Dear Miss Scripps

It would be hard to imagine more erroneous news reports than the enclosures. I did not urge the Regents to do anything. I did tell them I thought we were entitled to know their attitude. They expressed deepest interest and appreciation of what you had done. Their difficulty is financial. Adoption of Amendment #1 last fall has disrupted their financial plans. Until the Legislature acts they do not know what to count on. A committee appointed. I will make full

LA JOLLA, CALIFORNIA,

Mar. 24th 1915.

Mr. Ralph P. Merritt, Comptroller,  
Univ. of Cal.  
Berkeley, Cal.

My dear Mr. Merritt:

Today I am authorizing the Regents of the University of California to proceed with the erection of a pier at the Scripps Institution for Biological Research at a cost not to exceed \$35000. This sum is to include all expenses that may be incurred in such erection such as contract price, inspection, advertizing etc.

I am authorizing the sum above mentioned to be set aside so that all payments may be met as they come due.

Yours truly

Signed

LA JOLLA, CALIFORNIA,

Mar. 24th 1915.

Regents of the University of California,  
Berkeley, Cal.

Sirs:

I hereby authorize you to proceed with the building of a pier, salt water system and settling tank at the Scripps Institution for Biological Research at a cost not to exceed Thirty Five Thousand (\$35000) Dollars, such funds to be supplied by me in such manner that you may meet all payments as they come due. This sum will be set aside by me in a trust fund so that it will be available under any and all circumstances.

Yours truly

Signed

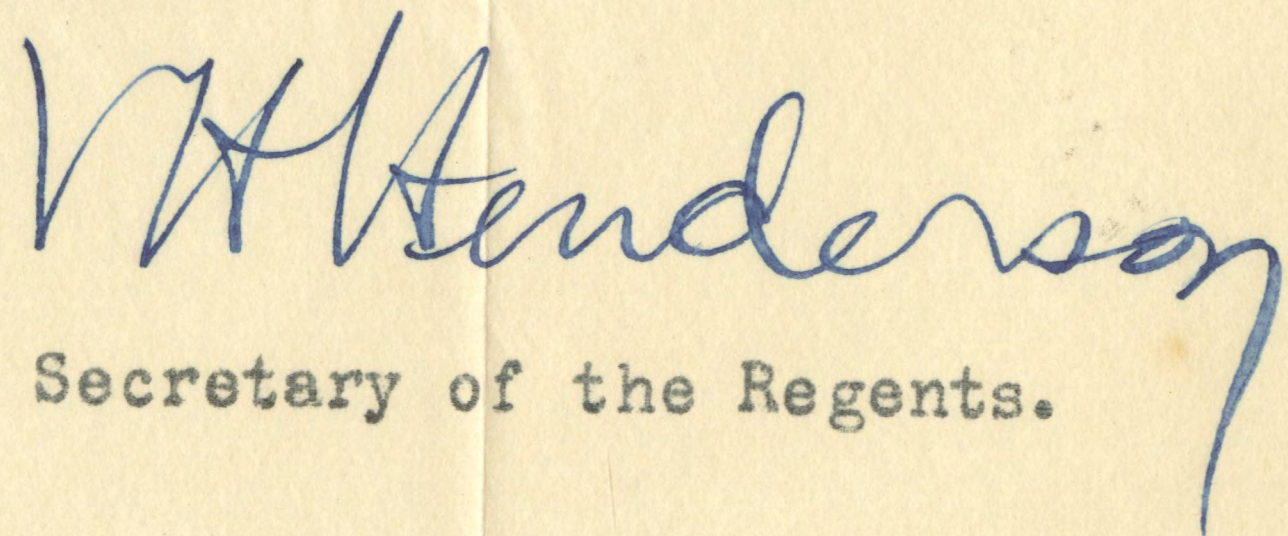

UNIVERSITY OF CALIFORNIA  
OFFICE OF THE SECRETARY OF THE REGENTS

Berkeley, March 25, 1915.

My dear Miss Scripps:

I have the honor of acknowledging in behalf of the Regents of the University of California your authorization of March 24 for the Regents to proceed with the building of a pier, salt water system, and settling tank at the Scripps Institution for Biological Research, at a cost of not to exceed \$35,000. This will be formally reported to the Regents at their meeting on April 13, but meanwhile President Wheeler and Comptroller Merritt will arrange the preliminary steps for the new undertakings, in conference with Dr. Ritter and Mr. Crandall. Your kindness in providing for these additional facilities for the Scripps Institution is very greatly appreciated.

