Namias – Roll A

Unknown date

16mm = mov005059

Namias – Roll B

Unknown date

16mm = mov005060

Namias – Master Copy

16mm = mov005061

Long Range Weather Forecasting

July 28, 1972

16mm, B&W, silent, workprint = mov005062

16mm magnetic film soundtrack = mov005063

5" reel-to-reel = aud005125

In the video portion Jerome Namias is giving a talk (silent, no audio), sitting at a table, referring to notes and pointing to illustrations on a blackboard. The audio portion for this film is called "Lip Sync Sound Track Recorded On UHER 1000 Report Pilot" on the original box container. Both the audio and video portions were never matched up, plus the film was shot in reverse image. Most likely a project that Namias was working on but never finished.
