research Professor*
Geoffrey R. Burbidge, Ph.D., *Research Professor*
Leonid V. Butov, Ph.D.
Joseph C. Y. Chen, Ph.D.
Patrick H. Diamond, Ph.D.
C. Fred Driscoll, Ph.D.
Daniel H. E. Dubin, Ph.D.
Robert C. Dynes, Ph.D., *UC President*
George Feher, Ph.D., *Research Professor*
Zachary Fisk, Ph.D., *Emeritus*
Donald R. Fredkin, Ph.D.

George M. Fuller, Ph.D.
Marvin L. Goldberger, Ph.D., *Emeritus*
John M. Goodkind, Ph.D., *Chair*
Robert J. Gould, Ph.D., *Research Professor*
Kim Griest, Ph.D., *Chancellor's Associates Faculty Award for Excellence in Undergraduate Teaching, 2002*
Benjamin Grinstein, Ph.D.
Frances Hellman, Ph.D.
Jorge E. Hirsch, Ph.D.
Terence T-L. Hwa, Ph.D.
Kenneth A. Intriligator, Ph.D.
Elizabeth Jenkins, Ph.D.
Barbara Jones, Ph.D., *Academic Senate Distinguished Teaching Award*
David Kleinfeld, Ph.D.
Norman M. Kroll, Ph.D., *Research Professor*
Julius G. Kuti, Ph.D.
Herbert Levine, Ph.D.
Leonard N. Liebermann, Ph.D., *Emeritus*
Ralph H. Lovberg, Ph.D., *Emeritus*
David B. MacFarlane, Ph.D.
Aneesh V. Manohar, Ph.D.
M. Brian Maple, Ph.D., *Bernd T. Matthias Endowed Chair, Director, Institute for Pure and Applied Physical Sciences; Director, Center for Interface and Materials Science*
George E. Masek, Ph.D., *Emeritus*
Carl E. McIlwain, Ph.D., *Research Professor*
Xuong Nguyen-Huu, Ph.D., *Emeritus*
Michael L. Norman, Ph.D.
Melvin Y. Okamura, Ph.D.
Thomas M. O'Neil, Ph.D.
José N. Onuchic, Ph.D., *Academic Senate Distinguished Teaching Award*
Hans P. Paar, Ph.D.
Laurence E. Peterson, Ph.D., *Research Professor*
Sally K. Ride, Ph.D., *Ingrid and Joseph W. Hibben Endowed Chair*
Ivan K. Schuller, Ph.D.
Sheldon Schultz, Ph.D., *Research Professor*
Lu J. Sham, Ph.D.
Vitali D. Shapiro, Ph.D.
Vivek A. Sharma, Ph.D., *Academic Senate Distinguished Teaching Award, 2004*
Sunil K. Sinha, Ph.D.
Harding E. Smith, Ph.D.
Harry Suhl, Ph.D., *Research Professor*
Clifford M. Surko, Ph.D.
Robert A. Swanson, Ph.D., *Emeritus*
Harold Ticho, Ph.D., *Emeritus*
David R. Tytler, Ph.D.
Wayne Vernon, Ph.D., *Research Professor*
Arthur M. Wolfe, Ph.D., *Director, Center for Astrophysics and Space Sciences, Chancellor's Associates Chair*
Peter S. Wolynes, Ph.D.
David Y. Wong, Ph.D., *Emeritus*
Herbert F. York, Ph.D., *Emeritus*

Associate Professors

Massimiliano DiVentra, Ph.D.
Frank Wuerthwein, Ph.D.

Assistant Professors

Michael M. Fogler, Ph.D.
Alexander Groisman, Ph.D.
Brian G. Keating, Ph.D.
Paolo Padoan, Ph.D.
Douglas E. Smith, Ph.D.
Thomas W. Murphy, Jr., Ph.D.

Adjunct Professors

Hans Kobrak, Ph.D., *Emeritus*
Ferenc Mezei, Ph.D.
Tihiro Ohkawa, Ph.D.
Raj K. Pathria, Ph.D.
Ronald E. Waltz, Ph.D.

Associate Adjunct Professor

David R. Smith, Ph.D., *Associate Research Scientist*

Senior Lecturers

Richard E. Rothschild, Ph.D., *Research Scientist, Center for Astrophysics and Space Science*

The Department of Physics was established in 1960 as the first new department of the UCSD campus. Since then it has developed a strong faculty and student body with unusually diversified interests which lie primarily in the following areas:

1. Physics of elementary particles
2. Quantum liquids and superconductivity
3. Solid state and statistical physics
4. Plasma physics
5. Astrophysics and space physics
6. Atomic and molecular collision and structure
7. Biophysics
8. Geophysics
9. Nonlinear dynamics
10. Computational physics

In addition to on-campus research facilities, the high energy program uses accelerators at SLAC, CERN, and Fermi Laboratory. The astrophysics program uses facilities at Keck, Lick, and Kitt Peak Observatories.

The Undergraduate Program

The Department of Physics offers undergraduate programs leading to the following degrees:

B.S., Physics
B.S., Physics with Specialization in Astrophysics
B.S., Physics with Specialization in Biophysics
B.S., Physics with Specialization in Computational Physics
B.S., Physics with Specialization in Earth Sciences
B.S., Physics with Specialization in Materials Physics
B.A., General Physics
B.A., General Physics/Secondary Education

A grade-point average of 2.0 or higher in the upper-division major program is required for graduation. Students must receive a grade of C– or better in any course to be counted toward fulfillment of the major requirements. In exceptional cases, students with a grade-point average in the major of 2.5 or greater may petition to have one grade of D accepted. All courses (lower- and upper-division) required for the major must be taken for a letter grade.

Shang-keng Ma Award

The Department of Physics presents the Shang-keng Ma Memorial Award at commencement each year to a graduating physics student who has shown exceptional ability and promise during the UCSD undergraduate years. The award was established in 1984 to commemorate the contributions of Professor Ma to the UCSD Department of Physics and to the field of theoretical condensed matter physics.

John Holmes Malmberg Prize

The John Holmes Malmberg Prize is presented annually at commencement to a graduating physics student who is recognized for potential for a career in physics and a measure of experimental inquisitiveness. This prize was established in 1993 in memory of Professor Malmberg who pioneered the use of non-neutral plasmas for sophisticated tests of plasma equilibrium, wave,

and transport effects. He was an involved teacher of undergraduate and graduate students and was active in departmental and campus affairs.

Physics Major (B.S. Degree)

The physics major provides a core of basic education in several principle areas of physics, with sufficient flexibility to allow students to prepare either for graduate school or a career in industry. Since in preparing for either goal, more than the required core courses are necessary, it is important for students to meet with a physics department adviser in deciding a schedule.

In the junior year, the emphasis is on macroscopic physics; the two principal physics subjects are electromagnetism and mechanics. The mathematics and computer background required for the physics program is completed in this year.

In the senior year, a sequence of courses in quantum physics provides the student the modern view of atomic and some aspects of subatomic physics and the principal analytical methods appropriate in this domain. The relation of the microscopic to the macroscopic world is the subject of courses in thermodynamics and statistical physics, with illustrations drawn from gas dynamics and solid-state physics. Upper-division laboratories teach students the essentials of physical measurement and building advanced equipment, as well as other aspects of experimental science.

The following courses are required for the physics major:

Lower-Division

1. Physics 4A-B-C-D-E or Physics 2A-B-C-D[1]
2. Physics 2CL and 2DL
3. Chemistry 6A or[2] a programming course such as MAE 9 or MAE 10
4. Mathematics 20C-D-E-F

[1] The Physics 4 series is recommended, but the Physics 2 sequence is acceptable by petition, in which case both

[2] Chemistry 6A and a programming course are required

Upper-Division

1. Physics 100A-B, 105A, 110A, 120A, 130A-B, 140A, and an additional laboratory course from the lab group: 120B, 121, 133, 173
2. Two courses from either the theoretical or experimental pre-grad-school sequence

   Theoretical pre-grad-school sequence: Phys. 100C, 105B, 110B, 130C, 140B

   Experimental pre-grad-school sequence: Phys. 100C, 110B, 120B, 130C, 140B
3. Restricted electives: Three upper-division (four-unit) or graduate courses in physics or mathematics (only one). Courses in other science disciplines may be substituted by petition.

For students wishing to prepare for graduate school it is important that all courses in either the theorist or experimentalist pre-grad-school sequence be taken. Mathematics 120A is also recommended.

Suggested Schedule (pre-graduate-school)

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys. 100A	Phys. 100B	Phys. 120A
Phys. 105A	Phys. elective[3]	Phys. 130A
Phys. 110A	Phys. 105B[2]	
SENIOR YEAR		
Phys. 140A	Phys. 140B[2]	Phys. lab[1]
Phys. 130B	Phys. elective[3]	Phys. elective[3]

[1] Any course from lab group listed above

[2] Any two courses from theoretical or experimental pre-grad-school sequence listed above

[3] Any restricted elective as described above

Suggested Schedule (career in industry)

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys. 100A	Phys. 100B	[pre-grad][4]
Phys. 105A	Phys. elective[3]	Phys. 120A
Phys. 110A	[other][5]	Phys. 130A
SENIOR YEAR		
Phys. 140A	[pre-grad][4]	Phys. elective[3]
Phys. lab[2]	Phys. elective[3]	[other][5]
Phys. 130B	[other][5]	

[2] Any course from lab group listed above

[3] Any restricted elective as described above

[4] any course from either pre-grad-school sequence listed above

[5] any other course as approved by adviser (optional)

Physics Major with Specialization in Astrophysics (B.S. Degree)

The astrophysics specialization is appropriate for students who would like to gain an in-depth understanding of modern astronomy and astrophysics, and/or who wish to prepare for graduate school in astronomy or astrophysics. It is similar to the standard physics major with electives being chosen from astronomically oriented courses. A wide variety of technical, academic, and professional careers are possible for students who choose this specialization.

The following courses are required for the physics major with specialization in astrophysics:

Lower-Division

1. Physics 4A-B-C-D-E or Physics 2A-B-C-D[1]
2. Physics 2CL and 2DL
3. Chemistry 6A or[2] a programming course such as MAE 9 or MAE 10
4. Mathematics 20C-D-E-F

[1] The Physics 4 series is recommended, but the Physics 2 sequence is acceptable, in which case both

[2] Chemistry 6A and a programming course are required.

Upper-Division

1. Physics 100A-B, 105A, 110A, 120A, 130A-B, 140A and an additional laboratory course from the lab group: 120B, 121, 133.
2. Two courses from either the theoretical or experimental pre-grad-school sequence.
3. It is recommended that students take the three quarter astrophysics sequence—Physics 160, 161, 162—but any three courses selected from the following list are acceptable:

   Physics 160. Stellar Astrophysics

   Physics 161. Compact Objects and the Milky Way

   Physics 162, Galaxies and Cosmology

   Physics 163, Solar System

   ECE 120, Solar System Physics

   Chem. 170, Cosmochemistry

   Erth. 130, Geodynamics of Terr. Planets

   MAE 180A, Space Science and Engineering 180 A/B

   Physics 223, Stellar Structure and Evolution; with consent of Instructor

   Physics 224, Interstellar Medium; with consent of Instructor

   Physics 226, Galaxies & Galactic Dynamics; with consent of Instructor

   Physics 227, Cosmology; with consent of Instructor

   Physics 228, High Energy and Compact Objects; with consent of Instructor

   Theoretical pre-grad-school sequence: Phys. 100C, 105B, 110B, 130C, 140B

   Experimental pre-grad-school sequence: Phys. 100C, 110B, 120B, 130C, 140B

Example Schedule

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys 100A	Phys 100B	Phys 120A
Phys 105A	Phys 105B[1]	Phys 130A
Phys 110A		
SENIOR YEAR		
Phys 140A	Phys 140B	Physics Lab[2]
Phys 160	Phys 161	Phys 162
Phys 130B		

[1] Experimentalists may replace 105B with an additional lab.

[2] Any course from lab group listed above

Physics Major with Specialization in Biophysics (B.S. Degree)

The Department of Physics offers an undergraduate program that prepares students for careers in biophysics. This program leads to a degree in "B.S., Physics with Specialization in Biophysics." As a terminal degree, it is an excellent education for students who wish to work in the biotechnology industry, and provides an ideal background for students who plan to attend graduate or professional school in biological or biomedical fields.

This program is intended for students with a strong interest in bringing the concepts and technical advances from the physical sciences to bear on issues in biology. The curriculum is chosen to prepare students as rigorously trained but broad-minded generalists, so that they may attack problems in the biological, biochemical, and biomedical sciences with the tools and confidence that come from rigorous training in the physical sciences.

The curriculum for Physics Major with Specialization in Biophysics is designed to allow premedical students to complete all necessary courses for admission to medical schools.

The lower-division program for physics majors with specialization in biophysics includes basic courses in biology and chemistry as well as physics. Although the sequence Physics 4A through 4E is strongly recommended, students have the choice of petitioning the department to substitute the sequence Physics 2A through 2D.

The following courses are required for the physics major with specialization in biophysics:

Lower-Division

1. Physics 4A-B-C-D-E and 2CL-DL; or Physics 2A-B-C-D and 2CL-DL (Physics 4 sequence is strongly recommended)
2. Chemistry 6A-B-C and 6BL
3. Biology, BILD 1 and BILD 2
4. Mathematics 20A-B-C-D-E-F

The upper-division program includes advanced courses in physics, including two core lecture courses and one core laboratory course in biophysics, as well as organic chemistry.

Upper-Division

1. Physics 100A, 105A, 110A, 120A, 130A, 140A, 171, 172, 173
2. Chemistry 140A

Additional electives, to achieve a count of twelve upper-division courses in the major, may be selected from biology, chemistry and physics. Three additional upper-division courses, in any subject, are required in order to satisfy UCSD requirements.

Premedical students will need to take two additional quarters of organic chemistry (Chemistry 140B and 140C), one quarter of organic chemistry laboratory (Chemistry 143A), and one quarter of an upper level biology course. In addition, some medical schools also require a quarter of biochemistry (Biology BIBC 100 or Chemistry 114A). The premedical requirements may be used to satisfy elective requirements for upper-division courses.

As a guide to prospective students, we consider a schedule of required classes for a Muir College student.

Suggested Schedule

B.S. in Physics with Specialization in Computational Physics

The computational physics specialization is designed to support a broad range of career development tracks, so students may pursue (1) a terminal B.S. degree for gainful employment in information technology and high-tech industry, (2) preparation for graduate studies in computational science with an M.S. degree, and (3) graduate work in physics with strong interest in computational physics. This flexibility is afforded by a wide array of restricted electives which allows students to design much of their own program (subject to adviser's approval) while simultaneously maintaining the essential physics-based curriculum. Academic advising will be provided by physics faculty in the Computational Physics Specialization Program to assist students in designing their optimal career development track in the flexible curriculum.

The following courses are required for Physics Major with Specialization in Computational Physics:

Lower-Division

1. Physics 4A-B-C-D-E or Physics 2A-B-C-D[1], Physics 2CL-DL
2. Mathematics 20C-F
3. Chemistry 6A
4. MAE 9, or MAE 10, or CSE 11[2]

[1] The 2A-B-C-D sequence is an allowed substitute by petition.

[2] Electing CSE 11, student is still required to have C or Fortran based programming skills equivalent to MAE 9, or MAE 10.

Upper-Division

1. Physics 100A-B, 105A-B, 110A, 120A, 121, 130A-B, 140A, 141, 142
2. Six restricted electives from following groups:

   Physics 100C, 110B, 120B, 130C, 140B, 173, other upper-division Physics courses, Mathematics 132A-B, 170A-C, 172, 173, 183 CSE 12, 30, 80

   Substitute Upper-Division courses[3]

Suggested Schedule (restricted electives not shown)

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys. 100A	Phys. 100B	Phys. 120A
Phys. 105A	Phys. 105B	Phys. 130A
Phys. 110A		
SENIOR YEAR		
Phys. 140A	Phys. 141	Phys. 142
Phys. 130B	Phys. 121	

[2] Students will choose two required courses from the group Phys. 121, Phys. 141, Phys. 142, and either will drop the third, or take it as one of the six restricted electives

[3] Substitute elective courses (upper-division science, mathematics, engineering, or other) require adviser's approval

Career Track Examples with Restricted Electives

The program of electives is intended to be flexible, and can be tailored to the student's needs and interests in consultation with the academic adviser.

Grad. School Theorist with Computational Interest Track for student with interest in theoretical physics based computational science:

Physics 100C, 110B, 130C, 140B
Mathematics 132A-B

Grad. School Experimentalist with Computational Interest Track for students with interest in experimental physics based computational science:

Physics 100C, 120B, 142
Mathematics 183
CSE 80

Information Technology Track for student with interest in physics based software oriented applications:

Physics 100C, 140B
CSE 12, 30, 80
Mathematics 173

Numerical Science/Engineering Application Developer Track for students with interest in physics and engineering applications of numerical algorithms:

Physics 100C, 140B
Mathematics 170A-C, 172

High Tech Instrumentation Track for students with interest in physics based instrumentation:

Physics 100C, 120B, 140B
Mathematics 183
CSE 12, 80

Physics Major with Specialization in Earth Sciences (B.S. Degree)

The upper-division program for physics majors with specialization in earth sciences is essentially the same as the standard physics major augmented by courses in earth sciences.

Students may wish to incorporate a small portion of the major program into their lower-division studies, for example, Earth Sciences 101.

The following courses are required for the physics major with specialization in earth sciences:

Lower-Division

1. Physics 4A-B-C-D-E and 2CL-DL; or Physics 2A-B-C-D and 2CL-DL (Physics 4 sequence is strongly recommended)
2. Chemistry 6A-B and 6BL
3. Mathematics 20C-F

Upper-Division

1. Physics 100A-B, 105A, 110A-B, 120A, 130A, 140A, plus one upper-division lab*
2. Earth Sciences 101, 102, 103, 120
3. Restricted Electives: three upper-division earth science (four-unit) or graduate courses to be chosen with the approval of the SIO earth sciences adviser
4. Two courses from either the theoretical or experimental pre-grad school sequence.

* Another lab course chosen from Physics 120B, 121, 133, or 173.

Suggested Schedule

Physics Major with Specialization in Materials Physics (B.S. Degree)

The materials physics specialization is designed to support a broad range of options, so students may pursue (1) a terminal B.S. degree, or preparation for (2) graduate work in materials science, or (3) graduate work in physics. This flexibility is afforded by a wide range of restricted electives which allows students to design much of their own program while simultaneously maintaining the essential physics-based curriculum. Academic advising will be provided by the department to assist the student in navigating through the many options. The B.S. program also serves as the entry to the integrated five-year B.S./M.S. program.

Lower-Division

1. Physics 4A-B-C-D-E or Physics 2A-B-C-D, Physics 2CL-DL
2. Chemistry 6A-B*
3. Mathematics 20C-F
4. MAE 9 or MAE 10 (or equivalent programming experience)

Upper-Division

1. Physics 100A-B, 105A-B, 110A, 120A-B, 130A-B, 140A, 133, 152A-B
2. Four restricted electives, to be chosen from Chemistry 120A-B*; Mathematics 120A; ECE 103, 134, 135A-B, 136, 136L; MAE 160, 110A; or any upper division physics course

* Students who anticipate taking Chemistry 120A-B as an upper-division elective are strongly advised to take Chemistry 6C.

Suggested Schedule (restricted electives not shown)

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys. 100A	Phys. 100B	Phys. 120A
Phys. 105A	Phys. 105B	Phys. 130A

SENIOR YEAR		
Phys. 140A	Phys. 152A	Phys. 152B
Phys. 120B		Phys. 133
Phys. 130B		

Restricted Electives: Example

As examples of restricted electives, a student opting for a terminal B.S. degree (Option 1) might choose to take MAE 160, ECE 103, 136, and Physics 121. Students preparing for graduate work in materials science (Option 2) might consider MAE 160, ECE 103, 134, and a fourth elective. Students preparing for graduate work in physics (Option 3) might consider Physics 100C, 110B, 140B, and a fourth elective. The program of electives is intended to be flexible, and

can be tailored to the student's needs and interests in consultation with the academic adviser.

See entry for Integrated Bachelor's/Master's Degree Program in Materials Physics.

General Physics Major (B.A. Degree)

This program covers the essential topics in physics and provides a broadly based education in the natural sciences. Starting with lower-division courses in mathematics, physics, computing, biology and/or chemistry, students proceed to upper-division mechanics, electricity and magnetism, thermal physics, quantum physics, and a physical measurements laboratory course. In addition, students take sixteen units of upper-division elective courses in the natural sciences or mathematics.

While the B.A. program is suitable for students who pursue a terminal degree in physics or use it as a preparation for other professional careers, it is not intended for those who wish to proceed to the Ph.D. in physics. The latter should enroll in the B.S. program.

The following courses are required for the general physics major:

Lower-Division

1. Physics 2A-B-C-D and 2CL-DL
2. Mathematics 20C-F
3. Three restrictive elective courses in science and engineering (a list of acceptable courses is given below)

Upper-Division

1. Physics 100A-B, 105A, 110A-B, 120A, 130A, 140A or Chemistry 127 or 131
2. Restricted Electives: Sixteen units of upper-division courses in science and engineering (excluding mathematics)

Suggested Schedule

FALL	WINTER	SPRING

Chem. 127 or 131	Restr. Elec.	
Restr. Elec.		

Approved Lower-Division Elective Courses

One course in computing chosen from the following list:

MAE 10, FORTRAN for Engineers

MAE 03, Introduction to Engineering Graphics and Design

CSE 10, Introduction to Programming Techniques

CSE 30, Introduction to Systems Programming

Physics 105B, Mathematical and Computational Physics

Plus **two** of the following courses:

BILD 1, The Cell

BILD 2, Multicellular Life

BILD 3, Organismic and Evolutionary Biology

Chem. 6A, General Chemistry

Chem. 6B, General Chemistry

Chem. 6C, General Chemistry

Chem. 6BL plus 6CL, General Chemistry Lab plus Intro. Analytical Chemistry

General Physics/Secondary Education Major (B.A. Degree)

This program is intended for students preparing for a career as a physics teacher in secondary schools. It covers the essential topics in physics and provides a broadly based education in the natural sciences. The program includes three courses in general chemistry plus a lab, one course in organic chemistry plus a lab, and a course in earth science as required by the Single Subject Credential Program of the state of California. It also includes three courses in Practicum in Learning offered by the Teacher Education Program. This degree is particularly suitable for students pursuing a Single Subject (Physics) credential for high schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program (TEP) for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career.

The following courses are required for the general physics/secondary education major:

Lower-Division

1. Physics 2A-B-C-D and 2CL-DL
2. Chemistry 6A-B-C and 6BL
3. Earth Sciences 10, 12, or 30
4. Mathematics 20C-F

Upper-Division

1. Physics 100A-B, 105A, 110A-B, 120A, 130A
2. Chemistry 140A and 143A
3. Earth Sciences 101
4. TEP 129A-B-C

Suggested Schedule

FALL	WINTER	SPRING
JUNIOR YEAR		
Phys. 100A	Phys. 100B	Phys. 130A

SENIOR YEAR		
Earth Sci. 101	TEP 129B	TEP 129C
TEP 129A		

Engineering Physics Program

The engineering physics program is offered jointly by the Departments of Physics, MAE, and ECE, and is administered by the Department of ECE. (See "ECE, Engineering Physics Program.") Transfer students who have had prior course work in the major at other institutions must consult with the Department of Physics, Student Affairs Office, 1110-115 Urey Hall Addition to make an appointment to see a faculty adviser.

Minor in Physics

Students may arrange minor programs or programs of concentration in physics by consulting with the Department of Physics Student Affairs Office, 1110-115 Urey Hall Addition, and their college for specific requirements. The Department of Physics requires at least twenty-eight units, of which at least twenty units must be upper-division. All courses must be taken for a letter grade. Lower-division transfer courses are permitted.

Advising Office

All students are assigned an academic adviser. It is strongly recommended students see their adviser at least once a quarter.

Additional advising information may be obtained from the Department of Physics Student Affairs Office, 1110-115 Urey Hall Addition (858) 534-3290.

Honors Program

The Department of Physics offers an Honors Program for students who demonstrate excellence

in the major. Students interested in the Honors Program should consult the Student Affairs Office. Eligibility for the Honors Program includes completion of all required lower-division physics courses, ten upper-division physics courses, and a GPA of a least 3.50 in the physics major.

The Honors Program consists of a minimum of eight units of Honors Thesis Research (Physics 199H), an Honors Thesis, and the presentation of the research to faculty and peers at UCSD's Undergraduate Research Conference or an Undergraduate Seminar. Admission to the Honors Program is contingent upon the prior approval of the Honors Thesis "research topic" by the Vice Chair for Education.

Integrated Bachelor's/Master's Degree Program in Materials Physics

The program offers a M.S. in physics with specialization in materials physics. **It is open only to UCSD undergraduates, and is a Plan I program only (thesis).** During the fourth quarter prior to receipt of the B.S. degree, students enrolled in the B.S. degree program with specialization in materials physics (see above) may apply for admission to the M.S. program. To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and have a GPA of at least 3.0 in both their major and overall undergraduate curriculum. It is strongly recommended that B.S. students who intend to apply to the M.S. program take MAE 160, ECE 103, and ECE 134 as restricted B.S. electives. It is the responsibility of the prospective B.S./M.S. student to select a faculty member (from the Department of Physics or, with physics department approval, from the MAE, ECE, or chemistry departments) who would be willing to serve as the student's adviser and with whom the student would complete at least twelve units of S/U graded research, which could commence as early as the undergraduate senior year. (Taken during the senior year, the units would count only toward the M.S. degree and not toward the B.S.) The student must confirm that the selected faculty adviser will not be on off-campus sabbatical leave during any quarter of the scheduled B.S./M.S. project. Students are expected to meet the requirements for the M.S. degree in one year (three consecutive, contiguous academic quarters) from the date of receipt of the B.S. degree. Any deviation from this plan, such as a break in enrollment for one or more quarters, may result in the student being dropped from the program.

The requirements for the M.S. degree are as follows:

1. Completion of at least twelve and no more than twenty-four units of research, which *may* begin as early as the first quarter of the senior undergraduate year.
2. Completion of three required courses during the fifth (graduate) year (MAT SCI 201A-B-C), and two restricted electives (see below).
3. Completion of restricted elective courses so that the total number of units (research plus required courses plus elective courses) totals no less than 36 units taken as a graduate student. Students accumulate units for their research by enrolling in Physics 295 (M.S. Thesis Research), which may be taken repeatedly.
4. Maintenance of a grade-point average of at least 3.0 for all course work, both cumulatively and for each quarter of enrollment in the B.S./M.S. program.
5. Completion of a thesis, with an oral presentation to, and approval of, a three-member committee from the Department of Physics including the faculty adviser. If the faculty adviser is from outside the physics department, the committee shall consist of the adviser and two members from the physics department faculty.
6. Three complete, separate, and consecutive quarters of full-time residency as a graduate student which will commence the quarter immediately following the quarter in which the B.S. degree is awarded (not counting summer session).
7. Although students may receive research or teaching assistantships if available from their adviser or through the Department of Physics, there is no guarantee of financial support associated with the M.S. program.
8. M.S. candidates will be permitted to serve as teaching assistants, although teaching will not be a requirement for the degree. Students who obtain a teaching assistantship should make sure that it does not interfere with completion of the M.S. degree requirements within the one year time frame allotted.

M.S. Program: Fifth Year Curriculum

1. MAT SCI 201A-B-C
2. Physics 295 (M.S. Thesis Research)
3. Two restricted electives, to be chosen from Physics 201, 211A-B; MAT SCI 227, 240A-B-C; ECE 231, 233: other courses allowed by petition

The Graduate Program

The Department of Physics offers curricula leading to the following degrees:

M.S., Physics
C.Phil., Physics
Ph.D., Physics
Ph.D., Physics (Biophysics)

Biophysics students will receive their M.S. and C.Phil. degrees in physics. Only their Ph.D. will be in physics (biophysics).

Entering graduate students are required to have a sound knowledge of undergraduate mechanics, electricity and magnetism; to have had senior courses or their equivalent in atomic and quantum physics, nuclear physics, and thermodynamics; and to have taken upper-division laboratory work. An introductory course in solid-state physics is desirable.

Requirements for the master of science degree can be met according to Plan II (comprehensive examination). (See "Graduate Studies: The Master's Degree.") The comprehensive examination is identical to the first-year departmental examination for Ph.D. students. A list of acceptable courses is available in the Department of Physics Graduate Student Affairs office. There is no foreign language requirement.

Doctoral Degree Program

The department has developed a flexible Ph.D. program which provides a broad, advanced education in physics while at the same time giving students opportunity for emphasizing their special interests. This program consists of graduate courses, apprenticeship in research, teaching experience, and thesis research.

Entering students are assigned a faculty adviser to guide them in their program. Many students spend their first year as teaching assistants or fellows and begin apprentice research in their second year. When a student's association with a research area and research supervisor is well established, a faculty research

progress committee is formed with the responsibility of conducting an annual review of progress and, at the appropriate time, initiating the formation of a doctoral committee. After three years of graduate study, or earlier, students complete the departmental examinations and begin thesis research. Students specializing in biophysics make up deficiencies in biology and chemistry during the first two years and complete the departmental examinations by the end of their third year of graduate study. There is no foreign language requirement.

Entrance Testing

An entrance test covering undergraduate physics is given to entering students during the first week of orientation to give better guidance to students in their graduate program. The results are not entered in the student's file. Entering students are encouraged, but not obliged, to bring the results to the first meeting with their academic adviser. Entering students may elect to take the departmental examination instead of taking the entrance test.

Requirements for the Ph.D.

Students are required to pass a departmental examination, advanced graduate courses, a qualifying examination, teaching requirement and a final defense of the thesis as described below.

1. DEPARTMENTAL EXAMINATION

Physics students are required to take the departmental examination after completing one year of graduate work at UCSD. The examination is on the level of material usually covered in upper-division courses and the graduate courses listed below:

Fall

Physics 200A (Theoretical Mechanics)
Physics 201 (Mathematical Physics)
Physics 212A (Quantum Mechanics)

Winter

Physics 200B (Theoretical Mechanics)
Physics 203A (Adv. Classical Electrodynamics)
Physics 212B (Quantum Mechanics)

Spring

Physics 203B (Adv. Classical Electrodynamics)
Physics 210A (Equilibrium Statistical Mechanics)
Physics 212C (Quantum Mechanics)

The examination is offered twice a year, at the beginning of the fall and spring quarters, and lasts two days, four hours per day. The examination may be repeated once, the next time it is offered.

Biophysics students take the departmental examination after completing two years of graduate work.

2. ADVANCED GRADUATE COURSES

Physics students are required to take five advanced graduate courses (with a grade of C or better) from at least three of the groups listed below no later than the end of the third year of graduate work. A 3.0 average in four of the five courses is required. (In lieu of the course requirement, students may petition to take an oral examination covering three areas of physics.)

Group 1: Physics 218A-B-C (Plasma); 234 (Nonneutral Plas.); 235 (Nonlin. Plas. Th.)

Group 2: Physics 210B (Nonequil. Stat. Mech.); 210C, 211A, 211B (Solid State); 219 (C.M./Matl. Sci. Lab), 230 (Adv. Solid State); 232 (Electronic Materials); 236 (Many-body Th.)

Group 3: Physics 214 (Elem. Part.); 215A-B-C (Part. & Fields); 217 (Renorm. Field Th.); 222 (Exp. Tech. Part. Phys.)

Group 4: Physics 220 (Group Th.); 221A, 221B (Nonlinear Dyn.); Physics 241 and 242 (Comp. Phys); Mathematics 210A-B, 210C (Mathematics Physics); Mathematics 259A-B-C (Geom. Physics)

Group 5: Physics 206 (BioPhysics); Physics 207 (X-ray Crystallography); 225A-B (Relativ.); 271 (Bio. Neurons/Net); 272 (Bio. Molecules)

Group 6: Physics 223 (Stel. Str.); 224 (Intrstel. Med.); 226 (Gal. & Gal. Dyn.); 227 (Cosmology), 228 (HE Astro. & Comp. Obj.)

Biophysics students select five courses from biology, biochemistry, chemistry, or physics in consultation with their adviser. At least three courses must be graduate courses.

3. QUALIFYING EXAMINATION AND ADVANCEMENT TO CANDIDACY

In order to be advanced to candidacy, students must have met the departmental requirements and obtained a faculty research supervisor. At the time of application for advancement to candidacy, a doctoral committee responsible for the remainder of the student's graduate program is appointed by the Graduate Council. The committee conducts the Ph.D. qualifying examination during which students must demonstrate the ability to engage in thesis research. Usually this involves the presentation of a plan for the thesis research project. The committee may ask questions directly or indirectly related to the project and questions on general physics which it determines to be relevant. Upon successful completion of this examination, students are advanced to candidacy and are awarded the Candidate of Philosophy degree.

4. INSTRUCTION IN PHYSICS TEACHING

All graduate students are required to participate in the physics undergraduate teaching program as part of their career training. The main component of this requirement is an evaluated classroom-based teaching activity. All graduate student teaching accomplishments are subject to the approval of the vice chair for education. There are several ways to satisfying the teaching requirement, including: (1) leading discussions as a teaching assistant, (2) practical classroom teaching, under faculty supervision, (3) participation in an approved teaching development program offered by the Department of Physics or the campus Center for Teaching Development, or (4) transferred teaching credit from another institution or department. Students who satisfy the requirement by teaching at UCSD should enroll in Physics 500 during the quarter in which they complete it.

5. THESIS DEFENSE

When students have completed their theses, they are asked to present and defend them before their doctoral committees.

TIME LIMITS FOR PROGRESS TO THE PH.D.

In accordance with university policy, the Department of Physics has established the following time limits for progress to the Ph.D. A student's research progress committee helps ensure that these time limits are met.

	Theorists	Experimentalists
Advancement to Candidacy	4 years	5 years
Total Registered Time and Support	7 years	8 years

Departmental Colloquium

The department offers a weekly colloquium on topics of current interest in physics and on departmental research programs. Students are expected to register and attend the colloquium.

Supplementary Course Work and Seminars

The department offers regular seminars in several areas of current interest. Students are strongly urged to enroll for credit in seminars related to their research interests and, when appropriate, to enroll in advanced graduate courses beyond the departmental requirement. To help beginning students choose a research area and a research supervisor, the department offers a special seminar (Physics 261) that surveys physics research at UCSD.

Course Credit by Examination

Students have an option of obtaining credit for a physics graduate course by taking the final examination without participating in any class exercises. They must, however, officially register for the course and notify the instructor and the Department of Physics graduate student affairs office of their intention no later than the first week of the course.

COURSES

LOWER-DIVISION

The Physics 1 sequence is primarily intended for biology.

The Physics 2 sequence is intended for physical science and engineering majors and those biological science majors with strong mathematical aptitude.

The Physics 4 sequence is intended for all physics majors and for students with an interest in physics. This five-quarter sequence covers the same topics as the Physics 2 sequence, but it covers these topics more slowly and in more depth. The Physics 4 sequence provides a solid foundation for the upper-division courses required for the physics major.

Note: Since some of the material is duplicated in the Physics 1, 2 and 4 sequences, credit cannot be obtained for both. Please check with the Physics Student Affairs Office when switching sequences. (Example: Physics 1A followed by Physics 2A, no credit for Physics 2A.)

Physics 5, 6, 7, 8, 9, 10, 11, and 12 are intended for non-science majors. Physics 5, 6, 7, 8, 9, 10, and 12 do not use calculus while Physics 11 uses some calculus.

1A. Mechanics (3)
First quarter of a three-quarter introductory physics course, geared towards life-science majors. Equilibrium and motion of particles in Newtonian mechanics, examples from astronomy, biology and sports, oscillations and waves, vibrating strings and sound. *Prerequisites: Mathematics 10A or 20A, prior or concurrent enrollment in Mathematics 10B or 20B, concurrent enrollment in Physics 1AL laboratory.* (F,W,S)

1AL. Mechanics Laboratory (2)
Physics laboratory course to accompany Physics 1A. Experiments in mechanics. *Prerequisite: concurrent enrollment in Physics 1A.* (F,W,S)

1B. Electricity and Magnetism (3)
Second quarter of a three-quarter introductory physics course geared toward life-science majors. Electric fields, magnetic fields, DC and AC circuitry. *Prerequisites: Physics 1A, 1AL and prior or concurrent enrollment in Mathematics 10C-D or 20C. Concurrent enrollment in Physics 1BL.* (F,W,S)

1BL. Electricity and Magnetism Laboratory (2)
Physics laboratory course to accompany Physics 1B. Experiments in electricity and magnetism. Course materials fee is required. *Prerequisite: concurrent enrollment in Physics 1B.* (F, W, S)

1C. Diffusion, Radiation, and Modern Physics (Lecture and Laboratory) (5)
Third quarter of a three-quarter calculus-based lecture and laboratory introductory physics course geared toward life-science majors. Behavior of systems under combined thermal and electric forces, the interaction of light with matter as illustrated through optics and quantum mechanics. Examples from biology and instrumentation. *Prerequisites: Physics 1B and Mathematics 10C or Mathematics 10D or 20C.* (F,W,S) (Course materials fee is required.) (Not offered after fall 2004)

1C. Waves, Optics, and Modern Physics (3)
Third quarter of a three-quarter introductory physics course geared toward life-science majors. Behavior of systems under combined thermal and electric forces, the interaction of light with matter as illustrated through optics and quantum mechanics. Examples from biology and instrumentation. (First offered winter 2005) *Prerequisites: Physics 1B, 1BL, Mathemat-ics 10C or 10D or 20C. Concurrent enrollment in Physics 1CL.* (F, W, S)

1CL. Waves, Optics, and Modern Physics Laboratory (2)
Physics laboratory course to accompany Physics 1C. Experiments in waves, optics, and modern physics. Course materials fee is required. First offered in winter 2005. *Prerequisite: concurrent enrollment in Physics 1C.* (F, W, S)

2A. Physics–Mechanics (4)
A calculus-based science-engineering general physics course covering vectors, motion in one and two dimensions, Newton's first and second laws, work and energy, conservation of energy, linear momentum, collisions, rotational kinematics, rotational dynamics, equilibrium of rigid bodies, oscillations, gravitation. *Prerequisites: Mathematics 20A, and concurrent enrollment in Mathematics 20B.* (F,W,S)

2B. Physics–Electricity and Magnetism (4)
Continuation of Physics 2A covering charge and matter, the electric field, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, electromotive force and circuits, the magnetic field, Ampere's law, Faraday's law, inductance, electromagnetic oscillations, alternating currents and Maxwell's equations. *Prerequisites: Physics 2A, Mathematics 20B, and concurrent enrollment in Mathematics 20C.* (F,W,S)

2BL. Physics Laboratory–Mechanics and Electrostatics (2)
One hour lecture and three hours' laboratory. Experiments include gravitational force, linear and rotational motion, conservation of energy and momentum, collisions, oscillations and springs, gyroscopes. Experiments on electrostatics involve charge, electric field, potential, and capacitance. Data reduction and error analysis are required for written laboratory reports. *Prerequisite: concurrent enrollment in Physics 2B or 4C.* (F,W,S) Course materials fee is required.

2C. Physics–Fluids, Waves, Thermodynamics, and Optics (4)
Continuation of Physics 2B covering fluid mechanics, waves in elastic media, sound waves, temperature, heat and the first law of thermodynamics, kinetic theory of gases, entropy and the second law of thermodynamics, Maxwell's equations, electromagnetic waves, geometric optics, interference and diffraction. *Prerequisites: Physics 2B, Mathematics 20C, and concurrent enrollment in Mathematics 20D.* (F,W,S)

2CL. Physics Laboratory–Electricity and Magnetism, Waves, and Optics (2)
One hour lecture and three hours' laboratory. Experiments on refraction, interference/diffraction using lasers and microwaves; lenses and the eye; acoustics; oscilloscope and L-R-C circuits; oscillations, resonance and damping, measurement of magnetic fields; and the mechanical equivalence of heat. *Prerequisites: prior or concurrent enrollment in Physics 1C, 2C, or 4D.* (F,W,S) Course materials fee is required.

2D. Physics–Relativity and Quantum Physics (4)
A modern physics course covering atomic view of matter, electricity and radiation, atomic models of Rutherford and Bohr, relativity, X-rays, wave and particle duality, matter waves, Schrπdinger's equation, atomic view of solids, natural radioactivity. *Prerequisites: Physics 2B and Mathematics 20D.* (F,W,S)

2DL. Physics Laboratory–Modern Physics (2)
One hour of lecture and three hours of laboratory. Experiments to be chosen from refraction, diffraction and interference of microwaves, Hall effect, thermal band gap, optical spectra, coherence of light, photoelectric effect, e/m ratio of particles, radioactive decays, and plasma physics. *Prerequisites: 2BL or 2CL, prior or concurrent enrollment in Physics 2D or 4E.* (S) Course materials fee is required.

4A. Physics for Physics Majors–Mechanics (4)
The first quarter of a five-quarter calculus-based physics sequence for physics majors and students with a serious interest in physics. The topics covered are vectors, particle kinematics and dynamics, work and energy, conservation of energy, conservation of momentum, collisions, rotational kinematics and dynamics, equilibrium of rigid bodies. *Prerequisites: Mathematics 20A and concurrent enrollment in Mathematics 20B.* (W)

4B. Physics for Physics Majors–Mechanics, Fluids, Waves, and Heat (4)
Continuation of Physics 4A covering oscillations, gravity, fluid statics and dynamics, waves in elastic media, sound waves, heat and the first law of thermodynamics, kinetic theory of gases, second law of thermodynamics, gaseous mixtures and chemical reactions. *Prerequisites: Physics 4A, Mathematics 20B and concurrent enrollment in Mathematics 20C.* (S)

4C. Physics for Physics Majors–Electricity and Magnetism (4)
Continuation of Physics 4B covering charge and Coulomb's law, electric field, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, magnetic field, Ampere's law, Faraday's law, inductance, magnetic properties of matter, LRC circuits, Maxwell's equations. *Prerequisites: Physics 4B, Mathematics 20C and concurrent enrollment in Mathematics 20E.* (F)

4D. Physics for Physics Majors–Electromagnetic Waves, Optics, and Special Relativity (4)
Continuation of Physics 4C covering electromagnetic waves and the nature of light, cavities and wave guides, electromagnetic radiation, reflection and refraction with applications to geometrical optics, interference, diffraction, holography, special relativity. *Prerequisites: Physics 4C, Mathematics 20D and concurrent enrollment in Mathematics 20F.* (W)

4E. Physics for Physics Majors–Quantum Physics (4)
Continuation of Physics 4D covering experimental basis of quantum mechanics: Schrödinger equation and simple applications; spin; structure of atoms and molecules; selected topics from solid state, nuclear, and elementary particle physics. *Prerequisites: Physics 4D, Mathematics 20E, and concurrent enrollment in Mathematics 20D.* (S)

5. The Universe (4)
Introduction to astronomy. Topics include the earth's place in the universe; the atom and light; the birth, life, and death of stars; the Milky Way galaxy; normal and active galaxies; and cosmology. Physics 5 or 7, and Earth Sciences 10 and 30 form a three-quarter sequence. Students may not receive credit for both Physics 5 and Physics 7. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (F,S)

6. Physics of Space Science and Exploration (4)
Descriptive introduction to basic physics concepts relevant to space science and exploration. Topics include gravity; orbits, weightlessness, and Kepler's laws; the Earth's physical environment (including its atmosphere, its magnetic field, and radiation from the sun); and light as an electromagnetic wave. These topics form the basis for an introduction to the space program and discussion of the scientific reasons for performing experiments or observations in space. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W) (Not offered in 2004–2005.)

7. Introductory Astronomy (4)
Introduction to astronomy and astrophysics. Topics same as Physics 5. This course uses basic pre-calculus level mathematics (algebra, proportions, logs, similar triangles). Physics 5 or 7 and Earth Sciences 10 and 30 form a three-quarter sequence. Students may not receive credit for both Physics 5 and Physics 7. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W)

8. Physics of Everyday Life (4)
Examines phenomena and technology encountered in daily life from a physics perspective. Topics include waves, musical instruments, telecommunication, sports, appliances, transportation, computers, and energy sources. Physics concepts will be introduced and discussed as needed employing some algebra. No prior physics knowledge is required. Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (S)

9. The Solar System (4)
A non-mathematical exploration of our Solar System and other planetary systems for non-science majors. The sun, terrestrial and giant planets, satellites, asteroids, comets and meteors. The formation of planetary systems, space exploration, the development and search for life. (F)

10. Concepts in Physics (4)
This is a one-quarter general physics course for non-science majors. Topics covered are motion, energy, heat, waves, electric current, radiation, light, atoms and molecules, nuclear fission and fusion. This course emphasizes concepts with minimal mathematical formulation. *Prerequisite: college algebra or equivalent.* Restricted to P/NP grading option if taken after Physics 1A, 2A, or 4A. (W)

11. Survey of Physics (4)
Survey of physics for non-science majors with strong mathematical background, including calculus. Physics 11 describes the laws of motion, gravity, energy, momentum, and relativity. A laboratory component consists of two experiments with gravity and conservation principles. *Prerequisites: Mathematics 10A or 20A and concurrent enrollment in Math 10B or 20B.* (F)

12. Energy and the Environment (4)
A course covering energy fundamentals, energy use in an industrial society and the impact of large-scale energy consumption. It addresses topics on fossil fuel, heat engines, solar energy, nuclear energy, energy conservation, transportation, air pollution and global effects. Concepts and quantitative analysis. (S)

87. Freshman Seminar in Physics and Astrophysics (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

90. Undergraduate Seminar–Physics Today (1)
Undergraduate seminars organized around the research interests of various faculty members. *Prerequisite: none.* (F,W,S)

91. Undergraduate Seminar on Physics (1)
Undergraduate seminars organized around the research interests of various faculty members. (F,W,S)

99. Independent Study (2)
Independent reading or research on a topic by special arrangement with a faculty member. *(P/NP grading only.) Prerequisites: lower-division standing. Completion of thirty units at UCSD undergraduate study, a minimum UCSD GPA of 3.0, and a completed and approved "Special Studies" form. Department stamp required.*

UPPER-DIVISION

100A. Electromagnetism (4)
Coulomb's law, electric fields, electrostatics; conductors and dielectrics; steady currents, elements of circuit theory. Four hours lecture. *Prerequisites: Physics 2C or 4D, Mathematics 20D; 20E, 20F.* (Concurrent enrollment in Math. 20F permitted.) (F)

100B. Electromagnetism (4)
Magnetic fields and magnetostatics, magnetic materials, induction, AC circuits, displacement currents; development of Maxwell's equations. Four hours lecture. *Prerequisite: Physics 100A.* (W)

100C. Electromagnetism (4)
Electromagnetic waves, radiation theory; application to optics; motion of charged particles in electromagnetic fields; relation of electromagnetism to relativistic concepts. Four hours lecture. *Prerequisite: Physics 100B.* (S)

105A. Mathematical and Computational Physics (4)
A combined analytic and mathematica-based numerical approach to the solution of common applied mathematics problems in physics and engineering. Topics: Fourier series and integrals, special functions, initial and boundary value problems, Green's functions; heat, Laplace and wave equations. *Prerequisites: Mathematics 20E and 20F and Physics 4E or 2D.* (F)

105B. Mathematical and Computational Physics (4)
A continuation of Physics 105A covering selected advanced topics in applied mathematical and numerical methods. Topics include statistics, diffusion and Monte-Carlo simulations; Laplace equation and numerical methods for nonseparable geometries; waves in inhomogeneous media, WKB analysis; nonlinear systems and chaos. *Prerequisite: Physics 105A.* (W)

107/207. Macromolecule Structure Determination by X-ray Crystallography (4)
This course will describe the different steps used in solving for a three dimensional structure of a macromolecule using X-ray crystallography. Topics covered: theory of X-ray diffraction by a crystal; X-ray sources & detectors; crystallization of a protein; crystal symmetry; solution of phase problem by the isomorphous replacement method; anomalous scattering; molecular replacement method; model building and phase improvement; structure refinement. *Prerequisites: Mathematics 20D and Physics 100A, or BIBC 100 or Chemistry 114A or consent of instructor.* (F) (Not offered in 2004–2005)

110A. Mechanics (4)
Coordinate transformations, review of Newtonian mechanics, linear oscillations, gravitation, calculus of variations, Hamilton's principle, Lagrangian dynamics, Hamilton's equations, central force motion. Four hours lecture. *Prerequisites: Physics 2C or 4D, Mathematics 20D, 20E, 20F (concurrent enrollment in Mathematics 20F permitted).* (F)

110B. Mechanics (4)
Noninertial reference systems, dynamics of rigid bodies, coupled oscillators, special relativity, continuous systems. *Prerequisites: Physics 110A and Mathematics 20E.* (W)

120A-B. Physical Measurements (4-4)
A laboratory-lecture course in physical measurements with an emphasis on electronic methods. Topics include circuit theory, special circuits. Fourier analysis, noise, transmission lines, transistor theory, amplifiers, feedback, operational amplifiers, oscillators, pulse circuits, digital electronics. Three hours lecture, four hours laboratory. *Prerequisites: Physics 2CL and 2DL, Physics 100A.* (S,F) Course materials fee is required.

121. Experimental Techniques (4)
A laboratory-lecture course on the performance of scientific experiments with an emphasis on the use of microcomputers for control and data handling. Topics include microcomputer-architecture, interfacing, and programming, digital to analog and analog to digital

conversion, asynchronous buses, interrupt and control techniques, transducers, actuators, digital signal processing–signal filtering, deconvolution, averaging and detection, construction techniques–soldering, parts selection, assembly methods, project management–planning, funding, scheduling, and utilization of personnel. Three hours lecture, four hours laboratory. *Prerequisite: Physics 120A or equivalent.* (W) Course materials fee is required.

122/222. Experimental Foundation of Particle Physics (4–4)
Modern experimental techniques in particle physics will be discussed. Experiments are selected which have provided (or will shortly provide) tests of the theory of elementary particles. Examples of topics for which experiments are discussed include neutral currents, discovery of the J/Psi and Upsilon particle, number of light neutrino species, neutrino mass, CP violation and Higgs Searches. *Prerequisite: Physics 130B or Physics 215B.* (Not offered in 2004–2005)

130A. Quantum Physics (4)
Phenomena which led to the development of quantum mechanics. Wave mechanics; the Schrπdinger equation, interpretation of the wave function, the uncertainty principle, piece-wise constant potentials, simple harmonic oscillator, central field and the hydrogen atom. Observables and measurements. Four hours lecture. *Prerequisites: Physics 2C or 2D, 4E, or equivalent.* (S)

130B. Quantum Physics (4)
Matrix mechanics, angular momentum and spin, Stern-Gerlach experiments, dynamics of two-state systems, approximation methods, the complete hydrogen spectrum, identical particles. Four hours lecture. *Prerequisite: Physics 130A.* (F)

130C. Quantum Physics (4)
Scattering theory, symmetry and conservation laws, systems of interacting particles, interaction of electromagnetic radiation with matter, Fermi golden rule, the relativistic electron. *Prerequisites: Physics 100C or equivalent, 130B.* (W)

133/219. Condensed Matter/Materials Science Laboratory (4)
A project-oriented laboratory course utilizing state-of-the-art experimental techniques in materials science. The course prepares students for research in a modern condensed matter-materials science laboratory. Under supervision, the students develop their own experimental ideas after investigating current research literature. With the use of sophisticated state-of- the-art instrumentation students conduct research, write a research paper, and make verbal presentations. *Prerequisites: Physics 2CL and 2DL for undergraduates; Physics 152A or Physics 211A for graduate students.* (S) Course materials fee is required.

137. String Theory (4)
Quantum mechanics and gravity. Electromagnetism from gravity and extra dimensions. Unification of forces. Quantum black holes. Properties of strings and branes. *Prerequisites: Physics 100A and 110A or consent of instructor, Physics 130A may be taken concurrently.* (S) (Not offered in 2004–2005.)

140A. Statistical and Thermal Physics (4)
Integrated treatment of thermodynamics and statistical mechanics; statistical treatment of entropy, review of elementary probability theory, canonical distribution, partition function, free energy, phase equilibrium, introduction to ideal quantum gases. *Prerequisites: Physics 130A, or consent of instructor.* (F)

140B. Statistical and Thermal Physics (4)
Applications of the theory of ideal quantum gases in condensed matter physics, nuclear physics and astrophysics; advanced thermodynamics, the third law, chemical equilibrium, low temperature physics; kinetic theory and transport in non-equilibrium systems; introduction to critical phenomena including mean field theory. *Prerequisites: Physics 140A, or consent of instructor.* (W)

141. Computational Physics I: Probabilistic Models and Simulations (4)
Project-based computational physics laboratory course with student's choice of Fortran90/95, or C/C++. Applications from materials science to the structure of the early universe are chosen from molecular dynamics, classical and quantum Monte Carlo methods, physical Langevin/Fokker-Planck processes, and other modern topics. *Prerequisite: upper-division standing or consent of instructor.*

142. Computational Physics II: PDE and Matrix Models (4)
Project-based computational physics laboratory course for modern physics and engineering problems with student's choice of Fortran90/95, or C/C++. Applications of finite element PDE models are chosen from quantum mechanics and nanodevices, fluid dynamics, electromagnetism, materials physics, and other modern topics. *Prerequisite: upper-division standing or consent of instructor.* (S)

151. Elementary Plasma Physics (4)
Particle motions, plasmas as fluids, waves, diffusion, equilibrium and stability, nonlinear effects, controlled fusion. Three hours lecture. *Prerequisites: Math 21D or consent of instructor. Physics 100 (B,C) or ECE 107 and Physics 110A are suggested.* Cross listed with MAE 117A. (S) (Not offered in 2004–2005.)

152A. Condensed Matter Physics (4)
Physics of the solid state. Binding mechanisms, crystal structures and symmetries, diffraction, reciprocal space, phonons, free and nearly free electron models, energy bands, solid state thermodynamics, kinetic theory and transport, semiconductors. *Prerequisites: Physics 130A or Chemistry 133, and Physics 140A.* (W)

152B. Electronic Materials (4)
Physics of electronic materials. Semiconductors: bands, donors and acceptors, devices. Metals: Fermi surface, screening, optical properties. Insulators: dia-/ferro-electrics, displacive transitions. Magnets: dia-/para-/ferro-/antiferro-magnetism, phase transitions, low temperature properties. Superconductors: pairing, Meissner effect, flux quantization, BCS theory. *Prerequisite: Physics 152A or consent of instructor.* (S)

154. Nuclear and Particle Physics (4)
The strong, electromagnetic and weak interactions of elementary particles at high energies. Symmetries and conservation laws. Introduction to the calculation of particle decay widths and scattering cross-sections using Feynman diagrams. Relativistic equations of motion, including the Dirac equation. *Prerequisites: Physics 130B.*

155. Nonlinear Dynamics (4)
Qualitative aspects of Hamiltonian and dissipative dynamical systems: stability of orbits, integrability of Hamiltonian systems, chaos and nonperiodic motion, transition to chaos. Examples to be drawn from mechanics, fluid mechanics, and related physical systems. Numerical work and graphical display and interpretation will be emphasized. Three hours lecture. *Prerequisites: Physics 100B and 110B.* (S)

160. Stellar Astrophysics (4)
Introduction to stellar astrophysics: observational properties of stars, solar physics, radiation and energy transport in stars, stellar spectroscopy, nuclear processes in stars, stellar structure and evolution, degenerate matter and compact stellar objects, supernovae and nucleosynthesis. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. *Prerequisite: Physics 2 or 4 sequence or equivalent.* (F)

161. Black Holes and The Milky Way Galaxy (4)
The structure and content of the Milky Way galaxy and the physics of black holes. Topics will be selected from: general relativity, theory and observation of black holes, galactic x-ray sources, galactic structure, physical processes in the interstellar medium, star formation. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. *Prerequisites: Physics 2 or 4 sequence or equivalent.* (W)

162. Galaxies and Cosmology (4)
The structure and properties of galaxies, galaxy dynamics and dark matter, the expanding universe, plus some of the following topics: the big bang, early universe, galaxy formation and evolution, large scale structure, active galaxies and quasars. Physics 160, 161, and 162 may be taken as a three-quarter sequence for students interested in pursuing graduate study in astrophysics or individually as topics of interest. *Prerequisites: Physics 2 or 4 sequence or equivalent.* (S)

163. Exploring the Solar System (4)
Topics will include: the early solar system, and planetary formation; an introduction to the Sun and planets; the solar wind and its interaction with planets; spacecraft instruments and observations; the search for life in the solar system; and the search for planets outside our solar system. *Prerequisites: Physics 2A-B or Physics 4A-4C.* (F)) (Not offered in 2004-2005)

171/271. Biophysics of Neurons and Networks (4-4)
Fundamental limits to measurements on nervous systems, the biophysics of excitable membranes and neurons, and the fundamentals of recurrent neuronal networks. The emphasis is on information processing by the nervous system through physical reasoning and mathematical anaylsis. Three hours lecture. The graduate version, Physics 271, will include a report at the level of a research proposal. *Prerequisites: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 140A, for graduate students, consent of instructor.* The graduate version, Physics 271, will include a report at the level of a research proposal. (F)

172/272. Biophysics of Molecules (4-4)
Physical concepts and techniques used to study the structure and function of biological molecules, the thermodynamics and kinetics of biological activity, and physical descriptions of biological processes. Examples from enzyme action, protein folding, photobiology, and molecular motors. Three hours lecture. *Prerequisites: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 130A; and graduate students, consent of instructor.* The graduate version, Physics 272, will include a report at the level of a research proposal. (W)

173. Modern Physics Laboratory: Biological and Quantum Physics (4)
A selection of experiments in contemporary physics and biophysics. Students select among pulsed NMR, Mossbauer, Zeeman effect, light scattering, holography, optical trapping, voltage clamp and genetic transcription of ion channels in oocytes, flourescent imaging, and flight control in flies. *Prerequisites: Physics 120A, BILD 1 and Chemistry 6BL.* (S)

180/280. Teaching and Learning Physics (4)
How people learn and understand key concepts in physics. Readings in physics, physics education research, and cognitive science. Field work teaching and evaluating pre-college and college students. Useful for students interested in teaching and learning physical sciences. *Prerequisites: Physics 1, 2, or 4 series, or consent of instructor.*

191. Undergraduate Seminar on Physics (1)
Undergraduate seminars organized around the research interests of various faculty members. *Prerequisite: Physics 2A or 4A series.*

195. Physics Instruction (2-4)
Students will be responsible for and teach a class section of a lower-division physics course. They will also attend a weekly meeting on teaching methods and materials conducted by the professor who supervises their teaching. (P/NP grades only.) *Prerequisite: consent of instructor.* (F,W,S)

197. Physics Internship (4)
An enrichment program which provides work experience with industry, government offices, etc., under the supervision of a faculty member and industrial supervisor. *Prerequisite: Completion of 90 units with 2.5 GPA and consent of faculty adviser.*

198. Directed Group Study (2 or 4)
Directed group study on a topic or in a field not included in the regular departmental curriculum. (P/NP grades only.) *Prerequisites: consent of instructor and departmental chair.* (F,W,S)

199. Research for Undergraduates (2 or 4)
Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) *Prerequisites: consent of instructor and departmental chair.* (F,W,S)

199H. Honors Thesis Research for Undergraduates (2-4)
Honors thesis research for seniors participating in the Honors Program. Research is conducted under the supervision of a physics faculty member. *Prerequisite: admission to the Honors Program in physics.* (F,W,S)

GRADUATE

200A. Theoretical Mechanics (4)
Lagrange's equations and Hamilton's principle; symmetry and constants of the motion. Applications to: charged particle motion; central forces and scattering theory; small oscillations; anharmonic oscillations; rigid body motion; continuum mechanics. *Prerequisite: Physics 110B or equivalent.* (F)

200B. Theoretical Mechanics (4)
Hamilton's equations, canonical transformations; Hamilton-Jacobi theory; action-angle variables and adiabatic invariants; introduction to canonical perturbation theory, nonintegrable systems and chaos; Liouville equation; ergodicity and mixing; entropy; statistical ensembles. *Prerequisite: Physics 200A.* (W)

201. Mathematical Physics (5)
An introduction to mathematical methods used in theoretical physics. Topics include: a review of complex variable theory, applications of the Cauchy residue theorem, asymptotic series, method of steepest descent, Fourier and Laplace transforms, series solutions for ODE's and related special functions, Sturm Liouville theory, variational principles, boundary value problems, and Green's function techniques. (F)

203A. Advanced Classical Electrodynamics (5)
Electrostatics, symmetries of Laplace's equation and methods for solution, boundary value problems, electrostatics in macroscopic media, magnetostatics, Maxwell's equations, Green functions for Maxwell's equations, plane wave solutions, plane waves in macroscopic media. *Prerequisite: Physics 100C or equivalent.* (W)

203B. Advanced Classical Electrodynamics (4)
Special theory of relativity, covariant formulation of electrodynamics, radiation from current distributions and accelerated charges, multipole radiation fields, waveguides and resonant cavities. *Prerequisite: Physics 203A.* (S)

206. Topics in Biophysics and Physical Biochemistry (4)
(Same as BGGN 206, Chemistry 206.) Selection of topics of current interest. Examples: primary processes of photosynthesis; membrane biophysics; applications of physical methods to problems in biology and chemistry, e.g., magnetic resonance, X-ray diffraction, fluctuation spectroscopy, optical techniques (fluorescence, optical rotary dispersion, circular dichroism). Topics may vary from year to year. *Prerequisite: consent of instructor.* (W)

107/207. Macromolecule Structure Determination by X-ray Crystallography (4)
This course will describe the different steps used in solving for a three-dimensional structure of a macromolecule using X-ray crystallography. Topics covered: theory of X-ray diffraction by a crystal; X-ray sources & detectors; crystallization of a protein; crystal symmetry; solution of phase problem by the isomorphous replacement method; anomalous scattering; molecular replacement method; model building and phase improvement; structure refinement. *Prerequisites: Mathematics 20D, Physics 100A, or BIBC 100 or Chemistry 114A or consent of instructor.* (F) (Not offered in 2004-2005)

210A. Equilibrium Statistical Mechanics (4)
Approach to equilibrium: BBGKY hierarchy; Boltzmann equation; H-theorem. Ensemble theory; thermodynamic potentials. Quantum statistics; Bose condensation. Interacting systems: Cluster expansion; phase transition via mean-field theory; the Ginzburg criterion. *Prerequisites: Physics 140A-B, 152A, 200A-B, or equivalent; concurrent enrollment in Physics 212C.* (S)

210B. Nonequilibrium Statistical Mechanics (4)
Transport phenomena; kinetic theory and the Chapman-Enskog method; hydrodynamic theory; nonlinear effects and the mode coupling method. Stochastic processes; Langevin and Focker-Planck equation; fluctuation-dissipation relation; multiplicative processes; dynamic field theory; Martin-Siggia-Rose formalism; dynamical scaling theory. *Prerequisite: Physics 210A.* (F)

210C. Statistical Field Theory (4)
Phase transition and critical phenomena: Landau-Ginzburg model and statistical field theory; Goldstone modes; breakdown of mean-field theory. Universality; scaling theory; the renormalization group. Epsilon expansion; large-N expansion; the nonlinear-sigma model. Topological defects; duality; the Kosterlitz-Thouless transition. *Prerequisite: Physics 210A or consent of instructor.* (W)

211A. Solid-State Physics (5)
The first of a two-quarter course in solid-state physics. Covers a range of solid-state phenomena that can be understood within an independent particle description. Topics include: chemical versus band-theoretical description of solids, electronic band structure calculation, lattice dynamics, transport phenomena and electrodynamics in metals, optical properties, semiconductor physics. *Prerequisite: Physics 152A or equivalent.* (F)

211B. Solid-State Physics (4)
Continuation of 211A. Deals with collective effects in solids arising from interactions between constituents. Topics include electron-electron and electron-phonon interactions, screening, band structure effects, Landau Fermi liquid theory. Magnetism in metals and insulators, superconductivity; occurrence, phenomenology, and microscopic theory. *Prerequisites: Physics 210A, 211A.* (offered in alternate years) (W)

212A. Quantum Mechanics (4)
Hilbert space formulation of quantum mechanics and application to simple systems: states and observables, uncertainty relations and measurements, time evolution, and mixed states and density matrix. Symmetries: commuting observables and symmetries, rotation group representations, Clebsh-Gordon coefficients, Wigner-Eckhardt theorem, and discrete symmetries (parity, time reversal, etc.). *Prerequisite: Physics 130B or equivalent.* (F)

212B. Quantum Mechanics (4)
Time independent perturbation theory: non-degenerate and degenerate cases, Zeeman effect, fine structure, exclusion principle, and many-electron atoms. Time dependent perturbation theory: interaction picture and Dyson series, transition rates. Radiation theory: quantization of EM field, calculation of atomic level transition rates, line width, and spontaneous decay. *Prerequisite: Physics 212A.* (W)

212C. Quantum Mechanics (4)
Scattering theory: Lippman-Schwinger formalism, Born approximation, partial waves, inelastic processes, and spin dependence. Path integrals: introductions and simple examples, rigid rotator, and Bohm-Aharonov effect. Dirac equation: single particle equation, hydrogen atom, and holes. *Prerequisites: Physics 212A-B.* (S)

214. Physics of Elementary Particles (4)
Classification of particles using symmetries and invariance principles, quarks and leptons, quantum electrodynamics, weak interactions, e-p interactions, deep-inelastic lepton-nucleon scattering, pp collisions, introduction to QCD. *Prerequisite: Physics 215A.* (W)

215A. Particles and Fields (4)
The first quarter of a three-quarter course on field theory and elementary particle physics. Topics covered include the relation between symmetries and conservation laws, the calculation of cross sections and reaction rates, covariant perturbation theory, and quantum electrodynamics. (F)

215B. Particles and Fields (4)
Continuation of 215A. Gauge theory quantization by means of path integrals, SU(3) symmetry and the

quark model, spontaneous symmetry breakdown, introduction to QCD and the Glashow-Weinberg-Salam model of weak interactions, basic issues of renormalization. *Prerequisite: Physics 215A.* (W)

215C. Particles and Fields (4)
Modern applications of the renormalization group in quantum chromodynamics and the weak interactions. Unified gauge theories, particle cosmology, and special topics in particle theory. *Prerequisites: Physics 215A-B.* (offered in alternate years) (S)

217. Field Theory and the Renormalization Group (4)
Application of field theory techniques and the renormalization group method to problems in condensed matter or particle physics. Topics will vary and may include: spin-glass and other systems dominated by quenched disorders; polymer statistics and liquid crystals; bosonization and many-body quantum systems in 1+1 dimensions; quantum chromodynamics and the electroweak model. *Prerequisites: Physics 210C, 212C, or consent of instructor.* (offered in alternate years) (S)

218A. Plasma Physics (4)
The basic physics of plasmas is discussed for the simple case of an unmagnetized plasma. Topics include: thermal equilibrium statistical properties, fluid and Landau theory of electron and ion plasma waves, velocity space instabilities, quasi-linear theory, fluctuations, scattering or radiation, Fokker-Planck equation. (F)

218B. Plasma Physics (4)
This course deals with magnetized plasma. Topics include: Appleton-Hartree theory of waves in cold plasma, waves in warm plasma (Bernstein waves, cyclotron damping). MHD equations, MHD waves, low frequency modes, and the adiabatic theory of particle orbits. *Prerequisite: Physics 218A.* (W)

218C. Plasma Physics (4)
This course deals with the physics of confined plasmas with particular relevance to controlled fusion. Topics include: topology of magnetic fields, confined plasma equilibria, energy principles, ballooning and kink instabilities, resistive MHD modes (tearing, rippling and pressure-driven), gyrokinetic theory, microinstabilities and anomalous transport, and laser-plasma interactions relevant to inertial fusion. *Prerequisite: Physics 218B.* (S)

133/219. Condensed Matter/Materials Science Laboratory (4)
A project-oriented laboratory course utilizing state-of-the-art experimental techniques in materials science. The course prepares students for research in a modern condensed matter-materials science laboratory. Under supervision, the students develop their own experimental ideas after investigating current research literature. With the use of sophisticated state-of-the-art instrumentation students conduct research, write a research paper, and make verbal presentations. Prerequisites: *Physics 2CL and 2DL for undergraduates; Physics 152A or Physics 211A for graduate students. (S)*

220. Group Theoretical Methods in Physics (4)
Study of group theoretical methods with applications to problems in high energy, atomic, and condensed matter physics. Representation theory, tensor methods, Clebsh-Gordan series. Young tableaux. The course will cover discrete groups, Lie groups and Lie algebras, with emphasis on permutation, orthogonal, and unitary groups. *Prerequisite: Physics 212C.* (S)

221A. Nonlinear and Nonequilibrium Dynamics of Physical Systems (4)
An introduction to the modern theory of dynamical systems and applications thereof. Topics include maps and flows, bifurcation theory and normal form analysis, chaotic attractors in dissipative systems, Hamiltonian dynamics and the KAM theorem, and time series analysis. Examples from real physical systems will be stressed throughout. *Prerequisite: Physics 200B.* (offered in alternate years) (W)

221B. Nonlinear and Nonequilibrium Dynamics of Physical Systems (4)
Nonlinear dynamics in spatially extended systems. Material to be covered includes fluid mechanical instabilities, the amplitude equation approach to pattern formation, reaction-diffusion dynamics, integrable systems and solitons, and an introduction to coherent structures and spatio-temporal chaos. *Prerequisites: Physics 210B and 221A.* (offered in alternate years) (S)

122/222. Experimental Foundation of Particle Physics (4–4)
Modern experimental techniques in particle physics will be discussed. Experiments are selected which have provided (or will shortly provide) tests of the theory of elementary particles. Examples of topics for which experiments are discussed include neutral currents, discovery of the J/Psi and Upsilon particle, number of light neutrino species, neutrino mass, CP violation and Higgs searches. *Prerequisite: Physics 130B or Physics 215B.*

223. Stellar Structure and Evolution (4)
Energy generation, flow, hydrostatic equilibrium, equation of state. Dependence of stellar parameters (central surface temperature, radius, luminosity, etc.) on stellar mass and relation to physical constants. Relationship of these parameters to the H-R diagram and stellar evolution. Stellar interiors, opacity sources, radiative and convective energy flow. Nuclear reactions, neutrino processes. Polytropic models. White dwarfs and neutron stars. *Prerequisites: Physics 130C or equivalent, Physics 140A-B or equivalent.* (S/U grades permitted.) (offered in alternate years) (F)

224. Physics of the Interstellar Medium (4)
Gaseous nebulae, molecular clouds, ionized regions, and dust. Low energy processes in neutral and ionized gases. Interaction of matter with radiation, emission and absorption processes, formation of atomic lines. Energy balance, steady state temperatures, and the physics and properties of dust. Masers and molecular line emission. Dynamics and shocks in the interstellar medium. *Prerequisites: Physics 130A-B or equivalent, Physics 140A-B or equivalent.* (S/U grades permitted.) (offered in alternate years)

225A-B. General Relativity (4-4)
This is a two-quarter course on gravitation and the general theory of relativity. The first quarter is intended to be offered every year and may be taken independently of the second quarter. The second quarter will be offered in alternate years. Topics covered in the first quarter include special relativity, differential geometry, the equivalence principle, the Einstein field equations, and experimental and observational tests of gravitation theories. The second quarter will focus on more advanced topics, including gravitational collapse, Schwarzschild and Kerr geometries, black holes, gravitational radiation, cosmology, and quantum gravitation. (225B offered in alternate years) (F,W)

226. Galaxies and Galactic Dynamics (4)
The structure and dynamics of galaxies. Topics include potential theory, the theory of stellar orbits, self-consistent equilibria of stellar systems, stability and dynamics of stellar systems including relaxation and approach to equilibrium. Collisions between galaxies, galactic evolution, dark matter, and galaxy formation. *Prerequisite: consent of instructor.* (offered in alternate years)

227. Cosmology (4)
An advanced survey of topics in physical cosmology. The Friedmann models and the large-scale structure of the universe, including the observational determination of H_0 (the Hubble constant) and q_0 (the deceleration parameter). Galaxy number counts. A systematic exposition of the physics of the early universe, including vacuum phase transitions; inflation; the generation of net baryon number, fluctuations, topological defects and textures. Primordial nucleosynthesis, both standard and nonstandard models. Growth and decay of adiabatic and isocurvature density fluctuations. Discussion of dark matter candidates and constraints from observation and experiment. Nucleocosmochronology and the determination of the age of the universe. *Prerequisite: consent of instructor.* (offered in alternate years)

228. High-Energy Astrophysics and Compact Objects (4)
The physics of compact objects, including the equation of state of dense matter and stellar stability theory. Maximum mass of neutron stars, white dwarfs, and super-massive objects. Black holes and accretion disks. Compact x-ray sources and transient phenomena, including x-ray and γ-ray bursts. The fundamental physics of electromagnetic radiation mechanisms: synchrotron radiation, Compton scattering, thermal and nonthermal bremsstrahlung, pair production, pulsars. particle acceleration models, neutrino production and energy loss mechanisms, supernovae, and neutron star production. *Prerequisites: Physics 130A-B-C or equivalent.* (offered in alternate years)

230. Advanced Solid-State Physics (1-4)
Selection of advanced topics in solid-state physics; material covered may vary from year to year. Examples of topics covered: disordered systems, surface physics, strong-coupling superconductivity, quantum Hall effect, low-dimensional solids, heavy fermion systems, high-temperature superconductivity, solid and liquid helium. (Offered in alternate years.) *Prerequisite: Physics 211B.*

152B/232. Electronic Materials (4)
Physics of electronic materials. Semiconductors: bands, donors and acceptors, devices. Metals: Fermi surface, screening, optical properties. Insulators: dia-/ferro-electrics, displacive transitions. Magnets: dia-/para-/ferro-/antiferro-magnetism, phase transitions, low temperature properties. Superconductors: pairing, Meissner effect, flux quantization, BCS theory. *Prerequisites: Physics 152A, Phys 211 or consent of instructor.* Graduate students in Phys 232 will complete a special topics paper. (S)

235. Nonlinear Plasma Theory (4)
This course deals with nonlinear phenomena in plasmas. Topics include: orbit perturbation theory, stochasticity, Arnold diffusion, nonlinear wave-particle and wave-wave interaction, resonance broadening, basics of fluid and plasma turbulence, closure methods, models of coherent structures. *Prerequisite: Physics 218C or consent of instructor.* (offered in alternate years) (W)

239. Special Topics (1–3)
From time to time a member of the regular faculty or a resident visitor will find it possible to give a self-contained short course on an advanced topic in his or

her special area of research. This course is not offered on a regular basis, but it is estimated that it will be given once each academic year. (S/U grades permitted.)

250. Condensed Matter Physics Seminar (0–1)
Discussion of current research in physics of the solid state and of other condensed matter. (S/U grades only.) (F,W,S)

251. High-Energy Physics Seminar (0–1)
Discussions of current research in nuclear physics, principally in the field of elementary particles. (S/U grades only.) (F,W,S)

252. Plasma Physics Seminar (0–1)
Discussions of recent research in plasma physics. (S/U grades only.) (F,W,S)

253. Astrophysics and Space Physics Seminar (0–1)
Discussions of recent research in astrophysics and space physics. (S/U grades only.) (F,W,S)

256. Biophysics Special Topics Seminar (0–1)
Discussions of current research in experimental solid state physics and biophysics. (S/U grades only.) (F,W,S)

257. High-Energy Physics Special Topics Seminar (0–1)
Discussions of current research in high-energy physics. (S/U grades only.) (F,W,S)

258. Astrophysics and Space Physics Special Topics Seminar (0–1)
Discussions of current research in astrophysics and space physics. (S/U grades only.) (F,W,S)

260. Physics Colloquium (0–1)
Discussions of recent research in physics directed to the entire physics community. (S/U grades only.) (F,W,S)

261. Seminar on Physics Research at UCSD (0–1)
Discussions of current research conducted by faculty members in the Department of Physics. (S/U grades only.) (W,S)

262. Complex Dynamical Systems Seminar (0–1)
Discussions of recent research in nonlinear and non-equilibrium physics. (S/U grades only.) (F,W,S)

265. Neuronal Networks Topics Seminar (1)
Discussion of current research on neuronal systems and dynamics. (F,W,S)

266. Recent Topics in Condensed Matter Physics (1–3)
The course is dedicated to recent developments in the area of condensed matter physics through lectures given by graduate students and postdocs. The course teaches practical skills, delivering research lectures, and answering questions in front of a research audience. *Prerequisite: physics graduate students in good standing.* (F,W,S)

171/271. Biophysics of Neurons and Networks (4–4)
Fundamental limits to measurements on nervous systems, the biophysics of excitable membranes and neurons, and the fundamentals of recurrent neuronal networks. The emphasis is on information processing by the nervous system through physical reasoning and mathematical anaylsis. Three hours lecture. The graduate version, Physics 271, will include a report at the level of a research proposal. *Prerequisites: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 140A, for graduate students, consent of instructor.* The graduate version, Physics 271, will include a report at the level of a research proposal. (W)

172/272. Biophysics of Molecules (4–4)
Physical concepts and techniques used to study the structure and function of biological molecules, the thermodynamics and kinetics of biological activity, and physical descriptions of biological processes. Examples from enzyme action, protein folding, photobiology, and molecular motors. Three hours lecture. *Prerequisites: Physics 100A and 110A, BILD 1, Chemistry 6C and Physics 130A and graduate students consent of instructor.* The graduate version, Physics 272, will include a report at the level of a research proposal. (S)

180/280. Teaching and Learning Physics (4)
How people learn and understand key concepts in physics. Readings in physics, physics education research, and cognitive science. Field work teaching and evaluating pre-college and college students. Useful for students interested in teaching and learning physical sciences. Undergraduate students are required to read and discuss papers in class. Graduate students are expected to read the papers and prepare an annotated bibliography on the background literature, then lead the in-class discussion on the topics covered in the papers. *Prerequisites: Physics 1, 2, or 4 series, or consent of instructor.*

295. M.S. Thesis Research in Materials Physics (1–12)
Directed research on M.S. dissertation topic. (F,W,S)

297. Special Studies in Physics (1–4)
Studies of special topics in physics under the direction of a faculty member. *Prerequisites: consent of instructor and departmental vice chair, education.* (S/U grades permitted.) (F,W,S)

298. Directed Study in Physics (1-12)
Research studies under the direction of a faculty member. (S/U grades permitted.) (F,W,S)

299. Thesis Research in Physics (1-12)
Directed research on dissertation topic. (F,W,S)

500. Instruction in Physics Teaching (1-4)
This course, designed for graduate students, includes discussion of teaching, techniques and materials necessary to teach physics courses. One meeting per week with course instructors, one meeting per week in an assigned recitation section, problem session, or laboratory section. Students are required to take a total of two units of Physics 500. (F,W,S)

Barbara Walter, Ph.D.

The Major Program

Political science addresses some of the fundamental problems facing human society. Questions concerning world peace, government policies aimed at achieving economic stability and growth, the management of environmental quality, control over political competition, the possibility of using law to affect social and political change, and the gap between the rich and poor in the U.S. and abroad are all on the research agenda of contemporary political scientists. The general purpose of the major is to address these and other issues systematically, and, simultaneously, to raise the broad theoretical questions which can help students relate today's political debates to those debates about politics which have kept a theoretical tradition alive for over 2,000 years.

Students may major in political science as a general program of study, or they may concentrate in one of six areas: (1) American politics, (2) comparative politics, (3) international relations, (4) political theory, (5) public law, and (6) public policy. All majors in political science must satisfy the following sixteen courses: PS 30 (Political Inquiry), three of the following four lower-division courses (Political Science 10, 11, 12 and 13) and twelve upper-division courses. Moreover, as stated below, students concentrating in one of the fields must satisfy that field's particular lower- and upper-division requirements.

Requirements for Major in Political Science without an Area of Concentration

1. Three of the four lower-division courses
2. Political Science 30
3. Any twelve upper-division political science courses

Requirements for Major in Political Science with an Area of Concentration

Major in Political Science/American Politics

1. Lower-division required: PS 10 (in addition to two other lower-division courses)
2. Political Science 30
3. Five upper-division American courses:
   A. at least two of which must be from the 100 sequence: 100A-B-C, 100DA, 100E-F-H
   B. the additional courses for the American concentration must be chosen from: 102C, 102E-F-G, 102J, 102K, 103A, 103B, 104A-B-C-D, 104F, 104I, 104L-M, 106A, 108

Major in Political Science/Comparative Politics

1. Lower-division required: PS 11 (in addition to two other lower-division courses)
2. Political Science 30
3. Five upper-division courses including:
   A. at least one from the following thematic courses: 120K, 124A-B, 125, 125A, 126AA, 126AC, 136A-B-C, 137A, 139A, 150A-B
   B. and at least one each from two of the following three regional areas:

      Asia: 121, 121B, 130B, 130H, 131C, 132B-C, 133A, 133D, 133DD, 133E-F

      Europe: 120A-B-C-D, 120H, 120I, 126AB, 130AA, 130AC

      Latin America: 134AA, 134B-C-D, 134N, 134R

Major in Political Science/ International Relations

1. Lower-division required: PS 12 (in addition to two other lower-division courses)
2. Political Science 30
3. Five upper-division IR courses with at least one each from three of the following four groups:
   A. Foreign Policy: 142A, 142B, 142M, 145A, 146A, 150A-B, 152
   B. National and International Security: 142I-J-K-L-M, 146E
   C. Political Economy: 126AB, 140A, 142B, 144AA, 144AB, 144D-E-F, 146A
   D. Theory of International Relations: 141A, 142L, 145B-C, 152

Major in Political Science/Political Theory

1. Three of four lower-division courses
2. Political Science 30
3. 110A-B-C
4. And at least two additional courses from: 110DA, 110EA, 110EB, 110H, 110J, 110N, 110T, 112A, 113B, 114B, 115A, 116A-B, 117, 118A-B, 119A

Major in Political Science/Public Law

1. Lower-division required: PS 10 (in addition to two other lower-division courses)
2. Political Science 30
3. Five of the following: 100A-B, 102L, 104A-B-C-D, 104F, 104I, 104L-M, 124B

Major in Political Science/Public Policy

1. Lower-division required: PS 10 (in addition to two other lower-division courses)
2. Political Science 30
3. 160AA
4. One of 160AB, 167A, 168, 170A
5. Two of 100A-B-C, 100E-F-G, 100I-J
6. One of 102B-C, 102E, 102L, 103A, 103B, 106A, 123A, 126AC, 142A, 142J, 150A-B, 161, 162, 163, 165, 166F

Two upper-division courses in a field may be substituted for that field's lower-division course. However, these courses cannot also be used to satisfy the upper-division course requirements for a concentration of that field.

Since course offerings may change from year to year, students are strongly advised to consult the department for the latest listing of courses before preregistration.