Very sincerely yours,

  
Secretary of the Regents.

Miss Ellen B. Scripps,  
La Jolla,  
California.

UNIVERSITY OF CALIFORNIA  
OFFICE OF THE COMPTROLLER

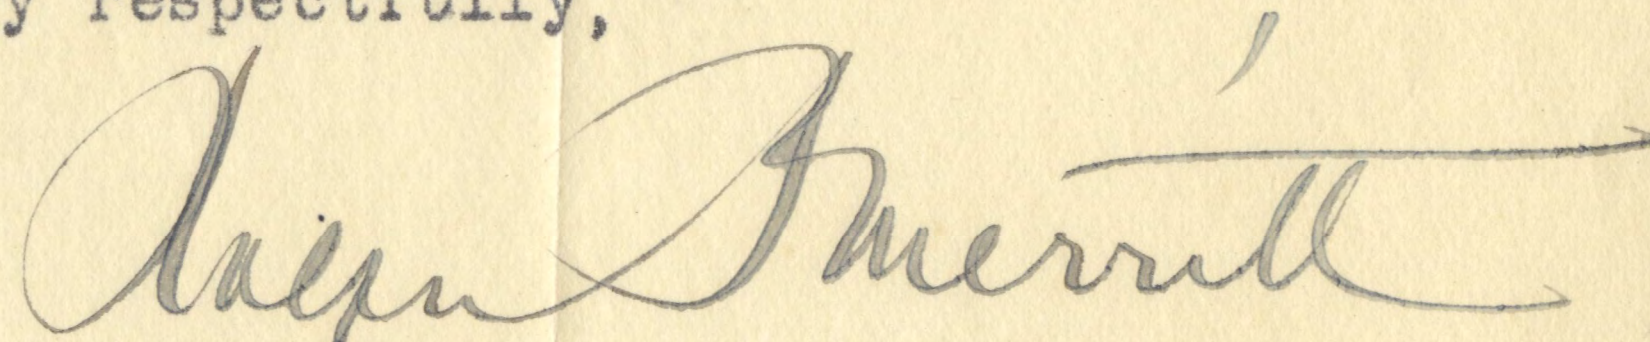

Berkeley, March 26, 1915.

My dear Miss Scripps:

Today's mail brings your favor of March 24th authorizing the Regents to proceed with the erection of a pier at the Scripps Institution for Biological Research at a cost not to exceed \$35,000. This sum is to include all expenses which may be incurred. I understand also from accompanying letters from Mr. Crandall, that the sum is to include the cost of water system and settling tank, as well as the pier.

It is very pleasing to the President and to the Regents to know that you have given instructions to proceed with this work, and it is hoped that the result of the outlay will be in every way a source of satisfaction to you. We are today taking up the matter with the engineer and with the firm which previously made the lowest bid on the construction work. Operations will be hurried as much as possible.

Very respectfully,

Comptroller.

GEM.

Miss Ellen B. Scripps,  
Scripps Institute,  
La Jolla, California.

San Diego, Calif., April 5, 1915.

Mr. E. W. Scripps,  
Miramar, Calif.

-- Biological Station --

Dear Mr. Scripps:

Saturday evening Capt. Crandall was over and submitted to me a draft of a letter to the University people at Berkeley (I think the letter was addressed to Comptroller Merritt), outlining the plan for the expenditure of \$100,000 on the Biological Station in the next two years.

I asked Capt. Crandall not to send any such letter at this time. When I get back from the north, I will have a talk with you about it. It conflicts directly with the plan upon which Prof. Ritter and I presented the subject at Sacramento. You will recollect that the proposal was that your sister would spend two dollars for each dollar that the State appropriated, up to \$100,000. Now this letter looks to the expenditure of that sum irrespective of what the State does. At least, this is the way it looks to me, and I ask that you do not urge Capt. Crandall to do anything until I get back and we can talk the matter over.

