Cite This Data: <https://doi.org/10.6075/J0X06774>

This data package includes the data and analysis code associated with the manuscript listed above. The directory contains (i) links to raw data and (ii) processed data from five sources:

- (1) Polar Pathfinder Version 4 Daily Sea Ice Motion Vectors;
- (2) Nimbus-7 SMMR and DMSP SSM/I-SSMIS Passive Microwave Data;
- (3) Japanese 55-year Reanalysis derived for ocean-ice models (JRA55-do);
- (4) International Bathymetric Chart of the Arctic Ocean (IBCAO);

This data package also includes data generated from the following source:

- (5) Modeled outputs from a set of statistical models using MATLAB and Tensorflow/Keras;

Below are lists of the data and MATLAB R2021b and Tensorflow/Keras codes used for processing and plotting (Tables 1-3). Descriptions of processing steps are listed below. Figures can be generated by running the codes listed in Table 3 after the processing listed below has been completed. Raw data files are not included due to their size. Instead, all necessary steps to download and reproduce results are provided. Processed data are provided so that figures can be reproduced.

Required software packages: (i) MATLAB R2021b and (ii) Python 3.8-3.11 (iii) TensorFlow 2

**Note: Make sure to change the descriptor 'loadpath' in each file that is run to match the filepath you're accessing on your machine.*

Label	File Name	Source Data
0.	Raw Data	
R1	Polar Pathfinder Version 4 Daily Sea Ice Motion Vectors	
R2	Nimbus-7 SMMR and DMSP SSM/I-SSMIS Passive Microwave	
R3	Japanese 55-year Reanalysis derived for ocean-ice models (JRA55-do)	

R4	International Bathymetric Chart of the Arctic Ocean (IBCAO)	
I. Download & Process Raw Data [P1_process_raw_data.m]: This code runs files PX-PX to download the raw data. Make sure to open and read the file, as the various datasets have different download methods (i.e. direct link vs. ftp, etc.).		
P1	D_download_seaicemotion_loop	R1
P2	D_download_jra55do	R3
P3	D_nsidc-download_NSIDC-0051.001_2021-02-04.py	R2
P4	https://www.gebco.net/data_and_products/gridded_bathymetry_data/arctic_ocean/	R4
P5	D_seaicemotion_8921.m	R1
P6	D_read_JRA55_do_wind.m	R3
P7	D_hourly_arctic_JRA55_do_wind_8921.m	R3
P8	D_daily_arctic_JRA55_do_wind_8921.m	R3
P9	D_regrid2EASE_wind.m	R3
P10	D_read_iceconc_8921.m	R2
P11	D_read_sic_grid.m	R2
P12	D_regrid2EASE_sic_8921.m	R2
P13	D_read_IBCAO.m	R4
P14	D_regrid2EASE_IBCAO.m	R4
P15	D_seaicemotion_uncertainty_7821.m	R1
P16	D_uncertainty_counts_7921.m	R1
II. Process data for input into statistical models [P2_data4model.m]: This file runs code PX-PX, which take the downloaded raw data and prepare it for input into the statistical models		
P17	S1_satellite_normalize_NaN_TVT_Mn.m	R1-3
P18	S1_satellite_normalize_NaN_Te_properties_Mn.m	R1-3
P19	S1_input_anomaly_maps.m	R1-3
P20	D_sic_threshold.m	R1-3
P21	D_coast_distance.m	R4
III. Run statistical models [P3_process_runmodels.m]: This file runs code PX-PX to run the various statistical models. Make sure to open and read the file, as the various models are run in different coding environments (i.e. MATLAB vs. python).		
P22	M_PS_loop_v1.m	R1-3
P23	M_LR_global_loop_complex_ridge_NaN_v1.m	R1-3
P24	M_LR_gridwise_loop_complex_ridge_NaN_v1.m	R1-3
P25	M_CNN_TVT_loop_reg_NaN_vX.py	R1-3

IV. Model Evaluation [P4_process_modelevaluation.m]: This file runs code PX-PX to evaluate the model outputs and generate the data for plotting that are included in this DOI (listed in Table 2).

P26	S2_ensemble_mean_overall_skill_corr_PS_LR_CNN_zm.m	R1-3
P27	S2_ensemble_mean_overall_skill_corr_LR_global.m	R1-3