Agreements signed between UCSD and several community colleges allow students to apply some community college courses toward lower-division course requirements for the major. Transfer students must, however, take at least one of the lower-division courses (10, 11, 12, 13) in residence at UCSD. Courses taken elsewhere may be credited toward the major. Please check with an undergraduate student affairs adviser for more information on credit for courses taken elsewhere.

Students who pass the Advanced Placement (AP) Tests in American or Comparative Politics may petition to be exempted from taking PS 10 or 11 (respectively). Effective fall 2004, students must pass with a score of 5 to be exempted from taking PS 10 or 11.

At least nine courses in political science must be taken in residence at UCSD. A total maximum of six courses may be taken elsewhere and applied toward the major. This applies to transfer students, students who pass the AP exam(s),

as well as students who study abroad on the Education Abroad Program (EAP) or the Opportunities Abroad Program (OAP). Students planning to transfer course work completed elsewhere are urged to consult the undergraduate student affairs adviser.

Double majors who include political science as one of their two majors must fulfill the requirements of both programs. Please consult the undergraduate student affairs adviser for more information.

Students must maintain an overall 2.0 GPA in the major. To be counted toward satisfying the requirements for the major, upper- and lower-division courses must be completed with a C– or better grade. Courses taken to satisfy requirements for the major may not be taken Pass/No Pass with the exception of a maximum of two independent study courses (PS 199).

Honors candidates for departmental honors are required to take PS 191A and B in which they write a senior thesis. (A 3.5 GPA in the major, senior standing, a significant writing project, a recommendation from a political science faculty member, and a political science faculty adviser are currently prerequisites for honors.) These courses may be counted toward the upper-division requirement.

Effective fall 2004, to be admitted to the Honors Seminar a student must be of senior standing in the first quarter of the seminar, have a minimum GPA of 3.6 in political science, have completed all lower-division requirements including Political Science 30 and five upper-division courses. Also, students must have an adviser prior to enrolling in the Honors Seminar.

Career Guidance

The premise of our educational philosophy is that the best professional preparation for productive careers which we can provide is one which is broad, theoretical, and only indirectly related to the current job market. Our majors graduate into a wide range of career options.

Many political science majors at UCSD will seek admission to a *law school*. Although law schools make no recommendation concerning the usefulness of any undergraduate major, a B.A. in political science should be seen as a useful complement to a law degree. Students who take courses in American government, policy analysis, and law and politics find that they develop a keen understanding of the role of law in the general political process. This helps students understand the limits and possibilities of the legal process in fostering change or in preserving the status quo. This same curriculum provides a solid foundation for a career in *journalism*. Students with any specific questions regarding law are advised to consult with career services.

Increasingly, political science majors are preparing for careers in *business* or as *policy analysts* in both the public and private sectors. Many of these students pursue advanced degrees in public policy or study for a master's in business administration. Students interested in this option should look into public policy, American, or comparative politics as an area of concentration. Students interested in public policy might wish to consider the public policy minor, which is described separately in the catalog. Some political science majors are interested in careers in international organization or *diplomacy*. These students should look into international relations as an area of concentration. In addition, a broad array of courses in comparative politics is essential for anyone interested in a career of international service.

A political science major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career.

Students interested in majoring or minoring in political science should stop by the Department of Political Science Office, SSB301, or visit our Web site: *www.polisci.ucsd.edu.*

Study Abroad

Political science majors are encouraged to participate in the Education Abroad Program (EAP) and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through them can fulfill UCSD degree and major requirements.

Minor in Political Science

For students entering UCSD winter 1998 or later the following guidelines for a political science minor will apply: seven political science courses, with a minimum of five upper-division. Continuing students may follow the guidelines for a minor of a total of six political science courses, with a minimum of three upper-division. All courses taken for a political science minor must be taken for a letter grade.

Interdisciplinary Minors

The Department of Political Science takes part in two interdisciplinary minors offered at UCSD. The law and society minor offers students the opportunity to examine the role of the legal system in society. Students should note that Law and Society 101 (Contemporary Legal Issues) may be used in fulfilling the twelve upper-division course requirement for the political science major. The minor in health care–social issues offers students a variety of perspectives that will enhance their ability to deal with complex social and ethical issues in modern health care. Additional information on these programs is available through the Warren Interdisciplinary Programs Office.

Research

The Department of Political Science is closely affiliated with several research centers/institutes/projects currently on campus. Faculty members directly involved include: Steven Erie, director, Urban Studies Program; J. Lawrence Broz and Kristian Gleditsch, coordinators, Project in International Affairs; Germaine Hoston, director, Center for TransPacific Studies in Values, Culture, and Politics; Mathew McCubbins, director, Public Policy Research Project; Samuel Kernell, coordinator, American Political Institutions Project; Peter Cowhey, director, Institute on Global Conflict and Cooperation; Wayne Cornelius, director, Center for U.S.-Mexican Studies; Peter Irons, director, Earl Warren Bill of Rights Project; Wayne Cornelius, director, Center for Comparative Immigration Studies. For further information please refer to the General Catalog section on "Research at UCSD."

The Ph.D. Program

The Department of Political Science at the University of California, San Diego offers a program of graduate studies leading to the Ph.D. degree. Instruction is provided in the major fields of the discipline. For purposes of comprehensive examinations, the discipline is broken into four fields: American politics, comparative politics,

international relations, and political theory. The department also offers a variety of courses that are of a methodological or epistemological nature, spanning the various fields.

Students take two years of course work in preparation for their comprehensive exams, including the First-Year Core Curriculum (POLI 200A-C and 204A-C). Students also attend regularly scheduled colloquia which feature presentations by faculty, outside speakers, and dissertation students.

A student must complete one seminar paper in one of his or her examination fields. This paper may be written as part of the requirements for a regularly scheduled seminar course or in an independent research course. The paper will involve original research or other creative effort.

By the end of the second year, a student must stand for the General Examination, which consists of written examinations in each of two fields and in a focus-area, and an oral examination.

The comprehensive exams are both written and oral. They test more than just mastery of course work and hence there is no single set of courses required for any field exam. To pass the exams a student is expected not only to master the relevant literature, but also to be able to synthesize and analyze the major issues in the field.

Each comprehensive exam tests both knowledge of the major theoretical approaches in the field and the ability to apply those theories to important questions in the field. For one of the two exam fields, the student also designates a specific area of interest (a "focus area"). The written focus area exam tests the student's in-depth knowledge and understanding. The focus area exam is taken the same week as the general field exam, and there is one oral covering both exams. Each field publishes a list of focus areas; students may, with approval, craft their own focus area. Each field, in addition, publishes a list of suggested ways to prepare for its exams; each field also determines the research tools required for scholars in that field.

Students are expected to complete their comprehensive exams no later than the end of their second year.

After passing both exams, students are expected to write a dissertation prospectus. This prospectus must be defended before a committee of five faculty, including two members outside the department. This committee also administers the final oral defense of the dissertation.

It is expected that students will complete their dissertations within six years of starting the program.

Students interested in the program should consult the department Web site for more detailed information.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed seven years. Total registered time at UCSD cannot exceed eight years.

COURSES

LOWER-DIVISION

10. Introduction to Political Science: American Politics (4)
This course surveys the processes and institutions of American politics. Among the topics discussed are individual political attitudes and values, political participation, voting, parties, interest groups, Congress, presidency, Supreme Court, the federal bureaucracy, and domestic and foreign policy making.

11. Introduction to Political Science: Comparative Politics (4)
The nature of political authority, the experience of a social revolution, and the achievement of an economic transformation will be explored in the context of politics and government in a number of different countries.

12. Introduction to Political Science: International Relations (4)
The issues of war/peace, nationalism/internationalism, and economic growth/redistribution will be examined in both historical and theoretical perspectives.

13. Power and Justice (4)
An exploration of the relationship between power and justice in modern society. Materials include classic and contemporary texts, films and literature.

27. Ethics and Society (4)
An examination of ethical principles (e.g., utilitarianism, individual rights, etc.) and their social and political applications to contemporary issues such as abortion, environmental protection, and affirmative action). Ethical principles will also be applied to moral dilemmas familiar in government, law, business, and the professions. Satisfies the Warren College ethics and society requirement.

30. Political Inquiry (4)
Introduction to the logic of inference in social science and to quantitative analysis in political science and public policy including research design, data collection, data description and computer graphics, and the logic of statistical inference (including linear regression).

40. Introduction to Law and Society (4)
This course is designed as a broad introduction to the study of law as a social institution and its relations to other institutions in society. The focus will be less on the substance of law (legal doctrine and judicial opinions) than on the process of law–how legal rules both reflect and shape basic social values and their relation to social, political, and economic conflicts within society.

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to 15 to 20 students, with preference given to entering freshmen. May not be used to fulfill any major or minor requirements in political science.

90. Undergraduate Seminar (1)
Selected topics to introduce students to current issues and trends in political science. May not be used to fulfill any major or minor requirements in political science.

UPPER-DIVISION

Minimum requirement for all upper-division courses is at least one quarter of lower-division political science, or upper-division standing.

American Politics

100A. The Presidency (4)
The role of the presidency in American politics. Topics will include nomination and election politics, relations with Congress, party leadership, presidential control of the bureaucracy, international political role, and presidential psychology.

100B. The U.S. Congress (4)
This course will examine the nomination and election of congressmen, constituent relationships, the development of the institution, formal and informal structures, leadership, comparisons of House with Senate, lobbying, and relationship with the executive branch.

100C. American Political Parties (4)
This course examines the development of the two major parties from 1789 to the present. Considers the nature of party coalitions, the role of leaders, activists, organizers, and voters, and the performance of parties in government.

100DA. Voting, Campaigning, and Elections (4)
A consideration of the nature of public opinion and voting in American government. Studies of voting behavior are examined from the viewpoints of both citizens and candidates, and attention is devoted to recent efforts to develop models of electoral behavior for the study of campaigns. The role of mass media and money also will be examined.

100E. Interest Group Politics (4)
The theory and practice of interest group politics in the United States. Theories of pluralism and collective action, the behavior and influence of lobbies, the role of political action committees, and other important aspects of group action in politics are examined. *Prerequisite: sophomore standing.*

100H. Race and Ethnicity in American Politics (4)
This course examines the processes by which racial and ethnic groups have/have not been incorporated into the American political system. The course focuses on the political experiences of European immigrant groups, blacks, Latinos, and Asians.

100J. Race in American Political Development (4)
Readings examine how the multiracial character of the United States has shaped the broad outlines of American politics. Cases include the founding/the Constitution, southern politics, social organization in formerly Mexican regions, the New Deal, consequences of limited suffrage.

102C. American Political Development (4)
Examines selected issues and moments in the political history of the United States, comparing competing explanations and analyses of U.S. politics. Likely topics include the founding, "American exceptionalism," change in the party system, race in U.S. politics, the "new institutionalism."

102E. Urban Politics (4)
(Same as USP107) This survey course focuses upon the following six topics: the evolution of urban politics since the mid-nineteenth century; the urban fiscal crisis; federal/urban relationships; the "new" ethnic politics; urban power structure and leadership; and selected contemporary policy issues such as downtown redevelopment, poverty, and race.

102F. Mass Media and Politics (4)
This course will explore both the role played by mass media in political institutions, processes and behaviors, and reciprocally, the roles played by political systems in guiding communication processes.

102G. Special Topics in American Politics (4)
An undergraduate course designed to cover various aspects of American politics.

102J. Advanced Topics in Urban Politics (4)
(Same as USP 110) Building upon the introductory urban politics course, the advanced topics course explores issues such as community power, minority empowerment, and the politics of growth. A research paper is required. Students wishing to fulfill the paper requirement with field research should enroll in the subsequent PS 102JJ course (offered Summer Session 2). *Prerequisite: consent of instructor.*

102JJ. Field Research in Urban Politics (2)
(Same as USP 111) To be taken with the approval of the PS 102J instructor, this course allows students to do original field research on topics in urban politics. This course is offered in Summer Session 2 subsequent to a 102J course. *Prerequisite: consent of instructor.* May not be used to fulfill any major or minor requirements in Political Science.

103A. California Government and Politics (4)
(Same as USP 109) This survey course explores six topics: 1) the state's political history; 2) campaigning, the mass media, and elections; 3) actors and institutions in the making of state policy; 4) local government; 5) contemporary policy issues; e.g., Proposition 13, school desegregation, crime, housing and land use, transportation, water; 6) California's role in national politics.

103B. Politics and Policymaking in Los Angeles (4)
(Same as USP 113) This course examines politics and policymaking in the five-county Los Angeles region. It explores the historical development of the city, suburbs, and region; politics, power, and governance; and major policy challenges facing the city and metropolitan area. *Prerequisite: upper-division standing.*

104A. The Supreme Court and the Constitution (4)
An introduction to the study of the Supreme Court and constitutional doctrine. Topics will include the nature of judicial review, federalism, race, and equal protection. The relation of judicial and legislative power will also be examined.

104B. Civil Liberties—Fundamental Rights (4)
This course will examine issues of civil liberties from both legal and political perspectives. Topics will include the First Amendment rights of speech, press, assembly, and religion; other "fundamental" rights, such as the right to privacy; and some issues in equal protection. Conflicts between governmental powers and individual rights will be examined.

104C. Civil Liberties—The Rights of Criminals and Minorities (4)
Examines the legal issues surrounding the rights of "marginal" groups such as aliens, illegal immigrants, and the mentally ill. Also includes a discussion of the nature of discrimination in American society.

104D. Judicial Politics (4)
Introduction to the study of law and courts as political institutions and judges as political actors, including the role of the judiciary in our constitutional system and decision making both within the Supreme Court and within the judicial hierarchy.

104F. Seminar in Constitutional Law (4)
This seminar will provide an intensive examination of a major issue in constitutional law, with topics varying from year to year. Recent topics have included equal protection law and the rights of civilians in wartime. Students will be required to do legal research on a topic, write a legal brief, and argue a case to the seminar. *Prerequisites: PS 104A/B; department stamp.*

104I. Law and Politics—Courts and Political Controversy (4)
This course will examine the role of the courts in dealing with issues of great political controversy, with attention to the rights of speech and assembly during wartime, questions of internal security, and the expression of controversial views on race and religion. The conflict between opposing Supreme Court doctrines on these issues will be explored in the context of the case studies drawn from different historical periods.

104L. Positive Political Theory of Law (4)
We will discuss modern theories of the origins of law and legal behavior.

106A. Politics and Bureaucracy (4)
This course explores the problematic relationships between politics and bureaucracy. The theoretical perspectives of Weber, the marxists, and pluralists will be employed to understand the character of American bureaucratic development in the twentieth century. *Prerequisite: upper-division standing.*

108. Politics of Multiculturalism (4)
This course will examine central issues in debates about race, ethnicity, and multiculturalism in the United States. It will look at relations not only between whites and minorities, but also at those among racial and ethnic communities.

Political Theory

110A. Citizens and Saints: Political Thought from Plato to Augustine (4)
This course focuses on the development of politics and political thought in ancient Greece, its evolution through Rome and the rise of Christianity. Readings from Plato, Aristotle, Augustine, Machiavelli, and others.

110B. Sovereigns, Subjects, and the Modern State: Political Thought from Machiavelli to Rousseau (4)
The course deals with the period which marks the rise and triumph of the modern state. Central topics include the gradual emergence of human rights and the belief in individual autonomy. Readings from Machiavelli, Hobbes, Locke, Rousseau, and others.

110C. Revolution and Reaction: Political Thought from Kant to Nietzsche (4)
The course deals with the period which marks the triumph and critique of the modern state. Central topics include the development of the idea of class, of the irrational, of the unconscious, and of rationalized authority as they affect politics. Readings drawn from Rousseau, Kant, Hegel, Marx, Nietzsche, and others.

110DA. Freedom and Discipline: Political Thought in the Twentieth Century (4)
This course addresses certain problems which are characteristic of the political experience of the twentieth century. Topics considered are revolution, availability of tradition, and the problems of the rationalization of social and political relations. Readings from Nietzsche, Weber, Freud, Lenin, Gramsci, Dewey, Oakeshott, Arendt, Merleau-Ponty.

110EA. American Political Thought from Revolution to Civil War (4)
The first quarter examines the origins and development of American political thought from the revolutionary period to the end of the nineteenth century with special emphasis on the formative role of eighteenth-century liberalism and the tensions between "progressive" and "conservative" wings of the liberal consensus.

110EB. American Political Thought from Civil War to Civil Rights (4)
The second quarter examines some of the major themes of American political thought in the twentieth century including controversies over the meaning of democracy, equality, and distributive justice, the nature of "neoconservatism," and America's role as a world power.

110EC. American Political Thought: Contemporary Debates (4)
This course explores contemporary issues in American political thought. Topics may include liberalism and rights, gender and sexuality, race and ethnicity, cultural diversity, and the boundaries of modern citizenship. Readings include political pamphlets, philosophical treatises, court decisions, and works of literature.

110H. Democracy and Its Critics (4)
This course will examine the historical development of the ideal of democracy from Periclean Athens to the present in the light of criticism by such thinkers as Plato, Tocqueville, and Mosca and difficulties encountered in efforts to realize the ideal.

110J. Power in American Society (4)
This course examines how power has been conceived and contested during the course of American history. The course explores the changes which have occurred in political rhetoric and strategies as America has moved from a relatively isolated agrarian and commercial republic to a military and industrial empire.

110N. Theories of Nationalism (4)
Nationalist ideologies. Examination of the rhetoric of nationalist mobilization. Theories about the relationship between nationalist movements and democracy, capitalism, warfare, and the state.

110T. Modern Political Ideologies (4)
An examination of some of the ideas and values associated with major social and political movements in Europe and the United States since the French Revolution. Topics will vary and may include liberalism, populism, democarcy, communism, nationalism, fascism, and feminism.

112A. Economic Theories of Political Behavior (4)
An introduction to theories of political behavior developed with the assumptions and methods of economics. General emphasis will be upon theories linking individual behavior to institutional patterns. Specific topics to be covered will include collective action, leadership, voting, and bargaining.

113B/213B. Chinese and Japanese Political Thought I (4/4)
Examines philosophical traditions of ancient and modern China and Japan, to understand how these have been reflected in Chinese and Japanese development. Course will be in English; however, students with Chinese or Japanese language skills will have opportunity to use these. Graduate students will be required to complete a seminar-length research paper; undergraduate students will write a paper. *Prerequisites: upper-division standing for 113B; graduate standing or consent of instructor for 213B.*

114B. Marxist Political Thought (4)
An introduction to Marxist thought from its roots in the western tradition through its development in non-western contexts. Emphasis is placed on how adaptations were made in Marxism to accommodate the specific challenges of each environment.

115A. Gender and Politics (4)
Our understanding of politics, power, conflict, and quality continue to be challenged and transformed by considering gender as it intersects with nationality, race, class, and ethnicity. We will consider the importance of gender in each of the subfields of political science.

116A. Feminist Theory (4)
Readings in historical and contemporary feminist theory; development of gender as a category of political analysis; alternative perspectives on core concepts and categories in feminist thought.

116B. Advanced Feminist Theory (4)
Advanced critical analysis of contemporary feminist theory; emphasis on the interrelationships among discourses of gender, race, ethnicity, class, and sexuality in the work of different feminist theorists; alternative perspectives on feminist political strategies and practices. *Prerequisite: PS 115B or PS 116A.*

117. Violence and Social Order (4)
This course explores the relationship between violence and the elements of social order, including social hierarchies, group boundaries, power, and authority. Topics include both classic and contemporary works in political theory, as well as some fiction and journalism.

118A. The "Political" in Systematic Theology (4)
An historical analysis of systematic theology in the Judeo-Christian tradition as political theory. Emphasis is placed on the politicization of the political dimensions of the early church, its encounter with positivism, and the emergence of Catholic social doctrine.

118B. The Political Theory of Liberation Theology (4)
A comparative study of liberation theologies, including Continental, Latin American, South African, and East Asian. *Prerequisite: PS 118A.*

119A. Special Topics in Political Theory (4)
An undergraduate course designed to cover various aspects of political theory.

Comparative Politics

120A. Political Development of Western Europe (4)
An examination of various paths of European political development through consideration of the conflicts which shaped these political systems: the commercialization of agriculture; religion and the role of the church; the army and the state bureaucracy; and industrialization. Stress will be on alternative paradigms and on theorists.

120B. The German Political System (4)
An analysis of the political system of the Federal Republic of Germany with an emphasis on the party system, elections, executive-legislative relations, and federalism. Comparisons will be made with other West European democracies and the Weimar Republic.

120C. Politics in France (4)
This course will examine the consequences of social and economic change in France. Specific topics will include institutional development under a semi-presidential system, parties, and elections.

120D. Germany: Before, During, and After Division (4)
Consideration of political, economic, and security factors that have kept Germany at the center of European developments for more than a century.

120H. European Integration (4)
This course reviews the origins and development of the European Community/European Union and its institutions, theories of integration and the challenges inherent in the creation of a supranational political regime.

120I. Politics in Italy (4)
This course will provide a comparative perspective on the development and functioning of the Italian political system. It includes analysis of political institutions, ideological traditions, parties and elections, political elites in the policy process, and the evolving importance of Italy within European integration.

120K. Politics of Developing Countries (4)
This course critically examines central concepts and theories of development, and assesses their utility in understanding political, economic, and social change in three regions of the developing world: Latin American, sub-Saharan Africa, and Southeast Asia.

121. Government and Politics of the Middle East (4)
This course examines general themes affecting the region (social structure and regime type, religion and modernization, bonds and tensions), the character of major states, and efforts to resolve the conflict between Israel and its Arab and Islamic neighbors. *Prerequisite: upper-division standing.*

121B. Politics in Israel 4)
An interdisciplinary study of Israel as both a unique and yet a common example of a modern democratic nation-state. We will examine Israel's history, its political, economic, and legal systems, social structure and multicultural tensions, the relation between state and religion, national security, and international relations.

122B. The Political Trial: Comparative Perspectives on the Politics of Justice (4)
A study of the political drawing on cases selected from the French and Russian Revolutions, the Nuremberg and Tokyo War Crimes Trials, revolutionary China and Cuba, and the Vietnam War era. The course will examine critically the relationship between politics and the administration of justice across time, culture, and political systems.

124B. The Politics of Comparative Judicial Development (4)
Focusing on judicial systems in civil and common law traditions, and in authoritarian as well as democratic politics, this course explores the judicial branch's traditional weakness, even in some democracies. The course considers alternative theories of judicial development and applies them to evidence from judicial systems in several countries.

125. The Politics of Conservation in Developing Countries (4)
Conservation in developing countries concerns resources that are extremely important to policymakers, militaries, environmental organizations, communities, and individuals. This course examines these groups' struggle for control over wildlife and forests—from the capital to the village—on several continents.

125A. Communities and the Environment (4)
A popular new idea in environmental protection is to include local communities in conservation efforts. But what are these communities? What challenges do they face in governing their own resources? This course uses both theory and case studies to explore the political economy of community-based conservations.

126AA. Fundamentals of Political Economy: Modern Capitalism (4)
This course explores how economic factors affect political institutions and how political action affects economic behavior in the United States and Western Europe. Particular attention is given to relations between business and labor, economic policy choices, and the impact of international trade. *Prerequisite: PS 11 or consent of instructor.*

126AB. Politics and Economics in Eastern Europe (4)
This course explores the interrelationship of politics and economics in Eastern Europe, analyzing the historic evolution of the area, the socialist period, and contemporary political and economic change there.

126AC. Issues in Political Economy (4)
Seminar deals in-depth with one or some of the issues touched on in PS 126AA and/or 126AB. Potential topics may include: labor and politics, privatization and divestment, regulation and deregulation, the welfare state, politics of public and private bureaucracy, and other such issues. *Prerequisites: PS 126AA and/or 126AB or consent of instructor.*

130AA. The Soviet Successor States (4)
An overview of the historical background and contemporary politics of the fifteen successor states of the Soviet Union.

130AC. Seminar: Post-Soviet Politics (4)
Undergraduate research seminar on the Post-Soviet Union. Issues and research areas will vary each time the course is offered. *Prerequisite: consent of instructor.*

130AD. The Politics of the Russian Revolution (4)
An examination of the dynamics of the Russian Revolution from 1905 through the Stalinist period and recent years in light of theories of revolutionary change. Emphasis is placed on the significance of political thought, socio-economic stratification, and culturo-historical conditions.

130H. Vietnam: The Politics of Intervention (4)
This course will examine the interventions of foreign powers in Vietnam between 1945 and 1975 (including France, the United States, China, and the Soviet Union) and the effects of intervention.

131C. The Chinese Revolution (4)
An analysis of the dynamics of the Chinese Revolution from the fall of the Qing Dynasty (1644–1911) to the present. Emphasis is placed on the relationship between political thought and the dynamics of the revolutionary process.

132C. Political Development and Modern China (4)
Political development has dominated the study of comparative politics among U.S. academicians since the revival of the Cold War in 1947. This course examines critically this paradigm and its Western philosophical roots in the context of the experience of modern China.

133D. Political Institutions of East Asian Countries (4)
This course discusses the following major topics in three East Asian countries (Japan, South Korea, and Taiwan) from a comparative perspective: (a) economic and political development (b) political institutions (c) public policies.

133F. Governments and Politics of Southeast Asia (4)
This course looks at one of the world's most dynamic and complex regions. The course has three parts: a review of the history and politics of the region; a country-by-country study of several Southeast Asian states; and a look at major challenges facing the region. *Prerequisite: upper-division standing.*

134AA. Comparative Politics of Latin America (4)
Comparative analysis of contemporary political systems and developmental profiles of selected Latin American countries, with special reference to the ways in which revolutionary and counter-revolutionary movements have affected the political, economic, and social structures observable in these countries today. Analyzes the performance of "revolutionary" governments in dealing with problems of domestical political management, reducing external economic dependency, redistributing wealth, creating employment, and extending social services. Introduction to general theoretical works on Latin American politics and development. *Prerequisite: PS 11 or consent of instructor.*

134B. Politics in Mexico (4)
General survey of the Mexican political system as it operates today. Emphasis on factors promoting the breakdown of Mexico's authoritarian regime and the transition to a more democratic political system. Changing relationship between the state and various segments of Mexico society (economic elites, peasants, urban labor, and the Church). New patterns of civil-military relations.

134C. Politics in Mexico (4)
Continuation of PS 134B. Emphasis on government policies and performance affecting economic development, job creation, population growth, social inequality, poverty, rural-urban imbalances, and migration. Case studies of specific government programs and regional variations in policy outcomes.

134N. Politics in Central America (4)
Focused examination of political conflict in one or more countries of the region, emphasizing issues, ideology, and process in grassroots political organization. Limited coverage of international politics.

136A. Nationalism and Ethnic Conflict (4)
Appropriate case studies from around the world will be selected.

136B. Comparative Politics and Political Culture (4)
This course is designed to provide undergraduates with a sound introduction to cultural interpretations of power and politics. The course will also attempt to render an explicit account of the process of theory formation in social science. Special attention will be given to Africa and Asia.

136C. Comparative Bureaucracy (4)
Politics of the administrative state in the world's democracies. How political institutions influence governance across different types of democratic institutional environments.

137A. Comparative Political Parties and Interest Groups (4)
This course serves as an introduction to the comparative study of political parties and interest groups. The course has three parts: 1) an analytical introduction to parties, interest groups, and their role in democratic representation; 2) parties and interest groups in Great Britain; and 3) parties and interest groups in Italy. *Prerequisite: PS 11 or consent of instructor.*

138D. Special Topics in Comparative Politics (4)
An undergraduate course designed to cover various aspects of comparative politics.

139A. Politics of the Ancient World Order (4)
An introduction to the domestic and international political orders of the ancient West. Primary focus will be on the strengths and limitations of comparative and international relations theories when applied to the ancient world of city-states, kingdoms, and empires.

International Relations

140A. International Law and Organizations (4)
International law and organizations are central to the efforts to create a world order to limit armed conflict, regulate world economy, and advance programs for economic redistribution among nations, and set minimum standards of human rights. This course explains the theory of international law and organizations that is accepted by diplomats and compares this viewpoint to the analysis of social scientists concerning the past record and likely future of world order concerning conflict, economic redistribution, and human rights.

142A. United States Foreign Policy (4)
United States foreign policy from the colonial period to the present era. Systematic analysis of competing explanations for U.S. policies—strategic interests, economic requirements, or the vicissitudes of domestic politics. Interaction between the U.S., foreign states (particularly allies), and transnational actors are examined. *Prerequisite: PS 12 or consent of instructor.*

142B. U.S. Foreign Economic Policy (4)
Seeks to explain U.S. foreign economic policies. Topics include: globalization—benefits and costs, winners and losers; interest group influence on trade policy; domestic and international institutions; multinational corporations; exchange rates; currency crises; environment and labor standards.

142I. National and International Security (4)
A survey of theories of defense policies and international security.

142J. National Security Strategy (4)
A survey of American strategies for national defense. Topics may include deterrence, coercive diplomacy, limited war, and unconventional warfare.

142K. Politics and Warfare (4)
This course offers an exploration of general theories of the origins of warfare; the impact of the state on war in the modern world; and the micro-foundations of combat and compliance in the context of the costs of war and military mobilization. The course should be of special interest to students in international relations and comparative politics.

142L. Insurgency and Terrorism (4)
"Terrorism" uses "illegitimate" violence to achieve political goals. This course uses philosophical, historical, and contemporary material from distinct cultures to understand which actions are defined as "terrorist," who uses them, why, and when, as well as the determinants of their effectiveness.

142M. U.S. Foreign Policy/Regional Security (4)
Lectures and readings examine U.S. foreign policy in Europe, Latin America, and East Asia with attention to current problems with specific nations (e.g., Bosnia) and issues (e.g., terrorism). This course integrates historical, comparative, and foreign perspectives on regional security dynamics. Credit will not be given to students who took PS 154 Special Topic/International Relations with the subtitle U.S. Foreign Policy/ Regional Security, in spring 1998, spring 2001, or fall 2002.

144AA. Politics and the International Economic Order (4)
This course examines the interplay of politics and economics in international relations and entails a review of the history of the international economic order from the seventh century through the present. Stress is placed on the evolution of the bargaining about money, trade, and investment.

144AB. Selected Topics in International Political Economy (4)
This course will consider major theories purporting to explain and predict the workings of the international order from the point of view of political economy. An extended discussion of one aspect of the economic order (e.g., the multinational corporation) will serve as the test case. PS 144AA and one quarter of economics recommended. *Prerequisite: PS 12.*

144D. Political Dimensions of International Finance (4)
(Conjoined with PS 262, IP/Gen 402, and IP 202.) Examination of effects of national policies and international collaboration of public and private international financial institutions, in particular management of international debt crisis, economic policy coordination, and the role of international lender of last resort. *Prerequisite: upper-division standing or permission of instructor. Previous background in economics strongly recommended.*

144E. The Politics of International Trade (4)
Examines theories of trade and protectionism, focusing both on relations among advanced industrial nations and on relations between developed and developing countries. Topics include standard and strategic trade theory, nontariff barriers to trade, export-led growth strategies, regional trade agreements, and the future of the WTO.

144F. The Politics of International Trade and Finance (4)
Examines the welfare and distributional aspects of international trade and finance as they relate to the politics of economic policymaking. Topics include: globalization in historical perspective; origins and consequences of trade policy; exchange-rate arrangements; international capital flows; currency crises; economic development.

145A. International Politics and Drugs (4)
This course examines the domestic and international aspects of the drug trade. It will investigate the drug issues from the perspectives of consumers, producers, traffickers, money launderers, and law enforcement. Course material covers the experience of the United States, Latin America, Turkey, Southeast Asia, Western Europe, and Japan.

145B. Conflict and Cooperation in International Politics (4)
Course on how countries overcome problems of conflict and cooperation in their dealings with one another. Focuses on theories of emergence of cooperation among states and applies these to various issue-areas. Subjects examined include international monetary relations, military alliances, economic sanctions, human rights, arms control, international trade, and others. *Prerequisite: PS 12.*

145C. International Relations After the Cold War: Theory and Prospect (4)
The nature of international politics appears to have changed dramatically since the end of the Cold War in 1989. This course applies different theoretical approaches to enhance our understanding of the new international environment, the future prospects for peace and war, and current problems of foreign policy.

146A. The U.S. and Latin America: Political and Economic Relations (4)
An analytical survey of U.S. relations with Latin America from the 1820s to the present, with particular emphasis on the post-Cold War environment. Topics include free trade and economic integration; drugs and drug trafficking; illegal migration and immigration control. Focus covers U.S. policy, Latin American reactions, dynamics of cooperation, and options for the future.

146E. U.S.-Latin American Relations: Security Issues (4)
This course will examine the history of security relations in the western hemisphere. They will be considered in global, regional, and rational contexts. International institutions, economic relations, domestic politics, and military issues will be examined for their contribution to explaining the evolution of the inter-American security agenda from independence to the post-Cold War. *Prerequisite: PS 12.*

146XL. 146E U.S.-Latin American Relations: Security Issues Foreign Language Discussion Section (1)
Students will exercise advanced foreign language skills to discuss materials in the PS 146E course. This section is taught by the course professor; has no final exam, and does not affect grade in PS 146E. *Prerequisite: must be co-registered in PS 146E.*

150A. Politics of Immigration (4)
Comparative analysis of attempts by the United States, western Europe, and Japan to initiate, regulate and reduce immigration from Third World countries. Social and economic factors shaping outcomes of immigration policies, public opinion toward immigrants, anti-immigration movements, and immigration policy reform options in industrializedcountries.

152. Foreign Policy Analysis (4)
This upper-division course focuses on the comparative study of foreign policies in contemporary and historical world affairs. Competing theoretical approaches drawn from international, domestic, and individual levels of analyses will be examined. War, security, alliances, and international crises will be used to evaluate the utility of competing approaches. *Prerequisite: PS 12.*

154. Special Topics in International Relations (4)
An undergraduate course designed to cover various aspects of international relations.

Policy Analysis

160AA. Introduction to Policy Analysis (4)
(Same as USP 101) This course will explore the process by which the preferences of individuals are converted into public policy. Also included will be an examination of the complexity of policy problems, methods for designing better policies, and a review of tools used by analysts and policy makers. *Prerequisite: PS 10 or 11.*

160AB. Introduction to Policy Analysis (4)
In this course, students will use their knowledge of the political and economic foundations of public policy making to conduct research in a wide variety of public policy problems. *Prerequisite: PS 160AA.*

161. Understanding Direct Legislation (4)
The purpose of the course is to examine how the referendum, initiative, and recall (direct legislation) are used to determine policy. The class will survey the historical and contemporary direct legislation literature in order to understand the popular and academic debate concerning direct legislation's use.

162. Environmental Policy (4)
This course will explore contemporary environmental issues such as global warming, endangered species, and land use. Students will be asked to analyze various policy options and to write case analyses. Policies may be debated in class.

163. Analyzing Politics (4)
Politics are understood as the combination of individual preferences and decisions into collective choices. What are the issues involved in aggregating individual preferences, what is the choice of rules—formal and informal—for doing so.

165. Special Topic: Policy Analysis (4)
An undergraduate course designed to cover various aspects of policy analysis.

166F. The American Welfare State (4)
(Same as USP 112) This course examines the building of the welfare state in the twentieth century. Topics include the legacy of progressivism, the New Deal and Great Society; Reaganite retrenchment; social programs, party and electoral dynamics; and the welfare state's impact on groups and the class structure.

167A. Seminar: Public Policy Analysis (4)
Students are asked to analyze various policy options related to contemporary American policy issues. Students are also required to do directed research on policy issues, to write case analyses based on their findings, and to debate policy alternatives in class. *Prerequisite: PS 10 or 11.*

168. Policy Assessment (4)
The use of real data to assess policy alternatives. Introduction to benefit/cost analysis, decision theory, and the valuation of public goods. Applications to health, environmental, and regulatory economic policy making.

Research Methods

181A. Field Research Methods for Migration Studies: Seminar (4)
Introductory survey of methods used by social scientists to gather primary research data on international migrant and refugee populations, including sample surveys, unstructured interviewing, ethnographic observation, and archival research. Basic fieldwork practices and problem-solving techniques will also be covered. Students planning to take the continuation of this course, Political Science 181B, should note that conversational fluency Spanish is a requirement for Political Science 181B. *Prerequisites: upper-division status, permission of instructor.*

181B. Field Research Methods for Migration Studies: Practicum (12)
Continuation of Political Science 181A. Students will apply one or more data collection methods learned in Political Science 181A to collect data from a sample of international migrants, refugees, or returned migrants in a high-migration community. Students participate in team field research, write a detailed individual report on the fieldwork experience and submit a detailed outline of a research paper to be based on data from the fieldwork, required of students who take the continuation of this course, Political Science 181C. Prior to fieldwork, students will read intensively about the research site and write a literature review essay. *Prerequisites: upper-division status, Political Seicnec 181A, conversational fluency in Spanish, permission of instructor.*

181C. Field Research Methods for Migration Studies: Data Analysis (4)
Continuation of Political Science 181B. Students will analyze primary data that they have helped to collect in a field research site and write a major paper based on these data for publication as a section of a co-authored report on the field research project. Methods for organizing and processing field research data for analysis, techniques of quantitative data analysis, and report preparation conventions will be covered. *Prerequisites: upper-division status, Political Science 181B, permission of instructor.*

Special Studies

191A-B. Senior Honors Seminar: Frontiers of Political Science (4-4)
This course is open only to seniors interested in qualifying for departmental honors. Admission to the course will be determined by the department. Each student will write an honors essay under the supervision of a member of the faculty.

194. Research Seminar in Washington, D.C. (4)
(Same as Com/Gen 194; USP 194, HIST 193, SocE 194, ERTH 194, COGS 194) Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. *Prerequisites: participating in UCDC program.*

197I. Political Science Washington Internship (6)
This internship is attached to the UC in DC Program. Students participating in the UC in DC Program are

placed in an internship in the Washington, DC, area for twenty-four hours per week. *Prerequisites: must be enrolled in the UC in DC Program.*

199. Independent Study for Undergraduates (2 or 4)
Independent reading in advanced political science by individual students. (P/NP grades only.) *Prerequisite: consent of instructor.*

GRADUATE

All graduate courses are categorized as either seminars or independent study.

Seminars

200. Political Science: Scope and Methods (4)
This course examines a variety of approaches to the study of politics, focusing on their intellectual history, canonical works that illustrate their major themes, and methodological critiques and defenses. The course seeks to clarify how interesting and important questions are discovered and how appropriate research is designed and executed.

200A. Foundations of Political Science (4)
An introduction to the theoretical concepts in the discipline of political science that are commonly used across various sub-fields. Each week will introduce the core concept(s) and discuss applications from several, if not all sub-fields in the department.

200B. Democracy (4)
An overview of the normative and positive issues associated with modern democracies. The appeal and the social, political, and economic arrangements of democracies will be explored.

200C. States and Markets (4)
An overview of the normative and positive issues associated with decentralized (market) versus centralized (political) mechanics of allocation. The appropriate role of government in the economy will be explored.

203. Math for Political Science (4)
Mathematical skills necessary for doing graduate work in political science. Topics include optimization, linear algebra, probability, set theory, and formal logic.

204A. Research Design (4)
This course will study various approaches to knowledge accumulation in social science. A basic outline of scientific method will be used to examine the difference between theories as assumptions and axioms and hypotheses as "if-then" statements derived from theory. Experimental, quasi-experimental, and qualitative designs will be discussed.

204B. Quantitative Methods I (4)
The use of quantitative methods (particularly multiple regression and its extensions) in political science. Emphasis on understanding the methods and using them in political science applications.

204C. Game Theory 1 (4)
This course introduces students to the rudiments of decision theory and game theory. Emphasis will be placed on modeling and solving games.

210A. Systems of Political Thought: Thucydides to Augustine (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Thucydides to Augustine. Some of the secondary literature on this period will also be explored.

210B. Systems of Political Thought: Machiavelli to Rousseau (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Machiavelli to Rousseau. Some of the secondary literature on this period will also be explored.

210C. Systems of Political Thought: Kant to Nietzsche (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to European political thought from Kant to Nietzsche. Some of the secondary literature on this period will also be explored.

210D. Systems of Political Thought: Contemporary (4)
This course is a preparation for the field examination in political theory. It will provide an intensive and critical introduction to twentieth-century political thought. Some of the secondary literature on this period will also be explored.

211A. American Political Thought (4)
This course explores American debates over political ideals, institutions, and identity from the Puritans to the present. Themes will include freedom and slavery, sovereignty and representation, individual and community, diversity and equality. Readings will vary from year to year. *Prerequisite: graduate standing or consent of instructor.*

212A. The Political Uses of Antiquity (4)
This course explores debates in the history of political thought about classical antiquity and its relationship to the modern world. The meaning, motivation, and significance of gestures toward antiquity as a model for judging contemporary politics and culture will be discussed. *Prerequisite: graduate standing or consent of instructor.*

113B/213B. Chinese and Japanese Political Thought I (4/4)
Examines philosophical traditions of ancient and modern China and Japan, to understand how these have been reflected in Chinese and Japanese development. Course will be in English; however, students with Chinese or Japanese language skills will have opportunity to use these. Graduate students will be required to complete a seminar-length research paper; undergraduate students will write a paper. *Prerequisites: upper-division standing for 113B; graduate standing or consent of instructor for 213B.*

215. The Self and the Political Order (4)
The course deals with the interrelationship of understandings of the political order and understandings of the self. The course will focus on the two great theorists of modernity, Rousseau and Nietzsche. Extensive readings from primary and secondary sources. *Prerequisite: graduate standing or consent of instructor.*

218A. The "Political" in Systematic Theology (4)
An historical analysis of systematic theology in the Judeo-Christian tradition as political theory. Emphasis is placed on the politicization of the political dimensions of the early Church, its encounter with positivism, and the emergence of Catholic social doctrine. *Prerequisite: upper-division standing or consent of instructor. Two courses in philosophy, or political or social theory are recommended, or graduate standing.*

218B. The Political Theory of Liberation Theology (4)
A comparative study of liberation theologies, including Continental, Latin American, South African, and East Asian. *Prerequisite: graduate standing or consent of instructor.*

219. Special Topics in Political Theory (4)
This seminar is an examination of the different approaches to the study of political theory. Issues and research areas will vary each time the course is offered. *Prerequisite: graduate standing or consent of instructor.*

220. Comparative Politics: State and Society (4)
This course will provide a general literature review in comparative politics to serve as preparation for the field examination. *Prerequisite: graduate standing in any discipline in the social sciences or humanities, or consent of instructor.*

221. Comparative Politics: Institutions (4)
This is a second course in comparative politics designed as a preparation for the field examination. It will focus on the comparative study of political institutions. *Prerequisite: graduate standing in any discipline in the social sciences or humanities, or consent of instructor.*

222. Measuring Democracy (4)
Research seminar that focuses on the problems of measurement, operationalization, and validity in the comparative study of types, causes, and consequences of democracy.

222A. American Politics in Comparative Perspective (4)
Research seminar that focuses on the systematic comparison of the American political system with about thirty other contemporary democracies, particularly the other large industrialized countries. A central aim will be to assess the claims about American "exceptionalism." *Prerequisite: graduate standing or consent of instructor.*

223A. Comparative Parliamentary Studies (4)
This course surveys the academic literature on parliamentary studies comparing the research on legislative elections. Behavior and organization in American, European, and Asian democracies. The course will also compare various approaches to studying legislative activity. *Prerequisite: graduate standing.*

225. The Politics of Divided Societies (4)
Research seminar that surveys the theoretical literature on divided societies in Africa, Asia, Europe, North America, and South America, particularly conflict and peacemaking in multiethnic countries. Cases to be studied in depth will be selected in accordance with students' area and country interests. *Prerequisite: graduate standing or consent of instructor.*

226. Authoritarian Politics (4)
Research seminar that surveys the theoretical literature on non-democratic political systems. Readings draw from cases in Africa, Asia, Europe, and Latin America. *Prerequisite: graduate standing or consent of instructor.*

228. Comparative Bureaucracy (4)
This course examines the politics of the administrative state in the world's democracies. The course focuses on how political institutions affect the nature of governance in democracies.

229. Special Topics in Comparative Politics (4)
This seminar is an examination of the different approaches to the study of comparative politics. Issues and research areas will vary each time the course is

offered. *Prerequisite: graduate standing or consent of instructor.*

230A. The Mexican Political System (4)
An interdisciplinary graduate seminar covering selected aspects of Mexican politics, economic development, and social change. Attention to both domestic and international factors affecting Mexico's transition to a more democratic system. Materials to be drawn from literatures in anthropology, economics, history (twentieth century), political science, sociology, urban studies, and communication. Topics vary from year to year partly reflecting research interests of participating students. Students are expected to write substantial research papers or thesis proposals. *Prerequisite: graduate standing or consent of instructor.*

231A. Political and Economic Development in Eastern Europe: Historical Perspective (4)
This course deals with issues in economic and political development in Eastern Europe prior to World War II. *Prerequisite: graduate standing or consent of instructor.*

231D. Politics of the Soviet Successor States (4)
A colloquium surveying major controversies in the analyses of Soviet and post-Soviet politics. *Prerequisite: graduate standing or consent of instructor. Cannot also receive credit for PS 231.*

231E. Politics of Development (4)
This course provides an overview of previous and current efforts to explain political and economic development in non-western settings. *Prerequisite: graduate standing or consent of instructor.*

232C. Political Development and Modern China (4)
Political development has dominated the study of comparative politics among U.S. academicians since the revival of the Cold War in 1947. This course examines critically this paradigm and its Western philosophical roots in the context of the experience of modern China. *Prerequisite: graduate standing or consent of instructor.*

235A. Latin American Politics (4)
Introductory reading seminar on Latin American politics to acquaint students with leading schools of thought, provide critical perspective on premises and methodology, and identify themes for further inquiry. Themes include authoritarianism, revolution, democratization, regional conflict, and emergence of middle-level powers.

236. Immigration Policy and Politics (4)
An interdisciplinary seminar covering origins, consequences, and characteristics of worker migration from Third World countries (especially Mexico, Central America, and the Caribbean basin) to the United States, from the nineteenth century to the present.

240. International Relations Theory (4)
A survey of the principal theories and approaches to the study of international relations. *Prerequisite: graduate standing or consent of instructor.*

243. International Security (4)
A colloquium surveying the major theoretical controversies in the study of international and national security. *Prerequisite: graduate standing or consent of instructor.*

244A. European Integration (4)
This seminar provides perspectives on the theories and politics of European integration. Analysis will focus on the development of the European Union, the functioning of core institutions, and the challenges of creating a supranational political regime.

245. International Political Economy (4)
A seminar surveying the major theoretical controversies in the study of international political economy. *Prerequisite: graduate standing or consent of instructor.*

247A. Quantitative International Relations (4)
Explores empirical research in international relations with special emphasis on international conflict. Topics covered include theories on the causes of war, the distribution of power and conflict, formal and informal alignment, interdependence and conflict, linkages between domestic and international processes, and issues of research design. *Prerequisite: graduate standing or consent of instructor.*

247B. Formal Models in International Relations (4)
Explores formal analytic and primarily game-theoretic research in international relations with emphasis on conflict and bargaining. Topics include: causes of war and peace, conventional and nuclear deterrence, crisis bargaining, arms race, and two-level games.

248. Special Topics in International Relations (4)
(Same as IRGN 290) This seminar is an examination of the different approaches to the study of international relations. Issues and research areas will vary each time the course is offered. *Prerequisite: graduate standing or consent of instructor.*

250. American Politics (4)
This course will provide a general literature review in American politics to serve as preparation for the field examination. *Prerequisite: graduate standing in any discipline in the social sciences or humanities, or consent of the instructor.*

251. American Political Institutions (4)
A critical examination of major contributions to the theoretical and empirical literature on the U.S. Congress, presidency, and federal bureaucracy. *Prerequisite: graduate standing or consent of instructor.*

252. American Politics: Behavior
Theoretical and empirical perspectives on voting and other forms of political participation, parties, interest groups, and public opinion in the United States. *Prerequisite: graduate standing or consent of instructor.*

254. American Political Development (4)
This course examines the historical evolution of the American state with particular attention to theories of political development. Special topics include the development of the party system, electoral and policy realignments, and the evolution of national political institutions. *Prerequisite: graduate standing in any discipline of the social sciences or humanities or consent of instructor.*

255. Urban Politics (4)
Examines central works on the development of political institutions in U.S. cities; analyses of community power structures; who governs, why, and to what ends; processes and prospects for minority empowerment; the prominence of "growth machines"; the political economy of contemporary cities. *Prerequisite: graduate standing or consent of instructor.*

256. Jurisprudence and Public Law (4)
An introduction to the field, including discussion of major jurisprudential theories (Dworkin, Ely, etc.) and constitutional controversies (e.g., abortion, the First Amendment). *Prerequisite: graduate standing.*

256A. Judicial Politics (4)
Judicial politics is the study of law and courts as political institutions and judges as political actors, focusing on decision-making and power relations within courts, within the judicial hierarchy, and within the constitutional system.

257. Voting and Elections (4)
This course is designed to acquaint graduate students with the central themes and issues in the study of voting in national elections. *Prerequisite: graduate standing or consent of instructor.*

258. Advanced Topics in Jurisprudence and Public Law (4)
This seminar will explore a single broad topic in depth, using both case material and discussions of the topic in empirical and theoretical literature. Examples of topics include race and the law; and sexuality, gender, and the law. Intended for graduate students preparing general exams in jurisprudence and public law, American politics, and political theory.

259. Special Topics in American Politics (4)
This seminar is an examination of the different approaches to the study of American politics. Issues and research areas will vary each time the course is offered. *Prerequisite: graduate standing or consent of instructor.*

273B. Game Theory and Political Applications (4)
This course builds on the concepts and methods in 273A, exploring the use of formal models in political science. *Prerequisite: PS 273A or consent of instructor.*

282A-B-C. Workshop on State and Society (4-4-4)
Examination of recent research in American politics, comparative politics, and political theory concerning the relationship of politics to society; development and presentation of research projects by graduate students; presentations of research projects by faculty. Second-year students present seminar paper; third-year students present dissertation prospectus; candidates make yearly presentations of dissertation research. *Prerequisite: PS 202 or consent of instructor.*

283A-B-C. Workshop in International Relations (4-4-4)
Examination of recent research in international politics; development and presentation of research projects by graduate students; presentations of research projects by faculty. Second year students present seminar paper; third year students present dissertation prospectus; candidates make yearly presentation of dissertation research. *Prerequisite: PS 202 or permission of instructor.*

284. Workshop on Scientific Communication (4)
Forms of scientific communication, practical exercise in scientific writing and short oral communication, and in criticism and editing; preparation of illustrations, preparation of proposals; scientific societies, and the history of scientific communication. Examples from any field of science, most commonly political science, economics, and law. *Prerequisite: PS 202 or consent of instructor.*

286A-B-C Workshop in Political Analysis (4-4-4)
Students will read and critique new research articles in political analysis. Students will present these critiques to the workshop. Students will also present their own methodological analyses to the workshop. *Prerequisite: graduate standing or consent of instructor.*

Independent Study

291A. Research Tutorial in American Politics (4)
Tutorial in a selected area of American politics leading to a research paper. The content of each tutorial will be

determined by the professor. *Prerequisite: graduate standing in political science.*

291D. Research Tutorial in Political Theory (4)
Tutorial in a selected area of political theory leading to a research paper. The content of each tutorial will be determined by the professor. *Prerequisite: graduate standing in political science.*

298. Directed Reading (1-12)
Guided and supervised reading in the literature of the several fields of political science.

299. Dissertation Research (1-12)
Independent work by graduate students engaged in research and writing of second-year paper and doctoral dissertation, under direct supervision of adviser.

500. Apprentice Teaching (1-4)
A course in which teaching assistants are aided in learning proper teaching methods by means of supervision of their work by the faculty: handling of discussions, preparation, and grading of examinations and other written exercises, and student relations. Twenty-four units of teaching apprenticeship meets the department teaching requirement for the Ph.D. degree.

501. Seminar on Teaching Development—American Politics (1-4)
A seminar designed for graduate students serving as teaching assistants in American politics, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. *Prerequisite: graduate standing.*

502. Seminar on Teaching Development—Comparative Politics (1-4)
A seminar designed for graduate students serving as teaching assistants in comparative politics, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. *Prerequisite: graduate standing.*

503. Seminar on Teaching Development—International Relations (1-4)
A seminar designed for graduate students serving as teaching assistants in international relations, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. *Prerequisite: graduate standing.*

504. Seminar on Teaching Development—Political Theory (1-4)
A seminar designed for graduate students serving as teaching assistants in political theory, includes discussion of teaching theories, techniques, and materials, conduct of discussion sessions, and participation in examinations, under the supervision of the instructor in charge of the course. *Prerequisite: graduate standing.*

Stephan Anagnostaras, Ph.D.
Leslie L. Carver, Ph.D.
Beatrice Golomb, M.D., Ph.D., *Adjunct*
James L. Goodson, Ph.D.
Michael R. Gorman, Ph.D.
Christine R. Harris Ph.D.
Gail D. Heyman, Ph.D.

Affiliated Faculty

Michael Cole, Ph.D., *University Professor, Communication*
Jean M. Mandler, Ph.D., *Professor Emeritus, Cognitive Science*
Terrence J. Sejnowski, Ph.D., *Professor, Biological Sciences/Adjunct Professor, Physics, Neurosciences, Cognitive Science, and Computer Science and Engineering*

The Undergraduate Program

The Psychology Major Program

The department offers three degree programs: bachelor of arts (B.A.), bachelor of science (B.S.), and the integrated bachelor of science (B.S.)/master of arts (M.A.). We offer courses in all major areas of experimental psychology, with emphasis in behavior analysis, biopsychology, clinical psychology, cognitive psychology and cognitive neuropsychology, developmental psychology, human information processing, physiological psychology, psychopathology, sensation and perception, and social psychology. The department emphasizes research in the experimental and theoretical analysis of human and animal behavior, and the study of the mind. Students who major in psychology can expect to develop a knowledge of a broad range of content areas, as well as basic skills in experimental and analytic procedures.

Majors must have departmental approval for electives taken outside the department. Of the required courses in the area of specialization (three regular upper-division courses and two research experiences), no more than two may be taken outside the department. We recommend consulting the department before enrolling in courses offered by other departments.

Prerequisites for the B.A.

Experimental psychology uses the tools and knowledge of science: calculus, probability theory, computer science, chemistry, biology, physics, and statistics. Accordingly, students in upper-division courses must have an adequate background in these topics. Prerequisites for individual courses are specified in the catalog.

A bachelor of arts (B.A.) degree in psychology will be granted if the following requirements have been met:

1. Three lower-division, general-introductory natural science courses from the listing of the approved UCSD courses below or their equivalent. (The three courses can be distributed in any manner.)

   Biology: 1, 2, 3, 10, 12 (or Cognitive Science 17), 20, 24, 26, 30

   Chemistry: 4, 6A, 6B, 6C, 11, 12, 13

   Physics: Any of the 1 and 2 series, 10, 11

2. Three formal skills courses, at least one of which must be calculus. The other two courses may consist of any combination of courses in calculus or logic. Acceptable calculus courses at UCSD include Mathematics 10A-B-C, 20A-B-C. Acceptable logic courses at UCSD include Philosophy 10 and 12.

3. One introduction to computer programming course. Acceptable courses at UCSD are CSE 3, CSE 5A, CSE 5B, CSE 8A, CSE 8B, CSE 11, CSE 12, MAE 5, MAE 9, MAE 10, or CogSci 18. Other courses will be accepted only if they are primarily concerned with programming in a high-level computer language.

   All courses listed under 1–3 may be taken Pass/No Pass.

4. One quarter of statistics. Acceptable courses at UCSD are Psychology 60, Economics 120A, Sociology 60, Mathematics 11, or 181, BIEB 100, Cognitive Science 14, or equivalent. Statistics **MUST** be taken for a letter grade.

Students should complete these prerequisite requirements by the end of the sophomore year.

Major Requirements for the B.A.

A minimum of **twelve** upper-division courses in psychology is required. Five must be taken from the core courses (Psychology 101–106), and at least seven from the upper-division elective courses. **A minimum of six upper-division psychology courses must be taken at UCSD.** These courses must be taken for a letter grade; courses taken on a Pass/No Pass prior to declaring psychology as a major **cannot** be used to satisfy the major requirement. Excluded from credit toward the major is Psychology 199 (Special Studies); however, Psychology 195 (Instructional Assistant) can be credited once. A grade-point average of at least 2.0 in the upper-division courses of the major is required for graduation.

2XX. Graduate Seminar

We encourage juniors and seniors with an overall 3.0 GPA or better to enroll in graduate seminars. Check the schedule of classes and contact the student affairs office on how to enroll.

Honors Program for the B.A. Program

Students are encouraged to participate in the department's honors program. It is strongly recommended for all students interested in graduate schools. An overall GPA of 3.3 is a prerequisite. Admission is granted by application in the fall of the junior year (deadline October 31). This program is composed of the following courses.

1. Junior year:

   Winter: Junior Honors Research Seminar 110. Advanced Statistics and Research Methods 111A

   Spring: Advanced Statistics and Research Methods 111B

2. Senior Year: A year-long independent research project (Psychology 194-A-B-C) under the sponsorship of a faculty adviser. This research culminates in an honors thesis.

3. At least one laboratory course (Psychology 107, 109, 114 , 115, 118A, 118B, 119, 120/121, 120/140, 127) or, upon petitioning, two Psychology 199 Independent Study courses culminating in a research paper accepted by the adviser (199s, however, do not count as upper-division credit toward the major).

Successful completion of the Honors Program requires a grade of A- in Psychology 194 and a minimum GPA of 3.5 in the upper-division courses taken for the major.

Prerequisites for the B.S.

In general, the prerequisites for the B.S. degree in psychology overlap with the B.A. prerequisites. However, to fulfill the formal skills, we require the mathematics sequence 20A-B-C.

Major Requirements for the B.S.

A minimum of twelve upper-division courses is required. Five of these courses must come from the core courses: Psychology 101–106. The seven elective courses may be chosen from any of the upper-division courses listed for the psychology program at UCSD.

B.S. students must choose an area of specialization (behavior analysis, biopsychology, clinical psychology, cognitive and cognitive neuropsychology, developmental psychology, sensation and perception, or social psychology), and three courses of the seven electives must be in the chosen area of concentration.

In addition to the twelve upper-division courses, all B.S. degree students must complete **two research experience courses** in the chosen area. Research experience courses will be comprised of a combination of laboratory courses and Psychology 199 (Independent Study). If two Psychology 199 courses are taken to fulfill this requirement, they must be directed by the faculty within the chosen area of specialization and culminate in a research paper approved by the adviser and submitted to the Undergraduate Student Services Office in due time for graduation.

2XX. Graduate Seminar

We encourage juniors and seniors with an overall 3.0 GPA or better to enroll in graduate seminars. Check the schedule of classes and contact the student affairs office for how to enroll.

Honors Program for the B.S.

The honors program is strongly recommended for all students interested in graduate schools.

In general, the honors program for the B.S. is the same as for the B.A. except that only one 199 rather than two is required. **NOTE:** The senior thesis, if done with a faculty member affiliated with the chosen area of concentration, will satisfy the laboratory experience requirement.

Successful completion of the honors program requires a grade of A– in Psychology 194 and a minimum GPA 3.5 in the upper-division courses taken for the major.

Upper-Division Course Requirements for the B.S.

Core courses of which five have to be taken for any area of concentration

Psych 101	Intro to Developmental Psychology
Psych 102	Intro to Sensation and Perception
Psych 103	Intro to Principles of Behavior
Psych 104	Intro to Social Psychology
Psych 105	Intro to Cognitive Psychology
Psych 106	Intro to Physiological Psychology

Areas of concentration and their associated courses are listed in alphabetical order below. (Subject to change—for additional qualifying courses, see the department's Student Affairs Office, 1533 McGill Annex).

Concentration in Behavior Analysis

Behavior analysis is based on the principles of Pavlovian and operant conditioning, and other aspects of contemporary associative learning theory. It also includes the application of reinforcement principles and other behavior modification techniques in applied settings (applied behavior analysis).

Courses:

Psych 109 Lab / Applied Behavior Analysis
Psych 120* Learning and Motivation
Psych 121* Lab / Operant Psychology
* to be taken concurrently with Psych 120
Psych 132 Hormones and Behavior
Psych 134 Eating Disorders
Psych 135 Evolutionary Principles/Animal Social Behavior
Psych 140* Lab/Human Behavior
* to be taken concurrently with Psych 120
Psych 143 Control and Analysis of Human Behavior
Psych 154 Behavior Modification
Psych 168 Psychological Disorders of Childhood
Psych 184 Choice and Self Control
Psych 188 Impulse Control Disorders
Psych 199 Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Biopsychology

This area studies how the nervous system mediates behavioral effects in the realms of motivation, perception, learning and memory, and attention. It also includes human neurophysiology and aphasia.

Courses:

Psych 107 Lab / Substance Abuse Research
Psych 114 Lab/Psychophysiological Perspectives on the Social Mind
Psych 125 Clinical Neuropsychology and Assessment
Psych 129 Logic of Perception
Psych 132 Hormones and Behavior
Psych 133 Circadian Rhythms—Biological Clocks
Psych 134 Eating Disorders
Psych 135 Evolutionary Principles/Animal Social Behavior
Psych 159 Physiological Basis of Perception
Psych 169 Brain Damage and Mental Function
Psych 179 Drugs, Addiction, and Mental Disorders
Psych 181 Drugs and Behavior
Psych 188 Impulse Control Disorders
Psych 199 Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Clinical Psychology

This area studies psychological and physiological causes of and treatments for mental illness in children and adults.

Courses:

Psych 107 Lab / Substance Abuse Research
Psych 109 Lab / Applied Behavior Analysis
Psych 124 Intro to Clinical Psychology
Psych 125 Clinical Neuropsychology and Assessment
Psych 131 Personality: Theory and Research
Psych 132 Hormones and Behavior
Psych 133 Circadian Rhythms—Biological Clocks
Psych 134 Eating Disorders
Psych 146 Persuasive Techniques
Psych 151 Tests and Measurement
Psych 154 Behavior Modification
Psych 155 Social Psychology and Medicine
Psych 163 Abnormal Psychology
Psych 168 Psychological Disorders in Children
Psych 172 Human Sexuality
Psych 184 Choice and Self-Control
Psych 188 Impulse Control Disorders
Psych 199 Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Cognitive Psychology and Cognitive Neuropsychology

a. The cognitive area studies reasoning, thinking, language, judgment, and decision-making in adults and children (including attention, memory, and visual and auditory information processing).
b. The cognitive neuropsychology area studies cognitive processes and their implementation in the brain. Cognitive neuroscientists use methods drawn from brain damage, neuropsychology, cognitive psychology, functional neuroimaging, and computer modeling.

Courses:

Psych 115 Lab / Cognitive Psychology
Psych 118 Lab 118A-B / Language Processing
Psych 119 Lab / Psycholinguistics
Psych 129 Logic of Perception
Psych 137 Social Cognition
Psych 141 Evolution and Human Nature
Psych 142 Psychology of Consciousness
Psych 144 Memory and Amnesia
Psych 145 Psychology of Language
Psych 148 Psychology of Judgment and Decision
Psych 152 Concepts of Intelligence
Psych 156 Cognitive Development in Infancy
Psych 161 Introduction to Engineering Psychology
Psych 187 Development of Social Cognition
Psych 199 Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Developmental Psychology

This area studies all aspects of human development with emphasis on social and personality development, perceptual development, and language acquisition. Also includes the study of developmental psychopathology.

Courses:

Psych 109 Lab / Applied Behavior Analysis
Psych 114 Lab/Psychophysiological Perspectives on the Social Mind
Psych 122 Aging
Psych 128 Practicum in Child Development
Psych 133 Brain and Cognitive Development
Psych 135 Evolutionary Principles/Animal Social Behavior
Psych 141 Evolution and Human Nature
Psych 145 Psychology of Language
Psych 152 Concepts of Intelligence
Psych 156 Cognitive Development in Infancy
Psych 168 Psychological Disorder of Childhood
Psych 172 Human Sexuality

Psych 180	Adolescence
Psych 185	Applied Developmental Psychology
Psych 187	The Development of Social Cognition
Psych 199	Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

(For additional qualifying courses, see the department's Student Affairs Office, 1533 Mandler Hall.)

Concentration in Sensation and Perception

This area studies how our sense organs and brain make it possible for us to construct our consciously experienced representation of the environment. Experiments using stimuli and computer control are used to test models of sensory or perceptual processes. Processes of particular interest include color vision, motion perception, and auditory illusions and paradox.

Courses:

Psych 125	Clinical Neuropsychology and Assessment
Psych 129	Logic of Perception
Psych 138	Sound and Music Perception
Psych 159	Physiological Basis of Perception
Psych 164	Mathematical Ideas in Psychology
Psych 169	Brain Damage and Mental Functions
Psych 182	Allusions and the Brain
Psych 199	Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Concentration in Social Psychology

This area studyies human behavior in social situations, with specialization in such topics as emotion, aggression, social cognition, and aesthetics. It also encompasses applied social psychology, including psychology and the law and behavioral medicine.

Courses:

Psych 114	Lab/Psychophysiological Perspectives on the Social Mind
Psych 127	Applied Social Psychology
Psych 130	Delay of Gratification
Psych 131	Personality: Theory and Research
Psych 135	Evolutionary Principles/Animal Social Behavior
Psych 137	Social Cognition
Psych 139	Social Psychology of Sports
Psych 141	Evolution and Human Nature
Psych 149	Social Psychology of Theater
Psych 152	Concepts of Intelligence
Psych 153	Psychology of Emotion
Psych 155	Social Psychology and Medicine
Psych 157	Happiness
Psych 160	Groups
Psych 162	Psychology and the Law
Psych 172	Human Sexuality
Psych 175	Psychology and the Arts
Psych 178	Industrial Organization Psychology
Psych 186	Psychology and Social Policy
Psych 187	Development of Social Cognition
Psych 199	Independent Study courses in this field, must culminate in a research paper to fulfill lab requirement (but do not count as upper-division psychology courses towards the major).

Advising

Students are strongly encouraged to choose an adviser among the faculty. The Undergraduate Student Services Office will assist with the choice, office hours, or appointments. The student then plans her or his major program with the aid of the adviser. Such planning should take place in the student's sophomore year or as soon as possible thereafter.

Preparation for Graduate School

Regardless of the area of specialization that a student chooses to pursue, it is strongly advised that she or he obtain a strong general background in statistics and experimental methods through research with a faculty member. A recommended program of study to accomplish these goals is the following:

1. At least five courses from the group numbered Psychology 101–106 (Core Courses)
2. At least one laboratory course (Psychology 107, 109, 114, 118A, 118B, 119, 120/121, 120/140, 127)
3. Introduction to Statistics and Advanced Statistics (Psychology 60 and 111A-B)
4. The Senior Independent Research Project, Psychology 194A-B-C, as part of the Honors Program or the Research Project 196A-B-C.
5. Strongly recommended: Independent Studies (Psychology 199).

Quarterly, the Associated Students' U.S. Grants Program awards funds to undergraduate students' research independent of in-class projects. We encourage students to apply. Also, check the Web at http://orpheus.ucsd.edu/finaid/Scholarships/ucsdsch.htm, usgrants@ucsd.edu, and http://usgrants.ucsd.edu; or visit the U.S. Grants Office on the third floor of the Price Center room 3.346 for an application.

Preparation for Graduate School in Clinical Psychology

The above program is recommended for all students planning to go on to graduate school, including those interested in a clinical graduate program. Experience in research methodology and a general knowledge of psychology are considered the most important features and are preferred over a large number of courses in one particular area. Students are strongly advised **not** to take a large number of clinical courses in lieu of the recommended program of study listed above.

The Minors Program

The minor in psychology consists of at least twenty-eight units (seven four-unit courses), of which at least twenty units (five four-unit courses) must be upper-division. At least four courses have to be taken at UCSD.

If Psychology 60 (Statistics) is chosen as one of the lower-division courses, it, too, has to be taken for a letter grade. The application for a minor can be obtained from your college.

Education Abroad

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress toward the major. Students considering this option should discuss their plans with the director of Undergraduate Studies before going abroad, and courses taken abroad must be approved by the department. Information on EAP/OAP is detailed in the Education Abroad Program of the *UCSD General Catalog*. Interested students should contact the Program Abroad Office in the International Center.

Transfer Credit

In general, all introductory courses in experimental psychology are accepted for lower-division credit toward a psychology minor. Lower-division courses covering special topics in psychology (e.g., personal adjustment, human sexuality) will be accepted only if: 1) the student

had a general introductory course as a prerequisite, and 2) the student had satisfied this prerequisite before taking the special topics course. Advance Placement credit for Statistics is not sufficient for the psychology major. Upper-division psychology courses will be evaluated for transfer credit on a course by course basis.

Elementary School Teaching

Majoring in psychology offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program (TEP) as early as possible in your academic career for information about the prerequisite and professional preparation requirements.

Major Requirements for the Integrated B.S./M.A.

An integrated program leading to a bachelor of science degree and a master of science degree in psychology is offered to those undergraduate students who are enrolled in any of the major programs offered in the Department of Psychology at UCSD. Qualified students are able to obtain the M.A. degree within one year following receipt of the B.S. degree. Students interested in applying to this program must meet with the B.S./M.A. adviser in the psychology student affairs office BEFORE the end of their junior year.

The program is open only to UCSD undergraduates. Psychology does not have financial aid available for students enrolled in this program.

Eligibility and Enrollment

To be eligible, students must have completed the first two quarters of their junior year in residence at UCSD and must have an overall UCSD GPA of at least 3.0 and students' major GPA should be at least 3.3. It is the responsibility of the prospective student to select a faculty member who would be willing to serve as the student's adviser and in whose laboratory the student would complete at least twenty-four units of research over a two-year period. Twelve of the twenty-four units of research Psychology 194A-B-C or 196A-B-C) must be completed during the student's senior undergraduate year and must be taken IN ADDITION to the requirements for the bachelor of science degree.

There are two applications:

1. In spring of the junior year, students apply to the integrated B.S./M.A. track if they fulfill above requirements.
2. In the spring of their senior year, they apply to the M.A. GREs are not required.

Requirements for the M.A.

For an M.A. in psychology, students must pick a concentration in one of six areas: Behavioral, Biological, Cognitive, Developmental, Sensation and Perception, and Social.

Students who have been approved (by both the Departmen of Psychology and UCSD Office of Graduate Studies) for the program must enroll in their graduate year in:

- Psychology 201A-B *Quantitative Methods,*
- Psychology 270A-B-C *Introduction to Laboratory Experimentation,*
- Four psychology seminars, two of which are in their area of concentration. In addition, three of the four seminars must be pro-seminars, which include:

  Psychology 217 *Developmental Psychology,*

  Psychology 218 *Cognive Psychology,*

  Psychology 219 *Behavioral Psychology,*

  Psychology 220 *Social Psychology,*

  Psychology 221 *Sensation and Perception,* and

  Psychology 222 *Behavioral Psychology.*
- one Psychology 500 *Teaching Instruction*

This amounts to forty units of graduate work. All courses must be completed with the grade of B^+ or better. All course work is to be approved by the advisers (forms available from the Undergraduate Students Affairs Office). Students are expected to meet the graduate requirements for the M.A. in *one year* (three consecutive, contiguous, academic quarters, beginning in the fall after graduation). Any deviation from this plan, such as a break in enrollment for one or more quarters, will cause the student to be dropped from the program.

All forms required for the program must be submitted and approved by the psychology undergraduate coordinator prior to each quarter of the graduate year. This includes the Application for Candidacy. Students must pay fees and be officially enrolled at UCSD during the quarter that the master's degree is to be awarded. The thesis draft should be submitted to the Office of Graduate Studies and Research for review before the final copy is officially submitted.

See the Undergraduate Students Affairs Office for further details.

The Graduate Program

The Department of Psychology provides broad training in experimental psychology. Increased specialization and the general burgeoning of knowledge make it impossible to provide training in depth in every aspect of experimental psychology, but most aspects are represented in departmental research.

Preparation

Apart from the general university requirements, the department generally expects adequate undergraduate preparation in psychology. A major in the subject, or at least a strong minor, is normally a prerequisite, but applicants with good backgrounds in such fields as biology and mathematics are also acceptable.

Language Requirements

There is no foreign language requirement.

Graduate Curriculum

All students must fulfill all course requirements (stated below) while registered as graduate students in psychology at UCSD. There may occasionally be exceptions granted to this rule. Requests for exception should be in the form of petitions from students and their advisers to the Committee on Graduate Affairs. It is in the best interest of the student if these petitions are forthcoming at the time of admission to the graduate program. In this way, the committee, the students, and their advisers will all be aware of the course requirements before any of them are taken.

Program of Study

Courses are divided into six areas: *behavior analysis* (including basic and applied), *biopsychology* (including neuropychology and neurophysiology), *cognitive* (including attention, language, and perception), *developmental* (including language acquisition), *sensation and perception* (including vision and audition), and *social* (including health and law). The Graduate

Affairs Committee provides an approved list of courses from these areas. In the first year of study, each student must fulfill the following four requirements:

1. Each student must fulfill a quantitative methods requirement, either by taking two quantitative methods courses approved by the Graduate Affairs Committee (currently 201A and 201B), or by showing a satisfactory knowledge of these courses through an examination.
2. In addition to the quantitative methods requirement, each student is expected to take four proseminars and four approved courses from the list prepared by the Graduate Affairs Committee. All course work must be completed by the end of the third year.
3. Each first-year graduate student is required to submit a research paper on the research project (Psychology 270ABC). The paper should be comparable in style, length, and quality to papers published in the normal, refereed journals of the student's research area. (The publication manual of the American Psychological Association, fourth edition, 1995, gives an acceptable format.)

   The research paper will be read and evaluated by the student's research adviser and by at least two other readers appointed by the graduate adviser.

   The research paper is presented orally at a research meeting held at the end of the spring quarter. Attendance at this meeting is a requirement for the department's graduate students and faculty. Typically, each student is allowed ten minutes to present the paper, with a five-minute question period following the presentation.
4. A teaching requirement must be met. (see below)

   All students are evaluated by the entire faculty at the end of the academic year. The normal minimum standards for allowing a student to continue beyond the first year are:

   a. satisfactory completion of the first-year research project (including oral presentation),
   b. at least a B+ in the quantitative methods courses,
   c. a B+ average in the courses which fulfill the area requirements, and
   d. having a faculty adviser in the psychology department.

Any student whose needs cannot be reasonably met with courses conforming to these guidelines is encouraged to petition the Graduate Affairs Committee. The petition should contain a specific list of courses and a statement of justification and must be approved by the student's adviser.

Advancing to Candidacy

In order to advance to Ph.D. candidacy a student must:

1. Complete all first year requirements,
2. Complete an additional four elective courses from the list prepared by the Graduate Affairs Committee, and
3. Complete the qualifying examination for the Ph.D.

The qualifying examination is divided into two sections to be taken separately by all students. *Part I* of the qualifying exam consists of a paper written by the student that is modeled after those published in *Psychological Bulletin* or *Psychological Review*. Ideally, the paper would consist of a detailed review and theoretical synthesis of a coherent body of research. The paper should demonstrate independent and original thinking on the part of the student, and should either take a theoretical stance or recommend experiments designed to resolve theoretical ambiguities (i.e., the paper should not merely review published research).

Students form a qualifying committee in much the same way that they form a dissertation committee. The same rules apply, except that members from outside the department need not be included (although up to two may be). Once the committee is formed, the student should prepare a brief (e.g., three pages) proposal defining the area of research and the theoretical issues that will be addressed in the paper. A proposal meeting is then arranged (usually in spring quarter of the student's second year), and committee members may at that time recommend changes in the scope of the paper and define their expectations.

The paper does not have a prescribed length, although low-end and high-end limits of thirty and fifty pages, respectively, seem reasonable. An oral defense of the paper is required (and should be completed by the end of the student's third year).

Part II of the qualifying examination is the defense of the dissertation proposal. This will normally follow *Part I* of the qualifying examination and will be an oral examination including outside examiners.

Teaching

In order to acquire adequate teaching experience, all student are required to participate in the teaching activities of the department for at least four years (one quarter for the first year and two quarters the second through the fourth year).

Residency

Each student must complete the requirements for qualification for candidacy for the Ph.D. degree by the end of the third year of residence. Any student failing to qualify by this time will be placed on probation. A student who fails to qualify by the end of the spring quarter of the fourth year of residence will automatically be terminated from the department.

No students may allow more than eight calendar years to elapse between starting the graduate program and completing the requirements for the Ph.D. degree. Students will automatically be terminated from the program at the end of the spring quarter of their eighth calendar year in the department.

Research

In each year of graduate study all students are enrolled in a research practicum (Psychology 270 in the first year; Psychology 296 in subsequent years). Students are assigned to current research projects in the department and recieve the personal supervision of a member of the staff.

Departmental Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years. Total university support cannot exceed eight years. Total registered time at UCSD cannot exceed eight years.

COURSES

LOWER-DIVISION

Experimental Requirements

Psychology at UCSD is a laboratory science. We are concerned with the scientific development of knowledge about human and animal

behavior and thought. Accordingly, experience with experimental procedures plays an important role in the undergraduate and graduate training of students.

All psychology majors must learn experimental methods, including basic statistical techniques. Students in the Honors Program must take laboratory courses and also do a year-long undergraduate thesis.

ATTENTION lower-division students: Students enrolled in the lower-division psychology courses *must* serve as experimental subjects for three hours per course. The requirement is intended to be a positive educational supplement to the course work. Part of each experimental session will be devoted to explanation and discussion of the purpose and nature of the experiment. This usually will be done at the end of the experimental session. Students always have the right to discontinue participation at any point in any study. Students who are unable to participate or who choose not to participate will be provided alternate service assignments which are designed to serve similar educational goals.

1. Psychology (4)
A comprehensive series of lectures covering the basic concepts of modern psychology in the areas of human information processing, learning and memory, motivation, developmental processes, language acquisition, social psychology, and personality.

2. General Psychology: Biological Foundations (4)
A survey of physiological and psychological mechanisms underlying selected areas of human behavior. Emphasis will be upon sensory processes, especially vision, with emphasis also given to the neuropsychology of motivation, memory, and attention.

3. General Psychology: Cognitive Foundations (4)
This course is an introduction to the basic concepts of cognitive psychology. The course surveys areas such as perception, attention, memory, language, and thought. The relation of cognitive psychology to cognitive science and to neuropsychology is also covered.

4. General Psychology: Behavioral Foundations (4)
This course will provide a basic introduction to behavioral psychology, covering such topics as classical conditioning, operant conditioning, animal learning and motivation, and behavior modification.

6. General Psychology: Social Foundations (4)
This course will provide a basic introduction to social psychology, covering such topics as emotion, aesthetics, behavioral medicine, person perception, attitudes and attitude change, and behavior in social organizations.

60. Introduction to Statistics (4)
Introduction to the experimental method in psychology and to mathematical techniques necessary for experimental research. *Prerequisite: one year mathematics or consent of instructor.*

87. Freshmen Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen. *Prerequisites: none.*

90. Undergraduate Seminar (1)
This seminar introduces the various subdisciplines in psychology and their research methods, and also explores career and graduate school opportunities. This includes informal presentations by faculty, graduate students, and other professionals.

99. Independent Study (2,4)
Independent study or research under direction of a member of the faculty. *Prerequisites: lower-division standing, completion of at least thirty units of undergraduate study at UCSD with a minimum UCSD GPA of 3.0; completed and approved Special Studies form.*

UPPER-DIVISION

101. Introduction to Developmental Psychology (4)
A lecture course on a variety of topics in the development of the child, including the development of perception, cognition, language, and sex differences. *Prerequisite: Psychology 60*

102. Introduction to Sensation and Perception (4)
An introduction to problems and methods in the study of perception and cognitive processes. *Prerequisite: Psychology 60*

103. Introduction to Principles of Behavior (4)
An example of the principles of conditioning and their application to the control and modification of human behavior.

104. Introduction to Social Psychology (4)
An intensive introduction and survey of current knowledge in social psychology. *Prerequisite: Psychology 60*

105. Introduction to Cognitive Psychology (4)
Introduction to experimental study of higher mental processes. Topics to be covered include pattern recognition, perception, and comprehension of language, memory, and problem solving. *Prerequisite: junior standing.*

106. Introduction to Physiological Psychology (4)
Intensive introduction to current knowledge of physiological factors in learning, motivation, perception, and memory.

107. Lab/Substance Abuse Research (4)
This lab course examines theory and research design and methods for substance abuse is adolescent adult populations. This course serves as preparation for individual research topics culminating in a paper.