You may not have remembered that in July your sister is to pay off the \$20,000 mortgage on F. T. Scripps' Bishop Cracker Company property. He borrowed that amount on mortgage and your sister directed me to pay off the mortgage when it became due in July next.

Sincerely yours,

(sgd) J C Harper

cc WBS ✓

Miramar, Calif., April 3rd, 1915.

Capt. W. C. Crandall,  
Biological Station,  
La Jolla, Calif.

My dear Crandall:-

This is to confirm my various statements made to you yesterday.

1- Beginning with March 1st, 1915, my sister, Ellen B. Scripps, proposes to advance \$4,166.66 each month - barring unforeseen emergencies - for twenty four months, or a total of \$100,000.00.

2- Her proposal is to expend this money, directly under her supervision, through you or someone else who may succeed you in your present office, making various improvements on the grounds of the Scripps Institution for Biological Research, providing the Board of Regents of The University of California will give their consent to placing these improvements on the grounds and promise their acceptance of the same as part of the property of the University.

3- Among the more important of these improvements are (A) \$24,000 to go on the pier (the eleven thousand now on hand subject to the direct control of the Regents will probably be added to the pier fund); (B) From twelve to eighteen cottages of similar construction to those at present standing, some of which will be larger and some perhaps smaller than the present cottages, but on the average somewhat larger - estimated cost of these, from \$12,000 to 24,000; (C) A building for a class room and laboratory tables, about 40 by 80 feet, estimated cost \$3,000; (D) A building that may be in such form that it can be changed into a cottage for living purposes, at

present to be used as a store, postoffice, and restaurant or boarding house, estimated cost \$16,000; (E) A building of the same external form as one of the cottages, without particians, this to be used as a school-house or school-room for the children of the colony, estimated cost \$1,000; (F) A reinforced concrete building, in style harmonious with the present concrete building, and so located that at some future time it may be connected by an additional reinforced concrete building with the present station, estimated cost \$20,000; (G) A sea wall, enclosing a part of the sea under the cliff, as the beginning of some future large aquarium to be built over part of it, estimated cost \$10,000; Beyond this, students, and other equipments in the shape of microscopes, hydrographic instruments, etc., to the estimated amount of (H) \$5,000, are to be bought; An allowance may be made for (I) \$7,000 for carrying out Mr. Ritter's idea of publishing; The establishment of a bus in the shape of a cheap machine, for \$500.00, and the running of it for two seasons when the colony is full, \$1,000, a total of (J) \$1500.00; (K) estimated incidentals, \$2,900.00; Total \$100,000.

I have authorized you to employ a building helper at \$150.00 a month, and to incur other incidental expenses in order that you may begin to prepare for the building immediately. Gravel and sand should be hauled preparatory to concrete work. Contracts for good dry lumber and mill work should be placed as soon as possible. Some grading may be necessary on the exact sites of the proposed cottages.

Unless my action in this matter is ratified, either by my sister or the governing board, I will myself pay the expenses<sup>thus</sup>/incurred.

You will observe that it is proposed to give constructed buildings and other material, rather than money, to the University.

The Regents and Comptroller should understand that the purpose of this plan is to permit my sister to push this work as rapidly as possible, and to avoid, as much as possible, formalities and red-tape. It is my own personal opinion that the work prosecuted in this way will secure more of her interested attention, and to that extent, more personal gratification on her part. You should understand, or cause the Regents to understand, or at least Mr. Merritt, that there is no intention of ignoring the wishes and views of the governing department of the University, but that, on the other hand, it is the general desire to conform in every way to the wishes and judgement of the Regents and the Comptroller. In fact, it is extremely desirable, for many reasons, that this work should progress as rapidly as possible, and therefore such arrangements as proposed will require Mr. Merritt and his staff to move swiftly and keep ahead of us, rather than that we should at any time have to delay proceedings on account of the Comptroller's having more important business on his hands.

While I doubt not that the Regents will ratify any work that we do, and accept it, it is desirable that the Regents should, by resolution, authorize a local commission to erect such structures as Miss. Scripps is willing to pay for, and accept any gifts of equipment that she may tender them, subject only to a veto on the part of the Comptroller, such veto to be exercised by him only on the grounds that the buildings or any other improvements will be an absolute injury to the property or estate.

