

Optimal Care for Surgical Weight Loss Confirmed at UC San Diego Health System

Bariatric Program Accredited by ACS Bariatric Surgery Center Network

October 25, 2012 | Jackie Carr

The Bariatric Metabolic Institute (BMI) at University of California, San Diego Health System has been accredited as a Level 1 facility by the Bariatric Surgery Center Network (BSCN) Accreditation Program of the American College of Surgeons (ACS). This designation means that the institutional performance of UC San Diego BMI meets the rigorous requirements outlined by the ACS BSCN Accreditation Program.

Santiago Horgan, MD, internationally recognized weight-loss surgeon.

“This accreditation from the American College of Surgeons affirms our mission of providing safe and effective weight loss surgeries for all patients,” said Santiago Horgan, MD, director, UC San Diego Bariatric Metabolic Institute and chief of minimally invasive surgery, UC San Diego Health System. “We are dedicated to reversing the obesity epidemic by offering an array of customized surgical procedures that significantly reduce weight and produce less pain and scarring.”

In an effort to extend established quality improvement practices to all disciplines of surgical care, the ACS BSCN Accreditation Program provides confirmation that a bariatric surgery center is committed to providing the highest quality care for its bariatric surgery patients. Accredited bariatric surgery centers provide the hospital resources necessary for optimal care of morbidly obese patients, and the necessary support and resources to address the entire spectrum of care from the pre-hospital phase through treatment and post-operative care.

The Centers for Medicare & Medicaid Services (CMS) has recognized UC San Diego BMI and allows expanded Medicare coverage of bariatric surgery for beneficiaries of all ages who have been diagnosed with other health problems associated with obesity. Medicare coverage has been limited to procedures performed in facilities certified by the American College of Surgeons or the American Society for Metabolic & Bariatric Surgery.

Each hospital undergoes an on-site verification by experienced bariatric surgeons, who review the center's structure, process, and quality of data using the current ACS Bariatric Surgery Center Network Accreditation Program Manual as a guideline in conducting the survey. Because high-quality surgical care requires documentation using reliable measurements of outcomes, accredited bariatric surgery centers are required to report their bariatric surgery outcomes data either to the American College of Surgeons National Surgical Quality Improvement Program (ACS NSQIP) or the College's BSCN Database, using a Web-based data entry system.

The UC San Diego Bariatric Metabolic Institute is dedicated to the science of developing and offering an array of surgical and non-surgical weight loss techniques that are customized to the patient's individual needs. A team of internationally recognized surgeons and specialists including registered nurses, a program psychologist, registered dietitians, patient advocates and support staff provide patients with a comprehensive long-term plan to improve their health and lifestyle.