109. Lab/Applied Behavior Analysis (4)
This course will provide students with hands-on training in the application of behavioral research technology to a clinical population. Students will meet weekly for lecture, discussion, research article reviews, and specific technique training. In addition, students will work on a research project. *Prerequisite: Psychology 199 in the Schreibman Autism Laboratory recommended.*

110. Juniors Honors Research Seminars (4)
Meetings consist of research seminars by a range of departmental faculty, exposing students to contemporary research problems in all branches of experimental psychology. Class discussions will follow faculty presentations. Evaluation is based on assigned papers. *Prerequisites: admission by application with a minimum UCSD GPA of 3.3. Department stamp required.*

111A. Research Methods I (6)
Designed to provide training in the applications of advanced statistical methods in the context of initial instruction in experimental design. Emphasis will be placed on the development of statistical problem-solving skills, practical computer applications, and scientific report writing. *Prerequisites: minimum grade of B in Psychology 60 or equivalent and junior standing. Open to honors students or consent of instructor. Department stamp required.*

111B Research Methods II (6)
Designed to extend the material of Psychology 111A. Focusing on the techniques developed previously. Participate in data collection, data organization, statistical analysis, and graphic displays, emphasis placed on developing scientific report writing, presentations, and critical thinking about experimental methods. *Prerequisite: Psychology 111A or consent of instructor.*

114. Laboratory in Psychophysiological Perspectives on the Social Mind (4)
Lab course on the use of psychophysiological methods to investigate "the social mind," or the cognitive and emotional processes involved in understanding and reacting to other people. Overview of major research topics and methods applying selected techniques in actual experiments. Students will engage in developing individual research questions to actively participate in designing and conducting the experiments. *Prerequisite: upper-division standing.*

115. Laboratory in Cognitive Psychology (4)
Lecture and laboratory work in human information processing. *Prerequisite: Psychology 105 and 111A-B or consent of instructor.*

118A. Real-Time Examination of Language Processing (4)
This lab course examines the design and methods for the real-time examination of language processing in normal and disordered (aphasic, dyslexic, child language impaired, etc.) language populations. This course serves as preparation for individual research topics in Psychology 118B. *Prerequisite: a course in language or cognition (see professor for exceptions).*

118B. Real-Time Examination of Language Processing (4)
This lab is a continuation of Psychology 118A. The instruction to laboratory methods is now applied to individual research projects culminating in a lab presentation and paper. *Prerequisite: Psychology 118A or consent of instructor.*

119. Psycholinguistics/Cognition Laboratory (4)
Methods and practicum in experimental study of language, reading, and related cognitive processes (reasoning, problem solving) in young adult populations. *Prerequisites: A course in language or cognition, or Psych 118A-B (see professor for exceptions). Permission of instructor required. Department stamp required.*

120. Learning and Motivation (4)
Survey of research and theory in learning and motivation. Includes instincts, reinforcement, stimulus

control, choice, aversive control, and human application. *Prerequisites: upper-division standing. Must be taken concurrently with Psychology 121.*

121. Laboratory in Operant Psychology (4)
Lecture and laboratory in operant psychology. *Prerequisite: must be taken concurrently with Psychology 120.*

124. Introduction to Clinical Psychology (4)
Introduction to major concepts and models used in psychological assessment and psychotherapeutic intervention. Several modalities of psychotherapy (individual, group, and family) will be reviewed along with research on their efficacy. *Prerequisite: Psychology 163.*

125. Clinical Neuropsychology and Assessment (4)
A fundamental grounding in basic neuropsychological principles and assessment methods, neuroanatomical, and cognitive relationships, with special emphasis on imaging technologies in diagnosis and prognosis. Neuropsychological testing methods are discussed in terms of statistical reliability, validity, and applications to neurologic/psychiatric populations. *Prerequisite: Psychology 60.*

127. Methods in Applied Social Psychology (4)
Emphasizes learning of experimental and quasi-experimental methodology applicable to social problems. Students carry out field research in areas such as the psychology of law (judicial decision-making), traffic-related behavior (risk taking), environmental psychology, and other areas of student interest. *Prerequisites: Psychology 104 and 60.*

128. Practicum in Child Development (6)
[Same as COHI 116 and HDP 135] A combined lecture/laboratory course for students in psychology, communication, and human development. Student backgrounds should include a background in general psychology or communication. Students will be expected to spend four hours a week in a supervised practical after school setting at one of the community field sites involving children. Additional time will be devoted to readings and class prep, as well as six hours a week transcribing field notes and writing a paper on some aspect of the field work experience as it relates to class lectures and readings. *Prerequisites: Psychology 101 or COGN 20 or HDP1 or consent of instructor.*

129. Logic of Perception (4)
Lectures will cover three topics: 1) tradition of experimental work on perception that dates back to Hemholtz; 2) discussion and criticisms of theories of perception; 3) recent physiological work on the visual pathways that may give us insights into neural mechanisms underlying perception. *Prerequisite: upper-division standing.*

130. Delay of Gratification (4)
This course will review the research on delay of gratification. It will cover what makes it in general so tough, what situations make it possible, who can do it, and what the implications of this ability are. *Prerequisite: upper-division standing.*

131. Personality: Theory and Research (4)
Introduction to major theoretical approaches to the study of personality constructs and processes. Disturbances in personality development and functioning will be discussed and illustrated. The social learning theory perspective will be emphasized relative to other theoretical frameworks. *Prerequisite: upper-division standing.*

132. Hormones and Behavior (4)
A survey of the effects of chmical signals (hormones, neurohormones and pheromones) on behavior as well as reciprocal effects of behavior on these chemical systems. Specific topics covered include aggression, sex and sexuality, feeding, learning, memory and mood. Animal studies will be emphasized. *Prerequisite: Psychology 106 or consent of insturctor.*

133. Circadian Rhythms—Biological Clock (4)
Examples and fundamental properties of the daily biological clock in humans, animals and microbes. Experimental approaches employed to understand how organisms keep time and how this applies to human health. *Prerequisite: Psychology 106 or BILD 1 or consent of instructor.* This course is cross-listed with BIMM 116.

134. Eating Disorders (4)
This course will cover the biology and psychology of eating disorders such as anorexia nervosa, bulimia nervosa, and binge eating disorder. Abnormal, as well as normal eating will be discussed from various perspectives including endocrinological, neurobiological, psychological, sociological, and evolutionary. *Prerequisite: upper-division standing.*

135. Animal Behavior (4)
Mechanisms that regulate the behavior of animals, including neural, endocrine, genetic, and environmental mechanisms, with a strong emphasis on evolution (natural and sexual selection). Topics include communication, sociality, mating strategies, and parental behavior. *Prerequisite: upper-division standing.*

136. Cognitive Development (4)
Examination of the foundations and growth of mind, discussing the development of perception, imagery, concept formation, memory, and thinking, with emphasis on the presentation of knowledge in infancy and childhood. *Prerequisite: Cognitive Science 110B, Psychology 105 or 101.*

137. Social Cognition (4)
Social cognition blends cognitive and social psychology to investigate how people make sense of the social world. Social perception, inference, memory, motivation, and affect, understanding of the self, stereotypes, and cultural cognition. *Prerequisite: upper-division standing.*

138. Sound and Music Perception (4)
Topics include the physiology of the auditory system, perception and pitch, loudness and timbre, localization of sound in space, perception of melodic and temporal patterns, handedness correlates, and musical illusions and paradoxes. There will be a substantial number of sound demonstrations. *Prerequisite: upper-division standing.*

139. Social Psychology of Sports (4)
This course focuses on the applications of social psychological principles and finding to the understanding of sports. Topics include the role of motivation, level of aspiration, competition, cooperation, social comparison, and optimal arousal, spectators' perspective, motivation and perceptions of success, streaks, etc. *Prerequisite: upper-division standing or consent of instructor.*

140. Lab/Human Behavior (4)
Laboratory on the principles of human behavior, including choice behavior, self-control, and reasoning. *Prerequisites: 120 (may be taken concurrently); upper-division standing.*

141. Evolution and Human Nature (4)
Can important aspects of human behavior be explained as a result of natural selection? Focus on sex differences, selfishness and altruism, homicide and violence, and context effects in human reasoning. *Prerequisite: upper-division standing and consent of instructor.*

142. Psychology of Consciousness (4)
This course will survey research on consciousness from an experimental psychology perspective. Special emphasis will be placed on cognitive, neuro-imaging, and clinical/psychiatric investigative techniques, and on the scientific assessment of the mind-body problem. *Prerequisites: Recommended Psychology 1 (or equivalent) and 60. Psychology 105 and/or 106 are useful but not necessary.*

143. Control and Analysis of Human Behavior (4)
An overview of the behavioral approach including basic principles, self-control, clinical applications, and the design of cultures. *Prerequisite: upper-division standing.*

144. Memory and Amnesia (4)
This course will review basic research into the nature of memory. It begins with an examination of historical milestones in the study of memory and then considers research concerned with contemporary models of memory and amnesia. *Prerequisite: upper-division standing.*

145. Psychology of Language (4)
Introduction to research on language comprehension and production. Focus on brain basis of language, language origin and universal structure, language disorders (aphasia, dyslexia), animal language, linguistic community differences, and the mental processes underlying normal language processing. *Prerequisite: a course in language, cognition, or philosophy of mind recommended.*

147. Gender (4)
This interactive undergraduate seminar will examine biological approaches to gender differences and sexuality. Do the biosciences further our understanding of these issues? How are biological claims embraced or rebutted by other disciplines? Students will read primary scientific literature and criticism. *Prerequisite: department stamp.*

148. Psychology of Judgment and Decision (4)
Broadly defined, the field of judgment and decision making examines preferences and subjective probability, and how they are combined to arrive at decisions. The course will cover history and current topics. *Prerequisite: upper-division standing*

149. Social Psychology of Theater (4)
Exploration of the relationship between social psychology and drama, focusing on the use of psychological principles in plays (by playwrights) and their performance (by directors, actors, and choreographers). *Prerequisites: upper-division standing, major in psychology or theater, or permission of instructor.*

151. Tests and Measurement (4)
This course provides an introduction to psychological testing presented in three components: 1) psychometrics and statistical methods of test construction; 2) application of psychological tests in industry, clinical practice, and other applied settings; and 3) controversies in the application of psychological tests. *Prerequisite: Psychology 60.*

152. Conceptions of Intelligence (4)
This course will examine the concept of intelligence from several perspectives: its historical development, its measure in terms of IQ test, and its role in practical affairs. Also included will be its role in comparative psychology and attempts to analyze intelligence in terms of more fundamental cognitive processes. *Prerequisite: Psychology 60 or consent of instructor.*

153. Psychology of Emotion (4)
Past and current findings and theories on emotion. Facial expressions of emotions, psychophysiology, evolutionary perspectives, and specific emotions: anger, fear, and jealousy. *Prerequisites: upper-division standing and Psychology 104, or consent of instructor.*

154. Behavior Modification (4)
Extension of learning principles to human behavior, methods of applied behavior analysis, and applications of behavioral principles to clinical disorders and to normal behavior in various settings. *Prerequisite: upper-division standing.*

155. Social Psychology and Medicine (4)
Explores areas of health, illness, treatment, and delivery of treatment, and social psychological perspectives in the medical area. *Prerequisite: Psychology 60 or equivalent and 104.*

157. Happiness (4)
This course will address the psychology of happiness. The discussions and readings, consisting largely of original research articles. Will explore such questions as: what is happiness? How do we measure it, and how do we tell who has it? What is the biology of happiness and what is its evolutionary significance? What makes people happy—youth, fortune, marriage, chocolate? Is the pursuit of happiness pointless? *Prerequisite: upper-division standing.*

159. Physiological Basis of Perception (4)
A survey of sensory and perceptual phenomena and the physiological mechanisms underlying them. *Prerequisite: Psychology 102 or consent of instructor.*

160. Groups (4)
Causes and consequences of gregariousness, stress, validating attitudes, improving efficiency, consolidating power, permitting loafing, rejecting deviates, and insulating group members from unpleasant outside influence. *Prerequisite: upper-division standing.*

161. Introduction to Engineering Psychology (4)
Surveys human perceptual and cogntive limitaitons and abilities important in designing "user-friendly" computers and devices, improving aviation and traffic safety, and other engineering challenges. Topics include human vision as it bears on display design (including virtual-reality), short-term memory limitations, learning and practice, effects of noise and stress, causes of human error and their minimization. Acceptable as elective for ECE and ESE students. *Prerequisite: upper-division standing.*

162. Psychology and the Law (4)
Studies the psychological factors in the legal system, applying psychological theory and methods to the criminal justice system, identifying crime and criminals, eyewitness reliability, bail setting, plea bargaining, sentencing, and parole. An original research project will be required as part of the course. *Prerequisite: Psychology 60 and 104.*

163. Abnormal Psychology (4)
Surveys origins, characteristics and causes of abnormal behavior and the biological and environmental causes of abnormality. *Prerequisite: upper-division standing.*

164. Mathematical Ideas in Psychology (4)
This course will survey how mathematical ideas have been applied in modeling psychological processes and in analyzing psychological data. Topics include signal detection theory, perceptual encoding, scaling techniques, and neural models of perceptual and cognitive processes. *Prerequisite: Calculus: one quarter, linear algebra desirable.*

166. History of Psychology (4)
Surveys major trend and personalities in development of psychological thoughts. Emphasis given to such topics as mind-body problem, nativism vs. empiricism, and genesis of behaviorism. *Prerequisite: concurrently enrolled in Honors Thesis 194A-B-C.*

167. Social and Emotional Development (4)
Focuses on topics like attachment, moral development, sex roles, self-definition, and peer interaction. *Prerequisite: Psychology 60 and 101.*

168. Psychological Disorders of Childhood (4)
Explores different forms of psychological deviance in children (psychosis, neurosis, mental retardation, language disorders and other behavior problems). Emphasis on symptomatology, assessment, etiological factors, and various treatment modalities. (Offered every other year.) *Prerequisite: upper-division standing.*

169. Brain Damage and Mental Functions (4)
Studies neural mechanisms underlying perception, memory, language, and other mental capacities. What happens to these capacities when different parts of the brain are damaged? What can we learn about the normal brain by studying patients? *Prerequisite: upper-division standing.*

172. The Psychology of Human Sexuality (4)
Important issues in human sexuality including sex and gender, sexual orientation, reproductive technology, and sexual dysfunction. *Prerequisite: upper-division standing.*

175. Psychology and the Arts (4)
An interdisciplinary course focusing on theoretical ideas and empirical research that relate contemporary psychology (social and cognitive, psychophysiology, motivation and emotion) to issues in various aesthetic and artistic domains, as visual arts, music, literature, criticism, and the performance arts. *Prerequisite: upper-division standing; major in Psychology, Music, Visual Arts, Communications, or Literature, or permission of instructor.*

178. Organizational Psychology (4)
Examines human behavior in industrial and organizational settings. Psychological principles are applied to selection, placement, and training. The effectiveness of individuals and groups within organizations, including leadership and control, conflict and cooperation, motivation, and organizational structure and design, is examined. *Prerequisite: upper-division standing.*

179. Drugs, Addiction, and Mental Disorders (4)
Considers the use, abuse, liability, and psycho-therapeutic effects of drugs in humans. Lectures are supplemented by guest lecturers from clinical experts in psychology and psychiatry. *Prerequisite: one lower-division psychology course (1, 2, 3, or 4) or upper-division standing.*

180. Adolescence (4)
This course will adopt a multidisciplinary approach toward understanding the period of human adolescence. A strong focus on the neurobiological aspects of adolescence will be combined with psychological, anthropological, and sociological considerations. *Prerequisite: upper-division standing.*

181. Drugs and Behavior (4)
Psychological effects, brain mode of action, patterns of use of psychoactive agents, including stimulants, sedative/hypnotic, hallucinogens, marijuana, alcohol, over-the-counter drugs, cognitive enhancers, antianxiety agents, antidepressants, antipsychotics, and basic principles in psychopharmacology. *Prerequisite: upper-division standing.*

182. Illusions and the Brain (4)
This course explores the bases of illusions in terms of perceptual and cognitive principles, and the underlying brain mechanisms; extensive demonstrations are included. *Prerequisite: upper-division standing.*

184. Choice and Self-Control (4)
Experimental analysis of choice behavior, with an emphasis on the types of choice involved in self-control. Focus on conditions under which decision-making is optimal. *Prerequisite: upper-division students in psychology, biology, economics, or consent of instructor.*

185. Applied Developmental Psychology (4)
This seminar course deals with how developmental psychologists conduct scientific studies that have direct practical implications for children's well-being. Major issues to be discussed are: child witnesses, literacy, school violence, impact of media on child development, and developmental psychopathology. *Prerequisite: upper-division standing.*

186. Psychology and Social Policy (4)
This course will examine social policy issues from the psychological point of view. Each social policy issue will be discussed in a descriptive manner and will include (with student input) an array of both pro and con arguments. The psychological (behavioral) assumptions in the pro and con arguments will then be identified and the empirical evidence for these assumptions will be analyzed. *Prerequisite: Psychology 60 and 104.*

187. Development of Social Cognition (4)
This course will examine reasoning about people from a developmental perspective. Topics will include emotional understanding, achievement motivation, peer relations, social categories, and culture. *Prerequisites: upper-division standing. Department stamp required.*

188. Impulse Control Disorders (4)
Problems of impulse control are important features of major psychiatric disorders but also of atypical impulse control disorder such as: pathological gambling, compulsive sex, eating, exercise, shopping. Focus: development, major common features, treatment, and neurobiological basis of impulse control disorders. *Prerequisite: upper-division standing.*

194A-B-C. Honors Thesis (4-4-4)
Students will take part in a weekly research seminar. In addition, they will plan and carry out a three-quarter research project under the guidance of a faculty member. The project will form the basis of the senior honors thesis. *Prerequisite: acceptance to the Honors Program in the junior year (110A-B) (GPA 3.3), in addition one laboratory course (114-127) or two 199s which culminate in a research paper (by petition only) and Psychology 110, 111A-B and consent of instructor.*

195. Instruction in Psychology (4)
Introduction to teaching a class section in a lower-division psychology course, hold office hours, assist with examinations and grading (P/NP grades only). This course counts only once towards the major. *Prerequisite: junior or senior psychology major with GPA of 3.0 or an A in the course and consent of instructor.*

196 A-B-C Research Seminar (4-4-4)
Weekly research seminar, three quarter research project under faculty guidance which culminates in a thesis. *Prerequisite: one laboratory course, 3.3. GPA , and/or consent of instructor.*

199. Independent Study (2 or 4)
Independent study or research under direction of a member of the faculty. *Prerequisite: GPA 2.5 and 90 units completed. (P/NP grades only.) Not counted for credit towards the major. See Section on 199 information.*

2XX. Graduate Seminar
We encourage Juniors and Seniors meeting the suggested criteria of an overall 3.0 GPA to enroll in Graduate Seminars. Check the schedule of classes and contact the Student Affairs Office on how to enroll.

GRADUATE

201A-B-C. Quantitative Methods in Psychology (4-4-4)
An intensive course in statistical methods and the mathematical treatment of data, with special reference to research in psychology. *Prerequisite: restricted to graduate students in psychology.*

204. Neurobiology of Social Development (4)
The goal of this class is to acquaint students with research on the neurological underpinnings of social and social cognitive development. Students will be expected to become familiar with the existing research in the area, and to understand the neural structures that comprise the limbic system, and their developmental timecourse. Students will be expected to form hypotheses about the neural correlates of aspects of social development based upon an understanding of the development of structures involved in social behavior.

206. Mathematical Modeling (4)
This course is designed to teach the basics of mathematical modeling. Topics include when, why, and how to use signal detection theory (an essential theory for anyone interested in attention, perception, memory, or decision making), how to analyze reaction time distributions (instead of simply measuring mean RT), how to engage in the fine art of model comparison, and how to avoid creating models that are more complex than the data they seek to explain.

208. Seminar on Hormones and Behavior (4)
A survey of the affects of chemical signals (hormones, neurohormones, and pheromones) on behavior as well as reciprocal effects of behavior on these chemical systems. Specific topics covered include aggression, sex and sexuality, feeding, learning, memory and mood. Animal studies will be emphasized.

209. Topics in Judgment and Decision Making (3)
This seminar examines issues in the psychology of judgment and decision making. Topics include the heuristics and biases approach, over confidence, framing effects, intertemporal choice, and rationality.

210. Skill Acquisition and Development of Expertise (4)
The course examines the transition from novice to highly skilled performance and the transfer of that skill to novel problems and contexts. Emphasis will be on information processing accounts of learning and performance for relatively simple cognitive tasks.

211. The Development of Social Cognition (3)
This seminar will cover the development of concepts about people. Topics include emotional understanding, "theory of mind," trait thinking, social categories, psychological essentialism, achievement motivation, and social and cultural influences on person perception.

212. Current Topics in Visual Science (3)
Each year a different topic in visual science is selected for in-depth review and discussion based on current readings. *Prerequisite: consent of instructor.*

213. Professional Procedures and Survival in Psychology (3)
This course provides a forum for presentation and discussion of the basic issues associated with surviving in a professional (particularly, academic) psychology environment. It covers such issues as: 1) how to get a job; 2) how to keep a job; 3) general issues in professional survival. The course will include the presence of a number of the psychology faculty in topic specific areas (e.g., journal editors from our faculty; faculty sitting on grant review panels, etc.). The issue of ethics will be examined and discussed relative to each topic raised.

214. Applied Developmental Psychology (4)
This seminar deals with how developmental psychologists conduct scientific studies that have direct practical implications for children's well-being. Major issues to be discussed are: child witnesses, literacy, school violence, impact of media on child development, and developmental psychopathology.

215. Language Acquisition (4)
Discussion of the acquisition of language by young children, including such topics as its stages, mechanisms, and relation to nonlinguistic development.

217A. Proseminar in Developmental Psychology I (3)
The course examines cognitive development through the school-age period. It begins with an examination of early neurological, sensory, motor, and perceptual functions and then focuses on issues in linguistic and cognitive development.

217B. Proseminar in Developmental Psychology II (3)
The course examines social and personality development from infancy through early adolescence. The class will first discuss general developmental theory and methods and then topics such as attachment, temperament, self-concept, aggression, family relations, play, and peers.

218A-B. Cognitive Psychology (3-3)
A two-quarter survey of basic principles and concepts of cognitive psychology. This course is intended to serve as the basic introduction for first-year students. Basic areas include knowledge, memory, thought, perception, and performance. The areas are taught by faculty members who work within the specialty. *Prerequisite: graduate status in psychology or consent of instructor.*

219. Proseminar in Learning and Motivation (3)
An overview of the experimental and applied analysis of behavior including topics such as the principles of operant and classical conditioning, stimulus control, choice, conditioned reinforcement, aversive control, biological and economic contexts, verbal behavior, and the modification of human behavior in a variety of applied settings.

220. Proseminar in Social Psychology (3)
An introduction to social psychology. Psychology and the law, health psychology, attitudes, emotions, person perception and aggression are some of the topics to be covered.

221. Proseminar in Sensation and Perception (3)
Fundamentals of vision, audition, and other senses. Emphasis will be upon psychophysical approaches to the study of these sensory modalities, as well as some essential aspects of their neurophysiological bases.

222. Biological Psychology (3)
A survey of the functional neuroanatomical, neurodevelopmental, neurophysiological, and pharmacological correlates of psychological phenomena.

223. Advanced Topics in Vision (4)
An in-depth analysis of empirical and theoretical issues in a specialized area of vision or visual perception. Emphasis most likely will be on a topic of ongoing vision research at UCSD. *Prerequisite: Psychology 212 or special consent of instructor.*

224. Parental Behavior: Evolution and Mechanisms (4)
This course will broadly address evolutionary, endocrine, psychological, and neurobiological aspects of parental behavior. Topics will include the social/environmental factors which promote parental care, the role of steroid and peptide hormones in parental care, and the evolutionary forces that promote different patterns of paternal and maternal investment in young. *Prerequisite: a basic understanding of brain function.*

225. Topics in Neural Timing (4)
This seminar will introduce fundamentals in chronobiology research and then address specific problems in greater detail. Proposed topics include oscillator coupling, masking, circannual rhythms, photoperiodism, and non-photic influences on circadian rhythms. The seminar will read classic and contemporary literature.

226. Color Appearance Models: Cognition and Perception (3)
This course covers color appearance models (e.g., CIE models, OSA, etc.) and their use in perception and cognition research. Emphasis will be given to the theories underlying color appearance spaces; the derivation and interpretation of corresponding "metrics"; color-difference tolerances; plausible linking propositions for color models and neurophysiology; and the ways these models are used in psychological and psychophysical experimentation.

227. Gender and Development (4)
Topics will include methodology, gender differences, culture, the development of knowledge of sex roles, stereotype formation, gender as a social category, and the role of gender in peer relationships, family relationships, and achievement motivation. Gender development will be approached from different perspectives within psychology, including developmental, cognitive, and social. The course will draw from areas outside of psychology, including anthropology and sociology.

228. Conceptions of Intelligence (3)
This course surveys major issues in the study of intelligence. Issues to be considered are the structure of intelligence, its heritability, and significance for real-world behavior. Special emphasis will be given to accounts of intelligence based on elementary processes.

229. Happiness (4)
This course will address the psychology of happiness. The discussions and readings, consisting largely of

original research articles, will explore such questions as: What is happiness? How do we measure it, and how do we tell who has it? What is the biology of happiness and what is its evolutionary significance? What makes people happy–youth, fortune, marriage, chocolate? Is the pursuit of happiness pointless?

233A. Topics in Learning and Motivation (3)
Advanced topics in learning and motivation, with special emphasis on current research. *Prerequisite: Psychology 210.*

234. Memory and Amnesia (3)
This course traces the history of research into animal and human short-term memory. Classic models, current viewpoints, and their attendant epistemological presuppositions will be considered. The relationship between empirical analyses of memory in animals and humans will also be reviewed.

236. Substance Abuse (3)
Theory and research on the development, progression, and resolution of substance use and abuse will be reviewed and evaluated. Normal and abnormal patterns of substance involvement will be contrasted across the life span.

237. Human Rationality (4)
The traditional view of rationality is based upon abstract, content-independent rules for behavior. People sometimes violate these rules in a laboratory setting, but the violations are often systematic and appear to reflect adaptation to the environment outside the laboratory. Such findings raise questions about what it means to be rational. Readings will be empirically oriented and cover the areas of deductive reasoning, inductive reasoning, and choice.

239. Psychology of Sport (3)
This seminar will focus on the applications of social psychological principles and findings to the understanding of sports.

241. Groups (4)
This course examines the role of groups in buffering stress, validating attitudes, improving efficiency, consolidating power, permitting loafing, rejecting deviates, and insulating its members from unpleasant outside influence. *Prerequisite: consent of instuctor.*

242A-B-C. Research Topics in Developmental Psychology (4-4-4)
Advanced seminar concentrating on methods of research and current experimental literature. May be taken by undergraduate senior majors concurrently enrolled in Psychology 194. *Prerequisite: consent of instructor.* (S/U grades permitted.)

243. Sound and Music Perception (3)
This course will deal with anatomy and physiology of the ear, central auditory pathways, and neurological disorders of sound and music perception.

244. Special Topics in Psycholinguistics (4)
Discussion of the psychological reality of grammatical models, competence versus performance, learnability and innateness in theories of language acquisition, and questions of autonomy of "modularity" of grammatical versus semantic processing. Studies of lexical accessing, sentence comprehension, sentence production, and acquisition will all be considered, as well as some recent work in aphasia.

245. Aphasia (4)
Research and theory on language breakdown in brain-damaged adults is surveyed. Topics include an historical overview from linguistics, psycholinguistics, and neuroscience (especially brain imaging techniques). Credit may not be received for both Psychology 245 and Cognitive Science 251.

247. Neuroendocrinology of Social Variation (4)
Students will read and discuss primary literature on the general topic of how steroid and peptide hormones contribute to the production of social variation and diversity. This diversity includes seasonal variation, intersexual variation, and divergence between species in patterns of sociality and space use, pair-bonding and mating tactics, aggression, and use of communication signals.

249A-B-C. Advanced Topics in Applied Behavior Analysis (3-3-3)
Research and discussion on selected topics in applied behavior analysis.

251. Advanced Topics in Learning and Motivation (3)
Weekly meetings for graduate students actively engaged in research on conditioning. *Prerequisite: consent of instructor.*

252. Seminar on Cognitive Neuroscience (3)
This is a series of weekly seminars on current trends in neuropsychology. The seminars will deal with the concept of "localization" of function in different parts of the brain and the effects of damage to these parts on cognitive functions such as perception, memory and language. Active student participation will be encouraged in preparing these seminars

253. Cognitive Psychology and Cognitive Neuroimaging (4)
This seminar in cognitive neuroscience focuses on modern approaches to cognitive psychology as revealed through cognitive neuroimaging. A major goal of the course is to evaluate what (if anything) neuroimaging evidence has added to classic cognitive models/evidence in major areas of cognition (working memory, categorization, executive processes, decision-making, emotion, and memory).

254. Functional Brain Imaging (3)
Principles of magnetic resonance imaging (MRI) of the human brain, focusing on recently developed techniques for brain activation on mapping. Includes principles of NMR and imaging, anatomic MRI, and a detailed survey of functional imaging techniques and data analysis.

255A-B-C. Advanced Topics in Biological Psychology (3-3-3)
Research and discussion on selected topics in biological psychology.

258. Delay of Gratification (3)
This course will review the research on delay of gratification. We will cover what makes it in general so tough, what situations make it possible, who can do it, and what the implications of this ability are. We will draw from research in social, personality, and animal psychology as well as economics.

259. Social Psychology/Psycho-aesthetics (3)
This course will be an intensive examination of social psychology (legal decision-making, emotion, aggressive behavior) and the psychology of visual art and music (psycho-aesthetics).

260. Cognitive 'Subcultures': Methodologies and Analysis (3)
Several methods of systematic data collection (e.g., judged similarity, paired comparisons, direct scaling) and analysis (e.g., consensus modeling, principal components analysis, multidimensional scaling) are explored in a hands-on computer lab and reading seminar. The ways in which these methodologies and data handling techniques bear upon basic research issues in psychology will be illustrated, and differences in data structures arising from qualitative variation in subjects will be explored.

261. Proseminar in History of Psychology (3)
This course will consider the intellectual context in the nineteenth century from which psychology developed as an independent discipline. Emphasis will be on early German psychology and evolutionary theory. The second part of the course will consider the histories of different areas of psychology (e.g., behavioral, cognitive).

262. Functional Construction of the Vertebrate Brain's Social Behavior Network (4)
The vertebrate brain contains a network of strongly interconnected structures that play essential roles in the regulation of social behavior. In this seminar we will read and discuss primary literature that details the structure and behavioral functions of this network.

263. Psychopharmacology (3)
This course will explore the basic neuropharmacological mechanism of action of the major classes of drugs, including neuroleptics, stimulants, anti-depressants, minor and major tranquilizers, and sedative hypnotics. It will focus on the use of behavioral techniques for evaluating the neural mechanisms by which these drugs act.

264A-B-C. Advanced Topics in Language Processes (4-4-4)
Research and discussion on selected topics in language processes.

267A-B-C. Advanced Topics in Behavior Medicine (3-3-3)
Research and discussion on selected topics in behavior medicine.

268A-B-C. Advanced Topics in Experimental Psychopathology (3-3-3)
Research and discussion on selected topics in experimental psychopathology.

269A-B-C. Advanced Topics in Sound & Music Perception (3-3-3)
Research and discussion on selected topics in sound and music perception.

270A-B-C. Introduction to Laboratory Experimentatoin (1-4)
A basic laboratory course, designed to introduce first-year graduate students to experimental methods in psychology. The student will select a research topic, do a thorough literature review of the area, design and carry out new, original studies of problems in the selected area, and prepare a final formal report of the study at the end of the spring quarter. This course is required of all first-year graduate students in the department. *Prerequisite: first-year psychology graduate students only.*

272. Selected Topics in Cognitive Psychology (3)
An in-depth analysis of selected empirical and theoretical topics in cognitive psychology. The course will focus on areas where notable progress appears to be taking place in contemporary research.

280. Seminar in Communication and Information Processing (1)
(S/U grades only.)

296. Research Practicum (1-12)
Research in psychology under supervision of individual staff members. (S/U grades only.) (F,W,S)

298. Library Research (1-12)
Reports and surveys of the literature on selected topics. *Prerequisite: graduate students in psychology.* (S/U grades only.) (F,W,S)

299. Independent Research (1-12)
Independent research and thesis research. (S/U grades only.) (F,W,S)

500. Apprentice Teaching (4)
Required teaching practicum for students enrolled in graduate program in psychology. One four-unit course per year for four years. (S/U grades only.)

Doctoral Student Handbook (PDF download)—http://www-rohan.sdsu.edu/dept/gsph/student/student.htm

The Joint Doctoral Program (JDP)

The doctoral program in public health (epidemiology) was developed as a joint program in 1990 between the Department of Family and Preventive Medicine in the School of Medicine at the University of California, San Diego (UCSD), and the Graduate School of Public Health at San Diego State University (SDSU). Students in the program complete course work and conduct research at both institutions. Faculty from each campus serve on advisory and dissertation committees, providing students with extensive exposure to experts whose research interests represent the interdisciplinary nature of modern public health. Dr. Deborah Wingard (UCSD) and Dr. Stephanie Brodine (SDSU) codirect the program. Dr. Richard Shaffer (SDSU) serves as overall program coordinator.

Requirements for the joint doctoral degree include:

1. successful completion of required course work
2. passing written preliminary examinations in epidemiology and biostatistics
3. passing written and oral qualifying examinations
4. demonstrating proficiency in two computer-based statistical software packages
5. demonstrating proficiency in teaching
6. completion and successful formal defense of a dissertation

Typical areas of emphasis include infectious disease epidemiology, chronic disease epidemiology, cancer epidemiology, behavioral epidemiology, community-based trials, physical activity/exercise/nutrition and health. San Diego is ideally located in a large and ethnically diverse metropolitan center bordering Mexico and the Pacific Rim, enabling students to carry out population-based multicultural and multinational studies of health problems.

Time Limits

The goal of this policy is to encourage Ph.D. completion in a timely manner.

Pre-candidacy limit. Maximum registered time to advance to Ph.D. candidacy: 4 years

Support limit. Maximum registered time doctoral student is eligible for support: 6 years

Total time limit. Maximum registered time to complete all Ph.D. requirements: 7 years

Information regarding admission is found in the current edition of the *Bulletin of the Graduate Division of San Diego State University.* To receive an application for admission, contact SDSU/UCSD Joint Doctoral Program in Public Health, San Diego State University, 5500 Campanile Drive, San Diego 92182-4162, (619) 594-2743.

Public Health— Health Behavior

Office: Multipurpose Facility, UCSD Medical Center, Room L-041
Mail Code: 0807

UCSD—http://www.medicine.ucsd.edu/fpm/

SDSU—http://www-rohan.sdsu.edu/dept/gsph/departments/hp.htm

The Joint Doctoral Program (JDP)

A Ph.D. in public health with a concentration in health behavior is offered by the joint faculties of the Department of Family and Preventive Medicine in the School of Medicine at UCSD and the Division of Health Promotion, Graduate School of Public Health at San Diego State University (SDSU). Students in the program complete course work and conduct research at both institutions. Faculty from each campus serve on advisery and dissertation committees, providing students with extensive exposure to experts whose research interests represent the interdisciplinary nature of modern public health. Dr. Lawrence Palinkas (UCSD) and Dr. John Elder (SDSU) codirect the program.

Emphasis is on producing graduates with a mastery in the central concepts and analytic processes of health behavior. Graduates of the program are expected to establish advanced skills in applied behavioral analysis for population application; to establish expertise in advanced qualitative and quantitative research methods; to establish advanced skills in the application of interventions and research methods to health behavior in disenfranchised populations; and to establish skills necessary to understand and change health policy. Graduates of the program are competitive for a variety of research, teaching, and community service positions in areas such as academic institutions, local and state health departments, federal and international agencies, and both private and public-sponsored research institutions.

Requirements for the joint doctoral degree include:

1. successful completion of required course work
2. passing written preliminary examinations in behavioral science, epidemiology, and biostatistics
3. passing written and oral qualifying examinations
4. demonstrating proficiency in teaching
5. completion and successful formal defense of a dissertation

Areas of specialization currently include physical activity, tobacco control, skin cancer prevention, nutrition and obesity, HIV/AIDS, and tuberculosis prevention and control. An additional emphasis will be placed on methodologies, such as measurement and related research issues; and ecological approaches to understanding health behavior. San Diego is ideally located in a large and ethnically diverse metropolitan center bordering Mexico and the Pacific Rim, enabling students to carry out community-based multicultural and multinational studies of health problems.

Time Limits

The goal of this policy is to encourage Ph.D. completion in a timely manner.

Pre-candidacy limit. Maximum registered time to advance to Ph.D. candidacy: 4 years

Support limit. Maximum registered time doctoral student is eligible for support: 6 years

Total time limit. Maximum registered time to complete all Ph.D. requirements: 7 years

Information regarding admission is found in the current edition of the *Bulletin of the Graduate Division of San Diego State University*. To receive an application for admission, contact SDSU/UCSD Joint Doctoral Program in Public Health, San Diego State University, 5500 Campanile Drive, San Diego 92182-4162, (619) 594-2743.

Public Service Minor

Steven P. Erie, Ph.D., *Political Science—Government*
Lawrence A. Palinkas, Ph.D., *Family and Preventive Medicine, School of Medicine—Health*
Joel Robbins, Ph.D., *Anthropology—Social Issues*

The public service minor at UCSD encourages students to understand the history and practices of public service and to participate in the development of civic skills. Those skills and practices are essential cornerstones of participation in a democratic society regardless of one's chosen profession.

The course work for the minor emphasizes the history and emergence of the non-profit sector as a national institution distinct from the private and public sectors. The practicum aspects of the minor coupled with the traditional academic work encourages students to see the connection between the deeds of charitable service and the historic worth of citizen participation in the common public franchise regardless of professional interests or gain.

The minor in public service is open to all UCSD students in good standing. Students first complete TMC 15, Public Service in America, and must choose one area of specialization from education, government, social issues, or health. A list of specific courses has been comprised as appropriate for these specializations and is available through Marshall College Provost's Office. Approval of the minor is based on completion of TMC 15 and 2 of the 3 upper-division specialization courses with a 2.0 GPA or better and a cumulative GPA of 2.5 on 90 units. Students approved to complete the minor are placed into specific internships in public service through the Academic Internship Program.

The following 28 units comprise the public service minor:

TMC 15, Public Service in America

3 upper-division specialization courses (education, government, social issues, or health)

3 upper-division academic internships in public service

Capstone seminar in public service

For more information regarding the requirements for the minor, see the Office of the Provost, Thurgood Marshall College, TMC Administration Building.

Program Description

The program engages in the academic study of religious phenomena in many regions of the world and within many different religious cultures and traditions; and it studies literature, history, and society in relation to religion. Faculty and students associated with the program give primacy to humanistic and social scientific methods of study that have become established in the academic community during the nineteenth and twentieth centuries.

The location of the program in the Arts and Humanities Division and its use of courses from a variety of departments and divisions imply that neither the study of religion nor its data are the privileged possession of a single discipline. The hallmark of the program is its interdisciplinary and interdepartmental structure. At UCSD, faculty from the departments of Anthropology, History, Literature, Philosophy, Political Science, Sociology, and Visual Arts provide students with the opportunity to examine religious artifacts, texts, institutions, and communities within a particular cultural and historical context and in the context of comparable manifestations within the general history of religions.

A concentration in the Study of Religion aims at fostering a student's understanding of religion as one of the primary expressions of the human condition and as an historically powerful force in the shaping of human cultures; and it aims to foster an understanding of multiple religious traditions. It seeks to develop a student's appreciation of the difficulties and possibilities inherent in undertaking a critical, disciplined, cross-cultural study of religion.

Since the program endorses an interdisciplinary and comparative approach to the study of religion, lower-division preparation should be wide and varied. Lower-division courses in which religion figures prominently (e.g., Introduction to Religion, The Making of the Modern World, or the Revelle College Humanities Program), as well as courses which focus on textual and contextual analysis and employ the analytical tools and conceptual categories of the human sciences, would all be useful in preparing the student for a major in the Study of Religion. The program strongly encourages foreign language study. The ability to read the languages of original sources and of modern scholarship is highly recommended, especially for students planning to attend graduate school in religion.

Major

The major in the Study of Religion consists of twelve upper-division courses; achieving a balance between courses which focus on a single religious tradition or issue and those which explore various traditions and methodologies. These courses should include the following:

- two required courses in the Study of Religion, (1) RELI 110A or B and (2) RELI 112 or 113.
- ten courses from the approved course list to be selected in consultation with the program director. Students should see the program adviser for further details.

Double Major

Students may choose to pursue the Study of Religion as their second major. In such cases, it may be possible for up to two courses to overlap with the other major. Students should consult the program coordinator for further information.

Honors in the Study of Religion

The program for the Study of Religion offers an Honors Program for students who demonstrate excellence in the major. The minimum eligibility requirements for the Honors Program are stated below. In most cases students are completing their last two quarters (winter and spring) when they enroll in the honors program.

- completion of RELI 110A or 110B
- at least junior standing
- 3.5 GPA in the major and a 3.3 overall GPA
- eight units of RELI 196H taken over two quarters (typically winter and spring)
- research paper (at least 20 pages: most students write between 30–50 pages.)
- public presentation

Students interested in the Honors Program should consult with the program coordinator for a detailed list of requirements and an application. Participation in the Honors Program is contingent upon the prior approval of the Honors Thesis research topic by the director. Honors proposals are due at the Program Office by the tenth week of the quarter (usually fall quarter of the senior year) prior to being enrolled. Final approval must take place before the first day of the quarter in which the student plans to enroll in RELI 196H. The notations "distinction," "high distinction," and "highest distinction" will be determined on the following basis; major G.P.A., the grade for the research paper, and the grade for the public presentation.

Minor

The minor in the Study of Religion consists of seven courses, of which five must be upper-division. These seven courses must include two required courses in the Study of Religion as delineated under the major:

- RELI 110A or 110B

  and
- RELI 112 or 113.

Some students may apply two lower-division college requirements to the minor (e.g., Revelle students may apply HUM 1 and HUM 2, and ERC students may apply MMW 2 and MMW 3).

STUDENT ADVISING

All students are assigned a faculty adviser and are encouraged to meet with their adviser at least once a quarter to develop their course of study. Additional advising information may be obtained from the program coordinator, Literature Building, third floor, room 3323.

STUDY ABROAD

Students are encouraged to investigate the University of California Education Abroad Program (EAP) and other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill major and minor requirements. More information about studying abroad can be obtained in the Education Abroad section of the catalog.

CAREER OPPORTUNITIES AND PREPARATION FOR GRADUATE STUDY

Among its many aims, the major in the Study of Religion is designed to develop fundamental skills in critical thinking, comparative analysis, research, and written expression. As such, the B.A. degree is appropriate for careers in education, government, business, and non-profit agencies. It is also an excellent preparation for graduate study in a variety of fields and disciplines.

Students interested in earning a California teaching credential from UCSD should contact the Teacher Education Program for further information.

Students are encouraged to consult the program director for further information about career opportunities and graduate study. Information is also available on the program's Web site.

COURSES

RELI 1. Introduction to Religion (4)
An introduction to key topics in the study of religion through a comparative reading of religious texts and/or artifacts. The intent is to develop basic strategies of interpretation for undertaking a critical, disciplined study of religion. (Not offered 2004–2005.)

RELI 110A. The Modern Study of Religion: Religion in Modernity (4)
This class examines the history of the term "religion," focusing upon the development of religion's contemporary significance within the Reformation and Enlightenment, and questioning what it means to be "modern." Topics change yearly. Special attention to contemporary culture and politics.

RELI 110B. The Modern Study of Religion: Social and Cultural Theories of Religion (4)
An introduction to basic strategies of interpretation in the study of religion, including issues of category formation, theory, and method. Special attention paid to prominent voices of the nineteenth and twentieth centuries, including Marx, Freud, Durkheim, Eliade, etc.

RELI 112. Texts and Contexts: The Holy Book in Judaism, Christianity, and Islam (4)
An introduction to the scriptures of Judaism, Christianity, and Islam, with the aim of providing a comparative perspective on the "bibles" of Western civilization.

RELI 113. Texts and Contexts: Textual Communities in South Asia (4)
This class considers important texts belonging to one or more of the following South Asian Traditions: Hinduism, Buddhism, Jainism, or Sikhism. It introduces students to the ways in which religious identities are formed and contested within a pluralistic society.

RELI 188. Special Topics in Religion (4)
Students in this lecture will investigate important problems in the study of religion or the history of particular religions. May be repeated for credit up to three times when topics vary. *Prerequisite: upper-division standing.*

RELI 189. Seminar in Religion (4)
This seminar requires the intensive analysis of critical problems in the study of religion or the history of particular religions. May be repeated for credit up to three times when topics vary. *Prerequisites: upper-division standing; RELI 110A or 110B.*

RELI 196H. Honors Thesis Research (4)
Honors thesis research for students accepted into the Honors Program. Research is conducted under the supervision of a program faculty member. *Prerequisite: program approval into the Honors program.*

RELI 197. Directed Advanced Readings (4)
A faculty member will direct a student in advanced readings on a topic not generally included in the Program for the Study of Religion's curriculum. Students must make arrangements with the program and individual faculty. May be repeated for credit up to three times for credit. *Prerequisites: upper-diviison standing; RELI 110A or 110B; overall GPA of 2.5.*

RELI 199. Independent Research Study for Undergraduates
Independent research in religion under the supervision of a faculty member affiliated with the Program for the Study of Religion. This course may be repeated three times with program approval. (P/NP grades only.) *Prerequisites: upper-division standing, with 2.5 GPA (overall); program stamp.*

APPROVED ELECTIVE COURSES

The following lower- and upper-division courses are offered on a regular basis, although not every course is available every year. Please contact the program coordinator for approved courses in any given quarter or visit the program's Web site, religion.ucsd.edu. Students may petition other courses, including independent study and Education Abroad Program courses when appropriate.

LOWER-DIVISION

ANLD 1. Introduction to Culture

HUM 1. The Foundations of Western Civilization: Israel and Greece

HUM 2. Rome, Christianity, and the Middle Ages

http://revelle.ucsd.edu

Humanities/Writing Program

OFFICE: Galbraith Hall 180, Revelle College
See Humanities Program for Revelle Writing.

Revelle Honors Program

OFFICE: Office of the Provost, Revelle College

Particularly well-prepared students are invited to join a freshman honors program, which includes weekly participation in small faculty seminars (Revelle 20). Acceptance into the Honors Program at admission is automatic for Regents and National Merit Scholars as well as those students entering with a high school GPA of 3.8 or higher and verbal and math SAT scores of 700 or higher. Admission to the program winter quarter is offered to those who achieve a 3.7 GPA in at least twelve graded units taken at UCSD during the fall quarter. A variety of other perquisites are also awarded. Outstanding students are individually advised to participate in small honors classes in chemistry, mathematics, physics, and social science.

Outstanding seniors are selected for participation in honors seminars, Revelle 100 and 110. At least five outstanding graduating seniors are honored at graduation each year with a monetary honorarium.

An honors banquet is given for the top 200 students (from all class levels) in Revelle each spring.

Revelle 20. Revelle Honors Seminar (0)
Weekly seminars with a faculty member (chosen each year by the provost to match the interests of participating students). This seminar will acquaint students with the scholarship and research being conducted by faculty and instill in students a sense of participation in the scholarly life at UCSD. *Prerequisite: by invitation only. Pass/Not Pass grades only.* (F,W,S)

Revelle 100. Senior Honors Seminar: Science and Civilization (4)
Beginning with the distinction between science and technology, the course will trace their evolution from earliest times, culminating in an examination of their impact on modern society and of the social concerns about their future course. *Prerequisites: senior standing, 3.5 overall GPA, science major, consent of instructor, Revelle students only. Pass/Not Pass grades only.*

Revelle 110. Senior Honors Seminar: Thinking About Science (4)
A seminar for honors students concerning the nature of science and its place in our society. The course will consist of readings and discussions concerning a range of historical, philosophical, and sociological perspectives on science. *Prerequisite: Revelle College senior honors students.*

Revelle Seminars

OFFICE: Office of the Provost, Revelle College

Revelle Seminars 90 (1.0 unit credit) are sponsored by Revelle College to promote student/ faculty interaction in a small group setting.

Revelle 90. Undergraduate Seminar (1)
A seminar intended for exposing undergraduate students, especially freshmen and sophomores, to exciting research programs conducted by the faculty. *Prerequisite: none. Pass/Not Pass grades only.* (F,W,S)

Revelle 91. Art, Book, and Life (1)
This interdisciplinary seminar will look at some selective relationships between visual arts and literature generally building chronologically and culminating with slide-illustrated visits to the world's great museums. Short student presentations. *Prerequisite: Humanities or consent of instructor.*

Russian and Soviet Studies

OFFICE: 3024 Humanities and Social Sciences Building, Muir College
Web site: http://orpheus.ucsd.edu/history/RussianSovietStud.html

Faculty

Steven Cassedy, Ph.D., *Professor in Literature*
Frantisek Deak, Ph.D., *Professor in Theatre*
Robert Edelman, Ph.D., *Professor in History*
Timothy McDaniel, Ph.D., *Professor in Sociology*
Philip Roeder, Ph.D., *Associate Professor in Political Science*
Rebecca Wells, *Lecturer in Literature*

Russian and Soviet Studies is an interdisciplinary program that provides a broad range of courses in the history, language, literature, and social and political life of Russia (before, during, and after the Soviet period). It is designed for students who do not wish to restrict their Russian studies to literature.

The Minor

The minor consists of seven courses, at least four of which must be upper-division. In addition, there must be at least one course each from two of the three following areas: literature, history, and social science. No more than three of the seven courses may be language courses. Knowledge of the language is not a requirement for the minor, but it is strongly recommended.

The Major

The major requires a study of Russian language. It consists of LTRU 1A-B-C (First-Year Russian), LTRU 2A-B-C (Second-Year Russian), or their equivalent, and a minimum of twelve upper-division courses. All students are required to take LTRU 104A-B-C (Advanced Practicum in Russian), HIEU 134 (History of Russia, Ninth Century to 1855), HIEU 156 (History of Russia, 1855 to the Present), and LTRU 110A-B-C (Survey of Russian Literature in Translation). In addition, students will take four electives, of which at least two must be from the social sciences (sociology or political science).

Students in the major are encouraged to participate in the Education Abroad Program (EAP) in Russia and to investigate other options for foreign study through the Opportunities Abroad Program (OAP). By petition, credits earned through EAP/OAP can fulfill UCSD degree and major requirements. Please visit the Web site at http://orpheus.ucsd.edu/icenter/pao for further details.

COURSES

LITERATURE

LTRU 1A-B-C First-year Russian (4-4-4)
LTRU 2A-B-C Second-year Russian (4-4-4)
LTRU 101A-B-C Advanced Russian (4-4-4)
LTRU 104A-B-C Advanced Practicum in Russian (4-4-4)
LTRU 110A-B-C Survey of Russian and Soviet Literature in Translation (4-4-4)
110A 1800–1860
110B 1860–1917
110C 1917–present
LTRU 123 Single Author in Russian Literature (4)
LTRU 128 Single Author in Soviet Literature (4)
LTRU 129 Twentieth-Century Russian or Soviet Literature in Translation (4)
LTRU 130 Genres in Russian Literature (4)
LTRU 131 Russian Short Fiction (4)
LTRU 132 Russian Poetry (4)
LTRU 150 Russian Culture: The Modern Period (4)
LTRU 198 Directed Group Study (4)
LTRU 199 Special Studies (2 or 4)

HISTORY

HIEU 134 Russia: Ninth Century to 1855 (4)
HIEU 156 Russia: 1855 to the Present (4)
HIEU 157 Early Soviet Social History (4)
HIEU 178 Special Topics in Modern Russian History (4)

SOCIOLOGY

Soc/D 188E Soviet Society

POLITICAL SCIENCE

POLI 130AA Soviet Politics and After
POLI 130B The Soviet State and Society
POLI 130C Seminar: Soviet Politics

Science Studies

The Science Studies Program at UCSD is a Ph.D. program committed to working toward a deeper understanding of scientific knowledge and technological change, past and present. The program offers students an opportunity to integrate the perspectives developed in communication studies and the history, sociology, and philosophy of science, while receiving a thorough training at a professional level in one of the component disciplines. Students enrolled in the program choose one of the four disciplines for their major field of specialist studies and are required to complete minor field requirements in the others. Students are also required to take the Introduction to Science Studies, and two interdisciplinary, topical "core" seminars, and to attend the program colloquium. Science studies students are encouraged to select dissertation topics that offer scope for a cross-disciplinary approach. The Ph.D. will be awarded in "Communication (Science Studies)," "History (Science Studies)," "Sociology (Science Studies)," or "Philosophy (Science Studies)." In special circumstances, students may be permitted to work for the M.A. degree.

COURSES

GRADUATE

HIGR 236A-B. Seminar in History of Science (4-4)
A two-quarter research seminar, comprising intensive study of a specific topic in the history of science. The first quarter will be devoted to readings and discussions; the second chiefly to the writing of individual research papers. The topic varies from year to year, and students may repeat the course for credit. (IP grade to be awarded the first quarter; final grade will be given at the end of the second quarter.) *Prerequisite: graduate standing.*

COGR 201I. Ethnography of Information Systems (4)
This course will survey the rapidly growing body of ethnographic analyses of information systems, to extend the basic principles of ethnographic research and to lead students in the development of projects modifying these principles for the emerging electronic environment. Students may approach the course in one (or both) of two ways—either preparing for and carrying out a pilot ethnographic study or studying the theoretical literature in depth.

HIGR 237. Topics in the History of Earth and Ocean Sciences (4)
Intensive study of specific problems in the history of the ocean sciences and of related earth and atmospheric sciences in the modern period. Topics vary from year to year, and students may therefore repeat the course for credit. *Prerequisite: graduate standing or consent of instructor.*

COGR 225A, HIGR 238, PHIL 209A, SOCG 255A. Introduction to Science Studies (4)
Study and discussion of classic work in history of science, sociology of science, and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. *Prerequisite: enrollment in Science Studies Program.*

COGR 225B, HIGR 239, PHIL 209B, SOCG 255B. Seminar in Science Studies (4)
Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. The topic varies from year to year, and students may, therefore, repeat the course for credit. *Prerequisite: enrollment in Science Studies Program.*

COGR 225C, HIGR 240, PHIL 209C, SOCG 255C. Colloquium in Science Studies (4)
A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required for all students in the Science Studies Program. *Prerequisite: enrollment in the Science Studies Program.*

HISC 160/260. Historical Approaches to the Study of Science (4)
This colloquium course will introduce students to the rich variety of ways in which the scientific enterprise is currently being studied historically. Major recent publications on specific topics in the history of science selected to illustrate this diversity will be discussed and analyzed; the topics will range in period from the seventeenth century to the late twentieth, and will deal with all major branches of natural science. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. *Prerequisites: consent of instructor; department stamp required.*

HISC 162/262. Problems in the History of Science and Religion (4)
Intensive study of specific problems in the relation between science and religion. The problems may range in period from the Renaissance to the twentieth century. Topics vary from year to year. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. *Prerequisites: upper-division standing; department stamp required.*

HISC 164/264. Topics in the History of the Physical Sciences (4)
Intensive study of specific problems in the physical (including chemical and mathematical) sciences, ranging in period from the Renaissance to the twentieth century. Topics vary from year to year, and students may therefore repeat the course for credit. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. *Prerequisites: consent of instructor; department stamp required.*

HISC 165/265. Topics in Twentieth-Century Science and Culture (4)
This is a seminar open to advanced undergraduates and graduate students that explores topics at the interface of science, technology and culture, from the late nineteenth century to the present. Topics change yearly; may be repeated for credit with instructor's consent. Requirements vary for undergraduates, M.A., and Ph.D. students. Graduate students are required to submit a more substantial piece of work. *Prerequisites: upper-division standing or consent of instructor; department stamp.*

HISC 166/266. The Galileo Affair (4)
Galileo's condemnation by the Catholic Church in 1633 is a well-known but misunderstood episode. Was Galileo punished for holding dangerous scientific views? Personal arrogance? Disobedience? Religious transgressions? Readings in original sources, recent historical interpretations. Graduate students will be expected to submit a more substantial piece of work. *Prerequisites: upper-division standing or consent of instructor.*

HISC 167/267. Topics in the History of Medicine (4)
Intensive study of specific problems in the history of medicine. Topics will vary from year to year, and students may therefore repeat the course for credit. Requirements will vary for undergraduate, M.A., and Ph.D. students. Graduate students may be expected to submit a more substantial piece of work. *Prerequisite: department stamp required.*

HISC 168/268. The Extraterrestrial Life Question (4)
The changing fortunes of the belief in the existence of life beyond the Earth (pluralism) from 1750–present as it evolved from a marginal speculation to a central scientific question with wide-ranging consequences for traditional religious belief systems. *Prerequisites: upper-division standing or graduate standing or consent of instructor. Graduate students will be expected to submit a more substantial piece of work.*

Soc. 225. Madness and Society (4)
An examination of the historical and sociological literatures on the relationship between madness and society, focusing primarily on the United States and Great Britain but with some comparative reference to western Europe.

Soc. 236. Contemporary Topics in the Sociology of Science (4)
This seminar will cover current books and theoretical issues in the sociology of science. Topics will vary from year to year. May be repeated three times for credit.

Soc. 237. Historical Sociology of Science (4)
In recent years the sociology of science and the history of science have developed increasingly close links and shared projects. Those include the detailed naturalistic study of actual scientific practice, the analysis of the social construction of scientific knowledge in particular social settings, and the examination of relationships between the moral economy of scientific sites and the status of the knowledge produced there. Particular attention will be paid to the identity of peculiarly historical and sociological perspectives. Technical problems concerning the deployment of sociological frameworks in historical study will be addressed. Students will read and assess a range of recent work in which the connection between sociology and history of science is most evident.

Soc. 238. Relativism and the Sociology of Science (4)
A critical survey of theoretical and empirical sociological work advocating a relativist perspective on scientific knowledge. Special attention is paid to the characterization of different relativist genres, to the debates between relativism, realism and rationalism, and to the empirical grounding of relativism in studies of scientific controversy and closure.

Soc. 277. The Sociology of Technology (4)
Social theory has been largely uninterested in technology. The major exceptions are to be found in the evolutionary

stories concerning "man the tool maker." The aim of the seminar is to review the literature in paleontology, philosophy of technology, and technology on the link between tools and social theory. The idea of the seminar is to test ideas coming from sociology of technology, ethology, and evolutionary scenarios, and anthropology of tool use, in order to make room in social theory for artifacts.

Phil. 204A. Core Course in Philosophy of Science (4)
An introduction to one or more central problems in the philosophy of science, or in the philosophy of one of the particular sciences, such as the nature of confirmation and explanation, the nature of scientific knowledge, reductionism, the unity of science, or realism and antirealism. May be taken for credit three times with changed content.

Phil. 212. Contemporary Topics in the Philosophy of Science (4)
This seminar will cover current books and theoretical issues in the philosophy of science. Topics will vary from year to year. *Prerequisite: Philosophy 180, or equivalent, or consent of instructor.*

Phil. 245. Philosophy of Science (4)
This seminar will cover current books and theoretical issues in the philosophy of science. May be taken for credit seven times with changed content.

Phil. 247. Philosophy of Biology (4)
Historical and contemporary perspectives on foundational issues about biology. May include questions about the nature of biological explanation, the relation of biology to chemistry and physics, the status of attributions of function, and the relation of biology to the social sciences. May be taken for credit six times with changed content.

Phil. 250A. Philosophy of the Cognitive Sciences (4)
Contemporary debates about the study of the mind-brain as studied in one or more of the empirical cognitive sciences. May include questions about the different strategies of explanation invoked, the conceptions of representation employed, the connections between theoretical models developed. May be taken for credit six times with changed content.

Science, Technology, and Public Affairs

OFFICE: Galbraith Hall, Room 180, Revelle College

The program offers an opportunity to study the important social policy issues that lie at the intersection of science, technology, and decision making and to develop awareness of the social and political factors that condition technology on the social order. The program will be attractive to students anticipating careers in law, administrative sciences, science, engineering, business, and international affairs. The program will serve as a meeting place for those interested in approaching policy questions from the perspective of the physical and biological sciences and for those in the social sciences having an interest in the scientific and technological component of present social, political, and environment problems.

COURSES

LOWER-DIVISION

35. Society and the Sea (4)
Introduction to the oceans and their relationship to humankind. Selected topics include ocean-related science, engineering, research, economics, and international relations (emphasizing countries of the Pacific Rim); living and nonliving resources; coastal zone management; military and social aspects; and the sea in weather and climate. *Prerequisite: none.* (F)

UPPER-DIVISION

181. Elements of International Medicine (4)
The sociocultural, ecomomic, and geopolitical framework for the study and understanding of medical problems on a worldwide scale, and as basis for international health policy. Global patterns of disease, availability and needs for medical technology, and comparisons between diverse medical education and health care delivery systems abroad with those in the U.S. Students should be able to acquire an understanding of diverse determinants of disease, and of relationships between socioeconomic development and health. *Prerequisite: senior or graduate standing.* H. Simon (W)

199. Special Project (2 or 4)
Directed study on topics in science, technology, and public affairs; especially for Warren College students. (P/NP grades only.) *Prerequisite: senior standing.*

The graduate department of Scripps Institution of Oceanography offers instruction leading to Ph.D. degrees in oceanography, marine biology, and earth sciences. Although students are not admitted specifically for an M.S. degree, it is possible to obtain an M.S. on the way to completing the Ph.D. program. A graduate student's work normally will be concentrated in one of the curricular programs within the department: applied ocean science, biological oceanography, climate sciences, geosciences, geophysics, marine biology, marine chemistry and geochemistry, and physical oceanography.

No undergraduate major is offered in the department though most courses in the department are open to enrollment for qualified

undergraduate students with the consent of the instructor. The UCSD Earth Sciences Undergraduate Program offers an earth sciences major leading to a B.S. or a combined B.S./M.S. degree. The interdisciplinary nature of research in marine and earth sciences is emphasized; students are encouraged to take courses from various UCSD departments, and to consider interdisciplinary research projects.

The Curricular Programs

Applied Ocean Science is a multidisciplinary program focused on the application of advanced technology to ocean exploration and observation. AOS students perform research in marine acoustics, optics, electromagnetics, geophysics, ecology, sediment transport, coastal processes, physical oceanography, and air-sea interaction. The emphasis is on the resolution of key scientific issues through novel technological development. The science focus of the Scripps AOS program is complemented by parallel Applied Ocean Science programs in both the Mechanical and Aerospace Engineering (MAE) and Electrical and Computer Engineering (ECE) departments. Students have access to professors, courses, and research facilities across all three departments.

Biological Oceanography is concerned with the interactions of populations of marine organisms with one another and with their physical and chemical environment. Because these interactions are frequently complex, and because the concepts and techniques used are drawn from many fields, biological oceanography is, of necessity, interdisciplinary. Therefore, studies in physical oceanography, marine chemistry, marine geology, and several biological areas are pertinent.

Research is conducted on space/time scales ranging from short-term interactions between individual organisms (mm., sec.) to interdecadal variation in widely dispersed populations. The techniques used in these investigations are diverse, and can include field observation and manipulations, experimentation in the laboratory, and mathematical modeling.

Research topics include primary and secondary productivity and nutrient regeneration, fishery biology and management, community ecology of benthic and pelagic organisms, population dynamics, habitat changes and disruptions, systematics and biogeography, population genetics and evolution, and behavior as it affects distribution. Development and testing of new tools (molecular, optical, acoustic), design of sampling programs, and statistical/mathematical analyses of data also are significant activities.

Climate Sciences concerns the study of the climate system of the earth with emphasis on the physical, dynamical, and chemical interactions of the atmosphere, ocean, land, ice, and the terrestrial and marine biospheres. The program encompasses changes on seasonal to interannual time scales and those induced by human activities, as well as paleoclimatic changes on time scales from centuries to millions of years. Examples of current research activities include: interannual climate variability; physics and dynamics of El Niño; studies of present and future changes in the chemical composition of the atmosphere in relation to global warming and ozone depletion; effects of cloud and cloud feedbacks in the climate system; paleoclimate reconstructions from ice cores, banded corals, tree-rings, and deep-sea sediments; the origin of ice ages; air-sea interactions; climate theory; terrestrial and marine ecosystem response to global change.

Geosciences emphasizes the application of general principles of geology, geochemistry, and geophysics to problems in the marine and terrestrial environments of the Earth. Graduate students routinely participate in expeditions at sea and on land and many doctoral theses evolve from these experiences.

Research areas in the geological sciences include: the origin and evolution of the ocean-atmosphere system and global climate; geology, geochemistry, and geophysics of oceanic crustal rocks and near-shore environments; tectonic and structural evolution of the oceans, plate margins, and back-arc basins; the role of fluids in the crust; chemistry of rare gases in active volcanoes; the use of natural nuclear processes for understanding physical and chemical processes in the Earth; paleomagnetic applications in geology and geophysics.

Geophysics emphasizes the application of general principles of mathematics and experimental physics to fundamental problems of the oceans, oceanic and continental lithosphere, and crust and deep interior of the Earth. Research interests of the group include: observational and theoretical studies of electric and magnetic fields in the oceans and on the land; paleomagnetism; theoretical seismology with special emphasis on the structure of the Earth from free-oscillation and body wave studies; broadband observational seismology, including ocean bottom and multichannel seismology; earthquake source mechanisms; the measurements of slow crustal deformations using satellite and observatory methods on continents and in the oceans; marine geodynamics and tectonophysics; gravity measurements; geophysical inverse theory; magnetohydrodynamics of the core of the Earth; geophysical instrumentation for oceanic and continental geophysical measurements; acoustic propagation in the oceans.

Marine Biology is the study of marine organisms. It is concerned with evolutionary, organismic, genetic, physiological, and biochemical processes in these organisms, and the relationship between them and their biotic and physical environment. Marine biology encompasses several major areas of modern biology, and is interpreted by understanding the physical and chemical dynamics of the oceans. Faculty research focuses on microbiology, photobiology, high pressure biology, deep-sea biology, developmental biology, genetics, biomechanisms, comparative biochemistry and physiology, behavior, ecology, biogeography, and evolution of marine prokaryotes and eukaryotes. Processes ranging from the fertilization of sea urchin eggs to the role of bacteria in marine food web dynamics are under study in over twenty independent research laboratories.

Marine Chemistry and Geochemistry concerns chemical and geochemical processes operating in a broad range of study areas: the oceans, the solid earth, the atmosphere, marine organisms, polar ice sheets, lakes, meteorites, and the solar system.

Areas of advanced study and research include the physical and inorganic chemistry of seawater; ocean circulation and mixing based on chemical and isotopic tracers; marine organic and natural products chemistry; marine bioinorganic chemistry; geochemical interactions of sediments with seawater and interstitial waters; geochemistries of volcanic and geothermal phenomena; chemical exchanges between the ocean and the atmosphere; geochemical cycles of carbon, oxygen, sulfur, nitrogen, and other elements; isotopic geochemistry of the solid earth and meteorites; atmospheric trace gas chemistry; paleoatmospheric composition recorded in polar ice cores, corals and sediments; and chemistry of lakes and other freshwater systems.

Studies are typically interdisciplinary and involve integration of chemical concepts with information about the physical, biological, or geological processes that influence natural systems. Students in the marine chemistry and geochemistry curricular group are encouraged to explore these links.

Physical Oceanography is the field of study that deals with mechanisms of energy transfer through the sea and across its boundaries, and with the physical interactions of the sea with its surroundings, especially including the influence of the seas on the climate of the atmosphere. Research activities within this curricular group are both observational and theoretical and include: study of the general circulation of the oceans, including the relations of ocean currents to driving forces and constraints of the ocean basins; fluctuations of currents, and the transport of properties; the mechanisms of transport of energy, momentum, and physical substances within the sea and across its boundaries; properties of wind waves, internal waves, tsunami and planetary waves; the thermodynamic description of the sea as a system not in equilibrium; optical and acoustic properties of the sea; and the influence of surf on near-shore currents and the transport of sediments.

Requirements for Admission

Candidates for admission should have a bachelor's or master's degree in one of the physical, biological, or earth sciences; degrees in mathematics or engineering science are also accepted. A scholastic average of B or better in upper-division courses, or prior graduate study, is required. The student's preparation should include:

(1) mathematics through differential and integral calculus

(2) physics, one year with laboratory (the course should stress the fundamentals of mechanics, electricity, magnetism, optics, and thermodynamics, and should use calculus in its exposition)

(3) chemistry, one year with laboratory

(4) an additional year of physics, chemistry, or mathematics

(5) all applicants are required to submit scores from the general test of the Graduate Record Examinations (GRE) given by the Educational Testing Service of Princeton, New Jersey. Marine biology applicants must also submit scores of the GRE biology (or biochemistry, cell, and molecular biology) subject test.

All international applicants whose native language is not English and whose undergraduate education was conducted in a language other than English must take the TOEFL and submit their test scores to the UCSD Office of Graduate Admissions.

Specific additional requirements for admission to the various curricular programs are as follows:

Applied Ocean Science—Students are admissible with a strong background in physical science, engineering science, or mathematics. Three years of physics or applicable engineering and three years of mathematics at college level are expected.

Biological Oceanography—Two years of chemistry, including general and organic chemistry, and a year of general biology are required. Physical chemistry requiring calculus may be substituted for physics requiring calculus where a more elementary physics course was taken. Zoology or botany may be substituted for general biology. Preparation should also include a course in general geology and at least one course in each of the following categories: systematics (e.g., invertebrate zoology), population biology (e.g., ecology), functional biology (e.g., physiology). In special cases, other advanced courses in mathematics or natural sciences may be substituted. Biological oceanography applicants are encouraged, but not required, to submit scores of the biology subject test of the GRE.

Climate Sciences—Students are admissible if they satisfy the requirements of the physical oceanography, geophysics, or marine chemistry and geochemistry curricular programs. Biology and geology majors may also be admissible if the Scripps faculty feel that they have a sufficiently strong background in mathematics and physical science.

Geosciences—A major in one of the earth sciences and undergraduate physical chemistry and calculus are required. Preparation beyond the minimum requirements in mathematics, physics, and chemistry is strongly recommended.

Geophysics—A major in physics or mathematics, or equivalent training, is required.

Marine Biology—A major in one of the biological sciences (or equivalent), with basic course work in botany, microbiology, or zoology; two years of chemistry, including organic chemistry, is required. Training in one or more of the following areas is strongly recommended: cellular biology, molecular biology, comparative physiology, genetics, developmental biology, ecology, evolutionary biology, vertebrate and invertebrate zoology, microbiology, and/or botany. Biochemistry and physical chemistry will be expected of students in experimental biology, although the student may, if necessary, enroll in these courses at UCSD after admission.

Marine Chemistry and Geochemistry—A major in chemistry, geology, biochemistry, or related field, is required.

Physical Oceanography—A major in a physical science, including three years of physics and mathematics, is required.

Special consideration occasionally can be given to candidates with outstanding records who do not meet all required preadmission criteria.

Programs of Study

Programs of study vary widely among the curricular groups, but generally first-year students are expected to enroll in core courses that cover physical, geological, chemical, and biological oceanography and in other courses recommended by the student's faculty adviser. Then, by the end of the first year, students usually select a particular area of focus and choose a major professor. As students advance beyond the first year, they begin to function effectively as research assistants or, in some cases, as teaching assistants. During their third to fifth year they are working toward writing their dissertations.

The interdisciplinary nature of research in marine and earth sciences is emphasized; students are encouraged to take courses in several programs and departments, and to select research problems of interdisciplinary character. The curricular programs of study are as follows:

Applied Ocean Science—The AOS academic program is designed to provide both a broad background and a core technical base to support the diverse interests and activities of the students. Early participation in an ongoing research project is encouraged. However, specialization and focus on a specific thesis topic is not required until the second or third year of the program. Required courses include SIO 214A Introduction to Fluid Mechanics, SIO 221A Analysis of Physical Oceanographic Data, and the two-quarter Wave Physics sequence SIO 202A–B. Two of the four SIO introductory courses (SIO 210, 240, 260, 280), must be completed during the first year, with the remaining two required prior to passing the doctoral qualifying exam at the end of the third year. In addition, the applied math sequence SIO 203 A–B or MAE 294 A–B is taken in either the first or second year of study. The AOS Seminar (SIO 208) serves as a communications bridge across the program; enrollment in this seminar is required during the student's entire period of study. Beyond these core classes, the majority of each student's academic program is tailored to individual interests. The AOS departmental examination, held at the end of the first year, is based on the core technical courses SIO 214A, SIO 221A, SIO 202A–B, and two of the four introductory courses

(chosen by the student). The exam has both oral and written components.

Biological Oceanography—The student will be expected to be familiar with the material presented in the following courses: SIO 210, 240, 260, 270 or 270A, 275A or 277, 280, 290, and at least one of SIO 271, 274, 282, 284, or 294. Other course work ordinarily will be recommended by the student's advisory committee, usually including 278 (or equivalent participatory seminar) one quarter of each year, a course in introductory parametric statistics, and at least one advanced-level course in physical, chemical, or geological oceanography. Participation in an oceanographic cruise (minimum of two weeks' duration) and service as a teaching assistant (one quarter) are required. Individual advisers and/or doctoral committees may require foreign languages or computer programming languages of individual candidates.

Climate Sciences—The emphasis of this curricular group is on education through interdisciplinary research. All students are responsible for the fundamental material in the following "core" courses: SIO 210, 217A-B-C, 260. Students are also expected to supplement their backgrounds with five to seven additional courses, including, for most Climate Sciences students, at least one additional quarter of fluid dynamics. These additional course(s) will be chosen in consultation with the students' advisors. It is recommended that students participate actively in at least two quarters of seminar courses designed to complement and stimulate individual research. Though the group stresses interactions across disciplines, students will specialize in a particular subdiscipline or track that will be chosen by the student following discussions with a 3-person faculty advisory committee soon after arrival. Examples of current tracks include: (1) atmospheric/ocean/climate dynamics and physics; (2) atmospheric chemistry (emphasizing climatic interactions); and (3) paleoclimate studies. Additional course requirements for these tracks will be tailored to the needs of the individual student.

Geosciences—The geosciences curriculum consists of a series of core courses and a series of research focus courses. All students whether pursuing an earth sciences or an oceanography degree are responsible for material in the core courses: Marine Geology (SIO 240), Marine Chemistry (SIO 260), and Physical Oceanography (SIO 210) during their first year of study. The research courses are selected from three themes: Geochemistry, Paleoclimate and Earth History, and Geology and Geophysics. A total of four research courses are required during the first year of study, with at least one from each theme. Additional courses offered by other curricular programs (e.g., geophysics, marine chemistry, and geochemistry) can be selected and scheduled depending on the student's background and interests any time during the student's career at SIO. A three-member faculty advisory committee is assigned to each student to help select the research and additional courses to be taken. Each student is also encouraged to participate in the Special Topics seminars (SIO 249) every quarter during the first two years of graduate study. Students wishing to graduate with an oceanography degree are also responsible for the material in SIO 280 (Biological Oceanography). Normally, students will take a comprehensive oral departmental examination near the end of their third quarter of residence. The qualifying examination will be given before the end of the third year.

Geophysics—There is no single course of study appropriate to the geophysics curriculum; instead, the individual interests of the student will permit, in consultation with the adviser, a choice of course work in seismology, geomagnetism, etc., although the content of certain core courses is usually taken during most of the first year. In the summer or early fall quarter following that year each student will be given written and oral departmental examinations, which are intended to cover the student's formal training. A brief presentation of possible research interests will also be expected at this exam.

Geosciences/Geophysics Track—For those students whose interests fall between the programs provided by the geosciences and the geophysics curricular groups, these groups are jointly offering a separate program and departmental examination. Such students would be admitted either to the geosciences or geophysics curricular group, but could declare their interest in a geosciences/geophysics track early in their first year. If they did so, they would take a departmental exam (at the end of spring quarter of their first year) which would be conducted by a committee with members from both curricular groups, and focusing on the student's ability to integrate material relevant to the subject. The expected courses would include those geosciences/geophysics courses appropriate to this specialization.

Marine Biology—Entering graduate students will be expected to gain research experience in one or more laboratories during their first year. In the spring term of their first year at SIO, students will take a departmental exam consisting of a presentation of their first-year research in the form of a paper and short talk to the curricular group, followed by a meeting with their first-year advisory committee. In this exam they also will be expected to demonstrate competence in the material covered in the following courses: SIO 210, 260, 280, 290 as well as any other course work recommended by the advisory committee. After their first year all students are expected to enroll and actively participate in at least one seminar course (SIO 278, 296, or equivalent) per year to provide in-depth knowledge and reading in selected areas, and to provide practice presenting scientific material. In addition to the seminar requirement discussed above, second-year students will present their research in a special Marine Biology mini-symposium, held in spring quarter; students in the third year and beyond are expected to participate in the research presentation class (SIO 291) each year. The curricular group coordinator, in consultation with the Ph.D. advisory committee, may waive specific course requirements in individual cases.

Marine Chemistry and Geochemistry—Students in this curricular group are required to take SIO 210, 260, and either SIO 280 or a suitable geosciences course (e.g. SIO 240) in their first year at SIO. Students in this curriculum are also expected to take additional SIO and UCSD courses; the exact choice of such courses will depend on the student's research interests and should be made in consultation with a faculty adviser.

Physical Oceanography—The physical oceanography curriculum combines a comprehensive program of coursework with individually tailored specialization to meet student needs. Students will demonstrate proficiency in foundation courses required for all subdisciplines of physical oceanography (SIO 203A-B, 214A, 212A), as well as additional courses appropriate to their specialization or interdisciplinary interest. Presently defined "tracks" in the curriculum are (i) Observational Physical Oceanography, (ii) Theoretical Physical Oceanography, and (iii) the Atmospheric/Ocean Climate System. All tracks are similar in the entry-year Fall Quarter, diverging as students become more familiar with the field and in their interests. A faculty Curriculum Advisory Committee meets with students to tailor tracks to individual needs, or to create new tracks as appropriate. In any track, the total body of required knowledge is equivalent to 16 four-unit courses, of which about 12 are covered during the first year. As part of the overall requirement, tracks include a

breadth component of 2 or more four-unit courses in other oceanographic disciplines. These might come from the SIO core courses in other disciplines (SIO 240, 260, 280) or from related graduate level courses taught at UCSD.

Language Requirements

The department has no formal language requirements. Within the department, some curricular programs may require demonstration of ability to use certain foreign languages pertinent to a student's research. All students must be proficient in English.

Departmental and Qualifying Examinations

Doctoral candidates normally will be required to take a departmental examination not later than early in the second year of study. The examination will be oral and/or written depending on the curricular group. The student will be required to demonstrate, in a quantitative and analytical manner, comprehension of required subject material and of the pertinent interactions of physical, chemical, biological, or geological factors.

When the student has passed the departmental examination, and has completed an appropriate period of additional study, the department will recommend appointment of a doctoral committee which will supervise the student's performance and reporting of his or her research. The doctoral committee must be formed before the student may proceed to the qualifying examination.

The doctoral committee will determine the student's qualifications for independent research by means of a qualifying examination, which will be administered no later than the end of the third year. The nature of the qualifying examination varies between curricular groups. In biological oceanography, marine biology, geosciences, physical oceanography, applied ocean science, and climate sciences the student will be expected to describe his or her proposed thesis research and satisfy the committee, in an oral examination, as to mastery of this and related topics. In marine chemistry and geochemistry the student, in an oral examination, is required to present and defend a single research proposition in his or her specialized area. The student also is required to provide a written summary of the research proposition, with references, prior to the examination. In geophysics, the student presents an original research problem, in the form of a written proposition, to the doctoral committee. The student's oral presentation and defense of this proposition completes the examination.

Dissertation

A requirement for the Ph.D. degree is the submission of a dissertation and a final examination in which the thesis is publicly defended. We encourage students to publish appropriate parts of their theses in the scientific literature. Individual chapters may be published as research articles prior to completion of the dissertation.

Departmental Ph.D. Time Limit Policies

Students must complete a qualifying examination by the end of three years, and must be advanced to candidacy for the Ph.D. degree by the end of four years. Total university support may not exceed seven years and total registered time at UCSD may not exceed eight years.

Special Financial Assistance and Fellowships

In addition to teaching assistantships, and graduate student researcher positions, fellowships, traineeships, and other awards available on a campus-wide competitive basis, the department has available a certain number of fellowships and graduate student researcher positions supported from research grants and contracts, or from industrial contributions.