While you are not authorized to contract to make any payments in advance of the sums to be collected at the rate of \$4,166.66 per month without my sister's distinct approval of such contract, I doubt not that she will be willing, in any important emergencies, to advance sums more rapidly than has been proposed.

I am sending a copy of this letter to my sister. It is not based entirely upon my conversation with her. It is possible and very likely that she will prefer to make important changes in the program that I propose.

I have a great predilection for temporary construction; on the other hand, I believe that my sister much prefers substantial and permanent work.

I have advised you to send my sister a weekly letter which, including a financial statement of the week's expenditure, should inform her of the activities of the week, negotiation of the contracts, and plans that you are forming, etc. You should only call on her when she informs you that she wishes to see you or when you are sure that it will be convenient for her to give you attention.

In conclusion I wish to remind you of what I said relative to the University's reimbursing the Station for the salary that has been paid to you from the date of some time last year, as agreed upon by Merritt and myself.

I presume that there will be a strong temptation and a strong pressure to cause the abandonment of the open sea vivorium (I believe that's what you call it). However, I am going to press very hard for this matter because I am sure that I am looking further into the future than anyone else is, and that I can therefore better foresee the future of this scheme than others. To those who oppose my project, I will call to mind the fact that, against considerable opposition, I carried the point of having the station located on this large block of land rather than on a small lot in La Jolla. There could have been no possibility for such improvements as are even now contemplated, had I not carried this point.

The open sea vivorium will, I am sure, compel the comparative rapidity of developments that would otherwise be long delayed or never

made.

After a year's wavering between "thinks and things", I have at last satisfied myself that the best way to get the state and the University to furnish and pay for researches and research work will be to supply the plant and material for such use.

Yours sincerely,

E. W. SCRIPPS.

UNIVERSITY OF CALIFORNIA  
OFFICE OF THE PRESIDENT

Berkeley, April 22, 1915.

My dear Miss Scripps:

I cannot tell you how much gratified I am to know of your continued and enlarging support of the institution at La Jolla. Your recent gift places the institution, it seems to me, in an assured position. It is certain to be permanent, to grow with the years and assume the position on the western coast which Wood's Hole holds on the eastern coast. It must be a great satisfaction to see the great work of your life steadily and inevitably taking shape.

Very faithfully yours,

*Benj. Ide Wheeler*

\$100,000 Fund for  
Biological Station --

Dear Mr. Mosher:

Miss Ellen B. Scripps has arranged with the Regents of the University of California to expend \$100,000 for the building of a pier and erecting additional buildings and providing the Station with additional facilities within the next two years. Instead of this money being turned over to the Regents and the contracts for the improvements and disbursements being made by the Regents, the improvements are to be made under the control of the local Board of the Scripps Institution for Biological Research.

In accordance with this plan, Miss Scripps has already signed a contract with the Mercerau Bridge and Construction Company for the construction of a pier 1,000 feet long at the price of \$26,186. Additional work is contemplated in connection with said pier which will bring the total expenditure on pier and accessories account up to about \$35,000. There is available for this work the sum of \$11,000, being residue of the fund of \$60,000 (in fact, \$62,500) which was completed last year. So that this work will call for \$24,000 additional. The plan calls for the payment of this \$100,000 in monthly installments, beginning with March 1st, 1915.

Please have a draft sent to Miss Scripps on receipt of this letter for \$12,500 payable to her order, this being for the three monthly x installments for March 1st, April 1st and May 1st.

Then each month thereafter send her a draft for one-third of such sum. This would call for a draft for two months of \$4,166.67 and for one month of \$4,166.66. These payments are to be continued until the total sum of \$100,000 has been remitted, when these remittances will automatically terminate.

Note on her cash account that these remittances are account Biological \$100,000 fund.

Yours truly,

LA JOLLA, CALIFORNIA,

Apr. 11th 1915.

Miss Ellen B. Scripps,

La Jolla, Cal.

My dear Miss Scripps:

Mr. E. W. Scripps was over to the Station this afternoon and he made the following request which you will find enclosed.

Regarding the one marked Mr. Ralph P. Merritt, it is necessary for this to be sent as a telegram to Mr. Merritt not later than Monday night. If you will call up Dr. Ritter as soon as you return he will send the same as a telegram as soon as you have authorized it and then come over and get your signature to the same and send it confirming the telegram to Mr. Merritt. This procedure is necessary as the Board of Regents meet in Berkeley, Tuesday morning and I will be there at that time.

