PROCESSING RECORD
SCRIPPS INSTITUTION OF OCEANOGRAPHY ARCHIVES

Scripps Institution of Oceanography

SIO Data Files, 1911-2000

Physical Description: 183 mss, 11 oversize boxes

Arrangement of Collection: Arranged in three series: 1. Pier Data. 2. CalCOFI. 3. Expeditions

Description: This is the master original data set for the Scripps Institution of Oceanography. It consists of three distinct series of data:

SIO Pier Data consists of paper recordings of sea surface temperature, air temperature, and weather observations made at SIO beginning in 1916. During the 1920's and 1930's, SIO also collected like data from shore stations along the coast of California (from lighthouses, life guard stations and other opportune locations). This data is arranged alphabetically by location, and then chronologically. The names of some stations changed over time, and the file includes some guides as cross-references. Dan Cayan put out a CD of selected data from this series, but none of the weather observations have ever been cumulated or published. This series remains the record copy of the data.

The following bound data logs were added to this series in 2014:

C.B. Andrews Sardine Stomach Content Data, 1926-1927 (Accession 87-024)

Plankton Record, 1891, 1901-1917 (Accession 81-116)

Data, 1916-1917 (Accession 81-93)

Data, 1916-1921, 5 vols. (Accession 81-94)

CalCOFI Cruise Data consists of paper recordings, graphs, notes, unpublished cruise reports and other material collected during regular California Cooperative Oceanic Fisheries Investigation cruises of the California Bight which began in 1949. This data includes temperature (at various depths), oxygen, salinity, nutrients and more recently chlorophyll and productivity measurements. It is the record copy of the CalCOFI cruises. Some of the data has been published in CalCOFI data reports, but not all of it.

Expeditions Data consists of data collected on SIO expeditions beginning with Gulf of California (1939) and continuing until shipboard computers were installed and electronic data was transferred directly to the Geological Data Center. Some, but not all of this data has been published in expedition reports or in the scientific literature.