COURSES

LOWER-DIVISION

87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small setting. Topics vary from quarter to quarter. Enrollment is limited to 15–20 students, with preference given to entering freshmen. (P/NP grades only.) SIO Staff (F,W,S)

UPPER-DIVISION

198. Directed Group Study (2-4)
Directed group study on a topic or in a field not included in the regular department curricula, by special arrangement with a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor.* Staff (F,W,S)

199. Special Studies (2 or 4)
Independent reading or research on a problem by special arrangement with a faculty member. (P/NP grades only.) *Prerequisite: consent of instructor.*

GRADUATE

200A. Computational Ocean Acoustics and Signal Processing I (4)
Overview of ocean acoustics. Acoustics Wave Equation with some analytic solution techniques. Ray Methods. Introduction to Spectral and Normal Modes methods. Introduction to beamforming including matched field processing. Computer programs will be constructed on all subjects covered. *Prerequisites: basic physics and familiarity with differential equations and some linear algebra.* Kuperman (F)

200B. Computational Ocean Acoustics and Signal Processing II (4)
Continuation of SIO 200A. Range dependent propagation models including adiabatic and coupled mode models and parabolic equations. More advanced topics in matched field processing. *Prerequisite: SIO 200A.* Kuperman (W)

200C. Computational Ocean Acoustics and Signal Processing III (4)
Continuation of SIO 200B. Modeling interference such as ambient noise. Time domain methods. Matched field tomography, nonlinear optimization methods, and geophysical inversion. *Prerequisite: SIO 200B.* Kuperman (S)

201. Geological Record of Climate Change (4)
Introduction to geological archives; the tools for paleoclimate reconstruction and a sampling of important issues from the geological record, including the development of "greenhouse" and "icehouse" worlds, the origin and evolution of glacial cycles, and the origin of "millennial scale" climate variability. *Prerequisite: chemistry and physics required for graduate admission to SIO, ERTH 101 or equivalent, or consent of instructor.* Charles (W)

202 A-B. Fundamentals of Wave Physics (4-4)
This two-quarter sequence is designed to introduce a broad background of students to basic principles of wave physics, including generation, propagation, dispersion, refraction, diffraction, reflection, waveguides, etc. A variety of wave motions of environmental relevance, including acoustic, ocean surface and internal (SIO 202A), optical and seismic (SIO 202B) are used to illustrate these principles. In-class experiments, data collection, and analysis exercises are incorporated. *Prerequisites: calculus and partial differential equations.* Buckingham, Kuperman, Stramski, Melville, Hildebrand, Dorman (W)

203A-B-C. Methods of Applied Analysis (4-4-4)
Methods of analysis with emphasis on physical applications, including: complex analysis, Fourier methods, Sturm-Liousville theory, boundary value problems and Green's function techniques, Frobenius' method, special functions, steepest descents, multiple scales, WKB methods, asymptotic expansions, variational methods, Wiener-Hopf techniques, Galerkin methods. *Prerequisites: Math. 110 and 120A, or consent of instructors.* Cessi, Ierley, Young (F,W,S)

204A. Advanced Acoustics I (4)
Boundary value problems in vibrating systems, wave propagation in strings, bars, and plates. Fundamentals of acoustical transducers. *Prerequisite: concurrent registration in ECE 145AL recommended.* Hildebrand (F)

204B. Advanced Acoustics II (4)
Theory of radiation, transmission and scattering of sound with special application to ocean acoustics. *Prerequisites: concurrent registration in ECE 145BL recommended; SIO 204A or consent of instructor.* Buckingham (W)

205. Applied Nonparametric Statistics (4)
Methods of nonparametric statistical analysis. sampling, and experimental design with emphasis on those procedures particularly useful in field studies. Designed to supplement an introductory parametric statistics course. Offered in alternate years. *Prere-quisites: elementary statistics or consent of instructor.* Venrick (S)

207A. Digital Signal Processing I (4)
Sampling: A/D and D/A conversion, discrete linear system theory, z-transforms; digital filters, recursive and nonrecursive designs, quantization effects; fast Fourier transforms, windowing, high speed correlation and convoluting; discrete random signals; finite word length effects. *Prerequisite: ECE 109, 153, or consent of instructor.* (S/U grades permitted.) Hodgkiss (F)

207B. Digital Signal Processing II (4)
Power spectrum estimation; homomorphic signal processing; applications to: speech, radar/sonar, picture, biomedical, and geophysical data processing. *Prerequisite: SIO 207A or consent of instructor.* (S/U grades permitted.) Hodgkiss (W)

207C. Digital Signal Processing III (4)
Single and multichannel data processing in a time varying environment; adaptive filters; high resolution spectral estimation; linear prediction; adaptive beamforming. *Prerequisite: SIO 207A-B or consent of instructor.* (S/U grades permitted.) Hodgkiss (S)

207D. Array Processing (4)
The coherent processing of data collected from sensors distributed in space for signal enhancement and noise rejection or wavefield directionality estimation. Conventional and adaptive beamforming. Sparse array design techniques. Applications to ocean acoustics and marine geophysics. *Prerequisite: SIO 207A or equivalent.* (S/U grades permitted.) Hodgkiss, Dorman (F)

208. Seminar in Applied Ocean Sciences (1)
Topics in applied ocean sciences. One hour seminar. (S/U grades only). Staff (F,W,S)

209. Special Topics (1-4)
Within the next few years, lectures on various special subjects will be offered by members of the staff. The emphasis will be on topics that reveal the interdependence of the biological, chemical, geological, and physical processes operating in the oceans. (S/U grades permitted.) Staff (F,W,S)

210. Physical Oceanography (4)
Physical description of the sea; physical properties of seawater, methods and measurements, boundary processes, regional oceanography. *Prerequisites: the mathematics and physics required for admission to the graduate curriculum in the Scripps Institution of Oceanography (see text), or consent of instructor.* Hendershott, Talley (F)

211A-B. Ocean Waves (4-4)
Propagation and dynamics of waves in the ocean including the effects of stratification, rotation, topography, wind, and nonlinearity. *Prerequisites: for SIO 211B, SIO 211A and SIO 214A, or consent of instructor.* Guza, Hendershott, Melville, Salmon, (W,S)

212A-B. Geophysical Fluid Dynamics (4-4)
The equations of motion for rotating stratified flow and their application to the atmospheric and oceanic dynamics; Ekman layer dynamics, potential vorticity dynamics, the quasigeostrophic approximation, theories of the wind-driven oceanic circulation, theories of the atmospheric Hadley circulation, geostrophic adjustment, and baroclinic instability. *Prerequisite: SIO 214A or consent of instructor.* Cessi, Young (W,S)

213. Ocean Turbulence and Mixing (4)
Mixing mechanisms, their identification, description, and modeling. Introduction to turbulence, semi-empirical theories, importance of coherent structures, effects of stratification and rotation on turbulent structure, entrainment and mixing. Cross-listed with MAE 214B. (S/U grades permitted.) Armi (S)

214A. Introduction to Fluid Mechanics (4)
A survey of classical problems in fluid mechanics and approximate techniques of analysis. Topics include conservation equations, straight laminar flows, low and high Reynolds number laminar flow, stability of laminar flows, turbulent flow. *Prerequisite: partial differential equations.* Winant (F)

214B. Environmental Fluid Dynamics (4)
Single-layer flows with a free surface, two-layer flows including exchange flows in harbors, estuaries, seas, and buildings. Continuously stratified flows with meteorological and oceanographic applications. Topographic effects, plumes, jets, and thermals. Cross-listed with MAE 224. *Prerequisite: introductory graduate level course in fluid mechanics.* (S/U grades permitted.) Armi (F)

215. Introduction to Atmospheric Radiative Transfer (4)
Introduces elementary concepts in electromagnetism and quantum mechanics to explain scattering, absorption and emission by gases, aerosols, and clouds. Elegant analytical solutions to the transfer equation will be employed in conjunction with satellite and laboratory measurements to consider phenomena such as the CO_2 greenhouse effect, albedo effect of clouds, color of the skies, and atmospheric radiative cooling. *Prerequisites: undergraduate courses in physics and differential calculus.* Ramanathan (S)

216. Introduction to the Physics of Complex Systems (4)
Emergent complex behavior in nonlinear, dissipative, open dynamical systems will be investigated by studying fundamental properties and their manifestation in examples drawn from the physical and biological sciences. Topics to include fractals, chaos, self-organization, artificial life, and neural networks. *Prerequisites: basic solid and fluid mechanics, mathematics through PDEs, and computer programming skills.* (S/U grades permitted.) Werner (W)

217A. Atmospheric and Climate Sciences I (4)
Thermodynamics and statics of dry and moist air, atmospheric composition, Earth radiation budget, vertical structure of the atmosphere, global energy balance, thermodynamic feedbacks in the climate system. *Prerequisites: undergraduate general physics and mathematics through differential equations.* (S/U grades permitted.) Somerville (F)

217B. Atmospheric and Climate Sciences II (4)
Structure of midlatitude synoptic systems; equations of motion, scale analysis, elementary applications and wave solutions; baroclinic instability theory; atmospheric general circulation and energetics; tropical dynamics; relationships between atmospheric dynamics, CO_2 clouds, precipitation, and other weather and climate phenomena. *Prerequisite: SIO 217A.* J. Norris (W)

217C. Atmospheric and Climate Sciences III (4)
Physical and dynamical processes that determine climate and climate change; role of aerosols; water vapor; CO_2 and other greenhouse gases; cloud-radiative interactions; atmospheric general circulation; role of convection; tropical climate including El Niño. *Prerequisites: SIO 217A and 217B or equivalent background.* Ramanathan (S)

218. Land Surface Hydrology (4)
Advanced introduction to natural processes that govern water occurrence and transport over the land surface. Principles of global hydrologic cycle and land-surface water balance, runoff and fluvial geomorphology, infiltration and subsurface water flow, evaporation and plant transpiration. *Prerequisite: graduate standing.* Georgakakos (S)

219. Special Topics in Physical Oceanography (1-4)
Example topics are case histories and methods in physical oceanography, theories of the ocean circulation, numerical methods in large-scale ocean and atmospheric models, and natural electromagnetic phenomena in the earth and the oceans. (S/U grades permitted.) Staff (F,W,S)

220. Observations of Large-Scale Ocean Circulation (4)
General circulation of the oceans; tropical, subtropical, and high-latitude current systems of the Atlantic, Indian, and Pacific Oceans and marginal seas; ocean heat flux and thermohaline circulations; observational basis of large-scale dynamics. *Prerequisite: SIO 210.* (S/U grades permitted.) Roemmich (S)

221A. Analysis of Physical Oceanographic Data (A) (4)
Fundamental elements of analysis of geophysical and oceanographic time series, including sampling problems, least squares techniques, spectral analysis, interpretation of series, design of experiments. *Prerequisite: consent of instructor.* Guza, Pinkel (F)

221B. Analysis of Physical Oceanographic Data (B) (4)
Techniques for analysis of physical oceanographic data involving many simultaneous processes including probability densities, sampling errors, spectral analysis, empirical orthogonal functions, correlation, linear estimation, objective mapping. *Prerequisite: SIO 221A or consent of instructor.* (S/U grades permitted.) Davis, Rudnick (W)

221C. Data Analysis Laboratory (4)
This course is to give students practical experience with analysis techniques. Students complete three projects. Topics include empirical orthogonal functions, objective mapping, complex demodulation, inference of geostrophic flow, minimization of CTD salinity spiking, isolation of wind-driven currents, wavelets. *Prerequisite: SIO 221A-B or equivalent. (S/U grades only.)* Rudnick, Gille (F)

222. Underwater Bioacoustics (4)
Introductory course to familiarize a broad spectrum of participants to underwater sound and its relationship to underwater animals. Basic physics of sound propagation. use of sound to study underwater animals and, the sounds made by the animals themselves for echolocation and communication will be covered. *Prerequisite: consent of instructor,* (S/U grades permitted Jaffe (W)

223. Geophysical Data Analysis (4)
Design of geophysical experiments and analysis of geophysical measurements, interpretation of geophysical time series; sampling, least squares, spectrum analysis. Staff (W)

224. Internal Constitution of the Earth (4)
An examination of current knowledge about the composition and state of the earth's interior revealed by geophysical observations. Seismic velocity and mass density distributions; equations of state; phase changes; energy balance and temperatures; constraints on composition from extraterrestrial samples and exposed rocks; spherical and aspherical variations of properties. *Prerequisites: calculus and differential equations, basic chemistry and physics, or consent of instructor.* Staff (S)

225. Physics of Earth Materials (4)
Mathematics and physics of continuous media, focusing on geophysical problems. Topics include deformation, stress, conservation laws, elasticity, attenuation, viscoelasticity, fracture mechanics, and porous media. *Prerequisite: consent of instructor.* Staff (F)

226. Introduction to Marine Geophysics (4)
Methods of exploration geophysics with emphasis on those useful at sea. Magnetic and gravitational potential field methods, multi-beam echo sounding reflection and refraction seismology will be covered. Recent papers from the literature will also be read and discussed. *Prerequisites: differential equations; at least one geology course.* (S/U grades permitted.) Dorman, Hildebrand (W)

227A. Introduction to Seismology (4)
Introduction to seismometers and seismograms; stress and strain; potentials and the wave equation; geometrical ray theory and travel times in layered media; representation of seismic sources; WKBJ and synthetic seismograms; seismic hazards and other applications of seismology. *Prerequisite: consent of instructor.* (S/U grades permitted.) Staff (F)

227B. Advanced Seismology I (4)
Introduction to low-frequency digital data; continuum mechanics and the equations of motion; free oscillation solutions; construction of Earth models; excitation of free-oscillations and source mechanism retrieval; array processing of long-period data; modelling aspherical structure; surface waves. *Prerequisite: consent of instructor.* (S/U grades permitted.) Staff (W)

227C. Advanced Seismology II (4)
High-frequency wave propagation; methods for computing synthetic seismograms including WKBJ, reflectivity and finite differences; body-wave spectra; attenuation of body waves; source physics; reflection and refraction seismology; seismic tomography. *Prerequisite: consent of instructor.* (S/U grades permitted.) Staff (S)

229. Gravity and Geomagnetism (4)
Introduction to potential theory, with applications to gravity and geomagnetism. Topics include the geoid, spherical harmonics, Laplace's equation, the Dirichlet problem on a sphere, and Fourier methods. Gravity anomalies and geomagnetic field modeling and sources are discussed; also paleomagnetic observations. *Prerequisites: advanced calculus, differential equations, complex variables, and familiarity with Maxwell's equations, or consent of instructor.* (S/U grades permitted.) C. Constable, Parker (F)

230. Introduction to Inverse Theory (4)
Solution of linear and nonlinear inverse problems in geophysics by optimization techniques such as norm minimization and linear programming. Construction of models by regularization; inference by bounding functionals. Illustrations from gravity, geomagnetism, and seismology. *Prerequisite: consent of instructor.* (S/U grades permitted.) Parker (W)

232. Environmental Geophysics (4)
A field-based course on the geophysical techniques employed in modern environmental surveys for ground water studies, contaminant and hazard assessment, soil and foundation evaluation, and archaeology. Includes shallow seismic, electrical, and ground penetrating radar methods. Seminars describing equipment and procedures will be followed by field trips, and the resulting data reduced and interpreted under supervision. *Prerequisite: consent of instructor.* S. Constable, Harding (S)

233. Introduction to Computing at SIO (4)
Introduction to the SIO computing environment and common software tools in geophysics and other disciplines. Topics include UNIX, Matlab, Postscript, GMT, LaTex, HTML, and a scientific programming language such as C or Fortran90. *Prerequisite: consent of instructor.* (S/U grades permitted.) Shearer (F)

234. Geodynamics (4)
A general course on the dynamics and kinematics of the solid earth based on the text of Turcotte and Schubert. Topics include plate tectonics, heat flow, lithospheric cooling, flexure, viscous flow, global gravity, crustal structure, and other related topics. *Prerequisite: familiarity with partial differential equations and Fourier transforms.* (S/U grades permitted.) Sandwell (W)

236. Satellite Remote Sensing (4)
A general course on physical principles of remote sensing based on the text by Rees. Topics include: orbit geometries and platforms; propagation, reflection, and emission of electromagnetic waves; electro-optical systems; passive microwave systems, ranging systems; and scattering techniques such as SAR. *Prerequisite: consent of instructor.* (S/U grades permitted.) Sandwell (F)

237A. Introduction to Ocean Optics (4)
Overview of ocean optics. Concepts in radiometry. Inherent and apparent optical properties. Radiative transfer equation. Light absorption and scattering by seawater constituents. Optics of air-water interface. Light fields within and leaving the ocean. Optics of marine particles. Measurement methods and instrumentation. *Prerequisites: basic physics and differential calculus, or consent of instructor.* Stramski (F)

237B. Ocean Color Remote Sensing (4)
Overview of ocean color satellite missions. Concepts in radiometry. Inherent and apparent optical properties. Radiative transfer equation. Solar radiation and elements of atmospheric optics. Propagation of light across the sea surface and within the ocean. Light absorption and scattering by seawater. Water-leaving radiance and remote-sensing reflectance. Ocean color algorithms and applications. *Prerequisites: basic physics and differential calculus, or consent of instructor.* (S/U grades permitted.) Stramski (F)

237C. Optical-Biological Interactions in the Ocean (4)
A discussion class with emphasis on the interaction of light with marine plankton. Topics will include light absorption, fluorescence, and scattering by phytoplankton and effects of growth conditions on phytoplankton optical properties. Classic and contemporary papers dealing with these topics will be discussed. *Prerequisites: basic physics and biology, or consent of instructor.* (S/U grades only.) Stramski (F)

238. Sensor Networks (4)
Characteristics of chemical, biological, seismic, and other physical sensors; signal processing techniques supporting distributed detection of salient events; wireless communication and networking protocols supporting formation of robust sensor fabrics; current experience with low power, low cost sensor deployments. Conjoined with MAE 149 and ECE 156. *Prerequisite: upper-division standing and approval of instructor, or graduate student in science or engineering.* (S/U grades permitted.) Hodgkiss, Rao (S)

239. Special Topics in Geophysics (1-4)
Special course offerings by staff and visiting scientists. Example topics are seismic source theory, geophysical prospecting methods, dislocation theory and seismic mechanisms, tectonic interpretation of geodetic data, and dynamo theory. (S/U grades permitted.) Staff (F,W,S)

240. Marine Geology (4)
Introduction to the geomorphology, sedimentation, stratigraphy, vulcanism, structural geology, tectonics, and geological history of the oceans. *Prerequisites: the physics and chemistry required for admission to the graduate curriculum in SIO, and ES 101 or equivalent, or consent of instructor.* Staff (W)

241. Seminar in Hydrogeology and Tectonics (2)
Introduction to the role that fluids play in the physical development of active tectonic systems. Discussions will focus on the nature of the processes controlling fluid flow through the Earth's crust and the dynamic interaction of fluid migration and faulting. *Prerequisite: ES 101 or equivalent.* (S/U grades permitted.) Brown (S)

243. Marine Paleoecology (4)
Paleoecology of marine plankton, nekton, and benthos. Patterns and changes in marine communities and ecosystems over geological time in relation to changes in the physical, chemical, and geological environment and biotic interactions. The preservation filter and inference of ecological processes from fossils and biogeochemical proxies. Biotic interchanges, incumbency, escalation and trends, mass extinctions, and recovery. Lectures, seminar discussion, laboratory, and field trips. *Prerequisites: bachelor's degree in science or consent of instructor; open to undergraduates with completion of ERTH 104 and either BIEB 130 or BIEB 140, or equivalent.* Jackson, Staff (W)

244. Shape and Structure of the Ocean Floor (4)
Description and explanation of the structural geomorphology of oceanic crust, and of the tectonic and volcanic processes responsible for it. Description and interpretation of deep-sea sedimentary landforms (e.g., deep-sea fans, drifts, bedforms) and of the bottom currents that shape them. Offered in alternate years. *Prerequisite: any previous graduate/undergraduate earth science or geology course.* Lonsdale (S)

245. Seminar in Marine Sediment Geochemistry (2)
Chemical paleoceanography will be the focus, emphasis, on seawater and/or sediment chemical and isotopic records; discussions will concentrate on some of the following istopic systems: Li, B, C, O, S, Sr, and Nd, and on select chemical tracers such as Cd and Ir; on the marine phases that most reliably record seawater chemical and isotope compositions; and on diagenetic problems, how to identify and deal with them. *Prerequisite: SIO 260 and consent of instructor.* (Offered in alternate years.) (S/U grades permitted.) Kastner (S)

246. Global Tectonics and Basin Formation (4)
Plate tectonics of the crust and upper mantle, examining a variety of environments from ridge crests to continental margins, including plate interiors, with an emphasis on basin formation in these tectonic settings. *Prerequisite: graduate standing.* Cande, Driscoll (F)

247. Rock Magnetism and Paleomagnetism (4)
Rock magnetism and acquisition of magnetic remanence in geological materials as well as laboratory procedures and data analysis (isolating remanence components and statistical approaches). The paleomagnetic literature will be used to illustrate applications in geological and geophysical problems.

Prerequisites: one year each of college-level physics and geology; mathematics through calculus. (S/U grades permitted.) Tauxe (W)

249. Special Topics in Marine Geology (1-4)
Special course offerings by staff and visiting scientists. (S/U grades only.) Staff (F,W,S)

250. Earth History (4)
Geologic history of the Earth including evolution of the oceans, atmosphere, and life's diversity. Major developments and current controversies in Earth history and biological evolution covered in a combination of lecture, student-led discussion of key papers, and weekend field trips. *Prerequisite: ERTH 101 (or equivalent) or consent of instructor.* R. Norris (F)

252A. Introduction to Isotope Geochemistry (4)
Radioactive and stable isotope studies in geology and geochemistry, including geochronology, isotopes as tracers of magmatic processes, cosmic-ray produced isotopes as tracers in the crust and weathering cycle, isotopic evolution of the crust and mantle. Conjoined with ERTH 144. *Prerequisite: graduate: SIO entrance requirements or consent of instructor; undergraduate: ERTH 101, 102, 120, or equivalent.* Castillo, Hilton, R. Keeling, Lal (F)

252B. Advanced Isotope Geochemistry I (4)
An advanced treatment of noble gas and stable isotope geochemistry. Offered in alternate years with SIO 252C. *Prerequisites: SIO 252A/ERTH 144.* Bada, Hilton, Wahlen (S)

252C. Advanced Isotope Geochemistry II (4)
An advanced treatment of radiogenic and cosmogenic isotope geochemistry. Offered in alternate years with SIO 252B. *Prerequisites: SIO 252A/ERTH 144.* Lal, Macdougall (S)

256A. Introduction to Field Geology (4)
Mapping and interpretation of geologic units and structures in the field. Field observations at the surface are related to theory and extrapolated to three dimensions. Field work is done on weekends in local areas; field data are discussed and evaluated through applicable geologic principles in the laboratory. Conjoined with ERTH 162A. *Prerequisites: consent of instructor; to be taken concurrently with SIO 256L.* Brown, Castillo (W)

256L. Structural Analysis for Field Geology (4)
Principles of stratigraphy and structural geology applicable to field geologic studies. Discussion and laboratory exercises. Conjoined with ERTH 162L. *Prerequisites: consent of instructor; to be taken concurrently with SIO 256A.* Brown, Castillo (W)

257. Seminar in Petrology (4)
Discussion of current research in petrology and mineralogy. (S/U grades permitted.) Hawkins (W)

259. Atmospheric Geochemistry (4)
Topics in this introductory course include: structure and composition of the atmosphere; chemistry and isotopes of natural and man-made carbon-, nitrogen-, and sulfur-bearing trace gases; ozone and hydroxyl radical; halogenated gases; air-sea exchange; aerosols; climatic effects. (S/U grades permitted.) Wahlen, Weiss (W)

260. Marine Chemistry (4)
Chemical description of the sea; the distribution of chemical species in the world oceans, and their relationships to physical, biological, and geological processes. Aluwihare, Barbeau, R. Keeling (W)

261. Energetics and Kinetics in Marine Systems (4)
This course teaches the physical chemical principles that control chemistry in marine systems. After a basic introduction to thermodynamics and its application to an understanding of the marine environment, the emphasis will be on the study of a variety of kinetic processes. *Prerequisites: undergraduate chemistry equivalent to UCSD Chemistry 6 sequence, SIO 260.* Dickson (S)

262. Seminar in Marine Natural Products (1)
Students will give seminars on current research topics in marine natural products chemistry. *Prerequisite: consent of instructors.* (S/U grades only.) Fenical (F,W,S)

263. Aqueous Chemistry (4)
This course emphasizes the chemical principles that control basic aqueous chemistry in marine systems. The focus will be to show that the geochemistry of the various elements in sea water and biological systems can be understood as a consequence of basic general chemical concepts such as electron structure, chemical bonding, and group and periodic properties. *Prerequisite: undergraduate chemistry equivalent to UCSD Chemistry 6 sequence.* Dickson (F)

264. Special Topics in Marine Natural Products Chemistry (3)
This course provides the foundation for advanced study in the field of marine natural products chemistry. Topics vary from the history of natural products to the organic chemistry of terpenes, alkaloids, acetogenins, and other natural product classes. Varying by topic quarterly, this class is given each quarter and may be repeated. *Prerequisite: one year general organic chemistry.* (S/U grades only). Fenical (F,W,S)

265. Chemical Ecology of Marine Organisms (4)
An outline of the organic chemicals from marine organisms with special reference to their function in the marine environment. The differences between terrestrial and marine natural products will be stressed. *Prerequisite: basic organic chemistry.* Fenical (W)

267. Biogeochemistry (4)
Examines quantitatively the impact of the biota on the chemistry of the atmosphere and ocean. Emphasis given to isotopes as tracers of biogeochemical processes. Attention given to paleoclimatic and paleoatmospheric data from ice cores to reveal mechanisms. *Prerequisite: undergraduate inorganic chemistry and calculus and SIO 210 and SIO 260 or consent of instructor.* Severinghaus, R. Keeling (S)

268. Seminar in Geochemistry and Marine Chemistry (1)
Student seminars on topics related to geochemistry and the chemistry of the marine environment. (S/U grades only.) Dickson (W)

269. Special Topics in Marine Chemistry (1-4)
Special course offerings by staff and visiting scientists. (S/U grades permitted.) Staff (F,W,S)

270. Pelagic Ecology (4)
An analysis of the concepts and theories used to explain the biological events observed in the water column. Alternate years. *Prerequisites: SIO 210, 280, or consent of instructor.* Checkley, Ohman (S)

270A. Fisheries Oceanography (4)
Aspects of marine ecology relevant to the reproduction, survival, and distribution of commercially important marine species. Alternate years only. *Prerequisites: SIO 210 and 280, or consent of instructor.* (S/U grades only.) Checkley (S)

271. Marine Zooplankton (4)
Lectures and laboratories treating the morphological, behavioral, and life history variations of the principal phyla of planktonic invertebrates and heterotrophic protists. Constraints of life at low Reynolds numbers; principles of allometry; growth processes of heterotrophic organisms. *Prerequisite: SIO 280 or consent of instructor.* (S/U grades permitted.) Ohman (S)

272. Biogeography (3)
A lecture course concerning the origin, development, and perpetuation of distributional patterns with emphasis on benthic marine organisms. Newman (W)

273A. Professional Ethics in Science (2)
A seminar on the historical and contemporary ethics and ethos of scientific research, based on published documents. Given in alternate years. Dayton (S)

273B. Science and Marine Environmental Policy (2)
Lectures by the instructor, visiting lecturers, and class discussions focusing on how scientists can help policy makers transform scientific understanding into policy. Topics will emphasize conservation, fisheries management, and pollution issues. Given in alternate years. Dayton (S)

274. Marine Arthropods (5)
Lectures and laboratories on the natural history, morphology, taxonomy and phylogeny of arthropods with emphasis on marine forms. Alternate years. *Prerequisite: consent of instructor.* Hessler, Newman (W)

275A. Benthic Ecology (4)
Evolution and maintenance of benthic communities from the terrestrial margins to the deep sea. Special emphasis will be placed on physical and biological scaling and processes determining patterns of distribution and abundance; interrelationships between community structure and population phenomena, including trophic relationships, reproductive and recruitment patterns, succession, and life history biology. Offered in alternate years with SIO 275B. *Prerequisite: consent of instructor; open to undergraduates.* (S/U grades permitted.) Levin, Dayton, Sala (S)

275B. Natural History of Coastal Habitats (4)
Two three-hour laboratories per week, three four-six day field trips to sites from Mexico to Monterey Bay. Several one-day field trips to local habitats including lagoons, sand and rock intertidal habitats, areas of marine fossils, and areas with migrating birds. Format of course variable depending on student interests. Alternate years with 275A. *Prerequisites: open to undergraduates with consent of instructor and completion of BIEB 130, Introductory Marine Ecology.* (S/U grades permitted.) Dayton (W)

276. Quantitative Theory of Populations and Communities (4)
An introduction to the quantitative tools and conceptual issues underlying the study of the dynamics and structure of ecological systems. *Prerequisite: calculus (three quarters) or consent of instructor.* (S/U grades permitted.) Sugihara, Deriso (F)

277. Deep-Sea Biology (4)
The ecology, zoogeography, taxonomy, and evolution of deep-sea organisms, with emphasis on the benthos. Offered alternate years. *Prerequisite: consent of instructor.* (S/U grades only.) Levin, K. Smith (W)

278. Seminar in Ocean Biosciences (2)
Presentations of reports, review of literature, and discussion of current research in the marine biological and oceanographic sciences. (S/U grades permitted.) Staff (F,W,S)

279. Special Topics in Biological Oceanography (1-4)
(S/U grades permitted.) Staff (F,W,S)

280. Biological Oceanography (4)
The biology and ecology of marine plankton, nekton, and benthos. Emphasis will be on processes regulating species, community, and ecosystem patterns and changes, including productivity, trophic relationships and species interactions with the physical, chemical, and geological environment. One or more field trips. *Prerequisite: bachelor's degree in science or consent of instructor.* Franks or Checkley, Levin (F)

281. Environmental Physiology and Biochemistry of Marine Organisms (4)
Biochemical mechanisms of adaptation of organisms to the marine environment. Special emphasis is on the effects of pressure, temperature, salinity, oxygen, and light on the physiology and biochemistry. Conjoined with BIBC 130. *Prerequisites: adequate training in biochemistry and biology and consent of instructor.* Felbeck (W)

282. Phytoplankton Diversity (4)
Molecular, biochemical, ecological, and evolutionary perspectives on the diversity of eukaryotic and prokaryotic phytoplankton. *Prerequisite: consent of instructor.* Palenik (W)

283. Marine Biodiversity (4)
The origins, maintenance, collapse and restoration of diversity in the sea, discussed from both ecological and evolutionary perspectives. *Prerequisite: consent of instructor.* (S/U grades permitted). Knowlton (S)

284. Invertebrate Zoology (5)
Invertebrate zoology covering all of the major and minor phyla: phylogeny, anatomy, physiology and natural history. Lecture and laboratory demonstrations. *Prerequisite: consent of instructors; no audits. Holland, Hessler* (W)

285. Physical-Biological Interactions (4)
Physical and biological processes affecting growth and patchiness of plankton. Concepts and equations from physical oceanography will be presented and explored in a biological context. Ideas will be treated both theoretically and with examples from the literature. *Prerequisites: introductory calculus and SIO 210, or consent of instructor.* Franks (S)

287A. Marine Microbial Ecology (4)
Recent developments in the study of marine bacteria. Emphasis will be on biochemical and physiological adaptations of marine bacteria to the ocean environment. Bacterial metabolism, growth, and death will also be discussed in the context of trophic interactions and flows of material and energy in marine ecosystems. Molecular biology techniques used in the study of bacterial ecology will also be discussed. *Prerequisite: consent of instructor.* (S/U grades permitted.) Azam (F)

287B. Microbial Physiology (4)
Prokaryotic microbial physiology will be discussed primarily from a biochemical standpoint with emphasis on mechanism. Topics will vary from year to year but will include the following themes: Central Metabolism. Bioenergetics, Biosynthesis, Regulation, Differentiation. Prokaryotic Structure-Function Relationships, *Prerequisites: BiBC100 or BIBC 102 or equivalent.* Haygood, Saier (S).

288. Environmental Microbiology Laboratory (4)
This course emphasizes advanced techniques and theory in environmental microbiology. Students will perform experiments concerning (a) enrichment of diverse microbes (b) microbial enumeration and identification (c) metabolic and physiochemical adaptations, and (d) biotechnology, along with an independent project. *Prerequisite: consent of instructors,* Bartlett, Brahamsha, Haygood, Tebo (S)

289. Introduction to Quantitative Marine Ecology and Evolution (4)
An introduction to basic questions and problems in quantitative ecology with emphasis on marine organisms: spatial and temporal patterns, population dynamics and the behavior of higher order systems, multispecies populations and communities, and population genetics and life histories. *Prerequisites: some undergraduate mathematics and ecology will be assumed; or consent of instructor.* Burton, Jackson, Sala, Sugihara

290. Marine Biology (4)
An introduction to the field of marine biology, especially to the diversity of marine organisms at all taxonomic levels and their adaptations to the marine environment. *Prerequisite: graduate standing.* Palenik and Staff (W)

291. Biology Graduate Research Presentations (1)
Graduate students in the biological sciences present their research in a seminar or poster format. Class participants and instructors provide written feedback on the presentations. Required of third-year and beyond marine biology curricular group students during spring quarter. Open to all SIO graduate students. (S/U grades only.) Tebo, Haygood, Latz (S)

292. Scientific Communication (2)
Forms of scientific communication, practical exercise in scientific writing and short oral communication and in criticism and editing; preparation of illustrations, preparation of proposals; scientific societies and the history of scientific communication. Examples from any field of science, most commonly biology, marine biology, ecology, and neuroscience. *Prerequisite: graduate status in science.* (S/U grades only.) Yayanos, Staff (S)

294. Biology of Fishes (5)
The comparative evolution, morphology, physiology, and ecology of fishes. Special emphasis on local and deep-sea and pelagic forms in laboratory. *Prerequisite: graduate standing or consent of instructor.* Hastings (S)

295. Introduction to Marine Biodiversity and Conservation—Seminar (8)
Lectures on ecological, economic, social, and legal issues related to marine biodiversity and case studies on socioeconomic and legal issues. *Corequisite: SIO 295L for IGERT and MAS students only. Prerequisite: permission of instructor.*

295L. Introduction to Marine Biodiversity and Conservation—Lab (7)
Laboratory work on major biological taxa, field trips on biodiversity in situ, computer labs for informatic tools. *Corequisite: SIO 295 for IGERT and MAS students only. Prerequisite: permission of instructor.*

296. Special Topics in Marine Biology (1-5)
Example topics are reproduction in marine animals, adaptation to marine environments, larval biology, marine fisheries, macromolecular evolution, physical chemical topics in physiology, philosophy of science. (S/U grades permitted.) Staff (F,W,S)

297. Marine Biology Seminar (1)
Lectures given by visiting scientists and resident staff and students. (S/U grades only.) Staff (F,W,S)

298. Special Studies in Marine Sciences (1-4)
Reading and laboratory study of special topics under the direction of a faculty member. Exact subject matter to be arranged in individual cases. *Prerequisite: graduate standing.* (S/U grades permitted.) Staff (F,W,S)

299. Research (1-12)
(S/U grades permitted.) Staff (F,W,S)

Sociology at UCSD

Sociology studies societies and human groups: their composition, organization, culture, and development. It combines scientific and humanistic methods to investigate a subject that is both relevant and broad—ranging from social interaction in everyday life to social changes taking place on a global scale. The Department of Sociology at UCSD offers an innovative program that covers the breadth of the discipline while giving students opportunities to specialize in areas of their choice, to conduct independent research, and to participate in an Honors Program. The department also encourages majors to study abroad and to take courses in other humanities and social science departments in order to expand their perspective on sociological topics.

Students at UCSD can explore a full range of sociological inquiry through courses in such established fields as Third World development, law, culture, social movements, religion, race and ethnic relations, gender roles, medicine, and mental illness. In addition, students have the opportunity to participate in courses found in few other sociology departments, such as the politics of language, ethnographic film, the Holocaust, comparative sex stratification, mass media, and revolutions. The faculty also teach an exceptional array of courses focusing on specific societies or world regions, including Africa, Japan, China, Latin America, eastern Europe, the Soviet Union, and the United States.

Thus sociology is a valuable major for students who want to enter law, medicine, architecture, business, or politics. It also provides a solid liberal arts education for students who plan careers in such fields as criminal justice, public health, urban planning, social welfare, counseling, public administration, international relations, or market research. For students who wish to pursue graduate study in the social sciences for careers in teaching or scholarly research, an undergraduate degree from the Department of Sociology will provide a thorough grounding in recent theoretical and methodological advances in the discipline. A sociology major offers excellent preparation for teaching in the elementary schools. If you are interested in earning a California teaching credential from UCSD, contact the Teacher Education Program for information about the prerequisite and professional preparation requirements. It is recommended that you contact TEP as early as possible in your academic career. Whatever the career choice, the study of sociology can help the student cultivate a critical awareness of social life.

Students interested in majoring or minoring in sociology should stop by the Department of Sociology office, SSB 401, for a brochure on the program and a student handbook. These clarify specific procedures and guidelines, and provide recommendations for areas of specialization within the major, as well as for graduate studies and careers in sociology.

The Undergraduate Program

The Major

To receive a B.A. with a major in sociology, students must complete four lower-division and twelve upper-division courses in sociology, including the required courses listed below.

A 2.0 GPA is required in the major, and students must earn at least a C– in each course used for the major. *No courses taken to apply toward the major may be taken on a Pass/Not Pass basis except Sociology 197, 198 or 199.* Only one such special studies course (including internships) may be applied toward the major. These special studies courses must be applied for and approved by the department before the beginning of the quarter in which the student wishes to enroll, and can only be taken on a Pass/Not Pass basis. See the staff undergraduate coordinator for the necessary application forms and deadlines.

Lower-Division

Sociology 1A, 1B, 20, and 60 are required for the major. We strongly recommend that you take Sociology 1A and Sociology 1B in sequence. It is advisable that students complete these required lower-division courses (which should be taken during the freshman or sophomore year) before continuing with their upper-division work. Sociology 60 is a prerequisite for all upper-division methods courses.

Upper-Division

Twelve upper-division courses are necessary for the major—five are courses in required clusters, and the other seven are upper-division electives. The upper-division sociology curriculum is divided into four areas of concentration (clusters) as follows:

A. **Theory and Method**
(courses designated Soc/A)
Theory
100, 102, 103F, 103T
Methods
103M, 104, 105, 106, 107, 108A, 108B, 109, 109S, 110A, 110B

B. **Culture, Language, and Social Interaction**
(courses designated Soc/B)
111, 112, 113, 114, 116, 117, 118, 118A, 119, 120S, 128, 130, 131, 142, 143, 145, 146, 160, 161, 162, 162R, 164J, 166, 167, 170, 172, 173, 174

C. **Organizations and Institutions**
(courses designated Soc/C)
121, 123, 124, 126, 129, 132, 134A, 134B, 135, 136A, 136B, 137, 138A–B, 139, 140, 140F, 141, 144, 148, 148L, 148M, 152, 153, 154, 155, 156, 157, 159, 165A/B, 168E, 168T, 180

D. **Comparative and Historical**
(courses designated Soc/D)
151, 158, 158J, 169, 171, 177, 178, 179, 181, 182, 183, 185, 187, 187S, 188A, 188B, 188D, 188F, 188K, 189

All students must complete Sociology 100 (students are strongly advised to do so by the end of their junior year) and *one* method course from the list above. (Method courses are numbered Soc/A 103M to 110C; for all of these methods courses, Sociology 60 is a prerequisite.) *One* course is required in each of the other three

areas. Students are encouraged to complete their theory and methods courses early in their program, since theoretical perspectives and skills in methods will enhance their subsequent course work.

In fulfilling the major, students may apply, with the Department of Sociology approval, up to two upper-division courses from the relevant offerings in the Departments of Anthropology, Economics, History, Linguistics, Political Science, Psychology, Urban Studies and Planning, macro and micro areas of the Department of Communication, and the Teacher Education Program. Courses from departments other than these may be taken if the student submits a petition to, and obtains approval from, the Department of Sociology.

Education Abroad Program

Students are encouraged to participate in the UC Education Abroad Program (EAP) or UCSD's Opportunities Abroad Program (OAP) while still making progress toward completing their major. Students considering this option should discuss their plans with the undergraduate adviser prior to going abroad, and courses taken abroad must be approved by the department. It may be possible to use some related courses outside of the discipline of sociology toward the major. For more information on EAP, see the section of this catalog on the Education Abroad Program. Interested students should contact the Programs Abroad Office in the International Center. To petition particular courses taken abroad, see the undergraduate adviser in the Department of Sociology.

Recommendations for Transfer Students

If students wish to use courses taken at other institutions towards their major, they must first meet with the staff undergraduate coordinator in the department during designated office hours. (College transcripts, college catalogs, and course syllabi should be brought at the time of appointment.) Students are required to fill out one student petition per transfer course as well as an additional "information sheet" available in the Department of Sociology. Once these petitions are turned in, a determination will be made regarding the transferring of courses into the program.

It is important to note that eight of the twelve upper-division courses in the undergraduate program must be taken in the Department of Sociology at UCSD, unless students obtain special acceptance of additional courses from the chair and the faculty undergraduate adviser.

The Minor

The minor consists of seven sociology courses: two lower-division and five upper-division. Unless colleges specify specific courses to be taken, the student may choose any two lower-division sociology courses (Soc/L 1A, 1B, 10, 20, 30, 40 or 60) and any five upper-division courses (Soc. 100 to 190). Courses for the minor must be taken for a letter grade only. Special study courses or internships may not be applied toward the minor.

Science and Society Minor

OFFICE: 462 Social Science Building, (858) 534-2729

Faculty

Steven G. Epstein, Ph.D., *Associate Professor of Sociology*
Andrew T. Scull, Ph.D., *Professor of Sociology*

The Science and Society Minor offers an opportunity for students to examine in a systematic and extended fashion the nature, significance, and development of modern scientific, technological, and medical enterprises. Science, technology, and medicine permeate modern society, and scientific developments often spark heated public debate. Yet undergraduate education rarely offers the chance to engage in systematic reflection upon how science influences society and how society influences science. The Science and Society Minor provides students with an innovative and inter-linked series of courses that permit precisely such a disciplined discussion of these issues.

Students complete the Science and Society Minor by taking two lower-division and five upper-division courses, a sequence that allows them to explore how modern scientific and medical knowledge and their associated technologies developed from the Scientific Revolution to the present; to understand how the roles of the scientist and the physician assumed their modern forms; to grasp how the scientific, technological, and medical communities came to possess their current authority; and to consider the appropriate role of the public in debating scientific and technological issues. A number of the courses offered focus on present-day scientific, technological, and medical topics and controversies: the impact of the Internet, the problems and prospects of molecular medicine, the disputes over the reality and the possible impact of global warming, scientific fraud, the ethics of medical experimentation, the AIDS epidemic, etc. Others provide students with historical perspectives on the changing meaning and character of science, medicine, and technology as key features of modernity.

The Science and Society Minor is of particular relevance to prospective science and engineering majors interested in developing a broader understanding of the scientific enterprise; to premedical students wishing to understand the intellectual and institutional foundations of modern medicine; and to social science and humanities students wanting to obtain a systematic grasp of contemporary scientific and technological society.

Science and Society Minor Requirements

The minor consists of two lower-division courses and five upper-division courses, chosen from the list below. One or more relevant upper-division courses offered in other departments or taken at another university may be petitioned for the minor, with the prior approval of the coordinator of the minor.

LOWER-DIVISION COURSES

Soc/L 30: Science and Society

Soc/L 40: Sociology of Health Care Issues

UPPER-DIVISION COURSES

Soc/B 128: Media and Society: From the Invention of Print to the Internet

Soc/C 134A: The Making of Modern Medicine

Soc/C 134B: Medicine in the Twentieth Century

Soc/C 135: Medical Sociology

Soc/C 136A: Sociology of Mental Illness: An Historical Approach

Soc/C 136B: Sociology of Mental Illness in Contemporary Society

Soc/C 137: Knowledge and Practice in Biomedicine

Soc/C 168E: Sociology of Science

Soc/C 168T: Sociology of Technology

Soc/D 171: Science and the Making of the Modern World

The Honors Program

The Department of Sociology offers an honors program to those students who have demonstrated excellence in the sociology major.

Successful completion of the honors program enables the student to graduate "With Highest Distinction," "With High Distinction," or "With Distinction," depending upon performance in the program.

Eligibility

Students may apply to the honors program if they meet the following requirements:

1. junior standing (ninety units completed)
2. GPA of 3.5 or better in the major
3. recommendation of a faculty sponsor familiar with student's work
4. must have completed at least four upper-division sociology courses
5. overall GPA of 3.2 or better
6. must have completed Soc/A 100 and one upper-division methods course prior to the fall quarter when the honors course begins; alternatively, the consent of the honors program director or the undergraduate adviser must be obtained

Interested students may pick up an application from the staff undergraduate coordinator in the Department of Sociology. Completed applications must be in the department office no later than week five of the spring quarter prior to the start of the honors program in the fall.

Students traveling abroad during their junior year should note that the deadline for applications still applies to them and should make arrangements accordingly.

Enrollment in the honors program is limited. Final decisions on acceptance into the program will be made by the presiding faculty member.

Course Requirement

The student must take Sociology 196A, Advanced Studies in Sociology, and Sociology 196B, Supervised Thesis Research, which will count as two of the twelve upper-division courses required for the major. Each student will choose a faculty adviser to help supervise the thesis research and writing with the honors program director.

Students whose GPA in the major falls below 3.5 or who do not earn at least an A– in the honors seminars will not graduate with distinction, but they may count the two honors courses among the twelve upper-division courses required for the major. Students must maintain a 3.5 GPA in the major and a 3.2 overall GPA until final graduation, in order to receive honors in the sociology honors program. To graduate "With Highest Distinction" the student must earn an A+; to graduate "With High Distinction" the student must earn an A; and to graduate "With Distinction" the grade must be an A–.

The Graduate Program

The graduate program in sociology at the University of California, San Diego is organized on the basis of programs of specialization in comparative and historical sociology, the sociology of culture, and the sociology of science, technology, and medicine. It is designed to prepare students for two main goals: to contribute to the increase of knowledge about societies and thereby advance the discipline of sociology; and to teach sociology at the graduate and undergraduate levels. The majority of graduates from the program find teaching and research positions in colleges and universities, although some also work in non-academic research and social policy positions. The department offers a course of study leading to the doctor of philosophy degree. While the Master of Arts degree is awarded as a step toward the completion of the Ph.D., applicants seeking only an M.A. degree are not accepted.

Departmental Research and Teaching

Members of the department are engaged in a wide variety of research and teaching activities that fall into three broad areas of concentration that correspond to our programs of specialization:

COMPARATIVE AND HISTORICAL SOCIOLOGY

Many members of our faculty have research interests in the historical and/or comparative analysis of social institutions, structures, and processes, and social change in general. Using methods of comparative historical research and concepts drawn from social theory, individual faculty are engaged in research on, among other things: (1) political sociology, including revolution, social and political movements, and the evolution of the modern state, (2) economic transformation in contemporary societies (industrial countries, "emerging markets," and agrarian societies), including the labor process, stratification and the organization of work, and the development of market economies, (3) collective identities and social relations, including nationalism, class, gender, race, and ethnicity, and (4) social control and institutionalization. The department is among the most internationally oriented departments of sociology in the world, with specialists in most regions of the world, including Eastern and Western Europe, the former Soviet Union, Japan, China, southern Africa, Latin America, the Middle East, as well as the United States.

SOCIOLOGY OF CULTURE

A great number of the faculty have research and teaching interests in the sociology of culture broadly conceived. Sociology of culture involves topics such as: (1) the interpretation of the symbol systems that constitute meaningful resources for social action, (2) the analysis of the processes through which patterns of meaning are socially reproduced, and (3) the study of the interaction between culture change and social change. Many faculty have an interest in the comparative study of cultural traditions around the world. Others are interested in the relationship of culture to social movements and collective identities. And some see the sociology of culture not simply as a subdiscipline but as a general theoretical perspective on social experience. More specific substantive interests include sociology of knowledge and intellectuals, political culture, the culture of work, education and socialization, comparative moral cultures, the cultural dimensions of ethnicity, gender, sexuality, and popular culture.

SOCIOLOGY OF SCIENCE, TECHNOLOGY, AND MEDICINE

A substantial fraction of the faculty has research and teaching interests focused on the interrelationships between science, technology, and medicine and modern society. Drawing on a range of sociological and historical methodologies, individual faculty are engaged in research on science and social movements, scientists and the state, biomedicine, the social history of madness and psychiatry, the historical sociology of scientific knowledge and practice, and sociological approaches to the Scientific Revolution. (For information on the interdisciplinary Science Studies Program, see below Specialized Programs of Study.)

In addition, the department plans to add a fourth program of specialization in inequalities

(class, gender, and race). A substantial number of our faculty teach and do research in these fields.

Admission

Admission to the graduate program in sociology is open to students with excellent undergraduate records in any field. Some previous work in sociology or the social and behavioral sciences is advisable, but not required. New students are admitted in the fall quarter of each academic year. A bachelor's degree from an accredited college or university is a prerequisite for admission to the graduate program. Prospective applicants should submit the official application for admission and awards (same form), one set of official transcripts from each institution attended after high school, official scores from the Graduate Record Examination, application fee, at least three letters of recommendation, and one or more samples of the applicant's own writing, such as a term paper. Additionally, foreign applicants must submit official scores from the Test of English as a Foreign Language (TOEFL) and the Test of Written English (TWE). Applicants are encouraged to contact and communicate with the department to talk with faculty and graduate students. The application deadline is January 2, of each year.

Program of Study

The graduate programs in the University of California system work under the "normative time" standard. Normative time refers to the time period in which students, under normal circumstances, are expected to complete their requirements for the Ph.D. degree. Each department establishes a normative time for its doctoral program, and for the Department of Sociology, as for most graduate programs in the university, it is six years. To provide an incentive for students to complete the Ph.D. within the normative time period, partial fee grants are made to all students who have advanced to candidacy and whose accrued time does not exceed six years (eighteen quarters). Once a student exceeds six years, he or she must again pay the full fees quarterly until graduation.

COURSE REQUIREMENTS

Students are required to enroll as full-time graduate students, to carry a minimum enrollment of twelve units of graduate-level courses each quarter, and to maintain a grade-point average of 3.5 or better.

Theory and Methods Requirements

Students take almost all the courses on theory and methods in their first year in the program. They are required to take two courses in classical sociological theory (Sociology 201A/B) and one in contemporary theory (Sociology 202), two in quantitative methods (Sociology 205 and 206), and two in qualitative methods (from among Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; Sociology 207, Comparative-Historical Methods; or Sociology 227, Ethnographic Film). In addition, students enroll in a two-credit introduction to the faculty and their research (Sociology 208, Faculty Research Seminar). Note: Sociology 208 is in addition to other requirements.

The remaining theory and methods requirements are Sociology 252 and 253, a two-quarter practicum, which will be taken in the second or third year. In these courses, students will complete a piece of research they have started in a previous seminar, write a paper, and revise it for submission to a journal. The emphasis in the first quarter will be on the completion of the research for this project, and the second quarter will focus on the writing of the results and revision of drafts.

Core Seminars

These are survey courses in major substantive fields. Students must take three out of the following eight, which the department offers regularly: Sociology 264, Economic Sociology; Sociology 226, Political Sociology; Sociology 216, Sociology of Culture; Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine; Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements. These are major areas of sociology and fields in which several of the members of our faculty specialize. Moreover, several of these seminars serve as introductions to the programs of specialization on which the program is based (see below).

Remaining Courses

Beyond these requirements, students must take six seminars, at least two of which must be in the program of specialization selected by the student. In total, eighteen graduate courses, plus the introduction to the faculty, are required for advancing to candidacy.

THE PROGRAMS OF SPECIALIZATION

The department currently offers specialized Ph.D. programs in comparative and historical sociology, sociology of culture, and the sociology of science, technology, and medicine. We are planning to establish a fourth program in social inequality (class, gender, and race). Affiliation to the clusters is voluntary and non-exclusive, and the department encourages multiple participation and joint activities among the groups. Students could qualify in more than one concentration, if they wish, and they will not be required to specialize in any one of them (although we are confident that most will find it advantageous to do so). The curriculum for each specialization is relatively light, in order to provide students with a solid common background in theory and methods, and allow for as much interface as possible between the programs. The requirements are: appropriate qualitative methods courses, one of the core seminars (see above) in areas relevant for the concentration, two specialized seminars, pertinent specialties for the field examination, and the dissertation.

The qualitative methods requirement varies according to the program of specialization. Students who concentrate in comparative and historical sociology must take Sociology 207, Comparative-Historical Methods. For sociology of culture, Sociology 203, Field Methods, is required. Finally, students specializing in sociology of science, technology, and medicine must choose two of the following three courses in qualitative methods: Sociology 203, Field Methods; Sociology 204, Text and Discourse Analysis; and Sociology 207, Comparative-Historical Methods. The required core seminars are survey courses in major substantive fields. Students must take three out of the following eight, which the department offers regularly: Sociology 264, Economic Sociology; Sociology 226, Political Sociology; Sociology 216, Sociology of Culture; Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine; Sociology 212, Social Stratification; Sociology 267, Sociology of Gender; Sociology 244, Sociology of Race and Ethnicity; and Sociology 222, Social Movements. These are major areas of sociology and fields in which several of the members of our faculty specialize. Moreover, several of these seminars serve as introduction to the programs of specialization on which the program is based.

The core seminars required for each program of specialization are the following:

Sociology 264, Economic Sociology or

Sociology 226, Political Sociology, for comparative and historical sociology

Sociology 216, Sociology of Culture, for sociology of culture

Sociology 234, Intellectual Foundations of the Study of Science, Technology, and Medicine, for sociology of science, technology, and medicine

PROGRAM OVERVIEW

First-year Evaluation

All students are evaluated by the department faculty toward the end of the academic year. At the end of the student's first year in the program, student performance is also evaluated by the Graduate Program Committee, including the director of Graduate Studies, the faculty teaching the core sequences, and by their faculty adviser. Students whose performance is satisfactory are allowed to continue the regular course of study; others may be asked to repeat some courses or to do additional coursework; others may be asked to withdraw from the program. Evaluations are communicated to students in writing.

Second-year Evaluation and the M.A. Degree

The master's degree is earned as one of the requirements of the Ph.D. and is based on the quality of the student's course work described below. At the end of the second year, students are evaluated by the Graduate Program Committee for the master's degree. At that time, the committee ascertains the student's suitability for doctoral work.

The 15 core courses required to receive the M.A. degree are:

Sociology 201A: Classical Sociological Theory I

Sociology 201B: Classical Sociological Theory II

Sociology 202: Contemporary Sociological Theory

Sociology 205: Quantitative Methods I

Sociology 206: Quantitative Methods II

Two courses chosen from:

Sociology 203: Field Methods

Sociology 204: Text and Discourse Analysis

Sociology 207: Comparative-Historical Methods

Three seminars from:

Sociology 212: Social Stratification

Sociology 216: Sociology of Culture

Sociology 222: Social Movements

Sociology 226: Political Sociology

Sociology 234: Intellectual Foundation of the Study of Science, Technology, and Medicine

Sociology 244: Sociology of Race and Ethnicity

Sociology 264: Economic Sociology

Sociology 267: Sociology of Gender

Five elective Sociology graduate seminars.

One may be outside the department and may be taken S/U

At the beginning of the spring quarter of their second year in the program or at the beginning of the quarter in which they wish to to be considered, students **must** submit to the committee for evaluation, three papers they have written for seminars taught by different faculty. Reviewers assess the quality of the overall record and determine whether it indicates a potential for conducting doctoral research.

The final decision regarding the M.A. degree is based on the student's GPA, the three papers, and yearly faculty evaluations. The committee makes one of the following three recommendations: pass, M.A. only , and non-pass. Pass means that students may proceed toward the Ph.D. Those given M.A. only evaluations are granted the degree but may not continue toward the Ph.D. Students who received non-pass evaluations are asked to withdraw without a graduate degree.

Students admitted for a Ph.D. with a master's degree in sociology may not be candidates for a second master's degree.

The Field Examination

In the quarter in which students expect to finish the theory and methods requirements, the three core seminars, and the six elective seminars, students become eligible to take the field examination. This examination **must be completed** by the end of the student's third year in the program. The object of the field examination is to demonstrate mastery of two established, broad, and distinct fields of sociological inquiry, selected from a list of fields provided by the department. The examination is carried out by a faculty committee composed of no fewer than four departmental faculty, one of whom serves as chair. The choice of fields and the composition of the committee **must be approved** by the Graduate Program Committee **before the student starts preparing for the exam.** Faculty from departments other than sociology may be added (or, if necessary, substituted) by petition to the Graduate Program Committee.

The demonstration of mastery has both written and oral components. The written part consists of two papers, one in each field, and a course syllabus for a course they would teach in one of the two fields in which they take their orals. In these papers, students are expected to demonstrate a grasp of key issues and debates, and of the broad, conceptual history of the field. These reviews are based on a bibliography drawn up by the student in consultation with relevant committee members and other faculty in each field. Students are expected to know the central arguments of all the books and papers in the bibliographies, regardless of the extent to which these books and articles have been used in the papers. Field papers **must** be a minimum of thirty and a maximum of fifty pages each, exclusive of notes and should include at least twenty to thirty books or article equivalents. The two bibliographies may not significantly overlap, either in literature surveyed or in specific titles. The papers, the bibliographies, and the syllabus **must** be submitted to the committee at least **two weeks before orals,** or the orals cannot go forward.

The oral part lasts two hours and covers both fields. It is given by the examining committee, sitting as a whole, and is based on the bibliographies, papers, and course syllabus submitted by the student. The exam does not focus on the papers, but on the students' knowledge of the fields. Following the oral examination, the committee evaluates the student on the basis of both the written and the oral components of the examination. Possible grades are high pass, pass, conditional pass, and no pass. High pass recognizes exceptional performance. Conditional pass indicates that the committee has passed the student pending the completion of additional work. Students receiving a grade of no pass will have an opportunity to retake the examination, should they so desire, no later than the end of the subsequent quarter. Students electing not to retake the examination or receiving a grade of no pass a second time will be asked to withdraw from the graduate program.

Students will have to constitute their field exam committee **two months** before the proposed date of the exam. Once the committee is constituted it can be changed only if a faculty member becomes unavailable. Students will have to submit one copy per member of a substantial draft of their field papers **one month in advance** to the graduate coordinator, who then distributes them to the committee members.

Faculty, in, turn will commit to read and comment on the papers in two weeks time.

All papers (as opposed to the drafts) and the syllabus must be submitted to the committee **two weeks before** the fields.

The Dissertation Prospectus and Hearing

The central intellectual activity leading to the award of the Ph.D. degree is the doctoral dissertation: an original contribution to knowledge, based on substantial, original research on a topic of intellectual significance within the field of sociology.

Following successful completion of the field examination, the student establishes a doctoral committee to supervise dissertation research. This is a five-person committee, including three faculty from within the department and two from other departments within the university. The committee should include the faculty members whose fields of expertise make them most appropriate for supervising the students' research. The student approaches the faculty member he or she would like to include, but the committee **must** be approved by the director of Graduate Studies and the department chair **before** the student starts working on the prospectus. The composition of the committee may or may not overlap with the committee that carried out the field examination. If the student elects to have six member committee, the sixth member has all the same obligations as the other committee members.

By the end of the spring quarter of the fourth year in the department, the student must have a dissertation prospectus approved by his or her doctoral committee. The dissertation prospectus is a document that presents the research topic of the dissertation, places it in the context of the relevant literature, discusses its significance, specifies and justifies the methods the student intends to use, establishes the feasibility of the research, and indicates the anticipated steps leading to completion.

Following submission of the dissertation prospectus, the student must defend it at a hearing before the doctoral committee. The purpose of the hearing is to certify that the prospectus is significant and feasible, that the research design is appropriate, and that the student is prepared to carry it out successfully. Based on the written prospectus and the hearing, the committee may choose to approve the prospectus or to ask for revisions and resubmission. The prospectus hearing serves, in effect, as a qualifying examination, and approval of the dissertation prospectus is the final step to advancement to candidacy for the Ph.D. degree.

Students will have to constitute their dissertation committee **three months** before the proposed date of the exam. Once the committee is constituted it can be changed only if a faculty member becomes unavailable. Students will have to submit one copy per member of a substantial draft of their prospectus **one month in advance** to the graduate coordinator, who then distributes them to the committee members. Faculty in turn, will commit to read and comment on the papers in two weeks time.

The Doctoral Dissertation

Upon approval of the dissertation prospectus, the student proceeds with dissertation research. Students are expected to consult with committee members as the research progresses and to keep the committee chair advised of progress made.

Once the dissertation is substantially completed and committee members have had the opportunity to review drafts of the written work, the committee meets at least one month before the defense takes place, with or without the student present, to consider the progress made and to identify concerns, changes to be made, or further work to be done. Once the committee members are substantially satisfied with the written work, the student, in consultation with the committee, schedules the oral defense of the dissertation. By university regulation, this defense is open to the public.

The final version of the dissertation must be approved by each member of the doctoral committee. **All** members of the committee **must** be present at the defense. Exceptions may be made **only** under very restrictive conditions. Further, the student **must** consult with the Office of Graduate Studies and Research to be told of appropriate requirements for the thesis to be filed. Having obtained this approval and successfully defended the dissertation in oral examination, the student is eligible to receive the Ph.D. degree. The final version of the dissertation is then filed with the university librarian via the Office of Graduate Studies and Research. Acceptance of the dissertation by the university librarian is the final step in completing all requirements for the Ph.D.

Ph.D. Time Limit Policies

Students must be advanced to candidacy by the end of four years (PCTL—Precandidacy Time Limit). Normative time is six years. Total university financial support (SUTL—Support Time Limit) cannot exceed seven years. Total registered (TRTL—Total Registered Time Limit) time at UCSD cannot exceed eight years.

Interdisciplinary Programs of Study

SOCIOLOGY OF SCIENCE, TECHNOLOGY, AND MEDICINE AND THE SCIENCE STUDIES PROGRAM

Students interested in the interrelationships between science, technology, and medicine (STM) and the larger social order can opt for one of two specialized programs of study. The first of these is undertaken wholly within the department (see above). The second approach is to seek admission to the Science Studies Program, a joint doctoral program that brings together graduate students from the Departments of Sociology, History, Philosophy, and Communication. Students in the Program pursue a cross-disciplinary curriculum leading to dissertation research in the sociology of science, technology, or medicine, broadly conceived. Sociology faculty affiliated with this Program have research interests across the broad spectrum of science studies, from the philosophy and history of science to the organization of scientific discovery and the culture of specific work.

Students may seek admission to the Science Studies Program at the same time they apply for admission to the Department of Sociology, or may, in certain circumstances, request to be accepted into the Program at some point after entering the University of California, San Diego. The requirements of the Science Studies Program are similar to those of the standard graduate program. However, there are some distinct curricular requirements in the first two years of the Program, as well as some distinct emphases in the qualifying examination. The core of the Program is a two-quarter team-taught seminar sequence taken in the first year, the first quarter being an interdisciplinary introduction to science studies and the second quarter (or core seminar) being devoted to special topics in science studies which vary from year to year.

For details on the Science Studies Program, including information about requirements,

write to the University of California, San Diego, Coordinator, Science Studies Program 0104, 9500 Gilman Drive, La Jolla, CA 92093-0104; or telephone the program coordinator at (858) 534-0491. Visit their Web site: http://sciencestudies.ucsd.edu

INTERDISCIPLINARY PROGRAM IN SOCIOLOGY AND COGNITIVE SCIENCE

This program allows students to earn a Ph.D. in sociology and cognitive science. Students must complete all the regular sociology requirements. In addition, they take six cognitive science seminars and select a dissertation committee composed of three Sociology and three Cognitive Science Program faculty. Admission to this program requires a separate application and is contingent on acceptance into the Sociology Department. For more information, contact the coordinators in the Sociology Department, (858) 534-4626, (jrudolph@ucsd.edu) or the Cognitive Science Department, (858) 534-7141, (rburrola@ucsd.edu). Please view our Web site for application and department handbook information: http://dssadmin.ucsd.edu/sociology/gbroch.htm.

COURSES

LOWER-DIVISION

Soc/L 1A. The Study of Society (4)
An introduction to the organizing themes and ideas, empirical concerns, and analytical approaches of the discipline of sociology. The course focuses on both classical and contemporary views of modern society, on the nature of community, and on inequality, with special attention to class, race, and gender. Materials include both theoretical statements and case studies. *(This is a required course for the sociology major. It is normally offered fall quarter.)*

Soc/L 1B. The Study of Society (4)
A continuation of Sociology/L 1A. The focus here is on socialization processes, culture, social reproduction and social control, and collective action. As in 1A, materials include both theoretical statements and case studies. While 1B may be taken as an independent course, it is recommended that students take 1A and 1B in sequence, as the latter builds on the former. *(This is a required course for the sociology major. It is normally offered winter quarter.)*

Soc/L 10. American Society: Social Structure and Culture in the United States (4)
An introduction to American society in historical, comparative, and contemporary perspectives. Topics will include American cultural traditions; industrialization; class structure; the welfare state; ethnic, racial, and gender relations; the changing position of religion; social movements; and political trends.

Soc/L 20. Social Change in the Modern World (4)
A survey of the major economic, political, and social forces that have shaped the contemporary world. The course will provide an introduction to theories of social change, as well as prepare the student for upper-division work in comparative-historical sociology. *(This is a required course for the sociology major.)*

Soc/L 30. Science, Technology, and Society (4)
A series of case studies of the relations between society and modern science, technology, and medicine. Global warming, reproductive medicine, AIDS, and other topical cases prompt students to view science-society interactions as problematic and complex.

Soc/L 40. Sociology of Health Care Issues (4)
Designed as a broad introduction to medicine as a social institution and its relationship to other institutions as well as its relation to society. It will make use of both micro and macro sociological work in this area and introduce students to sociological perspectives of contemporary health care issues.

Soc/L 60. The Practice of Social Research (4)
This course introduces students to the fundamental principles of the design of social research. It examines the key varieties of evidence, sampling methods, logic of comparison, and causal reasoning researchers use in their study of social issues. *(This is a required course for the sociology major.)*

Soc/L 87. Freshman Seminar (1)
The Freshman Seminar Program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminar topics will vary from quarter to quarter. Enrollment is limited to fifteen to twenty students, with preference given to entering freshmen.

Soc/L 90. Undergraduate Seminar (1)
This seminar will focus on a variety of current issues and special areas in the field of sociology, and will be focussed in particular on students of freshman status. Content will vary from year to year. (P/NP grades only.) *Prerequisite: freshman status.*

Soc/L 98. Directed Group Study (4)
Small group study and research under the direction of an interested faculty member in an area not covered in regular sociology courses. (P/NP grades only.) *Prerequisites: lower-division standing; completion of thirty units of UCSD undergraduate study; minimum UCSD GPA of 3.0; completion and approval of Special Studies form. Consent of instructor and department approval required.*

Soc/L 99. Independent Study (4)
Individual study and research under the direction of an interested faculty member. P/NP grades only. *Prerequisites: lower-division standing; completion of thirty units of UCSD undergraduate study; minimum UCSD GPA of 3.0; completion and approval of Special Studies form. Consent of instructor and department approval required.*

CLUSTER A: THEORY AND METHODS

Theory

Soc/A 100. Classical Sociological Theory (4)
Major figures and schools in sociology from the early nineteenth century onwards, including Marx, Tocqueville, Durkheim, and Weber. The objective of the course is to provide students with a background in classical social theory, and to show its relevance to contemporary sociology. *Prerequisite: upper-division standing. (This is a required course for the sociology major.)*

Soc/A 102. Contemporary Sociological Theory (4)
An analysis of leading theories in sociology with an emphasis on contemporary perspectives. Theoretical approaches include functionalism, Marxism, systems analysis, and interpretive sociology. *Prerequisite: upper-division standing.*

Soc/A 103F. Feminist Criticism and Social Theory (4)
This course will examine recent contributions to social theory from feminist critics and scholars. Theoretical writings will be paired with empirical studies illustrating the development and application of these ideas. The central concern of these investigations will be to reconcile new theories of subjectivity and multiple social worlds with classical understandings of society as a coherent body of practices. *Prerequisite: upper-division standing.*

Methods

Soc/A 103M. Computer Applications to Data Management in Sociology (4)
Develop skills in computer management and analysis of sociological data. Practical experience with data produced by sociological research. Students will develop competency in the analysis of sociological data, by extensive acquaintance with computer software used for data analysis and management (e.g., SPSS). *Prerequisite: Soc/L 60. Will satisfy method requirement in Cluster A.*

Soc/A 104. Field Research: Methods of Participant Observation (4)
Relationship between sociological theory and field research. Strong emphasis on theory and methods of participant observation: consideration of problems of entry into field settings, recording observations, description/analysis of field data, ethical problems in field work. Required paper using field methods. *Prerequisite: Soc/L 60; majors only. Will satisfy method requirement in Cluster A.*

Soc/A 105. Ethnographic Film: Media Methods (6)
(Conjoined with Soc/G 227.) Ethnographic recording of field data in written and audiovisual formats including film, video, and CD ROM applications. Critical assessment of ethnographies and audiovisual ethnographic videotape. *Prerequisite: graduate standing or consent of instructor for Soc/G 227 and SocL/60 for Soc/A 105. Will satisfy method requirement in Cluster A.*

Soc/A 106. Comparative and Historical Methods (4)
A broad-based consideration of the use of historical materials in sociological analysis, especially as this facilitates empirically oriented studies across different societies and through time, and their application in student research projects. *Prerequisite: Soc/L 60. Will satisfy method requirement in Cluster A.*

Soc/A 107. Epidemiological Methods: Statistical Study of Disease (4)
Epidemiology is the statistical study of disease, and epidemiological methods are a powerful tool for understanding the causes of certain diseases, e.g., AIDS, scurvy, cholera, and lung cancer. These fundamental epidemiological methods will be taught. *Prerequisite: Soc/L 60.*

Soc/A 108A. Survey Research Design (4)
Translation of research goals into a research design, including probability sampling, questionnaire construction, data collection (including interviewing techniques), data processing, coding, and preliminary tabulation of data. Statistical methods of analysis will

be limited primarily to percentaging. *Prerequisite: Soc/L 60. Will satisfy method requirement in Cluster A.*

Soc/A 108B. Quantitative Analysis of Survey Data (4)
Quantitative analysis of survey research data through computer-based student participation in the research process. Emphasis on index and scale construction and on univariate, bivariate, and multivariate types of analysis, including some standard descriptive and inferential statistics. *Prerequisite: Soc/L 60. Will satisfy method requirement in Cluster A.*

Soc/A 109. Analysis of Sociological Data (4)
Students test their own sociological research hypotheses using data from recent American and International social surveys and state-of-the-art computer software. Application of classical scientific method, interpretation of statistical results, and clear presentation of research findings. *Prerequisite: Soc/L 60. Will satisfy method requirement for Cluster A.*

Soc/A 109S. Special Topics in Methods (4)
Readings and discussions of particular methodological issues in sociology. Topics will vary from year to year, depending on the current research of regular faculty or visiting faculty. *Prerequisite: upper-division standing. Will satisfy method requirement in Cluster A.*

Soc/A 110A-B. Qualitative Research in Educational Settings (4-4)
Basic understanding of participant observation, interviewing, and other ethnographic research techniques through field experiences in school and community settings sponsored by CREATE. Students will learn to take field notes, write-up interviews, and compose interpretive essays based on their field experiences. *Prerequisite: Soc/L 60; Soc/A 110A is a prerequisite for Soc/A 110B. Will satisfy method requirement in Cluster A.*

CLUSTER B: CULTURE, LANGUAGE, AND SOCIAL INTERACTION

Soc/B 111A. Human Rights: Principles and Problems (4)
An inquiry into the concept of human rights, the history of human rights in the twentieth century, and problems in both the concept and its implementa-tion in modern societies. *Prerequisite: upper-division standing.*

Soc/B 111B. Human Rights: Practices and Cases (4)
An investigation into human rights practices in contemporary society, focusing on abuses and understanding both their causes and responses to them. We will look at several key cases, probably including the Islamic world and East Asia. *Prerequisite: upper-division standing.*

Soc/B 112. Social Psychology (4)
This course will deal with human behavior and personality development as affected by social group life. Major theories will be compared. The interaction dynamics of such substantive areas as socialization, normative and deviant behavior, learning and achievement, the social construction of the self, and the social identities will be considered. *Prerequisite: upper-division standing.*

Soc/B 113. Sociology of the AIDS Epidemic (4)
This course considers the social, cultural, political, and economic aspects of HIV/AIDS. Topics include the social context of transmission; the experiences of women living with HIV; AIDS activism; representations of AIDS; and the impact of race and class differences. *Prerequisite: upper-division standing.*

Soc/B 114. Culture and Ethnicity (4)
Examines culture and inter-ethnic relations, the links between culture and ethnic variations in socio-economic achievement, and the intersection of culture and ethnicity with politics and policy. Topics include intermarriage, ethnic conflict, multicultural education and affirmative action. *Prerequisite: upper-division standing.*

Soc/B 115. Social Problems (4)
Analyzes selected social problems in the United States, such as those regarding education, race relations, and wealth inequality, from various sociological perspectives, and also examines the various sites of debate discussion, like political institutions, TV and other media, and religious institutions. *Prerequisite: upper-division standing.*

Soc/B 116. Gender and Poverty (4)
This course examines theoretical arguments, current policy debates, and empirical research concerning gender and poverty. The course provides an intellectual framework for understanding issues central to women's poverty, including family structure, reproduction, childcare, employment, and aging. Race and ethnicity are central. Particular attention is given to women and children in female-headed households. *Prerequisite: upper-division standing.*

Soc/B 117. Language, Culture, and Education (4)
(Same as TEP 117.) The mutual influence of language, culture, and education will be explored; explanations of students' school successes and failures that employ linguistic and cultural variables will be considered; bilingualism; cultural transmission through education. *Prerequisite: upper-division standing.*

Soc/B 118. Sociology of Gender (4)
An analysis of the social, biological, and psychological components of becoming a man or a woman. The course will survey a wide range of information in an attempt to specify what is distinctively social about gender roles and identities; i.e., to understand how a most basic part of the "self"–womanhood or manhood–is socially defined and socially learned behavior. *Prerequisite: upper-division standing.*

Soc/B 118A. Gender and Language in Society (4)
(Same as LIGN 174.) This course examines how language contributes to the social construction of gender identities, and how gender impacts language use and ideologies. Topics include the ways language and gender interact across the life span (especially childhood and adolescence); within ethnolinguistic minority communities; and across cultures. *Prerequisite: upper-division standing.*

Soc/B 119. Sociology of Sexuality and Sexual Identities (4)
Introduction both to the sociological study of sexuality and to sociological perspectives in gay/lesbian studies. Examines the social construction of sexual meanings, identities, movements, and controversies; the relation of sexuality to other institutions; and the intersection of sexuality with gender, class, and race. *Prerequisite: upper-division standing.*

Soc/B 120S. Special Topics in Culture, Language, and Social Interaction (4)
This course will examine key issues in culture, language, and social interaction. Content will vary from year to year. *Prerequisite: upper-division standing.*

Soc/B 122. Jerusalem: Sacred and Profane (4)
Examining Jerusalem as world historical city and religious/political center. Focus on Jerusalem's modernization/architecture since Crimean War; struggles over its holy sites between Muslims, Jews, Eastern and Western Christians; its character as an ethnic frontier; the city in memory. *Prerequisite: upper-division standing.*

Soc/B 128. Media and Society: From the Invention of Print to the Internet (4)
It is no coincidence that the development of printed commun- ication has coincided with that of modern society. This course examines the connections between the two, tracing the historical sociology of print culture from the invention of the press to the communications revolution now at hand. *Prerequisite: upper-division standing.*

Soc/B 130. Interdisciplinary Approaches to Lesbian, Gay, Bisexual and Transgender Studies (4)
(Same as LTCS 135.) Introduction to the interdisciplinary examination of human sexuality and, especially, lesbian, gay, bisexual, and transgender identities and desires. Juxtaposes perspectives from the humanities, social sciences, and natural sciences, and introduces recent queer theory, to understand sexuality in relation to phenomena such as government, family, culture, medicine, race, gender, and class. *Prerequisite: upper-division standing.*

Soc/B 131. Sociology of Youth (4)
Chronological age and social status; analysis of social processes bearing upon the socialization of children and adolescents. The emergence of "youth cultures," generational succession as a cultural problem. *Prerequisite: upper-division standing.*

Soc/B 142. Social Deviance (4)
This course studies the major forms of behavior seen as rule violations by large segments of our society and analyzes the major theories trying to explain them, as well as processes of rule making, rule enforcing, techniques of neutralization, stigmatization and status degradation, and rule change. *Prerequisite: upper-division standing.*

Soc/B 143. Suicide (4)
Traditional and modern theories of suicide will be reviewed and tested. The study of suicide will be treated as one method for investigating the influence of society on the individual. *Prerequisite: upper-division standing.*

Soc/B 145. Violence and Society (4)
Focusing on American history, this course explores violence in the light of three major themes: struggles over citizenship and nationhood; the drawing and maintenance of racial, ethnic, and gender boundaries; and the persistence of notions of "masculinity" and its relation to violence. *Prerequisite: upper-division standing.*

Soc/B 146. Law Enforcement in America (4)
Provides a sociological understanding of policing in practice in the United States. Examines the social, political, and historical forces behind the development and shaping of policing in America—including the functions of police, the "working personality" of police officers, as well as police misconduct and its control. *Prerequisite: upper-division standing.*

Soc/B 160. Sociology of Culture (4)
This course will examine the concept of culture, its "disintegration" in the twentieth century, and the repercussions on the integration of the individual. We will look at this process from a variety of perspectives, each focusing on one cultural fragment (e.g., knowledge, literature, religion) and all suggesting various

means to reunify culture and consequently the individual. *Prerequisite: upper-division standing.*

Soc/B 161. Sociology of the Life Course (4)
This course explores concepts, theory and empirical research related to demographic, socio-psychological, and institutional aspects of the different stages of human development. It considers social influences on opportunities and constraints by gender, class, race/ethnicity, and historical period. *Prerequisite: upper-division standing.*

Soc/B 162. Popular Culture (4)
An overview of the historical development of popular culture from the early modern period to the present. Also a review of major theories explaining how popular culture reflects and/or affects patterns of social behavior. *Prerequisite: upper-division standing.*

Soc/B 162R. Religion and Popular Culture in East Asia (4)
(Same as HIEA 119.) Historical, social, and cultural relationships between religion and popular culture. Secularization of culture through images, worldviews, and concepts of right and wrong, which may either derive from or pose challenges to the major East Asian religions. *Prerequisite: upper-division standing.*

Soc/B 166. Sociology of Knowledge (4)
This course provides a general introduction to the development of the sociology of knowledge, and will explore questions concerning social determination of consciousness as well as theoretical ways to articulate a critique of ideology. *Prerequisite: upper-division standing.*

Soc/B 170. Sociology of Art (4)
(Conjoined with SOCG 263) This seminar explores the production and interpretation of art forms in cross-cultural context. Processes of symbolic and economic exchange in art worlds will be examined from sociological and semiotic perspectives. Contemporary and popular art forms will be analyzed as types of cultural reproduction. Graduate students will be required to submit a proposal abstract and final research paper of twenty-seven pages; undergraduates must complete a project and eleven-page paper. *Prerequisite: upper-division standing.*

Soc/B 172. Films and Society (4)
An analysis of films and how they portray various aspects of American society and culture. *Prerequisite: upper-division standing.*

Soc/B 173. Elite Crime (4)
Explores theoretical and conceptual dimensions in the analysis of the systematic violation of the laws and ethics of business and politics in the United States. Covers a range of illegal and unethical practices, the social and political advantages of such violators, as well as the historical bias in both theory and research that has contributed to our lack of understanding of such issues in sociology and criminology. *Prerequisite: upper-division standing.*

Soc/B 174. Sociology of Literature (4)
Literature will be discussed in the context of the ideas of national and regional culture, "historical situation," and "social order." Other issues to be studied are literary men and women as spokespersons and as rebels, literary movements and social conditions, and literary works as social documents. *Prerequisite: upper-division standing.*

CLUSTER C: SOCIAL ORGANIZATION AND INSTITUTIONS

Soc/C 121. Economy and Society (4)
An examination of a central concern of classical social theory; the relationship between economy and society, with special attention (theoretically and empirically) on the problem of the origins of modern capitalism. The course will investigate the role of technology and economic institutions in society; the influence of culture and politics on economic exchange, production, and consumption; the process of rationalization and the social division of labor; contemporary economic problems and the welfare state. *Prerequisite: upper-division standing.*

Soc/C 123. Sociology of Work (4)
A comparative analysis of work in contemporary industrial economies. Topics include: the division of labor in manufacturing and the changing structure of the working class, social and political consequences of skill and wage differentials, bureaucratization and determinants of job satisfaction, trade unions and their strategies, industrial conflict, labor movements, and the relationships between unions and political parties. *Prerequisite: upper-division standing.*

Soc/C 124. Business and Society (4)
This course places business organization and practices in their social setting. Topics include the relationship between business and government; the mutual impact of business and labor (union and nonunion); the interplay of business values and popular culture; and business and "globalization." Primary focus will be on the United States, past and present. *Prerequisite: upper-division standing.*

Soc/C 126. Social Organization of Education (4)
(Same as TEP 126.) The social organization of education in the U.S. and other societies; the functions of education for individuals and society; the structure of schools; educational decision making; educational testing; socialization and education; formal and informal education; cultural transmission. *Prerequisite: upper-division standing.*

Soc/C 129. The Family (4)
An examination of historical and social influences on family life. Analyzes contemporary families in the United States, the influences of gender, class, and race, and current issues such as divorce, domestic violence, and the feminization of poverty. *Prerequisite: upper-division standing.*

Soc/C 132. Gender and Work (4)
Examination and analysis of empirical research and theoretical perspectives on gender and work. Special attention to occupational segregation. Other topics include: the interplay between work and family; gender, work and poverty; gender and work in the Third World. *Prerequisite: upper-division standing.*

Soc/C 134A. The Making of Modern Medicine (4)
A study of the social, intellectual, and institutional aspects of the nineteenth-century transformation of clinical medicine, examining both the changing content of medical knowledge and therapeutics, and the organization of the medical profession. *Prerequisite: upper-division standing.*

Soc/C 134B. Medicine in the Twentieth Century (4)
A study of major intellectual and institutional changes in medicine in the twentieth century, place in their sociological context. The primary emphasis of the course will be on developments in North America and Britain. *Prerequisite: upper-division standing.*

Soc/C 135. Medical Sociology (4)
An inquiry into the roles of culture and social structure in mediating the health and illness experiences of individuals and groups. Topics include the social construction of illness, the relationships between patients and health professionals, and the organization of medical work. *Prerequisite: upper-division standing.*

Soc/C 136A. Sociology of Mental Illness: An Historical Approach (4)
An examination of the social, cultural, and political factors involved in the identification and treatment of mental illness. This course will emphasize historical material, focusing on the eighteenth, nineteenth, and early twentieth centuries. Developments in England as well as the United States will be examined from an historical perspective. *Prerequisite: upper-division standing.*

Soc/C 136B. Sociology of Mental Illness in Contemporary Society (4)
This course will focus on recent developments in the mental illness sector and on the contemporary sociological literature on mental illness. Developments in England as well as the United States will be examined. *Prerequisite: upper-division standing.*

Soc/C 137. Knowledge and Practice in Biomedicine (4)
This course focuses on the biomedical research enterprise in its relationship to medical practice. Topics include the construction of medical knowledge, the resolution of controversies, the organization of medical work, and the cultural authority of biomedicine. *Prerequisite: any lower- or upper-division course on the sociology of medicine or science, or consent of instructor.*

Soc/C 138. Genetics and Society (4)
The class will first examine the direct social effects of the "genetic revolution": eugenics, genetic discrimination, and stratification. Second, the implications of thinking of society in terms of genetics, specifically—sociobiology, social Darwinism, evolutionary psychology, and biology. *Prerequisite: upper-division standing.*

Soc/C 138A-B. Civic Participation (4-4)
(Same as COSF 125A-B) What are the sources of political apathy and political engagement? What are the variety of ways Americans express civic involvement and political concern? Primary focus will be on the contemporary United States, but with substantial attention to comparative and historical perspectives. This will be run as a research seminar. Students will write literary-based or fieldwork-based empirical research papers of twenty-five to forty pages.

Soc/C 139. Social Inequality: Class, Race, and Gender (4)
Massive inequality in wealth, power, and prestige is ever-present in industrial societies. In this course, causes and consequences of class, gender, racial and ethnic inequality ("stratification") will be considered through examination of classical and modern social science theory and research. *Prerequisite: upper-division standing.*

Soc/C 140. Sociology of Law (4)
This course analyzes the functions of law in society, the social sources of legal change, social conditions affecting the administration of justice, and the role of social science in jurisprudence. *Prerequisite: upper-division standing.*

Soc/C 140F. Law and the Workplace (4)
This course examines how the U.S. legal system has responded to workplace inequality and demands for employee rights. Particular attention is given to racial, gender, religious, and disability discrimination, as well as the law's role in regulating unions, the global economy, and sweatshop labor. *Prerequisite: upper-division standing.*

Soc/C 141. Crime and Society (4)
A study of the social origins of criminal law, the administration of justice, causes and patterns of criminal behavior, and the prevention and control of crime, including individual rehabilitation and institutional change, and the politics of legal, police, and correctional reform. *Prerequisite: upper-division standing.*

Soc/C 144. Forms of Social Control (4)
The organization, development, and mission of social control agencies in the nineteenth and twentieth centuries, with emphasis on crime and madness; agency occupations (police, psychiatrists, correctional work, etc.); theories of control movements. *Prerequisite: upper-division standing.*

Soc/C 147. Organizations, Society, and Social Justice (4)
Organizations are dynamic forces in society. This course examines how organizations address human health and social justice issues in national and international settings, focusing on the links between internal dynamics of organizations and macro-level political, economic, and cultural factors. *Prerequisite: upper-division standing.*

Soc/C 148. Political Sociology (4)
Course focuses on the interaction between state and society. It discusses central concepts of political sociology (social cleavages, mobilization, the state, legitimacy), institutional characteristics, causes, and consequences of contemporary political regimes (liberal democracies, authoritarianism, communism), and processes of political change. *Prerequisite: upper-division standing.*

Soc/C 148L. Inequality and Jobs (4)
Some people do much better than others in the world of work. Causes and consequences of this inequality will be examined: How do characteristics of individuals (e.g., class, gender, race, education, talent) and characteristics of jobs affect market outcomes? *Prerequisite: upper-division standing.*

Soc/C 149. Sociology of the Environment (4)
The "environment" as a socially and technically shaped milieu in which competing values and interests play out. Relation of humanity to nature; conflicts between preservation and development; environmental pollution and contested illnesses.