Regarding the second one, Mr. Scripps has authorized me to present it before the Board of Regents on Tuesday morning.

Mr. Scripps went over the telegram as above given and gave his approval to all the contents as he will confirm if possible by telephone or visit tomorrow.

Respectfully yours,

*W. C. Caudall*

Business Manager.

My dear Madam:

At a meeting of the Regents of the University of California on June 8, 1915, the Finance Committee presented the following report and recommendation:

"We have the honor of reporting that the following notification has been received by the University:"

"La Jolla, May 8th, 1915.

"To the Regents of the University of California,  
Berkeley, Cal.

"Gentlemen:

"I am providing for the construction of certain buildings and improvements upon the lands of the Scripps Institution for Biological Research at La Jolla, San Diego County, California, and at my request these buildings and improvements are to be constructed at my instance and under contract with me. As the title to these lands is now vested in you, I agree to pay for all such buildings and improvements, and to indemnify and hold you harmless from all costs and expenses of every character occasioned by the construction of such buildings and improvements.

"Yours truly,

"E.B. Scripps

"E.W. Scripps

"Dated May 10, 1915'

"We recommend that Miss Ellen B. Scripps and Mr. E.W. Scripps be informed that their offer of a guarantee as set forth above is accepted with the thanks of the Regents."

The recommendation of the Finance Committee was approved by vote of the Board, and I was instructed

to inform you that the offer by Mr. Scripps and  
yourself of the guarantee set forth as above is  
accepted by the Regents with much appreciation.

Very truly yours,

*W. Henderson*  
Secretary of the Regents.

Miss E. B. Scripps,  
Miramar, San Diego Co., Calif.

UNIVERSITY OF CALIFORNIA  
DEPARTMENT OF ZOOLOGY  
BERKELEY, CALIFORNIA

July 8, 1915.

Dear Mr. Scripps:

I am enclosing a copy of a letter just mailed to Professor J. McKeen Cattell, who, I think you know as editor of the Popular Science Monthly.

If you have not read his article "The Families of American men of Science" in the May number of the monthly, I wish you would take the time to do so and see if you do not endorse my invitation to him of consulting with us at La Jolla. You will notice I have not intimated anything as to an invitation beyond merely asking him to plan to include the Institution in his visit to California in case he is expecting to come for the meetings of the American Association. If, however, you think the plan worth while, and perhaps on consultation with Crandall, decide that the funds would bear the expenditure, I would suggest that either you or Crandall follow up my invitation with the proposal to bear a portion or the whole of Professor Cattell's traveling expenses, if he could accept the invitation. I am convinced that the matter of investigations of this sort is exceedingly important and I do not believe we should go amiss in considering it carefully even though we may not be able to do any extensive and systematic work in these lines and I feel quite sure too that it might be of advantage to the Institution in other ways than this to have a visit from Professor Cattell. He would, for example, I am sure, be interested in our managerial experiment.

Yours sincerely,

ASR

July 8, 1915.

Professor J. McKeen Cattell,  
Garrison-on-Hudson,  
New York.

Dear Professor Cattell:

The Scripps Institution for Biological Research has considerably increased its resources in the last few years and it is not impossible that still further increases will come to it in the near future. Anticipating the possibility of such increase, the Local Board of Management is already considering to some extent the question of what new line of investigation would best be entered upon should new resources be available. The members of the Board, which includes the two chief benefactors of the Institution, Miss E. B. Scripps and Mr. E. W. Scripps and the permanent resident scientific staff, are, I believe, strongly inclined to turn to something in human biology, probably to some aspect of the general problem of the influence of environment upon man from the quantitative and statistical standpoints. This would be the natural thing, because our major undertakings in the general biological realm are of this sort, from which it results that some of our staff have developed considerable facility in this kind of work and have in face elaborated certain rather new applications of mathematics to such problems.

I have been greatly interested in recent writings of yours, particularly your recent article "The Families of American men of Science", and it has occurred to me that probably you will come to California this summer for the meetings of the American Association and that I may have an opportunity to talk over with you what might

be done. In case you should come, I greatly hope you will be able to plan to visit us at the Scripps Institution near San Diego, and spend a day, or more with us. Could you do this I should make a point to have you meet both the benefactors of the Institution and members of the scientific staff who are interested in these questions, for the purpose of discussing the possibilities of work in the directions indicated, and of a man fitted to undertake the investigations.

I believe you might render an important service to scientific work by such a visit and I assure you we should all greatly appreciate your counsels.

Yours faithfully,

Signed W. E. R.

Dear Miss Scripps,-

Am going to write you some day - or  
are you not coming up for the Expo? I've a very  
special matter to talk to you about.  
works crowd rather hard.

Gentlemen :-

Regarding the extensions of piles already moulded and the moulding of longer piles made necessary by encountering deeper sand and deeper water which was not anticipated, I beg to state that our interests have come to the conclusion that they will complete the pier to the contract length of 1000 feet and place the longer piles as required.

Your Mr. Spear and the writer have made calculations on the additional cost of extending the piles to obtain the stipulated penetration into shale of 8 feet, all other details of the pier remaining the same. This additional cost is \$2856.00 There is also a credit to Miss Scripps of about 70 fir piles already on the ground which were not used on account of the short length under the field conditions that were encountered.

Very truly yours.

Research on the evening of July 19 to stop work until a settlement  
on  
could be made ~~regarding~~ the moulding of piles for the pier. This  
order was made necessary by the ~~fixed~~ conditions, the depth of  
sand and depth of water along the line of the pier being greater  
than anticipated, requiring therefore longer piles and extensions  
to those piles already moulded.

Very truly yours.

## AN ODD PLACE

A new town where high thinking and modest living is  
to be the rule

The Scripps Institute for Biological Reserach has  
undertaken an odd real estate enterprise

Everybody in San Diego knows the common practice of real estate speculators in opening up a new subdivision - that of placing restrictions on purchasers of lots; requiring that no house shall be built that does not cost at least a fixed sum of dollars.

Now, there is being established in the city of San Diego a new sort of subdivision, on which building restrictions are to operate. However, instead of lot owners being required to build a costly house, they are required to build the cheapest and most modest house at all consistent with purely material comforts.

The local board of directors who control - subject to the supervision of the Regents of the State University - all of the business affairs and research work of the Scripps Institute, control the State's property, of about 170 acres, on which the Institute is located.

Already they have built a fine reinforced concrete building containing a number of small room laboratories, each of which is assigned to some professor, also several rooms containing a twenty thousand dollar library which is being added to constantly; a large reading and meeting room, and still a larger room in which has been placed a large collection of specimens of Marine Biology; and finally another large room at present devoted to aquarium purposes.

They are about to duplicate this building with another reinforced concrete building of the same size, where a much larger library will be installed, and where there will be other laboratories; but it will be used mainly for the purpose of a large lecture room.

They are now constructing a concrete pier extending out into the ocean 1000 feet, where the water will be from 12 to 20 feet deep, according to the tide, at which landing from boats can be made, it being far out beyond the surf line. It is essential that the living specimens of sea life gathered by the Institution's boats should be quickly transferred from the boats to the aquarium before injury is done them by exposure either to the air or in vessels of water that quickly becomes injurious to small sea animals, when at all stagnant.

The cost of this pier which is now being built will be \$38,000.

The cost of the two concrete buildings and their contents will amount to seventy five or eighty thousand dollars.

There is just being erected a special aquarium for public use. In this, the body of the tanks are to be made of concrete, and the front part of clear glass. The light is to fall on these tanks in such a way as to make the contents of sea animals and plants clearly visible.

Previously, there has been constructed about a dozen cottages, used for the most part by resident members of the staff and employees of the Institution.

A garage for four machines has also been erected.

A school house is to be immediately built for the use of young children (up to ten or twelve years of age), of the resident professors and other families who may locate in this place.

A store building is to be put up and managed on the co-operative plan by the directors, for the benefit of the members of the Institution and the tenants of the various buildings.

What is called the Club House, is to be erected this season. It will contain a kitchen and dining room; and there will be a number of one,

two and three room cottages put up for the use of visitors or attaches who have no families.

At the present time, city water, electricity, and gas are supplied the Station.