Soc/C 152. Social Inequality and Public Policy (4)
(Same as USP 133.) Primary focus on understanding and analyzing poverty and public policy. Analysis of how current debates and public policy initiatives mesh with alternative social scientific explorations of poverty. *Prerequisite: upper-division standing.*

Soc/C 153. Urban Sociology (4)
(Same as USP 105) Introduces students to the major approaches in the sociological study of cities and to what a sociological analysis can add to our understanding of urban processes. *Prerequisite: upper-division standing or consent of instructor.*

Soc/C 154. Religious Institutions in America (4)
Examination of sociological theories for why people have religious beliefs. Also examines types of religious organizations, secularization, fundamentalism, religion and immigration, religion and politics, and religiously inspired violence and terrorism. The class will tend to focus on the American context. *Prerequisite: upper-division standing.*

Soc/C 155. The City of San Diego (4)
A research-oriented course studying a specific city. Students will describe and analyze a local community of San Diego. Additional work on one citywide institution. Guest lecturers from San Diego organizations and government. Readings largely from city reports and news media. *Prerequisite: introductory sociology.*

Soc/C 156. Sociology of Religion (4)
Diverse sociological explanations of religious ideas and religious behavior. The social consequences of different kinds of religious beliefs and religious organizations. The influence of religion upon concepts of history, the natural world, human nature, and the social order. The significance of such notions as "sacred peoples" and "sacred places." The religious-like character of certain political movements and certain sociocultural attitudes. *Prerequisite: upper-division standing.*

Soc/C 157. Religion in Contemporary Society (4)
Sacred texts, religious experiences, and ritual settings are explored from the perspective of sociological analysis. The types and dynamic of religious sects and institutions are examined. African and contemporary U.S. religious data provide resources for lecture and comparative analysis. *Prerequisite: upper-division standing.*

Soc/C 159. Special Topics in Social Organizations and Institutions (4)
Readings and discussion of particular substantive issues and research in the sociology of organizations and institutions–including such areas as population, economy, education, family, medicine, law, politics, and religion. Topics will vary from year to year. *Prerequisite: upper-division standing.*

Soc/C 165A-B. American News Media (4-4)
History, politics, social organization, and ideology of the American news media. 165A surveys the development of the news media as an institution, from earliest newspapers to modern mass news media. 165B deals with special topics, including the nature of television news, with methods of news media research, and requires a research paper. *Prerequisite: Soc/L 1A or consent of instructor; Soc/C 165B requires Soc/C 165A.*

Soc/C 168E. Sociology of Science (4)
A survey of theoretical and empirical studies concerning the workings of the scientific community and its relations with the wider society. Special attention will be given to the institutionalization of the scientific role and to the social constitution of scientific knowledge. *Prerequisite: upper-division standing.*

Soc/C 168T. Sociology of Technology (4)
An introduction to classic and recent sociological perspectives on technology, giving special attention to the relations between technology and science, technology and work, and technology and politics. *Prerequisite: upper-division standing.*

Soc/C 180. Social Movements and Social Protest (4)
An examination of the nature of protests and violence, particularly as they occur in the context of larger social movements. The course will further examine those generic facets of social movements having to do with their genesis, characteristic forms of development, relationship to established political configurations, and gradual fading away. *Prerequisite: upper-division standing.*

CLUSTER D: COMPARATIVE AND HISTORICAL SOCIOLOGY

Soc/D 151. Comparative Race and Ethnic Relations (4)
An historical and comparative analysis of race and ethnic relations in various national settings, with emphasis on the United States. The course will analyze the origins of ethnic stratification systems, their maintenance, the adaptation of minority communities, and the role of reform and revolutionary movements and government policies in promoting civil rights and social change. *Prerequisite: upper-division standing.*

Soc/D 158. Islam in the Modern World (4)
The role of Islam in the society, culture, and politics of the Muslim people during the nineteenth and twentieth centuries; attempts by Muslim thinkers to accommodate or reject rival ideologies (such as nationalism and socialism); and a critical review of the relationship between Islam and the West. *Prerequisite: upper-division standing.*

Soc/D 158J. Religion and Ethics in China and Japan (4)
This course examines religious traditions of China and Japan. It explores the relationship between religious ideas and practices on the one hand, and issues of social and individual ethics and morality on the other. *Prerequisite: upper-division standing.*

Soc/D 169. Citizenship, Community, and Culture (4)
Will survey the liberal, communitarian, social-democratic, nationalist, feminist, post nationalist, and multicultural views on the construction of the modern citizen and good society. *Prerequisite: upper-division standing.*

Soc/D 171. Science and the Making of the Modern World (4)
This course deals with two questions and the relationships between them: How did modern scientific knowledge develop from the Scientific Revolution to the present, and how have the scientist's role and the scientific community come to have their current authority. *Prerequisite: upper-division standing.*

Soc/D 177. International Terrorism (4)
This course covers the definitions, history, and internationalization of terrorism; the interrelation of religion, politics and terror; and the representation of terrorism in the media. A number of organizations and their activities in Europe and the Middle East are examined. *Prerequisite: upper-division standing.*

Soc/D 178. The Holocaust (4)
The study of the unique and universal aspects of the Holocaust. Special attention will be paid to the nature of discrimination and racism, those aspects of modernity that make genocide possible, the relationship among the perpetrators, the victims and the bystanders, and the teaching, memory, and denial of the Holocaust. *Prerequisite: upper-division standing.*

Soc/D 179. Social Change (4)
Course focuses on the development of capitalism as a worldwide process, with emphasis on its social and political consequences. Topics include: precapitalist societies, the rise of capitalism in the West, and the social and political responses to its expansion elsewhere. *Prerequisite: upper-division standing.*

Soc/D 181. Modern Western Society (4)
This course examines the nature and dynamics of modern western society in the context of the historical process by which this type of society has emerged over the last several centuries. The aim of the course is to help students think about what kind of society they live in, what makes it the way it is, and how it shapes their lives. *Prerequisite: upper-division standing.*

Soc/D 182. Ethnicity and Indigenous Peoples in Latin America (4)
Ethnicity and the reassertion of Indian identity in contemporary Latin America. Issues related to these trends are examined in comparative perspective, with attention to changes in global conditions and in the socioeconomic, political, and cultural contexts of Latin American modernization. *Prerequisite: upper-division standing.*

Soc/D 183. Minorities and Nations (4)
We will study minority rights and aspirations as well as the logic and dynamic of nationalist movements in selected cases. We will conclude by examining the chances and challenges of a post-nationalist world. *Prerequisite: upper-division standing.*

Soc/D 185. Globalization and Social Development (4)
Social development is more than sheer economic growth. It entails improvements in the overall quality of human life, particularly in terms of access to health, education, employment, and income for the poorer sectors of the population. Course examines the impact of globalization on the prospects for attaining these goals in developing countries. *Prerequisite: upper-division standing.*

Soc/D 185XL. Foreign Language Discussion Section (1)
Students will exercise advanced foreign language skills to discuss materials in Spanish in the correspondingly numbered English language foreign area course. This section is taught by the course instructor/professor; has no final exam and does not affect grade in parent course. *Prerequisite: must be coregistered with Soc/D 185.*

Soc/D 187. African Societies through Film (4)
Exploration of contemporary African urbanization and social change via film, including 1) transitional African communities, 2) social change in Africa, 3) Western vs. African filmmakers' cultural codes. Ideological and ethnographic representations, aesthetics, social relations, and market demand for African films are analyzed. *Prerequisite: upper-division standing.*

Soc/D 187S. The Sixties (4)
A sociological examination of the era of the 1960s in America, its social and political movements, its cultural expressions, and debates over its significance, including those reflected in video documentaries. Comparisons will also be drawn with events in other countries. *Prerequisites: upper-division standing.*

Soc/D 188A. Community and Social Change in Africa (4)
The process of social change in African communities, with emphasis on changing ways of seeing the world and the effects of religion and political philosophies of social change. The methods and data used in various village and community studies in Africa will be critically examined. *Prerequisite: upper-division standing.*

Soc/D 188B. Chinese Society (4)
The social structure of the People's Republic of China since 1949, including a consideration of social organization at various levels: the economy, the policy, the community, and kinship institutions. *Prerequisite: upper-division standing.*

Soc/D 188D. Latin America: Society and Politics (4)
Course focuses on the different types of social structures and political systems in Latin America. Topics include positions in the world economy, varieties of class structure and ethnic cleavages, political regimes, mobilization and legitimacy, class alignments, reform and revolution. *Prerequisite: upper-division standing.*

Soc/D 188F. Modern Jewish Societies and Israeli Society (4)
Contradictory effects of modernization on Jewish society in Western and Eastern Europe and the plethora of Jewish responses: assimilation, fundamentalism, emigration, socialism, disapora nationalism, and Zionism. Special attention will be paid to issues of dis/continuity between Jewish societies and Israeli society. Simultaneously, we will scrutinize the influence of the Palestinian-Israeli conflict on Israeli society, state, and identity. *Prerequisite: upper-division standing.*

Soc/D 188K. American Society (4)
Comparative and historical perspectives on U.S. society. The course highlights "American exceptionalism:" did America follow a special historical path, different from comparable nations in its social relations, politics, and culture? Specific topics include class relations, race, religion, and social policy. *Prerequisite: upper-division standing.*

Soc/D 188XL. Foreign Language Discussion Section (1)
Students will exercise advanced foreign language skills to discuss materials in the correspondingly numbered English language foreign area course. *Prerequisite: must be coregistered with parent course.*

Soc/D 189. Special Topics in Comparative-Historical Sociology (4)
Readings and discussion in selected areas of comparative and historical macro-sociology. Topics may include the analysis of a particular research problem, the study of a specific society or of cross-national institutions, and the review of different theoretical perspectives. Contents will vary from year to year. *Prerequisite: upper-division standing.*

CLUSTER E: INDEPENDENT RESEARCH AND HONORS PROGRAM

Soc/E 194. Research Seminar in Washgton, D.C. (4)
(Same as PS 194, COGN 194, ERTH 194, HIST 193, USP 194.) Course attached to six-unit internship taken by students participating in the UCDC Program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. *Prerequisites: department approval. Participating in UCDC Program.*

Soc/E 196A. Honors Seminar: Advanced Studies in Sociology (4)
This seminar will permit honors students to explore advanced issues in the field of sociology. It will also provide honors students the opportunity to develop a senior thesis proposal on a topic of their choice and begin preliminary work on the honors thesis under faculty supervision. *Prerequisite: acceptance into Department of Sociology Honors Program.*

Soc/E 196B. Honors Seminar: Supervised Thesis Research (4)
This seminar will provide honors candidates the opportunity to complete research on and preparation of a senior honors thesis under close faculty supervision. *Prerequisite: completion of Soc/E 196A.*

Soc/E 197. Instructional Assistance and Research in Field Methods (4)
While fulfilling apprentice-level instructional tasks as peer advisers in the Field Research Methods course (Soc/A 104), students will conduct their own research on selected issues/problems faced by field researchers. Instructional and research activities will be closely supervised by the course instructor. *Prerequisites: 3.5 in sociology, having excelled in Soc/A 104 (A or A+ grade); consent of course instructor; approval of sociology department chair.*

Soc/E 198. Directed Group Study (4)
Group study of specific topics under the direction of an interested faculty member. Enrollment will be limited to a small group of students who have developed their topic and secured appropriate approval from the departmental committee on independent and group studies. These studies are to be conducted only in areas not covered in regular sociology courses. *Prerequisites: junior standing and departmental approval required.*

Soc/E 199. Independent Study (2 or 4)
Tutorial: individual study under the direction of an interested faculty member in an area not covered by the present course offerings. Approval must be secured from the departmental committee on independent studies. *Prerequisites: junior standing and departmental approval required.*

GRADUATE

Soc/G 201A. Classical Sociological Theory I (4)
A discussion of major themes in the work of Tocqueville and Marx. *Prerequisite: graduate standing in sociology.*

Soc/G 201B. Classical Sociological Theory II (4)
A discussion of major themes in the work of Weber and Durkheim. *Prerequisite: graduate standing in sociology.*

Soc/G 202. Contemporary Sociological Theory (4)
Themes important for social theory at the turn of the twenty-first century: Marxism (Gramsci, Althusser), Critical Theory (Adorno, Habermas), Interpretation (Geertz), Social Systems (Parsons), post-structuralism (Foucault), postmodernism, and social constructivism (Bourdieu). *Prerequisite: graduate standing in sociology.*

Soc/G 203. Field Methods (4)
Research will be conducted in field settings. The primary focus will be on mastering the problems and technical skills associated with the conduct of ethnographic and participant observational studies. *Prerequisite: graduate standing in sociology.*

Soc/G 204. Text and Discourse Analysis (4)
Techniques of gathering and analyzing transcripts of naturally occurring conversations, interviews, discourse in institutional settings, public political discourse, and text of historical materials. *Prerequisite: graduate standing in sociology.*

Soc/G 205. Quantitative Methods I (4)
This course covers some of the elementary techniques used 1) to select random samples, 2) to detect statistical patterns in the sample data, and 3) to determine whether any patterns found in sample data are statistically significant. The course also stresses the benefits and drawbacks of survey and aggregate data and

some common ways in which these data are used incorrectly. *Prerequisite: graduate standing in sociology.*

Soc/G 206. Quantitative Methods II (4)
The course covers some of the more advanced techniques used 1) to select random samples, 2) to detect statistical patterns in the sample data, and 3) to determine whether any patterns found in sample data are statistically significant. The course also stresses the benefits and drawbacks of survey and aggregate data and some common ways in which these data are used incorrectly. *Prerequisite: graduate standing in sociology.*

Soc/G 207. Comparative-Historical Methods (4)
A broad-based consideration of the use of historical materials in sociological analysis, especially as this facilitates empirically oriented studies across different societies and through time. *Prerequisite: graduate standing in sociology.*

Soc/G 208. Faculty Research Seminar (2)
An introduction for entering graduate students to the range and variety of research and scholarly interest of the department's faculty. Through this introduction students will be better able to relate their own research interests and professional objectives to the ongoing work of faculty. *Prerequisite: graduate standing in sociology.* (S/U grades only.)

Soc/G 212. Social Stratification (4)
The causes and effects of social ranking in various societies. Theories of stratification; the dynamics of informal social grouping; determinants of institutional power, and the nature of struggles for power; the distribution of wealth and its causes; the dynamics of social mobility; the effects of stratification on lifestyles, culture, and deviance. *Prerequisite: graduate standing in sociology.*

Soc/G 213. Popular Culture (4)
The purpose of the course is two-fold: 1) to introduce students to a variety of theoretical perspectives on issues central to studies of popular culture, and 2) to survey disciplines outside of the field of sociology that have been contributing to the enormous intellectual growth of popular culture studies. *Prerequisite: graduate standing in sociology.*

Soc/G 216. Sociology of Culture (4)
The history of the concept of culture; cultural pluralism in advanced industrialized societies; the differentiation of cultural institutions; cultural policy and social structure; culture as a property of social groups; conflict and accommodation over efforts to change and sustain traditional culture.

Soc/G 217. Globalization, Culture, and Everyday Life (4)
This course explores the cultural, economic, and political processes which constitute globalization. Particular emphasis will be placed on understanding how consciousness and daily life practices are formed and transformed in a globalizing world. *Prerequisite: graduate standing in sociology.*

Soc/G 222. Social Movements (4)
An examination of theories accounting for the causes and consequences of social movements, including a discussion of the strengths and weaknesses of such theories for understanding historically specific revolutions, rebellions, and violent and nonviolent forms of protest in various parts of the world. *Prerequisite: graduate standing in sociology.*

Soc/G 226. Political Sociology (4)
This course discusses the relationship between state and society in a comparative perspective. The focus is on the interaction among states, domestic economic elites, and external economic and political processes in the determination of different developmental paths. Analytically, it includes topics such as characteristics and functions of the state in different types of society throughout history (with an emphasis on the varieties of capitalist and socialist state), the autonomy of the state and its causes in different settings, and developmental and predatory consequences of state activity. Readings will include both theoretical and empirical materials, the latter dealing mostly with nineteenth- and twentieth-century Europe and twentieth-century Latin America. *Prerequisite: graduate standing in sociology.*

Soc/G 227. Ethnographic Film: Media Methods (6)
Ethnographic recording of field data in written and audiovisual formats, including film, video, and CD ROM applications. Critical assessment of ethnographies and audiovisual data in terms of styles, format, and approaches. Graduate students are required to submit a fifteen-page mid-term paper comparing a written and an audiovisual ethnography and a final video ethnography with a project abstract. *Prerequisites: graduate standing/Soc/L 1A, 1B or consent of instructor.*

Soc/G 232. Advanced Issues in the Sociology of Knowledge (4)
The social construction of 'knowledge' and the social institutions in which these processes take place are examined. Topics include relationships between knowledge and social institutions, foundations of knowledge in society, knowledge and social interactions, and contrasting folk and specialized theories. *Prerequisites: graduate standing in sociology.*

Soc/G 234. Intellectual Foundation of the Study of Science, Technology, and Medicine (4)
This course focuses on some classic methodological and theoretical resources upon which the sociology of science, technology, and medicine all draw. It gives special attention to relationships between knowledge and social order, and between knowledge and practice, that are common to science, technology, and medicine. *Prerequisites: graduate standing in sociology.*

Soc/G 238. Survey of the Sociology of Scientific Knowledge (4)
An introduction to some enduring topics in the sociology of scientific knowledge and to some resources for addressing them. Attention is drawn to problems of accounting for scientific order and change, and to recurrent debates over the proper method for sociological accounts of science. *Prerequisite: graduate standing.*

Soc/G 239. Race/Ethnicity, Gender and Labor Markets (4)
Exploration and analysis of the operation of race/ethnicity and gender in the U.S. labor market. Emphasis on understanding inequality in: labor force participation, unemployment, wage inequities, and occupational locations. *Prerequisites: graduate standing in sociology.*

Soc/G 243. Sociology of Social Control (4)
An examination of the sociological literature on social control, looking at theoretical developments over time, and examining the contemporary literature dealing with social control in historical and comparative perspective. *Prerequisite: graduate standing.*

Soc/G 244. Sociology of Race and Ethnicity (4)
Analysis of enduring topics in the study of race and ethnicity, including stratification, discrimination conflict, immigration, assimilation, and politics. Other topics include racial and ethnic identity and the social construction of race and ethnic categories. A special focus is on the role of 'culture' and 'structure' for explaining race/ethnic differentiation. *Prerequisites: graduate standing in sociology.*

Soc/G 245. Graduate Seminar in Gender and Work (4)
Examination and analysis of empirical research and alternative theoretical perspectives on gender and work. Special attention to occupational segregation. Other topics include the interplay between work and family; gender, work and poverty; gender and work in the third world. Prerequisite: *graduate standing in sociology.*

Soc/G 249. Technology and the Human (4)
This course explores the ethical and political implications of technological interventions into human life. Approaches from science studies, the sociology of the body, and philosophy. Topics include transformations in domains of life such as work, health, childhood, and death.

Soc/G 252. Research Practicum I (4)
In this seminar students work on a research project, which might have originated in a paper written for another course. The goal is to produce the first draft of a paper that will be submitted to an academic journal. *Prerequisite: graduate standing in sociology.*

Soc/G 253. Research Practicum II (4)
In this seminar students revise an existing research paper (usually the one they wrote for Sociology 252) for submission to an academic journal. Emphasis is placed on conceptual development, writing style and structure, and drawing links to the existing theoretical and empirical literature. *Prerequisite: graduate standing in sociology.*

Soc/G 255A. Introduction to Science Studies (4)
(Same as Phil. 209A, HIGR 238, and COGR 225A.) Study and discussion of classic work in history of science, sociology of science, and philosophy of science, and of work that attempts to develop a unified science studies approach. Required for all students in the Science Studies Program. *Prerequisite: enrollment in Science Studies Program.*

Soc/G 255B. Seminar in Science Studies (4)
(Same as Phil. 209B, HIGR 239, and COGR 225B.) Study and discussion of selected topics in the science studies field. Required for all students in the Science Studies Program. *Prerequisite: enrollment in Science Studies Program.*

Soc/G 255C. Colloquium in Science Studies (4)
(Same as Phil. 209C, HIGR 240, and COGR 225C.) A forum for the presentation and discussion of research in progress in science studies, by graduate students, faculty, and visitors. Required of all students in the Science Studies Program. *Prerequisite: enrollment in the Science Studies Program.*

Soc/G 258. Institutional Change in the Contemporary World; Latin American Societies in a Comparative Perspective (4)
This course explores institutional change in contemporary Latin America, and compares this area with other transitional societies. Issues include social consequences of economic liberalization, changing forms of inequality, dynamics of civil society, conceptions of citizenship, quality and future of democracy. *Prerequisite: graduate standing.*

Soc/G 260. Sociology of Religion (4)
This seminar will examine major theories and debates in the sociology of religion. Possible topics include sec-

ularization, religion and immigration, and religion and politics. *Prerequisite: graduate standing in sociology.*

Soc/G 263. Graduate Seminar in the Sociology of Art (4)
This seminar explores the production and interpretation of art forms in cross-cultural context. Processes of symbolic and economic exchange in art worlds will be examined from sociological and semiotic perspectives. Contemporary and popular art forms will be analyzed as types of cultural reproduction. Graduate students will be required to submit a project abstract and final research paper of twenty-seven pages. *Prerequisite: graduate standing in sociology.*

Soc/G 264. Economic Sociology (4)
This course provides an overview of the classical and current debates in the economic sociology literature. It presents theories of the rise of industrial economics and addresses how economic activities are constituted and influenced by institutions, culture, and social structure. *Prerequisite: graduate standing in sociology.*

Soc/G 267. Sociology of Gender (4)
Course examines social construction of gender focusing on recent contributions to the field, including micro- and macro-level topics, i.e., social psychological issues in the development of gender, gender stratification in the labor force, gender and social protest, feminist methodologies. *Prerequisite: graduate standing in sociology.*

Soc/G 269. The Citizenship Debates (4)
Will examine the controversies surrounding the construction of the modern citizen and the good society of the liberal outlook, and their alternatives in the communitarian, social-democratic, nationalist, feminist, and multiculturalist perspectives. *Prerequisite: graduate standing in sociology.*

Soc/G 270. The Sociology of Education (4)
A consideration of the major theories of schooling and society, including functionalist, conflict, critical and interactional; selected topics in the sociology of education will be addressed in a given quarter, including the debate over inequality, social selection, cultural reproduction and the transition of knowledge, the cognitive and economic consequences of education. Major research methods will be discussed and critiqued. *Prerequisite: graduate standing in sociology.*

Soc/G 274. Culture and Ethnicity (4)
An in-depth analysis of the role of culture in the construction and experience of ethnicity. Topics include: culture and ethnic stratification, culture and ethnic relations, ethnic politics and policy, 'identity politics,' multiculturalism, and cross-national comparison of policy protecting ethnic cultural rights. *Prerequisite: graduate standing in sociology.*

Soc/G 284. Contemporary Biomedicine (4)
Develops central themes in medical sociology in order to understand twentieth- and twenty-first-century medical practice and research. Topics include authority and expertise; health inequalities; managed care; health activism; biomedical knowledge production; and the construction of medical objects and subjects. *Prerequisite: graduate standing.*

Soc/G 282. Immigration and Citizen (4)
Alternative theories of the relations of immigrants and host societies, and an examination on the debates on, and dynamic of, immigration expansion and restriction. Comparison of the bearing of liberal, communitarian, and ethnic citizenship discourses on the inclusion and exclusion of immigrants and their descendants. *Prerequisite: graduate standing in sociology.*

Soc/G 283. The Making of Modern Medicine (4)
An examination of the intellectual, social, cultural, and political dimensions of the Transformation of Western medicine from 1750 to 1900, with a primary focus on Anglo-American developments. *Prerequisite: graduate standing.*

Soc/G 285. Modernization and Globalization in East Asia (4)
Can East Asia modernize and globalize and still be distinct from the West? This course examines this question in multiple dimensions—political, cultural, and economic. Topics include human rights, democracy, economic organization, social institutions, and others. *Prerequisite: graduate standing.*

Soc/G 290. Graduate Seminar (4)
A research seminar in special topics of interest to available staff, provides majors and minors in sociology with research experience in close cooperation with faculty. (S/U grades permitted.) *Prerequisite: graduate standing in sociology.*

Soc/G 298. Independent Study (1-8)
Tutorial individual guides study and/or independent research in an area not covered by present course offerings. (S/U grades only.) *Prerequisite: graduate standing in sociology; departmental approval.*

Soc/G 299. Thesis Research (1-12)
Open to graduate students engaged in thesis research. (S/U grades only.) *Prerequisite: graduate standing in sociology.*

Soc/G 500. Apprentice Teaching (2-4)
Supervised teaching in lower-division contact classes, supplemented by seminar on methods in teaching sociology. (S/U grades only.) *Prerequisite: graduate standing in sociology.*

Space Science and Engineering

OFFICE: Galbraith Hall, Room 180,
Revelle College

The following are minor requirements for students admitted to UCSD January 1, 1998, and later. Students admitted to UCSD prior to the above date must see the program adviser to confirm minor requirements.

The space science and engineering minor is a focused set of seven upper-division courses open to students with junior standing in one of the following departments: MAE, chemistry, CSE, ECE, or physics. Other students with suitable chemistry, physics, and mathematics preparation may also pursue the minor.

The minor has three objectives. It is designed to offer an appropriate preparation for careers in space research and technology, with transcript notation of such a concentration of use to students. The minor can help balance strongly focussed departmental offerings with a broader interdisciplinary approach that can foster interdepartmental activities beneficial to students. Finally such a minor contributes to the preservation and renewal of the broad, interdisciplinary style which has distinguished UCSD from other leading research universities.

Curriculum

The minor consists of two required courses, Space Science (MAE 180A) and Space Engineering (MAE 180B), plus five electives to be chosen from a list of courses with the approval of an adviser. The present list of electives includes:

CHEM 170. Cosmochemistry

ECE 120. Solar System Physics

ECE 166. Microwave Systems and Circuits (extensive prerequisites, lab component)

ERTH 130. Geodynamics of Terrestrial Planets

MAE 155A-B. Aerospace Engineering Design

PHYS 160. Stellar Astrophysics

PHYS 161. Black Holes and the Milky Way Galaxy

PHYS 162. Galaxies and Cosmology

PHYS 163. Exploring the Solar Sytem

SE 144. Aerospace Structural Analysis

Spanish Literature

See Literature.

Structural Engineering

See Engineering, School of

Subject A

Web site: http://subjecta.ucsd.edu/

For information about satisfying the Subject A requirement, especially prior to enrollment, please refer to "Subject A: English Composition" in the catalog section, "Academic Regulations."

Students who have not satisfied the Subject A requirement before enrolling at UCSD must satisfy the requirement by achieving a grade of C or better in SDCC 1 (English Composition–Subject A) and by passing the Subject A Exit Examination given at the end of SDCC 1. That examination is administered by the Subject A Program office. Students must enroll in SDCC 1 (or ESL) during the first quarter of residence at UCSD. SDCC 1 is a Mesa College course taught at UCSD as part of a cooperative program with the San Diego Community College District.

Under Academic Senate regulations, SDCC 1 cannot be counted toward graduation requirements; however, the course units do count as workload credit toward the minimum progress requirement and eligibility for financial assistance.

For further information about the Subject A requirement or the Proficiency Test, please visit the Subject A Program office, 3232 Literature Building, or call (858) 534-6177.

Campbell Naismith, M.A.

The Teacher Education Program (TEP) at UCSD offers the Master of Education Degree/California Multiple Subject Teaching Credential for elementary school teachers, the Master of Education Degree/Single Subject Credential in English, mathematics, biology, chemistry, geosciences, and physics for secondary school teachers, the Master of Arts in teaching and learning with an emphasis in curriculum design, the Master of Arts in deaf education, the Doctor of Education (Ed.D.) in Teaching and Learning, and a minor in education.

A primary focus of the Teacher Education Program is multicultural education. We require candidates to master the subject matter that they will teach and develop a repertoire of teaching practices which use their students' cultural knowledge and language as educational resources.

Admissions Process

IMPORTANT: A NEW DOCTOR OF EDUCATION (Ed.D.) IN EDUCATIONAL LEADERSHIP (jointly with San Diego State University and California State University, San Marcos) IS PENDING APPROVAL. INFORMATION REGARDING THE JOINT Ed.D. IS AVAILABLE ON THE TEP WEB SITE AT http://tep.ucsd.edu.

January 14 is the application deadine for the M.Ed./Credential programs. All applicants must apply online at http://tep.ucsd.edu

Applicants interested in financial aid should complete the FAFSA application by March 2, and may contact Graduate Student Financial Services at (858) 534-3807.

Each applicant is carefully reviewed for admission by a committee. The selection committee ensures that applicants have completed the requirements for admission described below and evaluates each applicant on the basis of the following criteria:

1. A strong interest in multicultural approaches to education; a strong desire to improve the quality of American education; a strong desire to develop self-activated learners;
2. Experience working with children in educational environments, especially with students from diverse backgrounds;
3. Participation in public service activities;
4. Academic excellence in their undergraduate and graduate studies.

More information about the entire application process is available on the TEP Web site at http://tep.ucsd.edu.

The Master of Education (M.Ed.)

The M.Ed. articulates with Multiple Subject and Single Subject credential programs. It is a rigorous 15- to 24-month professional degree program designed specifically for preservice elementary and secondary teachers earning their initial teaching credential at UCSD. This

course of study allows candidates to earn a teaching credential and the M.Ed. degree from UCSD prior to entering the teaching profession. The program requires applicants with strong subject matter preparation.

PREREQUISITE REQUIREMENTS FOR GRADUATE CREDENTIAL PROGRAMS

Master of Education/Multiple Subject (Elementary) Credential

- **UCSD Undergraduates:** Students working towards *any* major at UCSD may complete the prerequisite Multiple Subject Credential admission requirements and Educational Foundations courses while they are undergraduates.

Multiple Subject Prerequisite Requirements

1. Undergraduates completing *any* major at UCSD may complete the prerequisite requirements for the Multiple Subject Credential. Candidates prior to completing their degree. Candidates who have already received a Bachelor of Arts or Science from any University of California campus, or an appropriate equivalent degree from another institution, must apply for graduate status as a M.Ed. Multiple Subject credential student. Examples of majors not eligible for application to TEP include Business, Education, Liberal Studies, Marketing, and Recreation.

   A 3.0 cumulative GPA is required from the institution awarding the bachelor's degree.

2. Subject Matter Competence:

   This requirement is satisfied by providing evidence of satisfactory completion of the California Subject Examinations for Teachers (CSET).

3. The California Basic Educational Skills Test (CBEST):

   Evidence of passing the CBEST satisfies this requirement.

4. U.S. Constitution requirement:

This requirement is satisfied by *either:*

- Completion of a course covering the provisions and principles of the U.S. Constitution, *or*
- Passage of an appropriate exam offered through University Extension or the County Office of Education (Contact the TEP office for information.)

5. Sensitivity to second language learning:

   Applicants must demonstrate, through course work or equivalent experience, an informed sensitivity to the challenges of second language learning and acquisition. This can be fulfilled in one of three ways:

   - Completion of nine quarter units of college course work in a single language that is not the applicant's native language, *or*
   - Completion of three years of secondary school course work in a language other than English. The course work must be taken in grades 7 through 12, with at least a B average, *or*
   - Demonstration of an "equivalent experience" in a second language situation. Applicants who wish to satisfy this requirement by one of the three options listed below must submit an essay that describes the length and circumstances of the experience, including at least three specific examples of situations that helped you gain personal knowledge and appreciation of issues surrounding second language acquisition in a diverse cultural setting. The three equivalent experience options are:

     i. The applicant has lived for prolonged period of time in a country where the language spoken was not native to the applicant, and where the applicant was continuously required to speak that second language (e.g., Peace Corps).

     ii. The applicant has had an extended experience immersed in a multilingual community in his/her native country.

     iii. The applicant was raised in a multilingual community.

6. Satisfactory scores on the Graduate Record Exam (GRE) General Test

7. Prerequisites for BCLAD Emphasis in Spanish *or* American Sign Language options:

   These emphases are designed for students who have sufficient bilingual skills to effectively teach in English and either Spanish or American Sign Language. Students interested in applying for admission to the BCLAD program must demonstrate:

   a. Spanish or American Sign Language fluency:

      i. Spanish: Completion of two Spanish literature courses (Spanish/English BCLAD only), at least one of which must be upper-division in either Latin American or Chicano literature, *and* completion of the TEP Spanish Language Assessment, with an FSI score of at least 3 (scores of 3- will be accepted, but students must receive a score of 3 prior to being recommended for the BCLAD credential). Since these exams are coordinated by TEP, please contact TEP in January prior to your application to the credential program.

      ii. American Sign Language: Completion of the TEP American Sign Language assessment with a rating of "acceptable" by a panel of assessors

   b. Cultural Knowledge:

      i. Spanish: One history course *and* one culture course covering Chicano or Latin American-related topics

      ii. American Sign Language: At least one course on the language or culture of deaf people in the U.S. or intensive experience living among deaf people in the U.S.

   c. History, Politics, and Theory of Bilingual Education: TEP 125 or ETHN 140 or ETHN 144

   d. A desire to teach in a bilingual setting.

   Note: A grade of B- or higher is required for all BCLAD courses.

Educational Foundations Course-of-Study for M.Ed./Multiple Subject (Elementary) Credential Candidates

UCSD students planning to apply to the M.Ed./Multiple Subject (elementary) Credential Program must complete the *Introduction to Teaching and Learning* requirement listed in **a** below and one course from each of the remaining three areas, **b, c,** and **d** *(see Table 1 for a sample schedule).* Graduate students admitted as prerequisite candidates may satisfy the Multiple Subject prerequisite requirements as an academic year program or through an intensive summer program of defined coursework (contact TEP for admission requirements and scheduling). A minimum 3.0 GPA for all

prerequisite coursework is required for admission to the TEP credential program.

a. Introduction to Teaching and Learning. *Three* of the following courses and a corequisite practicum for each:

TEP 130. Introduction to Academic Mentoring of Elementary School Students

or

TEP 134. Introduction to Literacy and Numeracy Tutoring (recommended for Multiple Subject candidates)

and

TEP 128A-B. Introduction to Teaching and Learning (*TEP 130 [or 134] is a prerequisite for TEP 128A and cannot be taken concurrently. TEP 128A and 128B are restricted to students applying to TEP at UCSD and must be taken in the year of application to the program.)*

and

TEP 139. Practicum in Teaching/Learning *(corequisite for TEP 130 or 134 and TEP 128A-B)*

b. Learning Environments. *One* of the following courses or equivalent:

TEP 114. Cognitive Development and Interactive Computing Environments *(recommended for Multiple or Single Subject candidates)*

TEP 115. Cognitive Development and Education *(recommended for Multiple Subject candidates)*

TEP 118. Adolescent Development and Education *(recommended for Single Subject candidates)*

TEP/LING 119. First and Second Language Learning: From Childhood through Adolescence *(recommended for Single Subject candidates)*

CogSci 154. Communication Disorders in Children and Adults (same as Psy 174)

COMT 116 Practicum in Child Development (same as HDP 135/Psy 128)

HDP 1. Introduction to Human Development

Psychology 101. Introduction to Developmental Psychology

c. Language and Culture. *One* of the following courses or equivalent:

TEP/SocB 117. Language, Culture and Education *(recommended for all credential candidates)*

ANGN 117. Anthropology of Education *(recommended for all credential candidates)*

ANGN 149. Language in Society

COCU 144. Language and Society

COHI 121. Literacy, Social Organization, and the Individual

COHI 122. Communication and the Community

COHI 114. Bilingual Communication

Ethnic Studies 140. Language and American Ethnicity

Ethnic Studies 141. Language and Culture

d. School and Society. *One* of the following courses or equivalent:

TEP/SocC 126. Social Organization of Education *(recommended for credential candidates)*

TEP 125. History, Politics, and Theory of Bilingual Education *(required for BCLAD candidates)* or ETHN 140 or ETHN 144

ECON 147. Economics of Education

ANGN 112. Language, Identity, and Community

ETHN 140. Language and American Ethnicity

ETHN 144. Bilingual Communities in the U.S.A.

Table 1: Sample Course-of-Study for Multiple Subject (Elementary) Credential

FALL	WINTER	SPRING
TEP 134	TEP 128A	TEP 128B *(only S*
TEP 139	*(only W)*	*restricted to*
TEP 117*	TEP 139	*TEP candidates)*
	TEP 114/115	TEP 139
		TEP 126* or
		TEP 125 *(required for BCLAD)*

* Offered various quarters. See other options above.

Professional Preparation

After students complete the prerequisites described above, they apply to the program, as described above. Upon acceptance, teacher candidates complete the professional preparation activities which lead to the award of the Multiple Subject credential.

The professional preparation component of the Multiple Subject credential consists of five courses and fifteen weeks of student teaching in elementary school classrooms.

Additional Requirements for BCLAD Candidates

Students pursuing the BCLAD emphasis in Spanish must also take TEP 152A-B *(Bilingual Instructional Practices).* Furthermore, BCLAD candidates will be placed in bilingual student teaching situations.

A typical student schedule for the professional preparation program is shown in Table 1:

Table 1: Schedule of Professional Preparation Activities for the M.Ed./ Multiple Subject Credential

FALL	WINTER	SPRING	SUMMER
TEP 151 (4)	TEP 161B (6)	TEP 161C (4)	TEP 204 (4)
TEP 161A (6)	TEP 169A (9)	TEP 169B (9)	TEP 206 (4)
TEP 190 (4)	TEP 205A (2)	TEP 182 (4)	
TEP 201 (4)		TEP 205B (2)	
TEP 203 (4)			
TEP 250 (4)			
BCLAD candidates:			
TEP 152A (2)	TEP 152B (2)		

Master of Education/Single Subject (Secondary) Credential

- **UCSD Undergraduates:** Students working towards a *Literature, Linguistics, Mathematics, or any Science* major at UCSD may complete the prerequisite Single Subject Credential requirements while they are undergraduates.

Single Subject Prerequisite Requirements

1. Undergraduates working toward *selected* majors at UCSD may complete the prerequisite requirements for the Single Subject Credential prior to completing their degree. Students must be working toward a major in the discipline corresponding to that of the desired credential:
   - *English:* any UCSD Literature or Linguistics major, or equivalent
   - *Mathematics:* any UCSD Mathematics, Engineering, or Computer Science major, or equivalent,
   - *Biology, Chemistry, Geosciences, or Physics:* any UCSD Natural Science major, or equivalent.

Candidates who have already received a literature, linguistics, mathematics, or science Bachelor of Arts or Science degree from any University of California campus, or an appropriate equivalent degree from another institution, must apply for graduate status as a M.Ed./ Single Subject credential student.

A 3.0 cumulative GPA is required from the institution awarding the bachelor's degree.

2. Subject Matter Competence:

   This requirement is satisfied by *either:*

   - providing evidence of satisfactory completion of the appropriate sections of the California Subject Examinations for Teachers (CSET)
     or
   - having completed all of the subject matter preparation program for the desired single subject credential.

3. The California Basic Educational Skills Test (CBEST):

   Evidence of passing the CBEST satisfies this requirement.

4. U.S. Constitution requirement:

   - completion of a course covering the provisions and principles of the U.S. Constitution
     or
   - passage of an appropriate exam offered through University Extension or the County Office of Education (Contact the TEP office for information.)

5. Sensitivity to second language learning:

   Applicants must demonstrate, through course work or equivalent experience, an informed sensitivity to the challenges of second language learning and acquisition. This can be fulfilled in one of three ways:

   - completion of nine quarter units of college course work in a single language that is not the applicant's native language
     or
   - completion of three years of secondary school course work in a language other than English. The course work must be taken in grades 7 through 12, with at least a B average
     or
   - demonstration of an "equivalent experience" in a second language situation.

Applicants who wish to satisfy this requirement by one of the three options listed below must submit an essay that describes the length and circumstances of the experience, including at least three specific examples of situations that helped you gain personal knowledge and appreciation of issues surrounding second language acquisition in a diverse cultural setting. The three equivalent experience options are:

i. The applicant has lived for a prolonged period of time in a country where the language spoken was not native to the applicant, and where the applicant was continuously required to speak that second language (e.g., Peace Corps).

ii. The applicant has had an extended experience immersed in a multilingual community in his/her native country.

iii. The applicant was raised in a multilingual community.

6. Satifactory scores on the Graduate Record Exam (GRE) General Test.

7. Prerequisites for BCLAD Emphasis in Spanish:

   This emphasis is designed for students who have sufficient bilingual skills to effectively teach in English and Spanish. Students interested in applying for admission to the BCLAD program must demonstrate:

   a. Spanish Language Fluency:

   i. Completion of two Spanish literature courses, at least one of which must be upper-division in either Latin American or Chicano literature, and

   ii. Completion of the TEP Spanish Assessment, with an FSI score of at least 3 (Scores of 3- will be accepted, but student must receive a score of 3 prior to being recommended for the BCLAD credential.) Since these exams are coordinated by TEP, please contact TEP in January prior to application to the credential program.

   b. Cultural Knowledge: One history course *and* one culture course covering Chicano or Latin American-related topics.

   c. History, Politics, and Theory of Bilingual Education: TEP 125 or ETHN 140 or ETHN 144

   d. A desire to teach in a bilingual setting.

   Note: *A grade of B– or higher is required for all BCLAD courses.*

Educational Foundations Course-of-Study for M.Ed./Single Subject (Secondary) Credential Candidates

UCSD students planning to apply to the M.Ed./ Single Subject (secondary) Credential Program must complete the *Introduction to Teaching and Learning* requirement listed in **a** below and one course from each of the remaining three areas, **b**, **c**, and **d** *(see Table 2 for a sample schedule).* A minimum 3.0 GPA for all prerequisite coursework is required for admission to the TEP credential program.

a. Introduction to Teaching and Learning. *Three* of the following courses and a corequisite practicum for each:

   TEP 129 A-B-C. Introduction to Teaching and Learning *(TEP 129B and 129C are restricted to students applying to TEP at UCSD and must be taken in the year of application to the program.)*

   or

   TEP 136. Introduction to Academic Tutoring of Secondary School Students or TEP 138. Introduction to Academic Tutoring at the Preuss School *(may be substituted for TEP 129A only)*

   and

   TEP 139. Practicum in Teaching/Learning *(corequisite for TEP 129 A-B-C and TEP 136)*

   and

   TEP 190. Research Practicum *(take concurrently with TEP 129C)*

b. Learning Environments. *One* of the following courses or equivalent:

   TEP 114. Cognitive Development and Interactive Computing Environments *(recommended for Multiple or Single Subject candidates)*

   TEP 115. Cognitive Development and Education *(recommended for Multiple Subject candidates)*

   TEP 118. Adolescent Development and Education *(recommended for Single Subject candidates)*

   TEP/LING 119. First and Second Language Learning: From Childhood through

Adolescence *(recommended for Single Subject candidates)*

CogSci 154. Communication Disorders in Children and Adults (same as Psy 174)

COMT 116. Practicum in Child Development (same as HDP 135/Psy 128)

HDP 1. Introduction to Human Development

Psychology 101. Introduction to Developmental Psychology

c. Language and Culture. *One* of the following courses or equivalent:

TEP/SocB 117. Language, Culture and Education *(recommended for credential candidates)*

ANGN 117. Anthropology of Education

ANGN 149. Language in Society

COCU 144. Language and Society

COHI 121. Literacy, Social Organization, and the Individual

COHI 122. Communication and the Community

COHI 114. Bilingual Communication

Ethnic Studies 140. Language and American Ethnicity

Ethnic Studies 141. Language and Culture

d. School and Society. *One* of the following courses or equivalent:

TEP/SocC 126. Social Organization of Education *(recommended for credential candidates)*

TEP 125. History, Politics, and Theory of Bilingual Education *(required for BCLAD candidates)* or ETHN 140 or ETHN 144

ECON 147. Economics of Education

ANGN 112. Language, Identity, and Community

ETHN 140. Language and American Ethnicity

ETHN 144. Bilingual Communities in the U.S.A.

Table 2: Sample Course-of-Study for Single Subject (Secondary) Credential

FALL	WINTER	SPRING
TEP 129A *(only F)*	TEP 129B *(only W)*	TEP 129C *(only S restricted to TEP candidates)*
TEP 139	TEP 139	TEP 139
TEP 117*	TEP 114/118/119	TEP 126* or TEP 125 *(required for BCLAD)*
		TEP 190 *(concurrent with TEP 129C)*

*Offered various quarters. See options above.

Internship and Student Teaching Programs

Those admitted to the M.Ed./Single Subject Credential Program are eligible to be interviewed in June, July, and August for a paid internship for the following school year, in a local middle or high school. Availability of internship positions in **not** guaranteed, though TEP attempts to facilitate internship positions for all Single Subject students. Students who do not receive an internship position will do their practicum as student teachers instead. Interns are responsible for teaching English, mathematics, biology, chemistry, geosciences, or physics courses under the guidance of a TEP supervisor and an on-site adviser. Interns, who are generally hired for part-time teaching loads, receive a salary from the school district commensurate with the number of courses they teach.

Professional Preparation Courses

Once students are selected, they are provided an intensive program of professional preparation, including a full-time summer program of teaching methods courses and seminars offered throughout the academic year which address classroom management techniques and strategies for dealing with concrete teaching and learning situations.

A typical student schedule for the Single Subject Professional Preparation Program is shown in Table 2.

Table 2: The Professional Preparation Program for the M.Ed./Single Subject Credential

SUMMER (1)	FALL	WINTER	SPRING
TEP 173 (4) (or 174 or 175)	TEP 179A (8)	TEP 179B (8)	TEP 179C (8)
TEP 176 (4)	TEP 151 (4)	TEP 181 (4)	TEP 182 (4)
TEP 201 (4)		TEP 205A (2)	TEP 205B (2)
TEP 203 (4)			
TEP 250 (4)			

For BCLAD Candidates:
TEP 152B (2) TEP 152A (2)

SUMMER (2)

TEP 204 (4)
TEP 206 (4)

Minor in Teacher Education

UCSD undergraduate students who are interested in pursuing a teaching credential should refer to the appropriate elementary or secondary Educational Foundations course of study when selecting courses for the minor. Contact TEP for details.

The Teacher Education Program offers a Minor in Teacher Education that requires a minimum of twenty-eight units, twenty units of which must be upper division. All courses for the minor must be taken for a letter grade except TEP 139. Students must complete a course-of-study that includes a minimum of one course in category **a** below and a minimum of one course from two of the remaining three categories **b, c, or d**. The TEP minor requires a minimum of twelve units in TEP courses. A maximum of eight units of practicum (TEP 139) may be applied to the minor.

a. Introduction to Teaching and Learning

One of the following courses (four quarter units) and corequisite practicum TEP 139 (two quarter units)

TEP 128 A-B. Introduction to Teaching and Learning (Elementary). (TEP 130 [or 134] is a prerequisite for TEP 128A and cannot be taken concurrently. TEP 128A and 128B are restricted to students applying to TEP at UCSD and must be taken in the year of application to the program.)

TEP 129 A-B-C Introduction to Teaching and Learning (Secondary) (It is preferable that 129A be taken in the fall quarter of senior year. TEP 129B and 129C are restricted to students applying to TEP at UCSD and must be taken in the year of application to the program.)

TEP 130. Introduction to Academic Mentoring of Elementary School Students

TEP 134. Introduction to Literacy and Numeracy Tutoring *(recommended for Multiple Subject candidates)*

TEP 136. Introduction to Academic Tutoring of Secondary School Students

TEP 138. Introduction to Academic Tutoring of Preuss School Students

and

TEP 139. Practicum in Teaching/Learning

b. Learning Environments

TEP 114. Cognitive Development and Interactive Computing Environments *(recommended for Multiple or Single Subject candidates)*

TEP 115. Cognitive Development and Education *(recommended for Multiple Subject candidates)*

TEP 118. Adolescent Development and Education *(recommended for Single Subject candidates)*

TEP 119. First and Second Language Learning: From Childhood through Adolescence *(recommended for Single Subject candidates)*

Cog Sci 154. Communication Disorders in Children and Adults (same as Psychology 174)

COMT 116. Practicum in Child Development (same as HDP 135/Psychology 128)

HDP 1. Introduction to Human Development

Psychology 101. Introduction to Developmental Psychology

c. Language and Culture

TEP/SocB 117. Language, Culture and Education *(recommended for all TEP credential candidates)*

ANGN 117. Anthropology of Education

ANGN 149. Language in Society

COCU 144. Language and Society

COHI 121. Literacy, Social Organization, and the Individual

COHI 122. Communication and the Community

COHI 114. Bilingual Communication

Ethnic Studies 140. Language and American Ethnicity

Ethnic Studies 141. Language and Culture

d. School and Society

TEP/Soc 126. Social Organization of Education *(recommended for all TEP credential candidates)*

TEP 125. History, Politics, and Theory of Bilingual Education *(required for BCLAD and recommended for all TEP credential candidates)* or ETHN 140 or ETHN 144

ECON 147. Economics of Education

ANGN 112. Language, Identity, and Community

ETHN 140. Language and American Ethnicity

ETHN 144. Bilingual Communities in the U.S.A.

The Master of Arts in Teaching and Learning: Curriculum Design

The M.A. in teaching and learning at UCSD offers professional educators in elementary and secondary schools an extensive overview of principles of educational research and curriculum design.

A key feature of the M.A. program is the integration of research and practice. M.A. students remain full-time K–12 teachers for the duration of the program. They design, implement, and evaluate curricular innovations in their own classrooms. The culmination of the M.A. work is a thesis describing the rationale, development, and effectiveness of these innovations.

Examples of M.A. Research Projects

The topics of the M.A. theses in past years are varied, and have included: multimedia approaches to secondary biology and chemistry instruction; writing revision among emergent writers; building partnerships between families and schools; activities which link home and school experiences in the content areas of reading and writing, mathematics, science, and social studies; improved integration of curriculum and assessment; motivation and art; using technology for mathematics and geography teaching; and embedding ESL in native language instruction.

Since the program's inception in 1988, 173 students have earned M.A. degrees in teaching and learning with an emphasis in curriculum design. Of these, ninety-four came from the ranks of elementary teachers, seventy-three worked as secondary teachers, and six taught at the post-secondary level.

The M.A. Course of Study (Teaching and Learning: Emphasis in Curriculum Design)

The M.A. program requirements consist of forty quarter units of course work, including the master's thesis. Courses are usually offered for 4.0 quarter units of credit, and are typically offered one night per week, from 5:00–8:00 p.m. Core course work comprises twenty-eight units, with the remaining twelve units consisting of elective course work.

A typical program consists of:

CORE M.A. COURSE WORK

First Summer
(mid June–late August)

TEP 231 or 232 (offered alternating summers)

Each summer includes an intensive course in innovative instructional theory and practices. Specific topic changes each year. Examples include: portfolio and authentic assessment; telecommunications in the classroom; collaborative learning; and research on child development and learning.

TEP 229

Introductory course about research on teaching practice.

Fall, Winter, and Spring:

TEP 230A-B-C

Three quarter seminar providing an extensive overview of curriculum design principles, and application of educational research to classroom practice.

TEP 233A

Graduate seminar series in which UCSD faculty present their research on educational topics.

TEP 290

Intensive work with faculty adviser (Spring only)

Second Summer
(mid June–late August)

TEP 231 or 232 (see above)

TEP 295

Completion of M.A. thesis writing.

Admission to the M.A. program in teaching and learning at UCSD is competitive. Factors considered by the selection committee include:

- teaching experience
- professional development activities
- experience and interest in curriculum design
- academic record

Admission to graduate standing at UCSD requires a minimum cumulative GPA of 3.0 for any prior graduate work, and for the bachelor's degree. Official scores from the GRE verbal, analytic, and quantitative sections are also required. Application deadline is February 1.

The Master of Arts in Teaching and Learning: Bilingual Education (ASL-English)

The Teacher Education Program (TEP) at UCSD offers a master of arts in teaching and learning: bilingual education emphasis (ASB-English) and the California Deaf and Hard-of-Hearing Specialist Teaching Credential and the Multiple Subject Teaching Credential with BCLAD emphasis for elementary school teachers. This program of study includes extensive practicum experience combined with the latest research and innovation in bilingual education and deaf education. Students in the program participate in research and development on the leading edge of bilingual, multicultural education for deaf and hard-of-hearing children.

In keeping with its aim of training teachers who will be able to meet the needs of deaf and hard-of-hearing children from various language and cultural backgrounds, TEP requires fluency in ASL for acceptance into the program. TEP's teacher training program is designed to prepare teachers to work in various types of school settings from residential school classrooms to local public school classrooms for deaf and hard-of-hearing children. TEP recognizes that deaf and hard-of-hearing children need teachers who are themselves bilingual and knowledgeable about the role of culture in human development.

Prerequisite Course of Study Education Foundations Sequence

Prior to admittance to the credential and master's study, prerequisite students (or UCSD undergraduates pursuing the minor in teacher education) complete the following five courses offered during the first summer.

TEP 128A-B: Introduction to Teaching and Learning (Elementary)

TEP 115: Cognitive Development and Education

TEP 117: Language, Culture and Education

TEP 125: History, Politics, and Theory of Bilingual Education

Program of Study for the Deaf and Hard-of-Hearing Specialist Credential, the Multiple Subject Teaching Credential with BCLAD Emphasis and the Master of Arts in Teaching and Learning.

After completion of the prerequisite component, students complete a program of study resulting in the California Deaf and Hard-of-Hearing Specialist Credential at the elementary level. Students also qualify for the Multiple Subject (BCLAD) credential.

This program of study consists of courses in bilingual education theory, methods, and applications to deaf education in addition to intensive classroom practice. During the second year of study the focus is on designing, implementing and evaluating a research project. This integration of research and practice is central to the goal of the M.A. program to develop teachers as researchers.

A typical program of study includes:

YEAR 1

Fall

COHI 124/TEP151 (alternating): Voice: Deaf People in America/Teaching the English Language Learner

TEP 142A: ASL-English Bilingual Education Practices

TEP 161A: Innovative Instructional Practices

TEP 190: Research Practicum (four units)

TEP 203: Technology, Teaching, and Learning

TEP 201: Introduction to Resources for Teaching and Learning

TEP 250: Equitable Educational Research and Practice

Winter

TEP 142B: ASL-English Bilingual Education Practices

TEP 161B: Innovative Instructional Practices

TEP 169A: Practicum in Student Teaching

Spring

TEP 142C: ASL-English Bilingual Education Practices

TEP 161C: Innovative Instructional Practices

TEP 169B: Practicum in Student Teaching

TEP 182: Inclusive Educational Practices

YEAR 2

Fall

COHI 124/TEP 151 (alternating): Voice: Deaf People in America/Teaching the English Language Learner

TEP 240A: Research in ASL-English Bilingual Education

TEP 241: Advanced Topics in Deaf Education

Winter

TEP 233A: Topics in Education Research and Design

TEP 240B: Research in ASL-English Bilingual Education

TEP 290: Research Practicum

Spring

TEP 149: Education Specialist Student Teaching

TEP 240C: Research in ASL-English Bilingual Education

Summer

TEP 295: M.A. Thesis

Admission Requirements

Candidates will apply to graduate admission to the prerequisite component of this program. Upon satisfactory completion of the prerequisite component, students will advance to the professional component and master's component which require two years of study. The following are the minimum eligibility requirements to for admission to the graduate prerequisite component. Applications are available beginning in January. **Application deadline is February 1.**

- A bachelor's degree with a 3.0 cumulative GPA
- Official Graduate Record Exam (GRE) scores
- Subject matter competence (CSET)
- The California Basic Educational Skills Test (CBEST)
- Completion of a course including the provisions and principles of the U.S. Constitution, **or** passage of the appropriate exam
- Official Graduate Application and Fee
- Statement of Purpose and Reference Letters
- Fluency in American Sign Language
- Knowledge and experience of the social and cultural life of deaf people
- A desire to teach deaf children of varying language and cultural backgrounds

Admission to graduate standing at UCSD requires a minimum cumulative GPA of 3.0 for any prior graduate work, and for the bachelor's degree. Official scores from the GRE verbal, analytic, and quantitative sections are also required.

Doctor of Education (Ed.D.) in Teaching and Learning

The Teacher Education Program at UCSD offers a Doctor of Education (Ed.D.) degree in Teaching and Learning. This cohort-based four-year doctorate is designed to enable professional educators to participate in a research-based program while working in an educational setting. The Ed.D. course of study provides a research perspective on educational reform, with the expectation of developing regional leadership for K–12 and postsecondary teaching and learning. With its rich tradition of research and technological innovation, UCSD is uniquely positioned in the region to provide the research expertise for this Ed.D. program.

The Doctor of Education in Teaching and Learning program provides professional educators with the knowledge and skills to serve as faculty of pre-service teacher education and leaders of professional development for practicing teachers. Students take courses which address the topics of school reform and educational equity; learning and educational technology; curriculum research and theory; qualitative and quantitative research methods; cognition and learning theory; the social organization of schooling; language and culture; and research on teaching and learning. The application deadline is February 1.

The following is a typical course of study:

YEAR 1

Summer

TEP 229: Introduction to Educational Resources

TEP 231 or TEP 232
(offered alternating summers)

Fall

TEP 230A: Research in Curriculum Design

Winter

TEP 230B: Research in Curriculum Design

Spring

TEP 230C: Research in Curriculum Design

Summer

TEP 295: M.A. Thesis

TEP 231 or TEP 232
(offered alternating summers)

YEAR 2

Fall

TEP 260A: Educational Research and Evaluation Design

TEP 270: Leadership and Equity in Educational Reform

Winter

TEP 260B: Educational Research and Evaluation Design

Elective Graduate Seminar

Spring

TEP 260C: Educational Research and Evaluation Design

Elective Graduate Seminar

YEAR 3

Fall

TEP 261A: Advanced Research and Evaluation Methods

Elective Graduate Seminar

Winter

TEP 261B: Advanced Research and Evaluation Methods

Elective Graduate Seminar

Spring

TEP 261C: Advanced Research and Evaluation Methods

Elective Graduate Seminar

YEAR 4

Fall

TEP 262A: Dissertation Writing Seminar

TEP 299: Dissertation Research

Winter

TEP 262B: Dissertation Writing Seminar

TEP 299: Dissertation Research

Spring

TEP 262C: Dissertation Writing Seminar

TEP 299: Dissertation Research

COURSES

The following courses are offered by the TEP faculty. Students are advised to consult with a TEP adviser to determine which courses satisfy credential requirements. Undergraduate students may enroll in graduate seminars with the consent of instructor.

UPPER-DIVISION

COHI 124. Voice: Deaf People in America (4)
The relationship between small groups and dominant culture is studied by exploring the world of deaf people who have for the past twenty years begun to speak as a cultural group. Issues of language, communication, self-representation, and social structure are examined. *Prerequisite: Com/HIP 100 or consent of the instructor.*

TEP 105. Teaching and Learning Physics (4)
(Same as PHYS 180.) A course on how people learn and understand key concepts in Newtonian mechanics. Reading in physics and cognitive science plus fieldwork teaching and evaluating K–12 students. Useful for students interested in teaching. *Prerequisite: Phys. 1A, 2A, or 4A or consent of the instructor.*

TEP 109. Teaching Physical Education (4)
This course is designed to assist future elementary teachers and recreation fitness leaders develop quality physical education programs for children. Instruction focuses on theory and practice of movement activities that are physically and emotionally safe, health promoting, and developmentally appropriate. (S)

TEP 114. Cognitive Development and Interactive Computing Environments (4)
Learning and development considered as an evolving interplay between "internal representations" and "external representations" of the world, with special attention devoted to the design, history, and educational implications of computer-based tools and learning environments. *Prerequisite: TEP 180 or consent of instructor.* (W)

TEP 115. Cognitive Development and Education (4)
This course examines the development of thinking and language in preschool and elementary school children, with implications for education. Themes include facilitating children's learning, and individual differences in cognition. Examples of topics covered are word learning, mathematical knowledge, and scientific thinking. Letter grade only. (W)

TEP 116. The Psychology of Teaching and Structures of Information for Human Learning (0-4)
College students tutoring college students. Curriculum: basic applied learning principles, specifying objectives, planning and designing instruction, testing, evaluation, interpersonal communication skills, study skills. Objectives will be assessed by project completion and practicum feedback. This course is not creditable toward professional preparation requirements for the multiple subject credential. Prerequisite: departmental approval (consent of instructor)—department stamp restriction. (F,W,S)

TEP 117. Language, Culture, and Education (4)
(Same as Soc/B 117) The mutual influence of language, culture, and education. Explanations of stu-

dents' school success and failure that employ linguistic and cultural variables, bilingualism, and cultural transmission through education are explored. (F,W,Su)

TEP 118. Adolescent Development and Education (4)
This course introduces prospective secondary teachers to the cognitive, social, and emotional development of adolescents, including developmental learning theory, the teaching/learning process, effective learning environments, and cross-cultural variation in development. Implications for classroom practice are drawn. (W)

TEP/LING 119. First and Second Language Learning: From Childhood through Adolescence (4)
An examination of how human language learning ability develops and changes over the first two decades of life, including discussion of factors that may affect this ability. *Prerequisite: upper-division standing or consent of instructor.*

TEP 125. History, Politics, and Theory of Bilingual Education (4)
This course provides a historical overview and models of bilingual education in the United States. Students will examine sociocultural, theoretical, and policy issues associated with native language and second-language instruction, and legal requirements for public bilingual program.

TEP 126. Social Organization of Education (4)
(Same as Soc/C 126) The social organization of education in the U. S.. and other societies; the functions of education for individuals and society; the structure of schools; educational decision-making; educational testing; socialization and education; formal and informal education; cultural transmission. (S,Su)

TEP 127A-B-C. Practicum in Interactive Computing (4-4-4)
The course focuses on interactional computing in teaching/learning. Course work concentrates on interactive computing, application to teaching, learning, bilingualism, and communication. Concurrent with course work, students are assigned to a school or community field site implementing interactive computing. Students will write research reports integrating course work and field experience. (F,W,S)

TEP 128 A-B. Introduction to Teaching and Learning (Elementary) (4-4)
This course series is for undergraduates who are exploring a career in elementary school teaching. Topics addressed include: theories of teaching and learning; research on cognition and motivation; and the cultural context of classroom teaching and learning. TEP 128A focuses on the learner in the teaching-learning interaction and TEP 128B focuses on the teacher in the teaching-learning interaction. *Prerequisites: department stamp required; TEP 139 must be taken as corequisite. TEP 130 or 134 must be completed before TEP 128A, and 128A for 128B. TEP 128A and TEP 128B are restricted for students applying to the TEP M.Ed/Multiple Subject Credential Program.*

TEP 129 A-B-C. Introduction to Teaching and Learning (Secondary) (4-4-4)
This course series is for undergraduates who are exploring a career in teaching secondary school. Topics addressed include: theories of teaching and learning processes and motivation for science, mathematics, and English instruction. TEP 129A focuses on the analysis of the needs of individual learners and small group instruction techniques; TEP 129B emphasizes the various roles of the classroom teacher and planning individual lessons; and TEP 129C emphasizes the assessment of student work and longer-range curriculum planning. *Prerequisites: department stamp. TEP 139 must be taken as corequisite. Must have successfully completed TEP 136, 138, or 129A for 129B, and 129B for 129C. TEP 129B and 129C are restricted for students applying to the TEP M.Ed./Single Subject Credential Program.*

TEP 130. Introduction to Academic Mentoring of Elementary/School Students (4)
This course focuses on the role of undergraduate mentors in raising academic expectations for students and families traditionally underrepresented at the university. The relationship between the school and community, the social and political organization of elementary schools, and the academic achievement of elementary children are examined. *Prerequisites: department stamp required. TEP 139 must be taken as a corequisite.*

TEP 134. Introduction to Literacy and Numeracy Tutoring (4)
This course examines effective practices for language arts and mathematics learning for elementary school children. The field experience and seminar focus on the tutor/student relationship, teaching and learning processes for literacy and numeracy, and community service. *Prerequisites: department stamp required. TEP 139 must be taken as a corequisite.*

TEP 136. Introduction to Academic Tutoring of Secondary School Students (4)
This course focuses on the role of undergraduate tutors in building academic resiliency in secondary students traditionally underrepresented at the university. The relationship between the school and community, the social and political organization of secondary schools, the philosophical, sociological, and political issues which relate to the U.S. secondary educational system, and the academic achievement of secondary children are examined. *Prerequisites: department stamp required. TEP 139 must* be *taken as a corequisite.*

TEP 138. Introduction to Academic Tutoring at the Preuss School (4)
This course focuses on effects of the Charter School movement on public education in the U.S., the role of the research universities in K-12 education, the social and political organization of the schools, the philosophical, sociological, and political issues which relate to the U.S. secondary educational system, and the academic achievement of secondary children. Students investigate the role of undergraduate tutors in building academic resiliency in secondary students traditionally underrepresented at the university. *Prerequisites: department stamp required. TEP 139 must be taken as a corequisite.*

TEP 139. Practicum in Teaching/Learning (2)
Students are placed in local schools and work with students in classrooms and the community. Students work on educational activities with K–12 students a minimum of four hours/week. *Prequisites: department stamp required. One of the following courses (may be taken concurrently) TEP 109, or TEP 127A-B-C, or TEP 128A-B, or 129A-B-C, or 130, or 134, or 136, or 138.*

TEP 142A. ASL-English Bilingual Education Practices (4)
Students will examine the history, current theory, philosophy, legislation, and trends in deaf education. Methods of first- and second-language development, communication, and literacy skills for deaf and hard-of-hearing children will be introduced. *Prerequisites: TEP 115, TEP 117, TEP 126, TEP 128A, TEP 128B. Must be a TE81 major.* (F)

TEP 142B. ASL-English Bilingual Education Practices (2)
Students will investigate formal and informal assessment techniques used for deaf and hard-of-hearing children, bilingual/multicultural education practices across the curriculum, effective learning environments and approaches for educating and interacting with families and communities. *Prerequisites: TEP 142A, TEP 161A. Must be a TE81 major.* (W)

TEP 142C. ASL-English Bilingual Education Practices (2)
Students will continue to investigate formal and informal assessment techniques used for deaf and hard of hearing children, bilingual/multicultural education practices across the curriculum, effective learning environments and approaches for educating and interacting with families and communities. *Prerequisites: TEP 142A, TEP 142B, TEP 161A. Must be a TE81 major.*

TEP 149. Deaf Education Specialist Student Teaching Practicum (9)
Education specialist credential candidate performs student teaching in participating schools for a minimum of seven weeks full-time under the supervision of a cooperating teacher and university supervisor. The field experience provides professional preparation and diversified teaching responsibilities for post-baccalaureate students pursuing the California Deaf and Hard of Hearing Specialist and BCLAD Credential. *Prerequisites: must be a TE81 major only—an affirmed Multiple Subject candidate at UCSD who has advanced to student teaching.*

TEP 151. Teaching the English Language Learner (4)
Students will examine the principles of second language acquisition and approaches to bilingual education. They will develop a repertoire of strategies for teaching in elementary or secondary content areas. *Prerequisite: TE81 or TE85 major code.* (F)

TEP 152A. Bilingual Instructional Practices (2)
History and models of bilingual education; socio-cultural issues associated with second language instruction, legal requirements for public school bilingual programs, native language and ESL teaching methods. First course in a two course sequence. *Prerequisite: TE85 major code.* (F)

TEP 152B. Bilingual Instructional Practices (2)
History and models of bilingual education; socio-cultural issues associated with second language instruction, legal requirements for public school bilingual programs, native language and ESL teaching methods. *Prerequisite: TE85 major code.* (Su,W)

TEP 161A. Innovative Instructional Practices (6)
First course in a three course sequence. It provides pedagogical methods for multiple subject teaching. Diverse subject areas (math, science, fine arts, P.E., and social studies) are integrated into a single intercurricular course of study by emphasizing activity/inquiry techniques of instruction. *Prerequisite: must be a TE81 or TE85 major.* (F)

TEP 161B. Innovative Instructional Practices (6)
Second course in three course sequence. It provides pedagogical methods for multiple subject teaching. Diverse subject areas (language arts, English language development, health education, mathematics, sciences, social studies, fine arts, and physical education) are integrated into a single intercurricular course of study

by emphasizing activity/inquiry techniques of instructions. *Prerequisities: TEP 161A; TE81 or TE85 major.*

TEP 161C. Innovative Instructional Practices (4)
Last course in a three course sequence. It provides pedagogical methods for multiple subject teaching. General teaching methods are integrated into a single intercurricular course of study by emphasizing activity/inquiry techniques of instruction. *Prerequisites: TEP 161B, must be a TE81 or TE85 major.* (S)

TEP 169 A-B. Multiple Subject (Elementary) Student Teaching Practicum (9-9)
The elementary credential candidate performs student teaching in participating schools for seven to eight weeks full-time for each course (fifteen weeks total) under the supervision of a cooperating teacher and university supervisor. The student teaching experience offers professional preparation and diversified teaching responsibilities for post-baccalaureate students pursuing the California Multiple Subject Teaching Credential. *Prerequisites: TE81 or TE85 major. Affirmed Multiple Subject Credential candidate at UCSD who has advanced to student teaching.*

TEP 173. Secondary English Teaching Practices (4)
The course introduces prospective secondary teachers to principles and strategies of teaching English language arts. Topics include: writing processes, reading processes, integrated language arts, assessment, the second language learner, the classroom community, the California English Language Arts Framework. *Prerequisite: TE85 major code or consent of instructor.* (Su)

TEP 174. Secondary Mathematics Teaching Practices (4)
Mathematics teaching techniques including, curriculum design, California Model Curriculum Standards, instructional methods, computer applications, selection and use of textbooks, student assessment, lesson planning, and classroom organization. Professional matters including curriculum planning, professional organizations, para-professionals, professional ethics, education law, and parent involvement are addressed. *Prerequisite: TE85 major code or affirmed credential candidate or approval of instructor.* (Su)

TEP 175. Secondary Science Teaching Practices (4)
Science teaching techniques, including science curriculum design, California Model Curriculum Standards, instructional methods, computer applications, selection and use of textbooks, student assessment, lesson planning, and classroom organization. Professional matters including curriculum planning, professional organizations, para-professionals, professional ethics, education law, and parent involvement are addressed. *Prerequisite: TE85 major or approval of instructor.* (Su)

TEP 176. Language and Learning Instruction (4)
This course satisfies the California Commission on Teacher Credentialing requirement for preparation in reading theory and methods for all credential candidates. Theories of reading development, integration of the language arts, reading and writing in the content areas, teaching methods, and literature. *Prerequisite: TE85 major code.* (Su)

TEP 179 A-B-C. Single Subject (Secondary) Internship Practicum (8-8-8)
The secondary credential candidate teaches approximately one academic quarter for each course in this series (one public school academic year) under the guidance of a university supervisor with additional support provided by an on-site teacher. The internship offers extensive professional preparation and diversified teaching experience under actual classroom conditions for post-baccalaureate students pursuing the California Single Subject Teaching Credential. *Prerequisites: TE85 major. Affirmed Single Subject internship credential candidate at UCSD.*

TEP 181. Health Education (4)
This course satisfies the Commission on Teacher Credentialing requirement for Health Education. Topics include: physical education, substance abuse, sex education, cardio-pulmonary resuscitation, nutrition, and first aid. *Prerequisite: TE81 or TE85 major code.* (F,Su)

TEP 182. Inclusive Educational Practices (4)
This course satisfies the Commission on Teacher Credentialing requirement for Special Education. Topics include: teaching methods for accommodating special-needs students in the regular classroom, developing an Individual Education Plan, characteristics of special-needs students, lesson planning to accommodate individual differences, and legislated mandates. *Prerequisite: TE81 or TE85 major code.* (S)

TEP 183. Current Issues in Teaching and Learning (4)
This course addresses curricula and teaching practices in the K–12 schools. Specific course topics will be developed in cooperation with local school faculty working with TEP on preservice, staff development, and research activities. General issues will include second language acquisition, uses of technology in schools, language arts, mathematics and science instruction, integrated curriculum, and alternative assessment. *Prerequisite: TE79 or TE80 major code.* (Su) (not offered 2002–2003).

TEP 190. Research Practicum (1-6)
Supervised research studies with individual topics selected according to students' special interests. Students will develop a research proposal and begin to gather and analyze data. *Prerequisite: consent of instructor.* (F,W,S)

TEP 195. Apprentice Teaching (2-4)
Advanced TEP students are prepared in effective methods of supervising the preparation of UCSD students serving as paraprofessionals in K-12 classrooms. Topics covered include: classroom management, interpersonal relations, supervision techniques, multi-cultural and multi-lingual education, politics in the school, and curriculum development. Each student serves as a discussion leader and conducts at least two workshops. *Prerequisites: department stamp required and TE79 or TE80 major code.*

TEP 198. Directed Group Study (4-2)
Directed group study, guided reading, and study involving research and analysis of activities and services in multicultural education, bilingual education, the teaching-learning process, and other areas that are not covered by the present curriculum. *Prerequisite: consent of instructor.*

TEP 199. Special Studies (4)
Individual guided reading and study involving research and analysis of activities and services in multicultural education, bilingual education, the teaching-learning process, and other areas that are not covered by the present curriculum. *Prerequisite: consent of instructor.*

GRADUATE

Sociology 270. The Sociology of Education (4)
A consideration of the major theories of schooling and society, including functionalist, conflict, critical, and interactional; selected topics in the sociology of education will be addressed in a given quarter, including: the debate over inequality, social selection, cultural reproduction and the transition of knowledge, the cognitive and economic consequences of education. Major research methods will be discussed and critiqued.

TEP 201. Introduction to Resources for Teaching and Learning (4)
This course introduces students to educational resources, both in print and on-line. Students compile and evaluate research studies, curricular materials, and instructional approaches in preparation for future projects in developing and evaluating various approaches to teaching and learning. *Prerequisite: students must be registered TEP graduate students.*

TEP 203. Technology, Teaching, and Learning (4)
This course will review current literature on effective applications of technology in the classroom. Students will also become fluent in the use of productivity tools, presentation software, and Web development for teaching and learning; critique software relevant to their area of teaching; and develop an educational activity based on their review of the literature that harnesses the power of technology. *Prerequisite: students must be registered TEP graduate students.*

TEP 204. Technology and Professional Assessment (4)
Advanced techniques for using network-based resources for teaching and learning will be introduced. Students will review relevant research on advanced technologies related to assessment of professional performance and student achievement. Students will present a Web based professional Teaching Performance Assessment Portfolio that reflects teaching performance during their student teaching or internship field experience. *Prerequisite: students must be registered TEP graduate students.*

TEP 205 A-B. Reflective Teaching Practice (2-2)
This course introduces principles and practices of reflective teaching. Student teachers and interns will systematically document their practice teaching and analyze observation data to improve performance. Students will collaborate with supervisors and expert teachers throughout the yearlong preservice teaching experience. *Prerequisite: students must be registered TEP graduate students.*

TEP 206. Teaching Performance Assessment Portfolio (4)
This course introduces the use of a Teaching Performance Assessment Portfolio for assessment of teaching performance. Student teachers and interns will design an electronic portfolio that demonstrates acceptable performance on essential credential standards. National Board of Professional Teaching Standards will also be introduced. *Prerequisite: students must be registered TEP graduate students.*

TEP 229. Introduction to Educational Resources (4)
This course prepares K-12 teacher-researchers to design, implement, and evaluate classroom research. Students learn how to access and evaluate research studies, curricular materials, and instructional approaches both on-line and in print. *Prerequisite: students must be registered TE76 majors.*

TEP 230A-B-C. Research on Curriculum Design (4-4-4)
A year-long course sequence which provides an extensive overview of curriculum design principles appropriate for K–12 instruction. Consensus and model building methods will be discussed using case studies of curriculum research and development projects appropriate for various subject areas and grade levels. Participants will design, implement, and evaluate a curriculum project in their own classrooms. *Prerequisite: must be TE76 major or consent of instructor.* (F,W,S)

TEP 231. Advanced Instructional Practices (4)
Selected advanced topics in K–12 instructional practices in various subject areas. Techniques for teaching higher-level cogni-tive processes and advanced applications of computers and other technology will be stressed. Participants will conduct a field study of promising teaching practices appropriate to their grade level(s) and subject area(s) of instruction. *Prerequisite: must be TE76 major or consent of instructor.* (Su)

TEP 232. Special Topics in Education (4)
This course explores topical issues in education. It focuses on recent developments which have broad implications for research and practice in teaching and learning. Course topics will vary each time the course is offered. *Prerequisite: must be TE76 major or consent of instructor.* (Su)

TEP 233A-B. Topics in Education Research and Design (2-2)
Current topics and issues in education and educational research methodology, including action research, participant observation, ethnography, and survey research. *Prerequisite: must be TE76 major or consent of instructor.*

TEP 240A-B-C. Research in ASL English Bilingual Education (4-4-4)
A three-course sequence in which participants conduct an overview of research and design and conduct a study related to bilingual, bicultural education for deaf children. *Prerequisite: must be TE81 major or consent of instructor.* (F,W,S)

TEP 241. Advanced Topics in Deaf Education (2)
Topics in human development and education that relate to deaf and hard-of-hearing children and the relationship between home, community/culture, and classroom. *Prerequisite: must be TE81 major or consent of instructor.* (S)

TEP 250. Equitable Educational Research and Practice (4)
This course introduces students to research studies and educational practices of educational equity, both in general and within specific content areas. Research studies relevant to educational equity will be examined, as will practices that have attempted to enable all students to achieve to the best of their abilities. Prerequisite: *students must be registered TEP graduate students.*

TEP 260 A-B-C. Educational Research and Evaluation Design (4-4-4)
This course integrates a variety of social and behavioral science perspectives and research methodologies in examining topics of central relevance to education. Students have opportunities to design and apply to educational research questions a variety of methodologies including: survey, interview, ethnographic, case study, video data analysis, and discourse analysis methods. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 261 A-B-C. Advanced Research and Evaluation Methods (4-4-4)
This course addresses more advanced topics in research design and methodology. Students hone the requisite research skills to conduct dissertation research. Students gain varied hands-on experiences in collecting and analyzing data relevant to schooling, as well as learn how to develop, manage, and analyze large data files. Students create a research agenda and develop skills needed in proposal writing: development, organization and coherence, conceptualization of research design, and attention to audience and writing style. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 262 A-B-C. Dissertation Writing Seminar (4-4-4)
This seminar provides an opportunity for doctoral candidates to present and critique in-progress dissertation research and writing. Topics addressed will also include: writing for professional publications and presenting research findings to varied audiences. *Prerequisite: students admitted into the Ed. D. Program, or consent of instructor.*

TEP 270. Leadership and Equity in Educational Reform (4)
This course provides a framework for understanding school reform movements that integrates relevant theory and research from a number of academic disciplines. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 271. Language and Diversity in the Schooling Process (4)
This course examines current research and theory which relate language and diversity to educational outcomes. Topics addressed include: the development of language and literacy in schools and other settings, sociocultural perspectives on language learning, and implications for educational policy and practice. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 272. Education and Culture (4)
This course examines schooling from an anthropological perspective, focusing on the impact of social and cultural forces on teaching and learning in U.S. public schools with comparative materials from other societies and settings. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 273. Research in Teaching and Learning: Reading and Writing (4)
This seminar will address current theories and research on the teaching and learning of reading and writing, as well as how research can be used to analyze and foster effective teaching practices. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 274. Research in Teaching and Learning: Mathematics (4)
This seminar will address current theories and research on the teaching and learning of mathematics, as well as how research can be used to analyze and foster effective teaching practices. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 275. Research in Teaching and Learning: Science (4)
This seminar will address current theories and research on the teaching and learning of science, as well as how research can be used to analyze and foster effective teaching practices. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 276. Research in Teaching and Learning: English Language Learning (4)
This seminar will address current theories and research on the teaching and learning of second language learning, as well as how research can be used to analyze and foster effective practices in teaching English to non-native speakers. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 277. Research in Teaching and Learning: History and Social Sciences (4)
This seminar will address current theories and research on the teaching and learning of social sciences, as well as how research can be used to analyze and foster effective teaching practices. *Prerequisite: students admitted into the Ed. D. Program or consent of instructor.*

TEP 278/COGR 278. Talking Culture, Culture Talking: Voices of Diversity (4)
This course explores the discourse of culture in American society and the problem of "silenced" or unheard voices. The interaction of individual and collective voice, language, and identity are discussed as they bear on the ways that culture moves through important social institutions such as schools. Of particular interest are issues of teaching, learning, displacement, inclusion, marginality, and the "speaking center." *Prerequisite: graduate status or consent of instructor.*

TEP 290. Research Practicum (1-6)
Supervised research studies with individual topics selected according to students' special interests. Students will develop a research proposal appropriate for M.A. thesis, begin to gather and analyze data. *Prerequisites: M.A. candidate and consent of instructor.* (S/U grades only.)

TEP 295. M.A. Thesis (4)
The student will work on the M.A. thesis under the direction of the students' thesis committee chair. *Prerequisites: M.A. candidate and consent of committee chair.* (S/U grades only.)

TEP 297. Directed Group Study (1-6)
Study and analysis of specific topics under the guidance of a faculty member. Offered for repeated registration. *Prerequisite: consent of instructor.*

TEP 298. Independent Study (1-6)
Individual guided study and/or independent research in an area not covered by present course offerings. Offered for repeated registration. *Prerequisite: consent of instructor.*

TEP 299. Dissertation Research (1-12)
Directed research on dissertation topic for students who have been admitted to candidacy for the Ed.D. degree. May be repeated for credit. *Prerequisite: students admitted into the Ed.D. program.*

TEP 500. Apprentice Teaching in Education (2-4)
The course, designed for graduate students serving as teaching assistants in teacher education courses, includes discussion of teaching theory and practice, instructional materials, organization of discussion sections, liaison with participating schools, and methods of evaluation/grading under the supervision of the instructor of the course.