Late this season or early next season, twenty or thirty new cottages will be erected. These will be partly furnished, and rented, for a short or long period of time, to the public.

As all of the land first acquired by the Institute is now State property, it cannot be sold; but long leases can be made on lots or lots and buildings, and the terms of these rents and leases will be so moderate as to make it possible for anyone of even a very small income to occupy them.

There is no intention on the part of the directors of the Institute or the Regents of the University to profit, at least in the immediate future on land increment. As the land cost the Institute not over sixty or seventy dollars, the actual cost of a building lot is insignificant.

The reason for making charges for rent is to obtain a fair interest on the money invested; and a sinking fund to replace the wooden cottages, whose life will probably not be long.

As the present cottages - even with the furniture, bath room, and closet in each cottage - have not cost more than an average of a thousand dollars each, the rental charge is comparatively small.

Adjoining the Biological land, on the cliff to the north, Miss Ellen Scripps, the founder of the Institution, and her brothers, own two other Pueblo lots. This land can be sold or given away. One of the parties owning this land has offered to give, free of charge, a title to a lot to any professor or other attache of the Institution, who desires to build his own home and own his own property.

Now as to the building restrictions. They are to be these:

First- No house will be allowed to be built, either on the Biological land or the adjoining property, other than such a structure that even a man with the most modest income could afford to own or rent. In other words; there are to be no fine or even moderately costly homes built in this new town, such as will cause the occupants to humbler homes to feel any sort of inferiority in the matter of financial status.

Second- Even at the expense of much land being withheld from building purposes, no house will be built so that it will obscure the beautiful view of the ocean from the residents of another house.

While there will be contour roads, lands, and paths constructed, there is to be no opening of public streets or any other course taken which will put upon the city of San Diego the cost and responsibility of street maintenance, sewerage, or anything of the sort.

The governing board of the new town will, if practicable and legally permissible, consist of the local society and directors of the Scripps Biological Institute.

At present, every cottage erected around the Institution is occupied, and the number of heads in the settlement is probably never less than twenty or twenty five, even in the season when seashore residence is least sought for.

At present, a small auto bus connects the settlement with the La Jolla Railway. Plans are being considered for the running of a larger bus directly from the Biological Station to connect with the terminal of the trolley line that is soon to be extended to Pacific Beach. As the fare proposed to be charged is so small, it is probable that this line will be conducted at a small loss, for some time at least.

The new town will not be a suitable residence for anyone actually employed in business in the city; as the time and cost of transportation will be too great.

The kind of settlers most desired, are those retired professional, literary, and other quiet people with moderate incomes, who naturally seek association with scientific men.

The pier will probably be one of the best fishing places on the coast; while the two miles long beach, to which a rock and concrete road will lead, will be desirable for both promenading and bathing.

The settlement and postoffice will probably be named Ellentown.

Few people in San Diego have any idea of either the importance of the Scripps Biological Institute as a scientific center, or the large amount of capital that has been invested in it.

Including the \$103,000 that has just been donated by Miss Scripps, the total outlay up to the present amounts to not less than \$250,000.

Beyond this, the Institution has an endowment of about \$150,000.

State appropriations for maintaining the institution now amount to \$12,500 annually; while \$10,500, most of which is contributed by Miss Scripps, is added annually by private, but reliably continuous donations.

All rent received from the occupants of the present cottages and the ones to be erected on State land, is also to be added to the income of the Institution.

The directors of the Institute feel confident that it will be a matter of only a short time when the Universities of the State, and the people of the State generally will have their interest more aroused; so that the Scripps Biological Institute will be the best equipped and largest endowed Biological Institute in the world.

Capt. Prof. W. C. Crandall is the business manager of the Institution and has authority to receive proposals from would-be lessees and purchasers, and even, if need be, to build such cottages as are required.

*Dictated by E. W. Scripps 9/10/15*

-- MEMORANDUM --

San Diego, Cal., Oct. 5<sup>th</sup>, 1916.

I have today deeded to Percy Spencer Barnhart a tract of land in Lot I, Pueblo Lot 1312, amounting to ninety-seven one hundredths (97/100) of an acre, more or less. I have given this property to him, although it was recited in the deed to be for the consideration of Ten Dollars, (\$10.00).