Theatre and Dance

OFFICE: 202 Galbraith Hall, Revelle College
(858) 534-3791
Web site: http://theatre.ucsd.edu

Professors

Andrei Both, M.F.A., *Scenic Design*
Frantisek Deak, Ph.D., *Criticism and Theory (Dean, Arts and Humanities)*
Judith A. Dolan, Ph.D., *Costume Design*
Kyle Donnelly, M.F.A., *Arthur and Molli Wagner Chair in Acting, Acting and Directing*
Deborah M. Dryden, *Emeritus, Costume/Set Design*
Floyd Gaffney, Ph.D., *Emeritus, Dance/Movement*
Allan Havis, M.F.A., *Playwriting*
Jorge A. Huerta, Ph.D., *Chancellor's Associates' Endowed Chair III, Dramatic Literature*
James Ingalls, B.F.A., *Lighting Design (Adjunct)*
Walt Jones, M.F.A., *Chair, Directing/Acting/Film*
Marianne McDonald, Ph.D., *Dramatic Literature*
Chris Parry, *Lighting Design*
Adele Edling Shank, M.A., *Playwriting*
Theodore Shank, Ph.D., *Emeritus, Directing*
Janet Smarr, Ph.D., *Literature and Italian Studies*
Yolande Snaith, B.A., *Theatre*
Arthur Wagner, Ph.D., *Emeritus, Acting/Directing*
Les Waters, B.A., *Directing and Acting*
James R. Winker, M.F.A., *Academic Senate Distinguished Teaching Award, Acting*

Associate Professors

Steven Adler, M.F.A., *Stage Management and Directing*
James Carmody, Ph.D., *Dramatic Literature*
Mary Corrigan, M.A., *Emeritus, Voice*
Tony Curiel, M.A., *Acting and Directing*
Nadine George-Graves, Ph.D., *Dramatic Literature*
Allyson Green, M.F.A., *Dance*
Luther James, *Emeritus, Acting/Playwriting*
John Rouse, Ph.D., *Dramatic Literature*
Jonathan Saville, Ph.D., *Emeritus, Literature/Criticism*
Carol Ann Smart, B.A., *Scenic and Costume Design (Adjunct)*

Assistant Professor

Victoria Petrovich, M.F.A., *Design*

Senior Lecturers with Security of Employment

Margaret Marshall, M.F.A., *Ballet, Dance History, Choreography*
Ursula Meyer, M.F.A., *Voice and Acting*
Charlie Oates, M.F.A., *Movement and Acting*
Patricia A. Rincón, M.F.A., *Modern and Jazz Dance*

Lecturer with Security of Employment

Eva W. Barnes, M.F.A., *Speech*

Lecturers

Kristin Arcidiacono, B.F.A., *Tap Dance and Musical Theatre*
Tony Caligagan, *Jazz Dance*
Sandra Foster-King, M.F.A., *Modern, Jazz, and African Dance*
Jean Isaacs, B.A., *Modern Dance*
Alicia E. Rincón, M.F.A., *Jazz Dance*
Todd Salovey, M.F.A., *Acting and Directing*
Amy Scholl, M.F.A., *Acting*
Judith A. Sharp, B.S., *Ballet and Music for Dancers*
Linda Vickerman, D.M.A., *Singing*

The Undergraduate Program

The curriculum of the Department of Theatre and Dance is based on the belief that a good undergraduate education in theatre or dance should provide the student with a solid background in dramatic literature and the aesthetics and history of theatrical performance as well as exposure to the different artistic components of theatrical art—performance, playwriting, design, and choreography. Finally, such an education should incorporate participation in the production process itself.

In addition to providing an integrated program for students desiring a theatre or dance major, the curriculum provides (1) a sequence of courses to fulfill the fine arts and/or humanities requirements for Muir College; (2) courses fulfilling Warren College's program of concentration requirements; (3) courses to fulfill Revelle, Thurgood Marshall, and Eleanor Roosevelt Colleges' fine arts requirements; (4) public speaking courses to fulfill requirements in the Schools of Engineering and Pharmacy; and (5) elective courses for the general student desiring experience in theatre or dance.

Any student who has been accepted to the University of California, San Diego is eligible to declare theatre or dance as a major, double major, or minor. Auditions are not required. Continuing UCSD students who are changing their major to theatre or dance must file a Change of Major form with the UCSD Registrar's Office.

The Theatre Major

The theatre major provides a student with a solid artistic and academic background. The required lower-division courses equip the student with the skills and knowledge necessary for more advanced work in each of the areas of study. The major is structured so that it can respond to the needs of students who seek a broad-based "liberal arts" education in theatre as well as those who plan to pursue their studies at the graduate level with the aim of acquiring either an M.F.A. or Ph.D. degree. Students should meet with the department's undergraduate coordinator the quarter in which they declare a theatre major in order to plan an appropriate individual course of study.

The major requirements are those published in the catalog in effect for the first quarter in which a student attends UCSD. Any student in good standing may declare a theatre major by completing the appropriate form at the Registrar's Office. A department stamp is not necessary.

The Dance Major

The department proudly opened a new state-of-the-art dance studio facility, designed by award winning and nationally recognized architect Antoine Predock in winter 1998. Christened the Molli and Arthur Wagner Dance Facility in 2001, the facility features three naturally lit and temperature controlled studios with superior acoustics and expansive views of an embracing grove of eucalyptus trees.

The dance major provides dancers with a solid academic base on which to build their dance technique education. The UCSD dance faculty believe that an understanding of the principles and theories of dance as a creative art is a vital component of any comprehensive training in dance. Instruction in dance seeks to promote the development of an intellectual understanding of dance history and dance aesthetics along with refinement of technical skill. Instruction in choreography allows the student to progress from approaching dance education as a question of technical skills to engaging in dance as a creative endeavor. The dance major provides a solid academic base through training in several dance

idioms, a background in dance history, numerous performance opportunities, and extensive experience in dance choreography.

The major requirements are those published in the catalog in effect for the first quarter in which a student attends UCSD. Any student in good standing may declare a dance major by completing the appropriate form at the Registrar's Office. A department stamp is not necessary.

The Theatre-Dance Double Major

The double major in Theatre and Dance provides students with a solid academic base and an artistic base in both theatre and dance disciplines. Furthermore, requirements for this double major will create stronger and more experienced directors (for their exposure to choreography), choreographers (for their exposure to directing), actors (for the poise and strength they will attain from dance), and dancers (for having confronted text and character).

Students should meet with the department's undergraduate adviser as soon as practical (but no later than the quarter in which they declare the major) in order to plan an appropriate individual course of study.

Double majors should complete the Petition for Double Major form obtained from their college and submit it to the department for review and approval.

Department of Theatre and Dance Advising

The Department's undergraduate faculty advisers can provide guidance and answers to your questions concerning specific course content, transfer coursework, honors research projects, academic success, production, auditioning procedures, postgraduate opportunities, and departmental policy changes.

The undergraduate coordinator can answer your questions regarding major requirements, procedural matters, class enrollment, the petition process, and give referrals to faculty and other campus resources for specific information.

The undergraduate student representatives are another important resource for theatre and dance majors. The studnet reps organize quarterly meetings at which students and faculty discuss departmental issues and concerns.

The department regularly communicates with our majors and minors as well as other students involved in our classes and productions through the campus email and listserver systems. Students are strongly urged to check their campus email accounts for timely messages or to make arrangements with Academic Computing Services to have campus email forwarded to any other email account they may use. Additionally, a handbook containing useful information is available in the department office, room 202, Galbraith Hall.

Satisfying Your Major Requirements

At least 50 percent of all course work required for the theatre or dance major (including both upper- and lower-division) must be taken at UCSD, regardless of approved transfer work, petitions, and the theatre residency requirement. Theatre practicum (THPR) classes, completed elsewhere do not satisfy the theatre and dance department's requirements unless they have been formally petitioned and approved. Only one practicum class from another institution may be petitioned. All courses required for the major or minor must be taken for a letter grade. A theatre and dance department course for which a student earns a grade lower than C– will not satisfy any of the department's graduation requirements. Four units of Instructional Assistance (THGE 195, P/NP credit) may be used as an upper-division elective for the theatre major, double major, or minor.

Major Requirements

Theatre majors are required to complete ten lower-division courses. Dance majors are required to complete three lower-division courses. All lower-division courses should be satisfied before starting upper-division course work in the respective areas.

Majors and minors should complete a practicum course, either THPR 1, THPR 2, THPR 3, or THPR 5, within three quarters of declaring their major or minor. Theatre majors should plan to complete their second practicum requirement as soon as possible therafter, as space in these classes is limited.

Theatre History 10, 11, 12, and 13 are prerequisites for most upper-division theatre history and theory courses. Introduction to Acting (THAC 1), Theatre Design (THDE 1), and Theatre Playwriting (THPW 1) are all prerequisites for any upper-division course work in their respective areas. Students should take these classes as soon as possible after declaring their major. Prerequisites ensure that students are properly prepared for the work required. Not completing prerequisites could therefore jeopardize your GPA.

Theatre majors are required to complete twelve upper-division courses. Dance majors must complete thirteen upper-division courses. Specific courses will vary for each student depending upon electives and history/theory courses selected.

THEATRE MAJOR

Lower-Division Requirements

1. Two courses selected from:

   THPR 1. Practicum–Scenery

   THPR 2. Practicum–Costume

   THPR 3. Practicum–Lighting

   THPR 5. Practicum–Sound

NOTE: Please refer to text, above, for specific information concerning practicum requirements. Theatre majors are required to take a second practicum course in an area different from their initial practicum course.

2. Each of the following :

   THHS 10. Introduction to Play Analysis

   THHS 11. History of Theatre 1: Classical to Renaissance

   THHS 12. History of Theatre 2: Neoclassicism to Realism

   THHS 13. History of Theatre 3: Symbolism to Postmodernism

3. THGE 1. Introduction to Theatre

NOTE: THHS 10 and one of the other lower-division THHS courses are the typical prerequisites for most upper-division theatre history courses. Please check prerequisites carefully.

4. Each of the area threshold classes:

   Performance Area—
   a) THAC 1. Introduction to Acting

   Design Area—
   b) THDE 1. Introduction to Design

   Playwriting Area—
   c) THPW 1. Introduction to Playwriting

NOTE: The threshold classes listed above must be completed before taking upper-division courses in their respective areas.

Upper-Division Requirements

4. One upper-division four-unit acting course

5. One upper-division four-unit design course
6. One upper-division four-unit directing course
7. One upper-division four-unit playwriting course
8. One upper-division four-unit stage management course
9. Three upper-division four-unit theatre history courses
10. Four upper-division four-unit theatre electives

NOTE: THGE 197 and 199 may not be used as upper-division electives by theatre majors unless approved by petition.

DANCE MAJOR

Lower-Division Requirements

1. One course from:

   THPR 1. Practicum–Scenery

   THPR 2. Practicum–Costume

   THPR 3. Practicum–Lighting

   THPR 5. Practicum–Sound

NOTE: Students should complete the THPR requirement within one year of declaring a dance major.

2. THAC 1. Introduction to Acting
3. THDA 25. Music for Dancers (four units)
   NOTE: This course may not be offered every year.

Upper-Division Requirements

4. THDA 160. Dance Movement Analysis and Injury Prevention Techniques
   NOTE: This course may be offered every other year.
5. THDE 121. Theatre Production: Lighting
   NOTE: This course may be offered every other year.
6. Three choreography courses:

   THDA 141. Principles of Choreography

   THDA 142. Choreography and Performance

   THDA 143. Choreography for Dramatic Text

7. Four history and theory courses. Choose from the following:

   THDA 151. Dance History–Ballet

   THDA 152. Dance History–Modern Dance

   THDA 153. Dance History–Jazz Dance and Related Ethnic Studies

   THDA 159. Dance Criticism and Aesthetics

   THHS 114. American Musical Theatre

8. Three advanced movement courses in one of the following areas of emphasis:

   THDA 102A-B, or C or 103A-B, or C. Ballet

   THDA 111A-B, or C or 112A-B, or C. Modern

   THDA 121A-B, or C or 122A-B, or C. Jazz

9. One advanced movement course outside the area of emphasis selected in number 8.

THEATRE AND DANCE DOUBLE MAJOR

Lower-Division Requirements

1. One course from

   THPR 1. Practicum–Scenery

   THPR 2. Practicum–Costumes

   THPR 3. Practicum–Lighting

   THPR 5. Practicum–Sound

NOTE: Students should complete the THPR requirement within one year of declaring the double major.

2. THAC 1. Introduction to Acting
3. THDA 25. Music for Dancers
   NOTE: This course may not be offered every year.
4. Each of the following threshold classes:

   THDE 1. Introduction to Design

   THPW 1. Introduction to Playwriting

NOTE: Students should complete the threshold class requirement before taking any upper-division course in each respective area.

Upper-Division Requirements

5. One upper-division four-unit acting course
6. One upper-division four-unit design course
7. One upper-division four-unit directing course
8. One upper-division four-unit playwriting course
9. One upper-division four-unit stage management course
10. Six upper-division four-unit theatre and dance history courses (THHS 114 required as one of the six upper-division history courses)
11. Four upper-division theatre electives (with no more than two from the core dance curriculum)
12. THDA 160. Dance Movement Analysis and Injury Prevention Techniques
    NOTE: This course will only be offered every other year.
13. THDE 121. Theatre Process: Lighting
    NOTE: This course may only be offered every other year.
14. Three four-unit choreography courses

    THDA 141, 142, and 143

15. Three advanced movement courses (four units each) in one of the following areas of emphasis:

    THDA 102A-B, or C or 103A-B, or C. Ballet

    THDA 111A-B, or C or 112A-B, or C. Modern

    THDA 121A-B, or C or 122A-B, or C. Jazz

16. One four-unit advanced movement course outside the area of emphasis selected in number 15.

NOTE: THGE 197 and 199 may not be used as upper-division electives by theatre and dance majors unless approved by petition.

Honors Program

The department offers a special program of advanced study for outstanding undergraduates majoring in theatre or dance. Successful completion of the Honors Program enables the student to graduate "With Highest Distinction" (A+), "With High Distinction (A), or "With Distinction" (A–), depending upon performance in the program.

Eligibility

1. Junior standing (ninety units or more completed)
2. 3.7 GPA or better in the major
3. 3.5 GPA or better overall, which student must maintain until final graduation
4. Completion of at least four upper-division theatre courses
5. Recommendation of a faculty sponsor who is familiar with the student's work

Guideline

Application to the Honors Program may be made upon completion of ninety units or no later than the fifth week of the quarter preceding the final two quarters before graduation.

The Undergraduate Committee will consider the application and, if approved, the student and the principal adviser will have the responsibility of proposing an Honors Thesis Committee to the Undergraduate Committee for final approval.

Students are required to take THGE 196A, Honors Studies in theatre and 196B, Honors Thesis in theatre, in addition to the thirteen upper-division required courses for the major, THGE 196A-B are to be taken consecutively and may not be taken concurrently.

PLACEMENT AND PROFICIENCY FOR DANCE MAJORS

The technical command and the expansion of a vocabulary of movement are essential to the dancer's creative expression. The faculty advise new students in dance to participate in beginning dance in all areas for a minimum of one year. These courses are designed to give the student the basic information needed to move on to the intermediate level II. The intermediate level is level II in all areas, and students should remain in this level for a minimum of one year unless the instructor encourages you to advance to level III. All students are required to audition and be approved by the faculty to be enrolled in all level III advanced, and level IV advanced dance courses. If you come to UCSD with a background in dance and would like to take an advanced class you need to audition in the class of your choice on the first day of the class meeting so that the teacher can accept you in the class or recommend another more appropriate class.

DEPARTMENTAL DEGREE CHECK

Departmental degree checks are completed upon request by the undergraduate coordinator. A degree check monitors your progress toward fulfillment of the theatre or dance majors or minors. It is suggested that you request a degree check at least once per year and particularly the quarter before graduation. You may call or stop by the Department of Theatre and Dance office to make an appointment for an unofficial degree check for your major. Remember you must also complete a degree check with your provost office prior to graduation. The provost office degree check will monitor all university and college requirements, such as GPA, units, residency requirements, P/NP limits, college general-education requirements, etc.

UNDERGRADUATE STUDENT PETITIONS

Undergraduate student petitions are required whenever an exception to a rule is being requested. They are required for: major or minor requirement substitutions; substitution of courses from other departments or institutions; late course adding or dropping; or requesting a retroactive incomplete grade. The petition process can take several weeks, depending on the request. Submit petitions for course substitutions well in advance of taking the course. To ensure that your petition is complete and well documented, have the Department of Theatre and Dance undergraduate coordinator assist you with the petition process if you have difficulty with the form. Incomplete or incorrectly completed forms may significantly increase the amount of time required to process your request.

ARTICULATION AGREEMENTS

As a prospective transfer student to UCSD, it is important to make sure that the community college courses you take are transferable to UCSD for transfer credit. Every California community college has an agreement with the University which specifies which of its courses receive UC transfer credit. These courses are listed in a Transferable Course Agreement, a document which is available from your community college counselor or from the Office of Admissions and Outreach at UCSD.

RECEIVING TRANSFER CREDIT

You must petition the department to substitute courses taken in another department or institution for courses required by the Department of Theatre and Dance. The following procedures and guidelines will help you with the transfer petition process.

First, review the Department of Theatre and Dance residency requirement. It is generally a good idea to petition a course before you take it. The Department of Theatre and Dance undergraduate faculty will review petitions for all transfer courses. Students may obtain a General Undergraduate Student Petition form at the department office, at their college, or online at the Registrar's Forms Web site. A detailed syllabus for the course to be evaluated must be attached to the completed petition form. Any petition relating to courses within the Department of Theatre and Dance should be dropped off at the main office during normal working hours.

Transfer credits must be accepted by the Admissions Office at the appropriate level and for the appropriate number of units for the substitution to be effective. Upper-division credit cannot be given for lower-division work. Course work done at a junior college can only transfer to UCSD as lower-division credit.

The Theatre Minor

Students should submit an Undergraduate Declaration of a Minor form to the department prior to their junior year. **Minor courses may not be taken on a Pass/No Pass basis.**

The minor requirements are those that are published in the catalog in effect during the first quarter in which a student attends UCSD.

Lower-Division Minor Requirements

1. One course from:

   THPR 1. Practicum–Scenery

   THPR 2. Practicum–Costumes

   THPR 3. Practicum–Lighting

   THPR 5. Practicum–Sound

   Note: Students must complete the THPR requirement within one year of declaring a theatre minor.

2. At least one course from the following list:

   THHS 11. History of Theatre 1: Classical to Renaissance

   THHS 12. History of Theatre 2: Neoclassicism to Realism

   THHS 13. History of Theatre 3: Symbolism to Postmodernism

   Note: THHS 11, THHS 12, and THHS 13 are prerequisites for many upper-division courses in history and theory. Please plan accordingly.

   THAC 1. Introduction to Acting
   Note: THAC 1 must be completed before taking any upper-division courses in Acting.

   THDE 1 Introduction to Design
   Note: THDE 1 must be completed before taking any upper-division courses in Design.

   THPW 1. Introduction to Playwriting
   Note: THPW 1 must be completed before taking any upper-division courses in playwriting

Upper-Division Requirements

3. Any five four-unit, upper-division theatre courses.

The Dance Minor

The dance minor consists of courses that concentrate on the principles of composition and choreography, the history of dance, and the process of performance. Dancers receive extensive training in one or more idioms (ballet, modern dance, jazz dance, and musical theatre). The dancer's training also includes participation in compositional workshops and productions including historical and contemporary performance experiences. Students should consult the dance adviser, if necessary, and submit their completed minor petition form to the undergraduate coordinator prior to their junior year. **Minor courses may not be taken on a P/NP basis.**

DANCE MINOR REQUIREMENTS

Lower-Division Requirements

1. One course from:
   THPR 1. Practicum–Scenery
   THPR 2. Practicum–Costumes
   THPR 3. Practicum–Lighting
   THPR 5. Practicum–Sound

Upper-Division Dance Requirements

2. One course selected from:
   THDA 140. Dance Improvisation
   THDA 141. Principles of Choreography
   THDA 142. Choreography and Performance
   THDA 143. Choreography and Dramatic Text
3. One course selected from:
   THDA 151. Dance History—Ballet
   THDA 152. Dance History—Modern
   THDA 153. Dance History—Jazz
   THDA 159. Dance Criticism and Aesthetics

DANCE MINOR MOVEMENT REQUIREMENTS (sixteen units total)

A prerequisite for entrance into the dance minor is technical ability above the beginning level in ballet, jazz, or modern. The student's level is determined by audition and, depending on his or her technical ability, the student will be placed at the intermediate or advanced level. Students wishing to enter the minor without intermediate (level II) proficiency must take beginning (level I) courses (up to two years) or until they pass an audition into level II.

3. Choose the total sixteen units from a combination of the following list of movement courses. **(Note:** Levels II, III, or IV courses may be repeated once for credit.)

   THDA 101A-B, or C. Ballet II (Intermediate, 2 units each)

   THDA 102A-B, or C. Ballet III (Advanced 1, 4 units each)

   THDA 103A-B, or C. Ballet IV (Advanced 2, 4 units each)

   THDA 110A-B, or C. Modern II (Intermediate, 2 units each)

   THDA 111A-B, or C. Modern III (Advanced 1, 4 units each)

   THDA 112A-B, or C. Modern IV (Advanced 2, 4 units each)

   THDA 120A-B, or C. Jazz II (Intermediate, 2 units each)

   THDA 121A-B, or C. Jazz III (Advanced 1, 4 units each)

   THDA 122A-B, or C. Jazz IV (Advanced 2, 4 units each)

(Only movement courses from the above list may be used.)

THEATRE AND DANCE PERFORMANCE AND PRODUCTION OPPORTUNITIES

The Department of Theatre and Dance produces undergraduate productions throughout the academic year. These productions range in scale from student directed "black box" productions to full-scale faculty directed undergraduate productions on the mainstage. Every effort is made to provide a faculty directed opportunity for undergraduates each quarter. THGE 108, a one-unit course under the supervision of the faculty director of theatre, is required by all students (except crews) involved in departmentally produced productions.

Each of these productions is staged with undergraduate actors and dancers. Historically, where there are design assignments to be made (sets, costumes, lights, sound), those assignments are given to qualified undergraduates. Upper-division credit is available for students involved in the design or staging of department productions. Students may not work on department productions unless they are formally enrolled in a related class. Information regarding design and advanced crew opportunities is typically available from the design faculty or may be posted on the bulletin board in the lobby of Galbraith Hall as opportunities arise.

Cabaret

Cabarets are independent productions that are produced in Galbraith Hall 157. Students may submit proposals for cabarets one quarter in advance to the cabaret manager. The cabaret policy is subject to revision on a quarterly basis.

Undergraduate Audition Policy

Undergraduates are encouraged to audition for all shows produced in the department. Auditions are typically held in the quarter preceeding the staging of a production. Audition announcements will be posted on the bulletin board in the lobby of Galbraith Hall. Undergraduates who have completed or are currently enrolled in THAC 1–Introduction to Acting are eligible to audition. Qualified undergraduates may audition for roles in graduate productions as they are available.

UCSD Dance Repertory

This repertory is open to dance students through auditions. The company will perform lecture-demonstrations, performances, and teach master classes in the community or at other UC campuses.

Annual Dance Concerts

Two main stage dance concerts are presented each year. In winter quarter's "An Evening of Dance," students perform choreography created by the professional faculty and international guest artists in the Mandell Weiss Center for the Performing Arts; and in spring quarter's "New Works" student dance concert, students perform the faculty directed experimental choreographic works for other students at the Mandeville Center Auditorium. In addition, smaller productions take place in our newly built and intimate Studio Theatre, located in the dance facility. Auditions are held at the beginning of the quarter for all productions. Students interested in performing in the winter concert must audition for a specific repertory class taught by the faculty or guest choreographer with whom they wish to work. Students who are then cast must enroll in both the appropriate Dance Repertory (THDA 131) and Studies in Performance (THDA 130). Students interested in performing in the spring concert must audition at the beginning of spring quarter; if cast, they enroll in Studies in Performance (THDA 130). Students participating in either dance production are required to be concurrently

attending a technique class. Students who wish to choreograph for the spring concert must have completed or be concurrently enrolled in a choreography class.

Professional Dance Internship

Dance students may apply for positions as interns. These internships provide qualified students an opportunity to work with, observe, and perform in professional companies. Internship possibilities include work with Patricia Rincon Dance Collective, California Ballet Company, San Diego Dance Institute, San Diego Dance Theatre, and other San Diego area professional dance companies. Interested students should discuss internship opportunities with the dance faculty.

Ushering

Undergraduates can volunteer to usher for a performance of most theatre events. Ushering is a great way to see the shows for free. Contact the promotions manager for more information.

Comps

Declared theatre and dance majors are eligible to receive a complimentary Major's Card. Declared majors may obtain their Major's Card by bringing their student ID to the department office after the second week of the fall quarter. The Major's Card may be redeemed for one free ticket, subject to availability, for each of the department's productions.

The Graduate Program

Master of Fine Arts in Theatre
Joint Doctoral Degree Program

M.F.A. in Theatre

The Department of Theatre and Dance has set an ambitious goal for its M.F.A. program: the training of artists who will shape the future direction of the theatre. The professional theatre training program is ranked third in the nation (and first west of the Hudson River) [*US News and World Report, 1997*].

The curriculum for all students involves studio classes and seminars. These are integrated with a progressive sequence of work on productions and with a professional residency at the La Jolla Playhouse.

The M.F.A. program at UCSD is built around the master-apprentice system of training. All the faculty are active professionals who teach at UCSD because of a shared commitment to training young artists. Instruction takes place not just in the classroom, but in theatres around the country where faculty, with students as assistants, are involved in professional productions, including those at the La Jolla Playhouse.

Students graduating from the M.F.A. program at UCSD should be prepared to take positions in the professional theatre in the United States and abroad. Students are now working in New York, in resident theatres, in the film and television industry, and in European repertory theatres. M.F.A. candidates in acting, design, directing, playwriting, and stage management will complete at least ninety quarter-units of academic work during their tenure in the program.

Program Descriptions

ACTING

The body and mind of the actor are synthesized to serve as an instrument of expression. Actors must depend on their instrument to perform, and the program places great emphasis on the strengthening and tuning of that instrument. The innate talent of the student is nurtured, coaxed, and challenged with individual attention from an extraordinary team of professionals and specialists in actor training.

Classes

Each year, intensive studio work in movement, voice, speech, and singing accesses, expands, and frees the physical body. Acting process introduces a range of improvisational and rehearsal techniques that help the actor approach onstage events with imagination and a rich emotional life. In the first year, studio classes guide the actor through daily explorations that encourage, change, and enhance artistic expression. The second year is devoted to the study of classical texts as well as the specific vocal and physical skills required to perform them. In the final year, classes focus on the needs of individual actors as they prepare to enter the professional world.

Productions

Actors work on classical and contemporary texts as well as new plays with graduate students, faculty, and professional guest directors. Each year the department schedules from fifteen to twenty productions of varying size and scope. Graduate students are given casting priority for all but a few plays. Student-scheduled and produced cabaret/workshop productions occur year-round and provide additional acting opportunities.

Externship

All graduate students serve a residency with the La Jolla Playhouse and are cast in positions ranging from supporting to leading roles alongside professional actors and directors of national and international stature. For many actors this opportunity establishes valuable networking relationships and exposure for future employment.

Research and Other Opportunities

Modest funds are sometimes available for the pursuit of research, special technique workshops, and travel to auditions and festivals. In addition, in the third year, the entire acting class receives a showcase presentation in both Los Angeles and New York at which specially invited groups of film, television, and theatre professionals are in attendance.

DESIGN

The design program aims to train students in the best professional practices of regional and commercial theatre. The design faculty are award-winning working professionals also committed to teaching. The design training program stresses an interaction with the works of many visual artists from a wide range of disciplines. Students are trained to create designs that "comment" on the play and the text, not merely "illustrate" it. Stu-dents' talent and design work are showcased at a number of venues that have directly resulted in many national grants, awards, and other work opportunities for our alumni.

Classes

All students take a core curriculum of first-year design studio classes in scenery, costume, and lighting (taken together with directors), and a design seminar where all three years come together in a forum to share production experiences, portfolios, and professional career techniques and skills. This is followed in subsequent years by more specialized Advanced Design classes which combine with production work in the student's own area of concentration. We are also able to offer a double-emphasis study (e.g., scenery and costume design combined) to appropriate students. Classes in other areas (e.g., drafting, text analysis, visual arts) are also normally offered.

Production

We offer a generous number of (fully executed) production opportunities, and generally all productions are designed by students. Designers collaborate with student, faculty, and internationally prominent guest directors. Students are fully supported by the same professional workshop staff as the La Jolla Playhouse and are not expected to build or run their own productions.

Externship

Student designers participate in a residency program at the La Jolla Playhouse, and normally work as assistants to visiting professional designers. However, there are also some opportunities for talented students to be hired as principal designers by the Playhouse during their season.

Research and Other Opportunities

Students may also be offered opportunities to travel with faculty as assistants on professional assignments to major regional theatres, Broadway, England, or Europe. Modest funds are sometimes available for student research and travel to see productions and to attend conferences and workshops.

DIRECTING

With an emphasis on the collaborative process, the Directing Program's purpose is to develop directors with a solid foundation in the components of production and the interpretation of text. Individuals are encouraged to make challenging choices, to break down barriers, and to create exciting, meaningful theatre. Graduates of the program are prepared to select and get to the heart of a text, communicate effectively with and inspire production designers, and elicit expressive performances from the actors with whom they work.

Classes

The core curriculum of the Directing Process Program offers students opportunities to hone their skills in text analysis and scene work in all three years. The first-year student also completes a sequence in the acting process and the development of a visual vocabulary in theatrical design and visual arts courses. Also in the first year, the techniques of London's Joint Stock Theatre Group (originators of such work as *Fanshen* by David Hare as well as *Fen* and *Cloud Nine* by Caryl Churchill) are explored in collaborative process, a course which explores community issues via theatrical means.

Production

Directing students will direct from two to four department scheduled and supervised productions in the Mandell Weiss Center for the Performing Arts during their time at UCSD. In addition, studio, workshop, and cabaret productions of the director's choice are strongly encouraged. The production season also offers opportunities to assist guest and faculty directors.

Externship

In the second year, the La Jolla Playhouse provides a residency during which students typically serve as assistant directors.

Additional Opportunities

It is common for the directing faculty to take M.F.A directors with them to work as assistant directors at theatres around the United States and internationally.

PLAYWRITING

Playwrights are more than mere writers. They are artists who unleash their imagination in incredibly dramatic ways. The successful playwright writes with intellectual power and emotional honesty, with a distinct and essential voice that speaks with vulnerability and sentience to the heart and soul of the audience. The dedicated, individual attention and formidable production opportunities of the program offer talented writers the ability to stretch, expand, and witness the unfolding of their work on stage in the bodies of very gifted actors.

Classes

In Playwriting Seminar—the core course—writers in all three years read and discuss their ongoing work, focusing on style, character, and structure. They also observe their work being read by M.F.A actors at times throughout the year. Writing for Television, Screenwriting, and Dramatization/Adaptation are offered in rotation within a three-year cycle. In addition, students take a variety of topics in theatre and dramatic literature along with individual practicum classes. Playwrights can take advantage of rich offerings in literature, music, visual arts, and language study, as well as dramatic texts, theory, and design.

Production

First-year students receive a one-act showcase production each year, while second- and third-year students receive a fully designed production. These are produced in the New Plays Festival each spring, which is attended by literary managers, agents, and artistic directors from across the country. Typically, these productions are directed, designed, and acted by students in the M.F.A. program. Production of plays in any year of study is dependent on the readiness of the work for staging.

Externship

Each student is assisted with a carefully chosen assignment, typically in the summer of the second year. Our playwrights may have an opportunity to gain exceptional literary and production experiences in a variety of theatres and venues in New York, Seattle, Los Angeles, London, Germany, and Romania.

STAGE MANAGEMENT

The stage manager is a pivotal member of the collaborative process who creates the environment that supports the work of the other members of the artistic team. The stage manager is the prime communicator and liaison who synthesizes the disparate elements of production into a cohesive whole and is responsible for the implementation of diverse artistic choices throughout the production process.

The Stage Management Program at UCSD integrates a comprehensive knowledge of all critical components of this complex field in order to prepare students for work in leading professional theatres. The program develops individualized, creative artists with personal approaches to their work. UCSD creates a supportive and stimulating environment that allows each student to develop the confidence and flexibility necessary to meet the challenges of production in a wide variety of professional venues.

Classes

All first-year students take a core curriculum in stage management process that explores the role of the stage manager in professional theatre today and offers a comprehensive investigation of the work from pre-production to closing a show. Students in all three years attend the stage management seminar, which serves as a weekly forum for sharing insights and solving problems on current production assignments, meeting with a variety of guest artists, and examining the bigger picture of stage management and theatre in America today. Additional coursework is

offered in various aspects of theatre administration and management, directing, drafting, design, and collaborative process.

Productions

Great emphasis is placed on the student's ability to apply the theories learned in class to the production process. Students typically serve as both ASM and SM on a number of studio and mainstage productions in a variety of theatrical spaces. In addition to established scripts directed by M.F.A., faculty, and nationally prominent guest directors, students also work on new plays by graduate or guest playwrights as well as faculty and student choreographed dance concerts.

Research Opportunities

Students are encouraged to work or research in the field when time permits. Past projects have included stage managing at the National Playwrights Conference at the O'Neill Center in Connecticut, interning at Warner Brothers Feature Animation, working as production assistant for the Broadway production of *Play On*, stage managing Andrei Serban's production of *Our Country's Good* at the Romanian National Theatre, and researching stage combat and weaponry at the Royal Shakespeare Company.

Externship

Each student is guaranteed at least one production opportunity at the La Jolla Playhouse, or a comparable professional residency experience.

Ph.D. in Theatre and Drama

The UCSD Department of Theatre and Dance and the Department of Drama at UC Irvine began to recruit students for the new Joint Doctoral Program in Theatre and Drama in fall 1999 for admission in fall 2000. Within the context of the program's twin focus on theory and history, an innovative structure permits each student to pursue a custom designed curriculum that draws from a rich variety of seminars in faculty research areas that include: Greek classical theatre; Shakespeare; neoclassical, modern, and contemporary French theatre; modern and contemporary German theatre; modernist and postmodernist theatre and performance; US Latino theatre; and theory.

Interested students are encouraged to request detailed information about the program and application materials, which will be available from either department each September.

Preparation

Students with a B.A. (minimum GPA: 3.5), M.A., or M.F.A. degrees in drama and theatre are eligible for admission to the doctoral program. We will also consider students with training in literature (or another area in the humanities), provided they can demonstrate a background in drama or theatre. Experience in one of the creative activities of theatre (acting, directing, playwriting, design, dramaturgy) will enhance chances of admission.

All applicants are required to take the Graduate Record Examination and to submit samples of their critical writing.

While not required for admission, a working knowledge of a second language is highly desirable (see Language Requirement).

COURSE OF STUDY

Students are required to take a minimum of 144 units, which is equivalent to four years of full-time study (full-time students must enroll for a minimum of twelve units each quarter). Forty of these units will be taken in required seminars; the balance will be made up of elective seminars, independant study, and research projects (including preparing the three qualifying papers), and dissertation research. Students must take a minimum of one seminar per year in the Department of Drama at UCI. The program of study makes it possible for students to take a significant number of elective courses and independent studies both with faculty in drama and theatre and in other departments.

Required Seminars

1. a minimum of twelve units of THGR 290 (Dramatic Literature and Theatre History to 1900)
2. a minimum of twelve units of THGR 291 (Dramatic Literature and Theatre History 1900 to the Present)
3. a minimum of sixteen units of THGR 292 (Cultural and Critical Theory)

These required seminars must be completed before the end of the student's third year. In addition to the ten required seminars, students must pass comprehensive examinations at the end of the first and second years (see "Comprehensive Examinations").

COMPREHENSIVE EXAMINATIONS

In the first year, students prepare for the written comprehensive examination, which is based on a reading list of approximately 150 titles ranging from the Ancient Greeks to the present. Students take the written comprehensive at the beginning of the fall quarter of the second year. (Comprehensive examinations are scheduled at the beginning of fall quarter in order to allow the students the summer to prepare.) Students who fail the written comprehensive may retake it no later than the first week of winter quarter of the second year. Students who fail the written comprehensive for a second time are dismissed from the program.

In the second year, students prepare for oral comprehensive examination. The reading list for this examination is designed to permit the student to acquire a knowledge of his or her dissertation subject area, broadly conceived. The reading list is compiled by the student and his or her dissertation adviser, in consultation with other members of the faculty, as appropriate; the reading list must be established by the end of winter quarter of the second year. Students take the oral comprehensive at the beginning of the fall quarter of the third year. Students also submit a dissertation prospectus (approx. five pages) at the time of the oral comprehensive. Students who fail the oral comprehensive may retake it no later than the first week of winter quarter of the third year. Students who fail the oral comprehensive for a second time are dismissed from the program.

Advancement to Candidacy: Three Qualifying Papers

Students normally select a dissertation adviser during the second year and must do so before the end of spring quarter of that year. In consultation with the dissertation adviser and other faculty members, students develop topics for three "qualifying papers," which are written during the third year. The three qualifying papers—one long (approx. fifty pages) and two short (approx. thirty pages each)—must be completed by the end of the third year; when completed, the qualifying papers provide the basis for the oral qualifying examination. Students write the long paper under the direction of the dissertation adviser; it is understood that the long paper is preparatory to the dissertation. The short papers deal with other related topics, sub-

ject to the approval of the student's advisers; the two short papers are understood as engaging in exploring the larger contexts of the dissertation. Students normally pass the qualifying examination and advance to candidacy at the end of the third year; students must advance to candidacy no later than the end of fall quarter of the fourth year. Once admitted to candidacy, students write the dissertation which, upon completion, is defended in a final oral examination. Students may select a dissertation adviser from either UCSD's Department of Theatre and Dance or UCI's Department of Drama. All UCSD doctoral dissertation committees must include at least one faculty member from UCI.

Language Requirement

Students are required to complete an advanced research project using primary and secondary material in a second language ("materials" should be understood as including live and/or recorded performance; interviews with artists, critics, and scholars; and other non-documentary sources, as well as more conventional textual sources). This requirement may be satisfied by writing a seminar paper or a qualifying paper (see "Advancement to Candidacy") that makes extensive use of materials in a second language. The second language requirement must be satisfied before the end of the third year. This requirement will not be waived for students who are bi- or multilingual; all students are required to do research level work in more than one language.

It is assumed that students will have acquired a second language before entering the doctoral program, although second-language proficiency is not a requirement for admission. While students may study one or more second languages while at UCI or UCSD, language classes may not be counted toward program requirements.

Teaching

Students are required to teach a minimum of four quarters. No more than eight units of apprentice teaching (THGR 500) may be counted toward the required 144 units.

Departmental Ph.D. Time Limit Policies

Students must advance to candidacy by the end of the fall quarter of their fourth year. Departmental normative time for completion of the degree is five years; total registered time in the Ph.D. program at UCSD or UCI cannot exceed seven years. While students with M.A. or M.F.A. degrees may be admitted to the Ph.D. program, they will be required to take all required doctoral seminars.

Financial Support

Ph.D. students entering the program with a B.A. may be supported (either by employment or fellowships) for five years. Students who have an M.A. and have been given transfer credit may be supported for four years. Such support depends upon the funds available, the number of students eligible, and the rate of progress.

*Contact department for application materials.

COURSES

Note: For changes in major requirements and in course offering implemented after publication, inquire at the office of the Department of Theatre and Dance.

The subject codes are:

THAC Acting

THGR Graduate

TH/AC Acting

TH/AC 1. Introduction to Acting (4)
A beginning course in the fundamentals of acting: establishing a working vocabulary and acquiring the basic skills of the acting process. Through exercises, compositions and improvisations, the student actor explores the imagination as the actor's primary resource, and the basic approach to text through action. *Prerequisite: none.*

TH/AC 101. Acting I (4)
This course focuses on beginning scene study with an emphasis on exploring action/objective and the given circumstances of a selected text. *Prerequisite: THAC 1 or consent of instructor.*

TH/AC 102. Acting II (4)
Further study in the application of the given circumstances to a text and the development of characterization. The final stages of this course will be selection and preparation of audition material. *Prerequisite: THAC 101 or consent of instructor.*

TH/AC 104. Classical Text (4)
Studies of the heightened realities of poetic drama. Verse analysis, research, methods and how to approach a classical dialogue. *Prerequisite: THAC 102.*

TH/AC 107. Improvisation for the Theatre (4)
Improvisation for the theatre explores improvisation techniques as an alternative and unique approach to acting. Students should have a performance background. *Prerequistite: THAC 1.*

TH/AC 108. Advanced Topics (4)
Advanced topics in acting, such as Avant Garde Drama, Commedia, or Beckett, for students who possess basic acting techniques. *Prerequisite: THAC 102; department stamp.*

TH/AC 109. Singing for Actors (4)
This course introduces basic skills of breathing, placement, diction, musicianship, harmony, interpretation, and presentation needed by actors for roles requiring singing. Through a combination of group and individual coaching in class, students will prepare a program of short solo and ensemble pieces for a finals-week presentation. *Prerequisites: THAC 1 and audition; department stamp.*

TH/AC 111. Freeing the Voice (4)
Intensive workshop for actors and directors designed to "free the voice," with special emphasis on characteristics and vocal flexibility in a wide range of dramatic texts. This proven method combines experimental and didactic learning with selected exercises, texts, tapes, films, and total time commitment. *Prerequisite: THAC 101.*

TH/AC 112. Major Seminar in Acting (4)
An in-depth study seminar focused on special issues in acting as they relate to contemporary theatre. Of particular interest to students who plan to pursue a career in this area of theatre. *Prerequisites: department stamp; theatre majors only; upper-division only.*

TH/AC 115. Movement for Actors (4)
An exploration of the wide array of physical skills necessary for the actor. Using techniques derived from mime, clowning, sports, acrobatics, and improvisation, students will investigate their individual physical potential as well as their sense of creativity and imagination. *Prerequisite: THAC 101.*

TH/AC 120. Ensemble (4)
An intensive theatre practicum designed to generate theatre created by an ensemble with particular emphasis upon the analysis of text. Students will explore and analyze the script and its author. Ensemble segments include black theatre, Chicano theatre, feminist theatre, and commedia dell'arte. Audition may be required. A maximum of four units may be used for major credit. *Prerequisite: department stamp.*

TH/AC 122. Ensemble: Undergraduate Production (4)
Participation in a fully-staged theatre production directed by a M.F.A. or Ph.D. student for the Department of Theatre and Dance. Admission by audition only. A maximum of four units may be used for major credit. *Prerequisites: consent of the instructor; department stamp.*

TH/AC 123. Advanced Studies in Performance (4)
Participation in a fully-staged season production that is directed by a faculty member or guest for the Department of Theatre and Dance. Admission by audition only. A maximum of four units may be used for major credit. *Prerequisites: consent of the instructor; department stamp.*

TH/AC 126. Acting-Directing Process (4)
A studio class that investigates the relationship between the actor and the director. Working alongside

directors, students learn how to animate the writer's and director's vision on stage through status exercises and scene work while expanding their skills in the acting process. *Prerequisites: THAC 1, THAC 101, and consent of instructor.*

TH/DA–DANCE

TH/DA 1. Ballet, Level I Beginning (2)
An introduction to classical ballet principles, technique, and terminology. Develops the body for strength, flexibility, coordination, and artistic interpretation. Emphasis on developing a foundation in classical movement for continuation of ballet training. Historical origin of ballet will be discussed along with an introduction to the kinesiological principles of movement. *Prerequisite: none.* May be taken three times for credit.

TH/DA 2. Modern Dance I, Beginning (2)
Introduction to modern dance as a means of visual communication. Pattern variations analyzed in time, space, design, and kinetic sense. Movement exploration includes improvisation and composition. *Prerequisite: none.* May be taken three times for credit.

TH/DA 3. Jazz Dance I, Beginning (2)
Emphasis on technical skills, terminology, contemporary compositions, and introduction to the history of jazz dance. Explores specific rhythmic exercises, isolations, turns, locomotor combinations to a broad base of musical styles and variations. *Prerequisite: none.* May be taken three times for credit.

TH/DA 4. Pre-Ballet: Introduction to Ballet (2)
Designed for the novice, this course will focus on correct postural alignment and establish a basic foundation for the understanding of ballet movement vocabulary, terminology and form, and an introduction to exercises to develop muscles and coordination. *Prerequisite: none.*

TH/DA 11A. Theatrical Tap (2)
The study of theatrical tap dance. Various styles of tap—such as classical, rhythm and musical theatre will be introduced. Emphasis on rhythm, coordination, timing, and theatrical style. Includes basic through intermediate tap movement. *Prerequisite: none.*

TH/DA 11B. Theatrical Tap (2)
The further study of various styles of theatrical tap dance. Includes more intricate rhythms such as turns, pull-backs, pick-ups, and wings. More complex rhythm variations and choreographic composition will be introduced. *Prerequisite: THDA 11A or consent of instructor.*

TH/DA 11C. Theatrical Tap (2)
Includes more complicated rhythms and advanced principles of dance composition for the theatre. Improves on musical interpretation, performance quality and style. Will focus on individual performance and choreography. *Prerequisites: THDA 11A and THDA 11B or consent of instructor.*

TH/DA 16. Musical Theatre Dance B (2)
A continuation of the exploration of the historical development of musical theatre character dance forms covering the 1930s through the 1960s. Emphasizes composition and movement techniques of this rich period of pioneers and stylists. Choreography for film will be introduced. *Prerequisite: none.*

TH/DA 20. Dance Workshop (2)
The study of aesthetic examination of major choreographic works. Emphasis will be on formulating the creative process into a complete dance form. Projects in performance, production, choreography and directing. *Prerequisite: consent of the instructor.* May be repeated for credit.

TH/DA 25. Music for Dancers (4)
A course designed to teach the fundamentals of all forms of music to dance students. Topics include identifying rhythm, instrumentation, vocabulary, and the orchestration of time in space. Historical and contemporary forms will be analyzed utilizing both live and recorded music. *Prerequisite: none.*

TH/DA 101A-B-C. Ballet II–Intermediate (2-2-2)
Continued studio work in ballet technique and terminology. Emphasis on increasing strength, flexibility and balance, and interpretation of classical musical phrasing. Includes concepts of anatomy and physiology in relationship to ballet. *THDA 1 is prerequisite for THDA 101A. THDA 101A is prerequisite for THDA 101B and THDA 101B is prerequisite for THDA 101C or consent of instructor.* Series may be repeated once for credit.

TH/DA 102A-B-C. Ballet III–Advanced 1 (4-4-4)
Further emphasis on techniques, projection, terminology, and introduction to point work. Introduces historical ballet choreographic variations. Individual and group composition will be presented and aesthetic criticism applied. Text, film, and video used in depicting the historical evolution of ballet (Course materials fee: $50). *THDA 101C is a prerequisite for THDA 102A. THDA 102A is prerequisite for THDA 102B and THDA 102B is prerequisite for THDA 102C or consent of instructor.* Series may be repeated once for credit.

TH/DA 103A-B-C. Ballet IV–Advanced 2 (4-4-4)
Designed for students with advanced training and includes point work, pas de deux, classical and contemporary variations, and repertory works. Emphasis on increasing composition and performing skills. The aesthetics of ballet in Western and Non-Western cultures will be discussed. *THDA 102C is a prerequisite for THDA 103A. THDA 103A is prerequisite for THDA 103B and THDA 103B is prerequisite for THDA 103C or consent of instructor.* Series may be repeated once for credit.

TH/DA 110A-B-C. Modern Dance II–Intermediate (2-2-2)
Further development of movement as an expressive medium. Introduces the principles and elements of modern dance and their relationship to other art forms. Discussion of modern dance pioneers. *THDA 2B prerequisite for THDA 110A. THDA 110A is a prerequisite for THDA 110B and THDA 110B is prerequisite for THDA 110C, or consent of instructor.* Series may be repeated once for credit.

TH/DA 111A-B-C. Modern Dance III–Advanced 1 (4-4-4)
Emphasis is on the development of modern dance as an expressive art concept. Individual and group choreography will be explored and aesthetic concepts. Incorporates applied physiological principles of human movement. Discussion of modern and post-modern trends using text, video, and film. *THDA 110C is a prerequisite for THDA 111A. THDA 111A is a prerequisite for THDA 111B and THDA 111B is prerequisite for THDA 111C, or consent of instructor.* Series may be repeated once for credit.

TH/DA 112A-B-C. Modern Dance IV–Advanced 2 (4-4-4)
A continuation of advanced exploration of dance as an expression of artistic and social communication. Contemporary and historical choreographic styles will be reviewed. Advanced principles of composition and dance aesthetics will be discussed. *THDA 111C is a prerequisite for THDA 112A. THDA 112A is a prerequisite for THDA 112B and THDA 112B is prerequisite for THDA 112C, or consent of instructor.* Series may be repeated once for credit.

TH/DA 120A-B-C. Jazz Dance II–Intermediate (2-2-2)
Further development of technical skills, terminology, and intermediate rhythmic patterns. Emphasis includes historical and current trends, and general concepts of anatomy and physiology in relationship to movement. Theories of spatial forms and structure will be discussed. *THDA 3 is a prerequisite for THDA 120A. THDA 120A is a prerequisite for THDA 120B and THDA 120B is prerequisite for THDA 120C, or consent of instructor.* Series may be repeated once for credit.

TH/DA 121A-B-C. Jazz Dance III–Advanced 1 (4-4-4)
Techniques of body control, with a final performance focus. Development of movement theory as related to the performer. Application of constructive criticism to the performer utilizing small group and solo choreography. Includes discussions of jazz dance and its effect of social-cultural and human behavior. *THDA 120C is a prerequisite for THDA 121A. THDA 121A is a prerequisite for THDA 121B and THDA 121B is prerequisite for THDA 121C, or consent of instructor.* Series may be repeated once for credit.

TH/DA 122A-B-C. Jazz Dance IV–Advanced 2 (4-4-4)
Extensive study in the development of movement theory as related to the performer. Includes lectures on choreographic principles, compositional forms, constructive criticism, and the history of jazz as an American art form. *THDA 121C is a prerequisite for THDA 122A. THDA 122A is a prerequisite for THDA 122B and THDA 122B is a prerequisite for THDA 122C, or consent of instructor.* Series may be repeated once for credit.

TH/DA 130A. Studies in Performance–Winter Faculty and Student Dance Concert (2-4)
The in-depth study of a major dance production. Admission by audition only. *Corequisites: students must be concurrently enrolled in any level of THDA 1, 2, 3, 101, 102, 103, 110, 111, 112, 120 or 121; department stamp.*

TH/DA 130B. Studies in Performance–Spring Student Dance Concert (2-4)
The in-depth study of a major dance production; including choreography and/or performance. Admission by audition only. *Corequisite: students must be concurrently enrolled in any level of THDA 1, 2, 3, 101, 102, 103, 110, 111, 112, 120 or 121. Prerequisites: choreographers must also either have completed or be currently enrolled in THDA 141, 142, or 143; department stamp.*

TH/DA 131. Dance Repertory (2)
The study and aesthetic examination of major choreographic works created by dance faculty of the department or distinguished guest artists. A total of eight units of THDA 130 and THDA 131 may count towards major requirements. Audition is required. *Prerequisite: department stamp.*

TH/DA 132. Dances Of The World (4)
Course designed for in-depth study of the dance of a particular culture—Afro-Cuban, Spanish Balinese, Japanese, Latin, etc. Specific topic will vary from quarter to quarter (Course materials fee $20). *Prerequisite: upper-division standing.* May repeat once for credit if in a different topic.

TH/DA 133. Advanced Dance of the World (4)
Course designed to continue the in-depth study of the dance of a particular culture: Afro-Cuban, Spanish, Balinese, Japanese, Latin, etc. Specific topic will vary from quarter to quarter. This course is designed for the more advanced student and will emphasize the refinement of the various techniques. *Prerequisite: upper-division standing and THDA 132 or audition.* May be repeated once for credit.

TH/DA 140. Dance Improvisation (4)
Participants will learn improvisation methods as related to the aesthetic awareness of movement. Students will explore both structured and unstructured improvisation skills to expand their awareness of movement choices in time, space, and energy. *Prerequisite: none.*

TH/DA 141. Principles of Choreography (4)
Presents the concepts and elements of dance creation through studies, readings, discussions, and examination of theories. This course is the foundation of the fundamentals of dance composition. *Prerequisite: none.*

TH/DA 142. Choreography and Performance (4)
Theories and techniques of advanced choreographic problems exploring a range of performance options including multi-media collaborations using video, text, lighting, props, masks, dance/music improvisations, and environmental choreography and performance. *Prerequisite: none.* May be repeated once for credit.

TH/DA 143. Choreography for Dramatic Text (4)
Choreography problems in movement, style, and purpose will be explored through analysis of both historical and contemporary dramatic text. Emphasis will be placed on dance as a complement to verbal communication and a medium for non-verbal communication. *Prerequisite: THDA 1 or THDA 2 or THDA 3, or above, and THAC 1, or consent of instructor.*

TH/DA 151. Dance History–Ballet (4)
A study of ballet as a reflection of history from its origins and aesthetic development to its choreographic diversity of today. *Prerequisite: none.*

TH/DA 152. Dance History–Modern (4)
A study of modern dance as a reflection of history from its origins and aesthetic developments to its choreographic diversity of today. Reflections of the significant reactions of modern dance to social, economical, and cultural changes will be included. *Prerequisite: none.*

TH/DA 153. Dance History–Jazz Dance and Related Ethnic Studies (4)
A study of jazz dance and other related ethnic dance cultures as a reflection of history from their origins and aesthetic development to their choreographic intentions of today. Evidence of artistic fluctuation in social, economical, and cultural diversity will be included. *Prerequisite: none.*

TH/DA 154. Dance History: Special Topics (4)
An in-depth exposure to an important topic in dance history. Topics vary from quarter to quarter. May be taken up to three times for credit. *Prerequisite: upper-division standing.*

TH/DA 159. Dance Criticism and Aesthetics (4)
A historical analysis of aesthetic concepts related to dance and comparable visual arts. Critical writings on dance as a visual art will be studied from the renaissance to the present. *Prerequisite: upper-division standing or consent of instructor.*

TH/DA 160. Dance Movement Analysis and Injury Prevention Techniques (4)
This course is designed to provide the dancer with a muscular skeletal understanding of dance education. Analytic studies will concentrate on kinesthetic functions, training practices, nutrition, distribution of dance injuries, and results of poor training. *Prerequisite: upper-division standing or consent of instructor.*

TH/DA 163. Dance Theory and Pedagogy (4)
The study of theoretical aspects of dance movement including an analysis of movement concepts for all ages. Development of basic technique training in all forms, curriculum planning, social awareness, and problem solving. Fundamental elements of cognitive and kinetic learning skills. *Prerequisite: Level II in any dance form or consent of instructor.*

TH/DA 170. Dance Theatre Performance Lab (4)
A process of creating theatrical imagery based on the interaction of dancers with physical objects, such as scenic elements, costumes, and props. The resulting interdependence between movement and theatre elements will provide the stimulus for developing performance ideas. *Prerequisite: upper-division standing or consent of instructor.*

TH/DA 171. Movement Research (4)
Students will study images of anatomical alignment and use their bodies to translate those images into physical action. They will expand their movement potential, deepen their awareness of body language and alignment, and develop their dance coordination and technique. *Prerequisites: any of THDA 101B, 101C, 110A, 110B, or 110C; or consent of instructor.*

TH/DA 193. Dance Externship (1-12)
Assist in teaching and mentoring children in K-12 level schools as well as other venues throughout San Diego. Build skills in communication, teaching, problem solving, and positive motivational techniques. *Prerequisites: Technical level II; department stamp.* May be repeated once for credit.

TH/DA 195. Instructional Assistance (2 or 4)
Assist with instruction in undergraduate dance courses. Full description of duties will appear on the "application for Instructional Assistance." *Prerequisite: upper-division standing, 3.0 GPA, etc. (per CEP guidelines).*

TH/DA 197. Field Studies in Dance (1-12)
Designed for advanced students, this course significantly extends their knowledge of the theatre and dance through intensive participation in the creative work of a major professional theatre or dance company under the guidance of artists resident in those theatres or companies. Students will submit regular written evaluations each week of their ongoing field study. *Prerequisites: upper-division standing and consent of instructor required (e.g., "San Diego Dance Institute").* May be repeated once for credit.

TH/DE Theatre Design

TH/DE 1. Introduction to Design for the Theatre (4)
A survey of contemporary and historical concepts and practices in the visual arts of the theatre; studies in text analysis, studio processes and technical production; elementary work in design criticism, scale model making, and costume design. A course serving as an introduction to theatre design and production.

TH/DE 101. Theatre Process—Scenery (4)
A hands-on course develops craft skills and solution-finding process in design including script analysis, concept sketches, research, and scale model making. An exploration of fundamental ways of seeing and understanding visual design. *Prerequisite: THDE 1 or THPR 1 or consent of instructor.*

TH/DE 111. Theatre Process—Costumes (4)
The process of the costume designer from script analysis, research visualization of ideas, through the process of costume design. Lecture and demonstration labs parallel lecture material. This course is intended for those interested in a basic understanding of the costumer's process. No previous drawing or painting skills required. *Prerequisite: THDE 1.*

TH/DE 121. Theatre Process—Lighting (4)
One of three classes in theatre process. The course aims to develop basic skills in lighting design through practical projects, lab work and lecture. These emphasize collaboration, manipulating light and color, and developing craft skills. *Prerequisite: THDE 1 or THPR 3 or consent of instructor.*

TH/DE 130. Assistant Designer (2-6)
A production-oriented course that continues to introduce students to the fundamentals of design assisting. Laboratory format allows the student to work with faculty, graduate, or advanced undergraduate theatre designers, doing research, developing design concepts, and supporting the designer in a number of professional ways. *Prerequisites: THDE 1, any upper-division undergraduate theatre design class, THPR 1, 2, 3, 4, or 5; and, permission of instructor; department stamp.* May be taken twice for credit.

TH/DE 131. Special Topics in Theatre Design (4)
A course designed to expose the theatre design student to a variety of specialized topics that will vary from quarter to quarter. *Prerequisite: THDE 1 or consent of instructor.* May be taken three times for credit.

TH/DE 132. Undergraduate Mainstage Production: Design (4)
A course which will guide a student in a design assignment on the undergraduate mainstage production. Specialized topics dependent on the design requirements of the production. *Prerequisite: THDE 1 or consent of instructor.* May be taken two times for credit.

TH/DE 134. Advanced Undergraduate Mainstage Design (2-6)
A production-oriented course that allows the advanced student major design opportunities in costumes, lighting, scenery, or sound. Laboratory format allows the student to work with faculty members and professional shop personnel in accomplishing significant creative work. *Prerequisite: TH/DE 130, TH/DE 132, THPR 1, 2, 3, or 5; department stamp required.* May be taken twice for credit.

TH/DE 190. Major Project in Design/Theatre Production (4)
For the advanced design/production student. Concentration on a particularly challenging design or theatre production assignment, including such areas as assistant designer (scenery, lighting, or costumes), technical director, master cutter, or master electrician. May be repeated one time for credit. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to fulfill major requirements. *Prerequisite: admission by consent of instructor only. See department for application form. May be taken two times for credit.*

TH/DR Directing/Choreography/Stage Management

TH/DR 101. Stage Management (4)
Discussion and research into the duties, responsibilities, and roles of a stage manager. Work to include studies in script analysis, communication, rehearsal procedures, performance skills, and style and concept approach to theatre. THGE 1, THAC 1, and THDE 1 recommended.

TH/DR 108. Text Analysis for Actors and Directors (4)
This is an introductory class in the process of understanding the play script. The class will focus on analyzing the story and the underlying dramatic structure in terms of dramatic action. Objectives, actions, choices, given circumstances, and character will be examined. *Prerequisite: upper-division standing or consent of instructor.*

TH/DR 111. Directing-Acting Process (4)
A studio class that investigates the fundamental skills a director needs to work with actors. Working with actors, students learn how to animate the text on stage through status exercises and scene work as they develop their skill in text work, staging, and dramatic storytelling. *Prerequisite: THDR 108 or THHS 10.*

TH/DR 190. Major Project in Directing (4)
For the advanced student in directing. Intensive concentration on the full realization of a dramatic text from research and analysis through rehearsal and into performance. A maximum of eight units of major project study, regardless of area (design, directing, or stage management) may be used to fulfill major requirements. See department for application. *Prerequisites: THDR 108, 111, and consent of instructor.* May be taken two times for credit.

TH/DR 191. Major Project in Stage Management (4)
For the advanced student in stage management. Intensive concentration on the full realization of a dramatic text, from research and analysis through rehearsal and final performance. A maximum of eight units of major project study regardless of area (design, directing, stage management, or playwriting) may be used to fulfill major requirements. See department for application. *Prerequisites: THPR 4, THPR 104, THDR 101, and consent of instructor.* May be taken two times for credit.

TH/GE Theatre General

TH/GE 1. Introduction to Theatre (4)
An introduction to fundamental concepts in drama and performance. Students will attend performances and learn about how the theatre functions as an art and as an industry in today's world. *Prerequisite: none.*

TH/GE 10. Theatre and Film (4)
Theatre and Film analyzes the essential differences between theatrical and cinematic approaches to drama. Through selected play/film combinations, the course looks at how the director uses actors and the visual languages of the stage and screen to guide and stimulate the audience's responses. *Prerequisite: none.*

TH/GE 11. Great Performances on Film (4)
Course examines major accomplishments in screen acting from the work of actors in films or in film genres. *Prerequisite: none.* May be taken three times for credit.

TH/GE 25. Public Speaking (4)
This course is designed to establish a clear understanding of the fundamentals of effective oral communication. The methodologies explore the integration of relaxation, concentration, organization, and clear voice and diction as applied to various public speaking modes. *Prerequisite: none.*

TH/GE 27. User-Friendly Shakespeare (4)
Do you get a puzzled or pained expression on your face when people mention Shakespeare? Try a congenial introduction to the world's greatest playwright from the perspective of performance. Film, live performance, and illuminating facts confront the so-called difficulties in an appreciation of the Bard. *Prerequisite: none.*

TH/GE 87. Freshman Seminar in Theatre and Dance (1)
Seminar on a topic in theatre or dance on a level appropriate for first-year students, conducted in an informal, small group setting limited to ten to twenty students. Topics will vary.

TH/GE 90. Undergraduate Seminar (1)
Discussion of various theatre topics.

TH/GE 108. Production (1)
The collaborative process from the rehearsal process through public performance. All participants will enroll in the same number of units with the director of theatre. *Prerequisite: none.*

TH/GE 123. Mary Poppins Meets Bladerunner (4)
A lecture class that examines significant historical and contemporary art direction/scenic design that effectively supports film narration in a unique manner. Highlights and video clips accompany each feature film presentation. (THDE 1 recommended.) *Prerequisite: upper-division standing.*

TH/GE 124. Cult Films: Weirdly Dramatic (4)
A select survey of eight to ten exceptional off-beat, frequently low-budget films from the last sixty years that have attained "cult" status. The mix includes Tod Browning's "Freaks" (1932) to John Water's "Pink Flamingos" (1973). Aspects of bad taste, cinematic irony, and theatrical invention will be highlighted. *Prerequisite: upper-division standing.*

TH/GE 125. Topics in Theatre and Film (4)
An in-depth exposure to an important individual artist or subject in theatre and/or film. Topics vary from quarter to quarter. *Prerequisite: upper-division standing or consent of instructor.*

TH/GE 130. Let There Be Light! (4)
An adventure-theory class investigating the power of light and color used in art, architecture, theatre, film, television and exploring its impact on students' lives. Students will perform research, submit papers, and create practical examples. No prior lighting/design skills required. *Prerequisite: none.*

TH/GE 195. Instructional Assistance (2 or 4)
Assist with instruction in undergraduate theatre courses. Full description of duties will appear on the "Application for Instructional Assistance." *Prerequisites: upper-division standing; 3.0 GPA; department stamp.* May be repeated for a total of 8 units.

TH/GE 196A. Honors Studies in Theatre (4)
This course will allow theatre honors students to explore advanced issues in the field of theatre. It will also provide honors students the opportunity to develop an honors thesis on the topic of their choice and begin preliminary work under faculty supervision. Department stamp required. Can be taken for a letter grade only. Other requirements are junior standing (ninety- plus units); 3.5 GPA up to graduation; 3.7 GPA in major; must have completed at least four upper-division theatre courses; recommendation of faculty member familiar with student's work.

TH/GE 196B. Honors Thesis in Theatre (4)
This course will provide honors candidates an opportunity to complete the research on and preparation of an honors thesis under close faculty supervision. Can be taken for a letter grade only. Other requirements are junior standing (ninety-plus units); 3.5 GPA overall up to point of graduation; 3.7 GPA in major; must have completed at least four upper-division theatre courses; recommendation of a faculty member familiar with student's work. Department stamp required.

TH/GE 197. Field Studies (1-12)
Designed for advanced students, this course significantly extends their knowledge of the theatre through intensive participation in the creative work of a major professional theatre, television, or film company under the guidance of artists resident in those theatres or companies. Students will submit regular written evaluations each week of their ongoing field study. *Prerequisites: consent of instructor, upper-division standing, and department stamp.* May be taken two times for credit.

TH/GE 198. Directed Group Studies (0-2-4)
Group studies, readings, projects, and discussions in theatre history, problems of production and performance, and similarly appropriate subjects. *Prerequisites: upper-division standing, 2.5 GPA, and consent of instructor.* May be repeated for a total of 12 units.

TH/GE 199. Special Projects (0-2-4)
Qualified students will pursue a special project in theatre history, problems of production and performance, and similarly appropriate topics. *Prerequisites: upper-division standing and consent of instructor, 2.5 overall GPA.*

TH/HS Theatre History

TH/HS 10. Introduction to Play Analysis (4)
An introduction to the fundamental techniques of analyzing dramatic texts. Focus is on the student's ability to describe textual elements and their relationships to each other as well as on strategies for writing critically about drama. *Prerequisites: none.*

TH/HS 11. History of Theatre 1: Classical to Renaissance (4)
An introduction to the plays, players, and places of Greek, Roman, and Renaissance theatre. Playwrights include Aeschylus, Sophacles, Euripides, Plautus, Shakespeare, Marlowe, Cervantes, and Lupe de Vega. Emphasis will be on the plays in performance. *Prerequisite: none.*

TH/HS 12. History of Theatre 2: Neoclassicism to Realism (4)
An introduction to the plays, players, and places of 17th, 18th, and 19th-century theatre. The course tracks the development of theatrical realism in acting, design, and playwriting. Playwrights include Molière, Racine, Sheridan, Goëthe, Beaumarchais, Ibsen, and Chekhov. The plays will be studied in the context of the theatre and culture in which they were first performed. *Prerequisite: none.*

TH/HS 13. History of Theatre 3: Symbolism to Postmodernism (4)
An introduction to the plays, players, and places of twentieth-century European and American theatre.

Playwrights include Jarry, Pirandello, Brecht, O'Neill, Genet, Beckett, Baraka, Shange, Fornes, and Hwang. Emphasis will be on the plays in performance. *Prerequisite: none.*

TH/HS 101. Topics in Dramatic Literature and Theatre History (4)
An in-depth exposure to an important individual writer or subject in dramatic literature and/or theatre history. Topics vary from quarter to quarter. Recent courses have included Modern French Drama, and the History of Russian Theatre. *Prerequisite: THHS 10 and either THHS 11 or 12 or 13 or consent of instructor.* May be taken three times for credit.

TH/HS 102. Masters of Theatre (4)
Focus on the artists of seminal importance in the theatre. Consideration will be given to theory and practice of the artist, with emphasis on theatrical realizations that can be reconstructed by integrated research. Examples of recent courses include Moliére, Fugard, and Strindberg. *Prerequisite: THHS 11 or THHS 12 or THHS 13 or consent of instructor.* May be taken three times for credit.

TH/HS 104. Italian Comedy (4)
Continuities and changes in Italian comedy from the Romans through the Renaissance and Commedia dell'arte to modern comedy. *Prerequisite: THHS 10 and THHS 11.*

TH/HS 105. French Comedy (4)
Masterpieces of French farce and comedy from the seventeenth century to the twentieth century studied their theatrical and cultural contexts. Readings include plays by Moliere, Marivauz, Beaumarchais, and Feydeau. *Prerequisite: THHS 10 and THHS 12.*

TH/HS 106. Brecht and Beyond (4)
Examination of the German playwright and director, Bertolt Brecht and of recent representative plays and performances from world theatre that reveal a creative assimilation of Brecht's influnce by artists including Peter Weiss, Heiner Muller, Augusto Boal, and Tony Kushner. *Prerequisite: THHS 10 and THHS 13.*

TH/HS 107. American Theatre (4)
In this course we will examine representative plays and playwrights who write about the "American" experience from a variety of historical periods and diverse cultural communities. Playwrights will include O'Neill, Glaspell, Miller, Williams, Hellman, Wasserstein, Wang, and Parks. *Prerequisite: THHS 10 and THHS 13.*

TH/HS 108. Luis Valdez (4)
In this course examines the works of Luis Valdez, playwright, director, screenwriter, film director, and founder of the Teatro Campesino. Readings include plays and essays by Valdez and critical books and articles about this important American theatre artists. *Prerequisite: THHS 10 and THHS 13.*

TH/HS 110. Chicano Dramatic Literature (4)
Focusing on the contemporary evolution of Chicano dramatic literature. This course will analyze playwrights and theatre groups that express the Chicano experience in the United States, examining relevant "actos," plays, and documentaries for their contributions to the developing Chicano theatre movement. (Cross-listed with Ethnic Studies 132.) *Prerequisite: THHS 11 or 12 or 13 or consent of instructor.*

TH/HS 111. Hispanic-American Dramatic Literature (4)
Course examines the plays of leading Cuban-American, Puerto-Rican, and Chicano playwrights in an effort to understand the experience of these Hispanic-American groups in the United States. (Cross-listed with Ethnic Studies 133.) *Prerequisite: THHS 11 or 12 or 13 or consent of instructor.*

TH/HS 112. Gay and Lesbian Themes in U.S. Latino Theatre (4)
This course examines plays by Latina and Latino playwrights that include characters who are gay, lesbian, bisexual, or transgendered. Readings include the plays as well as articles and essays about the plays, playwrights, and queer theory. *Prerequisites: THHS 10 and 13 or consent of instructor.*

TH/HS 113. Avant-Garde Theatre (4)
Innovations in theatre production and performance since the late nineteenth century, including the theatre of Artists and movements studied include Jarry, Appia, Constructivism, Expressionism, Dada cabaret, performance art, and dance theatre. Complements THHS 13's focus on dramatic innovation. *Prerequisite: THHS 10 and THHS 13 or consent of instructor.*

TH/HS 114. American Musical Theatre (4)
The class will explore this vital and unique theatre form by examining its origins, evolution components, and innovators. Special emphasis is placed on the process of adaptation and the roles of the director and choreographer. *Prerequisites: upper-division standing; THHS 10; THHS 13; or, consent of instructor.*

TH/HS 115. History and Theory of Directing (4)
Evolution of directing theory from 1850 to the present with reference to the work of internationally influential directors such as Saxe-Meiningen, Antoine, Stanislavski, Meyerhold, Brecht, and Brook, among others. *Prerequisite: THHS 10, 11, 12, and 13; and THAC 101.*

TH/HS 116. Old Myths in New Films (4)
The course will address the work of different writers each quarter, showing how their films derive from classic myths, legends, and traditions of a specific ethnic group. Authors discussed may include Kurosawa (Japanese), Herzog (German), Neil Jordan (Irish), and other moderns. *Prerequisite: upper-division standing or consent of instructor.* May be taken three times for credit.

TH/HS 117. Major's Seminar: Dramaturgy (4)
This course introduces students to the discipline of dramaturgy and prepares students to serve as dramaturges on theatrical projects. Material will include a survey of the origins, theories, and practical applications of dramaturgy in this and other countries. *Prerequisites: theatre majors only, THHS 11, 12, and 13; at least two UD THHS courses; consent of instructor.*

TH/HS 118. Dramaturgy in Practice (4)
Provides opportunities for students to undertake dramaturgy assignments for productions or as projects. Class meetings will create a mentoring atmosphere focused on the concrete, day-to-day process of dramaturging a project. *Prerequisites: theatre major, THHS 11, 12, and 13, two UD THHS courses; and THHS 17.*

TH/PR Practicum

TH/PR 1. Practicum–Scenery (4-6)
A production performance oriented course that introduces fundamentals of scenery construction and its theatrical operation. Laboratory format allows students to work through the scenery production process culminating in a crew assignment for a fully mounted theatrical production. *Prerequisite: department stamp required.*

TH/PR 2. Practicum–Costume (4-6)
A production performance oriented course that introduces fundamentals of costume construction and its integration into theatre operations. Laboratory format allows students to work through the costume production process culminating in a crew assignment for a fully mounted theatrical performance. *Prerequisite: department stamp required.*

TH/PR 3. Practicum–Lighting (4-6)
A production performance oriented course that introduces fundamentals of stage lighting or sound and its technical operation. Laboratory format allows a student to work through the lighting or sound production process culminating in a crew assignment for a fully mounted theatrical production. *Prerequisite: department stamp required.*

TH/PR 5. Practicum—Sound (4-6)
A production performance-oriented course that introduces fundamentals of theatre sound and its technical operation. Laboratory format allows a student to work through the sound production process culminating in a crew assignment for a fully mounted theatrical production. *Prerequisite: department stamp required.*

TH/PR 102. Advanced Theatre Practicum (4-6)
A production performance-oriented course that continues the development of costume, lighting, scenery, or sound production and introduces greater responsibilities in the laboratory format. Students serve as crew heads on major departmental productions or creative projects. *Prerequisites: THPR 1, 2, 3, or 5; permission of instructor; department stamp required.* May be taken for credit two times.

TH/PR 104. Advanced Practicum in Stage Management (4-6)
A production performance oriented course that continues the development of stage management skills and introduces greater responsibilities in the laboratory format. Students serve as either assistant stage managers on mainstage productions or stage managers on studio projects. *Prerequisites: THDR 101 and consent of instructor.* May be taken two times for credit.

TH/PW Playwriting

TH/PW 1. Introduction to Playwriting (4)
Beginning workshop in the fundamentals of playwriting. Students discuss material from a workbook which elucidates the basic principles of playwriting, do exercises designed to help them put those principles into creative practice, and are guided through the various stages of the playwriting process which culminates with in-class readings of the short plays they have completed.

TH/PW 101. Playwriting Workshop (4)
A workshop where students present their plays at various stages of development for group analysis and discussion. Students write a thirty-minute play which culminates in a reading. Also includes writing exercises designed to stimulate imagination and develop writing techniques. *Prerequisite: THPW 1 or consent of instructor.* May be taken two times for credit.

TH/PW 102. Playwriting Workshop II (4)
Advanced workshop where students study the full-length play structure and begin work on a long play. Students present their work at various stags of devel-

opment for group discussion and analysis. *Prerequisite: THPW 101 or consent of the instructor.* May be taken for credit two times.

TH/PW 104. Screenwriting (4)
Basic principles of screenwriting using scenario composition, plot points, character study, story conflict, with emphasis on visual action and strong dramatic movement. *Prerequisite: THPW 1.*

TH/PW 105. Writing for Television (4)
Basic principles of writing for television in the hour-long format. Course incorporates the study of sample episodes of current successful series for discussion. Analysis focuses on structure and character development. Students will create the concept and structure and write a television script. *Prerequisite: THPW 1.*

TH/PW 108. Topics (4)
Topics in playwriting, such as documentary theatre, adaptation and modernization, writing for media, for students who possess basic knowledge of playwriting. Admission by interview with instructor. *Prerequisites: THPW 1 and department stamp.*

TH/PW 190. Major Project in Playwriting/ Screenwriting (4)
For the advanced student in playwriting/screenwriting. This intensive concentration in the study of playwriting and/or screenwriting will culminate in the creation of a substantial length play. A maximum of eight units of major project study, regardless of area (Design, Directing, Stage Management, Playwriting) may be used to fulfill major requirements. Applicants must have completed the playwriting sequence, THPW 1, 101, and/or consent of instructor. See department for application form.

GRADUATE

TH/GR 200. Dynamics (1)
A daily program of physical, vocal, and speech exercises designed to prepare the student to move in a focused way into specific class areas with minimum amount of warm-up time. The exercises work on development of flexibility, strength, and coordination throughout the body. Strong emphasis is placed on physical and mental centering within a structured and disciplined approach to preparation. *Prerequisite: graduate standing.*

TH/GR 201. Stage Combat (2)
A study of the dramatic elements of stage violence, and practical work in developing the physical skills necessary to fully realize violent moments on the stage. At the core of the study is the process from text to convincing theatrical action. Physical work revolves around basic principles of energy, focus, and center inherent in unarmed and weapons combat. *Prerequisites: department approval and consent of instructor.*

TH/GR 202. Joint Stock (3)
The process of collaborative creation from idea to performance. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 203. Seminar and Supervision for ArtsBridge Scholars (1)
A workshop to address the specific pedagogical requirements and techniques to be employed by students as ArtsBridge (outreach) Scholars and Mentors of ArtsBridge Scholars. Instructor will mentor the students on-site as well as in seminars. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 204A. Text Analysis (4)
Topics to be covered will include: (1) concept of poetic language; lexical and syntactic analysis of dialogue; (2) the semantic context of dialogue; (3) thematic structure, from motive to themes; (4) the concept of dramatic character or hero; (5) dramatic narrative; (6) the material of drama; the relationship of myth and ritual to drama; (7) analysis versus interpretation; (8) practical applications. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 205. Improvisation for the Theatre (3)
A course designed to introduce improvisational techniques to professional acting students. A variety of approaches to the art of improvisation will be presented and practiced, both serious and comic. Small and large group improvisations will be offered for participation. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 206. Faculty Directed Production (4)
Faculty directed production, from the rehearsal process through public performance. All participants will enroll in the same section, the number of units depending upon degree of involvement. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 207. Production (1)
The collaborative process from the rehearsal process through public performance. All participants will enroll in the same section, the same number of units. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 209. Commedia and Comic Techniques (3)
A course designed to provide actors with tools, both physical and verbal, to play comedy. Included will be commedia del arte techniques, clown work, masks, circus techniques, mime, and scene work from comic scripts. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 210A. Process I (4)
The actors focus on the nature of the acting process, using various exercises to stimulate imagination and inspire instinctual choices. Later work includes improvisational and imaginative experiences to explore character and text. The class culminates in intensive scene work chosen for the particular actor to meld the improvisational approach with scripted material. The class is a combination of both actors and directors so that a common language is developed. *Prerequisite: admission to the M.F.A. Theatre program.*

TH/GR 210B. Process I (4)
Intensive studio examination of realistic texts using improvisational and imaginative techniques to realistically based texts commonly from American theatre. *Prerequisites: THGR 210A and admission to the M.F.A. Theatre program.*

TH/GR 210C. Process I (4)
The intensive study of the dramatic and fictional work of Anton Chekhov and an actor's approach to that work. This course includes many of the techniques begun in earlier classes and applies them to this material. Also included is a study of Chekhov's short stories and plays, and involves adapting and staging these works. *Prerequisities: THGR 210B and admission to the M.F.A. Theatre program.*

TH/GR 211A-B-C. Speech for the Actor I (2-2-2)
Introduction of the principles of phonetics and articulation. Constant study and drill to prepare the actor for standard speech and flexibility. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 212. Acting Practicum (2)
One-on-one laboratory workshop which examines practical applications of accents, speech and voice work, dialect, movement and combat work specific and ancillary to the productions in which the students have been cast. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 213A-B-C. Movement for Theatre I (2-2-2)
An intensive studio course in the art of movement as a basis for theatre performance. Theory and practice of energy flow, weight, spatial focus, time consumption, and the shape factor. (S/U grades only.) *Prerequisites: 213A for B, 213B for C, graduate standing and consent of instructor.*

TH/GR 214A-B-C. Voice for Theatre I (2-2-2)
Voice exercises designed to "free the voice" with emphasis on diaphragmatic breathing, articulation exercises, and singing exercises. Course designed to broaden pitch, range, projection, and to expand the full range of potential characterizations. (S/U grades only.) *Prerequisites: 214A for B; 214B for C.*

TH/GR 219. Directing Process Studio (4)
Preparation, presentation, and discussion of representative scenes from various periods of dramatic literature. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 220A-B-C. Process II: Classical Text (4,4,4)
An intensive studio examination of problems and potentials associated with the theatrical realization of the classical text. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 221A-B. Speech for the Actor II (3-3)
Advanced work in phonetics and articulation. Intensive study of stage dialects to prepare actor for variety of roles. *Prerequisites: graduate standing; THGR 221A prerequisite for THGR 221B; consent of instructor.*

TH/GR 223A-B. Movement for Theatre II (2-2)
An advanced course in the art of movement for the theatre, building on the knowledge gained in Theatre 213. (S/U grades only.) *Prerequisite: 223A for B.*

TH/GR 224A-B. Voice for Theatre II (2-2)
Advanced voice training designed to help the actor fuse voice, emotion, and body into a fully realized reflection of the text. (S/U grades only.) *Prerequisite: 224A for B.*

TH/GR 225A-B. Singing for the Actor II (1-1)
Continuing vocal technique for the musical theatre. More complicated musical material investigated and prepared. *Prerequisite: graduate standing.*

TH/GR 227. Directing Assistantship (6-12)
Assisting faculty with productions off-campus. Perform research necessary for project. Assist with casting. Participate in design meetings. Observe and participate in rehearsal. Direct, if delegated to do so. *Prerequisite: graduate standing.*

TH/GR 228. Designing Assistantship (6-12)
Assisting faculty with productions off-campus. To draft some or all of the project design. To perform research, either visual, historical or technical. To create and maintain all production plans and paperwork records from pre-production through opening night. To organize the staff for focus and work calls. *Prerequisite: graduate standing.*

TH/GR 229. Theatre Externship (9-12)
Selected professional opportunities in repertory and commercial theatre, designed to engage the student in particular creative responsibilities under the guidance of master artist-teachers. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 230. Acting Process III: Actors' Studio (4)
An advanced studio for graduate actors and directors, this work will explore a single text from the modern theatre under the direction of a master teacher-artist. Concentration will be on multiple possible modes of encountering a text, varieties of interpretation and performance realization, and the development of a theatre ensemble. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 231. New Play Festival (8-12)
The workshopping and production of plays written by M.F.A. playwrights.