I have also advanced him Fifteen hundred Dollars, (\$1,500.00) to build a home thereon. For this he has given his note and mortgage to W. C. Crandall, Trustee. I have given these to the Scripp's Institution for Biological Research, for which Crandall acts as Trustee. He is directed to pay over the interest and principal payments to said Scripp's Institution and the note and mortgage may be assigned to it by him if at any time that seems

a desirable course. *I expressly reserve the right to designate the particular use to which said fund shall be applied in the future by said Institution.* (Signed) E. W. Scripps.

-----

I accept the above trust and agree to hold said note and mortgage for said Scripp's Institution, and to account thereto for all sums collected thereon.

(Signed) W. C. Crandall.

EMR.

Miramar, Calif., Nov. 27th, 1915.

Prof. Charles A. Kofoid,  
Department of Zoology,  
University of California,  
Berkeley, Calif.

My dear Professor:-

Your proposition does not fit in with my  
scheme.

I am endeavoring to formulate a plan which will call  
for more money than I can myself furnish at the present time.  
Action is being delayed on this account. As every little helps,  
so every little disbursement that I make must stand for a long  
delay.

As I am sick in bed today I can write no further.

Yours sincerely,

E. W. SCRIPPS.

Miramar, Calif., Dec. 3rd, 1915.

Mr. F. T. Scripps,  
Pacific Beach, Calif.

My dear Fred:-

I am enclosing a copy of a letter that I have just written to Tom.

Have you seen the statements prepared by he and Meanley? It is clear to me on the face of these statements that some mistakes have been made. However, making allowances for all mistakes, the statements are entitled to serious consideration.

I expect to leave on a trip to Honolulu and perhaps Australia during January or February, and expect to be gone a great many months.

You know how it is with me - I am often sick, so that just at the time when you may think it most important to see me I would not be able to give you attention. Then, too, I never do anything in a rush. I think it will be safe to say that for fully three weeks before I start I will refuse to attend to any money matters or business of any kind, even if I am well enough to do so.

Affectionately,

E. W. SCRIPPS.

Miramar, Calif., Dec. 3rd, 1915.

Mr. Thos O. Scripps,  
Scripps Building,  
San Diego, Calif.

My dear Tom:-

I have analyzed the three monthly statements that Mr. Meanley made up from your books. From these statements it appears that your business (excluding household or home expense) has averaged something over sixty dollars per month profit; that is to say, your total receipts from rents are about sixty dollars per month more than your expenses.

When you take into consideration the depreciation of all buildings, which goes on continuously both in a general way and in small particulars, it would appear that you would have a deficit amounting to several hundred dollars per month.

It is not to be presumed that the so-called "Miscellaneous Expense" on the statements makes good all the depreciation. For instance, buildings have to be painted every several years. Other things are also wearing out and requiring improvement; from time to time carpenters, masons, and plumbers have to do considerable jobs.

The average life of a frame building is not over twenty years; hence, at least five percent of the total cost of every building of this character ought to be charged off every year. Even such buildings as the Scripps Building require, from time to time, expensive replacements of plumbing, elevator machinery, etc. Then, too, such a building as the Scripps Building would probably not last forty years. By that time, I mean, the building will have gotten so out of date that - if the then property is valuable - it will have to be torn down and a new

EWS to TOS #2

building put up, so that  $2\frac{1}{2}\%$  of the cost of the building should be charged as depreciation.

Whether or not the real estate on which the building stands will improve enough each year to make up for this depreciation is a matter of guess work.

I believe that any conservative and experienced real estate owner would say that your statements indicate that your business as a whole was running behind at the rate of six thousand dollars per year or five hundred dollars per month.

I note that your family and home expenses have, for the three months, averaged about \$1130.00. Deduct from this the sixty dollars per month cleared in your business, and it appears on the face of your statements - not counting the depreciation that I have spoken of - that you are running a monthly deficit of about \$1070.00 or more.

One thousand and seventy dollars per month would be twelve thousand eight hundred and forty dollars per year: add to this the something like six thousand dollars per year that I estimated you were losing on account of depreciation, wear and tear as the buildings become older, and you have a deficit of about eighteen or nineteen thousand dollars per year.

Yours sincerely,

E. W. SCRIPPS.