TH/GR 233. Acting for the Camera (1)
This course is designed to aid the actor in the transition from stage to film work. Examination of film production and its physical characteristics and the acting style needed for work in film and television. Students will rehearse and perform in simulated studio setting. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 235. Singing for the Actor III (1)
Continuing vocal technique for the musical theatre. More complicated musical material investigated and prepared. *Prerequisite: graduate standing.*

TH/GR 239. Skills (4)
A unifying approach to acting skills (voice, movement, and speech) designed to result in providing the graduating actor with a daily regimen appropriate for professional work. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 240. Directing Seminar (1-6)
A seminar focusing on the current directing projects of all graduate directing students. Depending upon individual student needs, the work may include play selection, historical or sociological research, and discussion of emerging directorial concepts, the rehearsal process, and post-production evaluation. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 241. Directing—Site Specific (2-4)
A course designed to create theatre performance in non-theatrical settings. This will be done by using theatrical text in non-traditional settings or text specifically created for individual sites. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 245. Directing Practicum (4)
Students enrolled in this course will work on productions in the function of a director. This will include staging, creative interpretation, blocking, etc. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 250. Playwriting Seminar (4)
A seminar focusing on the current playwriting project of all graduate playwriting students. Work for each quarter is individually determined according to student needs, but may include exploration of an inceptive idea, development of a scenario or other structural work, and writing dialogue. Students present work to be discussed in class. May include group or individual playwriting exercises. *Prerequisite: graduate standing.*

TH/GR 251. Playwriting Practicum (3-6)
Creative writing project developing original scripts from outline to the final play. Plays may vary depending on the quarter, but will include writing of a realistic one-act, a nonrealistic one-act, a one-act documentary or dramatization of fiction, a full-length play. *Prerequisite: graduate standing.*

TH/GR 252. Dramaturgy Seminar (4)
The seminar will deal with all dramaturgical issues pertaining to departmental productions: production research, textual and analysis, translation, adaptation, rehearsal process, and critique. Concurrently with the dramaturgy issues of the given year, the seminar will discuss possible choices of plays for future production seasons. *Prerequisite: graduate standing.*

TH/GR 253. Dramaturgy Practicum (1-6)
Students enrolled in this course will work on productions in the function of a dramaturg. This will entail preparation of texts, research, participation at rehearsals, etc. *Prerequisite: graduate standing.*

TH/GR 256. Contemporary Plays (1-4)
A guided reading course focusing exclusively on very recent plays in an attempt to become aware of what is being written now. Course may be repeated for credit. *Prerequisite: graduate standing.*

TH/GR 257. Screenwriting (4)
Students will develop the concept for an original piece for television or film and will write the screenplay. Student work will be discussed in seminar at each phase of the development. *Prerequisites: graduate standing and 250.*

TH/GR 258. Dramatization and Adaptation (4)
Seminar will deal with dramatization and adaptation of literary texts for the purpose of theatrical production. The class will study some significant examples of such practice from the past, and, subsequently, students will develop their own projects of dramatization, adaptation, or modernization of texts. *Prerequisite: graduate standing.*

TH/GR 261. Theatre and Drama in Ancient Greece (4)
This class will deal mainly with the fifth-century theatre, drama, and related subjects of mythology and philosophy of art. *Prerequisite: graduate standing.*

TH/GR 270A-B-C. Design Studio I (4-4-4)
This course will focus on beginning-level problems in theatre design, including text analysis, research, conceptualization, and visual expression. Students will work on individual projects in lighting, costume, and scenic design. The course will include group critiques of completed designs and works in progress. 270A: Scenic Design (fall); 270B: Costume Design (winter); 270C: Lighting Design (spring). *Prerequisite: graduate standing and consent of instructor.*

TH/GR 271. Design Seminar (2)
A seminar focusing on all aspects of the design profession, including current projects of graduate design students. The work may also include portfolio presentations, research presentations, and guest lecturers. *Prerequisite: graduate standing.*

TH/GR 272. Master Class in Design (1-4)
Special topics in design taught in an intensive workshop format by professionals in the respective fields of study. Topics could include, but are not limited to, sound design techniques, new development in set design, AutoCAD drafting, or computers in design. *Prerequisites: graduate standing and admission to the M.F.A. program in Theatre.*

TH/GR 273. Fashioning the Body (4)
A survey/history of artistic and cultural stylistic change as embodied in clothing from early Western civilization to the contemporary period. *Prerequisite: graduate standing.*

TH/GR 274. Advanced Scenic Design (4)
This course explores advanced problems in scenic design through development and critique of creative class projects and production works-in-progress. *Prerequisite: graduate standing.*

TH/GR 275. Advanced Lighting Design (4)
Creative projects and topics in Lighting Design to develop the student's techniques and professional practices. Work to include studies in design research, concepts, psychophysical considerations, collaboration, professional procedures and systems, paperwork, and organization. Various scales of production projects will be addressed by the student for presentation and critique, and may be theoretical or productions in the departmental calendar. *Prerequisite: second- or third-year design students only; graduate standing.*

TH/GR 276. Advanced Costume Design (4)
Projects in costume design, emphasizing script analysis, research, conceptualization, and visual expression. Studio work includes costume rendering in various media for specific plays. *Prerequisite: graduate standing.*

TH/GR 277. Special Topics in Playwriting and Writing for other Media (4)
Topics will focus on various aspects of writing for the stage, television, and film. Topics will vary from quarter to quarter. *Prerequisite: graduate standing.*

TH/GR 278. Special Topics in Theatre Design: (1-6)
A course designed to expose the theatre design student to a variety of specialized topics, including millinery, pattern drafting and draping, scenic painting, model making, figure drawing, drafting, fitting, rendering. Topics will vary from quarter to quarter. *Prerequisite: graduate standing.*

TH/GR 279. Design Practicum (4)
This course covers the artistic, aesthetic and practical aspects of the designers work as they develop and execute the design toward a fully realized production. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 280. Stage Management (1-4)
Discussion and research into the duties, responsibilities, and roles of a stage manager. Work to include studies in script analysis, communication, rehearsal procedures, performance skills, and style and concept approach to theatre. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 281. Stage Management 2 (4)
A continuation of the introductory stage management course, to further explore the stage manager's process, focusing on the technical rehearsal period through the closing of a show. *Prerequisites: graduate standing, TH/GR 280, and consent of instructor.*

TH/GR 286. Special Topics in Stage Management (1-6)
A course for M.F.A. students in stage management. Topics will focus on various aspects of theatre administration, and advanced stage management including: Non-profit Theatre, Commercial Theatre, Advanced

Problems, Venues, Musicals/Dance, Production Management, Theatre Development, Business Problems, and Theatre Marketing. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 288. Stage Management Seminar (4)
A weekly seminar in which all graduate stage managers participate. Includes discussions of problems encountered on current productions, paperwork, methodology, and production approaches. *Prerequisites: graduate standing and consent of instructor.*

TH/GR 290. Dramatic Literature and Theatre History Prior to 1900 (4)
Selected material from following topics: Classical Drama, Asian Drama,Medieval and Early Modern Drama, Shakespeare, European Drama 1600–1900. May be taken eight times as content varies. *Prerequisites: Ph.D. standing, consent of instructor.*

TH/GR 291. Dramatic Literature and Theatre History 1900 to the Present (4)
Selected material from following topics: European Theatre 1900–Present, American Theatre 1900–Present, Contemporary Theatre and Performance. May be taken eight times as content varies. *Prerequisites: Ph.D. standing, consent of instructor.*

TH/GR 292. Cultural and Critical Theory (4)
Selected material from following topics: Performance Theory, Dramatic Theory, Critical Theory, Cultural Studies. May be taken eight times as content varies. *Prerequisites: Ph.D. standing, consent of instructor.*

TH/GR 293. Directed Studies (4-12)
Individual or small group directed study.

TH/GR 294. Dissertation Research (4-12)
Research and preparation of doctoral dissertation.

TH/GR 295. Acting Practicum (2)
This course covers the artistic, aesthetic, and practical aspects of the actors' work as they develop and execute the character/role towards a fully realized production. *Prerequisites: graduate standing.*

TH/GR 296. Stage Management Practicum (4)
Taken each term by all graduate stage management students. The class focuses on the development of knowledge and skills necessary for the contemporary stage manager. Seminar format is augmented by lab work that may include departmental productions. *Prerequisite: graduate standing and consent of instructor.*

TH/GR 297. Thesis Research (2-12)
Thesis research for M.F.A. degree. (S/U grades only.) *Prerequisite: graduate standing.*

TH/GR 298. Special Projects (0-4)
Advanced seminar and research projects in theatre. (S/U grades only.) *Prerequisite: graduate standing.*

TH/GR 299. Thesis Project (2-12)
Specific projects in theatre individually determined to meet the developing needs, interests, and abilities of M.F.A. candidates. (S/U grades only.) *Prerequisite: graduate standing.*

TH/GR 500. Introduction to Apprentice Teaching (4)
This course, designed to meet the needs of the graduate students who serve as teaching assistants, includes analysis of texts and materials, discussion of teaching techniques, conducting discussion sections, formulation of topics and questions for papers, and examinations and grading. 2 units=25% TAship. 4 units=50% TAship. *Prerequisites: graduate standing and consent of the instructor.*

TH/GR 501. Teaching—Non Departmental (4)
Consideration of pedagogical applications in the teaching of literacy, historical and philosophical text at the undergraduate level. Pedagogical aids for the teaching of composition and supervised teaching in sections of undergraduate coruses such as the Revelle Humanities sequence and in the CAT programs of Sixth College. *Prerequisites: graduate standing and consent of instructor.*

Third World Studies

OFFICE: 3313 Literature Building,
Warren College, (858) 822-0377

Professors

Carlos Blanco-Aguinaga, Ph.D., *Spanish and Latin American Literature, Emeritus*
Jaime Concha, Ph.D., *Spanish and Latin American Literature*
Michael P. Montéon, Ph.D., *Latin American History*
Vicente L. Rafael, Ph.D., *Communication: Southeast Asian and Philippine Culture*
Edward Reynolds, Ph.D., *African History*
Rosaura Sanchez, Ph.D., *Spanish and Latin American Literature, Linguistics*
William Tay, Ph.D., *Chinese Literature, Emeritus*
Oumelbanine Zhiri, Ph.D., *Literature*

Associate Professors

Suzanne Brenner, Ph.D., *Anthropology*
Robert Cancel, Ph.D., *African and Caribbean Literature, Coordinator of Third World Studies*
Ann L. Craig, Ph.D., *Political Science*
Rosemary George, Ph.D., *Literature*
Max Parra, Ph.D., *Mexican Literature*
Marta E. Sanchez, Ph.D., *Latin American Literature*
Winnie Woodhull, Ph.D., *Literature*

The Third World Studies Program has three main objectives:

1. To provide an understanding of the Third World and its relationships to the West. In order to understand these relationships, it is necessary to study the historical context out of which the present relationships developed. For example, besides trying to understand what kind of society existed in Meso-America when the Spaniards arrived in 1520, the student must also have an understanding of the historical development in Europe which resulted in Spain's decision to seek wider trade abroad. There is insistence on both the similarities and differences which Third World societies have among themselves and the similarities and differences with Western societies.
2. To provide an interdisciplinary approach to the study of the Third World. The program is not conceived as being exclusively historically oriented nor as being predominantly a social science program, but rather one that integrates both the social sciences and the humanities.
3. To provide an understanding of the shifting economic and political nature of the countries designated as belonging to the "Third World," especially in light of the dramatic political and economic changes worldwide in the late 1980s and 1990s. To this end, our Third World Studies courses will, where appropriate, address and contextualize the history of the term "Third World" and its current applications in scholarship and the broader international media.

The Major Program

Students interested in Third World studies may focus on a theme, problem, or geohistorical area. A Third World studies program of study must be interdisciplinary. Students must choose course offerings from at least three disciplines (anthropology, economics, history, literature, political science, sociology, etc.).

A Third World studies major requires a minimum of *twelve* upper-division courses plus three lower-division courses from the Third World studies sequence (TWS 21, 22, 23, 24, 25, or 26). Students at Eleanor Roosevelt College may substitute up to two courses, Making of the Modern World 4 and 5, for two of the three-course lower-division sequence, but must take at least one course in the TWS 21–26 sequence. Selection of a specific concentration, discipline, or department should be determined in consultation with a Third World studies faculty member or program adviser.

Students majoring and minoring in Third World Studies are encouraged to experience their areas first-hand by studying abroad in any number of ways. Most convenient, depending on the area, is the University of California's Education Abroad Program, whereby students can gain

UC credit for study at foreign universities. This is especially convenient for students who cannot find sufficient courses at UCSD pertaining to such regions as the Caribbean and the Indian subcontinent. Moreover, Latin America, Asia, and Africa coursework is available in these regions through the Education Abroad Program and various programs available through other U.S. universities.

Double Major

Students interested in Third World studies as a double major must have at least *ten* upper-division courses that are unique to each departmental major. The courses required for Third World studies may cover one or more disciplines. Courses may focus on a theme or problem or on a geo-historical area. The remaining two courses may overlap with the other major requirements. Approval from *both* departments is required for overlaps. Students should consult a Third World studies faculty member or program adviser for approval of a major program.

Minor

A student may minor in Third World studies by selecting two courses from the lower-division Third World studies sequence (TWS 21, 22, 23, 24, 25, or 26) and five upper-division courses in disciplines dealing with the Third World.

Third World studies faculty members offer courses in the Departments of Anthropology, Communication, Literature, Political Science, Sociology, History, and in the Third World Studies Program. Appropriate courses in other departments may also be considered. Students should consult departmental and program listings for Third World area offerings.

COURSES

See listings also under the Departments of Anthropology, Communication, History, Literature, Political Science, and Sociology for other Third World area offerings.

LOWER-DIVISION

21-22-23-24-25-26. Third World Literatures (4-4-4-4-4-4)
An introduction to the cultures of various Third World countries through close reading of selected literary texts. TWS 21 focuses on African literature, TWS 22 deals with Latin American literature, TWS 23 examines Chinese literature, TWS 24 examines Caribbean literature, TWS 25 examines Middle Eastern literature, and TWS 26 examines literature of the Indian Subcontinent. Topics will vary each quarter. (F,W,S)

UPPER-DIVISION

132. Literature and Third World Societies (4)
This course will investigate novelistic and dramatic treatments of European society in the era of nineteenth-century imperialism, Third World societies under the impact of colonialism, and the position of national minorities inside the United States to the present day. Attention will center on the interplay between the aesthetic merits and social-historical-philosophical content of the works read.

135. Bilingualism: Research and Field Studies (4)
A study of sociolinguistic findings on bilingualism throughout the world and an evaluation of bilingual education theories. The students will also engage in surveys of local communities to assess bilingualism and educational needs of bilingual communities. *Prerequisite: upper-division standing.*

190. Undergraduate Seminars (4)
Seminars will be organized on the basis of topics with readings, discussions, and papers. Specific subjects to be covered will change each quarter depending on particular interest of instructors or students. May be repeated for credit.

197. Field Work (4)
In an attempt to explore and study some unique processes and aspects of community life, students will engage in research in field settings. Topics to be researched may vary, but in each case the course will provide skills for carrying out these studies.

198. Directed Group Studies (2 or 4)
Directed group study on a topic or in a field not included in the regular department curriculum, by special arrangement with a faculty member. *Prerequisite: upper-division standing.*

199. Independent Study (2 or 4)
Tutorial, individual guided reading and research projects (to be arranged between student and instructor) in an area not normally covered in courses currently being offered in the department. (P/NP grades only.) *Prerequisites: upper-division standing and consent of instructor.* (F,W,S)

Third World Studies offerings in other departments:

Anthropology: Regional

Thurgood Marshall College

Honors Program and Special Courses

OFFICE: Provost, Thurgood Marshall College Administration Building

The Thurgood Marshall College Honors Program is designed to address one of the greatest responsibilities and challenges of public higher education: the education of students of exceptionally high academic achievement. The program provides the organization and the environment within which students are encouraged to pursue individual excellence.

Honors activities and events are designed to introduce Thurgood Marshall students to the excitement of pioneering research and innovative scholarship in all disciplines at UCSD and to create opportunities for discussion on public issues with locally and nationally known figures. This happens primarily through the honors seminar, offered every quarter, and open to all class levels of honors students. Also, honors students enjoy a relaxed and informal evening with the provost.

To qualify for the honors program, incoming freshmen must have achieved an evaluated high school GPA of 3.8 or better, and mathematical SAT score of 650 and verbal SAT score of 710 or higher. Continuing UCSD and transfer students are eligible upon successful completion of at least twelve graded units with a 3.7 or better cumulative GPA. All honors students must maintain a 3.50 or better cumulative GPA.

Thurgood Marshall College annually recognizes superior achievement. The Provost Award is presented at commencement to a graduating senior who is recognized for outstanding academic achievement and breadth of scholarship. In addition, students may be eligible for universitywide and departmental honors, Provost Honors, Thurgood Marshall College Honors, Phi Beta Kappa membership, and participation in small honors classes in science.

Public Service Minor

Thurgood Marshall College sponsors the Public Service Minor at UCSD, which encourages students to understand the history and practices of public service and to participate in the development of civic skills. This minor is open to all UCSD students in good standing. Please see "Public Service Minor" in the departmental listings.

COURSES

10. Thurgood Marshall College Methods of Inquiry (2)
In this course, students learn analytical thinking strategies routinely used by professional scholars. Each student applies strategies from the materials presented in lectures and reading assignments to his or her current course work. *Prerequisite: concurrent enrollment in two lecture courses.* (P/NP only.)

15. Introduction to Public Service in America (4)
This course is designed to study, discuss, and analyze the history and current role of public service in the United States. Students will be introduced to the different roles held by the three sectors of the American economic structure (government, business, and nonprofit/public service) with opportunity to provide a critical analysis of those roles within American society.

20. Thurgood Marshall College Honors Seminar (1)
Weekly seminar conducted by UCSD faculty and distinguished guest lecturers on topics related to the core curriculum: diversity, justice, and imagination. (P/NP only.)

90. Undergraduate Seminar (1)
These seminars are designed to expose undergraduate students, especially freshmen and sophomores, to exciting research conducted by UCSD faculty. *Prerequisite: none.* (P/NP only.)

199. Marshall College Special Project (1–4)
Individual, independent research, or creative work intended to satisfy Marshall College graduation requirement. Designated for Marshall College students, topics are supervised by Marshall faculty in association with the honors seminar and honors projects. A written application describing the project is required. See Office of the Provost. *Prerequisites: upper-division students with 2.5 GPA and 90 units and approval of the provost or faculty designee. Honors standing required for honors projects.* (P/NP only)

UC San Diego Washington Program (UCDC)

Career Service Center, Room 112
http://career.ucsd.edu/sa/UCDC.shtml/
http://www.ucdc.edu

Since 1997, the UC San Diego Washington Center has provided students an opportunity to intern in the nation's capital while continuing their academic coursework. The program is open to all students who have completed ninety units toward graduation with a 2.5 grade-point average. Students earn fourteen units of academic credit, continue to be registered full time, and fulfill university residency requirements.

Students maintain financial aid eligibility; the amount can be adjusted to reflect the additional costs of the program. In addition, eligible students are considered for the University of California President's Washington Scholarship Program. Students live in the new University of California Washington Center, located in the heart of Washington, D.C.

Internship—Students work twenty-four hours per week as interns in federal agencies, interest groups, trade associations, the national news media, museums, research institutions, or in other organizations related to policy, politics, science, and culture and geared to the interests and objectives of individual students. *Political Science 197I:* six units of academic credit.

Research Seminar—Drawing on the internship experience, each student participates in a seminar and undertakes an independent research project. *Political Science 194* (or depending on the student's major, one of the cross-listed equivalents): four units of academic credit.

Elective Course—Each student also enrolls in one upper-division seminar course at the Washington Center. These courses are taught by the different campuses' resident faculty and change each quarter. Typically they include a mix of political science, international relations, other social sciences, history, and the arts and humanities. In addition to regular instruction, these seminars may take advantage of the Washington locale and often include guest speakers and field work activities.

Urban Studies and Planning

Mike Stepner, *USP Lecturer*
Kenneth E. Sulzer, Ph.D., *USP Lecturer*
Michelle White, Ph.D., *Professor, Economics*
Ilya Zaslavsky, Ph.D., *San Diego Supercomputer Center, Assistant Research Scientist*

The Urban Studies and Planning Program

The great majority of U.S. citizens, and a growing proportion of people throughout the world, live in cities. Cities provide the environment in which people work, learn, play, and make decisions together. Local governments make critical interventions in the quality of life. At the same time, the cities of the world are increasingly linked in a global economic system, making diverse contributions to the international division of labor.

Urban studies and planning is an interdisciplinary program providing students with a variety of perspectives for understanding the development, growth, and culture of cities and the communities within them. Course work introduces students to the ways different disciplines understand cities and the societies of which they are a part. Upper-division requirements educate students about the parameters within which urban choices are made.

One of the outstanding features of the Urban Studies and Planning Program is the upper-division research requirement. During a two-quarter sequence designed to be taken in the fall and winter of the senior year, all USP majors are guided through a research internship and writing process. The upper-division field studies sequence allows students to work on specific policy projects in the San Diego region. Eligible students may choose to enroll in USP 190 in the spring to write an honors thesis. The honors option is an opportunity to do advanced research and writing that builds on work already completed in the senior sequence.

Urban studies and planning is an undergraduate community of students with diverse interests and goals. After graduation some majors pursue

graduate work in social science disciplines. Others pursue graduate study in public policy, law, planning, or architecture. Urban studies has always also attracted students interested in medicine and public health issues, who continue to study in these areas at schools of medicine or public health. Urban studies and planning provides students with a solid liberal arts background for graduate study or for professional work in a number of fields. Many students find employment opportunities through their field work placement. More generally, graduates of urban studies and planning will have the analytic skills to think clearly and act creatively about the problems and prospects of the urban environment.

The Urban Studies and Planning Major

A bachelor of arts degree in urban studies and planning will be given to students who satisfactorily complete the general-education requirements of Muir, Revelle, Marshall, Warren, Roosevelt, or Sixth College in addition to the urban studies and planning courses described below. The undergraduate program in urban studies and planning requires a three-quarter lower-division sequence in urban studies; Political Science 30; and twelve courses in upper-division urban studies and planning. *Students are encouraged to complete the lower-division prerequisites before they enroll in the upper-division courses.*

In accordance with campus academic regulations, courses used to satisfy the major cannot be applied toward a minor, although some overlap is allowed for double majors. All lower-division and upper-division requirements must be taken for a letter grade. A 2.0 grade-point average is required in the major, and students must earn at least C– in each course used for the major. Transfer students should see the USP student affairs adviser to determine whether courses taken elsewhere satisfy USP program requirements. No more than one special studies course, USP 198 or USP 199, will be accepted to count towards the major.

Lower-Division Requirements

Students majoring in urban studies and planning must complete the introductory sequence:

USP 1. History of U.S. Urban Communities (4)

USP 2. Urban World System (4)

USP 3. The City and Social Theory (4)

and

Political Science 30. Political Inquiry (4)
(Psychology 60, Introduction to Statistics or Sociology L60, The Practice of Social Research may be substituted for Political Science 30.)

Upper-Division Requirements

The upper-division requirements in urban studies and planning are:

1. three foundation courses
2. one research methods course to be taken junior year
3. six upper-division elective courses
4. two senior sequence courses of field work and internship

FOUNDATION COURSES

Foundation courses provide the conceptual tools for the major. Students are to choose three of:

USP 102. Urban Economics (Economics 135) (4)

USP 103. U.S. Cities in the Twentieth Century (HIUS 148) (4)
(USP 165/HIUS 147, History of the American Suburb may be substituted for USP103.)

USP 104. Ethnic Diversity and the City (Ethnic Studies 105) (4)

USP 105. Urban Sociology (Sociology C/153) (4)

USP 107. Urban Politics (Political Science 102E) (4)
(USP 113, Politics & Policymaking in Los Angeles may be substituted for USP 107.)

USP 124. Land Use Planning (4)
(USP 173, History of Urban Planning and Design may be substituted for USP 124.)

RESEARCH METHODS COURSES

Students are to choose one course of:

USP 129. Research Methods: Studying Racial and Ethnic Communities (Ethnic Studies 190) (4)

USP 130. Field Work in Racial and Ethnic Communities (Ethnic Studies 107) (4)

USP 192. GIS for Urban Community Planning (4)

USP 193. San Diego Community Research (4)

Sociology A/104. Field Research: Methods of Participant Observation

SENIOR SEQUENCE REQUIREMENT

In their senior year, all students must complete the senior sequence, USP 186 Field Work in the fall, and USP 187 Internship in the winter. These courses must be taken IN ORDER. The sequence develops each students ability to: (1) critically review others' research, (2) formulate interesting research questions of their own, (3) design an original research project and investigative strategy, (4) conduct research, and (5) analyze, interpret, and write up findings. The final requirement of USP 186 is a research proposal. By the end of USP 187 each student must complete a Senior Research Project.

Because the senior sequence includes an internship, no other internship or field placement will be counted towards the major.

USP 186. Urban Fieldwork Seminar (6)

USP 187. Urban Studies Internship (6)

HONORS IN URBAN STUDIES AND PLANNING

Candidates for Honors in Urban Studies and Planning are required to take USP 190 Senior Seminar, in which students write a senior thesis. Prerequisites for enrolling in USP 190 are a minimum 3.5 GPA in the major, senior standing, USP 186 and 187, and consent of instructor. Majors who plan to write a senior thesis in USP 190 must declare their intent in USP 186.

USP 190. Senior Honors Seminar (4)

UPPER-DIVISION ELECTIVE COURSES

Students are encouraged to pick an "area of concentration," and choose upper-division electives listed under that cluster. Students may also define their own "area of concentration" and design an appropriate curriculum drawn from courses offered by USP and other related departments. USP 199 Independent Study taken for pass/no pass will count for one USP upper-division elective course.

Urban/Regional Policy and Planning

USP 101/Political Science 160AA. Introduction to Policy Analysis

USP 102/Economics 135. Urban Economics

USP 107/Political Science 102E. Urban Politics

The Minor Program

The urban studies and planning minor consists of seven courses in urban studies and planning, selected with the prior approval of the USP student affairs adviser. Students who wish to minor in urban studies may do so by taking any two courses from among the lower-division sequence and the upper-division foundation courses, and five upper-division courses from among those that serve the USP major. All courses must be taken for a letter grade and students must earn at least C– in each course used for the minor.

Education Abroad Program

Students are encouraged to participate in the UC Education Abroad Program (EAP) or Opportunities Abroad Program (OAP) while still making progress towards completing their USP major. For more information on EAP, see the section of this catalog on the Education Abroad Program or visit http://www.ucsd.edu/icenter/pao. Students considering this option are advised to discuss their plans with the USP student affairs adviser before going abroad.

COURSES

LOWER-DIVISION

1. History of US Urban Communities (4)
This course charts the development of urban communities across the United States both temporally and geographically. It examines the patterns of cleavage, conflict, convergence of interest, and consensus that have structured urban life. Social, cultural, and economic forces will be analyzed for the roles they have played in shaping the diverse communities of America's cities.

2. Urban World System (4)
Examines cities and the environment in a global context. Emphasizes how the world's economy and the earth's ecology are increasingly interdependent. Focuses on biophysical and ethicosocial concerns rooted in the contemporary division of labor among cities, Third World industrialization, and the post-industrial transformation of U.S. cities.

3. The City and Social Theory (4)
An introduction to the sociological study of cities, focusing on urban society in the United States. Students in the course will examine theoretical approaches to the study of urban life; social stratification in the city; urban social and cultural systems–ethnic communities, suburbia, family life in the city, religion, art, and leisure.

UPPER-DIVISION

101. Introduction to Policy Analysis (4)
(Same as Political Science 160AA.) This course will explore the process by which the preferences of individuals are converted into public policy. Also included will be an examination of the complexity of policy problems, methods for designing better policies, and a review of tools used by analysts and policy makers. *Prerequisite: upper-division standing or consent of instructor.*

102. Urban Economics (4)
(Same as Economics 135.) Economic analysis of why and where cities develop, problems they cause, and public policies to deal with these problems. Determination of urban land rent/use, reasons for suburbanization. Transportation and congestion in cities, zoning, poverty and housing, urban local government. *Prerequisites: Economics 1A-B.*

103. American Cities in the Twentieth Century (4)
(Same as HIUS 148.)This course surveys changes in U.S. cities since about 1900. Case studies of individual cities illustrate the social, political, and environmental consequences of rapid urban expansion, as well as the ways in which "urban problems" have been understood historically. *Prerequisite: upper-division standing or consent of instructor.*

104. Ethnic Diversity and the City (4)
(Same as Ethnic Studies 105.) This course will examine the city as a crucible of ethnic identity exploring both the racial and ethnic dimensions of urban life in the U.S. from the Civil War to the present. *Prerequisite: upper-division standing.*

105. Urban Sociology (4)
(Same as Sociology C/153.) Introduces students to the major approaches in the sociological study of cities and to what a sociological analysis can add to our understanding of urban processes. *Prerequisite: upper-division standing or consent of instructor.*

107. Urban Politics (4)
(Same as Political Science 102E.) This survey course focuses upon the following six topics: the evolution of urban politics since the mid-nineteenth century; the urban fiscal crisis; federal/urban relationships; the "new" politics; urban power structure and leadership; and selected contemporary policy issues such as downtown redevelopment, poverty, and race.

109. California Government and Politics (4)
(Same as Political Science 103A.) This survey course explores six topics: 1) the state's political history; 2) campaigning, the mass media, and elections; 3) actors and institutions in the making of state policy; 4) local government; 5) contemporary policy issues; e.g., Proposition 13, school desegration, crime, housing and land use, transportation, water; 6) California's role in national politics. *Prerequisite: upper division standing*

110. Advanced Topics in Urban Politics (4)
(Same as Political Science 102J.) Building upon the introductory urban politics course, the advanced topics course explores issues such as community power, minority empowerment, and the politics of growth. A research paper is required. Students wishing to fulfill the paper requirement with field research should enroll in the subsequent Political Science 102JJ course offered Summer Session II. *Prerequisites: upper division standing, consent of instructor.*

111. Field Research in Urban Politics (4)
(Same as Political Science 102JJ.) To be taken with the approval of the Political Science 102J instructor, this course allows students to do original field research on topics in urban politics. This course is offered in Summer Session II subsequent to a spring 102J course. May not be used to fulfill any major or minor requirements in politics science or urban studies and planning. *Prerequisites: USP 110/Political Science 102J and consent of instructor.*

112. The Amereican Welfare State (4)
(Same as Political Science 166F.) This course examines the transformation of the American welfare state in the twentieth century. Topics include Progressivism, the New Deal and Great Society; Reagan-era retrenchment; race, gender and social policy, and policy devolution to state and local governments. *Prerequisite: upper-division standing.*

113. Politics and Policymaking in Los Angeles (4)
(Same as Political Science 103B.) This course examines politics and policymaking in the five-county Los Angeles region. It explores the historical development of the city, suburbs, and region; politics, power, and governance; and major policy challenges facing the

city and metropolitan area. *Prerequisite: upper-division standing.*

115. Politics and Policymaking in San Diego (4)
(Same as Political Science 103C.) This course examines how major policy decisions are made in San Diego. In analyses the region's power structure (including the roles of non-governmental organizations and the media), governance systems and reform efforts, and the politics of major infrastructure projects. *Prerequisite: upper-division standing or consent of instructor.*

124. Land Use Planning (4)
Introduction to land use planning in the United States: zoning and subdivision, regulation, growth management, farmland preservation, environmental protection, and comprehensive planning. *Prerequisite: upper-division standing or consent of instructor.*

129. Research Methods: Studying Racial and Ethnic Communities (4)
(Same as ETHN 190.) The course offers students the basic research methods with which to study ethnic and racial communities. The various topics to be explored include human and physical geography, transportation, employment, economic structure, cultural values, housing, health, education, and intergroup relations. *Prerequisite: upper-division standing or consent of instructor.*

130. Field Work in Racial and Ethnic Communities (4)
(Same as ETHN 107.) This is a research course examining social, economic, and political issues in ethnic and racial communities through field work. Topics are examined through a variety of research methods which may include interviews and archival, library, and historical research. *Prerequisite: upper-division standing.*

132. African Americans, Religion, and the City (4)
(Same as Ethnic Studies 188.) This course details the history of African-American migration to urban areas after World War I and World War II and explore the role of religion in their lives as well as the impact that their religious experiences had upon the cities in which they lived. *Prerequisite: upper-division standing.*

133. Social Inequality and Public Policy (4)
(Same as SOC C/152.) Primary focus on understanding and analyzing poverty and public policy. Analysis of how current debates and public policy initiatives mesh with alternative social scientific explanations of poverty. *Prerequisite: upper-division standing.*

135. Asian and Latina Immigrant Workers in the Global Economy (4)
(Same as ETHN 129.) This course will explore the social, political, and economic implications of global economic restructuring, immigration policies, and welfare reform on Asian and Latina immigrant women in the United States. We will critically examine these larger social forces from the perspectives of Latina and Asian immigrant women workers, incorporating theories of race, class, and gender to provide a careful reading of the experiences of immigrant women on the global assembly line. *Prerequisite: upper-division standing.*

137. Housing and Community Development Policy and Practice (4)
This course considers the history, theory, and practice of U.S. housing and community development. It examines how the public, private, and nonprofit sectors shape and implement planning and policy decisions at the federal, state, local and neighborhood levels. *Prerequisite: upper-division standing.*

139. Race, Gender, and Urban Planning (4)
This course explores the nexus between race, gender, and urban planning. Lectures address how women and people of color shape the city through design, policy, and advocacy. The course also considers the impact of traditional planning on these two groups. *Prerequisite: upper-division standing.*

143. The U.S. Health Care System (4)
This course will provide an overview of the organization of health care within the context of the community with emphasis on the political, social, and cultural influences. It is concerned with the structure, objectives, and trends of major health and health-related programs in the United States to include sponsorship, financing, training and utilization of health personnel. *Prerequisite: upper-division standing or consent of instructor.* (Offered winter quarter.)

144. Environmental and Preventive Health Issues (4)
This course will analyze needs of populations, highlighting current major public health problems such as chronic and communicable diseases, environmental hazards of diseases, psychiatric problems and additional diseases, new social mores affecting health maintenance, consumer health awareness and health practices, special needs of economically and socially disadvantaged populations. The focus is on selected areas of public and environmental health, namely: epidemiology, preventive services in family health, communicable and chronic disease control, and occupational health. *Prerequisite: upper-division standing or consent of instructor.* (Offered fall quarter.)

145. Aging–Social and Health Policy Issues (4)
This course will provide a brief introduction to the nature and problems of aging, with emphasis on socioeconomic and health status; determinants of priorities of social and health policies will be examined through analysis of the structure and organization of selected programs for the elderly. Field visits will constitute part of the course. *Prerequisite: upper-division standing.* (S)

147. Case Studies in Health Care Programs/Poor and Underserved Population (4)
The purpose of this course is to identify the special health needs of low income and underserved populations and to review their status of care, factors influencing the incidence of disease and health problems, and political and legislative measures related to access and the provision of care. Selected current programs and policies that address the health care needs of selected underserved populations such as working poor, inner city populations, recent immigrants, and persons with severe disabling mental illnesses will be studied. Offered in alternate years. *Prerequisite: upper-division standing or consent of instructor.* (Not offered 2003–2004.)

165. History of the American Suburb (4)
(Same as HIUS 147.) This seminar explores the development of suburbs in America, from the early nineteenth-century to the contemporary era. Topics include suburban formation, class, ethnic and racial dimensions, government influences, social life, and cultural responses to suburbia. The class will explore influences, social life, and cultural responses to suburbia. The class will explore competing theories of suburbanization as it surveys the major literature. *Prerequisite: upper-division standing.*

166. History of San Diego (4)
A lecture-discussion course that surveys the social, political, economic, cultural and environmental history of the San Diego region from pre-colonial times to the present, with emphasis on the urban development that has occurred since 1900. *Prerequisite: upper-division standing.*

171. Sustainable Development (4)
Sustainable development is a concept invoked by an increasingly wide range of scholars, activists, and organizations dedicated to promoting environmentally sound approaches to economic development. This course critically examines the diverse, often contradictory, interests in sustainability. It provides a transdisciplinary overview of emergent theories and practices. *Prerequisite: upper-division standing.*

172. Planning/Policy-making: U.S.-Mexican Border Region (4)
Course examines globalization and key regional/urban policy issues facing U.S.-Mexico border zone, including industrialization, urban sprawl, environmental management, trade and infrastructure planning, social policy, transportation; focus on problems in the San Diego-Baja California region. *Prerequisite: upper-division standing.*

173. History of Urban Planning and Design (4)
The analysis of the evolution of city designs over time; study of the forces that influence the form and content of a city: why cities change; comparison of urban planning and architecture in Europe and the United States. *Prerequisite: upper-division standing.*

174. Regional Governance and Planning Reconsidered (4)
Regional planning and local governance in California, focusing upon San Diego. Current system, the state/local relationship, and the incentives and disincentives for restructuring regional and local governance and planning. *Prerequisite: upper-division standing.*

179. Urban Design, Theory, and Practice (4)
Roles of the urban designer, preparing schematic proposals and performance statements, identifying opportunities for and constraints on designers. Each student will prepare a practical exercise in urban design using various urban design methods. *Prerequisite: upper-division standing.*

180. Transportation Planning (4)
Introduction to the history and current state of urban transportation planning, including the relationship between transportation and urban form; role of automotive, mass transit, and alternative modes; methods for transportation systems analysis; decision-making, regulatory, and financing mechanisms; and public attitudes. *Prerequisite: upper-division standing.*

186. Urban Field Work Seminar (6)
Introduces students to the theory and practice of social research. Introduces techniques for logging data, including field notes and filing systems. During the second half of USP 186, students must complete five weeks (50 hours) of the ten week (100 hour) internship requirement of the senior sequence. *Prerequisites: USP major and senior status.*

187. Urban Studies Internships (6)
An intensive research and internship experience that culminates in an original senior thesis. Students learn about the theoretical and technical challenges of

scholarly research and publication. *Prerequisites: USP 186 and USP major.*

190. Senior Honors Seminar (4)
Each student enrolled will be required to write an honors essay, a substantial research paper on a current urban policy issue, under the supervision of a member of the faculty. Most often the essay will be based on their previous fieldwork courses and internship. This essay and other written exercises, as well as class participation, will be the basis of the final grade for the course. The seminar will rotate from year to year among the faculty in urban studies and planning. *Prerequisites: USP 186, USP 187, major GPA 3.5, and permission of instructor.*

192. GIS for Urban and Community Planning (4)
Introduction to Geographic Information Systems and using GIS to make decisions: acquiring data and organizing data in useful formats; demographic mapping; geocoding. Selected exercises examine crime data, political campaigns, banking and environmental planning, patterns of bank lending and finance. *Prerequisite: upper-division standing.*

193. San Diego Community Research (6)
Using the San Diego region as a case study, students will be introduced to the process of collecting, evaluating, and presenting urban and regional data using a variety of methods including aggregate data analysis, historical research, ethnography, and GIS mapping. *Prerequisite: consent of instructor.*

194. Research Seminar in Washington, D.C. (4)
(Same as Cognitive Science 194, Communication 194, Earth Science 194, History 193, Political Science 194, Sociology E/194.) Course attached to six-unit internship taken by students participating in the UCDC program. Involves weekly seminar meetings with faculty and teaching assistant and a substantial research paper. *Prerequisite: department approval. Participating in UCDC program.*

195. Teaching Apprentice–Undergraduate (2-4)
Introduction to teaching activities associated with course. Responsibilities include preparing reading materials assigned by the instructor, attending course lectures, meeting at least one hour per week with the instructor, assisting instructor in grading, and preparing a summary report to the instructor. *Prerequisites: consent of instructor and an A in the course in which the student plans to assist.*

198. Directed Group Study (2-4)
Directed group study on a topic or in a field not included in the regular departmental curriculum by special arrangement with a faculty member. *Prerequisites: upper-division standing and consent of instructor.*

199. Independent Study (2-4)
Reading and research programs and field-study projects to be arranged between student and instructor, depending on the student's needs and the instructor's advice in terms of these needs. *Prerequisites: upper-division standing and consent of instructor.*

Lecturer with Potential for Security of Employment

Brett Stalbaum

The Department of Visual Arts offers courses in painting, drawing, sculpture, performance, computing for the arts, film, video, photography, and art history/criticism (including that of film and video). A bachelor's degree from this department provides students with a solid liberal arts background and is preparatory training for careers as artists, art historians, filmmakers, video artists, photographers, digital media artists, and art critics. It also provides students the initial skills required for teaching and work in museums, television, and the commercial film, photography, and internet industries.

By its composition, the Department of Visual Arts is biased in the direction of actively producing artists and critics whose presence at the center of the contemporary art world necessitates reconsideration and reevaluation of artistic productions, their information structure, and significance. Consequently, a flexible introductory program of historically based courses has been devised mainly to provide the student an opportunity to concentrate on areas involving significantly different aesthetic and communication structures. A series of studio courses, in which painting and sculpture are included, is presented to bring the student into direct contact with the real contingencies compelling redistribution of aesthetic attitudes and reinterpretation of genres. Because of the exploratory nature of our program, the department is prepared to emphasize new media that would traditionally be considered to have scant relation to the visual arts. Thus, courses in theatrical events, linguistic structures, etc., are provided. In this context, theoretical courses with a media orientation, as in film, video, photography, or computing, are also offered.

The Department of Visual Arts is located in the Mandeville Center for the Arts. In addition, faculty and graduate students have offices/studios/research spaces in the Visual Arts Facility located in Sixth College. Facilities and equipment are

available to undergraduates in both the Mandeville Center and at the campus-wide Media Center, providing the opportunity to study painting, drawing, photography, computing in the arts, 16mm film, performance, sculpture, and video. Facilities at the Media Center include portable video recording equipment, video and audio editing suites, non-linear editing, and production studios. Additional film equipment available includes an animation stand, optical printer, two sound-mixing studios, and numerous film editing suites. Courses in computing in the arts take place in the Silicon Graphics/Mac/NT lab located at the Visual Arts Facility, the INTEL-shared lab in the Applied Physics and Mathematics building, and a dedicated ICAM lab in building 201 University Center.

The University Art Gallery displays a continually changing series of exhibitions, and the Mandeville Annex Gallery, located on the lower level, is directed by visual arts undergraduate students. A gallery and performance space, located in the Visual Arts Facility, are directed by graduate students.

The Undergraduate Program

College Requirements

The Department of Visual Arts teaches courses applicable toward the Muir, Sixth, and Warren general-education requirements, the Marshall humanities requirement, the Eleanor Roosevelt and Revelle fine arts requirements. Optional minors may be taken within any college.

Minor in Visual Arts

The Department of Visual Arts offers minors in seven areas of study: studio painting/drawing/sculpture, photography, computing, art history, media history/criticism, film/video, and ICAM. A minor consists of six specific courses of which at least three must be upper-division. Effective January 1, 1998, a minor will consist of seven specific courses, of which at least five must be upper-division. Because the requirements differ for each minor, prospective visual arts minors should consult with the departmental adviser for a complete list of appropriate classes acceptable for the minor.

Students are advised to begin their program in the second year; otherwise, they cannot be guaranteed enough time to complete the classes required for a minor.

Education Abroad Program

Students are often able to participate in the UC Education Abroad Program (EAP) and UCSD's Opportunities Abroad Program (OAP) while still making progress toward completing their major. Financial aid is applicable to study abroad and special study abroad scholarships are readily available. Students considering this option should discuss their plans with the director of Undergraduate Studies before going abroad, and courses taken abroad must be approved by the department. More information on EAP/OAP is detailed in the Education Abroad Program of the *UCSD General Catalog* or on their Web site http://ucsd.edu/icenter/pao. Interested students should contact the Programs Abroad Office in the International Center.

Residency Requirements

A minimum of two-thirds of the course work completed for the major must be taken at UCSD. Students who transfer to UCSD in their second or third year may petition to substitute courses taken at other colleges and universities for major requirements.

Visual Arts 111, Structure of Art, must be taken at UCSD by all students, including transfer students, in the art history, media, and studio majors.

Note: Rarely are community college transfer credits accepted toward fulfilling upper-division requirements in any of the four majors, but courses of comparable content will be considered by petition.

Honors Programs

The department offers honors programs in art history, in media, and in studio for outstanding students.

The **art history** honors program will provide outstanding students with pre-professional experience. It consists of an issue-oriented seminar followed by a directed group study and will result in an exhibition with catalogue, a scholarly conference with a mock publication and/or series of research papers. Students who meet the criteria may, with permission of the art history faculty adviser or the art history honors seminar instructor, enroll in the art history honors program during the last quarter of their junior year or as a senior. This program is open to juniors and seniors who meet eligibility requirements: minimum GPA of 3.5 (3.3 overall), completion of all lower-division art history requirements, completion of all upper-division art history distribution requirements, and completion of Art Historical Methods (VIS 112) and at least one additional art history seminar. The level of distinction will be determined by the faculty committee on the basis of work in the honors seminar and on the research project.

The **media** honors program will help students develop high quality professional portfolios. The honors thesis project sequence of individual studies runs the length of an academic year to provide sufficient time for ideas to develop and critically aware work to be produced. Students may arrange to work with different faculty advisers each term or may engage a single adviser for the year. To be eligible for the honors thesis sequence, students must have at least a 3.5 GPA in the major and have approval of all the advisers with whom they will work. Qualified students may begin their sequence the last quarter of their junior year or during their senior year. At the end of the third quarter, all involved media faculty will meet to critique the overall quality of the final thesis work to determine level of distinction.

Through exhibition, verbal and written presentations and course work, the **studio** honors program is intended to give the student as strong a technical, critical, and theoretical base as possible. The program is open to juniors and seniors with a minimum 3.5 GPA in the major (3.0 overall), who have completed all lower-division studio requirements and all upper-division groups I, II, III, and IV (subgroup A) requirements.

Students interested in participating in an honors programs should consult with the departmental adviser.

Double Major within the Department

There are three double majors within the Visual Arts department: Art History/Theory/Criticism paired with either studio, media, or ICAM. Students interested in a double major within the department must have at least ten upper-division courses that are unique to each departmental major and the remaining courses may overlap with other major requirements. Students should consult with the departmental adviser for additional information.

Major Requirements

Twenty courses are required in studio, media, and ICAM and eighteen courses in art history for the attainment of the bachelor of arts degree. A minimum of twelve of these courses must be upper-division, however, some majors may require more upper-division courses.

All courses taken to satisfy major requirements must be taken for a letter grade, and only grades of C– or better will be accepted in the visual arts major.

Studio Major

The studio major is aimed at producing a theoretically based, highly productive group of artists. Lower-division courses are structured to expose students to a variety of ideas in and about the visual arts. Introductory skills are taught, but their development will occur at the upper-division level in conjunction with the student's increasing awareness of the range of theoretical possibilities in the field. The curriculum includes courses in drawing, painting, sculpture, performance, photography, video, 16mm film, many offerings in art history/criticism, as well as new courses in digital imaging and electronics.

GROUP I: LOWER-DIVISION

Foundation Level

Five courses required

1	Introduction to Art Making: Two-Dimensional Practices
2	Introduction to Art Making: Motion and Time Based Art
3	Introduction to Art Making: Three-Dimensional Practices
22	Formations of Modern Art

Choose one from:

20	Introduction to Art History
21	Introduction to Non-Western Art
84	History of Film

GROUP II: UPPER-DIVISION

Entry Level

Five courses required

111	Structure of Art

Note: Required for Visual Arts studio, media, and art history majors. VIS 111 can be taken at the same time as any "A" series classes or VIS 40, 60 or 70N. VIS 40, 60, or 70N can be taken to fulfill Group II entry level studio requirements, but will not count toward the fifteen upper-division courses needed to fulfill the major requirements.

Choose four from:

40/ICAM 40	Introduction to Computing in the Arts
60	Introduction to Photography
70N	Introduction to Media
104A	Performing the Self
105A	Drawing: Representing the Subject
106A	Painting: Image Making
107A	Sculpture: Making the Object

GROUP III: UPPER-DIVISION

Intermediate Level

Two courses required

104BN	Verbal Performance
105B	Drawing: Practices and Genre
105D	The Aesthetics of Chinese Calligraphy
106B	Painting: Practices and Genre
107B	Sculpture: Practices and Genre
140/ICAM 101	Digital Imaging: Image and Interactivity
147A	Electronic Technologies for Art I

Group IV: UPPER-DIVISION

Advanced Level

Five courses required

GROUP A:

Choose two from:

104CN	Personal Narrative
105C	Drawing: Portfolio Projects
105E	Chinese Calligraphy as Installation
106C	Painting: Portfolio Projects
107CN	Sculpture: Portfolio Projects
147B	Electronic Technologies for the Art II

GROUP B:

Group A must be completed before Group B can be taken.

Choose three from:

108	Advanced Projects in Art
110A	Contemporary Issues and Practices
110B	New Genres/New and Old Technologies
110C	Proposals, Plans, Presentations
110D	Visual Narrative/Tableau
110E	Art in Public Places/Site Specific Art
110F	Installation: Cross-Disciplinary Projects
110G	The Natural and Altered Environment
110H	Image and Text Art
110I	Performing for the Camera
110J	Ritual Performance
110K	Installation Performance
130	Special Projects in Visual Arts
132	Installation Production and Studio

GROUP V: UPPER-DIVISION

Non-Studio

Three courses required

Upper-division art history, film history, and theory/criticism courses such as:

113CN*	History of Criticism III: Contemporary (1950–present)
117B*	Theories of Representation
117D*	Portraiture
124CN	Nineteenth Century Art
125A	Twentieth Century Art
125BN	Contemporary Art
125CN	Histories and Contexts of Conceptual Art
125E*	History of Performance
126F*	Western and Non-Western Rituals and Ceremonies
152	Film in Social Context
154	Hard Look at the Movies
157	Video History and Criticism
158	Histories of Photography
159/ICAM 150	History of Art and Technology
194	Fantasy in Film

*seminar

HONORS PROGRAM IN STUDIO

110M	Studio Honors I
110N	Studio Honors II

The Studio Honors I and the attached Studio Honors II count as one course towards the fulfillment of a Group IV requirement.

Art History/Theory/Criticism Major

The major in art history, theory, and criticism is designed both for students who desire a broadly based education in the humanities and for those who plan to pursue a career in an art-related profession. In both cases, the foundation for study is proficiency in the languages of artistic expression. Through the study of art history, students learn to treat works of art as manifesta-

tions of human belief, thought, and experience in Western and non-Western societies from prehistory to the present day. Courses in criticism review the theoretical approaches which are used to understand artistic achievement. By combining art historical and critical study, the program promotes in the student an awareness of the cultural traditions which have shaped his or her intellectual outlook and provides a framework for informed judgment on the crucial issues of meaning and expression in contemporary society.

Majors are encouraged to take relevant courses in allied disciplines such as history, communication, anthropology, and literature, and in such area programs as classics and Italian studies. In addition, students who plan to apply to graduate schools are strongly advised to develop proficiency in one or more foreign languages, as is dictated by their area of specialization.

FOUNDATION LEVEL—LOWER-DIVISION

Five courses required

20	Introduction to Art History
21	Introduction to Non-Western Art
22	Formations of Modern Art
23	Information Technologies in Art History

Choose one from:

1, 2, 3	Introduction to Art-Making
60	Introduction to Photography
70N	Introduction to Media

Note: VIS 23 must be completed by the end of the sophomore year or taken the first time it is offered after a junior declares an art history major or transfers into the program.

ADVANCED LEVEL—UPPER-DIVISION

Thirteen courses required

GROUP I—Required Courses

Two courses

These two courses are required for all art history and criticism majors:

111	Structure of Art*
112	Art Historical Methods

Note: Majors must complete VIS 112 by the end of their junior year and are strongly advised to do so earlier.

* Required of Visual Arts art history, media, and studio majors.

GROUP II—DISTRIBUTIONAL REQUIREMENT

Five courses

Choose one course from each of the following areas:

A. **Pre-Modern: Ancient and Medieval**

120A	Greek Art
120B	Roman Art
120C	Late Antique Art
120D	Prehistoric Art
121AN	The Idea of Medieval Art
121B	Castles, Cathedrals, and Cities
121C*	Art and Gender in the Middle Ages and Renaissance
121D*	The Illuminated Manuscript in the Middle Ages
121E	The Pursuit of the Millennium
128AN	Topics in Pre-Modern Art History
129AN*	Special Problems in Pre-Modern Art History

B. **Early Modern: Renaissance and Baroque**

122AN	Renaissance Art
122CN	Defining High Renaissance Art
122D	Michelangelo
122E*	The City in Italy
123AN	Between Spirit and Flesh: Northern Art of the Early Renaissance
123BN*	Jan van Eyck
123CN*	Early Print Culture: The First Media Revolution
124AN	Baroque Art
128BN	Topics in Early Modern Art History
129BN*	Special Problems in Early Modern Art History

C. **Modern**

124BN	Art and the Enlightenment
124CN	Nineteenth Century Art
125A	Twentieth Century Art
125BN	Contemporary Art
125CN	Histories and Contexts of Conceptual Art
125DN*	Marcel Duchamp
125E*	History of Performance
128CN	Topics in Modern Art History
129CN*	Special Problems in Modern Art History
158	Histories of Photography
159/ICAM 150	History of Art and Technology

D. **Non-Western**

126AN	Pre-Columbian Art of Ancient Mexico and Central America
126BN	The Art and Civilization of the Ancient Maya
126CN	Art of the North American Indians
126DN	African and Afro-American Art
126E	Oceanic Art
126F*	Western and Non-Western Rituals and Ceremonies
126G*	Problems in Mesoamerican Art History
126H*	Problems in Ancient Mayan Iconography and Inscriptions
128DN	Topics in Non-Western Art History
129DN*	Special Problems in Non-Western Art History

E. **Theory**

113AN*	History of Criticism I: Early Modern
113BN*	History of Criticism II: Early Twentieth Century (1900–1950)
113CN*	History of Criticism III:Contemporary (1950–Present)
117A*	Narrative Structures
117B*	Theories of Representation
117C*	Art in Time: The Historical Dimension
117D*	Portraiture
117E*	Problems in Ethnoaesthetics
128EN	Topics in Art Theory and Criticism
129EN*	Special Problems in Art Theory and Criticism

*seminar

Students must take at least two upper-division seminars in addition to VIS 112 and to the course taken in fulfillment of the distribution requirement for Theory. These two additional seminars may be taken in fulfillment of Pre-Modern, Early Modern, Modern and Non-Western or as open electives.

Art history majors cannot enroll in more than one upper-division seminar without having completed Information Technologies in Art History (VIS 23) and Art Historical Methods (VIS 112).

GROUP III—ELECTIVES

Six courses

Students are required to take six upper-division courses in addition to VIS 111, VIS 112 and those used to fulfill the distribution requirements. At least three of these must be courses

in art history or theory. For the remaining three, choose from the following:

- Any upper-division art history course (s) in history or theory
- any upper-division course(s) in media history and criticism (e.g., VIS 150, 151, 152, 153, 154, 155, 156N, 157);
- up to two upper-division courses in studio or media production; or
- with permission of art history faculty adviser, one upper-division course in a related department or program such as anthropology, history, literature, or critical gender studies.
- Two two-unit curatorial practices workshop courses (VIS 127A) count as one course towards the fulfillment of an elective.

Media Major

With a visual arts foundation, the program is designed for students who want to become creative videomakers, filmmakers, photographers, and computer artists, encouraging the hybridity of media. The curriculum combines hands-on experience of making with practical and theoretical criticism, provides historical, social, and aesthetic backgrounds for the understanding of modern media, and emphasizes creativity, versatility, and intelligence over technical specializations. It should allow students to go on to more specialized graduate programs in the media arts, to seek careers in film, television, computing, or photography, or to develop as independent artists. All media majors should see the Visual Arts Undergraduate Adviser upon entrance into UCSD.

FOUNDATION LEVEL—LOWER-DIVISION

Six courses required

GROUP A

1 or 2 or 3	Introduction to Art Making
22	Formations of Modern Art
84	History of Film

GROUP B

40/ICAM 40	Introduction to Computing in the Arts
60	Introduction to Photography
70N	Introduction to Media

All six courses listed under Groups A and B above are required. VIS 70N is prerequisite for use of the Media Center facilities; no further production courses may be taken until VIS 70N is completed.

INTERMEDIATE LEVEL—UPPER-DIVISION

Nine courses required

GROUP A

Six courses required

111	Structure of Art
174	Media Sketchbook

Both VIS 111 and VIS 174 are required and prerequisite to further study. Additionally, all courses from one of the following emphases are required.

Computing Emphasis

Three courses plus one from photography or film/video

140/ICAM 101	Digital Imaging: Image and Interactivity
145A/ ICAM 102	Digital Media I: Time, Movement, Sound
145B	Digital Media II

Photography Emphasis

Two courses plus two from computing or film/video

164	Photographic Strategies
165	Camera Techniques

Film and Video Emphasis

Three courses plus one from computing or photography

172	Studio Video
176	Introduction to Filmmaking
177	Scripting and Editing Strategies

GROUP B–History, Criticism, and Theory

Three courses required

113BN	History of Criticism II: Early Twentieth Century (1900–1950)
113CN	History of Criticism III: Contemporary (1950–Present)
117B	Theories of Representation
150	History and Art of the Silent Cinema
151	History of Experimental Film
152	Film in Social Context
153	The Genre Series
154	Hard Look at the Movies
155	The Director Series
156N	Special Problems in Film History and Theory
157	Video History and Criticism
158	Histories of Photography
159/ICAM 150	History of Art and Technology

Note: Any art history courses in Pre-Modern, Early Modern, Modern, and Theory may be taken to fulfill the Group B requirement.

VIS 158 is required for all students with a photography emphasis.

VIS 159/ICAM 150 is required for all students with a computing emphasis.

ADVANCED LEVEL—UPPER DIVISION

Five courses required

180A	Documentary Evidence and the Construction of Authenticity in Current Media Practices
180B	Fiction and Allegory in Current Media Practices

Both of the above are required. Additionally, three electives must be taken. VIS 180A and 180B cannot be taken concurrently.

Electives

Three courses required

Computing Emphasis

147A/B	Electronic Technologies for Art I and II
149/ICAM 130	Seminar in Contemporary Computer Topics

Photography Electives

166	Advanced Camera Techniques

Film and Video Electives

181	Sound and Lighting
182	Advanced Editing
186	Advanced Filmmaking Strategies

VIS180A/B must be completed before any of the following four courses may be taken; instructor approval is required to enroll:

109	Advanced Projects in Media
131	Special Projects in Media
132	Installation Production and Studio
197	Media Honors Thesis

Note: Enrollment in production courses is limited to two per quarter. Production courses are numbered VIS 109, 131, 132, 140/ICAM 101, 141A-B, 145A/ICAM 102, 145B, 147A-B, 164-166, 172-177, and 180A-186.

Interdisciplinary Computing and the Arts (ICAM)

The Interdisciplinary Computing and the Arts major in the Music and Visual Arts departments draws upon, and aims to bring together, ideas and paradigms from computer science, art, and cultural theory. It takes for granted that the computer has become a metamedium and that artists working with computers are expected to combine different media forms in their works. All of this makes the program unique among currently existing computer art or design programs which, on the one hand, usually focus on the use of computers for a particular media (for instance, specializing in computer animation, or computer music, or computer design for print) and, on the other hand, do not enter into a serious dialogue with current research in computer science, only teaching the students "off-the-shelf" software.

The program also recognizes that creating sophisticated artistic works with computers requires a new model of the creative process, one which combines traditional artistic procedures with the experimental research characteristic of the sciences. All in all, it aims to train a new type of cultural producer, who is familiar with art and media history, who is equally proficient with computer programming and artistic skills, who is always ready to learn new technologies, and who is comfortable interacting with scientists and computer industry resources.

The goals of the program are:

- to prepare the next generation of artists who will be functioning in a computer-mediated culture
- to give students necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new aesthetics for computer media
- to prepare students to mediate between the worlds of computer science and technology, the arts, and the culture at large by being equally proficient with computing and cultural concepts
- to give students sufficient understanding of the trajectories of development in computing so they can anticipate and work with the emerging trends, rather than being locked in particular software currently available on the market

LOWER-DIVISION

Eight courses required

Arts

Four courses required

MUS 4	Introduction to Western Music
VIS 1	Introduction to Art-Making: Two-Dimensional Practices
VIS 22	Formations of Modern Art
VIS 70N	Introduction to Media

Computer Science

One course required

CSE 11	Introduction to Computer Science: JAVA

NOTE: CSE 11 is an accelerated course in the JAVA programming language. CSE 8A and 8B, which cover the same material in a non-accelerated format, may be substituted.

Mathematics

Two courses required

MATH 20A	Calculus for Science and Engineering
MATH 20B	Calculus for Science and Engineering

NOTE: MATH 20A and 20B are accelerated calculus courses for Science and Engineering. MATH 10A, 10B, and 10C, which cover similar material in a non-accelerated format, may be substituted.

Computing and the Arts

One course required

ICAM 40/ VIS 40	Introduction to Computing in the Arts

UPPER-DIVISION

Twelve courses required

Survey

One course required

ICAM 110	Computing in the Arts: Current Practice

Foundation

Three courses required

ICAM 101/ VIS 140	Digital Imaging: Image and Interactivity
ICAM 102/ VIS 145A	Digital Media I: Time, Movement, Sound
ICAM 103/ MUS 170	Musical Acoustics

Advanced

Four courses required

Choose one from:

VIS 141B	Computer Programming for the Arts II
VIS 145B	Digital Media II
VIS 147B	Electronic Technologies for Art II
MUS 172	Computer Music II

Choose three from:

ICAM 120	Virtual Environments
ICAM 130/ VIS 149	Seminar in Contemporary Computer Topics
VIS 109	Advanced Projects in Media
VIS 131	Special Projects in Media
VIS 132	Installation Production and Studio
VIS 141A	Computer Programming for the Arts I
VIS 147A	Electronic Technologies for Art I
VIS 174	Media Sketchbook
MUS 171	Computer Music I
MUS 173	Audio Production: Mixing and Editing
MUS 174A-B	Audio and MIDI Studio Techniques
MUS 175	Musical Psychoacoustics
MUS 176	Music Technology Seminar

Theory and History

Two courses required

ICAM 150/ VIS 159	History of Art and Technology

and one of:

VIS 123CN	Early Print Culture: The First Media Revolution
VIS 125E	History of Performance
VIS 150	History and Art of the Silent Cinema
VIS 151	History of the Experimental Film
VIS 152	Film in Social Context
VIS 153	The Genre Series
VIS 154	Hard Look at the Movies
VIS 155	The Director Series
VIS 156N	Special Problems in Film History and Theory
VIS 157	Video History and Criticism
VIS 158	Histories of Photography
VIS 194	Fantasy in Film
MUS 111	Topics/World Music Traditions
MUS 114	Music of the Twentieth Century

Senior Project

Two courses required

ICAM 160A	Senior Project in Computer Arts I

ICAM 160B Senior Project in Computer Arts II

NOTE: Enrollment in production courses is limited to two per quarter. Production courses are numbered VIS 109, 131, 132, 140/ICAM 101, 141A-B, 145A/ICAM 102, 145B, 147A-B, 174. ICAM 120, 160A-B.

Admission to the ICAM Major and to the Media Major with Computing Emphasis

Student interest in the interdisciplinary computing and the arts major (ICAM) and the media major with computing emphasis has been strong. Because the department has limited resources to accommodate student demand, it is necessary to limit admission to these majors to the most highly qualified students. Any student admitted to UCSD beginning in fall 2002 who wishes to declare either an ICAM major or media major with computing emphasis will be admitted to the pre-major.

ICAM MAJOR

Freshman students designated as pre-majors in ICAM must complete the following eight required lower-division courses within six quarters (by the end of their sophomore year):

MUS 4	Introduction to Western Music
VIS 1	Introduction to Art-Making: Two-Dimensional Practices
ICAM 40/ VIS 40	Introduction to Computing in the Arts
MATH 20A**	Calculus
MATH 20B**	Calculus
CSE 11*	Introduction to Computer Science: JAVA
VIS 22	Formations of Modern Art
VIS 70N	Introduction to Media

*CSE 11 is an accelerated course in the JAVA programming language. CSE 8A and CSE 8B, which cover the same material in a non-accelerated format, may be substituted.

** MATH 20A and 20B are accelerated calculus courses for Science and Engineering. MATH 10A, 10B, and 10C, which cover similar material in a non-accelerated format, may be substituted.

MEDIA MAJOR WITH COMPUTING EMPHASIS

Freshman students designated as pre-majors in media with computing emphasis must complete the following six required lower-division courses within six quarters (i.e., by the end of their sophomore year):

Group A (3 courses)

VIS 1	Introduction to Art-Making: Two-Dimensional Practices,
or	
VIS 2	Introduction to Art-Making: Motion and Time-Based Art,
or	
VIS 3	Introduction to Art-Making: Three-Dimensional Practices
VIS 22	Formations of Modern Art
VIS 84	History of Film

Group B (3 courses)

VIS 40/ ICAM 40	Introduction to Computing in the Arts
VIS 60	Introduction to Photography
VIS 70N	Introduction to Media

APPLYING TO THE MAJORS

Upon completion of these courses, pre-majors seeking entrance into either major must formally apply at the Department of Visual Arts Undergraduate Program Office. Admission to the majors will be based on the following criteria: 1) Performance in the required lower-division courses as measured by GPA of 3.0 or higher, determined by the department on an annual basis; 2) Submission of a portfolio of work acceptable to the department; and 3) An artistic statement. The portfolio for both majors will consist of at least two projects that the student has produced in ICAM 40/VIS 40, in another digital arts class, or independently, that in the faculty's judgment demonstrate that the student possesses the artistic ability and technical skills to perform at a high level in upper-division courses in the majors. Pre-majors should consult the undergraduate staff adviser as to the form in which projects should be submitted (disk, slides, tapes, etc.).

TRANSFER STUDENTS

Beginning in fall 2002, transfer students who wish to declare an ICAM major or media with computing emphasis are subject to the major's admissions policies: that is, they will be admitted initially as pre-majors, apply to the major on the same basis as other students, and be subject to the same requirements with respect to lower-division courses, grade-point average, and portfolio evaluation. Transfers entering with 36 or more quarter units must apply for admission to the major no later than their third quarter of study at UCSD. At the time of admission to the pre-major, transfer students' transcripts will be evaluated by the department to determine what courses completed elsewhere, if any, may be petitioned as equivalent to required courses. Students should be prepared to provide course descriptions and other materials that may be required to determine the content of such courses.

CONTINUING STUDENTS (STUDENTS ADMITTED PRIOR TO FALL 2002)

Any student admitted to UCSD before fall 2002 may declare an ICAM major or media major with computing emphasis by completing a Change of Major form at the Visual Arts Undergraduate Program Office, attending a departmental orientation meeting, and obtaining a department stamp.

Policies Relating to the ICAM Major and the Media Major with Computing Emphasis

SATISFACTORY PROGRESS

Any ICAM major or media major with computing emphasis whose GPA in courses required for the major drops below 2.0 will be placed on probationary status the following quarter. If, during that probationary quarter, the GPA does not move back to up 2.0 or better, he or she will be dropped from the major.

PREREQUISITES

Students are required to complete all prerequisites prior to enrolling in any course required for the major. Exceptions must be negotiated with the instructor of the course in question, in consultation with a visual arts adviser.

LIMITATIONS TO ENROLLMENT BY NON-MAJORS

A department stamp is required for all upper-division courses in computing in the arts. Because ICAM and media with computing emphasis are impacted majors, first preference in enrollment in upper-division computing in the arts will be given to those two majors and to music majors with a technology concentration. Second preference will be given to other visual arts and music majors. Other students will be admitted to these courses only if space is available.

Master of Fine Arts Program

The program is designed to provide intensive professional training for the student who proposes to pursue a career within the field of art—including art making, criticism, and theory. The scope of the UCSD program includes painting, sculpture, performance, installation art, photography, film, video, and digital media. The program is unique in that the course of study provides for and encourages student mobility within this range of traditional and media-based components. It also offers opportunities for collaborative work.

The educational path of students is focused around their particular interests in art. The department seeks to provide an integrated and comprehensive introduction to the possibilities of contemporary art production, the intellectual structures which underlie them, and the "world view" which they entail. All art-making activities are considered serious intellectual endeavors, and all students in the program find themselves confronted by the need to develop their intellectual and critical abilities in working out their artistic positions. A body of theory-oriented courses is required. Therefore, we have no craft-oriented programs or facilities; nor do we have any courses in art education or art therapy. The courses offered are intended to develop in the student a coherent and informed understanding of the past and recent developments in art and art theory. The program also provides for establishing a confident grasp of contemporary technological possibilities, including those involved in film, video, photography, and the electronic media.

The program includes formal education in lecture and seminar courses as well as study groups, studio meetings, and quarterly departmental critiques. Course work is intended to place art making in critical and intellectual context but doesn't underestimate the central importance of the student's own work. In fact, this aspect of the student's activity is expected to be self-motivated and forms the core around which the program of study operates and makes sense.

No two students will necessarily follow the same path through the degree program, and the constitution of individual programs will depend upon the analysis of their individual needs and interests, worked out by students in collaboration with their individual faculty advisers.

Admission Requirements

Grade-Point Average—An overall GPA of 3.00 and a 3.50 in a student's undergraduate major is required.

Art History—Students are expected to have had at least four semester courses or six quarter courses in art history and/or film history/criticism at the undergraduate level. Those who have a broader art history background will have a better chance of being awarded teaching assistantships. Students without this requirement can be admitted, but they may be expected to make up the six courses in excess of the seventy-two units required for the degree. If there are questions concerning this requirement, check with the department.

Statement—Students are required to submit an essay of one-to-three pages on the direction of their work and its relationship to contemporary art. This essay should be critical in nature, refer explicitly to the student's own work, and may refer to other artists, recent events in art history, and issues in domains other than art that have bearing on the student's process, thought, and work.

Work—Students are asked to submit documentation of their best work in a suitable format such as slides, videotape, film, diskettes, CD, DVD, photographs, etc. These will be returned upon review of the application. It is necessary to include a self-addressed, stamped envelope for return of work.

Regular University Admission Policies

Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office using the UCSD online application on or before Thursday, January 15, 2005. Portfolio, statement, letters of recommendation, and official transcripts should be sent directly to the department.

Requirements for the Degree

The M.F.A. is considered the terminal degree in studio work, and is a two- to three-year program. The following requirements must be completed in order to receive the M.F.A.:

First Year Review—This review takes place in the third quarter in residence. Students make a formal presentation of their work to a faculty committee; this includes a position paper and an oral examination. This presentation is considered a departmental examination, and if at its conclusion the student's work is judged to be inadequate, the student may be dismissed regardless of GPA, or may be reviewed again in the fourth quarter.

Seventy-two units of course work, including a four-unit apprentice teaching course, are required. Students may select sixteen of these units (four courses) from upper-division undergraduate course offerings. (See listings in this catalog.) There are six required Visual Arts core seminars:

- Introduction to Graduate Studies in the Visual Arts (VIS 200)
- Contemporary Critical Issues (VIS 201)
- Art Practice Seminar (VIS 202)
- Working Critique Seminar (VIS 203)
- Introduction to Graduate Studies in Art Practice (VIS 205)
- one course in either Art Practice/Theory group or the Art History/Theory/Criticism group

Specific information on other course distribution requirements can be obtained from the department. One additional graduate course is required and must be taken in another department.

Students who remain registered in the third (optional) year must average one graduate course per quarter.

The M.F.A. Final Presentation

Presentation of Work—During the last quarter in residence, each student is required to present to the public a coherent exhibition or screening of his or her work.

Oral Examination—A committee of three Department of Visual Arts faculty members and one faculty member from another department will administer an oral examination to each student covering the student's work and its relationship to the field of art.

Thesis—Students are required to submit some form of written work for the M.F.A. degree. Four options are available:

1. Catalog—The student would design and have printed an actual catalog. This would include a critical essay of approximately 1,500 words.

2. Critical paper—The student would write a critical paper of 3,000 words analyzing his or her process and the relationship of his or her work to recent art history, with references to contemporary styles and specific artists.
3. Analytical essay on some phase of art—Students who have focused on both art production and art criticism would write a 3,000 word critical essay on any current art position. A brief discussion (750 words) of the student's work would also be included.
4. Critical thesis—Students whose emphasis is essentially criticism and who do not present an M.F.A. exhibition would write a forty- to fifty-page thesis—the topic to be decided by the student and his or her adviser.

Applications and additional information can be obtained from the graduate office of the Department of Visual Arts.

Ph.D. Program

The Department of Visual Arts offers the Ph.D. and M.A. degrees in art history, theory, and criticism with concentrations in any of the areas in which faculty do research (see below). Offering a distinct alternative to existing Ph.D. programs in art history, the program centers on a unique curriculum that places art objects and practice at the center of inquiry, both past and present, and encompassing fine art, media, and mass culture, even as it encourages examination of the larger frameworks—historical, cultural, social, intellectual, and theoretical—within which the category "art" has been contextualized in the most recent developments in the discipline.

This program is also distinctive in that it is housed within a department that has been for many years one of the nation's leading centers of art practice and graduate education in studio, media, and—most recently—digital media. The offering of the Ph.D. and M.F.A. degrees is based on the department's foundational premise that the production of art and the critical, theoretical, and historical reflection upon it inherently and necessarily participate in a single discursive community.

The innovative character of this program is most evident in a unique curricular structure that is broadly organized into three groups of seminars. The importance of critical theory to the field today is reflected in the seminars under the **Theories/New Visions** group, while the study of art in its concrete historical, social, and cultural contexts, across different cultures and media, is emphasized in time, place, and media specific seminars listed under **Times/Terrains**.

The program builds most distinctively on recent developments in the field in the seminars under the heading **Categories/Constructs.** These seminars address the core questions about artworks and practices that the department believes every doctoral student in art and media history, whatever his or her area of specialization, should engage. How is the category "art" itself produced, now and in the past, in the urbanized west and in other cultures, and in the context of ever-changing technologies? How are artistic identities constructed across distinct epochs and societies, and with reference to categories such as gender and ethnicity? What are the circumstances and contexts (social, intellectual, institutional, and the like) within which art is both produced and disseminated? What are the alternative modes of engaging art objects and practices and what are the histories and theoretical assumptions of the specialized discourses used to describe and analyze them?

Seminars in the **Categories/Constructs** group are unique in the degree to which they foreground the self-critical turn in recent art and media history by making reflection upon the central concepts, constructs, categories, and languages of art historical inquiry a key programmatic concern. They are also distinctive in that they are designed to cut across traditional categories of history and contemporaneity, art and media (film, video, photography, digital media), history and theory, and to promote cross-cultural inquiry insofar as they center on questions crucial to the study of art of diverse cultures as well as diverse art forms and historical epochs.

Admission

Applicants may apply to the Ph.D. program only. The policy of UCSD is to admit in the fall quarter only. Applications for admission must be postmarked January 15, and selections will be made by April 1. For circumstances under which the M.A. is granted, see below. Prior to matriculation, students must have obtained a bachelor's or master's degree in art history, art practice, or another field approved by the departmental committee on graduate studies, such as (but not limited to) history, literature, anthropology, or philosophy.

Applicants must submit their academic transcripts, scores on the Graduate Record Examination, three letters of recommendation, a statement of purpose (no more than 750 words), and a sample of written work (e.g., senior honors thesis, M.A. thesis, or other research or critical paper, preferably in art or media history). An overall GPA of 3.00 and a 3.50 in a student's undergraduate major are required. The Test of English as a Foreign Language (TOEFL) is required for international applicants. Applicants must have a good reading knowledge of at least one of the foreign languages required for graduate study, normally either French or German, at the time they enter the program.

Please note that no application will be processed until all required information has been received. Students should submit applications with the application fee to the graduate admissions office on or before Thursday, January 15, 2005. Statements of purpose, writing samples, and letters of recommendation should be sent directly to the department.

Areas of Concentration

During the first year of study, each student must declare an area of major concentration in consultation with his or her individual faculty adviser and with the approval of the Ph.D. graduate adviser. The major concentration may be selected from the following: ancient art; medieval art; renaissance art; early modern art; modern art (nineteenth and twentieth centuries); contemporary art; media studies (film, video, photograph, digital media); and Meso-American art. A student may also choose, in consultation with his or her adviser and the Ph.D. graduate adviser, a field of emphasis that cuts across the areas within the department (e.g., art or media theory and criticism) or, with appropriate approvals, one that involves another department (e.g., early modern art history and history). Once the field of emphasis is established, it will be the responsibility of the student and his or her adviser to devise a program of courses, independent study and outside reading, over and above the required program, that will ensure that the student will attain command of the major field of emphasis.

Course Work

A normal full-time program consists of 12 units per quarter. Prior to the qualifying examination, students will be expected to complete 84 units, equivalent to 21 four-unit courses (normally accomplished in seven to nine quarters). This 21-course requirement will normally be satisfied by a combination of graduate seminars, reading courses, independent study, and apprentice teaching. No more than three may be apprentice teaching; no more than two may be reading courses; and no more than two may be graduate seminars in art practice or art practice/theory. By reading course, we mean an upper-division undergraduate course which a student takes with additional reading and writing requirements. Full-time study is expected; part-time study will be considered on a case-by-case basis and for a limited time. Graduate seminars in Art History, Theory, and Criticism should comprise the bulk of the student's twenty-one-course requirement.

All students are required to take the following seminars in their first year of study: VIS 200 Introduction to Graduate Studies in Visual Art (offered in fall only) and VIS 204 Re-Thinking Art History. Students must also take, at some point, one seminar from the Art Practice/Theory group, VIS 210-VIS 219. One four-unit apprentice teaching course is also required.

In order to ensure that students attain a reasonable measure of historical and cultural breadth, all students are required to take one seminar from at least four of the following areas: 1) ancient or medieval art; 2) renaissance or early modern art; 3) modern or contemporary art; 4) media studies; 5) non-western art.

If a student has completed some graduate work in art history, theory, and criticism before entering UCSD, there may be some appropriate adjustments in course work as approved by petition to the Ph.D. graduate adviser and the department chair.

Foreign Language Requirements

Students will be required to demonstrate reading knowledge of at least two of the foreign languages required for advanced study in art history, theory, and criticism. Normally one of these should be either French or German, and the other should be the language most directly relevant to the student's area of specialization. The student and his or her individual adviser will jointly determine the examination languages.

Foreign language requirements will normally be satisfied by passing examinations requiring sight translation of texts in art history, theory, and criticism. No student who has not passed one such examination will be admitted to second-year study, and no student who has not passed two will be admitted to third-year study.

Examinations

No later than the first quarter of the third year, the student, in consultation with his or her individual adviser, will form a qualifying examination committee which will consist of at least three members drawn from the visual arts department faculty and one drawn from another department. This committee will conduct the qualifying examination required by university policy and oversee completion of the dissertation. The membership of the committee must be approved by the Ph.D. graduate adviser and ultimately the dean of Graduate Studies. The qualifying examination will consist of a three-hour written examination, followed within the next two days by a two-hour oral examination, in the student's major field. A student must have completed all required course work and passed all language examinations before taking the qualifying examination, which will be held no later than the end of the third year. Upon successful completion of the qualifying examination, the student will be advanced to candidacy.

A student who fails either the written or the oral examination may petition the committee and Ph.D. graduate adviser to repeat the examination. Any student who fails a second time will not be advanced to candidacy. In some cases, the committee and graduate program director may judge such student eligible to receive a terminal M.A. (see below).

Dissertation

Following successful completion of the qualifying examinations, the student will complete a doctoral dissertation in his or her field of emphasis. Upon selection of the dissertation topic, a colloquium will be held at which the student will present a prospectus that outlines the topic and program of research for discussion by the graduate group and for approval by his or her committee. After the committee has reviewed the finished dissertation, the student will defend his or her thesis orally. In exceptional cases, the thesis defense may be waived by unanimous agreement of the committee members and the Ph.D. graduate adviser.

Normative Time from Matriculation to Degree

The student will normally advance to candidacy in two and one-half to three years and must be advanced to candidacy by the end of four years. He or she will normally complete the research for and writing of the dissertation by the end of his or her sixth year of study. Total university support may not exceed seven years, and total registered time at UCSD may not exceed eight years.

M.A. Degree

All students will apply for and be admitted to the Ph.D. program. An M.A. degree may be awarded to continuing Ph.D. students upon successful completion of the following: (1) at least 12 four-unit courses, including VIS 200 *Introduction to Graduate Studies in Visual Art*, VIS 204 *Re-Thinking Art History*, and one seminar from the group VIS 210-219; (2) a three-hour written examination in a designated field of emphasis (see **Examinations** above); (3) one language examination; and (4) an M.A. thesis. The M.A. is not automatically awarded; students must apply in advance to the Ph.D. graduate adviser and in accordance with university procedures, no later than the first two weeks of the quarter in which they expect to receive the degree.

Students who demonstrate minimal competence on the qualifying examination, but not sufficient competence to continue in the program, may be awarded a terminal M.A. upon completion of the requirements set forth in the paragraph above.

COURSES

Note: The following list of courses represents all visual arts offerings; not all courses are offered each year.

LOWER-DIVISION

1. Introduction to Art-Making: Two-Dimensional Practices (4)
An introduction to the concepts and techniques of art making with specific reference to the artists and issues

of the twentieth century. Lectures and studio classes will examine the nature of images in relation to various themes. Drawing, painting, found objects, and texts will be employed. *Prerequisite: none.* This course is offered only one time each year.

2. Introduction to Art Making: Motion and Time Based Art (4)
An introduction to the process of art making utilizing the transaction between people, objects, and situations. Includes both critical reflection on relevant aspects of avant-garde art of the last two decades (Duchamp, Cage, Rauschenberg, Gertrude Stein, conceptual art, happenings, etc.) and practical experience in a variety of artistic exercises. This course is offered only one time each year.

3. Introduction to Art-Making: Three-Dimensional Practices (4)
An introduction to art making that uses as its base the idea of the "conceptual." The lecture exists as a bank of knowledge about various art world and non-art world conceptual plays. The studio section attempts to incorporate these ideas into individual and group projects using any "material." This course is offered only one time each year.

20. Introduction to Art History (4)
This course examines history of Western art and architecture through such defining issues as the respective roles of tradition and innovation in the production and appreciation of art; the relation of art to its broader intellectual and historical contexts; and the changing concepts of the monument, the artist, meaning, style, and "art" itself. Representative examples will be selected from different periods, ranging from Antiquity to Modern. Content will vary with the instructor. *Prerequisite: none.*

21. Introduction to Non-Western Art (4)
This course offers a comparative and thematic approach to the artistic achievements and cultural productions of societies with widely divergent structure and political organization from the ancient kingdoms and empires of Central America and Asia to the tribes of Africa and the chiefdoms of Native American and Oceanic peoples. Topics vary with the interests and expertise of the instructor. *Prerequisite: none.*

22. Formations of Modern Art (4)
Wide-ranging survey introducing the key aspects of modern art and criticism in the nineteenth and twentieth centuries, including Neo-Classicism, Romanticism, Realism, Impressionism, Post-Impressionism, Symbolism, Fauvism, Cubism, Dada and Surrealism, Abstract Expressionism, Minimalism, Earth Art, and Conceptual Art. *Prerequisite: none.*

23. Information Technologies in Art History (4)
This seminar introduces fundamentals of art historical practice such as descriptive and analytical writing, compiling annotated bibliographies with traditional and online resources, defining research topics, and writing project proposals. *Prerequisite: none.*

Note: Prerequisite for VIS 112 and highly recommended for all other seminars. Must be taken within a year of declaring major or transferring into the art history program.

40. Introduction to Computing in the Arts (4)
(Cross-listed with ICAM 40.) An introduction to the conceptual uses and historical precedents for the use of computers in art making. Preparation for further study in the computer arts area by providing overview of theoretical issues related to the use of computers by artists. Introduces the students to the program's computer facilities and teaches them basic computer skills. *Prerequisite: open to visual arts and ICAM majors and minors only.* Materials fee required.

60. Introduction to Photography (4)
An in-depth exploration of the camera, combining darkroom techniques in black and white, and color photography. Emphasis is placed on developing reliable control of the fundamental materials and procedures through lectures, field, and lab experience. Basic discussion of image making included. *Prerequisite: open to visual arts art history, ICAM, media, studio, and music ICAM majors and minors only.* Materials fee required.

70N. Introduction to Media (6)
Operating as both a lecture and production course, this introductory class provides a technical foundation and theoretical context for all subsequent production-oriented film and video studies. In the laboratory, the student will learn the basic skills necessary to initiate video production. Completion of Visual Arts 70N is necessary to obtain a media card. *Prerequisite: none.* Materials fee required.

84. History of Film (4)
A survey of the history and the art of the cinema. The course will stress the origins of cinema and the contributions of the earliest filmmakers, including those of Europe, Russia, and the United States. Materials fee required. This course is offered only one time each year.

87. Freshman Seminar (1)
The Freshman Seminar program is designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Freshman seminars are offered in all campus departments and undergraduate colleges, and topics vary from quarter to quarter. Enrollment is limited to fifteen to twenty students with preference given to entering freshmen.

UPPER-DIVISION

104A. Performing the Self (4)
Using autobiography, dream, confession, fantasy, or other means to invent one's self in a new way, or to evoke the variety of selves in our imagination, the course experiments with and explores the rich possibilities available to the contemporary artist in his or her own persona. *Prerequisites: two from VIS 1, 2, 3 and either 22 or 111.*

104BN. Verbal Performance (4)
The course is designed to introduce the student to the part played by language in contemporary performance art. Monologues, musically derived sound poetry, vocalizations, verbally inscribed installations, and the uses of language and voice in film and video are some of the areas explored. *Prerequisite: VIS 104A.*

104CN. Personal Narrative (4)
The course will explore primary experiential materials to more fully understand the relationship of voice, style, language, and personality, to issues of memory, identity, self-awareness, and desire. Instructor and student will discuss student work as well as published personal narrative. *Prerequisite: VIS 104BN.*

105A. Drawing: Representing the Subject (4)
A studio course in beginning drawing covering basic drawing and composition. These concepts will be introduced by the use of models, still life, landscapes, and conceptual projects. *Prerequisites: two from VIS 1, 2, 3 and either 22 or 111.*

105B. Drawing: Practices and Genre (4)
A continuation of VIS 105A. A studio course in which the student will investigate a wider variety of technical and conceptual issues involved in contemporary art practice related to drawing. *Prerequisite: VIS 105A.*

105C. Drawing: Portfolio Projects (4)
A studio course in drawing, emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. *Prerequisite: VIS 105B.*

105D. The Aesthetics of Chinese Calligraphy (4)
This course examines Chinese calligraphy as an art form. This conceptually based introductory course combines fundamental studio exercises with creative explorations. Students are exposed to traditional and contemporary forms of Chinese calligraphy while encouraged to experiment with basic aesthetic grammars. *Prerequisite: VIS 105A.*

105E. Chinese Calligraphy as Installation (4)
This course concerns East–West aesthetic interactions. What are the conceptual possibilities when calligraphy, an ancient form of Chinese art, is combined with installation, a contemporary artistic Western practice? Emphasis is placed on such issues as cultural hybridity, globalization, multiculturalism, and commercialization. *Prerequisite: VIS 105D.*

106A. Painting: Image Making (4)
A studio course focusing on problems inherent in painting—transferring information and ideas onto a two-dimensional surface, color, composition, as well as manual and technical procedures. These concepts will be explored through the use of models, still life, and landscapes. *Prerequisites: two from VIS 1, 2, 3 and either 22 or 111.*

106B. Painting: Practices and Genre (4)
A continuation of VIS 106A. A studio course in which the student will investigate a wider variety of technical and conceptual issues involved in contemporary art practice related to painting. *Prerequisite: VIS 106A.*

106C. Painting: Portfolio Projects (4)
A studio course in painting emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. *Prerequisite: VIS 106B.*

107A. Sculpture: Making the Object (4)
A studio course focusing on the problems involved in transferring ideas and information into three-dimensions. Course will explore materials and construction as dictated by the intended object. Specific problems to be investigated will be determined by the individual professor. *Prerequisites: two from VIS 1, 2, 3 and either 22 or 111.*

107B. Sculpture: Practices and Genre (4)
A studio course in which the student will investigate a wider variety of technical and conceptual issues as well as materials involved in contemporary art practice related to sculpture. *Prerequisite: VIS 107A.*

107CN. Sculpture: Portfolio Projects (4)
A studio course in sculpture emphasizing individual creative problems. Class projects, discussions, and critiques will focus on issues related to intention, subject matter, and context. *Prerequisite: VIS 107B.*

108. Advanced Projects in Art (4)
A studio course for serious art students at the advanced level. Stress will be placed on individual creative problems. Specific orientation of this course will vary with the instructor. Topics may include film, video, photography, painting, performance, etc. May be repeated twice for credit. *Prerequisite: consent of instructor, department stamp required.*

109. Advanced Projects in Media (4)
Individual or group projects over one or two quarters. Specific project organized by the student(s) will be realized during this course with instructor acting as a close adviser/critic. Concept papers/scripts must be completed by the instructor prior to enrollment. *Prerequisites: VIS 180A and VIS 180B for media majors, or consent of instructor for ICAM majors. Open to media and ICAM majors only.* Two production course limitation.

110A. Contemporary Issues and Practices (4)
An examination of contemporary studio art practice. The course is divided among research, discussion, and projects. Field trips to galleries and discussions with artists will combine with the students moving their work into a dialogue with the issues raised. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110B. New Genre/New and Old Technologies (4)
Advances the idea of different materials, methods, and practices raised at the intermediate level in drawing, painting, and sculpture, and explores and utilizes new and traditional media in studio production of work. Emphasis on multiple media, combining traditional and electronic media, as well as different genres, in an attempt to create new directions for the student's ideas. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110C. Proposals, Plans, Presentations (4)
Explores the use of the maquette, or sketch, in the process of developing, proposing and planning visual works in various media for public projects, site specific works, grants, exhibition proposals, etc. The student will work on synthesizing ideas and representing them in alternate forms that deal with conception, fabrication and presentation. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110D. Visual Narrative/Tableau (4)
Examination and use of multi-media in exploring narrative issues in art making. The identification of subject leads to the determination of choice or mix of media and construction of narrative. Traditional studio practice surrounding narrative painting and sculpture, forms such as comic drawing or story boards, and the use of photo, video, and computing. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110F. Installation: Cross-Disciplinary Projects (4)
Attempts to expand the idea contained in a singular work, or object, into the use of multiple objects, images, and media that redefines the idea as well as the space for which it is intended. Examination of historic, modern, and contemporary works would be brought into discussion of project development and execution. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110G. The Natural and Altered Environment (4)
Explores the natural and altered environment as a basis for subject as well as placement of work pertaining to the environment. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110H. Image and Text Art (4)
Devoted to the study and practice of the multiple ways in which writing and other forms of visible language have been incorporated into contemporary and traditional artworks, including artists' books, collaging and poster art, visual and concrete poetry, typographical experiments, and calligraphies. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110I. Performing for the Camera (4)
The dematerialization of the performer into a media based image—video, film, slides, still photographs, using the camera as a spy, a co-conspirator, a friend or a foe—employing time lags, spatial derangement, image deconstruction, along with narrative, text, history, to invent time based pieces that break new ground while being firmly rooted in an understanding of the rich body of work done in this area over the last three decades. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110J. Ritual Performance (4)
The course will explore forms of art making that use dream and myth, body art, dance, social drama, happenings, story telling, and enactments of contemporary and traditional forms of performance art that involve a crossing of the lines between different arts and genres. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110K. Installation Performance (4)
The artist as performer working with materials, objects, props, technology, to create multi-layered, experimental, interesting three-dimensional art spaces in which the artist's body, voice, actions, or memory, moves through, enlivens, or haunts the physical space. *Prerequisites: two from VIS 104CN, 105C, 106C, 107CN and 147B or consent of instructor.*

110M. Studio Honors I (4)
An advanced studio course intended for the productive, motivated, and self-disciplined student with a clear and unified body of work. The intent is to help refine and expand the student's work and ideas towards an exhibition and verbal written position. *Prerequisite: consent of the instructor, department stamp required.* **Note:** The Studio Honors I and the attached Studio Honors II count as one course toward the fulfillment of a Group IV requirement.

110N. Studio Honors II (4)
The second advanced studio course in the Honors Program in Studio, the successful completion of which will lead towards an honors degree in the studio major. The course builds on the critical and technical issues raised in Studio Honors I. *Prerequisite: VIS 110M.*

111. The Structure of Art (4)
This course will address the structure of signification in art. We will consider the modes of signification in a wide range of representational and nonrepresentational artworks from architecture through drawing, painting, sculpture, photography, video, and film to performance. Examples will be selected from various places and epochs. This course is required for transfer students. This course is offered during spring quarter only.

112. Art Historical Methods (4)
A critical review of the principal strategies of investigation in past and present art-historical practice, a scrutiny of their contexts and underlying assumptions, and a look at alternative possibilities. The various traditions for formal and iconographic analysis as well as the categories of historical description will be studied. Required for all art history and criticism majors. *Prerequisites: VIS 23 and one upper-division art history course; two recommended.*

113AN. History of Criticism I: Early Modern (4)
Introducing Classical Medieval and Renaissance theories of the image, we concentrate on developments in the eighteenth and nineteenth centuries: Neo-Classicism, Romanticism, Realism, and Symbolism. *Prerequisite: upper-division sanding; VIS 112 or two upper-division courses in art history strongly recommended.*

113BN. History of Criticism II: Early Twentieth Century (1900–1950) (4)
The principal theories of art and criticism from Symbolism until 1945: formalism and modernism, abstraction, Surrealism, Marxism, and social art histories, phenomenology, existentialism. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

113CN. History of Criticism III: Contemporary (1950–Present) (4)
Recent approaches to the image in art history and visual culture: structuralism, semiotics, psychoanalysis, post-structuralism, post-modernism, feminism, post-colonialism, cultural studies. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

117A. Narrative Structures (4)
How can a fixed image represent events in time? The strategies of storytelling and their consequences for the meaning of works of art will be investigated. Content of the course will vary. May be repeated twice for credit with permission of the instructor. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

117B. Theories of Representation (4)
A discussion of major Western theories of representation with a critique of their applicability to art. Material is drawn from a wide variety of historical periods from Antiquity to Modern. Emphasis is given to theories special significance for art history, but some attention is given to representation theories in other contexts. Readings may include selections from such modern theorists as Peirce, Panofsky, Gombrich, Bernheimer, Barfield, Barthes, Goodman, Foucault, Bryson, Summers, and Mitchell and from classic texts by Plato, Aristotle, John of Damascus, Alberti, and Leonardo. *Prerequisite: none; one or more upper-division courses in art history strongly recommended.* **Note:** Majors must have taken VIS 23.

117C. Art in Time: The Historical Dimensions (4)
How does a work of art live in time? What connects it with art past, present, and future? Where does tradition and innovation intersect? Why is past art always an issue for contemporary practice? This seminar considers these and other questions as well as different theoretical models for understanding art's historical dimension. Specific issues and readings may vary from year to year. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

117D. Portraiture (4)
Portraiture appeals to the human interest in human beings. This seminar explores how portraits from dif-

ferent periods (potentially ancient through modern) reflect cultural ideas about citizens even as they purport to convey actual appearances. Content may vary with instructor. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

117E. Problems in Ethnoaesthetics (4)
This seminar will address and critique various approaches to studying the art of non-Western societies with respect to their own aesthetic and cultural systems. Students are encouraged to explore comparative philosophies of art and test paradigms of Western aesthetic scholarship. *Prerequisite: none; VIS 21 or 112 or two upper-division courses in art history strongly recommended.*

120A. Greek Art (4)
Greek classical civilization was a turning point in the history of humanity. Within a new kind of society, the idea of the individual as free and responsible was forged, and with it the invention of history, philosophy, tragedy, and science. The arts which expressed this cultural explosion were no less revolutionary. The achievements of Greek art in architecture, sculpture, and painting will be examined from their beginnings in the archaic period, to their epoch-making fulfillment in the classical decades of the fifth century B.C., to their diffusion over the entire ancient world in the age of Alexander and his successors. *Prerequisite: none; VIS 20 recommended.*

120B. Roman Art (4)
Roman art was the "modern art" of antiquity. Out of their Italic tradition and the great inheritance of Greek classic and Hellenistic art, the Romans forged a new language of form to meet the needs of a vast empire, a complex and tumultuous society, and a sophisticated, intellectually diverse culture. An unprecedented architecture of shaped space used new materials and revolutionary engineering techniques in boldly functional ways for purposes of psychological control and symbolic assertion. Sculpture in the round and in relief was pictorialized to gain spatial effects and immediacy of presence, and an extraordinary art of portraiture investigated the psychology while asserting the status claims of the individual. Extreme shifts of style, from the classicism of the age of Augustus to the expressionism of the third century A.D., are characteristic of this period. The new modes of architecture, sculpture, and painting, whether in the service of the rhetoric of state power or of the individual quest for meaning, were passed on to the medieval and ultimately to the modern West. *Prerequisite: none; VIS 20 recommended.*

120C. Late Antique Art (4)
During the later centuries of the Roman Empire, the ancient world underwent a profound crisis. Beset by barbarian invasions, torn by internal conflict and drastic social change, inflamed with religious passion which was to lead to a transformed vision of the individual, the world, and the divine, this momentous age saw the conversion of the Roman world to Christianity, the transfer of power from Rome to Constantinople, and the creation of a new society and culture. Out of this ferment, during the centuries from Constantine to Justinian, there emerged new art forms fit to represent the new vision of an otherworldly reality: a vaulted architecture of diaphanous space, a new art of mosaic which dissolved surfaces in light, a figural language both abstractly symbolic and urgently expressive. The great creative epoch transformed the heritage of classical Greco-Roman art and laid the foundations of the art of the Christian West and Moslem East for the next thousand years. *Prerequisite: none; VIS 20 or 120B recommended.*

120D. Prehistoric Art (4)
Tens of thousands of years before the dawn of history, the hunting peoples of Ice Age Europe invented the first language of visual images. Their painted cave sanctuaries, such as Lascaux and Altamira, are dazzling in their expressive vitality and mystifying in meaning. This course link cave art with what is known about contemporary conditions of nature, society, and human life. *Prerequisite: none; VIS 20 recommended.*

121AN. The Idea of Medieval Art (4)
This course introduces the art and architecture of Western Europe from the fourth through the thirteenth centuries. A leading theme is the changing idea of what "medieval" has come to mean, from the coining of the terms "Middle Ages" and "Dark Ages" by Renaissance humanists, to the Romantic fascination with Gothic ruins, and finally to the fantasy medievalisms of twentieth century popular culture and current approaches to medieval art in art historical scholarship. *Prerequisite: none; VIS 20 recommended*

121B. Castles, Cathedrals, and Cities (4)
This course explores European art and architecture of the twelfth- through the fourteenth-centuries against the background of the rituals of chivalry, church, and civic life that made a dazzling spectacle of art and life in the High Middle Ages. *Prerequisite: upper-division standing; VIS 20 recommended.*

121C. Art and Gender in the Middle Ages and Renaissance (4)
This seminar explores how different representational traditions involving women and men reflected but also contributed to the formation of period beliefs about gender difference. It also considers the differential roles of women and men as producers and patrons of art and period expectations and practices involving male and female spectatorship. Specific content may vary from year to year. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

121D. The Illuminated Manuscript in the Middle Ages (4)
This seminar charts the changing pictorial problematics presented by the illuminated manuscript from its origins in late antiquity to the disintegration of the manuscript tradition under the impact of the first printed books. Works such as the *Book of Kells* and the *Tres Riches Heures of the Duke of Berry*, among the most brilliant achievements of Western painting, are among those considered. *Prerequisite: none; VIS 112 or two upper-division courses in art history strongly recommended.*

121E. Pursuit of the Millennium (4)
(Cross-listed with HIEU 115) The year 2000 provokes questions about the transformation of time, culture, and society. Taking the year 1000 as a touchstone, this class examines the history of apocalyptic expectations in the Middle Ages through a close scrutiny of both texts and art. *Prerequisite: none.*

122AN. Renaissance Art (4)
Italian artists and critics of the fourteenth through sixteenth centuries were convinced that they were participating in a revival of the arts unparalleled since Antiquity. Focusing primarily on Italy, this course traces the emergence in painting, sculpture and architecture, of an art based on natural philosophy, optical principles, and humanist values, which embodied the highest intellectual achievement and deepest spiritual beliefs of the age. Artists treated include Giotto, Donatello, Masaccio, Brunelleschi, Jan van Eyck, Mantegna, Botticelli, Leonardo da Vinci, Michelangelo, Raphael, Bramante, Durer, and Titian. *Prerequisite: none; VIS 20 recommended.*

122CN. Defining High Renaissance Art (4)
Since the sixteenth century, the names of Leonardo da Vinci, Raphael, and Bramante have conjured up images of the highest artistic achievement. This course shows the intellectual concerns common to the artist and scientific productions of Leonardo help illuminate the distinctive character of the art of two of his greatest contemporaries. *Prerequisite: none; VIS 20, 122AN, or 122BN recommended.*

122D. Michelangelo (4)
This course offers new approaches to understanding Michelangelo's greatest creations. By considering how each work relates to the setting for which it was intended, by regarding critical literature and artistic borrowings as evidence about the works, and by studying the thought of the spiritual reformers who counseled Michelangelo, new interpretations emerge which show the artist to be a deeply religious man who invested his works with both public and private meanings. *Prerequisite: upper-division standing; or one of the following courses: VIS 20, 21, 22 or 23; or any upper-division course in art history and criticism or in European history.*

122E. The City in Italy (4).
(Cross-listed with HIEU 124.) Each Italian city takes pride in having a style and history all its own. This lecture course, usually taught in conjunction with the history department's HIEU 124, considers various approaches to and models for understanding the social, political, economic, and artistic fabric of such renowned medieval and Renaissance cities as Rome, Florence, Venice, Naples, Milan, and Sienna. Content varies from year to year. May be repeated three times for credit. *Prerequisite: none; an upper-division course in Pre-Modern or Early Modern art history or Pre-Modern or Early Modern European history is strongly recommended.* **Note**: May be used to fulfill the seminar requirement for art history majors.

123AN. Between Spirit and Flesh: Northern Art of the Early Renaissance (4)
The art of the Early Renaissance in Northern Europe is marked by what appears to be striking conflict: on the one hand, a new love of nature and of the pleasures of court society; and on the other, an intensified spirituality and focus on personal devotion. This course explores these provocative cross-currents in works by master painters like Jan van Eyck and Hieronymous Bosch as well as in lesser known mass-produced objects of everyday use. *Prerequisite: none; VIS 20, 121AN, and/or 122AN recommended.*

123BN. Jan van Eyck (4)
Intensive study of the career of Jan van Eyck, whose magical paintings have always fascinated viewers with their microscopically detailed naturalism and subtly disguised spiritual meanings. Masterpieces such as the "Arnolfini Wedding" are emphasized. *Prerequisite: none; VIS 112 or two upper-division courses in art history recommended.*

123CN. Early Print Culture: The First Media Revolution (4)
During the fifteenth century, two inventions—printed pictures and books printed with moveable type—revolutionized both Western art making and information technologies. This seminar considers the condi-

tions that made possible this "first media revolution," its immediate impact and its continuing resonances in early modern visual culture. *Prerequisite: none; VIS 112 or two upper-division courses in art history recommended.*

124AN. Baroque Art (4)
This course discusses the achievement of such major artists as Caravaggio, Gentileschi, Bernini, Borromini, Rubens, Rembrandt, Velasquez, and Vermeer within a culture marked by increasing intellectual specialization, the entrenchment of modern national boundaries, the co-existence of rival religious organizations, the formations of artistic academies, and the rise of an art market serving the flourishing middle class. *Prerequisite: none; VIS 20 recommended.*

124BN. Art and the Enlightenment (4)
Eighteenth century artists and critics were convinced that art could be a force to improve society. This course places Roccoco and Neo-Classical artists such as Watteau, Fragonard, Tiepolo, Hogarth, Reynolds, Vigee Lebrun, Blake, and David, within the context of art academies, colonialism, the Grand Tour, Enlightenment conceptualizations of history and nature, and the American and French Revolutions. *Prerequisite: none; VIS 20 or 22 recommended.*

124CN. Nineteenth Century Art (4)
A critical survey discussing the crisis of the Enlightenment, Romanticism, Realism and Naturalism, Academic Art and History Painting, representations of the New World, the Pre-Raphaelites, Impressionism, international Symbolism, Post-Impressionism, and the beginnings of Modernism. *Prerequisite: none; VIS 20 or 22 recommended.*

125A. Twentieth Century Art (4)
A critical survey outlining the major avant-gardes after 1900: Fauvism, Cubism, Metaphysical Painting, Futurism, Dada, Surrealism, Neo-Plasticism, Purism, the Soviet avant-garde, Socialist Realism, and American art before Abstract Expressionism. *Prerequisite: none; VIS 20 or 22 recommended.*

125BN. Contemporary Art (4)
Art after Abstract Expressionism: Happenings, Post-painterly Abstraction, Minimalism, Performance, Earth Art, Conceptual Art, Neo-Expressionism, Post-Conceptualism and development in the 1990s, including non-Western contexts. We also explore the relation of these tendencies to Postmodernism, Feminism, and ideas of Postcoloniality. *Prerequisite: none; VIS 20 or 22 recommended.*

125CN. Histories and Contexts of Conceptual Art (4)
A detailed exploration of the history, theories, and social contexts of the Conceptual Art movement from mid-1960s to the 1980s. Artists/theorists discussed include Duchamp, Kosuth, Weiner, Baldessari, Barry, Piper, Darboven, Huebler, Art and Language, Beuys, Holzer, and Neo-Conceptualism. *Prerequisite: none; VIS 20 or 22 recommended.*

125DN. Marcel Duchamp (4)
A critical examination of the work of one of the most radical twentieth century artists. In Duchamp's four dimensional perspective, the ideas of art-object, artist, and art itself are deconstructed. *The Large Glass and Etant Donnees* ... are the twin foci of an *oeuvre* without boundaries in which many twentieth-century avant-garde devices such as chance techniques, conceptual art, and the fashioning of fictive identities, are invented. *Prerequisite: none.*

125E. History of Performance Art (4)
The novel, perplexing, outrageous, and witty modes of performance by such contemporary artists as Acconci, Anderson, Antin, Beuys, Jonas, Kaprow, and Lacy will be examined in the critical framework of earlier twentieth-century experiments in music, theater, and dance as well as in the visual arts. The movements of futurism, dada and surrealism, the Russian avant-garde, the Bauhaus, abstract expressionism, and happenings provide antecedents for performance art. So do the fields of anthropology, sociology, and psychology as well as the theater practices and theories of Artaud, Brecht, Piscator, Meyerhold, and Stanislavsky, and the experimental dance of Duncan, Wigman, Laban, Graham, Cunningham, and Rainer. *Prerequisite: none.*

126AN. Pre-Columbian Art of Ancient Mexico and Central America (4)
An introduction to the cities and monuments of the ancient civilizations which flourished in Mexico and Central America before the Spanish Conquest. This course will cover the major cultures of Mesoamerica, including the Olmec, Aztec, and neighboring groups. *Prerequisite: none; VIS 21 recommended.*

126BN. The Art and Civilization of the Ancient Maya (4)
This course offers a history of Maya society from its formative stages to the eve of the Spanish Conquest through an investigation of its art and archeology. Special attention is given to its unique calendar and writing systems. *Prerequisite: none; VIS 21 recommended.*

126CN. Art of the North American Indians (4)
This course discusses the artistic legacy and cultural diversity of the ancient, historic, and surviving Native American people of the United States and Canada. *Prerequisite: none; VIS 21 recommended.*

126DN. African and Afro-American Art (4)
The dynamic, expressive arts of selected West African societies and their subsequent survival and transformation in the New World will be studied. Emphasis will be placed on Afro-American modes of art and ceremony in the United States, Haiti, Brazil, and Suriname. *Prerequisite: none; VIS 21 recommended.*

126E. Oceanic Art (4)
An examination of the relation of art to ritual life, mythology, and social organization in the native Polynesian and Melanesian cultures of Hawaii, New Guinea, the Solomon Islands, and Australia. *Prerequisite: none; VIS 21 recommended.*

126F. Western and Non-Western Rituals and Ceremonies (4)
This course will examine the process of image-making within specific ceremonies and/or rituals. Selected ceremonies from West Africa, Melanesia, Nepal, and the United States, including both Christian and non-Christian imagery, will be considered. Performance art and masquerade will be analyzed within a non-Western framework. *Prerequisite: none; VIS 21 recommended.*

126G. Problems in Mesoamerican Art History (4)
Topics of this seminar will address special problems or areas of research related to the major civilizations of ancient Mexico and Central America. Course offerings will vary in order to focus upon particular themes, subjects, or interpretive problems. *Prerequisite: none; VIS 21 recommended.*

126H. Problems in Ancient Maya Iconography and Inscriptions (4)
This seminar focuses upon the art, architecture, and inscriptions of the ancient Maya. Topics will vary within a range of problems that concern hieroglyphic writing, architecture, and visual symbols the Maya elite used to mediate their social, political, and spiritual worlds. *Prerequisite: none; VIS 21 recommended.*

127A. Curatorial Practices Workshop (2)
Students will be exposed to the professional context of institutional art research, preparation, exhibition, and publication. The content of the course will revolve around the curatorial experience of a particular faculty member. May be repeated once for credit. *Prerequisite: VIS 112 or two upper-division courses in art history.* **Note:** Two two-unit curatorial practices workshop courses count as one course towards the fulfillment of a Group III elective requirement in the major.

128AN-EN. Topics in Art History and Theory
These lecture courses are on topics of special interest to visiting and permanent faculty. Topics vary from term to term and with instructor and many will not be repeated. These courses fulfill upper-division distribution requirements. As the courses under this heading will be offered less frequently than those of the regular curriculum, students are urged to check for availability and descriptions of these supplementary courses in the annual catalogue listings. Like the courses listed under VIS 129, below, the letters following the course number designate the general area in which the courses fall. Students may take courses with the same number but of different content, with consent of instructor and/or program adviser. May be repeated three times for credit. *Prerequisite: none; courses in art history recommended.*

128AN. Topics in Pre-Modern Art History (4)
A lecture course on a topic of special interest in ancient or medieval art. *Prerequisites: upper-division standing; courses in art history recommended.*

128BN. Topics in Early Modern Art History (4)
A lecture course on a topic of special interest in Renaissance or Baroque art. May be repeated three times for credit. *Prerequisites: courses in art history recommended.*

128CN. Topics in Modern Art History (4)
A lecture course on a topic of special interest on Modern or Contemporary art. May be repeated three times for credit. *Prerequisites: courses in art history recommended.*

128DN. Topics in Non-Western Art History (4)
A lecture course on a topic of special interest in Pre-Columbian, Native American, Oceanic, Asian, or African art. May be repeated three times for credit. *Prerequisites: courses in art history recommended.*

128EN. Topics in Art Theory and Criticism (4)
A lecture course on a topic of special interest in art theory, art criticism, or the history of literature on art. May be repeated three times for credit. *Prerequisites: upper-division standing; courses in art history recommended.*

129AN-EN. Special Problems in Art Criticism and Theory (4)
These seminar courses provide the opportunity for in-depth study of a particular work, artist, subject, period, or issue. Courses offered under this heading may reflect the current research interests of the instructor or treat a controversial theme in the field of art history

and criticism. Active student research and classroom participation are expected. Enrollment is limited and preference will be given to majors. The letters following 129 in the course number designate the particular area of art history or theory concerned. Students may take courses with the same number but of different content more than once for credit, with consent of the instructor and/or the program adviser. May be repeated three times for credit. *Prerequisite: VIS 112 or two upper-division courses in art history.*

129AN. Special Problems in Pre-Modern Art History (4)
A seminar on an advanced topic of special interest in ancient or medieval art.

129BN. Special Problems in Early Modern Art History (4)
A seminar on an advanced topic of special interest in Renaissance or Baroque art.

129CN. Special Problems in Modern Art History (4)
A seminar on an advanced topic of special interest in Modern or Contemporary art.

129DN. Special Problems in Non-Western Art History (4)
A seminar on an advanced topic of special interest in Pre-Columbian, native American, oceanic, Asian, or African art.

129EN. Special Problems in Art Theory and Criticism (4)
A seminar on an advanced topic of special interest in art theory, art criticism, or the history of literature on art.

129G. Art History Honors Seminar (4)
This research seminar, centered on a series of critical, thematic, theoretical, and/or historical issues that cut across subdisciplinary specializations, provides outstanding advanced students with the opportunity to undertake graduate-level research. The first part of a two-part sequence completed by Art History Honors Directed Group Study (VIS 129H). Prerequisite: consent of instructor or art history faculty adviser, department stamp required. Note: The Art History Honors Seminar and the attached Art History Honors Directed Group Study counts as one course towards the fulfillment of the Group III requirement.

129H. Art History Honors Directed Group Study (4)
The second part of the honors program sequence, this course provides a forum for students engaged in research and writing to develop their ideas with the help of a faculty adviser and in conjunction with similarly engaged students. *Prerequisite: consent of instructor or art history faculty adviser, department stamp required.*

130. Special Projects in Visual Arts (4)
Specific content will vary each quarter. Areas will cover expertise of visiting faculty. May be repeated twice for credit. *Prerequisite: consent of instructor, department stamp required.*

131. Special Projects in Media (4)
Specific content will vary each quarter. Areas will cover expertise of visiting faculty. May be repeated twice for credit. Two production course limitation. *Prerequisites: VIS 104CN, 105C, 106C, 107CN, or 147B for studio majors, or VIS 180A and VIS 180B for media majors. Open to studio, media, and ICAM majors; ICAM minors only.*

132. Installation Production and Studio (4)
Through discussions and readings, the class will examine the issues and aesthetics of installation art-making. Using media familiar to them, students will produce several projects. May be repeated once for credit. Studio and media majors only. *Prerequisites: VIS 104CN, 105C, 106C, 107CN, or 147B for studio majors, or VIS 180A and VIS 180B for media majors. Open to studio, media, and ICAM majors; ICAM minors only.* Two production course limitation.

140. Digital Imaging: Image and Interactivity (4)
(Cross-listed with ICAM 101.) Introduction to digital image involving images, texts, and interactive display and operates both within computer-mediated space (i.e., Web site) and in physical space (i.e., artist book). Interactive narrative and computer programming are explored. Materials fee required. *Prerequisite: VIS 40 or ICAM 40. Open to media, ICAM, and studio majors; computing and ICAM minors only.* Two production course limitation.

141A. Computer Programming for the Arts I (4)
Computer programming as a tool and conceptual framework for art-making. Course will use Silicon Graphics workstations to teach fundamental aspects of using C programming language and UNIX operating system to create computer graphics, audio, and text-based works. Materials fee required. *Prerequisites: VIS 40 or ICAM 40; and VIS 140 or ICAM 101. Open to ICAM majors and minors only.* Two production course limitation.

141B. Computer Programming for the Arts II (4)
Continuation of VIS 141A. Students extend their programming capabilities to include image processing, multimedia, and interactive 3-D graphics programming contextualized by a further exploration of topics in algorithmic and procedural modeling. Materials fee required. *Prerequisite: VIS 141A. Open to ICAM majors and minors only.* Two production course limitation.

145A. Digital Media I: Time, Movement, Sound (4)
(Cross-listed with ICAM 102.) Exploration of time-dependent media components. Creation and manipulation of digital sound as well as moving images and their integration in multimedia work. Use of computer programming to control time is emphasized. Materials fee required. *Prerequisites: VIS 40 or ICAM 40 and VIS 140 or ICAM 101. Open to media and ICAM majors; ICAM minors only.* Two production course limitation.

145B. Digital Media II (4)
Second course in the sequence where students will implement projects under direction of faculty. Projects involve interactive narrative media, Internet-based publishing (Web site), distributable media (CD-ROM), and/or computer-based interactive environment (virtual reality). Materials fee required. *Prerequisite: VIS 145A or ICAM 102. Open to media and ICAM majors; ICAM minors only.* Two production course limitation.

147A. Electronic Technologies for Art I (4)
Develop artworks and installations that utilize digital electronics. Techniques in digital electronic construction and computer interfacing for interactive control of sound, lighting, and electromechanics. Construction of devices which responsively adapt artworks to conditions involving viewer participation, space activation, machine intelligence. Purchase of components kit required. *Prerequisite: VIS 1. Open to media, studio, and ICAM majors; ICAM minors only.* Two production course limitation.

147B. Electronic Technologies for Art II (4)
Continuation of the electronics curriculum. Design of programmable microcontroller systems for creating artworks that are able to respond to complex sets of input conditions, perform algorithmic and procedural processing, and generate real time output. Purchase of components kit required. *Prerequisite: VIS 147A. Open to media and ICAM majors; computing and ICAM minors only.* Two production course limitation.

149. Seminar in Contemporary Computer Topics (4)
(Cross-listed with ICAM 130.) Topics relevant to computer-based art- and music-making, such as computer methods for making art/music, design of interactive systems, spatialization of visual/musical elements, critical studies. Topics will vary. May be repeated twice. Materials fee required. *Prerequisite: VIS 140 or ICAM 101, VIS 145A or ICAM 102, and MUS 170 or ICAM 103 recommended. Open to media and ICAM majors; ICAM minors only.* Two production course limitation.

151. History of the Experimental Film (4)
An inquiry into a specialized alternative history of film, consisting of experimental works made outside the conventions of the movie industry and which in their style and nature are closer to modernist painting, poetry, etc., than to the mainstream theatrical cinema. Works by such film artists as Man Ray, Salvador Dali, Maya Deren, Stan Brakhage, and Michael Snow will be examined in depth. Materials fee required. *Prerequisite: VIS 84 or consent of instructor.*

152. Film in Social Context (4)
This collection of courses gathers, under one cover, films that are strongly marked by period, geography, and the culture within which they received their dominating local quality. These courses pay particular attention to the stamp of place—climate, dress, habitation, language, music, politics—as well as the filmic moves that helped color such works as environmental. The series takes in the following subjects: Third World films, the Munich films (the new wave of Germans who made their first features in Munich following 1967), Japanese movies, films of the American thirties and their relationship to current thought, American Westerns, Ethnographic Film, Brazil's Cinema Novo, etc. Specific topics to be covered will vary with the instructor. May be repeated twice for credit. Materials fee required. *Prerequisite: VIS 84 or consent of instructor.*

153. The Genre Series (4)
A group of related courses exploring the conventions within such generic and mythic forms as the cowboy, shamus, chorus girls, and vampire films. May be repeated twice for credit. Materials fee required. *Prerequisite: none; VIS 84 recommended.*

154. Hard Look at the Movies (4)
Examines a choice of films, selected along different lines of analysis, coherent within the particular premise of the course. Films are selected from different periods and genres among Hollywood, European, and Third World films. May be repeated once for credit. Materials fee required. *Prerequisite: VIS 84 or consent of instructor.*

155. The Director Series (4)
A course that describes the experiences, looks, and structure of director-dominated films. A different director will be studied each quarter. The student will be required to attend the lecture in the course and to meet with the instructor at least once each week. May be repeated three times for credit. Materials fee required. *Prerequisite: VIS 84 or consent of instructor.*

156N. Special Problems in Film History and Theory (4)
Seminar on an advanced topic in the history and theory of film. Content will vary from quarter to quarter. *Prerequisite: VIS 84 or consent of instructor.* **Note:** Materials fee required.

157. Video History and Criticism (4)
A lecture course that examines video as an art form, its relationship to the development from television and other art forms, and surveys current work in the medium. Materials fee required. *Prerequisites: VIS 22, 84, and 111.*

158. Histories of Photography (4)
Photography is so ubiquitous a part of our culture that it seems to defy any simple historical definition. Accordingly, this course presents a doubled account of the medium; it explores both the historical and cultural specificity of a singular photography as well as some of the multitude of photographies that inhabit our world. Will examine a number of the most important photographic themes from the past 200 years. *Prerequisite: none.*

159. History of Art and Technology (4)
(Cross-listed with ICAM 150.) Aims to provide historical context for computer arts by examining the interaction between the arts, media technologies, and sciences in different historical periods. Topics vary (e.g., Renaissance perspective, futurism and technology, and computer art of the 1950s and 1960s). *Prerequisite: none.* **Note**: Materials fee required.

164. Photographic Strategies (4)
Introduction to the aesthetic problems in photography. Portfolio required for admission. Materials fee required. Two production course limitation. *Prerequisites: VIS 60 and consent of instructor, department stamp required. Open to media majors and photography minors only.*

165. Camera Techniques (4)
An intermediate course on refined control over different films, developers, papers, and other photographic techniques. Portfolio required for admission. Materials fee required. Two production course limitation. *Prerequisites: VIS 60 and consent of instructor. Open to media majors and photography minors only.*

166. Advanced Camera Techniques (4)
Advanced-level course involving new techniques and processes as well as refined control over different films, developers, papers, and other photographic materials. Portfolio required for admission. Materials fee required (photo lab). Two production course limitation. *Prerequisites: VIS 164, 165, and consent of instructor. Open to media majors and photography minors only.*

172. Studio Video (4)
A production course of video as a creative medium and the video studio as a production and post-production tool. Covers lighting, studio sound, the switcher and special effects, directing and editing in the controlled environment of the video studio. *Prerequisites: VIS 111 and 174. Open to media majors only.* Two production course limitation.

174. Media Sketchbook (4)
Video medium used both as production technology and as device to explore the fundamental character of film-making and time-based computer art practices. Students perform all aspects of production with attention to developing ideas and building analytical/critical skills. *Prerequisite: VIS 70N. Open to media and ICAM majors only.* Two course limitation.

175. Introduction to Digital Media Editing (Visual and Sound) (4)
Technical as well as a creative context for understanding the principles of editing and the manipulation of media files in nonlinear editing softwares, focusing on organizational strategies for image and sound and for projects of various lengths. *Prerequisites: VIS 40/ICAM 40, 60, 70N and 174, plus one from VIS 1, 2, 3, 22 or 84. Open to media majors only.* Two production course limitation.

176. Introduction to Filmmaking (4)
Technical foundation, creative, theoretical context to 16mm film production. Motion picture camera (Bell & Howell, Bolex, Arriflex S), lightmeter, frame composition, sound recording, picture and sound editing. Filmmaking process of shooting, lighting, to editing, mixing. Produce short film (1–2 minutes) with post-synchronized soundtrack. *Prerequisites: VIS 174; VIS 60 and 177 recommended. Open to media majors only.* Two production course limitation.

177. Scripting and Editing Strategies (4)
Conceptual structures of scripting and editing. Script writing on reading and analysis of traditional and experimental works. Students write several short scripts. Editing as structural partner to scripting, studying strategies and grammars shaping film on videotape. Analytical papers produced. *Prerequisites: VIS 70N and VIS 174. Open to media majors only.* Two production course limitation.

180A. Documentary Evidence and the Construction of Authenticity in Current Media Practices (4)
Exploration of concepts in representational artworks by critically examining "found" vs. "made" recorded material. Advanced film/video, photography, computing work. Issues of narrative and structure; attention to formal aspects of media work emphasized. Cannot be taken same quarter as VIS 180B. *Prerequisites: VIS 111, 174 and one from VIS 140/ICAM 101, 145A/ICAM 102, 145B, 164, 165, 172, 176, 177; VIS 177 strongly recommended. Open to media majors only.* Two production course limitation.

180B. Fiction and Allegory in Current Media Practices (4)
Exploration of choices in invention, emphasizing "made" over "found." Advanced film/video, photography, and computing. Issues of narrative and structure, and formal aspects of media work emphasized. Cannot be taken same quarter as VIS 180A. *Prerequisites: VIS 111, 174 and one from VIS 140/ICAM101, 145A/ICAM 102, 145B, 164, 165, 172, 176, 177; VIS 177 strongly recommended. Open to media majors only.* Two production course limitation.

181. Sound and Lighting (4)
Advanced course to gain sophisticated control of lighting and sound recording techniques with understanding of theoretical implications and interrelation between production values and subject matter. Interactions between sound and image in various works in film, video, or installation. *Prerequisite: VIS 174, and three of the following courses depending on emphasis: VIS 164, 165, 172, 175, 176, 177. Open to media majors only.* Two production course limitation.

182. Advanced Editing (4)
Film/video editing and problems of editing from theoretical and practical points-of-view. Films and tapes analyzed on a frame-by-frame, shot-by-shot basis. Edit stock material and generate own materials for editing final project. Aesthetic and technical similarities/differences of film/video. Repeated twice for credit. *Prerequisites: two required from VIS 164, 165, 172, 176, 177; VIS 177 strongly recommended. Open to media majors only.* Two production course limitation.

186. Advanced Filmmaking Strategies (4)
Presents techniques of sync sound recording, shooting, crew work, planning pre-production and production; links technical decisions with creative and theoretical understanding of film production. Prepare, produce, edit short 16mm film (3–5 minutes). Recommend fully developed script to enroll. Repeated once for credit. *Prerequisites: VIS 176, 177, and consent of instructor. Open to media majors only.* Two production course limitation.

194. Fantasy in Film (4)
This course will explore the path of the deliberately "unreal" in movies. Fantasy in Film will be considered both in terms of its psychological manifestations and also in terms of imaginary worlds created in such willfully anti-realistic genres as science-fiction, horror, and musical films. *Prerequisite: none.* Offered in summer session only.

197. Media Honors Thesis (4)
This advanced-level sequence coordinates three consecutive independent research courses to culminate in a completed thesis project in the third quarter of study. After the project's public presentation, the faculty involved in the project will determine whether the student will graduate with departmental honors. *Prerequisite: consent of instructor.* **Note**: Requires a written proposal, 3.5 GPA in the major, prior consent from all involved and approvals by the department chair and provost.

198. Directed Group Study (2-4)
Directed group study on a topic or in a group field not included in regular department curriculum, by special arrangement with a faculty member. *Prerequisite: consent of instructor.* **Note**: Open only to upper-division students. Requires instructor's, department chair's, and provost's approval. Pass/Not Pass grades only.

199. Special Studies in the Visual Arts (4)
Independent reading, research, or creative work under direction of a faculty member. *Prerequisite: consent of instructor.* **Note**: Open only to upper-division students. Requires instructor's, department chair's, and provost's approval. Pass/Not Pass grades only.

ICAM 103. Musical Acoustics (4)
(Cross-listed with MUS 170.) An introduction to the acoustics of music with particular emphasis on contemporary digital techniques for understanding and manipulating sound. *Prerequisites: MUS 1A, 2A, or 4*

ICAM 110. Computing in the Arts: Current Practice (4)
Designed around the presentations by visiting artists, critics, and scientists involved with contemporary issues related to computer arts. Lectures by the instructor and contextual readings provide background material for the visitor presentations. *Prerequisite: none.* **Note**: Materials fee required.

ICAM 120. Virtual Environments (4)
Students create virtual reality artworks. Projects may be done individually or in groups. Exploration of theoretical issues involved will underlie acquisition of techniques utilized in the construction of virtual realities. Materials fee required. *Prerequisites: VIS 145A or ICAM 102; CSE 11 recommended. Open to ICAM majors and minors only.* Two production course limitation.

ICAM 160A. Senior Project in Computer Arts I (4)
Students pursue projects of their own design over two quarters with support from faculty in a seminar environment. Project proposals are developed, informed

by project development guidelines from real-world examples. Collaborations are possible. Portfolio required for admission. *Prerequisites: VIS 141B or VIS 145B or VIS 147B or MUS 172. Open to ICAM majors only. Department stamp required.*

ICAM 160B. Senior Project in Computer Arts II (4)
Continuation of ICAM 160A. Completion and presentation of independent projects along with documentation. *Prerequisites: ICAM 160A. Open to ICAM majors only. Department stamp required.*

ICAM 198. Directed Group Study (2-4)
Directed group study on a topic or in a group field not included in regular department curriculum by special arrangement with a faculty member. May be repeated twice for credit. *Prerequisites: consent of instructor.* **Note**: Only open to upper-division students. Requires instructor approval. Pass/Not Pass grades only.

ICAM 199. Special Studies (2/4)
Independent reading, research or creative work under direction of faculty member. *Prerequisites: department stamp and upper-division standing required.*

GRADUATE

CORE SEMINARS

200. Introduction to Graduate Studies in the Visual Arts (4)
Introduces incoming students to the work of art history, studio, and media faculty as it engages key common and comparative themes. Required of all first-year students in both the Ph.D. and M.F.A. programs. (Required, M.F.A., Ph.D.)

201. Contemporary Critical Issues (4)
An exploration of a range of issues important on the contemporary critical scene through readings and writing assignments. Topics will vary from year to year. Offered every fall. (Required, M.F.A.)

202. Art Practice (4)
A workshop/seminar devoted to a particular materials practice (e.g., media, painting, digital media, etc.) that engages with critical questions arising within that discipline. Content will vary from quarter to quarter. May be repeated once for credit. (Required, M.F.A.)

203. Working Critique (4)
Workshop in which students engage in an extensive evaluation of each others' ongoing work in preparation for either the First Year Review or MFA Review. Offered every winter. May be repeated once for credit. (Required, M.F.A.)

204. Re-Thinking Art History (4)
Critical evaluation of the methods, practices, and disciplinary commitments of art history, encompassing both revisionist interventions of the late twentieth century and earlier paradigms, in order to envision new discipline-specific and interdisciplinary directions for the future of art history and visual culture. (Required, Ph.D.)

205. Introduction to Graduate Studies in Art Practice (4)
This seminar introduces art practice students to the graduate program in a workshop environment. Emphasis is on the production of new work and on situating that work in relation to a larger art context. (Required, M.F.A.)

ART PRACTICE/THEORY

210. Narrative (4)
Examination of narrative issues in contemporary art-making. Traditional and experimental narrative practices in painting, drawing, sculpture, and performance are explored alongside narrative strategies in media and digital media.

211. Fact and Fiction (4)
This seminar addresses the space between narrative work generated from a factual base and that generated from a fictional one. Special attention will be given to discussing work that confounds the assumed gap between the two.

212. History and Memory (4)
This seminar will engage the space between personal and larger histories. How is one's own past both intertwined with and determined by larger social histories?

213. Public Space (4)
An exploration of what public space is and how it operates, with a view toward an expanded context for considering how public artwork can operate within it. Included are areas such as mass media, activism, community action, computer networks, ecology, and alternative forums.

215. Human Interface (4)
Examines human interface as it informs or transforms how we read and participate in culture at large. Concepts such as subject/author/object relationships, abstraction, metaphor, analogy, visualization, and complexity are discussed to establish context.

216. The Object (4)
An investigation of the world of artifacts ("works of art" and others) and how they function as agents of communication and modifiers of consciousness. Contemporary perspectives drawn from the fields of art theory, anthropology, contemporary art, and semiotics will be utilized.

217. Communities and Subcultures (4)
A critical examination of the practices of self-defined communities (e.g., Bauhaus, Shaker, Surrealists) which have attempted to change the social and spiritual quality of life by aesthetic means and of communities and subcultures defined by other means.

218N. Imaging Selves and Others (4)
Explores various strategies exhibited in a wide range of contemporary art practices engaging in the representation of personality, spirituality, and the physical self.

219. Special Topics in Art Practice/Theory (4)
Examines a topic of special interest to permanent and visiting faculty that is not addressed in the regular curriculum. As in other Art Practice/Theory seminars, students will both produce work and read and write critically about the topic. Topics will vary.

HISTORY/THEORY/CRITICISM

Categories/Constructs

230. "Art" as Category (4)
Explores the complex and changing criteria by which certain (categories of) objects and practices are designated as "art" in culturally and historically diverse societies.

231N. Confronting the Object (4)
Investigates the nature and status of art objects and practices and the forms of engagement with them through topics such as the practice and metaphysics of description; phenomenological analysis; film analysis; and ekphrasis and visual analysis.

232. Artistic Identities (4)
Explores the historical, theoretical, and cross-cultural concepts of the artist/auteur and his/her varied and shifting identities as inscribed in works of art, recorded in biography and critical literature, and enacted through social roles.

233N. Frames of Production (4)
Critical and historical analysis of the institutions, social networks, and communicative media that enable the production of art, including particular institutions (art academies, workshops and studios, including film studios), artists' communities, ritual frameworks, state and private patronage, etc.

234N. Frames of View (4)
Critical and historical analysis of the institutions, social networks, and communicative media through which art is presented to its audiences. May also address theories of vision and visuality, spectatorship, public space, originality and reproduction, and public space.

235N. Frames of Analysis (4)
Historical critique and philosophical analysis of the central terminology and constructs of art history, theory, and criticism. May address such key terms as style, genre, and periodization or a topic such as theories of representation and narrative.

Theories/New Visions

240. Histories of Theory and Criticism: Plato to Post-Modernism (4)
Historical and cross-cultural investigations of art theory and criticism, antiquity to the present. May be taught as an historical overview or focus on a particular topic, e.g., Critical Currents Since World War II, Renaissance Foundations, From Culture to Popular Culture.

241. Topics in Contemporary Critical Theory (4)
Focused studies, changing from year to year, in contemporary theoretical positions and perspectives (e.g., New Social Theory, Post-Colonialism, Gender Theory) and one or more leading theorists (e.g., Deleuze, C. S. Peirce, Steinberg).

242. Theories of Media and New Media (4)
Critical study of the ways in which media (film, video, photography) and new media have been theorized. May be taught from an historical or comparative perspective or focus on a single topic or theorist.

243. Aesthetic Theory (4)
Study of the philosophical concepts of the function of art and visual culture and the criteria for its evaluation in diverse epochs and cultures. May be taught as an historical overview or comparative study or focus a single topic or theorist.

244. Studies in the Relationship of Theory and Practice (4)
Investigations of one or more artist-theorists or movements, contemporary or historical, that put in issue the interface between theory and practice. May also focus on a topic such as perspective, color, or narrative, or genre such as film or new media.

Times/Terrains

250N. Seminar in Ancient Art (4)
The arts of Greece, Rome, and allied cultures in the ancient world. Topics will vary, e.g., Roman Portraiture: Self and Social Mask; The Invention of Perspective and Revolution in Two-Dimensional Representation; The "Modern" Art of Antiquity (late third to early fourth century A.D.).

251. Seminar in Medieval Art (4)
European art from late antiquity through the fourteenth century and the historical processes by which "medieval" art has been constructed as a category. Topics may include Devotional Vision and the Sacred Image; Medieval Comic Genres; Neo-Medievalisms, Fifteenth Century to Today.

252. Seminar in Renaissance Art (4)
Concentrates on the art of the Renaissance in Italy and the North through a changing series of topics, e.g., Vision and Composition in Perspective; The Sistine Chapel; Envisioning Jan Van Eyck; Renaissance Print-Making; Leonardo da Vinci's *La Gioconda*.

253. Seminar in Early Modern Art (4)
European and American art, 1580s to 1850. Topics might include Deconstructing the Enlightenment: Images of Disorder; Escaping History: Genre Painting, Rococo to Impressionism; Politics and Love in the Art of Jacques-Louis David; Art and Urbanism in Baroque Rome.

254. Seminar in Modern Art (4)
European and American art, ca. 1850 to 1960. Questions in Impressionism and Post-Impressionism; The Cubist Revolution: Marcel Duchamp and the Anti-Formalist Tradition; American Modernism; Reckoning with Abstract Art; Issues in Dada and Surrealism; Soviet Avant-Gardes.

255. Seminar in Contemporary Art (4)
Thematic and critical discussions of recent U.S. and international art, 1960s to the present. Art/Text; Mixed Media Practices; Conceptual Art; Art After Appropriation; Global Art at the Millennium; New Genres of Public Art; Mike Kelly and the Conceptual Vernacular: Art and Activism.

256. Seminar in Media and New Media (4)
Topics in media (photography, film, video) and new media, contemporary or historical. Coverage may be broad or addressed to a particular topic such as Film Remakes; Silent Cinema; Photography and American Social Movements; The Language of New Media.

257. Seminar in Meso-American Art (4)
Topics relating to the art and civilizations of Precolumbian Mexico and Central America, either specifically art historical (such as iconographic, formal, and stylistic analysis) or encompassing a spectrum of interdisciplinary and cultural/historical problems.

258. Seminar in Chinese Art (4)
Advanced studies in the secular and religious art traditions of China. From year to year, the seminar may focus on early China (Neolithic to the end of the T'ang dynasty), on later dynasties (Sung, Yuan, Ming) or on art of the People's Republic.

259. Seminar in Latin American Art (4)
Historical and theoretical problems in the art of Mexico, Central, and South America art from the colonial period to today, as well as from the Hispanic traditions of the American Southwest.

269. Contextual Studies: Special Topics (4)
Studies in the art of cultures and time periods not covered in the currently published curriculum (e.g., African Art, Japanese Art, Byzantine Art, Islamic Art) or of issues and genres crossing epochal, cultural, and media boundaries.

OTHER

280. Workshop in Critical Writing (4)
Practice in writing about art (both one's own and others) accompanied by analysis of selected contemporary critical writings.

281. Curatorial Practice (4)
Methodological investigation of and training in the practices of art museums, galleries, film and digital environments, public arts organizations, and the like. Instruction by museum and gallery curators and opportunities for participation in ongoing programs at local art institutions.

282. Special Projects in Art Practice (4)
Advanced workshop in specialized areas of art practice (e.g., Sound and Lighting, Editing).

295. Individual Studies for Graduate Students (1-12)
Individual research with the student's individual faculty adviser in preparation for their comprehensive exhibitions for the M.F.A. degree or qualifying exam for the Ph.D. These units are intended to be with the chair of the student's review committee. For the M.F.A. degree, these units can only be taken after completing the First Year Review. (Required, M.F.A., Ph.D.)

298. Directed Group Study (1-12)
Directed group study on specific topics not covered at present in the normal curriculum. Used as an experimental testing of courses that may be given regular course numbers if proved successful. Special arrangement with faculty member. *Prerequisite: consent of department.*

299. Graduate Research (1-4)
Graduate-level research under the direct guidance of a faculty member. *Prerequisite: consent of instructor.*

500. Apprentice Teaching (1-4)
Apprentice teaching in undergraduate courses given by the Department of Visual Arts. Graduate students are required to teach a minimum of one quarter (four units) within the department to fulfill degree requirements.

501. Apprentice Teaching in Culture, Art, and Technology (CAT) (4)
Consideration and development of pedagogical methods appropriate to undergraduate teaching in the interdisciplinary Sixth College Core Sequence, Culture, Art and Technology. Supervised by the Core Program faculty, director and associate directors for the Writing and Thematic Programs. *Prerequisites: graduate student and consent of instructor.*

Warren College

OFFICE: Literature Building, Second Floor
Warren College
http://warren.ucsd.edu/

The Writing Program

OFFICE: Building 410, University Center

Each student must complete a two-course sequence in Warren Writing (10A and 10B) within four quarters (following successful completion of the Subject A requirement). **Note:** Effective fall quarter 2000, all new and continuing students are required to complete Warren writing courses only at UCSD. The purpose of the sequence is to teach and thereby enable students, through intensive practice, to read critically and write appropriately in a variety of academic contexts. Classes are seminar-size and center on discussion of student work.

The two-quarter sequence emphasizes written argumentation based on primary and secondary sources. The curriculum provides a context within which a diversity of cultural experiences is foregrounded to address a range of issues inherent in the relationship of the "Individual and U.S. Society," the primary theme of the sequence. The readings are accessible, scholarly writings that interrogate aspects of this relationship, and may include novels, short stories, essays, autobiographies, political documents, and book-length nonfictional treatments of the theme. Thus, the writing and readings prepare students for their work in various academic disciplines.

In both 10A and 10B, student writing is duplicated and discussed by the class in a workshop setting. Instructors hold conferences with students individually during the quarter and provide written and oral commentaries on student work. Every student receives a mid-quarter evaluation, and a final narrative evaluation is placed in the student's academic file. The minimum writing requirement is 8,000 words per quarter.

10A. The Writing Course A (4)
A workshop course in reading and writing required of all Warren College students. The course emphasizes argumentation and critical writing based on sources. *Prerequisites: satisfaction of the university Subject A requirement and must be a Warren College student. Letter grade only.*

10B. The Writing Course B (4)
A workshop course in reading and writing required of all Warren College students who have completed 10A. The course continues the emphasis on argumentation and critical writing based on sources. *Prerequisites: completion of WCWP 10A and must be a Warren College student. Letter grade only.*

Warren Honors Program

OFFICE: 3238 Literature Building, Second Floor, Warren College

The Warren Honors Program offers students educational, cultural, and social experiences designed to broaden their intellectual interests. The activities vary each year and are planned to foster student interaction and promote a sense of community.

Students may replace one course in a minor, program of concentration, or area study with a faculty-directed Independent Study (199) honors research paper. If the research paper is written within the student's major, departmental approval may be needed for acceptance toward major requirements. The paper may also be written as part of an Academic Internship (197). The Michael Addison award is presented at the graduation ceremony to the student who is judged to have written the most distinguished research paper in the Honors Program.

Entering freshmen with a high school GPA of 3.8 or above and SAT I scores of 700 verbal/ 700 mathematics, SAT II writing score of 700, are eligible to participate in the Honors Program. Students remain in the program until thirty-six units of UCSD credit are completed. After that, a cumulative GPA of 3.5 on all units completed at UCSD must be maintained to remain in the program.

Students who do not qualify for the Honors Program at the time of admission may join it as soon as a cumulative GPA of 3.5 is attained on thirty-six or more units completed at UCSD. Entering transfer students with a GPA of 3.8 based on at least thirty-six quarter-units of college work are also eligible.

Warren Scholars Seminar

The Warren Scholars Seminar offers an interdisciplinary academic curriculum which is designed to help students broaden their intellectual interests. Students enroll in two seminars, Warren 11A-B, Warren Scholars Seminar, which fulfill the college writing requirement. The seminars are taught by a variety of distinguished faculty and teaching assistants.

Entering freshman Honors Program students are admitted to the Warren Scholars Seminar by invitation.

Students in the Honors Program may be discussion leaders in Warren 11A-B (Warren 195, Apprentice Teaching). Discussion leaders participate in planning meetings, interview the faculty speakers, are trained to lead group discussions, read and evaluate student papers, and plan social events for the class.

Additional information may be obtained by writing to: Warren College Honors Program Coordinator, Warren College, UCSD, La Jolla CA 92093-0422.

11A. Warren Scholars Seminar A (4)
The Warren College Scholars Seminar A allows students to develop and refine their expressive and analytical skills. The seminar offers an interdisciplinary approach to topics on the relation of individuals and society, and the function of evidence and observation in the formation of theories. The course emphasizes argumentation and critical thinking. *Prerequisites: limited to freshman Warren College Honors Program students with math/verbal/writing scores of 700 and above, and upon approval of a submitted writing sample.*

11B. Warren Scholars Seminar B (4)
The Warren Scholars Seminar B allows students to develop and refine their expressive and analytical skills by exploring a topic that offers viewpoints from a wide range of disciplines. The seminar emphasizes argumentation and critical writing. The topic will vary each year. *Prerequisite: Warren 11A or by consent of instructor.*

195. Apprentice Teaching (1)
Undergraduate instructional assistance. Responsible both in area of learning and instruction. Student must prepare reading materials assigned by the professors and lead student discussions in Warren 11A or 11B. *Prerequisite: student must be in the Warren College Honors Program.*

Ethics and Society

OFFICE: 3238 Literature Building, Second Floor, Warren College

Ethics and Society is an interdisciplinary course required of all Warren students. It is cross-listed as Political Science 27 and Philosophy 27 (see departmental listings). A student may enroll in this course through either department, but not both. Ethics and Society is to be taken after the completion of Warren Writing 10A-B (or Scholars Seminar 11A-B), either in the spring of the freshman year or in any quarter of the sophomore year. This requirement is waived for certain upper-division transfer students (see the program of concentration brochure).

Health Care—Social Issues

OFFICE: Interdisciplinary Programs, 3238 Literature Building, Second Floor, Warren College

Health Care–Social Issues is an interdisciplinary minor administered by Warren College, available to all UCSD students with a general interest in health care issues and to students considering a health care career. For more information, see listing under "Health Care–Social Issues."

Law and Society

OFFICE: Interdisciplinary Programs, 3238 Literature Building, Second Floor, Warren College

Law and Society is an interdisciplinary minor administered by Warren College, available to all UCSD students with a general interest in law as a social institution and to students considering law-related careers. For more information, see listing under "Law and Society."

Academic Internship

OFFICE: Literature Building, Second Floor, Warren College

The Academic Internship Program is developed and administered by Warren College, and it is available to juniors and seniors with a 2.5 GPA (some internships require a 3.0 GPA) in any college at UCSD. For more information, see listing under "Academic Internship."

One-unit Undergraduate Seminar

The One-Unit Undergraduate Seminar Program is a campuswide program administered by Warren College. The purpose is to (a) foster closer interaction between undergraduate students and faculty members; and (b) introduce undergraduates to exciting areas of intellectual interest. Generally, the seminars are accessible to students at all levels with no prerequisites. Enrollments are limited to twenty-five students per seminar. Grading is P/NP only, and each student is limited to four seminars for credit.

Appendix

Nondiscrimination and Affirmative Action Policy Statement for University of California

It is the policy of the university not to engage in discrimination against or harassment of any person employed by or seeking employment with the University of California on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth), physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or status as a covered veteran (special disabled veteran, Vietnam era veteran, recently separated veteran, or any other veteran who served on active duty during a war or in a campaign or expedition for which a campaign badge has been authorized). This policy applies to admissions, access, and all employment practices, including recruitment, selection, promotion, transfer, merit increase, salary, training and development, demotion, and separation. This policy is intended to be consistent with the provisions of applicable state and federal laws and university policies.

In addition, it is the policy of the university to undertake affirmative action, consistent with its obligations as a federal contractor, for people of color and women, for persons with disabilities, and for covered veterans. The university commits itself to apply every good faith effort to achieve prompt and full utilization of people of color and women in all segments of its workforce where deficiencies exist. These efforts conform to all current legal and regulatory requirements, and are consistent with university standards of quality and excellence.

Inquiries regarding the University of California, San Diego's (UCSD) equal employment opportunity policies and student-related nondiscrimination policies may be directed to:

UCSD Policies and Procedures Applying to Student Activities

Students enrolling at UCSD are required to observe campus regulations, including but not limited to the Standards of Conduct and the Policies and Procedures Applying to Student Activities, which are available to students at http://ugr8.ucsd.edu/judicial/ as well as the following locations:

Student Legal Services
Student Organizations and Leadership Opportunities
College Dean Offices
Office of Graduate Studies and Research
Office of the Student Affairs Dean, School of Medicine
Student Policies and Judicial Affairs
SIO, Graduate Student Department

Notice to Students of Their Privacy Rights

In accordance with the Federal Family Educational Rights and Privacy Act of 1974 and campus procedures implementing the University of California Policies Applying to the Disclosure of Information from Student Records, students at the San Diego campus of the university have the right:

1. To inspect and review records pertaining to themselves in their capacity as students;

2. To have withheld from disclosure, absent their prior consent for release, personally identifiable information from their student records, with exceptions as noted in Section 160.2 of the university's policies (see also Directory or Public Information below);
3. To inspect records maintained by the campus of disclosure of personally identifiable information from their student records;
4. To seek correction of their student records through a request to amend the records or a request for a hearing; and
5. To file complaints with the Department of Education regarding alleged violations of the rights accorded them by the Federal Act.

Directory or Public Information

The Federal Family Educational Rights and Privacy Act of 1974 (revised June 1976) permits the university to release or publish, without the student's consent, items in the category of "public information" which are name, address (campus and/or permanent), telephone number, campus email address, date and place of birth, major fields of study, dates of attendance, degrees and honors received, the most recent previous educational institutions attended, participation in officially recognized activities, including intercollegiate athletics, and the name, weight and height of participants on intercollegiate university athletic teams. Students may request in writing, by the last day of registration each quarter, that any or all personally identifiable information from their records not be regarded as public information. Forms for this purpose are available in the Registrar's Office.

Notification of Rights Under FERPA for Postsecondary Institutions

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:

1. The right to inspect and review the student's education records within forty-five days of the day UCSD receives a request for access.

   Student should submit to the registrar, dean, head of the department written requests that identify the record(s) student wishes to inspect. The UCSD official to whom the request was submitted will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records were not maintained by the UCSD official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.
2. The right to request amendments of the student's education records that the student believes are inaccurate or misleading.

   Students may ask UCSD officials to amend a record that they believe is inaccurate or misleading. They should write the UCSD official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate or misleading. If the UCSD official decides not to amend the record as requested by the student, that official will notify the student of the decision and advise the student of the procedures to appeal the denial.
3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent.

   One exception which permits disclosure without consent is disclosures to UCSD or UC officials with legitimate educational interests. A UCSD or UC official is a person employed by UCSD or UC in an administrative, supervisory, academic, research, or support staff position: a person or company with whom UCSD or UC has contracted (such as attorney, auditor, or collection agent): or a student serving on an official committee, such as a disciplinary or grievance committee. A UCSD or UC official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.
4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by UCSD to comply with the requirements of FERPA.

   The name and address of the office that administers FERPA is:

   Family Policy Compliance Office
   U.S. Department of Education
   400 Maryland Avenue, SW
   Washington, DC, 20202-4605

Questions about these rights or any other aspect of student records management by UCSD officials may be referred to the Director, Student Policies and Judicial Affairs, Student Center, Building B, or by telephone at (858) 534-6225 or email at naguilar@ucsd.edu. The text of FERPA may be found in the Government Documents section of the UCSD Geisel Library. Copies of the UCSD student records policy, PPM 160-2, may be accessed electronically at http://adminrecords.ucsd.edu/ppm/docs/160-2.html.

UCSD Sexual Harassment Prevention and Policy

The University of California, San Diego is committed to creating and maintaining a community in which all persons who participate in UCSD programs and activities can work together in an atmosphere free from all forms of harassment, exploitation, or intimidation. Every member of the UCSD community should be aware that UCSD is strongly opposed to sexual harassment and that such behavior is prohibited both by law and UCSD policy. Retaliation against a person who brings a complaint of sexual harassment is also strictly prohibited and may result in separate disciplinary action. It is UCSD's intention to take whatever action may be needed to prevent, correct, and if necessary, discipline behavior which violates this policy.

Laws and University Policies Prohibiting Sexual Harassment

The California Fair Employment and Housing Act and Title VII of the Federal Civil Rights Act of 1964, as amended, prohibit sexual harassment in employment. Title IX of the Education Amendments of 1972 prohibits sexual harassment in educational institutions which are recipients of federal funds. UCSD's policy prohibits discrimination on the basis of sex, including sexual harassment, and provides for disciplinary action for inappropriate conduct.

Defining Sexual Harassment

Sexual harassment is defined as unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature when any or all of the following conditions result:

- Submission to such conduct is made either explicitly or implicitly a term or condition of instruction, employment, or participation in any university activity.
- Submission to or rejection of such conduct by an individual is used as a basis for evaluation in making academic or personnel decisions affecting an individual.
- Such conduct has the purpose or effect of unreasonably interfering with an individual's performance or creating an intimidating, hostile, or offensive university environment.

A determination of whether particular conduct constitutes sexual harassment takes into account the totality of the circumstances, including:

1. the frequency of the offensive conduct;
2. its severity;
3. whether it is physically threatening or humiliating;
4. the location of the conduct and the context in which it occurred;
5. the degree to which the conduct affected the education or employment environment; and
6. the relationship between the parties.

Sexual harassment does not typically include verbal expression or written material that is relevant and appropriately related to course subject matter or curriculum.

Sexual harassment may occur between persons of differing power or between peers. In addition, sexual harassment may involve a female harassing a male, or a male or female harassing a person of the same gender.

Consensual Relations

UCSD's consensual relationship policy addresses potential ethical and legal issues that arise when individuals develop romantic or sexual relationships. In addition, the UC regents have approved a systemwide faculty-student relationship policy that prohibits a faculty member from becoming romantically or sexually involved with students for whom the faculty member has or should expect to have supervisory responsibility.

Prevention and Education

To implement UCSD's policy regarding sexual harassment, the Office of Sexual Harassment Prevention and Policy (OSHPP) provides assistance in investigating and resolving complaints and provides education to the entire UCSD community. Emphasis is on prevention and early resolution. Copies of UCSD's policy and procedures may be obtained at OSHPP at 201 University Center or at its campus Web page at http://oshpp.ucsd.edu. Faculty, staff, and students are encouraged to review the interactive online education program, *Preventing Sexual Harassment*, available on the OSHPP Web page.

Complaint Resolution

UCSD has established formal and informal procedures for resolving sexual harassment complaints. There are several informal resolution options, depending on the circumstances, including educational programs for targeted campus units or for particular individuals and mediation between the parties. Where informal resolution is unsuccessful or inappropriate, a formal complaint may be filed and a formal investigation undertaken. There is no prescribed sequence, so choosing one option first does not prevent a complainant from choosing a different option for resolution later on.

Because complaints are most effectively resolved at the earliest possible stage, UCSD encourages early reporting of concerns or complaints regarding sexual harassment. If you believe you have been sexually harassed, you are encouraged to discuss your options and learn about UCSD procedures by contacting OSHPP at (858) 534-8298. You may obtain advice without filing a complaint. Unreasonable delay in reporting sexual harassment or failure to utilize UCSD's complaint resolution procedures may affect your legal rights.

A number of governmental agencies also accept complaints of sexual harassment, including the California Department of Fair Employment and Housing, the U.S. Equal Employment Opportunity Commission, and the Office for Civil Rights, U.S. Department of Education. The time deadlines for filing such complaints vary between 180 and 365 days.

Retaliation

Threats, other forms of intimidation, and retaliation against a faculty member, student, or staff employee for bringing a complaint of sexual harassment or for assisting another in bringing a complaint are prohibited. Retaliation is itself a violation of UCSD policy and applicable law, and is a serious offense. Complaints of retaliation may be brought through the informal or formal sexual harassment complaint procedures. Acts of retaliation may result in discipline.

Title IX Coordinator

Persons who wish to bring a complaint alleging a violation of Title IX of the Education Amendments of 1972 may contact the Title IX Coordinator as follows:

Lori Chamberlain, Title IX Coordinator
University of California, San Diego
9500 Gilman Drive, Mail Code 0024
La Jolla, California 92093

Scott S. Hofferber, *Chief Operating Officer*

Jan R. Radke, *Chief Medical Officer*

Edward Babakanian, *Chief Information Officer*

Lawrence S. Friedman, *Medical Director, Ambulatory and Primary Care*

Paul J. Hensler, *Administrator, Thornton Hospital*

Robert W. Hogan, *Associate Director, Finance, UCSD Medical Center*

James D. Kaufman, *Director of Support Services*

Dennis E. Goodrich, *Director of Facilities Planning and Management*

Mary Middleton, *Associate Director, Patient Care Services, UCSD Medical Center*

Dennis Moran, *Associate Director, Clinical and Professional Services, UCSD Medical Center*

Cecilia M. Smith, *Medical Director, UCSD Medical Center*

UCSD School of Medicine

Leslie Bruce, *Director, Government and Community Relations*

Ruth Covell, *Associate Dean, Program and Policy Analysis*

Terence Davidson, *Associate Dean, Continuing Medical Education*

Leslie Franz, *Director, Health Sciences Communications*

Gordon Gill, M.D., *Dean, Scientific Affairs*

Edward W. Holmes, M.D., *Dean*

Julianne R. Howell, *Director, Health Sciences Planning*

Cecilia M. Smith, *Associate Dean, Medical Center Affairs and Graduate Medical Education*

Roger D. Meyer, *Associate Dean, Administration*

Charles Mittman, *Dean, Clinical Affairs*

Jacqueline Parthemore, *Associate Dean, Veterans' Affairs*

Robert Resnik, *Associate Dean, Admissions and Financial Aid*

Maria Savoia, *Associate Dean, Curriculum and Student Affairs*

Jerry Schneider, *Dean, Academic Affairs*

David Tarin, *Associate Dean, Cancer Affairs*

Endowed Chairs
University of California, San Diego

Akamai Chair of Internet Mathematics
Fan Chung Graham

Victor C. Alderson Chair of Applied Ocean Science
Veerabhadran Ramanathan

American Heart Association California Affiliate Chair in Cardiovascular Research
Ken Chien

Atkinson Family Chair
—

Richard C. Atkinson Chair
Eduardo Macagno

Rita L. Atkinson Chair
Efim Zelmanov

Sanford I. Berman Chair in Language and Human Communication
—

J. Robert Beyster Chair in Engineering
Joseph Pasquale

Blasker Chair in Environmental Engineering
Paul Linden

Simon Bolivar Chair in Latin American Studies
Peter H. Smith

Dan Broida Chair in Elementary Particle Physics
—

Callaway Golf Chair in Structural Mechanics
John B. Kosmatka

Center for Magnetic Recording Research Chair in Materials
—

Center for Magnetic Recording Research Chair in Materials V
—

Center for Magnetic Recording Research Chair in Mechanics and Tribology
Frank E. Talke

Center for Magnetic Recording Research Chair in Physics
H. Neal Bertram

Chair in High Performance Computing
Francine Berman

Chancellor's Associates Chair I in Econometrics
Robert F. Engle

Chancellor's Associates Chair II in Econometrics
Clive W.J. Granger

Chancellor's Associates Chair III in Theatre
Jorge A. Huerta

Chancellor's Associates Chair IV in Physics
Arthur Wolfe

Chancellor's Associates Chair V in Ethnic Studies
Ramon A. Gutierrez

Chancellor's Associates Chair VI in Chemistry and Biochemistry
Mark H. Thiemens

Chancellor's Associates Chair VII in Biological Science
Stephen Hedrick

Chancellor's Associates Chair VIII in Political Science
Mathew McCubbins

Chugai Pharmaceutical Chair in Cancer
David Tarin

Communications Industry Professorship in Engineering
Lawrence Larson

Francis Crick Chair (Regents Chair)
Peter G. Wolynes

Cymer Corporation Endowed Chair
Robert Bitmead

Edward A. Frieman Chair in Global Observation Research
—

Frank Caylus Grandier Chair in Medieval European History
—

Gildred Chair for United States-Mexican Relations
Wayne A. Cornelius

Harry E. Gruber Chair in Computer Science and Information Technologies
Larry Smarr

Chair in Hebrew Biblical Studies
David Noel Freedman

Walter F. Heiligenberg Professorship in Neuroethology
James Nieh

Ingrid and Joseph W. Hibben Chair in Space Science and Education
Sally Ride

Hwei-Chih and Julia Hsiu Chair in Chinese Studies
Joseph W. Esherick

Chair in Infectious Diseases
Joshua Fierer

Institute of the Americas Chair for Inter-American Affairs
Paul W. Drake

John Dove Isaacs Chair in Natural Philosophy
—

Kazuo Iwama Chair in Material Science
Sung Ho Jin

Irwin Mark and Joan Klein Jacobs Chair of Information and Computer Science
Ronald Graham

Helen A. Jarrett Chair in Alzheimer's Disease Research
David P. Salmon, M.D.

Chair of Judaic Studies
David Goodblatt

Nancy Kaehr Chair in Pediatric Research
Sanjay K. Nigam

Jerome Katzin Chair in Corporate Governance
—

Katzin Chair of Jewish Civilization
Richard E. Friedman

Lawrence B. and Sallye K. Krause Chair in Korean Studies
Stephen Haggard

Stephen W. Kuffler Chair in Biology
Anirvan Ghosh

Estelle and Edgar Levi Memorial Chair in Aging
Dilip Jeste

Benard L. Maas Chair in Inherited Metabolic Disease
Jerry A. Schneider

Mary Gilman Marston Chair in Psychiatry
Lewis L. Judd

Quinn Martin Chair in Drama
—

Bernd T. Matthias Chair in Physics
M. Brian Maple

Joseph E. Mayer Chair of Theoretical Chemistry
J. Andrew McCammon

Hajime Mori Chair in Japanese Language and Literature
Masao Miyoshi

Nancy Olmsted Chair in Pediatric Pulmonology
Paul M. Quinton

Pacific Economic Cooperation Chair in International Economic Relations
Takeo Hoshi

Edith and William M. Perlman Chair in Clinical Cardiology
Kirk L. Peterson

Charles Lee Powell Chair in Mathematics
—

Charles Lee Powell Chair in Wireless Communication
Bang-Sup Song

Presidential Chair in Energy and Combustion Research
Forman A. Williams

Presidential Chair in Philosophy II
Patricia S. Churchland

Professorship in Neuroregeneration
Marla Feller

Qualcomm Endowed Chair in Communications and Technology Policy
Peter Cowhey

Qualcomm Endowed Chair in Embedded Microsystems
Rajesh Gupta

Qualcomm Endowed Chair in Mobile Computing
—

Qualcomm Endowed Chair in Sensor Networks
—

Qualcomm Endowed Chair in Telecommunications and Information Technologies
—

Helen Ranney Chair in Medicine
Kenneth Kaushansky

Anne Ratner Chair in Pediatric Ophthalmology
David Granet

Eric and Johanna Reissner Chair in the Department of Structural Engineering
Frieder Seible

Stephen O. Rice Chair in Magnetic Recording Research
Jack K. Wolf

Florence Seeley Riford Chair for Acquired Immune Deficiency Syndrome (AIDS) Research
—

Florence Riford Chair for Alzheimer's Disease Research
Leon J. Thal

William E. and Mary B. Ritter Memorial Chair
Jeremy Jackson

Rohr Chair in Pacific International Relations
Miles Kahler

Paul D. Saltman Chair in Science Education
Randolph Hampton

Science Applications International Corporation Chair in Engineering
Andrew Chien

Harold Simon Chair in International Health and Cross Cultural Medicine
—

Skyworks Chair in High Performance Communications Devices and Circuits
Peter Asbeck

Sokwanlock Chair in Chinese International Affairs
Barry Naughton

Herbert Stern Chair in Biology
Jean Wang

Structural Systems Research Chair
—

Tasch Endowed Chair in Parkinson's Disease Research
—

Evelyn and Edwin Tasch Chair in Cancer Research
—

Ronald R. Taylor Chair in Information Technology in Computer Science
Pavel Pevzner

Torrey Mesa Research Institute Chair in Plant Science
Julian I. Schroeder

Sandra and Monroe Trout Chair in Pharmacology
Palmer W. Taylor

Monroe E. Trout Chair in Surgery
David Hoyt

Harold Clayton Urey Chair in Chemistry
Clifford Kubiak

Valtz Family Chair in Philosophy
—

Arthur and Molli Wagner Chair in Acting
Kyle Donnelly

Sam M. Walton Endowed Chair for Cancer Research
John P. Pierce

Judith and Jack White Chair in Cardiology
Anthony Demaria

Muriel Jeannette Whitehill Chair in Bio-Medical Ethics
Theodore Friedmann

Kent R. Wilson Chair in Physical Chemistry
—

Herman Wouk Chair of Modern Jewish Studies
Deborah Hertz

Samuel S.C. Yen Chair in Reproductive Medicine
Samuel S.C. Yen

Walter J. Zable Chair in Engineering
—

UC San Diego Foundation

Acting Chancellor
Marsha A. Chandler

President
James M. Langley

Chair
Duane J. Roth

Vice Chairs
Dr. John D. Cambon, '74

UCSD Facts and Figures (as of fall 2003)

On-campus student enrollment
- Undergraduate....19,872
- Warren....4,559
- Muir....3,866
- Marshall....3,856
- Revelle....3,697
- Roosevelt....3,232
- Sixth....662
- Graduate....3,465
- Medical School (including 540 Medical Center residents and interns)....1,370
- Total students....24,707

Grade-point averages
- Freshman....2.92
- Sophomore....3.00
- Junior....3.04
- Senior....3.05

Number of undergraduates in most populous departments
- Biology....3,055
- Economics....1,724
- Psychology....1,147
- Electrical and Computer Engineering (ECE)....1,136
- Computer Science and Engineering (CSE)....1,077
- Political Science....1,067
- Bioengineering....885
- Communication....797
- Mechanical and Aerospace Engineering..767
- Visual Arts....734

Based upon the previous year's experience, 94 percent of all new freshmen enrolled at UCSD in the fall quarter are also enrolled in the subsequent fall quarter. Eighty-two percent of all students who begin their undergraduate studies as freshmen at UCSD complete their degree requirements here within six years. Questions or requests for more detailed information should be directed to the Office of Student Research and Information.

UCSD Extension enrollment....29,844
Summer Session enrollment....13,794
On campus teaching faculty members....1,727
Books in library collection....2,953,024
Total land area—UCSD
- Main campus....1,202
- Outlying areas....393
- UC Natural Reserves....367
- Total acres....1,962

Members of Honorary Societies/Prizes/Awards
- A.B. Wood Medal and Prize....1
- Academia Sinica....1
- Academic Senate Distinguished Teaching Awards....19
- Academie des Sciences, France....1
- Acoustical Society of America....1
- African Studies Association....1
- American Academy of Arts and Sciences...81
- American Academy of Mechanics....4
- American Academy of Microbiology....2
- American Academy of Pediatrics....1
- American Academy of Religion....1
- American Anthropological Association....6
- American Association for the Advancement of Science....77
- American Association of Anatomists....1
- American Astronomical Society....10
- American Chemical Society....57
- American Geophysical Union....9
- American Institute of Aeronautics and Astronautics....9
- American Institute of Architects....1
- American Institute of Chemists....2
- American Mathematical Society....23
- American Meteorological Society....1
- American Nuclear Society....3
- American Philosophical Society....14
- American Physical Society....39
- American Psychiatric Association....1
- American Psychological Association....9
- American Society for Biological Chemists..13
- American Society for Cell Biology....4
- American Society for Clinical Investigation..1
- American Society of Composers, Authors & Publishers....3
- American Society of Mechanical Engineers..7
- American Sociological Association....1
- American Thoracic Society (Edward Livingston Trudeau Medal)....1
- Arthur C. Cope Scholar Award....1
- Association of American Physicians....2
- Association for Computing Machinery....1
- Balzan....2
- Beckman Foundation Young Investigator....2
- Bernal Prize....1
- Carol Nachman Prize....2
- Chancellor's Medal....2
- Chancellor's Summer Faculty Fellowship...20
- Charles E. Molnar Award....1
- Cognitive Science Society....1
- College Teaching Awards....6
- Cottrell Scholar....1
- Council on Foreign Relations....0
- C.U. Ariens Kappers....1
- Distinguished Teaching....6
- Econometric Society....8
- Fields Medal....1
- Fulbright Awards....45
- Geological Society of America....0
- German Marshall Fund....4
- Gregory Luebbert Prize....1
- Guggenheim....146
- Gustav Steinman Medal....1
- Heidelberg Academy of Sciences....0
- Hellman Faculty Fellowship....36
- Humboldt Research Award....9
- Huntsman Medal....2
- Institute of Electrical & Electronic Engineers....21
- Institute of Mathematical Statistics....3
- Institute of Medicine....22
- Institute of Scientific Information....2
- International Academy of Astronautics....6
- International Union of Radio Scientists....1
- Johan Skyette Prize....1
- KGTV Channel 10 News Leadership Award..1
- Kyoto Prize....1
- La Society des Oceanists, Musee de L'Homme....1
- Macarthur Foundation....8
- Meteroical Society....1
- National Academy of Education....2
- National Academy of Engineering....15
- National Academy, Institute of Medicine (see Institute of Medicine)
- National Academy of Sciences....68
- National Humanities Medal....1
- National Medal of Science....6
- New York Academy of Science....6
- Nierenberg Prize....3
- Nobel Prize Winners (Nobel Laureates)....8
- Oceanology International Lifetime Achievement Award....1
